The present motorcycle field is limited—an almost predetermined number of people will ride the type of motorcycle most commonly known: the standard type of from 7 to 9 horsepower and selling at from $200 to $300. A wider field is open to the manufacturers who supply an efficient lightweight motorcycle of simple design at a price nearer the $100 mark. The reason is obvious. But these markets or fields are subjected to fads and fancies; they are not really sound. They require the backing of a more staid phase; one not so liable to depression or subject to injury because of money stringency or nation-wide retrenchment. It should be backed by a branch that treats the motorcycle as an investment, as a measure of economy, and the commercial field is that branch. Yes, it may even be considered the trunk, so to speak, of the future motorcycle industry, and from it will branch the fields that employ the motorcycle for pleasure, pastime and recreation.

The Field of the Future

As one journeys through the country and keeps the motorcycle in mind, he finds that there are at least a few concerns that are solving their delivery problems with the motorcycle van. These few are growing in numbers, but too slowly, for there remains the vast majority yet to be awakened. Thousands and thousands of merchants are still uninformed, still somewhat sceptically-minded toward the motorcycle's possibilities for delivery purposes.

This should not be so, especially with the wealth of proof that every dealer has at his command in the publicity that motorcycles are receiving in the war zones both here and abroad. The splendid work of the motorcycle as a sound vehicle for arduous service in despatch riding and for rapid delivery of ammunition, etc., is an excellent selling argument. There is a wealth of it—it is of the most attention-compelling value, entertainingly interesting, as it were, and with pictures from the front and the proofs of actual performances that are available to back up the arguments, there is no excuse for not having that bigger, better business that the delivery van proposition provides.

Some Selling Points

Take your prospects in hand, point out to them that the motorcycle is the simplest form of motor vehicle to be had. Its reliability is unquestionable; you have the proof. Mechanically, here are some comparisons: There is no water-cooling apparatus to leak or freeze; the ignition system—a magneto—is down to bedrock reliability. There is no necessity for messy, troublesome bateries and other contraptions. The transmission is obviously simple—a chain. There are no universals, no differentials, no complicated rear construction; three wheels instead of four with small and comparatively inexpensive tires. As for economy and upkeep—a year's supply of gas and oil would cost you approximately $90, and provide fuel that will give more than 15,000 miles of delivery service. Such economy cannot possibly be equaled by any other vehicle. Shoe leather will cost more.

COMPARATIVE COSTS OF MODERN DELIVERY VEHICLES

The R. S. Van vs. the Gasoline Electric Truck

	350 lb. R-S Van	1000 lb. Elec. Truck	1000 lb. Gaso. Truck

Makeshifts Tabooed

"Any motorcycle" and "any van construction" will hardly make a successful delivery van, and makeshift vans need never be offered to any merchant while there are correctly designed vehicles to be had. The manufacture of a satisfactory delivery van is not as simple as it may seem. It is quite a problem, as successful designers will admit, and to sell a van that has not passed through proper experimental stages is to court disaster both for yourself and for the motorcycle delivery proposition in your vicinity. If ever the law that "a satisfied customer is the best customer," holds true, it holds in the motorcycle delivery van field.

Increasing the Demand

There is more jealousy among the smaller trade than there is among individuals. If you satisfy the grocery man on the east corner and he is successful in stealing the west corner grocery man's telephone business, for instance, because of his ability to meet quickly the demands of the modern housewife, the grocer on the west corner becomes a live prospect immediately. So you must serve the first correctly, for if he succeeds with a delivery van plan, your list of live prospects is increased two-fold at least, and perhaps more.

The simplest type of delivery van would naturally seem to be the most suitable for the first machine to be purchased by the merchant. Other things being equal, perhaps a large single cylinder outfit would be best. It is more readily kept in condition, and perhaps a little more dependable, if neglected, because of its hardiness. With a high gear of about 5½ to 1, if for country use, and probably 6 for city use, good results should be obtained. Of course, this would be for heavy work—the gear ratio would vary with the character of the loads and the nature of the country covered.

Prepare for Emergencies

No commercial vehicle should go on the road unprepared, for eventual trouble, a breakdown and "tow in" means a black eye to you. So be sure your sales are made with the tool-box well filled. Do not let the merchant be penny-wise and pound foolish. In addition to the usual tools, an extra inner tube and tire kit, spare chain links, one each of the engine valves, a spark plug, extra engine oil and an assortment of bolts and studs, all carefully packed and stored, should be in the emergency kit.

There is hardly need to enlarge upon the ability of the motorcycle delivery van for light delivery work. Its utility has been admitted and proved a thousand times,

Digitized by Google

and most manufacturers are in a position to supply proof of the pudding, so to speak, if you will request it, for actual figures provide you with selling arguments. They will be of much value in establishing convincing arguments.

Only Suitable Outfits Desirable

Of course, there are the exceptions that prove the rule. Certain motorcycles and some dealers' contraptions for carrying a van are unsuited for commercial purposes. A motorcycle of strong construction is required. It must be simple, foolproof and have the ability to run at low speeds without excessive overheating. Occasionally a merchant will be found who has unfortunately been a vicitim of an unwise dealer; an under-powered motorcycle and a home-made and poorly-designed van chassis have been sold to him. On the other hand, scores of merchants can be found who have had their requirements properly catered to, and then satisfaction reigns supreme.

Of course, like any piece of mechanical apparatus, the van to be of utmost service must not be overloaded. A single cylinder 4-horsepower van will safely carry 200 pounds, and do it satisfactorily, while in the case of 5-horsepower or 7-horsepower twin-cylinder outfits, 300 pounds are not too much. While these lots are sure to cause no difficulty, additional weight can be carried, but it is better to slightly under-load than to greatly over-load. The van should be offered only to that class of merchants whose packages are of the lighter weight variety.

For Light Delivery

The transportation of pig-iron or steam boilers cannot be handled efficiently with motorcycle delivery vans, but confectionery stores, millinery shops, auto supply houses, grocery stores, druggists and a score of other shops of a similar class can use these vans to advantage. Aside from its ability to deliver the goods quickly and economically over a wide range of territory and thereby increase the field of the merchant's selling activity, the vans lend themselves to attractive decoration, so that an advertising story can be told and new business can thereby be created while that already secured is being given attention.

It is not a bad plan to fit over-sized tires on the van wheel, as well as on the rear wheel of the motorcycle, and if you are at all ingenious, fit some kind of a shield that will protect the engine and chain when the outfit is used in muddy and slushy weather.

COMPARATIVE COST OF OPERATING INDIAN PARCEL CAR

Against

Single Horse Delivery Wagon

For One Year of 300 Working Days

	Indian Parcel Car	Single Horse Delivery Wagon
Initial Cost	$350.00	$297.00

The Choice of Motors

The larger twin-cylinder outfits will often be found to be the more suitable machine, although, as has been said, the single-cylinder variety may be ideal for a beginning. When, however, a battery of delivery vans is being considered and a competent superintendent is to be put in charge to give daily or weekly inspections, the twin-cylinder van will perhaps be the more suitable. In this case, the similarity of the machines or models make for efficiency in repairs, replacements, etc. If the merchant is to put the care of his delivery van system in the hands of a superintendent, to be hired by the merchant himself, it should be suggested to him that he use grease administered by a force pump to all wheel bearings. When grease is put in this way, it lasts longer and, in addition, acts as a preventive against the ingress of grit. This may seem a singular instruction in lieu of other mechanical suggestions, but it has been found one of the most helpful in the operation of the cycle parts of the machine.

The fad of a rabid enthusiast for a new motorcycle every year, irrespective of the good condition of the machine in his possession at the time, has made many a dealer worry over the problem of getting rid of the used machine he is forced to take in trade for a new one. He has to figure this at a price which will prove profitable instead of acting as an actual discount on the new model sold.

For Commercial Service

Here is the problem of fads and fancies creating a huge question mark. The motorcycle of last season, which has been ridden 3,000 to 4,000 miles and traded in at a high figure because it is really in good condition and should be worth a reasonable sum, can be sold for commercial purposes. The reasonable sum allowed at trading in is seldom obtained by the dealer on a resale for pleasure work, not to mention the loss of interest on the money tied up in the transaction.

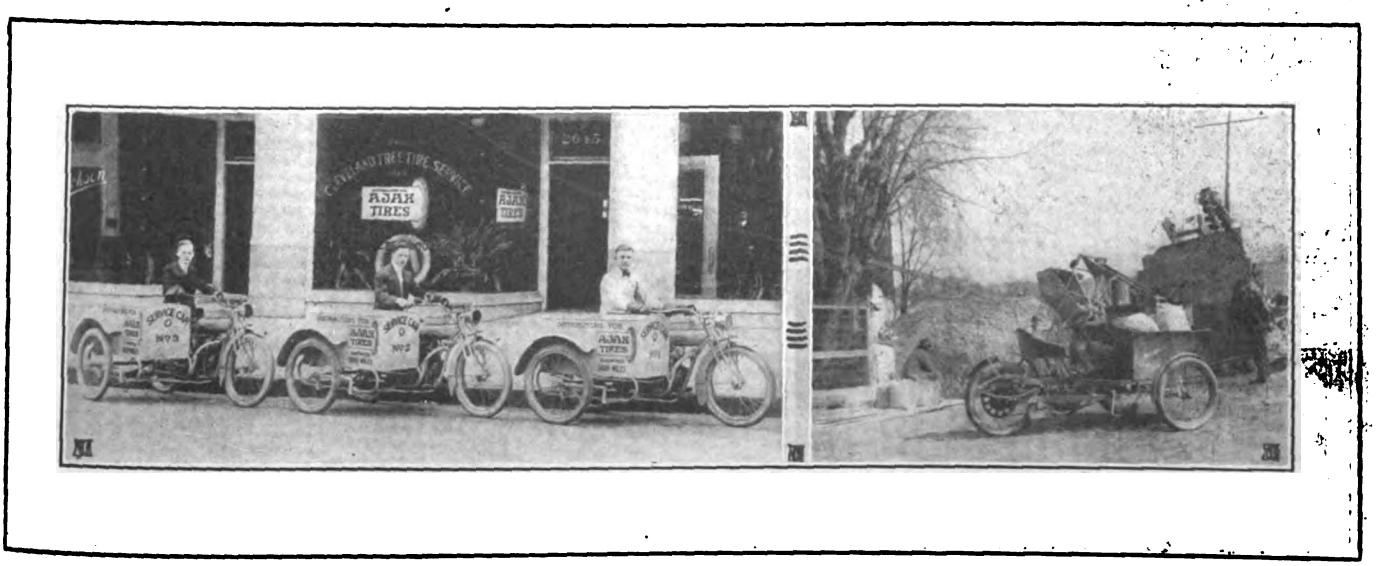
Now, this self same machine, carefully overhauled and re-enameled, with a delivery van properly attached and the whole made into a worth-while commercial proposition, seems an excellent solution of the second-hand machine problem.

Because of the somewhat low price of the traded-in machine, the price of the complete van outfit can be made inviting, and by reason of the generally-good condition of the machine (both van and mount being practically new), satisfaction is assured. Sales opportunities of similar outfits for future use are made promising. With an excellent introduction of this character, and the satisfactory service rendered at a low price, the merchant may perhaps be ready to purchase a battery of entirely new machines. Thus everybody will be satisfied and a most difficult problem solved at the same time—what to do with the second-hand motorcycle.

Worth Investigation

This seems to be an entirely new thought and when suggested to several dealers who should know, was looked on as an excellent solution of the second-hand question. Why not investigate it yourself, Mr. Dealer? But in doing so, be fair to yourself and your customer. Remember that a satisfied customer is the best asset you can gain.

In connecting up the thoroughly-over-



Digitized by Google

hauled used machine to the new van chassis, be sure that you take into consideration that strong construction is important. It should be given special attention, particularly as it applies to the connections between the van chassis and the motorcycle. The lugs on the motorcycle for taking the couplings should be brazed on to form an actual part of the frame, and a sufficient number of connections should be established between the chassis and the machine. Four seem sufficient for the heaviest work, although more may be advisable if conditions require them.

Proper Alignment

Alignment is an essential feature, and great care should be taken that the outfit is properly aligned and kept so. If the alignment is untrue, the stress on the whole machine is increased and, aside from the danger of accident, money is being wasted in unnecessary tire wear, due to road friction. This in itself causes a serious waste of gasoline. Of course, your future sales possibilities would be dwindling in the meantime. The number of commercial motorcycles that are being subjected to unnecessary stress due to this one point is large, and the trouble should be corrected immediately it is discovered.

It is proper for the machine to list slightly away from its load when the motorcycle is not in use, in order that the camber of the road can be taken into consideration when the machine is in service. The suggested construction pulls the load outward when in action and brings the machine in a normal or upright position.

The Dealer's Opportunity

The motorcycle delivery van is the dealer's opportunity to cater to a field that is almost unlimited. There is hardly need to refer again to the possibilities. It is the cheapest motor vehicle, in fact, the cheapest of all vehicles for the delivery of parcels, as can be proved by the tables of comparison given herewith. It is simple, easily handled and, given just a little care and consideration, meets a demand in a manner which no other vehicle can. Any dealer who seriously takes on the delivery van, and takes it properly, is taking a step in the right direction. Let watchful waiting be tabooed, in this case, at least. Wire your manufacturer today. See your merchant immediately.

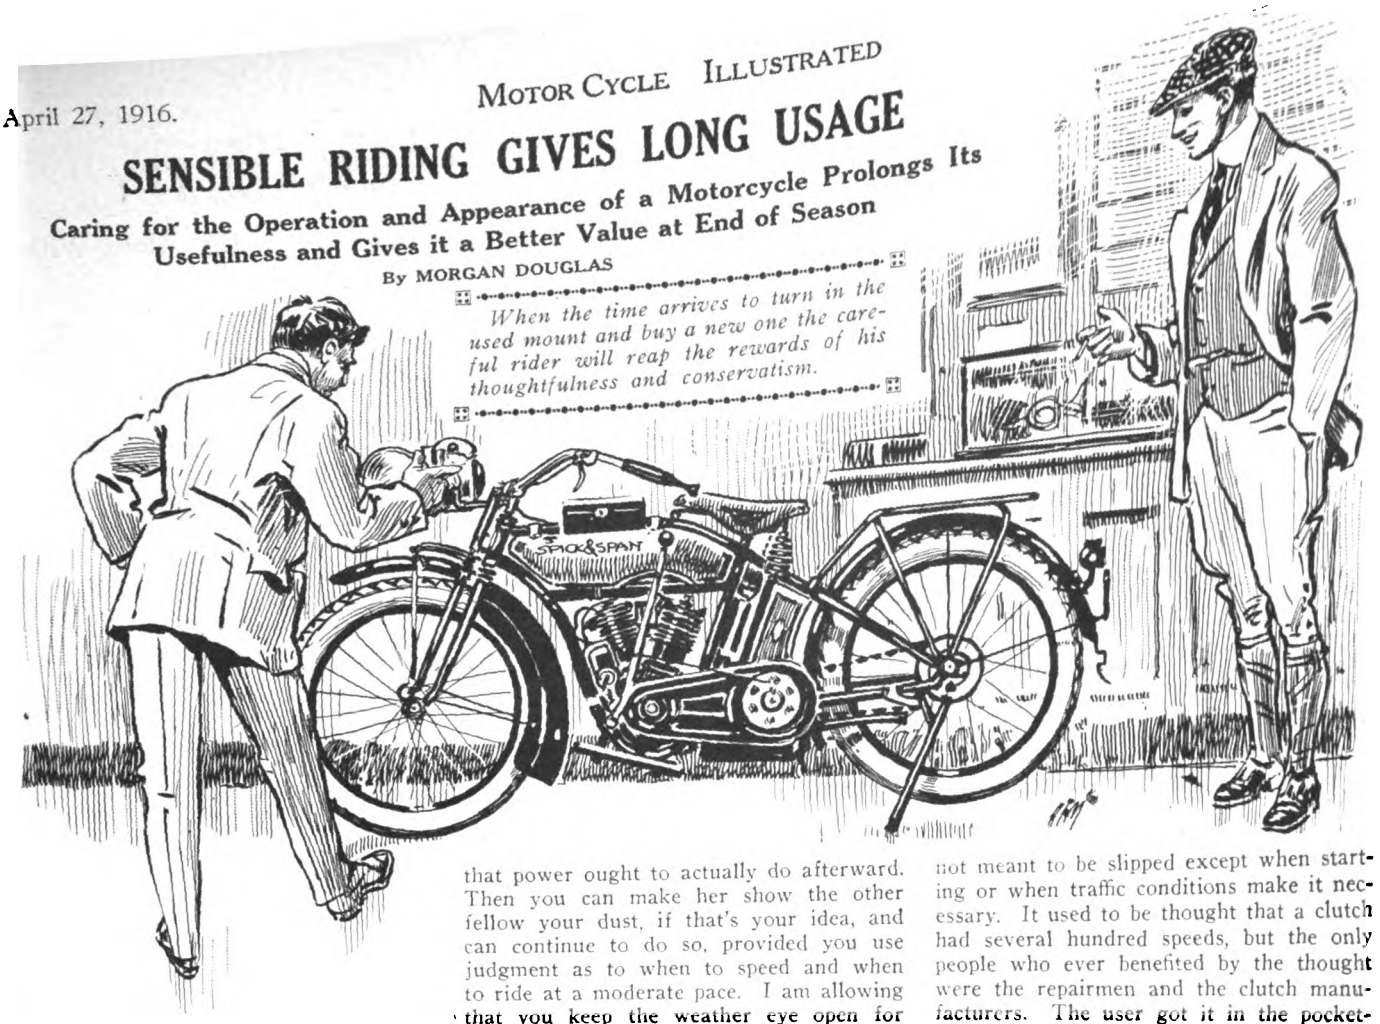
SENSIBLE RIDING GIVES LONG USAGE

Caring for the Operation and Appearance of a Motorcycle Prolongs Its Usefulness and Gives it a Better Value at End of Season

By MORGAN DOUGLAS

When the time arrives to turn in the used mount and buy a new one the careful rider will reap the rewards of his thoughtfulness and conservatism.



WHENEVER I see a 1913 or 1914 machine running nicely on the road these days, I always feel that the original owner has done the right thing by it when it was new and that he showed a good understanding of its mechanism, and also was looking ahead to the time when he traded it in or sold it. Perhaps I am wrong in lots of cases, but I like to feel that its first rider *did* treat it well in each instance, all of which brings me to the main idea of keeping a motorcycle in such condition as will get a fair price or allowance on it when you want to get another one. Its an easy matter to do this, but you have to begin on it before the plating wears off or rust comes to stay on exposed parts, as far as outward appearances are concerned, and within the first 500 miles of riding, as far as the "works" are concerned. I am taking it for granted that you are not a highway incendiary, a speed-mad maniac, or any other of the popular conceptions of the greasy rider who whizzes along the highways on a big, bright twin. If you are in this class, read the rest of the story, anyhow. It may sober you a bit by showing you where you can save a little money when the "factory" announces the 1917 models which can do a mile in next to nothing at all and your old boat becomes too slow.

The First 500 Miles

If you look at the tag on your machine when you first get it, you will probably see instructions not to drive like Sam Hill for the first 500 miles. This is first-class dope. That half-a-thousand means a lot to the bearings; if the pace is moderate, the bearings get a nice surface and the speed will come up to what a motor of that power ought to actually do afterward. Then you can make her show the other fellow your dust, if that's your idea, and can continue to do so, provided you use judgment as to when to speed and when to ride at a moderate pace. I am allowing that you keep the weather eye open for highwaymen in linen dusters and tin stars when you attempt to open her up, but really these gentry have nothing to do with the story.

Beginning with the start of any trip, don't try any grandstand work. Make your getaways gently, without throttle-dumping or clutch-slamming. Motorcycles are pretty stoutly built these days, but bearings get gouged and shafts get sprung by too violent applications of the clutch to a roaring motor, so let the bone-head do that sort of thing. If he gets scrap-heap value for his machine at the end of a season, that's not your lookout. Besides, a roaring motor is a nuisance to everybody else, and the jumping away with a hideous pow-wow doesn't draw anything but black looks and uncomplimentary remarks from all but the lightest of feather-brains.

Using Brake and Clutch

Make all brake applications gradually, with the clutch out in good season. This isn't always possible, but it should be a matter of habit. By making easy applications, you lengthen the life of the motor and the transmission, and these things mean more allowance when you turn in the machine. Slow the machine down by means of the throttle rather than by using the brake, and when the clutch is out, don't let the motor race. It doesn't do any motor good to run it without a load.

When ready to increase the speed, open the throttle gradually, not all at once. If the motor is good it will pick up much better, though not so quickly as when the throttle is dumped, but you run no chances of cracking something. Let the clutch in enough to drive the machine without jerking, but avoid slipping it. Clutches are not meant to be slipped except when starting or when traffic conditions make it necessary. It used to be thought that a clutch had several hundred speeds, but the only people who ever benefited by the thought were the repairmen and the clutch manufacturers. The user got it in the pocketbook by believing it to be true.

Crossing the Tracks

Cross railroad tracks, thank-you-ma'ams and other similar things which infest our roads with the clutch out. In other words, roll them. It saves the machine and makes a fall easier. Take hills on as high a gear as you can, but as soon as the motor starts to labor, change down, and save your bearings. Run on a good mixture, one that gives a snappy note to the exhaust. Keep the spark up as far as possible all the time. These two things help in keeping the motor in good condition. The first reduces sooting and the second prevents bearing injury from premature ignition.

What I have said about riding the machine on the road is really road-judgment only. Now we come to caring for the machine after riding. When you come in, the first thing to do is to inject kerosene into the cylinders to cut any carbon. Let the kerosene stay in over night and then pedal it out. If you do this, the overhaul —if it is needed at all—at the end of the season will have mighty little work connected with it. Follow this by wiping off the dirt and oil, more particularly from the motor and transmission (including gear set), and go over the plating with a woolen or fuzzy cotton cloth. If you do this regularly, there will be no need of using polish until near the end of the season.

Caring for Enamel

To keep the enamel bright, wipe it down with a soft rag dipped in water, using a rotary motion. Don't let dirt get on the rag between rubs. Then wipe with a dry rag and use some good preparation like Johnson's Prepared Wax to put a gloss on

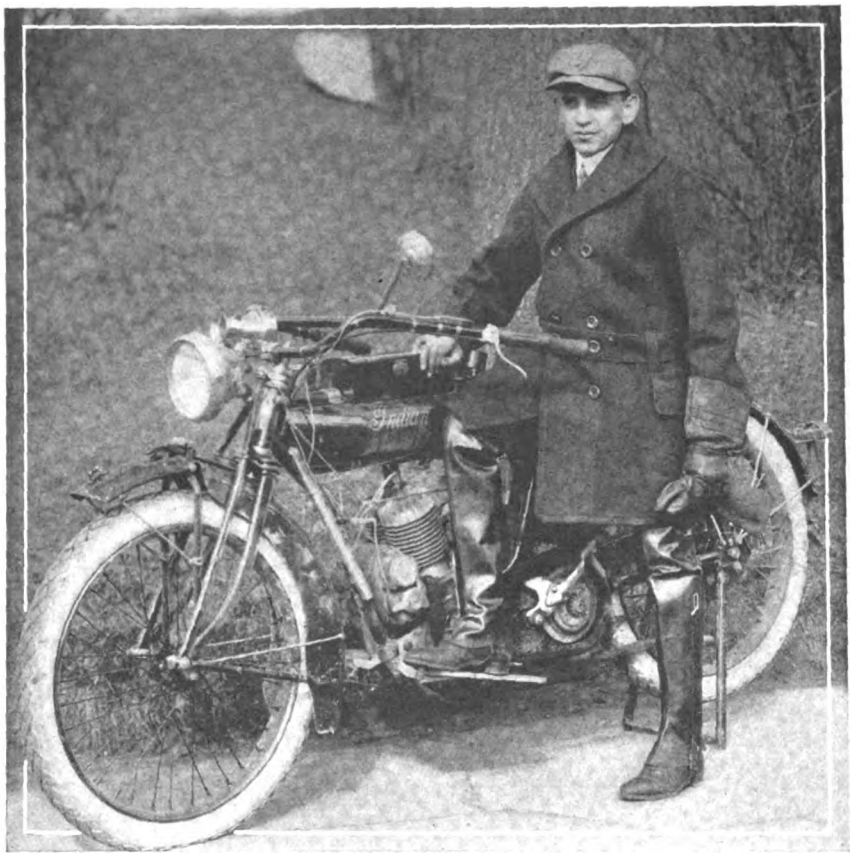
SHOWING MOTORCYCLE'S INDISPENSABILITY

How Widespread Usefulness of Power Two-Wheeler Renders the Rider Unable to Get Along Without It—Pays Big Returns as a Substitute for Indoor Sports

By WALLACE STUART



The Author—Note the Neatness of Costume and Motorcycle

AS far back as I can remember, I have been on wheels of some sort at every opportunity. I sometimes feel as if I had been born on wheels, in fact. My first attempt to beat walking was by means of roller skates, and I used these until large enough to ride a bicycle. The bicycle was my joy and pride, but when the opportunity presented itself, I purchased a motorcycle.

Five years ago I got my first motorcycle. It cost $28; $20 for the machine and $8 for parts to fix it up, for the machine was a wreck. I worked hard over it and got it into such shape as enabled me to use it for two years. This old boat convinced me for the first time what I now realize very forcibly, that a motorcycle cannot be got along without, once its value has been demonstrated.

My first year of riding was very hard, for I was taken seriously ill shortly after getting the machine fixed up, and when I started to ride again, I was the mere shadow of my former self. I weighed 98 pounds, ready to ride. Though the machine weighed only 150 pounds, it was all that I could do to manage it. However, I stuck to it, and with the exercise and fresh air which accompanied the sticking, I mastered it, and at the same time improved greatly in health. By the second year I was coming along finely as a motorcyclist, and at the end of that period I sold the mount for $50, a good price considering the original cost.

The third year saw me entering the twin-cylinder class. From then on I have ridden the biggest machines I could get hold of. With the twin I began to enjoy the real pleasures of motorcycle riding, for with my wife on the tandem seat we took many enjoyable rides. In 1914, we made a tour of the New England States, traveling like gypsies; stopping at whatever town night would find us; eating our meals in restaurants. We visited Hartford, Boston, the Berkshires, Albany and Saratoga, N. Y., the Adirondacks, Lake George, the Catskills and numerous other places of interest. It was over 1,000 miles and only cost us $28. My wife picked up four pounds and my health improved to such an extent that I was like a different man. This proves that we didn't cheat ourselves.

Becoming a Trade Booster

It was only natural for me to seek a position with some concern in the motorcycle business, and I have been connected with that trade for several years. The largest were F. A. Baker & Co. and the New York Sporting Goods Co., both in New York and both consolidated now. While I demonstrate, sell and talk motorcycles all day long, I do not get enough of them. I look forward to Sunday trips and runs with pleasure. In fact, I cannot seem to be parted from the machines, for I ride evenings, also. In my mind, motorcycle riding is the greatest and best all-around sport today.

The Good Fellowship Feature

The greatest feature of riding is the good fellowship amongst riders. Wherever you go you get the glad hand and a helping hand, if necessary. This is due to the good work of the F. A. M., and a feature for which I would pay many times the one dollar dues if required.

It would be very hard, almost impossible, for me to get along without a motorcycle again, as for business or pleasure I always find use for it. I ride to and from work in place of the crowded cars and the choky subway, and save time in the traveling. I feel much better for the fresh air, morning and night. For business and social calls it beats cars every time, especially in the evening.

For Many Purposes

My machine gives me pleasant and inexpensive access to beaches or summer resorts; it is independent of all time-tables and delays. For fishing trips, picnics, or vacation trips, I find the motorcycle indispensable, and—the biggest thing of all—I find I actually have saved money by its use. Not in the sense that I have a larger bank account, but in what it would have cost me had I taken in all the beach attractions and paid railroad fares, etc. I figure that this would have cost me 50 per cent. more than what it has with the motorcycle.

Even as a substitute for indoor sports the motorcycle excels, summer or winter. It is the greatest moving picture known, for a trip through the country is one continuous "movie." In place of parties, there is nothing that can beat a run with the riders of some club to a nook in the woods or to some roadhouse for a fine dinner or lunch, followed by games and a general good time before going homeward.

SENSIBLE RIDING GIVES LONG USAGE

(Continued from preceding page)

the enamel. Be sure to clean off the spokes, especially close to the nipples, as there is where rust starts. A brush dipped in gasoline is fine for this work.

If you keep the machine clean and bright and care for the "works" as mentioned above, it will be in good shape at the end of a season to get a good value on it for either trading-in or selling to someone else. And the purchaser will get a good used machine for his money. A dealer gives more for a bright-looking mount than for a dingy boat, so act accordingly. Maybe after you have done these things, you will not like to get another machine and then you will have a mount in first-class condition for another season, as a result of your own care.

HOW TO KEEP FUEL CONSUMPTION LOW

A Little Attention to Mixture and Lubrication Will Do Lots Toward Saving Fuel—Running Motor Idle a Big Source of Gasoline Loss

By CAMERON SMITH

REDUCING fuel consumption to most people means keeping a good mixture at all times, and this is correct as far as it goes. But there is more to it than twiddling a jet needle valve or turning an air-valve knob, and while the list is rather long, the necessary preventives require next to no work.

If you run on either a weak or a rich mixture you don't get the pep from the motor, so right there is an incentive to run on the correct one. The spark position has considerable to do with fuel consumption, and this means keeping the spark advanced as far as it will go without knocking at all times. You can get the proper spark position by "feel," and if you don't know how to get the best mixture, the instruction book coming with the machine or obtainable from the carbureter maker will put you wise.

There is lots of fuel wasted in starting and in warming up the motor. You can burn up from 10 to 20 miles of fuel by throttle-dumping on the stand to warm her up with the greatest of ease; all you have to do is to let the motor run more than two minutes. By this, especially if you roar the motor, you loosen the bearings in the way that they shouldn't be loosened and bearings which are worn mean less efficiency and more fuel burned to do the same work. So start the motor and let her run gently on the stand for not over 60 seconds. If that doesn't warm her, she will warm on the road, or needs looking after.

Friction is all right in the clutch, but fork rockers and springs should work nicely, in order to further reduce friction.

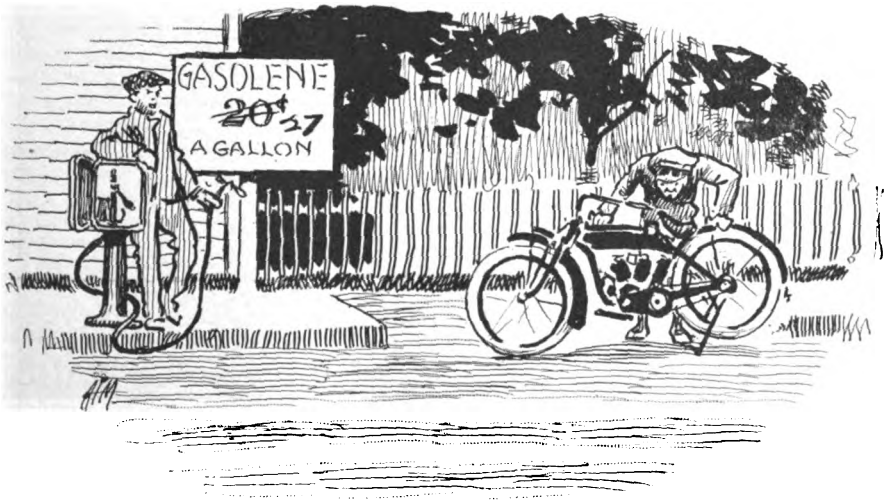
The drives—primary and final—should be kept in line at all times. With the chain from the motor to the countershaft, there is rarely any trouble, and as far as the final drive chain is concerned, a shifting of the rear wheel on its axle will correct any misalignment. Too tight a chain will cause extra friction, too.

Now, you may think that that's far enough. Well, it isn't. Slipping clutches eat up gasoline and do other things. Running the motor idle wastes fuel; don't do it except in traffic. With present-day starters it is not hard to start a motor, especially if it is warm. Riding like Samuel Hill is wasting power and fuel. It takes less power up to a certain point to drive a motorcycle than it does at, say 25 miles an hour, but the explosions are more frequent and part of the charge is just burnt up and shot out of the exhaust without helping any.

Running on Low Gear

Another way of wasting fuel is running on low gear when a higher one can be used. I don't mean by this that the motor should be forced to gasp its way up a hill on high to save running on low, but I do mean running at high speed with the low gear in. This is a monkey trick and one that only proves the ability of the motor to stand up under hard treatment. It wastes fuel lavishly.

Dragging brakes are other consumers of power, so look over them before starting



it means extra work for the motor at every other place. See that oil gets to all moving parts. In the motor, the mechanical pump or drip-feed takes care to keep the oil right and in the gearset a charge of oil will last for a long time; half a season in most cases. The wheels should turn freely on their bearings at all times, but if not, it will pay the rider to renew the lubricant in them. The chain should be free from fur—otherwise a mixture of road dirt and oil—and will run better for a regular cleaning-off with gasoline and a bath in hot paraffin or chain lubricant. The out. Gummy pistons, stale oil and carbon are other lesser fuel wasters, so inject kerosene after each run to cut any soot or oil in the cylinders.

On the road, coast all hills possible, stopping the motor if the hills are long enough. Roll all corners to reduce strain on the transmission and motor. Finally, don't carry the maximum load on the machine that the frame will stand. It may show what the motor can do, but it strains things and puts shafts out of alignment, setting up extra friction and meaning more fuel. If you are a sidecarist, take this to heart.

NOTES OF THE BRITISH SPORT AND TRADE

LONDON, England.—Gasoline is 60 to 64 cents a gallon in Britain and even these prices are cheap compared with the cost in Paris. The precious stuff is up to 84 cents a gallon there! I see that some of you Americans are growling at slight advances, but if you'll compare your varying prices with ours, you'll perhaps feel less inclined to kick up a row. There is serious talk, too, of restricted gasoline supplies for pleasure motoring. The war's the first and foremost thing, of course. You may ask, why not use substitutes?

Benzole, an excellent substitute, is not obtainable in Britain, except for war purposes, so we can't resort to that. As one of the first to boom benzole for motoring, I feel pleased to know that, just when the German war-bomb burst on the world in general, it had come to be recognized as an efficient substitute—cheaper to buy and giving more miles per gallon.

Alcohol Not Thinkable

I used to buy it at 14 cents a gallon in the early days and it was up to nearly three times that figure when war came along. Alcohol is an unthinkable commodity for consumption in a motorcycle engine. Users prefer to drink it at current prices. But the openings are not exhausted because gasoline is ferociously dear and benzole unobtainable and alcohol too costly altogether.

Many men have been trying paraffin—what you call kerosene in the States—good old popular paraffin, which can be had at most any sort of country shops and not merely at motor agents', at one-third to one-fourth the price of gasoline.

I recently came across the case of a rider of an Auto Wheel (the British counterpart of the American motor wheel), who had obtained 160 miles a gallon with paraffin. But for starting up, it is necessary to give a generous injection of gasoline through the compression tap. Once started, the engine runs with perfect satisfaction. The same engine gave 150 m. p. g. on gasoline, so there is a gain of 10 m. p. g. by the use of paraffin and besides, the big saving in first cost.

The Economy Question

Next, a burning topic is the exertion of fitting an extra air inlet to economize gasoline. Is it any wonder that Economy with a capital E is one of the big words of the hour? And with gasoline at fabulous prices? Anyhow, this economy business is forcing men to get as much as they can for the money in mileage. Some time ago I took out a P. & M. (Phelon & Moore) motor cycle of the 1912 period to test it after an overhaul and to sample a new carbureter. A sidecar was fitted and the results had been as low as 40 m. p. g. before the overhaul. Sometimes it was down to 20 m. p. g., which was unbearably bad. After the overhaul the results were:

Distance, 104 miles over all sorts of roads; gasoline used, 1½ gallons; average consumption, 70 miles per gallon. The trip showed what a good overhaul will do, plus a good type of carbureter and an extra air inlet.

Digitized by Google

HOW TO SELECT YOUR MOTORCYCLE

The Choice Must be Regulated by the Kind of Roads to be Traveled, the Weight to be Carried and the General Character of the Service That Will be Expected

By COURIER

REGULARLY at the beginning of each riding season, I am asked both by letter and word of mouth as to what is the proper mount by any number of riders. In past seasons, when there were but two types of motorcycle available—the 7-8 horsepower twin and the 4-5 horsepower single—the choice was very simple; it was one or the other.

There being only two types, lots of riders had to use machines for which they were not suited. One typical case was that of Bob T., who weighed 118 pounds and worked indoors all week long. He first used a heavy twin, but, while able to *ride* it, could not handle it after a 100-mile run. Bob bought a single-cylinder type soon after purchasing the twin, but this weighed 260 pounds and he still found it a bit too heavy. When the lightweight first came out, he bought one and it suits him to a T. It handles easily and weighs less than 130 pounds.

Where the Lightweight Fits In

Now, whether you are a trained athlete, a "husk" who can do the "haymaker's lift" all day long, or a bank employee who is on a stool all day, the lightweight is the type for you for solo work in town or the suburbs. This is provided that roads are anyway good. The lightweight gets there; it is economical and it has lots of power with relation to its weight. Anyone can handle it, and if they can ride, can go anywhere on it, given a two-speed or three-speed gear.

There has been a sort of worship of big power until recently and the ability to burn up the roads was looked upon as way ahead of any other quality in a motorcycle. Well, most of us like to travel fast; I know I do, but I am not going to use a husky twin where a lightweight will do the work any more than I would hitch three horses to a buggy.

What a 2¼ H. P. Can Do

Because the lightweight has a small motor is no sign that it won't give good service. If you want to know what a 2¼ or 2½ horsepower motor will do in endurance work, look, for example, at the results of the 1907 F. A. M. endurance run, New York to Providence, R. I., 350 miles. Ten riders finished in the single-cylinder class and seven rode 2¼ horsepower mounts. Another finisher used a 2 horsepower and the remaining men used 3 horsepower singles. This run incorporated a hill-climb, which eight of the men ascended without trouble. This was, remember, before the days of clutches, stands and two-speed gears. A 2¼ horsepower single climbed Mt. Wilson near Pasadena, Cal., on May 26 of that year, too. This is some proof of the power of the 2¼ single—and we have improved the construction of motorcycles a bit in the last eight years.

The present day lightweight, weighing less than the 1907 "regular" singles, is finely adapted to suburban work and light touring. As certain parts of the country are inclined to be hilly, a two-speed or three-speed is desirable, but not absolutely necessary. The lower gears, of course, come in handy in city traffic, in hill-work and where the going is heavy, in addition to starting. This applies whether the motor is two-stroke or four-stroke. I will even go so far as to say that for all but the hardest kind of endurance, or for trans-continental work, the lightweight is a first-class mount and should be chosen where speed is not the main thing.

The accompanying article is an exceedingly valuable addition to the "How" series. It will assist the purchaser to select a motorcycle that will leave him a red-hot booster at the end of the season. To make him such an enthusiast it is only necessary to give him the kind of mount he needs; the motorcycle itself will do the rest.

Where more power is desired, the next choice is the big single. It is a steadier runner than the lightweight because of its greater weight and will do the work of the smaller machine, but at greater expense for fuel and oil—and tires. In ordinary riding in the country, it is not necessary to have a two-speed or three-speed gear, but, of course, a variable gear is of value on any mount. The big single can be and is used for touring of all kinds, over some pretty rough country at that, but, of course, it is inferior in speed to the twin.

In choosing between the lightweight or the big single for what may be called runabout or short-tour service, the conditions of the roads to be traveled should be taken into account, also the means for storing the machine. If the extra speed of the big fellow is desired and weight makes no difference, the choice is already made. If, on the other hand, you like to go along at a nice, comfortable pace, knowing that you can get up any reasonable hill you meet and can carry the machine by hand if necessary, then the choice will be the lightweight.

Facilities for Storing

The means for storing also figure in the choice. A lightweight can be taken into the house and stored in the hall, cellar or some other room, but this is not always possible with a larger machine. To take 280 pounds of motorcycle up and down a flight of steps is considerable work, whereas 130 pounds or less would be an easy matter. To those who have stable room or facilities for storing any machine, the choice rests solely on the conditions named above.

For business purposes—collecting, inspection, messenger service, canvassing and the like—the choice ranges between the lightweight and the big single once more. Of great consideration in such cases is the nature of the roads to be gone over, and the rougher these are and the more speed which will be necessary, the more should the choice be made of the big single. A variable gear is desirable for such work, but not absolutely necessary. Such a mount can, of course, be used for both business and pleasure.

For Business and Pleasure

I haven't included the big twin so far, for this type of mount finds its best application where roads are heavy, where speed is essential and where strict economy is not looked for. It costs more to run a twin for a given distance than it does a big single, and with gasoline going up in price at intervals, it may make a difference to a modest pocketbook whether the twin or the "one-lunger" is used. However, where the mount is employed in business and pleasure and a

Digitized by Google

passenger is carried, a twin can be considered preferable to a single.

For tandem work, get a twin or a variable-gear single. Both will do the work in ordinary country. Of course, if you want smooth running and more speed, the twin is the mount. There is a satisfaction in knowing that, barring your own carelessness, there will be no hill or road encountered that the big twin will not take, even in the most mountainous country.

However, there are hundreds of riders with "one-lungers" who take tandem passengers regularly and get along finely with the increased load. In fact, right in my neighborhood is a couple who run up a big mileage tandem on a 3½ belt-drive single during the season and rarely have to dismount for hills.

Touring Calls for Powerful Mount

Long-distance touring, with heavy luggage, really calls for a 7-8 horsepower mount, twin or four-cylinder. I must state right here that what has been said before about the big twin applies equally to the four-cylinder mount in all cases. The extra power (as compared with the big single and smaller motors) is of value where road conditions are poor. It takes a mighty fine rider to make interstate tours on a single-cylinder machine and, possibly, the majority would get more pleasure from the twin or four-cylinder mount for such work.

There is another type of mount which deserves much consideration: the medium-weight twin. At present there are not many of them abroad as compared with the singles and big twins. They serve the same purposes as the big singles (runabout, business and pleasure), and also should be fine for tandem work in give-and-take country. These twins and the big twins and four-cylinders bring up what I call "passenger touring," i. e., where a sidecar is employed.

Sidecar Requirements

At present there is only one kind of sidecar work—heavy touring. The big twin or the four-cylinder, both with two or three-speed gears, are the only ones to be considered for this work. It can justly be said that these mounts, properly geared (not less than 4.1 on high), will take a sidecar and passenger anywhere that the wheels will track on the road surface.

However, there are many possibilities in light sidecar work, using a medium twin or big single, with a sidecar lighter than the majority used at present. I know of a number of experienced riders who use a big single with three-speed gear with a standard sidecar for touring, but the roads where they ride are pretty good as to surface. Light sidecar work, with a 5-6 twin or single as the power plant and a sidecar to suit, will eventually become popular before many seasons pass, and the rigs will go anywhere that the 7 horsepower rigs will travel, too.

Now that we have taken into consideration what we are going to use the mount for, what kind of roads we will travel and whether high speed is an essential, the next consideration is, can the rider handle the machine? He certainly can handle the lightweight, big single and medium twin for solo work, but how about the heavy twin or the four-cylinder type? It is not hard to *ride* any machine, but the handling of a heavy one in sand or mud may prove a bit difficult to men who do not keep in fine training at all times; so this ability should be given considerable thought before a choice is definitely made. As far as the sidecar is concerned, a 100-pound rider can tool it along.

Your Needs at a Glance

I am putting the recommended types of machine in the following table for ready reference:

Runabout work—Lightweight, big single and medium twin.

Business purposes—Big single, medium twin or lightweight. Big twin or four-cylinder for heavy work and speed.

Tandem riding—Big twin or four-cylinder.

Sidecar work—Big twin or four-cylinder.

Light sidecar work—Medium twin or big single.

HOW TO KEEP YOUR MOTOR AT ITS BEST

Cleanliness of the Powerplant Reduces the Necessity for Tinkering to the Minimum; Any Thoughtful Rider Can Make the Few Adjustments Ordinarily Needed

By JOHN O'BANNON

IT WAS not so long ago that motorcycling and dirt were considered to be synonymous terms, and to the non-riding element, the greasy being alongside the road with the stained mount was always engaged in making repairs. There is less of this prejudice evident as time goes on, but the spectator really had some excuse for figuring that the man working on the dirty machine was making repairs, for he was neglecting the cardinal principle with regard to machinery of any kind—keeping it clean, eliminating the grime, grit and grease that make for rapid wear.

That's the first thing to do to keep your motor at its best—keep it clean. From the grips on the handlebars to the rear sprocket, keep off the dirt and keep the lubricant on the working surfaces. This sounds like something of a job when you consider the different parts of the motor, but it is only a few minutes' work at the most, done best after the ride is over for the day.

This "How" article is intended for the present rider as well as for the prospective recruit. The former will derive many helpful pointers from it and the latter will be convinced that keeping a motorcycle in tip-top shape is a matter that need not bother him in the least.

Dirtiness Causes Trouble

I want to show you a few places where dirtiness makes a difference in the running of the motor—and a bad difference at that. Right around the push-rod guides you will often see dribbles of oil down the gear casing or crankcase. Outside of indicating carelessness, it apparently does no harm, but oil collects road dirt, and this does no good in the guides, where some of it eventually arrives. The dribbling oil also gets on the push-rods and gets burnt there, cutting the guides or making them stick.

One of the indications that the valve stems are being lubricated is a "weeping" of oil at the lower end of the guides. More chance for furring up and quick wear, not to mention that this is an indication of burnt oil in the cylinder. A rusty or dirty cylinder—and you can see lots of them on the road—spells loss of radiating power and may mean overheating some time when you need a lot of low-gear work.

Gasoline for Cleaning

I guess that's about enough for the present. The cure of the oozing oil is gasoline on a paint brush or from a spray, followed by a wiping-down will keep things up to snuff in this direction, and it's not a long or difficult job, either. You don't have to be a graduate mechanic to do it; in fact, there is really no technical skill needed, once a motor is in fine condition, to keep it in top-notch form. This is one thing that the new rider or the prospect should bear in mind and that every other rider should tell these two when getting them into the pastime.

A motor runs best when it is fed the correct mixture, the proper amount of oil, and when the clutch and brakes work properly. If there is a two-speed or a three-speed gear, this should operate easily and the tires should be kept pumped to the correct pressure. As soon as you allow dirt or other foreign matter to get at any part, you set up friction—and friction means wear. So keep the motor and machine clean.

Mixture and Oiling

There is nothing formidable in the above list, even for a green rider. The mixture, for instance, usually needs little attention when once set, but if the motor doesn't sound snappy, a slight turn of the pet needle-valve will bring it to concert pitch. You can hear the sound of the motor when the cutout is opened and make the adjustment accordingly. Practically every motor has the oil feed adjusted for normal work when new, especially if there is a mechanical pump fitted, so unless extra speed (above 40 miles an hour) is wanted, no attention need be paid to the apparatus, except to keep plenty of oil in the tank. For extra speed, the hand pump should be used, a "gun" every five miles being more than plenty. Go over the various other moving parts on the machine, such as the fork-rockers, clutch lever and brake pivots with the oiler at intervals.

The clutch really ought to have only two positions—in and out. The only time that a clutch should slip at all is when starting off. I don't mean that for riding you should have the clutch in so snugly that the drive is jerky, but in enough to do away with slipping. You can regulate the tension of the clutch when riding so that the drive will be smooth and positive, for practically every machine has a hand lever for the purpose. Above all things, don't try to run with the clutch slipping, for it wears the plates and discs out too quickly, besides not doing the motor any good, or the drive, either, for that matter. The old idea of the clutch being a variable gear was allowable when there were no variable gears, but even then it was monstrous. Today it is an unnecessary survival of the dark ages of motorcycling and there is absolutely no excuse for it.

Oil in Gearset

New oil at intervals of about nine weeks of ordinary running will be plenty to keep any gearset in shape. I say ordinary running, for if hard work in which low or intermediate gears were used considerably has been done, the oil in the box will get stale, and need replenishing sooner. In fact, after a long and hard run, it would not be a bad idea to drain off the oil and put in a fresh charge right away. This is about five minutes' work, or ten at the most, and merely means taking out the drain plug and the filler plug and putting them back again. Nothing difficult or wearying about this, is there?

The tires need next to no attention, unless they leak at the valve. This leakage is a rare

Digitized by Google

thing nowadays, as the inner tubes have been brought to a state pretty near perfection and are put in carefully. A rough way to estimate the pressure before starting out is to try and pinch the tire or to strike it with the fist. If it sounds hard and dull when struck, it is all right. However, a pump with a gauge is a fine thing, and most good shops have one. Keep the tires up to the pressure given by the makers; you will find this in the instruction book coming with the machine.

Question of Tools

In the tool line, the kit coming with the machine can be depended upon to care for the nuts and screws used on the mount. However, the list should include the following in addition to the special wrenches coming with the machine: magneto wrench and gauge; double chain repair link; half chain link; coupling link for chain; inside blowout patch; chain tool; 6-inch monkey wrench; adjustable pliers; round-handle screwdriver; small coil of copper wire; roll of tire tape; small sheet of emery cloth; cotter-pin extractor and plenty of patches, with a tube of solution or Jiffy. All of these will go in the tool box on the machine, but, if not, several wrenches or a wrench and screwdriver can be carried in the rider's pocket.

Don't buy cheap oil; it never paid anyone yet, and you in particular won't be the exception. Personally, I use one brand, but I know of four others that will do pretty well, and so if I should get low in the oil tank I can always get something good for use in the motor. I strongly advise buying your oil in the sealed can and using it from the can in place of buying it here and there. It will ensure your getting the right thing and not an inferior article which costs the oil-man less and may put the kibosh on your bearings. Go to recognized dealers or fuel stations for your gasoline, as wayside places, like groceries or farms, often water the gasoline, and water is better to wash in than to feed to the cylinders.

Going Over the Nuts

Now that you have a kit of tools, use them when necessary. About once a week it is advisable to go over all bolts in the machine. By this I mean just to put the wrench on them to see if they are perfectly tight.

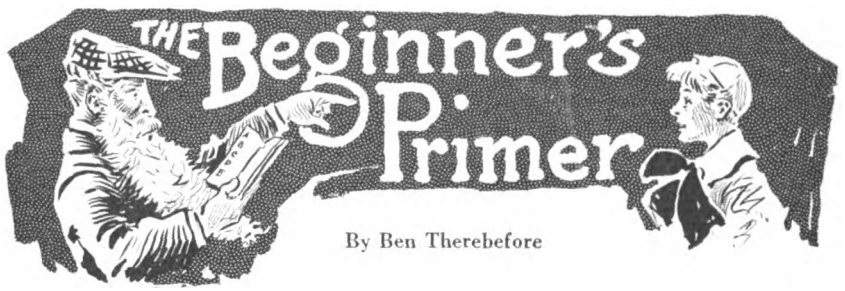
This is a precaution, really, as most nuts are lock-washered these days and don't loosen except after very hard service. You will probably find that the nuts are all in good, tight condition, but there might be something that you overlooked the last time which it would not do to have loose for long. The going over will take about ten minutes at the most.

With a sidecar combination, the main thing is to keep the sidecar in line: sidewheel parallel to the rear wheel of the motorcycle both vertically and horizontally, and its axle, as near as the construction will permit, in line with the axle of the rear wheel. Don't toe the rig in or out, in spite of some fellows saying that it steers easier those ways: you wear the tires on the side instead of on the tread, besides straining the whole outfit. There is really very little to do to the sidecar, even in the cleaning line, for the vehicle really takes care of itself. Of course, a dirty-looking sidecar won't be attractive for "the girl" to ride in, so go over the outside with a rag and beat the upholstery to get the dust out, using a dry cloth to wipe the padding off.

Very Light Work

I often wish that some years ago things would have been as easy for the rider as they are today. Then we had to perform regular repairshop jobs and wear special clothing to present anything like a decent appearance. Today, the machines are so dependable, that only a trifle of looking after need be paid to them, and this much—it's mighty little compared to what the old-timers and the automobile men did—should be an actual pleasure to all riders. Most of it can be done before the motor cools after a run, when mud is soft, and this brings me to something with regard to the cylinders themselves. Give each cylinder a gun of kerosene when through riding—before the motor is cold—and you will find an absence of carbon deposit and hard-starting as a reward for the few seconds necessary to shoot it in.

I took a man's motor down with him the other day, after 15,000 miles of riding. This was the first time that his cylinders had been off since he bought the mount in 1914. The motor was clean as a whistle, but the bearings were a little worn after that mileage. He used kerosene after every ride, and was able to run it that far without overhaul or removing the carbon. It's worth while to use the gun of kerosene, I guess.



WHEN Bob told me that he had induced the mater to come across with the price, and would no longer be a push-bike artist, but was ready to join the ranks of the initiated who toil not but certainly do spin—albeit he was going to straddle a one-lunger—he also told me that he was ready to listen to any advice that, as a veteran, I might be pleased to give him. To get concrete facts he asked me to tell some of my troubles.

"Promise not to monkey with your engine, magneto or carbureter except in the presence of experts or dire necessity," said I, "and I will lay bare the secrets of my soul, and tell you of my troubles."

"I promise," said Bob.

"I have never had engine trouble; mageto trouble but once, and my carb. has behaved itself as well as the other two," I went on, "and that is because I have followed the old injunction to 'let sleeping dogs alone,' and have carefully refrained from interfering with these useful and reliable articles, except for grinding an occasional valve. They might well be called the heart, lungs and stomach of the machine. Like your own similar organs they are well and carefully made and adjusted and if you don't maltreat them, and let them alone, they will do the same by you."

"I promise again," said Bob.

Little Troubles Are Mean Ones

"The meanest kind of troubles," I continued, "are the little things that are hard to locate; the squeaks you can't find and the slow leaks in your tires. Those two things caused me more trouble and annoyance than anything else until I found out how to handle them. I tell you the man who invents a tire as reliable and as nearly foolproof as the rest of the modern machine will make a fortune.

"Keep your tires up to pressure recommended by the makers. My troubles began by not inflating my tires enough—using the kick-'em test instead of a pressure gage. The natural result of this was stone bruises, which meant repairs on the road. Then I pumped up the tire with the hand pump. It had been clipped to the frame and exposed to dust and dirt for some time, so I got a fine piece of grit in the valve. Of course it produced a slow leak, so I had to pump up every two or three days. I finally had to take that tube out and put it in water to make sure of the leak, so now I know enough to have a small cork screwed on to the end of the pump tube to keep it clean. And, incidentally, I learned too, to be sure that the little rubber in the valve cap didn't touch the valve stem—for that is another nice way to get a slow leak.

"Maybe I've had more than my share of tire troubles. On one tour I figured they came on the average of about every 100 miles, while my partner had none. I used up our last patch a long way from anywhere but I didn't worry for I had a rubber raincoat and I knew I could cut all I needed from the tail of that if worst came to worst.

Get Big Cement Can

"There is one thing you should do at once. The cement in your tire kit is in a small lead tube. Throw it away and get a man-sized can for a few cents. If you don't you wont have any cement when you want it, for a few miles riding will wear a hole through that tube; then in comes the air and when you come to use it, the cement is dried up solid. If you want your patches to hold forever, follow the directions on the can; if it says to wait for 10 minutes for the stuff to dry, or to use two coats of it, do so. It will pay in the long run, for a slow-leaking patch is like Sherman's definition of war.

"About the squeaks. The spring fork is the worst offender, but if you don't ever let them begin you wont ever have to find any. Apply lubricant whenever and wherever your instruction book calls for it, and the squeaks will take care of themselves. Don't forget to fill up your chain with graphite and oil every little while, too."

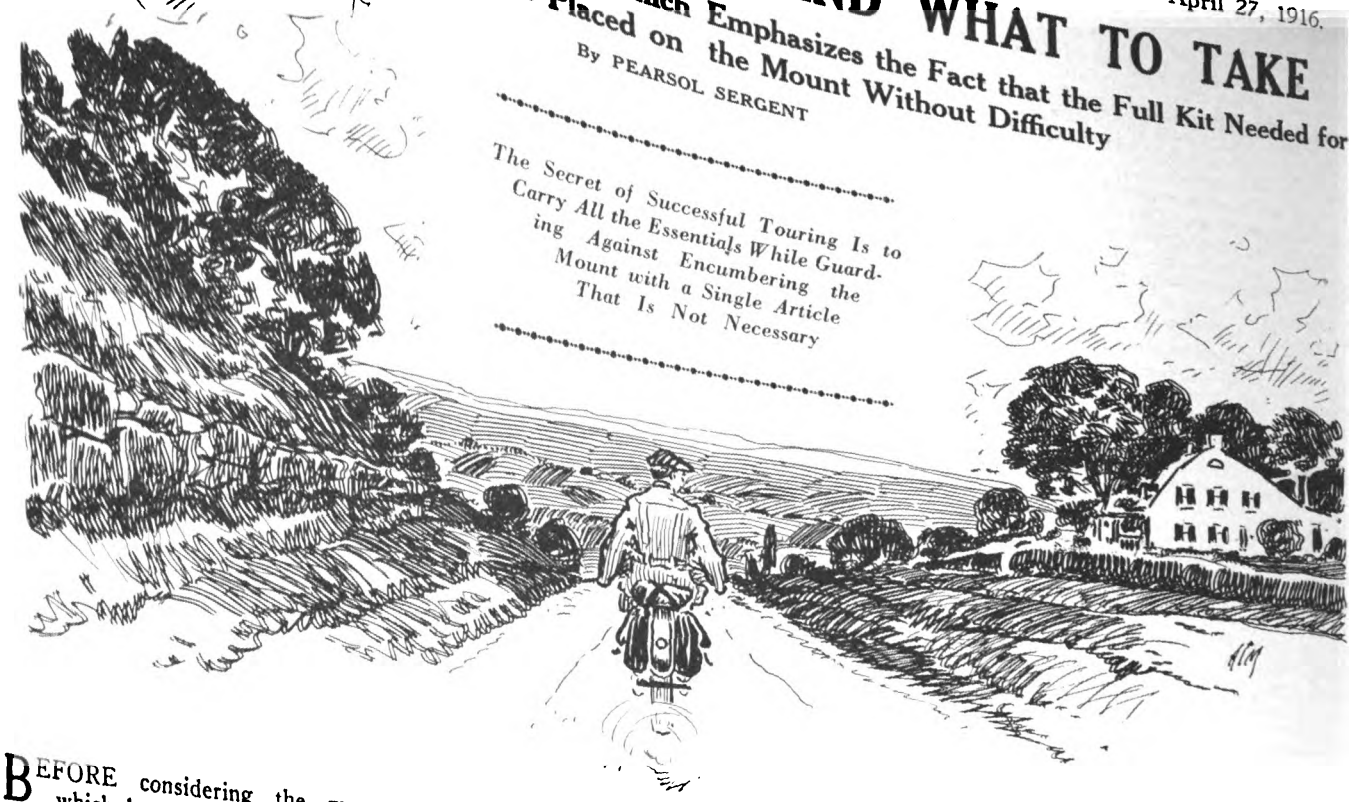
CYCLE ILLUSTRATED April 27, 1916.

LUGGAGE AND WHAT TO TAKE

For the Motorcyclist Which Emphasizes the Fact that the Full Kit Needed for any Journey Can Be Placed on the Mount Without Difficulty

By PEARSOL SERGENT

The Secret of Successful Touring Is to Carry All the Essentials While Guarding Against Encumbering the Mount with a Single Article That Is Not Necessary



Here's another corking article in the "How" series. It shows what a simple matter it is for a motorcyclist to carry every article he needs for a trip and still keep his mount trim and up to the mark. It's very easy for the motorcyclist to travel in comfort, and this article gives the practical observations of an experienced rider.

BEFORE considering the manner in which luggage is best carried on the machine, it is necessary to decide upon what to take for a trip and what to leave behind. For a day's jaunt, or even one of two days, the "kit" will usually include a tooth-brush, pocket comb and a couple of extra handkerchiefs, and the rider's pockets will naturally take care of all of these essentials. But for a trip lasting a week or more, there will be more needed: extra shirts, socks, perhaps another pair of shoes and a shaving kit, as well as a blanket and some means of protecting the rider from rain.

Long experience with luggage on motorcycles, horses and small automobiles has led me to favor a pack rather than a bag of any kind. For the solo motorcyclist, a suitcase or grip is unhandy in several respects. First, it takes up too much room on the carrier, and makes it harder to mount and dismount, as those who have tried one know pretty well. Then, it puts too much weight back of the vertical line of the rear axle and is a skid-producer in soft going. Unless wooden or metal braces are used when the suitcase is fitted, the straps will bulge it, and the case will gape in spots and be worth next to nothing after the trip. It takes time to adjust the braces and straps, and unless you wind the case with a number of straps, it will shift and in rough going may come off, leaving the job to do over again. Just try this once or twice and you will boost for some other form of carrying luggage.

Making Up the Pack

Now for the pack. The toilet articles can go in a roll or in a stout fibre box. The spare socks and handkerchiefs can go in the pockets of the spare shirt. The spare shoes, sou-wester hat and blanket come next, and finally the rubber coat, oilskins or poncho, according to the taste of the rider. This is how to make up the pack:

Packing for Compactness

Lay out the poncho or rubber coat flat. Fold the blanket and lay it on the poncho; then lay the spare shirt (with socks, etc., in the pockets) near the center of the blanket. Put the sou-wester hat and shoes close to the shirt, and the box of toilet articles on top of the shirt. Get a stout rubber band or a short leather strap, and a long strap. Roll the shirt around the toilet box and strap it with the short strap or rubber band. Next roll the blanket round the shirt and its enclosed box, the shoes and the sou-wester, and finally fold the poncho over the whole business. You will have a neat pack not over five inches high. Strap this to the luggage carrier with the long strap, using it from front to rear and left to right. Keep the buckle at the rear as far as possible when strapping up. You can flatten such a pack out on the carrier until it is not over four inches deep by careful rolling, and the pack will not interfere with mounting to any extent.

You now have a kit that will be readily available at any time, in short order, and one which will carry enough luggage for a trip of 1,000 miles or more. You may not want to camp out, but if you have to, there is the blanket and the poncho is ready for use as a ground-sheet. When it rains, you open the pack right on the carrier by taking off the long strap, take out the sou-wester and pull off the poncho, then wrap the blanket again and strap it down as before. The blanket will keep the rest of the pack dry, and the rider can don hat and poncho and keep dry himself.

I have found the spare pair of shoes to come in very handy. The regular shoes are light-soled, while the spare ones are regular pedestrian boots with closed tongue, like an army shoe. If the rider runs into a stretch of poor weather, he can shift shoes at the first opportunity and get better protection for his feet. And speaking of shoes, I want to drive home the fact that both pairs should be very comfortable, as nothing makes a rider more tired than poor-fitting shoes.

Poncho Is More Desirable

I favor the poncho rather than the slicker. The latter is not neat when folded and is likely to crack in the folds. It needs oiling once in a while to keep it in condition. The poncho, which is a rubber blanket with a fly in the center, can be put on in a jiffy and will hang over the rider's body and part of the legs. It can be used as a ground-sheet when sleeping out, and will serve to

Digitized by Google

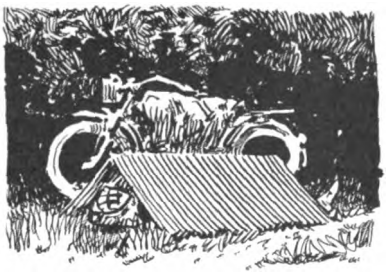
cover the vital parts of the machine at night or during a rainstorm. You can roll a sou-wester hat in a poncho and strap to the handlebars for short distance work, and you can make a compact and neat job of it.

Small panniers, arranged one on either side of the carrier, are favored by many tourists, but there are certain qualifications concerning them. The first is that they are usually too big. If a rider carries a kit consisting of the luggage mentioned above, he will pack an ordinary pannier pretty tightly and not have enough left to fill the other one. The load in the second pannier will shift, accordingly, and the machine be out of balance. If the second pannier is packed with other things, a considerable amount of unnecessary material will be carried.

Use Leather Panniers

Now, a pannier made of duck or some woven fabric is all right in the show-window, but it rarely lasts long under service. As a leather proposition, it will cost something, also. So I favor the pack for the solo rider. If, however, the motorcyclist wishes to carry part of his kit in leather panniers will be as good as any with spare inner tubes and parts, the other means for carrying luggage.

When a sidecar is fitted, the luggage proposition changes somewhat. A small suitcase can be carried on a metal grid fitted to the rear of the car, or a handbag can be tucked in close to the seat, without interfering with the passenger's legs. There will be no real need to load up the sidecar for male passenger and rider, for the rider can carry his pack on the carrier, while the passenger can utilize a bag in the sidecar. For the fair tourist, a 22-inch suitcase laid flat on the sidecar floor or lashed to the inside at the left will carry a goodly amount of clothing, if no luggage grid is fitted to the car at the rear, but, of course, it is better to have the sidecar clear if possible. In the nose can be carried a rolled mackintosh or rug in which are small articles, it being desirable to strap this roll to the footrest in order to prevent it shifting.



For the tandem outfit, the rider's and passenger's kits can be carried in a pair of army haversacks, slung pannier-wise in rear of the passenger's legs. Each army haversack will cost about 50 cents, with leather straps and the necessary hooks. The haversacks should be secured to the mudguard braces by short leather loops and attached to each other at the rear by a strap and buckle. This strap should pass over the guard close to the stand latch. In case blankets are carried they can be rolled and carried by the rider and passenger like the regular army blanket roll, or strapped back of the tandem seat. The ponchos and sou'westers are carried rolled on the handlebar or cross-tube, around the Prest-o-lite tank if the latter is supported in either position.

The Value of Traveling Light

The main idea is to travel light, taking just what is needed and no more. With the packing arrangements indicated above, the motorcyclist and his mount will present a neat appearance and the things will be there until taken off by the rider, not shed along the road after some hard going. Packing the kit in each case is a matter of moments, and the packs in no way interfere with the rider. Furthermore, the cost is low, and that counts a lot these days.

LATEST NEWS NOTES FROM ACTIVE CLUBS

NOVEL FEATURES IN WORCESTER 24-HOUR

Novel Features in Worcester 24-Hour Class for Lightweights Instituted and Secret Checks Are Done Away With

WORCESTER, MASS., April 24.—Several degrees of novelty attach to the fifth annual 24-hour endurance run of the Worcester M. C., which is scheduled for Saturday and Sunday, June 10-11, over a course of 475 miles reaching from this point through the White Mountains of New Hampshire to the Canadian border and return. This is the first time, for instance, that lightweights have been recognized by the Worcester organization, a special division being arranged for the little fellows which will cover a course about half the total, stretching to Profile House and back. By way of attracting a greater entry list, riders from Keene, N. H., and Manchester, N. H., and nearby districts are invited to join in, the Keene division to start early and join the main body at Worcester, and check out when they reach Keene on the return trip. The Manchester riders, on the other hand, will not start until the endurance run reaches Manchester, but will have to continue riding after the others have checked in at Worcester and finish their ride at Manchester again.

The secret control has been eliminated, although the contestants will receive a consistency rating based upon their showing between two of the controls, the riders being informed when they enter the consistency district that their time is to be taken somewhere between the entering and leaving control. At the same time, by way of counteratcing the tendency on the part of some riders to press ahead at an unreasonable speed, a penalty of 250 points is to be the reward for any rider timed 30 minutes in advance of his schedule at any point on the course, and suitable flagging stations are to be established for timing the riders in between the controls.

READING CLUB MAY FORM LADIES' AUXILIARY

READING, Pa., April 24.—It's a toss-up whether the decision of the Reading Motorcycle Club to stage a two-day run to Philadelphia and return for Saturday and Sunday, May 13-14, or the one to look into and consider the formation of a ladies' auxiliary was the most important accomplishment at the last meeting of the body.

The run will partake more of the feature of a sociability run than of an endurance contest, a running schedule which will permit of ample sight seeing being adopted. If the ladies' auxiliary is formed, and a committee of three, comprising Charles F. Kinsey, William Buel and Albert Rhodes, was appointed to give the matter full consideration, the wives, sisters and friends of the members will be free to joint the new division.

SWENSON ISSUES CALL FOR "HERRING RUN"

PROVIDENCE, R. I., April 24.—One of the big institutions of the year in motorcycle circles in this city will be the run, known as the "Herring Run," of the Providence club next Sunday to Taunton, Mass. This event always brings out a large number of riders, and as it is free-for-all, with nothing formal about it except the hour of starting, 10:30, it makes the most enjoyable sort of outing.

The call for the run has just been issued by B. A. Swenson, "The Indian Motorcycle Man." He has been so busy making sales this year that he would have been unable to make the trip any other day than Sunday, so that is the reason for having it that day.

The reason for the trip is the sight of the herring at Taunton which run up the rivers at this period of the year. People drive in motorcars and come by trains from all directions to see this. It is said the fish are running greater than ever before.

SEATTLE CLUBSTERS ENJOY RUN TO CEDAR FALLS

SEATTLE, Wash., April 17.—Some thirty-odd members of the Seattle Motorcycle Club last Sunday traveled through the mud and slush to Cedar Falls and return. A light rain which fell through the entire trip made the roads unusually slippery and impeded the progress of the riders in many ways. Despite weather conditions the round trip was made without serious mishap.

The large party left the Queen City on the 8:15 ferry for Kirkland, enjoying the first stage of the journey across beautiful Lake Washington. From Kirkland the members motored to Snoqualmie Falls, where a brief sight-seeing excursion was indulged in. At Snoqualmie the motorists were met by Merwin Fogh, a member of the club who acted as guide during the remainder of the trip.

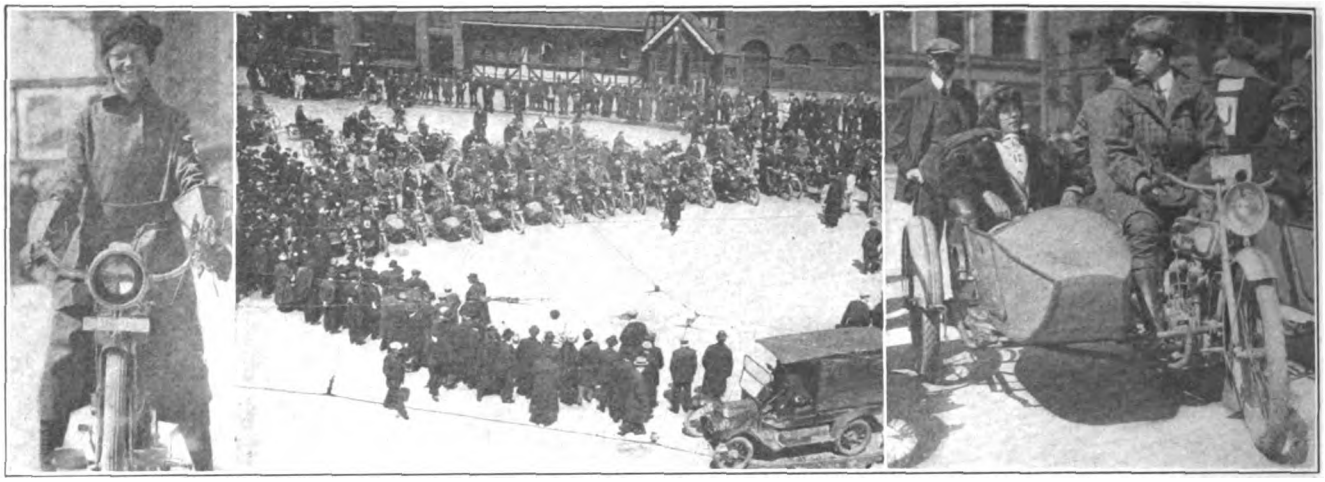
WORCESTER RUN OPENS BAY STATE SEASON

Annual Patriots' Day Event Is Well Attended, Although Weather Conditions Are Unsatisfactory—Affair Dates Back to High-Wheeler Times



The Only Lightweight and the Only Solo Girl, Miss Haines on the Little Indian. Middle: Start of Company A. Right: Mrs. Jes Campbell and Jes Himself Went Through on Their Harley-Davidson Sidecar Combination

BOSTON, Mass.—The official outdoor season of the Bay State M. C. was opened on Patriots' Day, April 19, by a run to Worcester, in which 175 machines and 200 riders participated. The weather was chilly, but all hands enjoyed themselves, nevertheless.

President Jes Campbell and Road Captain C. W. Stanley took charge of the riders who assembled in Park Square at 10 a. m., and as fast as the participants came in from the suburbs and neighboring cities, they were formed in companies of 25 machines, with a captain in command of each. The procession through Back Bay and into the country was perfect and created a most favorable impression by its orderliness and size.

When Marlboro was reached a detour was made to Wachusett Dam, some 10 miles off the main road, the members of the Worcester M. C. were met with there. The Bay Staters were escorted into Worcester by the local clubsters. A fine dinner was spread for the Boston riders at the State Mutual building.

At Worcester, where the Bay Staters had invited clubs from all over the State to join them, there were some 150 machines and Worcesterites had an impression that all the State was visiting their city on wheels. The return run to Boston was as successful as the run out and the riders disbanded at Park Square at 6 p. m.

The April 19th run from Boston to Worcester and return has been an institution ever since the days of the old "ordinaries," it being in those days the favorite "century" with which to open the season. Down through the days of the old lumbering safeties and light, high-geared bicycles came the tradition of the Worcester run. The first regular motorcycle run held by a Boston club took place April 19, 1908, when 20 noisy machines participated.

Nineteen hundred nine was a banner year for the run, for at that time a motorcycle dealer offered a free dinner to all motorcyclists who went on the run. There were 264 riders at dinner. Snow and cold prevented the 1910 run. The Boston M. C. was formed that year, and it was under that organization that the 1911 and 1912 runs were held.

With the formation of the Bay State Motorcycle Club in 1913 the run began to boom, there being 175 machines that year, 250 in 1914 and 300 last year. Weather conditions prevented a better showing this year.

CALLING THE AUTOMOBILE MAN'S BLUFF

Henderson Motorcycle Official Offers $150 in Wagers That Product of Boasting Motorcar Representative Cannot Complete Grand Rapids Run

DETROIT, Mich., April 25.—Faith in the good old motorcycle in these parts is unbounded. That much is demonstrated by the offer of Paul J. Bailey, of the Henderson Motorcycle Co., to wager $100 with a local dealer handling a light automobile that one of his cars cannot enter the Grand Rapids endurance run scheduled for July 2, 3 and 4, and running on the same schedule and under the same rules as the motorcycles, finish with a perfect score. And furthermore, Bailey also offers to wager another $50 that the car will not be able to finish within 24 hours of the scheduled finishing time for the motorcycles. Bailey extends his offer to include any automobile on the market.

The wager grew out of a series of circular letters which the automobile dealer in question has been sending to motorcycle riders in Detroit lauding the automobile and "knocking" the motorcycle. Among other things the letters stated boldly that the particular car handled, considered all in all, is superior to any motorcycle built. It is this statement particularly which aroused Bailey's ire and which resulted in his challenge to the automobile people to prove it.

Whether or no anything will come out of the challenge is at the present time a matter of conjecture, but even should the dealer take up the offer, which is altogether doubtful, Bailey is not worrying about losing his wager. Nor are motorcycle folks hereabouts who know the road conditions and the possibilities. As a matter of fact, there are at least two other motorcycle enthusiasts in Detroit who are willing to take Bailey's end of the bet for the same sum, if the automobile dealer can be induced to take him up.

INDIVIDUAL SADDLES USED ON TWIN-SEAT

LOW riding position with ease in attachment and provision for the riders to use their pet saddles are features of the Twin-Seat, produced by the Pioneer Manufacturing Company, of Milwaukee, Wis. It is light in weight without sacrificing strength, and it is claimed that it will fit any motorcycle.

The Twin-Seat consists of two brackets made from steel tubing, one being attached to each side of the motorcycle frame. To each bracket is brazed a regulation saddle post, to which the riders can fit any saddle desired. This feature of construction enables the users to adjust their seats to the height they desire, rather than have to accommodate themselves to a fixed pair of seats. When attached, the device remains fixed in place but can be readily removed.

Those interested should communicate with the company at Milwaukee, or apply to their local jobbers. Attractive terms are offered to dealers.

HARLEY-DAVIDSON GUN OUTFITS PROVE ABILITY

Under Trying Conditions of Operation Automatic Rifle Equipped Combinations Show Military Value in Wisconsin Guard Try-Outs—Milwaukee M. C. Hears Address on Guns' Performances

MILWAUKEE, Wis., April 25.—The members of the Milwaukee Motorcycle Club went into the much discussed question of preparedness thoroughly in its last meeting, when Lieut. Ralph Hibbard, of the Wisconsin National Guard, machine gun company, gave an address and explanation of the varied accoutrement used by his company in warfare.

It was Lieut. Hibbard's company that gave the new Harley-Davidson machine gun equipment its initial tryout, and at the time the test was made several of the motorcycle enthusiasts of Milwaukee were interested spectators. The machine gun range is on the Racine County line and off of the famed Chicago-Milwaukee highway. The range highway branches off right at the most disreputable stretch of road in the entire country, the big blot on the intercity route.

On the day of the test a heavy rain the night before, together with the softening of the ground through receding frost, made a combination that could not have been worse for testing out any kind of vehicle. Even the patient pack mule would have balked at the sticky, black gumbo that confronted the motorcycle guns before they could get onto the range proper, and the soldier boys were plastered with mud from head to foot.

When the Gun Started

It was after the machine gun got "talking" that all thoughts of wet feet and long stretches of mud still to be faced on the return trip were forgotten entirely. For many of the spectators it was the first opportunity to see the Bennet-Mercer automatic rifle in action, and the way she spit out steel-coated bullets and picked off targets no bigger than soup plates at a half a mile was a revelation.

The motorcyclists present wanted to know more about the machine gun and "other things military," so Capt. Armitage of the company consented to detail Lieut. Hibbard to bring around the gun and other accoutrement.

Lieut. Hibbard was enthusiastic in his praise of the motorcycle in army work. "The motorcycle has no comparison as a transporting medium in dispatch, aviation or advance guard work," he said. "It will not be long before the military authorities will be sending squads of men from the army to the motorcycle factories to be trained as riders and motorcycle mechanics.

"The present method of sticking green rookies onto motorcycles and expecting them to give efficient service is giving the motorcycle an undeserved black eye. With well-trained riders the motorcycle will make a much better showing. The dispatch rider must be a motorcyclist first and then a soldier. By this I do not mean that soldiers cannot be trained for this duty, but merely that no one can cram the knowledge of motorcycling into a soldier in a fortnight."

U. S. ORDERS TEN MORE GUN OUTFITS

Ordnance Department Calls for Five Each from Indian and Harley-Davidson Factories—Hendee Apparatus to Be of Novel Type

SPRINGFIELD, Mass., April 24.—That the investigation inaugurated by the United States Government last fall to determine the real worth of the motorcycle with a suitable gun carriage in military application is about to bear fruit can be gleaned from the fact that the Ordnance Department of the United States Army at Springfield, Mass., acting under instructions from Washington, has placed orders for ten motorcycles of the machine gun carriage type.

The order was split evenly between an eastern and a western motorcycle factory, the Indian folk of Springfield supplying five special machines of an approved type and a like number coming from the plant of the Harley-Davidson at Milwaukee.

It has been an open secret for some months that the Indian folk have, in collusion with army men stationed at the Arsenal here, been engaged in the development of a military machine to meet every requirement of modern military tactics, and it is understood that this long course of experimentation has resulted in the production of an entirely new and novel type of military machine for which the Hendee folk promise big things. The Indian Powerplus twin, of course, forms the basis around which the new vehicle is built, the changes in the motorcycle itself being slight. The gun carriage, it is stated, is radical, embracing features making for instantaneous attachment and detachment with the motorcycle, the carriage itself being a complete and mobile unit when detached from the machine. The gun mounting, too, is said to be entirely new and individual, the whole representing the combined efforts of the Indian factory men and guided by the comprehensive experience of the army folk.

The purchase of these ten machines, it would seem, is the beginning of a broad test and it indicated that the United States Army has a mind to give the motorcycle exhaustive consideration.

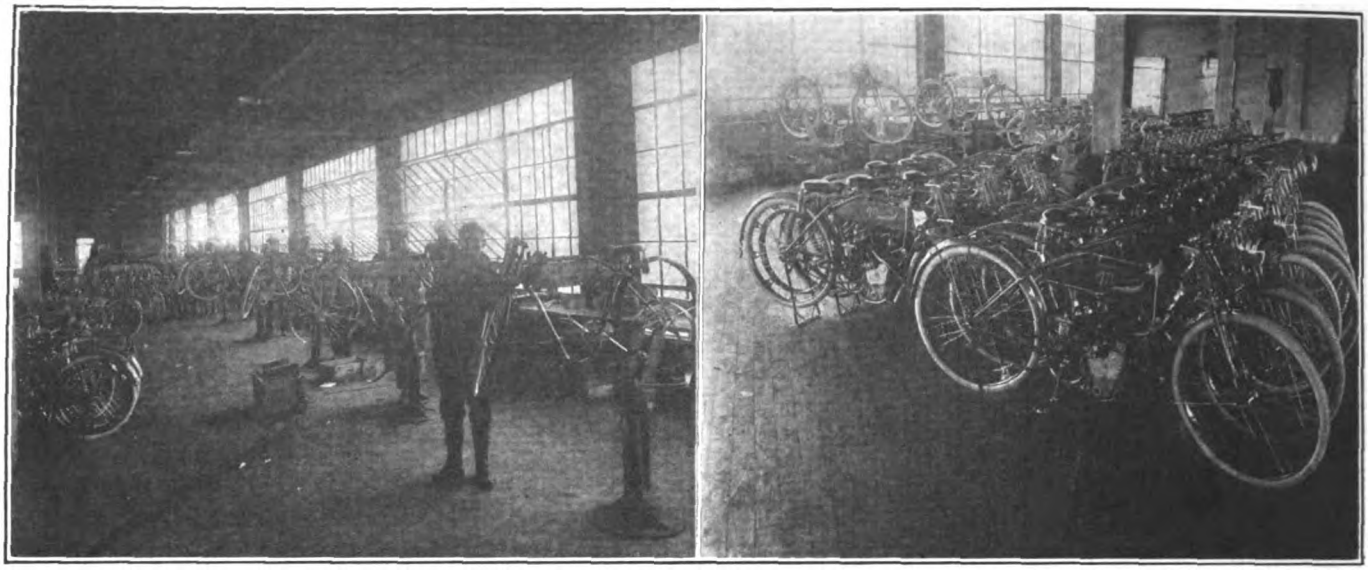
BIG ORDERS CALL FOR EXTRA TIME WORK ON MIAMI LIGHTWEIGHTS



Increasing Demand for Power Bicycle Has Resulted in Great Activity in Big Middletown Factory; Left, Row of Assemblers at Work on Little Four-Strokers; Right, Machines Ready for the Hands of the Packers

SILVEX CUP IS EXHIBITED AT N. Y. SPORTING GOODS

BROOKLYN, N. Y.—The cup donated by the Silvex Company, of New York, to the club having the most entries finishing with a perfect score in the forthcoming Invincible M. C. run is now on exhibition at the store of the New York Sporting Goods Company, 15 Warren street, New York.

Entries to date promise that at least 150 will participate in the affair of April 30, and 200 would not be surprising. Some of the old-timers, such as Fred A. Baker, Tom Sixsmith, Frank Baker, Bob Brazenor, John Steele, I. I. Brandenburg and others, will ride in the affair.

All clubs expecting to compete for trophies must send a full list of members' names to I. W. Barnard, 15 Warren street, before April 27, so that there will be no trouble in identifying the numerous entrants.

NATHAN IS DOUBLING SPACE FOR INCREASED OUTPUT

OWING to the great increase in business, which calls for increased manufacturing facilities, the Nathan Novelty Manufacturing Company, of 88 Reade street, New York, is practically doubling its quarters. The large amount of additional space will be devoted to manufacture exclusively. New machinery has been bought and is ready for installation.

THIS AIR CUSHION FITS ANY LUGGAGE CARRIER

COMFORT and durability, the latter backed by two years of successful use, are to be found in the pneumatic cushion brought out by the Motorists' Accessories Company, of Ashland, O. While primarily designed for fitting on luggage carriers for passenger service, it is nicely adapted for camping or boating, or in any other place where an easy seat is wished. It will fit the luggage carriers of all standard motorcycles when inflated, and can be carried in the pocket or tool kit when deflated.

This cushion does not need an inflator or pump, the breath alone being necessary. It is listed at $3.50, and can be had direct from the maker or through the jobber or dealer.

NEW ROGERS SIDECAR TOP HAS ATTRACTIVE LINES

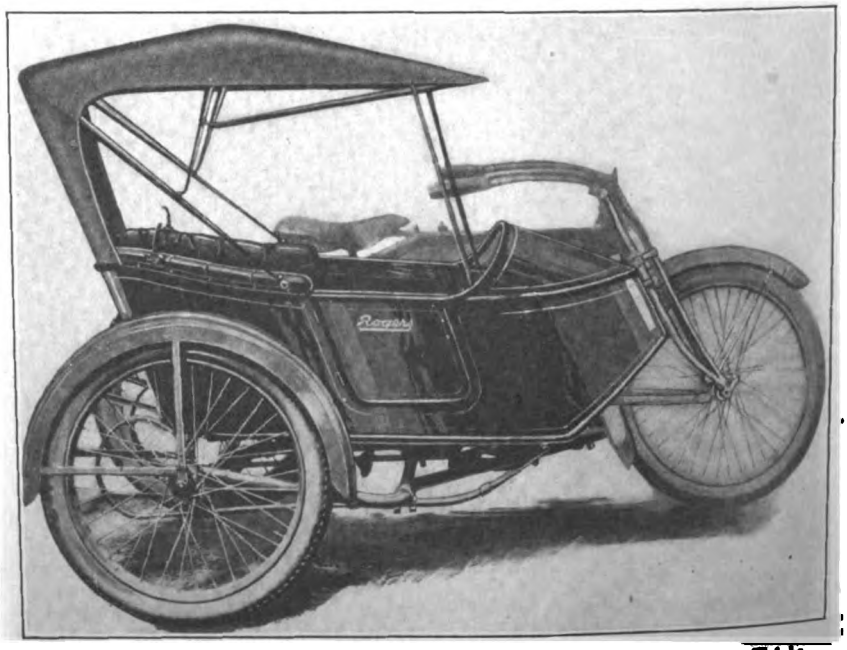
NEATNESS, combined with low height and graceful lines, is featured in the recent design of sidecar top brought out by the Rogers Manufacturing Company, of 337 West Madison street, Chicago, Ill. This top, which is primarily designed for the Rogers sidecar, is long, and while giving ample headroom is not excessive in elevation above the top of the car. There is nothing awkward in its appearance, and it adds to the appearance of the car to which it is fitted.

All details of the top have been greatly improved. Automobile-type bow fasteners have been substituted for the ordinary buggy-type article. The bows are covered and when let down rest in long metal sockets in place of the usual rubber bumpers. The tops are supplied complete with side curtains and front windshield, so that absolute protection is furnished.

The increasing demand from sidecarists for better protection of a high grade for lady passengers has resulted in the bringing out of this top, says the Rogers company.

TEST SETS ENABLE RIDER TO CARE FOR TROUBLES

IN order to enable the rider to care for his own ignition troubles and thus prevent unnecessary delays and excessive repair charges, Haese & Co., of Punxsutawney, Pa., have brought out two test sets,



New Rogers Sidecar Top Extended, Showing Graceful Lines and Low Height

Digitized by Google

one for the user of an electrically-equipped motorcycle and the other for the user whose mount has a high-tension magneto fitted. These sets are of convenient size and contain all articles necessary to test out for troubles and to repair the same, as well as an instruction book entitled "Care, Repair and Road Troubles."

The test set for electrically-equipped machines includes the following: hydrometer, magneto file, pair of pliers, electrician's knife, sandpaper, small coil of rosin core solder, roll of tape, small coil of wire, screwdriver, voltammeter and the instruction book. This set lists at $5.50. The set for standard motorcycles, with magneto equipment, has a magneto file, electrician's knife, pair of pliers, sandpaper, rosin core solder, tape and small coil of wire, with an instruction book for such models. This set is priced at $3.50.

A BRAZILIAN OPENING

Motor Cycle Illustrated is in receipt of a letter from Armando Dias, Rua De Malcher 31 A., Belem, Brazil, who desires to obtain the agency for an American motorcycle.

LIGHTWEIGHTS FEATURE IN 'FRISCO CLUB RUN

Ride to Pleasanton and Sunol Creates Interest in Little Fellows, Who Do Well in Social Event—Lady Rider Participates

SAN FRANCISCO, Cal., April 18.—The San Francisco M. C. had a highly successful run to Pleasanton and Sunol, in Alameda County, on April 16. Starting out with 15 machines and passing through Oakland and neighboring towns, the total soon rose to 35 and that number arrived at the destination.

The route was out the Foothill Boulevard to San Leandro, then over to the Dublin road and over the grade to Pleasanton, which was reached a little before noon. There was no effort to make speed, the crowd keeping well together and taking their time. After a short stop at Pleasanton, they proceeded to Sunol and over to the Spring Valley Water Company's fountain and picnic grounds, where the midday stop was made for a basket lunch and a couple of hours' recreation. The route home was down Niles Canyon to Niles and back to Oakland by the State Highway. The roads were excellent practically all the way.

The party arrived in Oakland early, and instead of returning immediately to San Francisco, the other members accepted the hospitality of the Karslakes, who provided refreshments at their home.

Lightweight machines were the principal subject of interest during the run, as a number of the members are riding machines of this type, which seem to be giving all-round satisfaction. The position of prominence on this occasion, however, was occupied by the new Cleveland lightweight, with which the members have not yet had time to become very familiar. Though not the first time the Cleveland has appeared on a club run, this was the first occasion on which one was ridden by a lady, Miss Karslake having one of the new machines to try out. Its performance was so satisfactory, and attracted so much attention among the ladies of the party, that on reaching home Miss Karslake was importuned to show them all how to run it.

HARLEY-DAVIDSON RIDER SETS OAHU RECORD

Frank Ropero Makes Trip Around Hawaiian Island in 127 Minutes, Cutting Former Amateur Time By 6:33

MILWAUKEE, Wis., April 24.—Word comes to the Harley-Davidson factory from D. C. Mitchell, manager of the Honolulu Cyclery and Hawaiin distributor for the Harley-Davidson, that Frank Ropero riding a motorcycle bearing that nameplate broke the amateur record for a trip around the island of Oahu, one of the Hawaiian group. Ropero covered the 86.9 miles of rough, rocky and sandy roads in 2 hours, 7 minutes and 47 seconds, clipping six minutes and 33 seconds from the former record established by Eddie Commings.

Twenty miles of the course were of the worst description possible including three gulches with nasty short turns and any amount of passes here for bad turns. The worst point of the course is the Pali, a steep grade full of treacherous curves proportions.

Ropero, who is a youngster scaling but 130 pounds and who is looked upon as a "comer" in Hawaiian motorcycle circles had not been over the course in over a and comprising a mixture of rough rocky road and red dirt road in all kinds of crazy year and consequently lost some time by taking the wrong course at one point which carried him three miles out of his way. He also was forced to change plugs and search for a lost filler cap, both of which cost him an interval or two. William Ferry and William Chilton, both motorcycle officers who held the clocks on the lad, believe that given another trial under favorable conditions he could clip another few minutes from the record.

HEARSEY-WILLIS IS NOW H. T. HEARSEY COMPANY

INDIANAPOLIS, Ind.—President H. T. Hearsey, of the Hearsey-Willis Company, of 339 North Capitol avenue, this city, has obtained a decree from the Circuit Court of Marion County, changing the name of this company to the "H. T. Hearsey Company." The firm will transact all of its business under the new corporate name. No change of any kind has taken place in the personnel or in the staff of the concern and the address is the same as before.

The reason for the change to the H. T. Hearsey Company was made as a result of the retirement of Fred I. Willis a short time ago. When Mr. Willis left the Hearsey-Willis Company, he sold his interests in that firm to Mr. Hearsey and ceased to have any connection with it, hence the directors and officers felt that it would be appropriate and in every way proper to eliminate Mr. Willis' name.

CONDITIONS POINT TO BIG YEAR, SAYS GIRTON

"PROSPECTS in the motorcycle field in Southern California are good for a return to the remarkable conditions which existed in 1913," says T. C. Girton, of the Girton-Hoffer Co., Excelsior distributors in Southern California, Arizona and New Mexico. "The fact that gasoline is going higher instead of hurting the motorcycle is helping it, as it is winning to the two-wheeler a great many people who have been on the edge of considering lightweight automobiles, but realize that the cost will be all out of proportion to the use they can make of the heavy machines.

"Business conditions are much more favorable than they have been and the great extent of the good road system of this state, and the conditions offered by the clubs and informal touring parties organized by dealers offer an incentive to motorcycle ownership which is certain to win hundreds of additional riders."

BAILEY-DRAKE TO ENTER EXPORT FIELD

Successful 'Frisco Company Seeks American Accounts For Philippines, Australia and Other Asiatic Countries—Representatives Appointed

SAN FRANCISCO, Cal., April 22.—In view of the excellent opportunity offered American manufacturers at the present time to market their products throughout the Orient and Pacific islands and South Seas, the Bailey-Drake Company, of 149 New Montgomery street, this city, has decided to enter the export field and extend its operations to include the Philippines, Japan, China and Australia.

It will be the firm's intention to represent American manufacturers in those countries in exactly the same capacity as it represents Eastern manufacturers on the Pacific Coast. All the territory mentioned will be covered regularly and all classes of merchandise salable in those countries will be handled.

The Bailey-Drake company has a representative in Sydney, Australia, who will cover the coast towns and the interior towns as well and will take care of business in New Zealand, also.

The firm has had a representative in the Philippines who devotes his entire attention to the islands. Both this representative and the Australian above-mentioned are former Pacific Coast travellers.

During February, the company sent a representative to Japan and he will be joined in a few days by another. One is a Japanese, of training and education in both this country and his native land and will handle American goods to the satisfaction of everyone. Plans are now being made to have a representative for China, with headquarters in Shanghai.

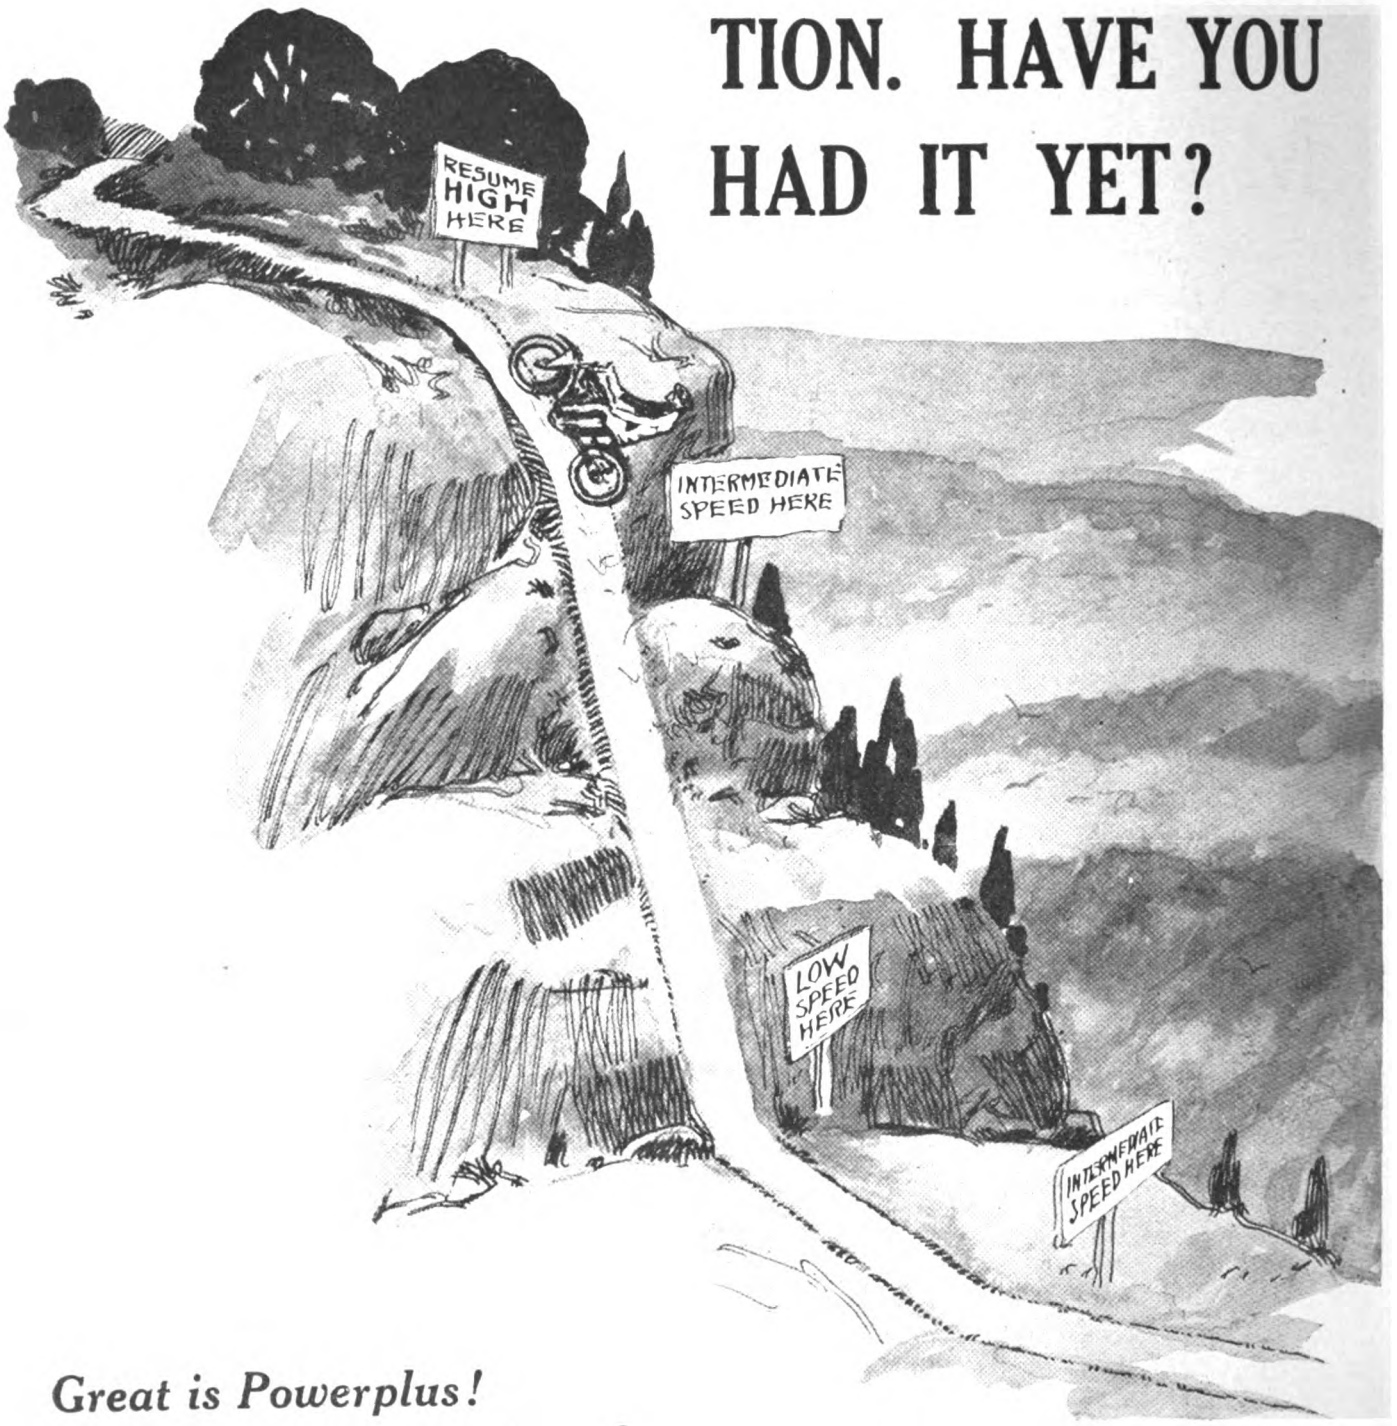
HERE'S THE POWERPLUS SENSATION. HAVE YOU HAD IT YET?



Great is Powerplus!
Sketch is my impression of last week's ride among the hills.
A. T. MERRICK.

Digitized by Google

ONE OF THE FINEST TRIBUTES POWERPLUS EVER HAD

MOST of us in the motorcycle field know Arthur T. Merrick—if not personally, at least through his drawings in the various magazines and especially the motorcycle publications.

Recently Mr. Merrick purchased a 1916 Powerplus Indian—and shortly after delivery of the machine to him we received the drawing reproduced on the opposite page. Across the sketch Mr. Merrick wrote:

"Great is Powerplus! Sketch is my impression of last week's ride among the hills."

Unconsciously—and because he is an artist—Mr. Merrick has expressed not only his own enthusiasm about Powerplus *but that of thousands of other Powerplus riders.*

Great enjoyment—exhilaration at the thought of doing the almost impossible—bubbling fun—riding zest—the glorious sense of having a machine that obeys—all these Mr. Merrick has spontaneously conveyed to us—*and to you men, to you who are yet uninitiated into the splendid privileges of riding a Powerplus Indian.*

The little picture of Merrick's was conceived in a moment of sheer joy—*and that is why it means so much. He told more than he realized he was telling. He told it in a spirit of fun—and that is why it's such a genuine tribute. He spoke out in his own way without thinking. Consequently he uncovered a big truth. In a few strokes of the brush he told the whole Powerplus story.*

POWERPLUS RIDING IS A *DIFFERENT* KIND OF MOTORCYCLING. MR. MERRICK'S TRIBUTE IS A REAL TRIBUTE TO THE 1916 POWERPLUS

CALIFORNIA HILL CLIMB A THRILLER

Twenty-six Riders Try "Broncho-Busting" Up 65 Per Cent. Grade Near the Capistrano Mission; Myron Warner, Mounted on Powerplus Indian, Makes Best Score

By FRANK REED

(4) From Left: Shepherd, Ludlow, Wagner and Butler, All "Indians." (5) Harley Reed, Excelsior. (6) Looking the Hill Square in the Face. (7) From Left: Ivans, Herold and Warner, Indian Team. (8) From Left: Miles, Bruschi and Van Order, Harley-Davidson Pit men. (9) Some of These Officiated, Some Contended. (10) Artley, Merkel, Shows How They Had to Lead 'Em Down. (11) Bush Used This Fancy Sprocket and a Bevy of Mud Hooks

CAPISTRANO, Cal., April 21.—Once again the motorcycle fans of Southern California were treated to a thrilling hill-climb fest. On Sunday last members of the Orange County Motorcycle Dealers' Association led a little band of seasoned contestants out to a "man-killer" incline, 'most as steep as the side of a house, which is located just south of the historic San Juan Capistrano Mission, and told the boys to "go to it." And the fellows did their "darndest."

No Chance of Reaching Top

That hill showed a grade of at least 65 per cent, and if you don't believe it just take a look at the pictures. Of course, none of the twenty-six competitors had any chance of reaching the summit, and the awards were, therefore, made on the basis of the greatest average distance covered in three trials allotted each rider.

Myron Warner, a Santa Ana boy, rode his Powerplus Indian to victory by rolling up an average of 327 feet and 1 inch. His performance was the most remarkable of the day, for he was the only contestant to pass the 310-foot mark on all three of the trials. Shooting across this mark with ten feet to the good, Roy du Granute, Flying Merkel, "bronco-busted" into second place. His average was 298 feet 2 inches. Wells Bennett and Harley Reed, both Excelsior enthusiasts, came near tying for the third honors. Though Reed's best distance was 319 feet and 6 inches and Bennett's but 300, the latter won out on the average score, having 295 feet to his credit, as against the average of 294 feet and 8 inches made by Harley Reed.

There was a great crowd of spectators present to witness the stirring contestants, thousands of riders and automobilists having come from all corners of the Golden State. The interest of the fans was tense and at a high pitch throughout the climb. Whenever a rider shot up the hill he was coaxed on by the shrill "tut-tut" of many horns.

Some Steepness!

An idea of the steepness of the hill can be gathered from the fact that the management had to provide a rope, extending from a pole at the top of the incline, which was hurriedly hooked on to any machine that had toppled over, to prevent it from doing a "hop, skip and jump" to the bottom of the incline. More than one was the rider who was thankful for the existence of that rope.

Roy du Granute gave a fine demonstration of what a bucking machine could do when it hit the almost perpendicular grade. On each of his trials Roy's machine skittishly threw up its front wheel and bucked

Digitized by Google

him off. And the last time it threw him he was almost thirty feet below his "point of departure" before he could gain his feet.

Facile Down-Hill Riding

The best exhibition of down hill riding was given by C. F. Bruschi, the San Diego dealer. Bruschi had guessed wrong on the gear, or something, and as a result he did some fancy jumping near the 200-foot mark and got off the course sidewise. But he clung to his saddle, nevertheless, cut across the hill, turned and came down the terrific slope as though it were a boardwalk.

Just before the finish of the climb, T. G. Butler, of Los Angeles, started up the hill on an Indian Featherweight. Everybody laughed, but Butler actually went half way up the summit and showed the mettle of the little papoose. And then everybody stopped laughing.

How Machines Were Equipped

With the exception of the fact that all machines were geared especially for the climb all the competing models were taken from stock. The Schebler trade-mark was found on all of the carbureters. The winners were equipped as follows: Warner, first place, used a stock 1916 Indian with Dixie magneto, Schebler carbureter, Duckworth chains, Goodyear blue streak tires and Troxel saddle; Du Granute, second place winner on Merkel, had Bosch magneto, Schebler carbureter, Renold chains, Federal and Goodyear tires and Troxel saddle. Bennett, third man on 1916 Excelsior, had Bosch magneto, Schebler carbureter, Coventry chains, U. S. chain tread tires and Mesinger saddle. Reed, on Excelsior, had same equipment, except Duckworth chains and Firestone non-skid tires. Artley, on Merkel, fifth place winner, had Bosch magneto, Schebler carbureter, Renold chains, Firestone and Federal tires and Troxel saddle.

FIRST MACHINE GUN TROOP IS AUTHORIZED

Squadron Will Be Part of Officers' Training Corps and Will Number 150 Men—Solo Mounts Included in Equipment

MONTREAL, Quebec, April 24.—The first real motorcycle machine gun and despatch carriers' section in the Canadian militia has been authorized. The squadron will be a part of the McGill Contingent, Canadian Officers' Training Corps, and will be raised in Montreal immediately. It will consist of some 150 men, all motorcyclists, and both sidecar and solo mounts will be used. The sidecar outfits will be employed in machine gun work while the single machines will be used by the despatch riders. Lieutenant-Colonel Robert Starke will be the commanding officer. The Champ de Mars, a parade area, will be the scene of the preliminary training after which the members of the section will be used in extensive field operations which will be carried out by the local garrison this summer.

The Rotary Club of Montreal has donated complete bicycle equipment for the signalling section of the Irish-Canadian Overseas Battalion of this city. This section consists of about thirty non-commissioned officers and men.

Captain E. J. Thom, Divisional Signalling Officer, has issued a call for twenty-five motorcycle riders of Montreal for use in field manoeuvres which will be conducted by the several home service regiments during the coming summer. Captain Thom proposes to allot four or five riders to each of the local units for use in despatch carrying on various occasions. All of these volunteers will also be taught signaling work.

CRESCI DEVELOPS NOVEL FIRE APPARATUS

VINELAND, N. J., April 24.—Anthony Cresci, Jr., the Cumberland county Harley-Davidson dealer with headquarters here, has developed a new piece of fire fighting apparatus and has succeeded in equipping the local fire department with it. The basis of the apparatus is, of course, a Harley-Davidson three-speed twin to which Cresci has attached in a novel manner a pair of Babcock fire extinguishers. The tanks are so disposed on either side of the machine that they can be readily detached when the machine reaches the scene of action. The machine is ridden by Fireman Walter Barlow, a member of Reliance Hose Co. No. 2 and in several instances the superior mobility of the two-wheeled apparatus over the four has resulted in Barlow reaching the fire and extinguishing it before the arrival of the regular fire equipment.

Robert Mennies, captain of the Reliance Hose, is loud in his praise of the two-wheeler as an adjunct to the fire department.

LONDON CLUB IS ACTIVE CYCLE ORGANIZATION

LONDON, Ontario.—The London Motorcycle Club, the oldest existing motorcycle club in Canada, can now claim to be the largest motor-wheel organization in the dominion and probably no other cycle club in the country is more active. A recent social turnout of the local "M.C." was a record-breaker, the roll-call showing the presence of over seventy-five riders, nearly all of whom were members of the organization. The officers are now striving to reach the century membership mark. The London club is now ahead of the Toronto Motorcycle Club in point of size and the events on the club calendar are marked by maximum success.

Unique work is now being secured by R. Oatbridge, of London, with his two-speed single-cylinder Yale. Oatbridge lives in a secluded suburb and he finds it necessary to keep a roadway, one and one-half miles in length, in passable condition. To maintain a good riding surface, he utilizes a road drag with his motorcycle and he has been keeping open a path twelve feet wide for the use of himself and neighbors. The motorcycle tows the "snow-plough" with comparative ease.

POLICE INDIANS FOR THREE MORE CITIES

SPRINGFIELD, Mass., April 24.—Latest reports from the Northwest indicate that there is a sudden increase in the happiness of "cops" in three distinct, though widely separated, localities. The sunny frame of mind comes to the officers as a result of the adoption of Indians for police duty in Billings, Mont.; Grand Forks, N. D., and Hibbing, Minn. The sales in the respective cities were made by the Montana Cycle & Supply Co., the Grand Forks Motorcycle Co., and Charles A. Norman.

PASSAIC CLUBSTERS VISIT CAMP

PASSAIC, N. J.—The members of the Passaic Motorcycle Club have visited their camp at Lake Hopatcong and report the bungalow to be in good condition after the winter's hard weather. This camp is about sixty miles from the city and is used by the members and their friends during the summer months.

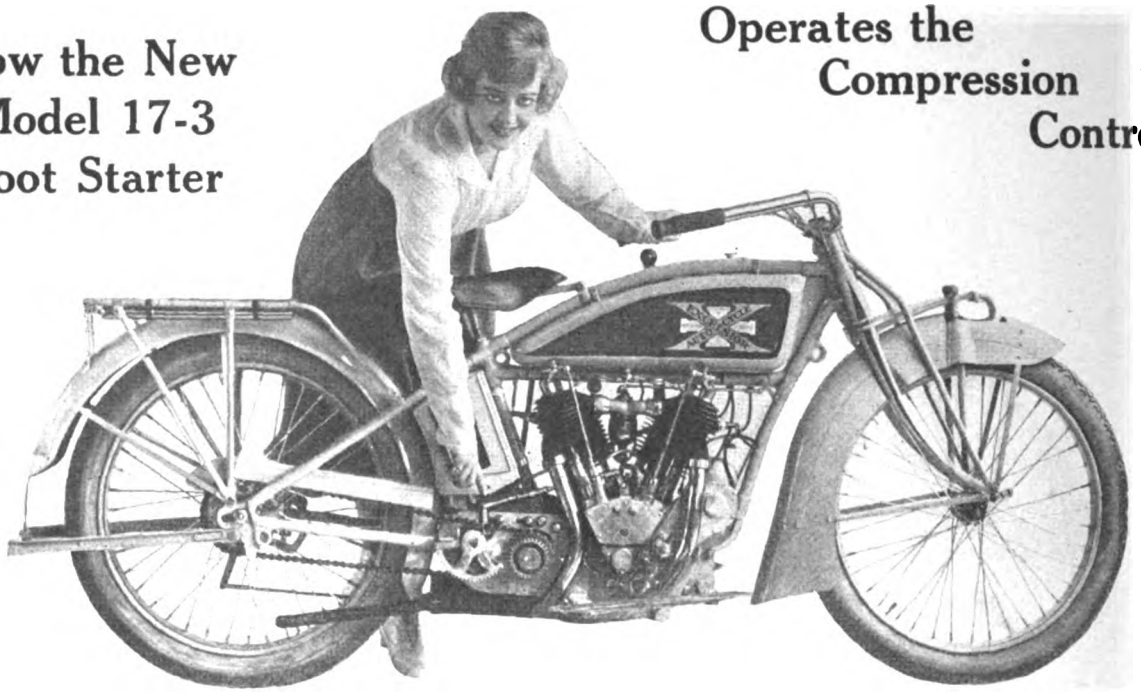
LET US SHOW YOU

How the New Model 17-3 Foot Starter Operates the Compression Control



On the starter shaft is a cam and directly over this a lever, the upper end of which is connected to the exhaust valve lift by an adjustable tie rod.

On pushing down the starter pedal, the cam acts on the lever in such way that the upper end is moved forward, causing the exhaust valves to open.

As the downward thrust of the starter pedal is continued the cam passes from under the lever, allowing the valves to close at the mechanically correct instant to insure starting the motor.

Thus the motor compression is automatically controlled with no attention whatever on the part of the operator.

It is the infallibility of perfect mechanism superseding the irregularity of manual control requiring no effort or experience on the part of the operator.

Heretofore foot starters have been useful only in proportion to the experience and skill of the operator.

The Excelsior Model 17-3 Starter works with mechanical precision and accuracy.

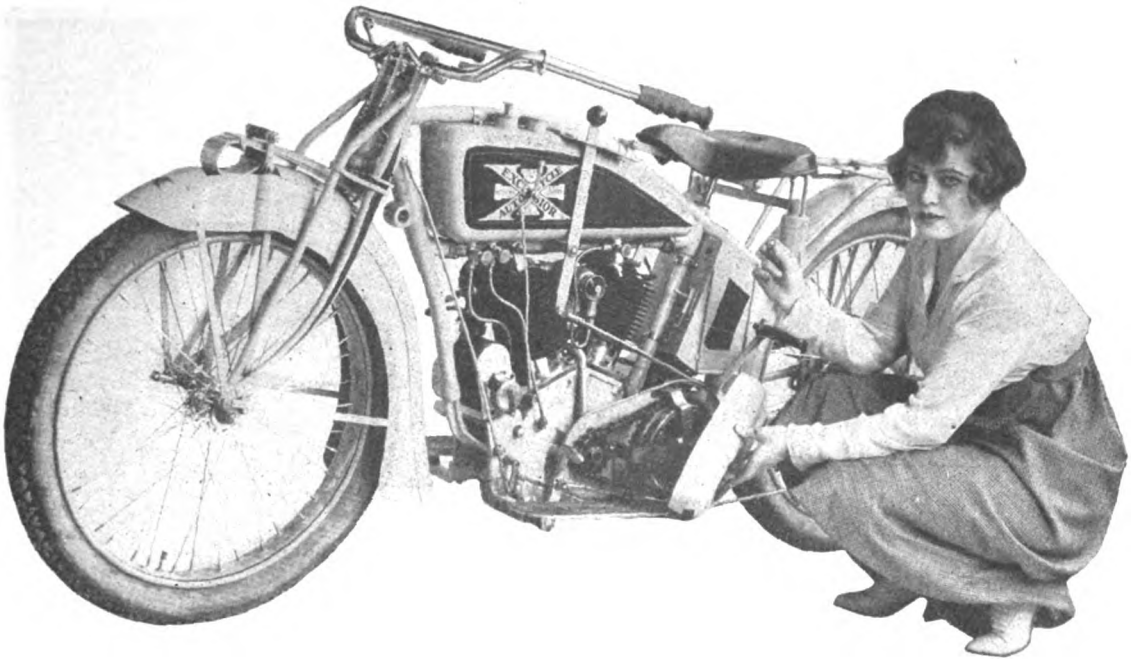
If there is gasoline in your carburetor, your motor CANNOT fail to start.

Excelsior Motor Manufacturing

Digitized by Google

HERE IS ANOTHER DETAIL

of Cleanliness and Efficiency



When you are on the road, the motor chain, clutch and clutch operating mechanism are entirely enclosed and thoroughly protected from dust, dirt and grit.

The chain is fully lubricated by oil supplied by the large breather tube on the motor crank case. As the clutch housing is oil tight this oil is compelled to stay inside where it does its work on the chain, not on the clothing of the rider or other parts of the motorcycle.

Access to the clutch for oiling or adjusting, is attained in half a minute or less simply by taking out one large round head screw and the outer half of the case may be instantly removed.

It may be as quickly replaced by merely snapping into position and replacing the screw.

This is not merely a matter of convenience and cleanliness, it is an insurance of long life to the chain and perfect operation of the clutch, another big feature of Model 17 supremacy.

Watch these pages for others, or, better still, see the dealer or write for catalog.

SEASON'S PROSPERITY REFLECTED BY METROPOLITAN DEALERS

FELIX LEWIN, manager of the Henderson branch in this city, has just sold Emanuel Blout, the big distributor of Victor talking machines, a Henderson outfit for delivery service. Blout is using this rig to supplement his four automobiles, and is watching its performance with a view of replacing one auto with another Henderson.

On April 18 the Henderson branch sold two of the two speed models to two chums and another the following day to a friend of the two.

H. RAOUL, handling the Indian and Cleveland lightweight, at 4192 Broadway, has disposed of 28 Powerplus machines so far as well as three Clevelands. The two-stroke lightweights are from the original shipment of five, received a few days ago.

Raoul's quarters have been enlarged recently and the repair shop has been established in the basement. He is practically cleaned out of used machines and has orders for all he can get of the 1916 models. His establishment is headquarters for the Audubon M. C.

GUS RUTHOLZ, distributing the Reading Standard in this city, has been making sales this last week. He disposed of two Reading Standard sidecar combinations, as well as two solo twins of the same make; four Excelsiors and three other 1916 machines. In second-hand machines, Gus sold six, took orders for two more.

LITTLETOWN, N. Y.

THE ORANGE COUNTY MOTOR SUPPLY CO. has completed arrangements with the Vim Cycle Hardware Company, of Buffalo, to handle the Dayton Motor Bicycle in this city.

REAL Commercial Value

"Built on automobile lines—operated at motorcycle expense."

That's the R-S delivery van. It is no weak attempt at strengthening a *motorcycle* for delivery purposes—it is rather a lightening and adaptation of *automobile* design.

With such materials entering into its construction as channel steel frame, vanadium steel springs, automobile-size hubs, double capacity tank, drop forged steering knuckles and arms, the R-S is undoubtedly, in both theory and by *proven fact*—the most practical and lowest-in-cost commercial vehicle made.

IT IS *NOT* A MOTORCYCLE—except for its motor, which is the famous R-S side-by-side 12 horsepower, with three speed sliding gear transmission.

Write us for full particulars on the commercial opportunities made possible with the R-S. It is of vital importance that you get in touch with us *today.*

NOTE THE 1916 IMPROVEMENTS

Three-speed Transmission.
Oversize Multiple Disc Clutch, foot operated.
Two distinct Brakes. One operated by foot, other by hand.
Step Starter.
Improved Steering Device.
New Controls to Carburetor and Magneto.
Wider and deeper mud guards.

A Striking Example of Motorcycle Perfection

The R-S is doing big things this year. *Always* a favorite, the 1916 R-S, with its nominal price plus its SIXTY refinements and improvements, has jumped into the ***front rank*** as a selling proposition.

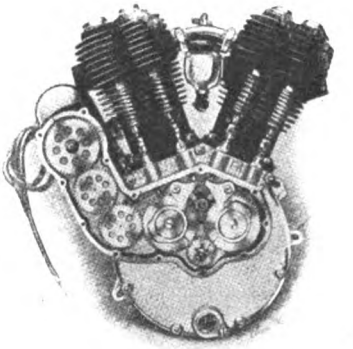
Fourteen years of consistent manufacturing success has well qualified the R-S for its present popularity. It is deserved. And many R-S dealers, for whom we predicted the ***most prosperous year they have ever had,*** are beginning to find that our prophecy has come true. Reports from all over the country indicate an unprecedented demand. And why not? Just glance at these features, part of the sixty 1916 improvements. AND REMEMBER THIS: While up to date in EVERY particular, the R-S is ***built around*** the same wonderful side-by-side valve motor that has always distinguished it and which has been adopted as near as possible by other leading manufacturers for 1916. Here are the quality points:

THREE SPEED SLIDING GEAR — DOUBLE LOCKING DEVICE — SIDE-BY-SIDE VALVE MOTOR — NEW STEP STARTER — NEW FRONT FORK—R-S PERFECTION SEAT POST — LONG, COMFORTABLE FOOTBOARDS — VERY STRONG FRAME — LARGE COUNTERSHAFT CLUTCH, FOOT AND HAND OPERATED—30″ SADDLE POSITION, ETC.

12 H. P. Twin with 3 Speed, - $265.00
6 H. P. Single " " " 230.00

Why not invest one cent in a postal and write for a complete description of "THE WORLD'S MASTER MOTORCYCLE"?

rd Company
Street Pa.



The famous R-S motor, with its side-by-side valves, its flexible, silent power that generates its full strength with marvelous quickness—this motor has been endorsed by the Society of Mechanical Engineers as being ABSOLUTELY PERFECT in design, construction and finish.

These Men a They Sell Bikes ATHERTON

Read what they have to say

M. WORKSMAN
14-16 Vesey St., New York City

Buffalo Metal Goods Company,
Buffalo, N. Y.
Gentlemen:

Recently I tried out an Atherton Coaster Brake on my Bicycle Delivery Van and despite the added load the braking and pedalling service of this brake has been just fine.

The no-slip in the forward drive feature makes a wonderfully smooth and certain driving action. As a brake it is very responsive.

Enclosed herewith please find my initial quantity order.

Very truly yours,
(Signed) M. WORKSMAN.

NEW YORK SPORTING GOODS CO.
15 & 17 Warren St., New York City

Mr. W. F. Emerson, President,
Buffalo Metal Goods, Co.,
Buffalo, N. Y.
Dear Sir:

A word or two of praise for your Atherton Coaster Brake.

In my dealings with bicycle customers, I have found that they have a decided preference for the Atherton, because of its smoothness, and its absolute lack of slip in the forward drive.

I feel justified in saying that the Atherton Coaster Brake is the most popular brake made.

Very truly yours,
(Signed) IRVING BARNARD.

T. J. SIXSMITH
203 & 205 West 100th St., New York City

The Atherton Coaster Brake Co.,
Gentlemen:

In regard to the Atherton Coaster Brake for bicycles I wish to state that my experiences with them have always been satisfactory and being in this business for the past eighteen years have not found an instance where they have failed to do their work. With the exception of where a bicycle has met with accident or abuse I have never had one of your brakes go wrong. With best wishes for continuous prosperity I beg to remain,

Yours very truly,
(Signed) T. J. SIXSMITH.

DRISCOLL & JEANROY

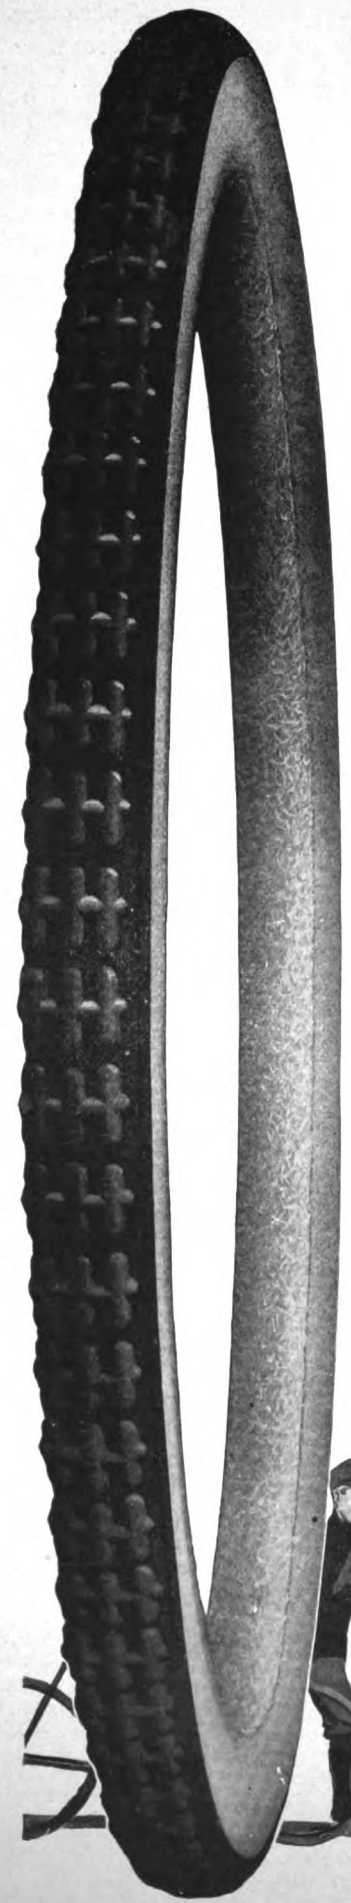
"BAREFOOT" RUBBER



Every motorist in the country is reading about the new Black "Barefoot" Rubber on Goodrich Auto Tires.

This wonderful new Rubber—with more "gristle," tougher, harder to puncture, harder to wear out—

That *clings* to the surface (like your bare foot clings to the floor) without *grinding* over it—

Giving bigger mileage, lessening repair bills, easing strain on the inner tire body.

Now, *we are putting that same rubber on the Goodrich "Giant" Bicycle Tire!*

It is the best and strongest bicycle tire ever built—with all the science and knowledge of the World's Largest Rubber Factory—a Bicycle Tire *worth the money.*

It enables you to capitalize on the big Goodrich *National Advertising Campaign* on "*Barefoot*" *Rubber*—

And it offers you a bigger profit—makes the sale worth your while!

To every *Giant* is a coupon entitling the boy to our *Boys' Guide Book.* something every live boy wants, and a Handsome Silver Lettered Pennant.

We are advertising in the Boys' Papers—*we have headed the buyer toward your store!*

Connect up—sell him Goodrich "*Giants*"—you'll both be ahead of the game in the end.

Goodrich "GIANT" BICYCLE TIRES

My First Ride on a Cleveland

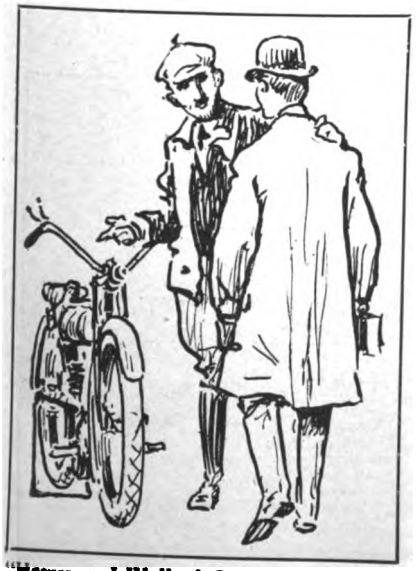
Sensations of a Novice who made his initial motorcycle trip on the powerful light Motorcycle

I'VE just come back to my office after three of the most wonderful hours I ever spent in my life. I've been intoxicated—but not on liquor—on pure ozone, on the wonderful thrill of speed and power under instant control; on the delight of feeling the ebb and flow of the fluid power as it welled up to do my bidding at the touch of my foot or finger! I've been riding on a Cleveland Light Motorcycle—the first motorcycle I ever rode in my life!

Mind you, I had never even **sat** on a motorcycle before I went up to see Harry Raoul, the New York Cleveland dealer, today on a certain legal matter. (I'm a lawyer.) After our business affairs were ended Harry took me by the coat lapel and said "Mac, I want you to try this baby here," and he pointed to the trim, rakish, low-hung Cleveland Light Motorcycle that was standing on the floor.

I Become Interested

"What, me? I guess not, Harry. I wouldn't be **seen** on one of those things. Besides, I never rode on a **bicycle,** much less a contrivance with a motor on it." However, I walked over with Harry and gazed down at the solid - looking little mount with a good deal more interest than I had ever felt before in any of the chuggers. It was so clean-cut, so evidently built for **service** that I was interested immediately in spite of myself.



"However, I Walked Over with Harry"

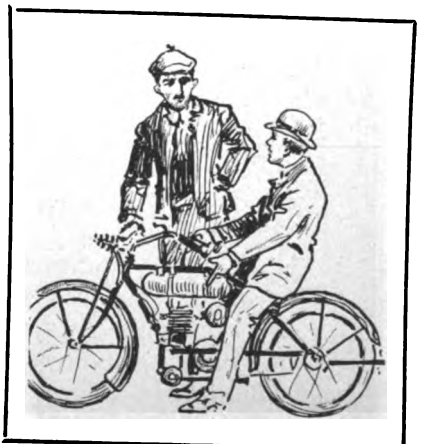
"You don't have to know anything about riding with this boat, Mac," said Harry as he urged me to take off my coat and sit down on the saddle. "Holy Smoke," I exclaimed, "why, I can keep both feet flat on the floor!"

"Yep," said Harry laconically. "You couldn't have a spill if you tried. Close to the ground, that's the word. She'll hold the road, no matter how bad it is. Now watch how easy she starts," he said, as I climbed off and he took the Cleveland by one arm, so to speak, and led it outside.

A Short Demonstration

"See these two levers on the right handlebar? This one is for gas, this one for air. See those two pedals down below on the right? Those are the first and high speed pedals. To start, I lift the valve," suiting the action to the word by grasping a lever on the right handlebar, "walk a little way with the machine, drop the valve," the motor coughed once, then started to drum away with a deep, humming note, "sit down, step on my first speed, and off I go." And Harry sailed off in a wide curve, now loitering at a snail's pace, then darting off at lightning-like speed. I had never seen such marvelous motor response before! I was fascinated. I wanted to ride that machine, if it was the last thing I ever did on earth.

Harry purred up to the curb as silently as a big Rolls-Royce. "Well, Mac, what do you think of it?" he asked triumphantly. "Say, Harry," I said, "let's try it." I was a little nerv-



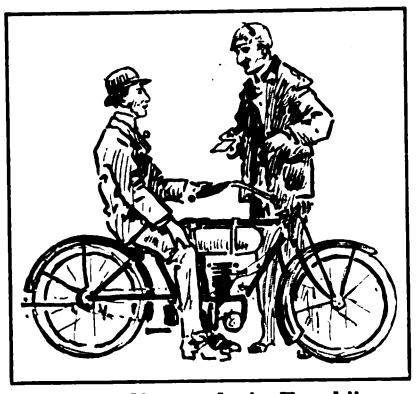
"Holy Smoke! I Can Keep My Feet Flat on the Floor!"

Digitized by Google

My First Ride on a Cleveland

(Continued)

ous, I admit, but game. Besides, it looked so darn easy and pleasant to me that I didn't worry much about being able to handle such a comfortable, easy-riding machine as the Cleveland.



"Say, Harry—Let's Try It"

"All right, climb on," he said, readily. I got on, then stood up with the machine beneath me, walked a step or two, lifted the valve as directed, and then dropped it.

My First Ride

B-r-r-r-r! I sat down suddenly in the saddle and felt myself being pulled along. I wavered around wildly for a moment, then collecting myself I closed the throttle lever slightly, steadied the front wheel, put my feet up on the comfortable rubber footrests and let 'er slide!

I spun smoothly along up the road at what was, according to my automobiling experience, a ten mile clip. The wonderful **surety** of the power at my command sent a wild surge of exultation through me. I opened the throttle a trifle—the motor "picked up" under me in a second. I stepped on the high speed pedal and we swooped up a long hill with the motor gaining power at every wheel-turn. Wow! This was **wonderful!**

Remember, please, that I had never ridden on any kind of a two-wheeled vehicle before. But that didn't feaze me one little bit—for that low-hung little giant under me felt so **safe,** responded so readily to every movement of the throttle that I just **couldn't** feel anything but absolutely calm and certain. I opened the throttle a bit wider and tore along at a corking pace.

An Emergency

Suddenly a big touring car rounded into the road from a cross street. I was paralyzed for a moment—I didn't know what to do—or, rather, had forgotten for the nonce what Harry had told me about brakes. I was within two yards of the rear of that car (it looked like the Woolworth building to me) when I remembered Harry's instructions. I clutched the valve lifter with a desperate grip; at the same time jammed on the foot-brake with my left toe. P-fft! I was standing still, both feet on the ground, the motor silent beneath me, and, praises be! that big leviathan of a touring car a hundred yards away and growing smaller every second!

I gulped a couple of times, smiled wanly, sat quiet for a few minutes until I got back my nerve, then started the little wonder off again. This time I went more quietly, in first speed, taking time to view the wonderful panorama of the Hudson before me. The motor throbbed silently. Never before had I been so absolutely at peace with all the world. I wanted this motorcycle for my very own—and wanted it quick! I stepped on high, opened the throttle and zipped along for the last mile to Harry's door, turning the curve in grand style.

I Become a Convert

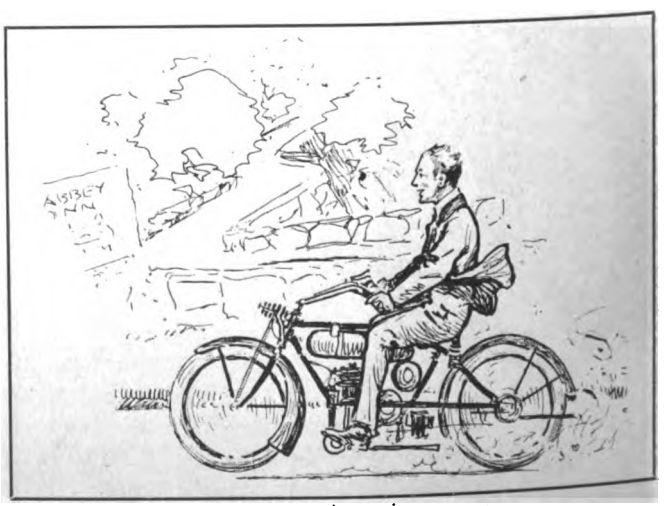
"Well," Harry grinned, "what do you think of the Cleveland Light Motorcycle now?"

"What do I think?" I answered, "I **know** I want this motorcycle **right now**—I want to ride it home. I don't feel as if I ever wanted to get off it. That's what I think of the Cleveland. How much is this marvel?"

"The price is $140 cash," said Harry. "It'll be ten per cent more on time payments, if you want to buy it that way."

"No, I guess I can stand the strain," and I wrote out my check for the full amount and handed it to Raoul.

So now I am the owner of a Cleveland Light Motorcycle and I'm proud—very proud. I'm



Wow! This Was Wonderful

Digitized by Google

going out tomorrow for an all-day ride, out into newly awakened Spring land, I and my Cleveland, and I **know** it will be the most enjoyable day I ever spent.

And, finally, I'm just enough of a businessman to know that the cycle dealer who handles the Cleveland has a sure thing. It isn't a gamble at all. Consider the **price,** and then the **quality.** Take them together, and you have a proposition that's utterly unbeatable. They tell me that the manufacturers of this machine have already sold five times as many motorcycles as any other maker did the first year in business. And the Cleveland has been on the market less than six months! I'm not at all surprised to learn that there is such a demand for the Cleveland, and it certainly would be my ambition to get the agency if I knew as much about the motorcycle business as I ought to know about pleading cases, preparing briefs, and the diverse other what-nots of the legal profession.

Yes, boys, the Cleveland is a little marvel, just what was needed to make men like myself motorcycle enthusiasts, and put some easy money in the bank accounts of progressive, up-to-the-minute dealers. And to those who are just **thinking** about taking on the Cleveland agency, my recommendation is, **get it** if you can. Good things like that are not always to be had. The Cleveland sure is the dealer's one best bet—a 100-to-1 shot, and no chance to lose out.

Good-bye, boys; hope to meet you out on the road tomorrow.

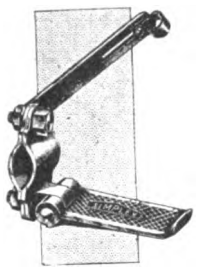
STEVENS
NEW YORK

TO THE TRADE

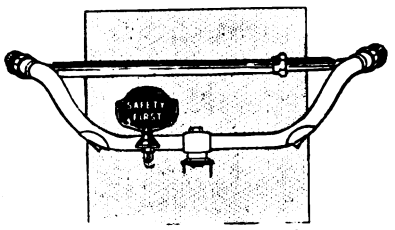
"Let the buyer beware" never applied to STEVENS merchandising. Every commodity handled by us has undergone the acid test for desirability, utility and price. You can buy a "pig in a bag" from STEVENS & CO. with as much confidence as if the porker were paraded before you to let you examine his points. That confidence is worth a great deal to dealer and consumer—it is indispensable to the jobber.

Louis Schmab



Simplex Foot Rests

Fit any machine. Clamps made to fit properly without injuring tubing. Just the thing for tandem attachments. Strong, rust-proof nickeled finish. Two popular models. Price of **Rigid Footrests, per pair..... 75c**
Folding Footrests, per pair.....$1.25

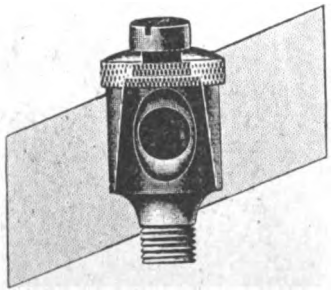


Safety First Emblem

Every rider should display one of these dignified emblems. It's decorative, timely and sensible. **Price, enameled in green on white metal 75c**

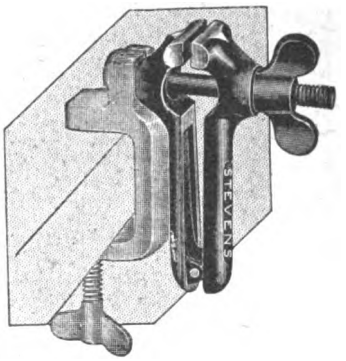
Handlebar Cross Rod

Adds strength and beauty to the handlebars. Gives more steadiness in steering. All up-to-date motorcycles are equipped with cross-rods. **Price, highly nickeled.....$2.00**



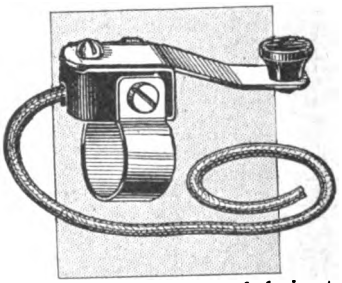
Stevens Air Valve

Insures instant starting. For "cold" motors, shut off the air a moment with the Auxiliary Air Valve, pedal, turn it on again and—Drrrrr!—she's off. A handy little jigger—should be on every carbureter. **Price 20c**



Stevens Hand Vise

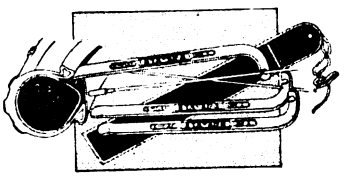
For quick chain repairs, as a temporary substitute for a broken leaf spring, for a hundred and one emergency uses, this Hand Vise has proven itself most practical.
Price, Hand Vise only.....75c
Clamp, for attaching to workshop bench, 25c extra



Simplex Magneto Cutout

The safest and most inexpensive brake. Grounds the magneto at the touch of your finger, allowing the compression to act as a smooth, powerful, instantaneous brake.
Price, complete with cable.....50c

Simplex Tire Tools



Make play out of removing the heaviest tires. Three hefty tools, made of carbon steel, nickel finish. No. 1 Set, suitable for tires up to 2½". Price, per set of 3.....25c
No. 2 Set, heavier and more efficient than No. 1; drop forged, nickel finish. Price 50c
Jimmy—the little giant—has hundreds of uses around frames and motors. Nothing better for putting on new stiff tires and taking off old ones.
Price, each 30c

The Brake That Brought The Bike Back

Spring has come

—thousands of young people are planning to ride bicycles.

Soon the park roads will be alive with cyclists.

Whatever mount may be selected, it's ten to one you will be asked to equip it with the

NEW DEPARTURE COASTER BRAKE

Its handsome design and lasting finish add a new touch of beauty to the wheel.

It has no complicated mechanism to get out of order.

Its few, well made and thoroughly inspected parts cannot fail to respond to the will of the rider.

It is sold under a guarantee that protects you and your customer absolutely.

For these reasons, it is the best possible aid to your share of "A Million Bicycles in 1916."

Let us help you sell more bicycles. Write for full particulars.

THE BICYCLING WORLD

FOUNDED 1877

DEPARTMENT OF MOTORCYCLE ILLUSTRATED

"ALL THE BICYCLE NEWS EVERY WEEK"

BENEDICITE

FROM out the heated city Cyclist takes
His way; an instant pauses at the gates,
An instant listens as the morning wakes.
The din of life he leaves behind; then waits
No more, but with a cry of pleasure flees
To where his wheeling song may freely rise
On air more pure; where floats the sweetened breeze
Between the verdant fields and azure skies.

THROUGH woody hollows carpeted with moss,
Up daisy-covered hills, o'er babbling brooks,
Down steep, uncertain paths, with vines across,
In sleep-enticing spots and ivied nooks,
Past cooling caves—from each to each he flies;
Now sinking deep amid some clover bed,
Now drinking crystal dew of summer skies
From out some lily cup above his head.

UPON a cliff, in mute amazement lost
He stands at last and listens to the roar
And rush of waters, by late tempests tost,
That crush in anger on a rocky shore.
Below him, up the beach and to the right,
Makes in a cove, one of those sheltered spots
That win a sailor's heart, a cosy bight
Safe haven for some fifty fishers' cots.

'TIS here, in the secluded fishing town,
Where hollyhocks and china-asters grow
Before the doorways weather-worn and brown,
And o'er the shelly paths their petals strow,
That wandering Cyclist, lulled by moaning sea
And sighing wind, by stormy petrel's scream
And flying mist, reposes 'neath the lea
Of an embedded wreck and dreams his dream.

HE sees a narrow street, to him well known,
Where busy men go rapidly along,
With woeful care upon their faces shown;
And lo, he, too, is of the anxious throng
Of hurrying ones; a frown of fretting thought
Sits on his forehead and unrests his eye;
Anon he passes down a sultry court,
Then gains a heated office wearily.

ALL day without he hears the roar of trade,
Within the hum and noise of laboring clerks;
Below accounts lie waiting to be made;
And though the day is done, yet still he works;
Though temples throb, yet still within his den
He lingers on, companion of dull pain,
Till fingers guide no more the stubborn pen,
And on his desk he rests a weary brain.

IN sleeping Cyclist's breast a sigh now burns;
He wakes; looks upon the land and sea;
Arises; then to beauteous nature turns
And cries aloud, in joyous ecstasy,
"God bless my wheel! It knows nor care nor strife,
For one day out of the ever-coming seven
I run with it far from the hells of life,
To find in nature's handiwork a heaven."

NOW all is silent as the falling dew;
The sun has set; the moon, ascended high,
Doth light the slumbering earth with silvery hue;
A nighthawk gives his solitary cry,
Safe in the confines of the heavenly blue,
And again doth Cyclist leave his day of weal;
And, when the city's gates he passes through,
Once more with joy exclaims, "God bless my wheel!"

A Right Royal Ride

By Quincy Kilby

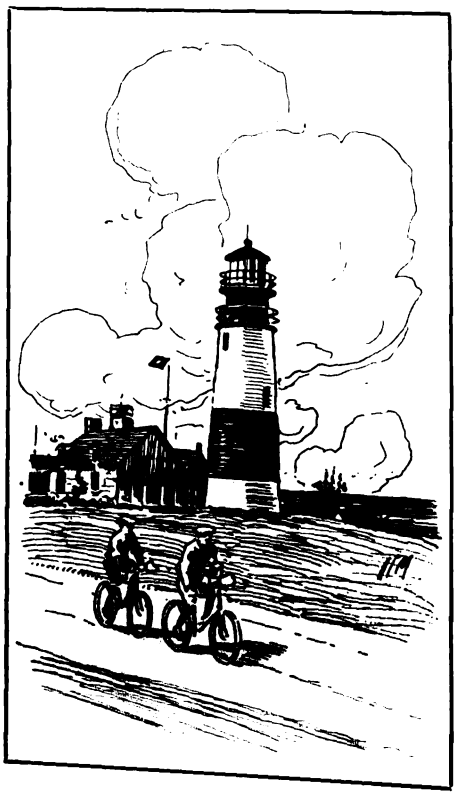
PERHAPS the best of our Sunday rides was that which took us to Aunt Mary's. She was all of our aunt, though it was Jack Fecitt who discovered her. She was a jolly, motherly ould soul who lived at the First Cliff in Scituate, and there she did feed us with lobster, or coot stew, or leggerlam, or whatever was timely, backed up by tempting vegetables from her own garden, peas, produce, potatoes, provender and pie-plant. And if we wished we could bathe in the buff by the breakwater, where the wobbly waves were cussed cold, and barnacles bit our feeble feet. Or we could bask in the sun or idle in the shade, according to the season, and gaze out upon the mighty Atlantic, which began in Aunt Mary's dooryard and hasn't ended yet. Naturally it would be calm there, for the sea in Scituate is always silent. Strike—one.

If There Were No Public Schools

About twenty-six miles, I think it was, from my front steps to the Mecca of our meanderings. Four or five of us would start at about nine o'clock, up around the corner to Massachusetts avenue, and eastward as far as Edward Everett Square, named for the man who was born thereon. George Washington spent the night in a house there, and the next day the British evacuated Boston, and there also was located the first public school this country ever saw. If there had never been any public schools, what a lot more fun you and I would have had when we were boys. Talk about the soulless drudgery of a sodden mill! That's nothing to the life a boy leads in school, an innocent prisoner condemned for no fault to never-ending hours of unillumined misery. I would rather spend a million days in trips to Aunt Mary's than one in school.

They trained us, every mother's son,
For business or for college.
We lost an awful lot of fun,
And all we gained was knowledge.

In Dorchester we would annex Jack and Gus, thus completing the roster of the Old Men's Club, as a saucy minx on the sidewalk once christened us—us the juvenile, the joyous, the gentle, and the jiddy, "in the brave days when we were forty-nine." Once we rode all the way to Aunt Mary's without a dismount, but that was only for the say-so, as there was so much to see and there was so much to instruct each other about, that haste was hated and speed was spurned. That once could not have been in the fall when apples were ripe, for we knew every apple tree along the entire route, and which were fine and which were only fair. Apples taste so much better when eaten out of doors, and these were so enticing, that we had to consume six or eight apiece on the way down, or we wouldn't have dared look ourselves in the face.



As we left Dorchester we observed the overpowering odor of chunky chocolate, and saw at Lower Mills the brobdignagian Baker buildings towering above our tops. Then came Milton Hill, where in the high-wheel days mighty men used to falteringly fail, or proudly prate their prowess, and where there was a crockery fence, brought out from China by the elder of the famous Forbesses, another of whom owned one of the islands of Gosnold, that last town in Massachusetts which took me three years to attain when I was cleaning up the state. That terminal-town Forbes married a daughter of Ralph Waldo Emerson, though it is quite as unique a distinction to own a crockery fence as it is to wed a philosopher's child. But the fence has gone now, has gone where crockery is mockery and fences an offence.

Only Cattleships and Bruisers

After Milton, Quincy, and after Quincy, Weymouth, with the Fore River shipbuilding establishment in plain view from the bridge which connects them, from whose vantage ground may at any time be seen, newly made or in the making, a large assortment of battleships and cruisers. So different from East Boston, where you see only cattleships and bruisers. Strike—tuh.

In North Weymouth there stood a refreshment shop bearing the effective sign, "Luff up!" but it came shortly before an excellent coast, and so we neglected it. There was another fine coast as we approached the bridge over Black River, where on our right stood a serried battalion of the blackest evergreens I have ever seen, the savin cedars of our southern suburbs, gloomy, yet fascinating. Before reaching Hingham we passed the polo grounds, but as they don't play that game on Sunday hereabouts, the place offered no excitement.

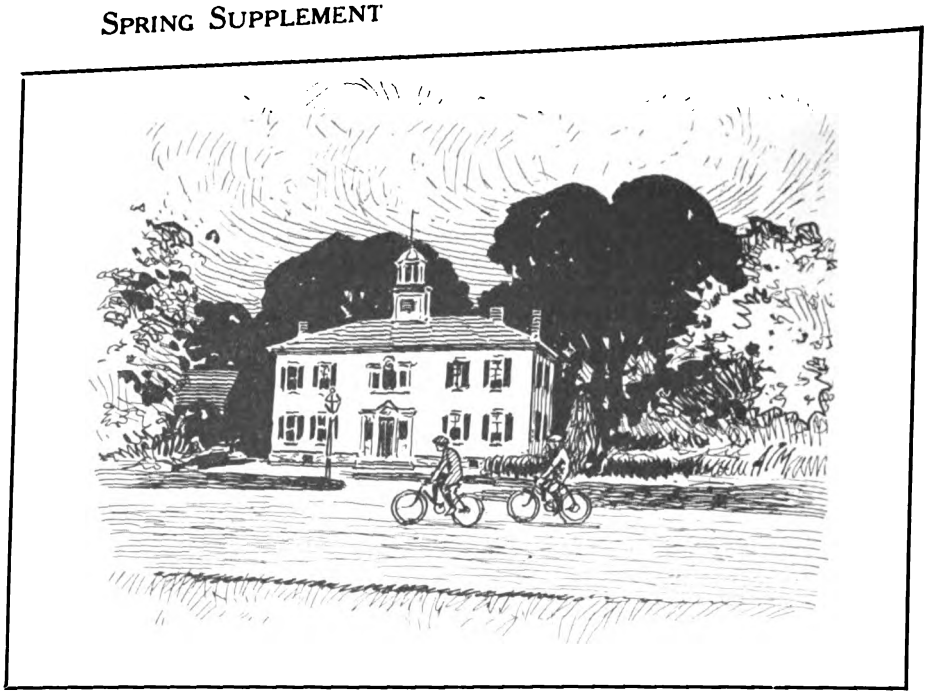
Kilby St. Ought to Be in Quincy

There are two ways of going through Hingham on the way toward Scituate. One takes you over Old Colony Hill, which is quite a pull, while the other takes you past the Old Ship Church, and by easier grades to the State Road, and so past Henry M. Whitney's private trotting track to Cohas-

Digitized by Google

set. The latter route is beautiful, but it makes you miss the Jerusalem Road, one of the finest shore drives in the world. The two ways may be combined, however, by cutting through Kilby street in Hingham. That is a good name for a street, an excellent name, but it ought to be in Quincy.

The Old Ship Church deserves a paragraph to itself, as it is the most ancient place of worship within the original limits of the United States, and has been, and is still, in constant use. It is called the Ship because of a compass which is painted on the ceiling of the belfry, in plain sight from the street. As that belfry is situated directly over the centre of the edifice, the bell rope comes down in the middle of the congregation, a condition of which I have never heard elsewhere. Another remarkable circumstance is that in two hundred years the society had only six pastors. That is why the ancestors of so many good people, including Abraham Lincoln and myself, came from Hingham.



Fined a Peck of Corn

In 1792 the town voted to tear down the old church and build a new one, but they have not done so yet. Something must have detained them. In the old days everybody went to church, for anybody who stayed away, or who left before the service was over, was fined a peck of corn. I suppose you wonder where they all could get a peck of corn. Whisper. If you throw a grain of corn in the street, any sparrow will give it a peck. Strike—three. Batter up.

Within the old church in the centre of Hingham
Their prayers they all pray and their psalms they all sing' em.
While under the belfry adorned with a compass
Are kindness and peace without ever a rumpus.
The candlestick-maker, the baker, the butcher,
Infallibly free from the fear of the future,
Sleek citizens all, with their lovable ladies,
Sleep soundly, assured of salvation from hades.

Next came Cohasset with its beautiful common and another old church. This is one of the most beautiful of New England villages and was once the home of Lawrence Barrett the tragedian, Robson and Crane the comedians, and the Hanlon brothers, pantomimists. There were originally six of the Hanlons, and three are still living, one of whom, William, ranks among my dearest friends. It was only last fall that I accompanied him to Cohasset, to attend the auction sale of the old Hanlon studios, where were evolved and created those spectacular pantomimes, so dear to the juvenile American heart, "Superba" and "Fantasma."

A Cherished Souvenir

Friend William asked me to choose a souvenir and I took a framed woodcut of the six brothers, made more than fifty years ago, when they were the foremost gymnasts of the world, and now it hangs in my den, in the goodly company of many portraits of dramatic and operatic stars, and a banner of the Wheel About the Hub.

Just as we arrived at the beginning of the village we came to a drink of water, which always tempted us to tarry, even though we might not dismount, but rather leaned against the trough while in our rubber cups we caught the clear, cold water as it spurted to the basin. There was another drink on the edge of North Scituate, near the brook which divided the Plymouth Colony from the Massachusetts Bay Colony, where stood a pump bearing this inscription.

"Pure water here for man and beast,
Come, take a sip at Nature's feast.
If you prize this crystal fount,
Pump your share when you dismount."

Obeying the poet's injunction, I always had one of the fellows pump our proper share, while we waited for him and told him to hurry up. It must not be forgotten that "The Old Oaken Bucket" was written in praise of one such utensil which hung from a well-sweep here in Scituate. Many a drink have we had from the original well, out of a newer cedar bucket, presented by an admirer from Richmond, Virginia.

Riding Past Dreamwold

We passed Tom Lawson's estate, Dreamwold, hoping that none of his pedigreed bulldogs might get us, and rode over a bridge and alongside a short beach on which were heaped piles of Irish moss, snatched from the sea by hardy Scituaters. Doesn't "Scituaters" sound like a drug clerk drawing soda water? It is almost as bad as the Fitts Brothers out in Framingham. "My next imitation will be that of a planing mill."

In another minute we were at Aunt Mary's kitchen door, the portal by which we gained the dining room, and even the parlor. We washed from a tin basin in the kitchen sink, shook hands with the servants, spoke to the dogs—and then the food!

Succeeding which, upon the lawn
We indolently drowse,
Or twit our chosen comrades on
The lowness of their brows,
While they with aggravated tone,
And overheated blood,
Declare that Goodrich tires are prone
To skid in good rich mud.

BICYCLING AS AN ALL YEAR SPORT

A Veteran Club Rider Tells How Interest in the Bicycle Can Be Kept Alive in Winter and Summer; Events Which Can Be Staged to Hold Riders Together

By FRED M. SANBORN
Crescent Bicycle Club, Baltimore, Md.

IN considering the question of keeping the interest in cycling alive throughout the entire year, in the dull, chill months of winter as well as in the bright, sunshiny days of early spring when enthusiasm blossoms as spontaneously in the breast of the dealer as in the bicycle rider himself and when he makes all kinds of promises as to the wondrous amount of "boosting" he is going to do for the sport "this season," too much stress cannot be laid upon the importance of organizing and fostering clubs.

The club does something for the dealer that he can never do for himself—it welds together into one unit all the enthusiasm for the sport and love of the game possessed by the individual riders who frequent his store, and many, also, who do not frequent his store but who may become valuable assets to his business through their association with the club, whose activities the dealer is willing to promote and encourage by giving a little of his time and energy.

Racing and Mileage Contests

The biggest boost for the sport and for both the riders and the dealers no doubt is furnished by road racing, and in the months when this is possible there can be no better "ad." But, of course, there is a goodly portion of the year when weather conditions are uncertain so that the staging of events is problematical. Also it is impossible in many communities through the difficulty of securing prizes and arousing sufficient interest among the riders to promote more than a limited number of races, and for these reasons a mileage contest is probably the best month-in and month-out attraction that a club can offer.

A mileage contest, of course, runs from the first of the year to the last, and even though bad weather may prevail, there are nearly always a few days in every month when cycling is possible. Consequently there is always interest as to what members are in the lead. A mileage contest to be properly conducted should have the comparative standing of the competitors, announced each month promptly, so that each may know just where he stands.

There are few better publicity getters than a mileage contest—the newspapers are usually willing to devote space to the monthly standings and the public in general always seems to take great interest in it. The club members themselves, of course, feel a keen interest in the standing—it makes no difference how long you are, you can always pass somebody else.

The dealer who "is on the job" must be himself a member of the club, and while he should act absolutely impartial in his relations with every member, whether he "hangs out" at his store or not, he should make it a point to see that each competitor receives all the credit due him in the newspaper reports and that a full account of the final standing, pictures of the winners, etc., appears in all local newspapers and cycling journals. This final account comes at a time in the year when interest is at its lowest ebb, and is a splendid means of reviving enthusiasm among the old riders and of implanting it in the new ones, to say nothing of its value as a matter of publicity.

Seeing Sights Near the City

Regular weekly runs, held preferably on Sunday, when everyone can get out, are also a splendid means of keeping up the interest throughout the year. These runs, which had best be in charge of competent officers, should be held to places near the city and the pace regulated so all can easily maintain it.

Once in a while a longer run, a two-day trip over the week-end or on a holiday, adds interest and pleases the more more strenuous riders who delight in the touring spirit and like to roll the miles behind them.

It should be made a point to hold a run in the winter months, as the bicycle rider is usually a hardy individual who takes pride in getting out each Sunday despite the cold and wind. I might mention here that the medal awards ought always to be good ones for both mileage and run attendance contests, thus serving the double purpose of pleasing the winners and arousing a desire to compete.

Racing Men the Best Customers

Racing is without a doubt the greatest interest creator of all cycling activities, and the dealer who takes an active and personal part in promoting it is doing a great deal to benefit both the sport and himself. The racing men themselves are his best customers, buying, as they do, only the highest priced bicycles and the finest grade equipment. The newspaper accounts of the races are bound to attract public attention. We in Baltimore have always found handicap road races at a distance of about ten miles best for the great majority of riders.

A run attendance contest, in which the riders are given points for attending the runs held during the entire year and medals are given those with the best score, is also attractive. Short handicap road races held on the runs, at distances at about five miles or so, also add to the interest, especially if medals are awarded. Social features can be employed to hold a club together for that quiet period between Christmas and Easter.

"Stereopticon lecture" entertainments furnish much fun winter evenings, particularly when the members get up slides of their own to be shown on the screen, as well as pictures of general interest. Comic slides can be made by members illustrating amusing incidents of the past season and containing good-natured "knocks" at the various members which often "bring down the house." A stere-

(Continued on page 112)

Dealer: Ride a bicycle! It's the best sport and exercise in the world.

Prospect: Since you're rooting so hard, why don't you ride one yourself?

Dealer: Gee whiz! B'gosh I never thought of that!

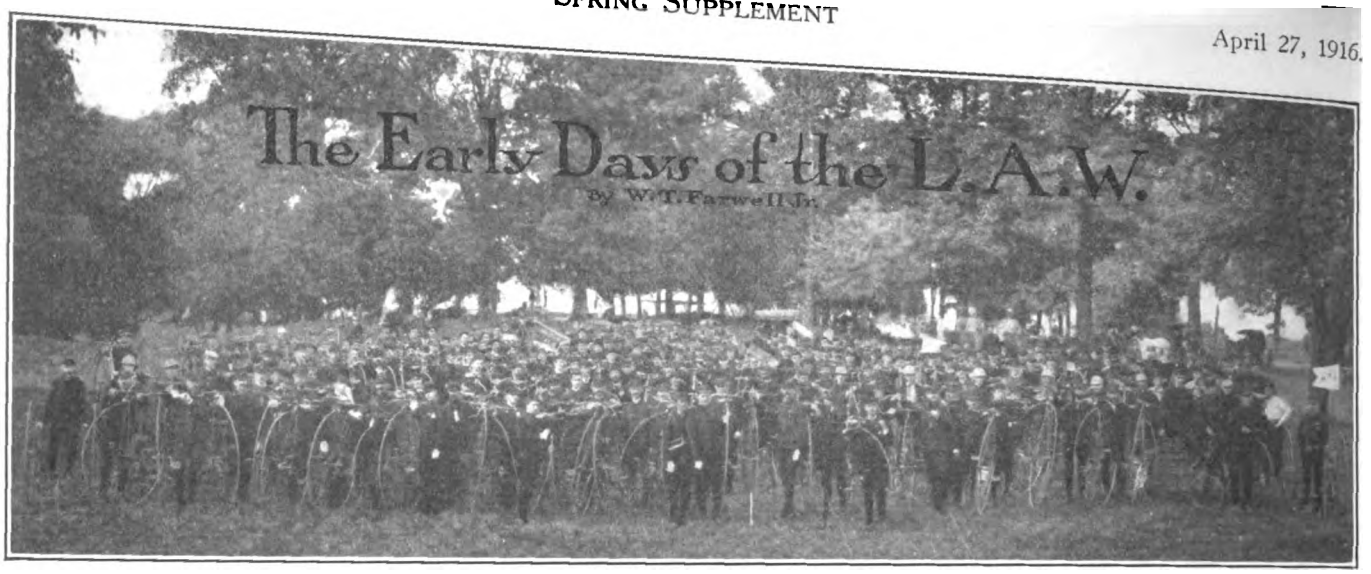
HOE TO THE END OF EACH ROW!

Digitized by Google



Second Annual Meet of the Pennsylvania Division, L. A. W., Fairmount Park, Sept. 13, 1884

SAY to one of the old veterans of the high-wheeler days that the bicycle has become almost entirely a utility vehicle, and you'll find that in most instances he will agree with you and then immediately grow reminiscent over the days when the trusty bicycle was meant for pleasure—and for pleasure only. His eyes will sparkle with delight as he relates crisp stories of the goodfellowship and freemasonry of the wheel, made possible largely through the club life fostered by the League of American Wheelman.

And he will be apt to tell you that the bicycle will not again become a real joy-bringing "steed" until clubs are organized on a broader scale, and united in such fashion as to stimulate a growing interest in cycling. During the past year quite a number of new clubs have sprung up all over the country, which seems to be rather a good indication that the pleasure side of cycling is again coming into its own.

It ought therefore to prove interesting to present a brief sketch of the L. A. W.'s history, in which is woven the story of many a stirring meet among rival clubs, and which recalls the days when the cyclists on the road hailed one another as comrades, and fought shoulder to shoulder to establish their rights.

The first cycling organizations were formed in England, and then in France during the 70's. The movement then spread to America where the Boston Bicycle Club was organized in 1878. Other clubs then appeared in America quite rapidly, as interest in touring and racing increased.

In England two national organizations flourished in 1878, these being the "Cyclists' Touring Club" and the "Bicycle Union." The former body is still going strong, having absorbed in later years the union, which had controlled the sporting end of the game.

Suggests Forming National Body

It was the splendid work accomplished by these national bodies, and also the desire for protection and recognition on the part of American wheelman, which led Frank W. Weston, the founder of the *Bicycling World*, to suggest in the January 10, 1880, issue of this journal, that the time was ripe for the clubs and riders in America to join hands.

Two other active minds were also busy exploiting the same idea. Early in 1880, Kirk Monroe, president of the New York Bicycle Club, suggested a "grand meet of wheelmen," and after some correspondence with the Boston and Essex (N. J.) clubs, an invitation was issued on March 20, signed by Mr. Monroe, asking wheelmen to gather at Newport, R. I., on Decoration Day, 1880.

Mr. Chas. E. Pratt, president of the Boston Bicycle Club and editor of the *Bicycling World*, was heartily in favor of this meet and its purpose, and used his able pen in presenting many strong arguments that aroused nation-wide interest. In one of his editorials, Editor Pratt said:

"We wish to suggest now for consideration in season, whether the proposed meet would not offer a suitable occasion for the meeting of delegates from all clubs for the organization of a bicycle league, which will serve to protect and to further the general common rights and interests of the wheelmen throughout the United States and Canada, and combine the best points of the Cyclists' Touring Club and Bicycle Union abroad."

Touring on High-Wheelers

150 Riders at Newport Meet

The Newport meet proved to be a great success. There were present about 150 riders, including representatives from 32 clubs, when the convention was called to order on Monday, May 31, 1880.

Thus was organized the once great and powerful L. A. W. Starting with a few hundred members, it grew apace year by year, and reached the zenith of its power in the boom days of the 90's, having then a membership of 100,000 cyclists.

Almost immediately after its formation, the L. A. W. made its influence felt in many ways. It launched a club movement and sought out every active cyclist and gave him the power to unite the riders in his section. The league stood behind the clubs and the wheelman in their fight to insure their rights on the road.

Restrictions Against Use of Bicycle

In this connection it must be remembered that the forerunner of the bicycle, known as the Velocipede or Boneshaker, had made itself objectionable to the authorities in many cities, with the result that restrictions were enacted against the use of the two-wheeler. But the laws made no distinction between the bicycle and the Boneshaker.

"Road hogs" were worse in those days than now. Horses and drivers hated the sight of the tall "ordinaries"; and even after the horses seemed to have become quite accustomed to the new type of vehicle, the drivers still continued to harbor a deep-rooted aversion to cyclists, and obstinately refused to show them any courtesy on the road. Many riders were run down and injured.

But the severe punishment administered to these unruly users of the highway, brought about through the co-operation of the clubs and the legal department of the L. A. W., eventually made cycling a safer pastime.

Most of the cities and boulevards were closed to cyclists until the L. A. W. took a hand in the matter. For the purpose of making a test case of the legality of ex-

Digitized by Google

cluding bicyclists from Central Park, three members rode into the park on July 2, 1881, and were promptly arrested. The case was carried from court to court, and finally lost. It was Col. A. A. Pope, who generously provided the sinews of war to the tune of $9,000.

Park Opened to Riders

In 1883 the fourth annual meet of the L. A. W. was held in New York City. It was the good impression created by the orderly conduct of the wheelmen at this meet which led the park commissioners to reconsider the restrictions against cyclists, and to permit competent riders the use of certain drives in Central Park.

But the riders continued to clamour for broader rights and sought relief in the New York legislature through the L. A. W. After two months of persistent and well-directed effort, the famous Liberty Bill was passed in 1887, granting riders the use of all roads in any park of the state. Taking their cue from New York, other states passed similar "Liberty Bills."

The Good Roads Movement Started

The work of the L. A. W., however, did not stop there. Having secured the use of all roads, they soon began to demand better roads. In 1888 a standing committee on highway improvements was created, and in 1890 the league's "roads improvement bureau" was established with Isaac Potter at its head. As the result of the propaganda started and executed by the bureau, many bills were passed authorizing the construction of better roads.

One of the most important steps taken by the league in its agitation for rideable roads was the founding of the *Good Roads* magazine, which was edited by Mr. Potter, and is still in existence today. Thus the L. A. W. effectively boosted the good roads campaign, which resulted in the building of thousands of miles of "permanent" highways, long before the automobiles came into use.

Established a Touring Bureau

From the time of its inception the league actively promoted touring. It gathered and printed touring information covering every rideable section of the country. It erected sign posts along all the mainly traveled routes, and obtained special hotel rates for touring members.

The annual L. A. W. meets were big affairs, and all the large cities made an effort "to land" these conventions, which always gave promise of drawing a large crowd of visitors from all parts of the country. A grand parade was usually the feature of the program, when thousands of riders in their braided club uniforms, mounted on tall "ordinaries," made an imposing spectacle as they rode in various formations through streets that were lined with an admiring populace.

After the parade, were held the important business session and election of officers. Then followed the big banquet and the races. These meets were stirring occasions, and filled every league wheelman with a justifiable pride in his mount.

Early in its career the L. A. W. took track racing under its wing, and successfully governed it for several years. It formulated rules and defined the status of the amateur and professional when the racing game in this country was in a chaotic state.

Spectacular Parades Were Held by the Devotees of the High Wheeler During the Early Club Days

Scene at One of the Meets Held by the Massachusetts Bicycle Club, in Trinity Square, Boston, During the 80's. This Club Was Among the Wealthiest and Largest in the Country

When the L. A. W. was formed, the *Bicycling World* was made its official organ in which league notices and business were published. Later the league decided to publish its own organ, called the *L. A. W. Bulletin*, which became one of the leading cycling papers, and in 1888 was incorporated with the *Bicycling World*.

The pioneers who founded the L. A. W. devoted much of their time and effort to the good of cycling, without any thought of personal gain. In later years, however, its offices were sought for material reasons, and it was then—fortunately after the league's most important work had been accomplished—that the L. A. W. became honeycombed with politics and its influence began to decline.

Old Veterans Are Still Active

The L. A. W. is still kept alive by a few old veterans, chief among whom is the venerable Abbot Bassett, who first came into prominence as chairman of the racing board, back in the early 80's, when he professionalized a number of well-known stellar riders. In 1887 he was made secretary, and has held that office ever since.

Today cyclists have everything in their favor—thanks largely to the untiring efforts of the L. A. W. They have better roads, superior machines and little need for a protective organization—except perhaps against the lineal descendant of the early "road hog," the present-day motorist, who does not seem to know the meaning of "safety first."

But what the young cyclist today needs is more of that fraternal spirit which united the early riders, made club life and the pleasure side of cycling the most potent influence in the growth of bicycle riding as a sport and recreation.

ENGLISH STRATEGY

Rain was falling steadily as the weary cyclist plodded on through the English mud. At last he spied a figure walking toward him through the gloom.

Gladly he sprang off his machine and asked the native:

"How far off is the village of Poppleton?"

"Just ten miles the other way, sir," was the native's prompt reply.

"The other way!" exclaimed the cyclist. "But the last sign post I passed said it was in this direction."

"Ah," said the native, with a knowing grin, "but, ye see, we turned that theer post round so as to fog those ere Zeppylings!"

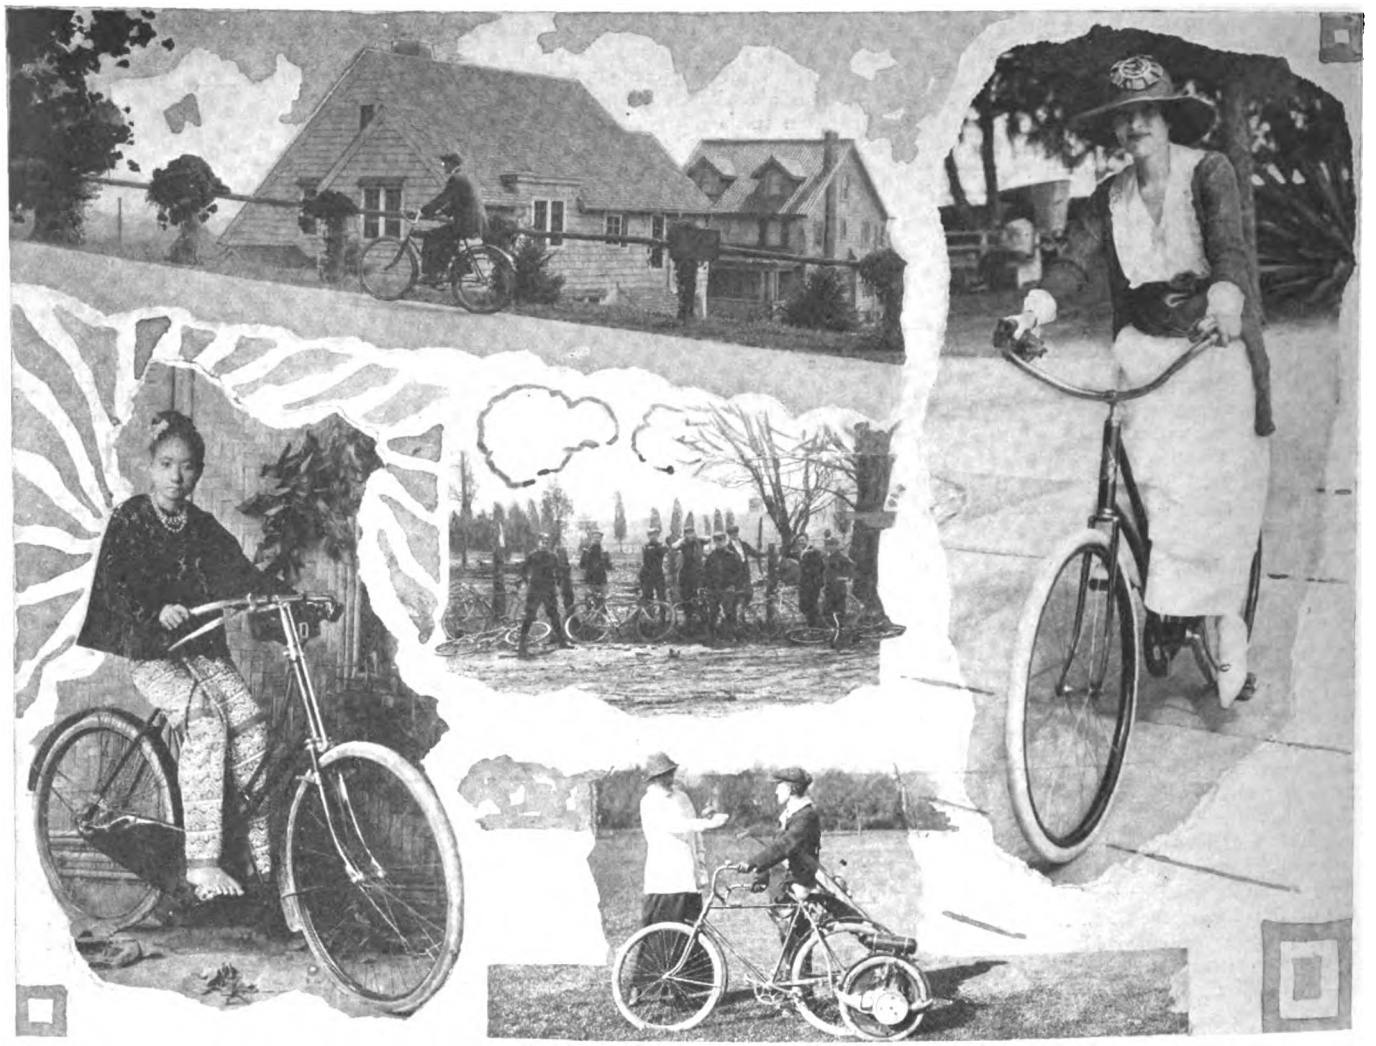
HERE'S A VERSATILE SPORT AND ITS KEYNOTE IS HEALTH



NEW CYCLE CLUB IS FORMED IN NEW LONDON

NEW LONDON, Conn., April 24.—Cycle interest here has culminated in the formation of The Flying Merkels, a bicycle club with a charter membership of nearly a score. The newly formed club is under the wing, so to speak, of Leon Posner, the Racycle and Flying Merkel dealer here, who acts in the capacity of treasurer. Other officers are: President, Walter E. Comeau; vice-president, John Regan; secretary, John Doyle. On April 13 the club staged a road race to Saybrook and return, a distance of 20 miles, which resulted in a victory for Walter Comeau astride an Iver Johnson, with D. Bain second on a Great Western.

BUFFALO DEALERS PLAN BICYCLE CADET CORPS

BUFFALO, N. Y., April 22. The Buffalo Bicycle Dealers' Association has called a special meeting at the T. M. A. Hall, 49 Broadway, April 28. "At this meeting," said President John W. Henry, "we will work out the final details for our summer's events. Also, it is our intention, at this meeting, to devise plans for a bicycle cadet corps.

"We are planning to invite the Boy Scouts in this corps. Another thing we hope to decide is the date for the first Saturday afternoon bicycle road run. All of the committees will be announced at this meeting."

BOYS FORM BICYCLE CLUB

CLIFTON, N. J.—Five youngsters from the Lakeview Heights section of the township have formed a bicycle club for the purpose of seeing more of nature. They have been provided with their two wheelers by their parents who realize the benefits to be derived from the exercise received and the inhaling of pure fresh air in the country. The boys are making an effort to enlist others in the club and this group promises to be the foundation for a large sized boys bicycle club in this section of the country.

TRIANGLE RUN TO COWENTON

BALTIMORE, Md., April 24.—The run of the Triangle Wheelmen was held Sunday to Cowenton, starting from 931 N. Broadway at 9 a. m. A special run was held on Thursday, April 20, and was much enjoyed by those taking part. Those finishing were: Capt. Horace G. Seward, Colorbearer Edward J. Kulda, Harry L. Starr, Elmer Lauer and Joseph Civish.

VIM CONFERENCE RADIATES OPTIMISM ON ALL SIDES

BUFFALO, N. Y., April 25.—The Vim Cycle & Hardware Company held a conference of its salesmen from April 22 to 25, sessions being held every afternoon and evening. This was one of the most enthusiastic conferences ever held by the firm and everyone was optimistic over present and future conditions.

A consensus reports by the Vim salesmen showed that dealers in most parts of the country were suffering from a shortage of stock. All over, however, they were found very ready and anxious to buy. The increasing demand for the higher grades of bicycles was another interesting feature of all reports.

Between sessions trips were made through the Vim plant and all hands were acquainted with the various operations and made familiar with the stock on hand.

President Henry announced that there would be a general advance in prices in the near future and that a shortage in certain lines of stock had made filling of orders very difficult. He stated that the shortage was due to slow deliveries of material. Among those present at the conference were S. D. Greene, H. W. Georger, Lou Kronson, Albert Dietrick, President Henry and members of the office and sales staff.

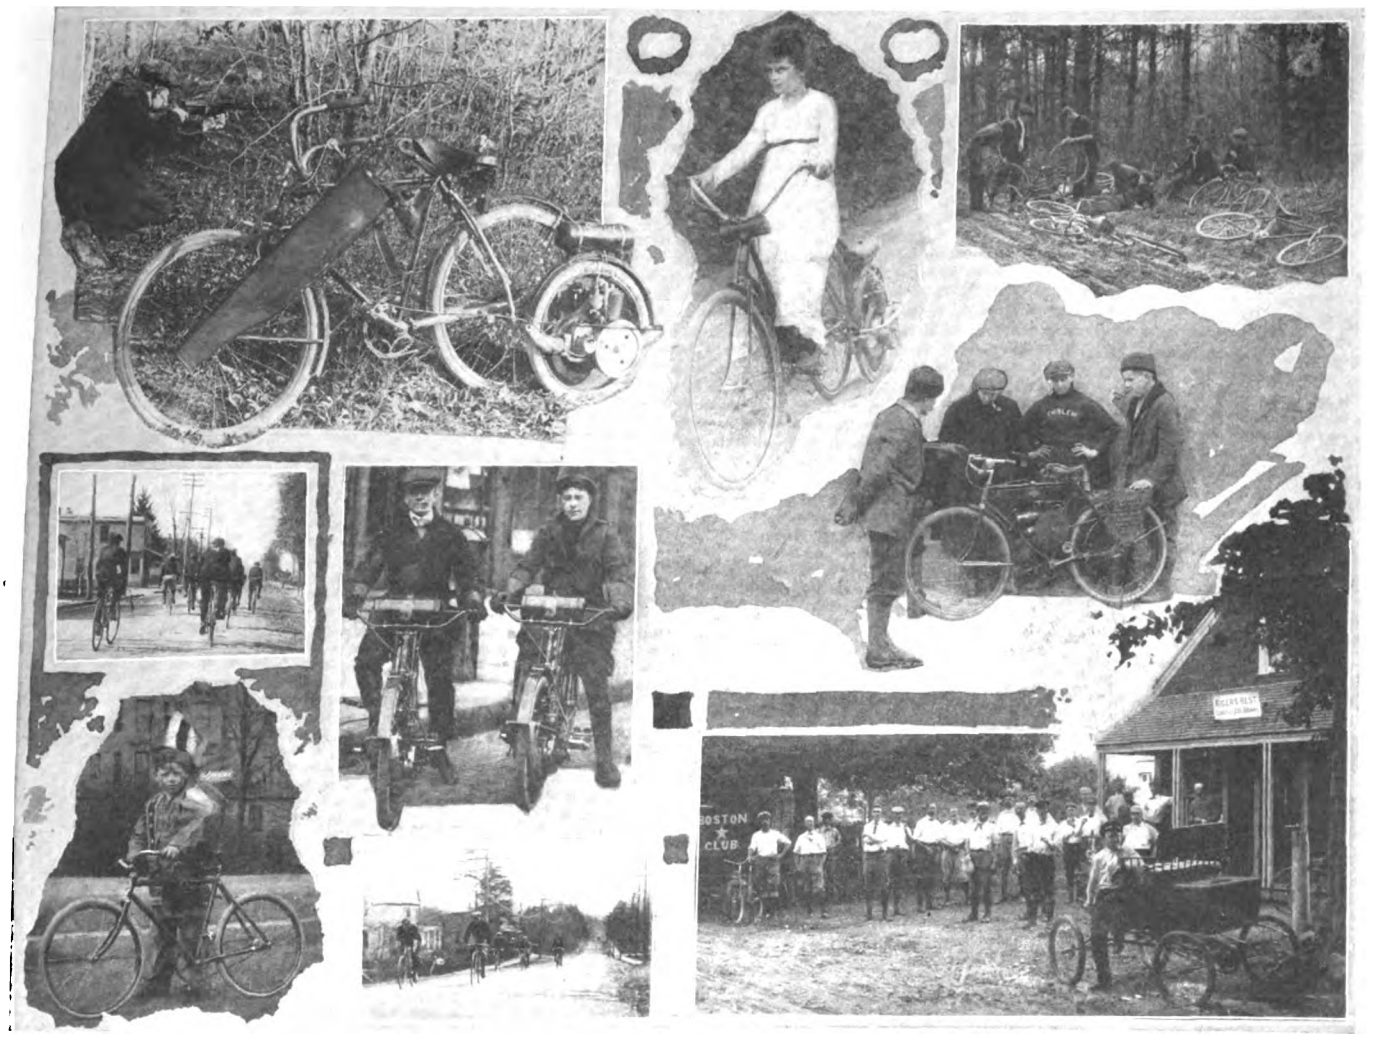
RIDE A BICYCLE—AND YOU'LL KNOW THE JOYS OF CYCLING



GREENINGER IS PRESIDENT OF C. A. C. CLUBS

SAN FRANCISCO, Cal., April 15.—Perhaps the biggest piece of bicycle news that has broken in coast circles during the past week is the election of R. A. Greeninger to the presidency of the California Associated Cycling Clubs at the annual convention of that body which was held in Sacramento. Mr. Greeninger, who is one of the "oldtimers," bicycly speaking, is the founder and now holds the presidency of the New Century Wheelmen of San Francisco. He has several times held the captaincy and presidency of that bicycle organization since its inception in 1900 and his election to the chief post of the state bicycle organization is a tribute to his ability to lead bicycle enthusiasts to worth while deeds as well as to his zeal.

Stockton has deferred to Sacramento in the matter of staging a bicycle meet on May 14. Both meets were scheduled for the same date, but since the Sacramento Wheelmen had planned the meet further ahead the Stockton boys postponed their event to take place on May 21. Other bicycle events scheduled for the near future in these parts are a thirty-mile C. A. C. C. novice relay race, a one-mile novice sprint championship and a five-mile handicap carded for April 23 by the New Century Wheelmen and a racemeet to be staged some time in May by the Olympic Club of this city.

Bicycle Day and the Bicycle Day racemeet have done much to increase the popularity of the sport in this district, with the result that events are filling better and drawing better crowds, while the local bicycle business is flourishing.

SAN FRANCISCO NEWS

SAN FRANCISCO, Cal., April 21.—Hans Ohrt, the amateur cycling champion, will leave here on May 1 for Newark. Ohrt has been training faithfully and is in fine trim. He will be accompanied to Newark by M. Burger and Harry Hoffman, both of the Olympic Club.

The Stockton Wheelmen were admitted to the California Associated Cycling Clubs at the last meeting of that body. On May 14 the Stockton boys will hold a meet that will include eight events.

RAIN POSTPONES C. R. C. A. RUN ON EASTER

NEW YORK, April 24.—Inclement weather necessitated the postponement of the nineteenth annual spring century run of the Century Road Club Association which was scheduled to be held over a Long Island course yesterday, Easter Sunday. The run will be staged, weather permitting, on Sunday next, April 30, over the same course. That the event holds promise of reaching gigantic proportions is evidenced by the fact that over 100 entries have been received.

GIVE HEARTY SUPPORT TO MICHIGAN RACES

GRAND RAPIDS, Mich., April 21.—Requests by officers of the Western Michigan Cycle Club for prizes to be given in connection with the road runs, which will be held this season, have met with hearty response here. For the meet with the local Y. M. C. A., to be held on Decoration Day, more than $700 in prizes have already been pledged for the winners, and the merchants are assisting on a large scale, for they realize the advertising value of the races.

The leading bicycle dealers in this city report an excellent trade; more machines have thus far been disposed of than during the entire season last year. Many of the buyers are men of considerable prominence who are welcoming the bicycle back as the best medium of exercise and pleasure for the summer months.

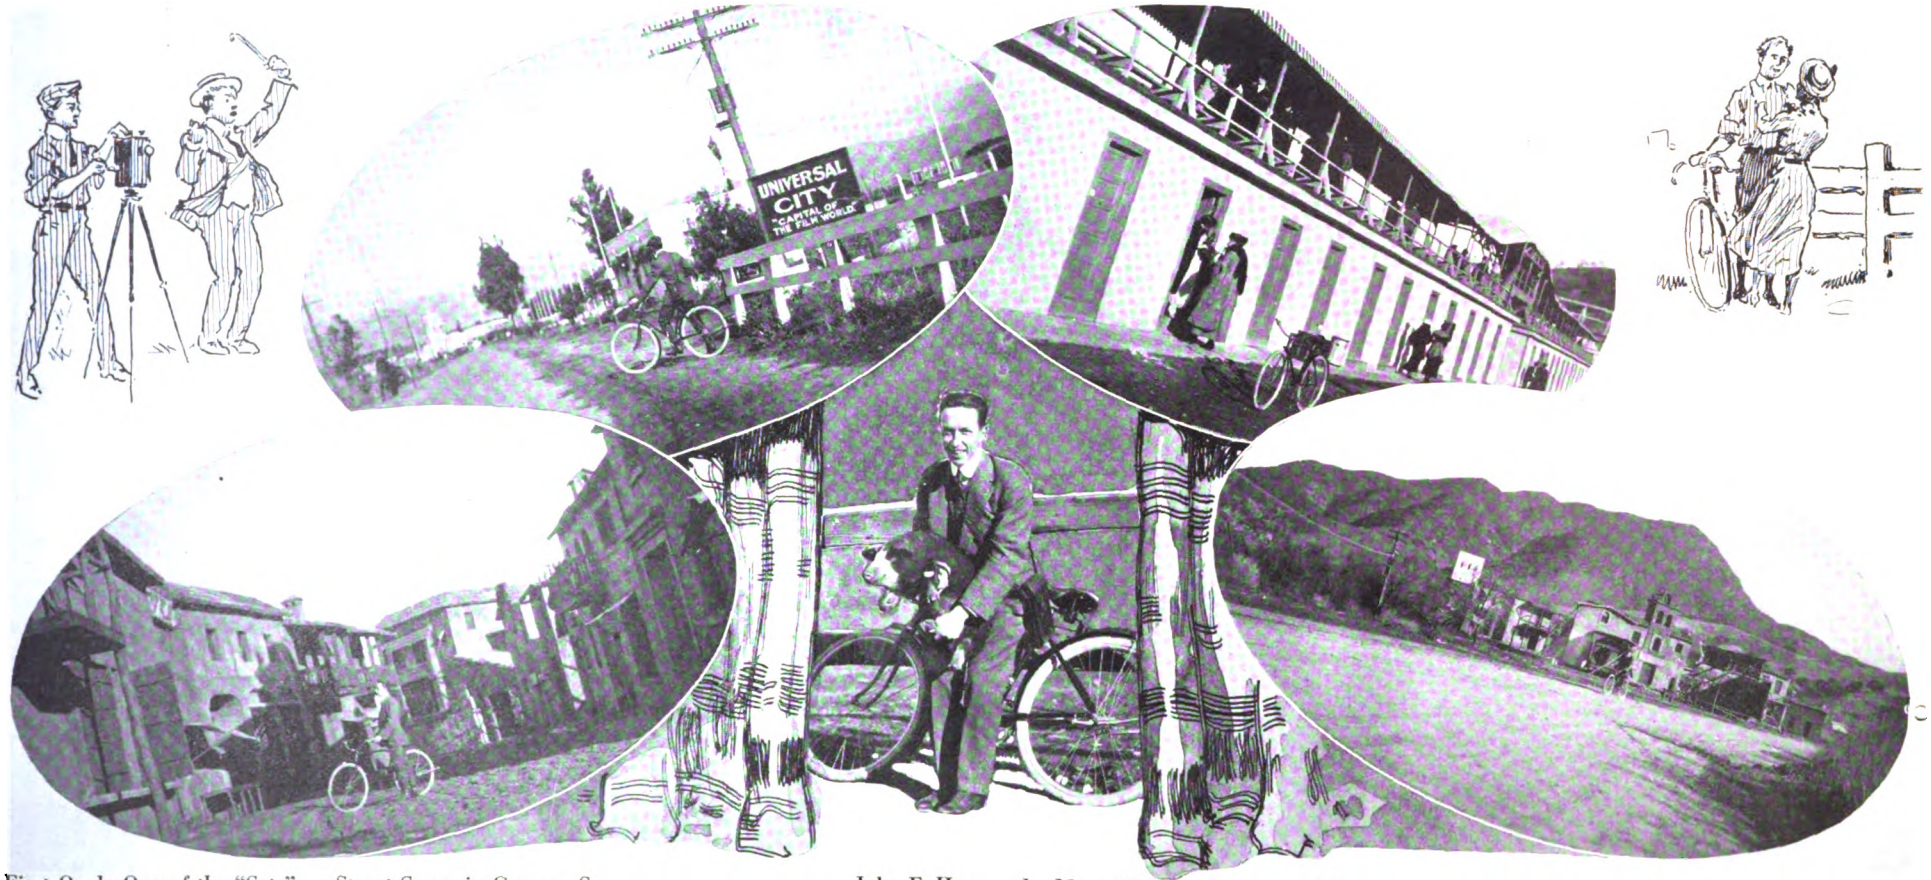
Reeling Off Miles in Filmdom

BY John E. Hogg



First Oval: One of the "Sets"—a Street Scene in Genoa. Second: Approaching Universal City from the Cahuenga Pass

John E. Hogg and a Movie Hog

Third Oval: Dressing Rooms Under the Spectators' Gallery. Fourth: In the Back Country of the City

UNIVERSAL CITY, that wonderful municipality in Los Angeles County, Cal., which is devoted exclusively to the production of motion picture films, is nestled in the southern end of the beautiful San Fernando Valley, eight miles north of the city of Los Angeles. It is separated from the hustling metropolis by the Malibu Range, and the Cahuenga Pass, breaking through this mountain range, offers the only accessible highway to the "capital of the film world," as the big movie city is called.

I followed this highway a few weeks ago on my bicycle to visit Universal City. Street and "rubber-neck" wagons were available; but my experience in riding through this section had shown that the pass need have no terrors for fallen head downward, his foot being caught in the stirrup. That spectacle certainly made my blood run cold. Then, as the men with the rifles leveled their weapons at the fleeing horse and the camera man was rapidly turning the crank, a pistol cracked in the hands of the struggling rider.

The horse stumbled, but didn't fall. Again the pistol cracked and the animal dropped, hoofs over head. There was a tangle of horse and man in a great cloud of dust. The horse kicked three or four times and then lay dead. Extricating his foot from the stirrup, the cowboy managed to get on his feet and, staggering away a few paces, he collapsed in the grass.

A variety of natural scenery is to be found in the back section of the city. There is a big arroyo—dry river—which serves to depict desert scenes; here are hills, snow-capped mountains and verdant valleys. And scattered all over are to be seen many "sets," representing villages and cities of modern and medieval times. Any kind of scenery which may be desired in a play is readily gotten up by the technical department—sometimes at an enormous expenditure of time, energy and money.

There is also a zoo filled with a wide variety of wild animals, from vicious tigers, leopards, lions and serpents to herds of camels and elephants. This zoo also includes a full supply of many domestic animals.

Having explored the back country, I toured over the fine

City Can Best Be Seen by Bicycle

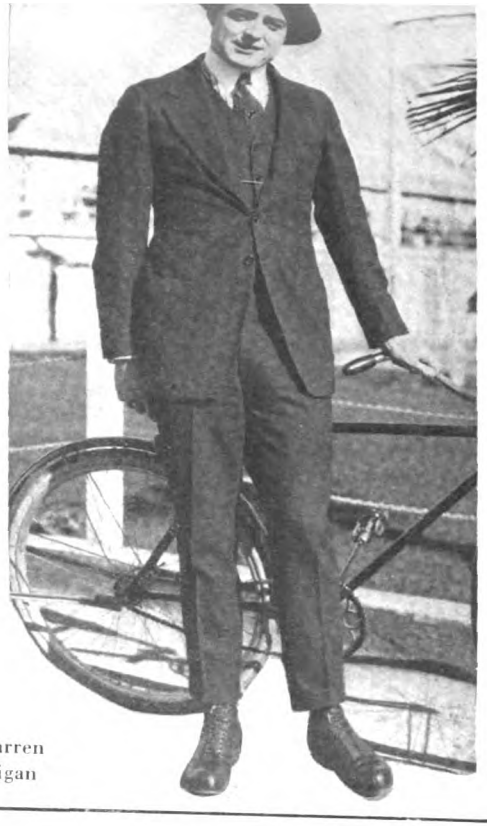
There is too much to be seen in the film city to cover it comfortably by walking, and if one journeys by the street cars or "rubber-neck" wagons he has no other method of getting about once he is landed at the city entrance. Therefore the bicyclist has a decided advantage, as he may go where he will with but little exertion and a minimum expenditure of time.

Approaching the city from Cahuenga Pass one gets an impressive bird's-eye view of it. From the distance it resembles a large amusement park with its large white buildings and "sets"—as the temporary structures erected for scenic purposes are termed.

One of the first buildings likely to attract one's attention upon entering the city proper is the hospital—a very necessary unit in a motion picture plant. For in making films the primary requirement is action; if a scene calls for a fight between men it's got to be a real battle, or the picture will be ridiculed by the audience. Scarcely a day passes but that a hurried call is sent in for the ambulance to rush some injured actor or actress to the hospital.

This element of dare-deviltry in the making of moving pictures was certainly well demonstrated on the occasion of the writer's visit to the city. I had ridden well into the back of the town among the hills, in a section where few tourists, unless mounted on cycles or horses, ever stray. I saw a number of cowboys riding to and fro on a nearby hillside. I also noticed a camera man setting his outfit up. What puzzled me, however, was the presence of about a dozen men, lined up along the hill, with Winchester rifles.

Suddenly down the incline came a horse galloping as if the devil were after him, dragging a cowboy who had



J. Warren Kerrigan

ment, housing extensive shops for various trades employed, which is provided with every facility for constructing scenery and temporary buildings. These shops may be called upon to erect a fac-simile of Rome one week, only to tear it down again the next and build it over in the form of an Indian or Igorrote village.

Opposite the technical offices is the properties warehouse, where one can find practically everything under the sun. As one enters the warehouse he is greeted with a huge sign: "Ask for what you want. We have everything from a needle to an anchor."

Five Huge Outdoor and Two Electric Stages

Right adjacent to the warehouse are five huge stages, and beyond these two large-sized electric stages which are used during bad weather, or when the demand for a film is so great that it becomes necessary to work night and day. Dressing rooms are conveniently located near the stages, each actor having his own room. There is a never-ending hustle and bustle about the place, and the procession of actors dressed in all manner of costumes makes one believe that a masquerade ball is in full swing.

The spectators' gallery is above the dressing rooms, and from it visitors can obtain a full view of all the stages and watch every move of the actors and camera men. From here you may see a drama being produced on one stage, while on another a blood-and-thunder show is in progress. And in the midst of all the camera men are ever busy cranking away.

Oftentimes it is required to rehearse an action several times before the director will permit it to be photographed. I had just leaned by bicycle against the fence and taken a place in the spectators' gallery when, on the stage oppo-

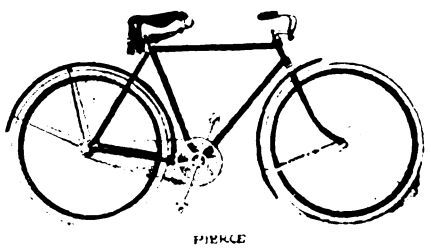
Some Leading Roadsters

PIERCE

The two-piece hanger Pierce roadster illustrated here is made by the Pierce Cycle Company, Buffalo, N. Y., in four models for boys and men, ranging from 20-inch frames to 24-inch; and in two models for ladies, these having frames of 20 and 22 inches. Eighteen-gauge steel tubing is used in the frame, which has these features: Flush joints with long reinforcements; all frames drilled for mudguards; pinch bolt seat post binder; drop forged rear fork ends; both upper and lower rear forks strongly reinforced with curved braces.

Three colors can be selected for the finish: black, blue or carmine. Four coats of the best baked enamel are used, hand rubbed. Price, $35.



IVER JOHNSON

The Truss Bridge frame is one of the outstanding features of the Iver Johnson road model shown here. It is manufactured by the Iver Johnson's Arms and Cycle Works, Fitchburg, Mass. Seamless steel tubing is used throughout and the connections in the frame are of the "tapered jaw" type.

The Iver Johnson two-piece crankhanger is another distinctive feature. Hoffman balls are used in the hanger, and the cones are of fine crucible steel. The bearings are of the two-point contact variety.

Both mudguards and a coaster brake, of standard make, are included with the bicycle here illustrated. The pedals are of the motorcycle type and when not otherwise specified a Troxel motor bike saddle, Vitalic tires, and a striped finish of ivory black with full nickeled fork, are given.

Price, including coaster brake, $40.

POPE COLUMBIA

The Westfield Mfg. Co., Westfield, Mass., offers its Columbia roadster, shown here, with a Sturmey-Archer three-speed hub and coaster brake included in the regular equipment. Spring fork and truss fork are among the extras.

Like other Pope models, the Columbia roadster has the sturdy frame head construction with thimbles in the head tube and spun to fit. The parts are then brazed by the dip process and form a perfect union.

Heavy mud guards are included, front and rear, while the finish is in black enamel with nickel trimmings and double white stripe. Fisk tires are specified, as also the Morrow coaster brake, Imperial De Luxe saddle, 81 gear, rubber pedals of motorcycle type.

Price, including the Sturmey-Archer three-speed coaster brake, $45.

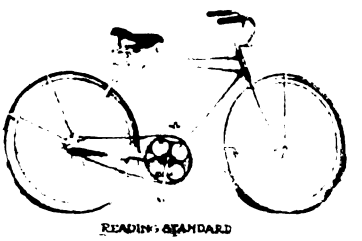
INDIAN

Combining ease in riding with ability to stand hard service is the Men's Roadster, Model No. 10, produced by the Hendee Maufacturing Company, of Springfield, Mass., under the well-known Indian trademark. This model is shown in the accompanying illustration. It has a 22 inch frame of cold rolled seamless steel, with oval and tapered stays. The head has spun reinforcements. An option of 20 or 24 inch frame is offered. Handlebars are forward-extension and are adjustable. They are fitted with sewed leather grips.

A one-piece crank-hanger is fitted with 7 inch cranks, 2½ inches drop to frame. Heavy gauge steel mudguards of ample width are fitted. Rims are of maple enameled and striped to match the frame. A Corbin duplex coaster brake is stock equipment.

Pedals are Standard No. 5 with Indian rubbers. A Troxel Eureka saddle is fitted. Finish is Indian red with double gold stripes and nickel trimmings. Goodyear Blue Streak tires, 1½ inches, and All-Weather tread are stock equipment. Pump and tool bag are provided. Goodyear single clinch double-tube tires, or G. & J. Indianapolis, tires, both of 1½-inch size, are offered at an extra cost.

Price, including coaster brake, is $30.



READING STANDARD

The Improved Brace Frame construction characterizes this model in the extensive line brought out by the Reading Cycle Manufacturing Company, Inc., of Reading, Pa. The model shown is the Reading Standard Flyer. The frame has an auxiliary curved brace leading from the base of the steering-head toward the top tube and then curving downward to meet the seat mast tube. The standard frame is 21 inches, with options of 19, 22 and 23 inches.

There is a curved brace at the crank-hanger in this model. The hanger itself is of the one-piece type, of Reading Standard special design. Rims are of first quality wood, with 36 spokes front and rear, but steel-lined or all-steel rims are offered as an option. Ample mudguards are fitted.

The saddle is a Troxel Motor Bike No. 2, but choice is offered of a Mesinger R-S cushion or a Persons Motor Bike. Reading White Flyer Black Tread tires are standard, with options of Red Tread of same make, Atlas, Fisk or Continental. Finish is white and sylvan-green head with Pointed Gothic design.

Price, complete, is $40.

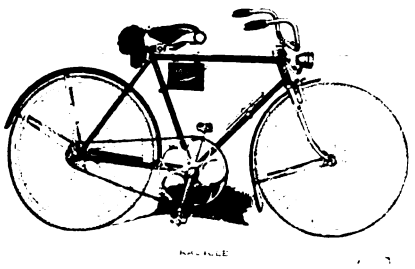
EMBLEM

The frame with horizontal brace tube characterizes this model among others in the Emblem line, produced by the Emblem Manufacturing Company, of Angola, N. Y. The machine shown is Model No. 114, the Emblem Motorbike. Seamless steel tubing is used throughout and all joints are outside. Ample mudguards are fitted for both rear and front wheels.

The crown is of extra strong construction, yet light in weight. Handlebars are of the forward-extension type, with leather grips. The bars are adjustable to suit the rider. The saddle is of special design for

Digitized by Google

Among 1916 Offerings



this machine. The seat tube gives a wide range of adjustment for saddle-height.

An Emblem two-piece hanger is used on this model. The driving sprocket is concaved and is very light yet sturdy. Pedals are of the rubber tread type. Tires are Emblem make, extra heavy, with an option of Fisk manufacture. Rims are steel-lined. Price, complete is $40.

GENDRON

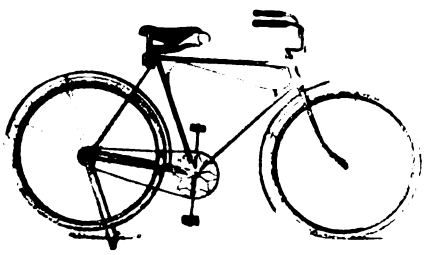
The Gendron Wheel Co., Toledo, O., offers as its leading roadster the "Climax" Motor Bike. It is built in 22-inch frame only, has 1-inch, 19-gauge tubing and outside head joints. A 3-plate crown is used in the fork, which is of the motorcycle type with reinforced braces and enameled to match the frame.

Crescent rims of hard maple, also enameled to match the frame, are specified. The spokes are the heavy motorcycle type, 36 front and rear. New Departure hubs are used in the front, while Sturmey-Archer three-speed brakes are employed, with control on the top bar.

Features of motorcycle construction are observed in the Climax in the saddle, handlebars, luggage carrier, mudguards and stand. The Everlaster studded tread tire is regularly specified, while option is given on Federal heavy studded tread.

The machine is equipped with an electric lightening outfit, including both a head and tail light. A mirroscope to be attached to the handlebars is part of the regular equipment.

Price: $63.



ADLAKE

The brace frame marks this bicycle among its brothers in the line of the Great Western Manufacturing Company, of La Porte, Ind. The machine shown here is the Adlake Model No. 77. The brace leads by a curve from the top tube to the steering-head and back to the rear of the top tube, then down to the seatmast tube a short distance below the cluster. A curved brace attaches the brace tube to the diagonal tube near the steering-head.

The standard equipment includes a choice of New Departure, Corbin or Morrow coaster brake, a stand with latch on rear guard end, and Fisk Victor tires. Fork, frame, mudguards and stays are enameled, with the stand nickeled in dead finish. Finish is blue with white striping, or a choice of black, slate, maroon or brown, and with each color, the steering head has a fancy finish. Rims are enameled to match the frame.

Price, including coaster brake and stand, $40.

RACYCLE

The Miami cushion fork incorporating coil springs and adjustable to suit the weight of the rider is one of the chief features of the Racycle Pacemaker shown here. It is made by the Miami Cycle & Manufacturing Company, of Middletown, O. The handlebars are of the forward-extension type with Racycle rubber grips, known as the Miami Box Bar.

The equipment consists of a Musselman coaster brake and mudguards, as well as a Miami electric headlight with batteries and battery box. A Troxel Climax saddle is fitted, as well as Goodyear Blue Streak tires. Finish is translucent gun blue with aluminum rims with blue centers.

Price, complete, is $60.

DAYTON

The Dayton roadster, model 130, a product of the Davis Sewing Machine Co., Dayton, O., is made regularly in 22-inch frame, the 20 and 24-inch being optional. The main frame is of one-inch steel tubing, while the rear stays and forks are oval and tapered.

The sprockets usually provided are: front, 26 tooth; rear, 9 tooth, giving an 81 gear. Options are offered on higher or lower gear. Fisk Victor tires are specified, and also adjustable handlebars, double rubber pedals, Diamond roller chain No. 71 and Troxel Eagle Easy saddle.

Price: $30.

PREMIER

Ribbed fork-sides and quick detachable Featherweight mudguards are outstanding features of the Premier Grand model, shown here. It is manufactured by the Premier Cycle Works, of Chicago, Ill. The frame is of 19-guage seamless steel tubing with oval rear stays and forks.

The saddle is a Superba of special design. Stock tire equipment is Aztec tires. Imported Brampton rat-trap pedals and Brampton chains are used. Option of rubber pedals is offered. Stock finish is national blue with white head and seat mast, but three other colors can be had on request: black with red head and seat mast, and golden brown and white with appropriate trimmings, also, all black with hair-line gold stripes. A variety of options is offered in frame sizes, and gears.

Price, with coaster brake, is $50.

RED WING

Model 10, of the Red Wing bicycles, made by J. W. Grady & Company, Worcester, Mass., is a standard diamond frame machine. The tubing throughout is 19-gauge seamless stock. All joints are heavily reinforced and brazed by the immersion process, which affords a strong and practically non-breakable union between the parts of the frame.

The finish on this model, as on all the Red Wing line, is what is known as "automobile red," which is applied over the priming or foundation coat and baked to a beautiful and lasting finish. The fork is finished with one-third nickel tips and crown.

Price: $30.

Digitized by Google

REELING OFF MILES IN FILMDOM

(Continued from page 109)

site, I noticed a beautiful young girl staging a fall down the stairway into the parlor, where a number of guests in party costume had assembled.

The fall she made didn't suit the director. So he sent her back to do it all over again. She fell down the second and the third time, but still the director was not satisfied. When the young lady went back for the fourth time, and gathered her skirts about her feet, preparatory to stumbling over them, the director shouted:

"Now fall, damn it! If you get bunged up you can lay off for a few days."

A Film Star Awheel

The young lady sprawled the length of the stairs and the camera man caught it. "Fine work!" exclaimed the director. As she was lifted to her feet, it was found that the girl's elbows were badly bruised.

When I went into the spectators' gallery, I had left my bicycle leaning against the fence on the street below, and upon returning to get the machine I was surprised to find that it was gone. Just as I was beginning to wonder whether there were any bicycle thieves in Universal City, I spied J. Warren Kerrigan, of film fame, wheeling down the street on a two-wheeler that looked much like my own.

He rode up to me and returned the wheel, laughing:

"I ride a bike just like this one."

"Glad to hear it, Mr. Kerrigan," I replied. "And now, if you'll be kind enough to let me snap your picture with that bike, I'll let you use it for a while longer." Kerrigan dropped into pose and the kodak clicked.

Leaving the main portion of the city again, I pedaled up a long grade to a huge castle far up the hill on the western side of the town. The castle was of a "paper and glue" construction; but it was beautiful, nevertheless, from a distance. Workmen nearby explained that it was used recently for some photoplays of medieval times in which Mme. Nazimova appeared in the principal role. It must have cost thousands of dollars to build that castle, and yet it was now being permitted to crumble to ruin.

The sun was getting quite low, and I hurried to the top of Cahuenga Pass. When I reached the crest of the hill, I turned about for a farewell look down at Universal City. Far off in the valley I saw a house burning up briskly. Indians were running about on foot and horseback, and the crack, crack, crack of rifles and pistols floated up the hillside.

WRIGHT LEADS IN CRESCENT MILEAGE CONTEST

BALTIMORE, Md., April 23.—Revised figures prove that William T. Wright continues to lead in the Crescent Bicycle Club's century mileage contest up to the first of the present month, with Walter Iglehart second and Fred Sanborn third. Those from three to ten on the list are as follows, names being given in the order of their positions: John G. Strickler, John E. Nitz, Lester Nickles, Welby Sherman, Langdon M. Sanborn, Roland Bishop and Walter Doersch.

Only two changes have taken place during the last month, Nickles having changed places with Welby Sherman and Bishop having moved up from last place into ninth. The total mileage for the month of March, 8,326 miles and 12 centuries, is nearly as great as that for both January and February.

FIVE ENTRIES ALREADY IN FOR C. R. C. A. HANDICAP

NEW YORK, April 24.—With nearly a month still to pass before it becomes a reality, five entries already have been received for the annual ten-mile handicap road race of the Century Road Club Association scheduled for May 21, which leads the committee to the belief that the event will fill even better than the 1915 contest when 160 starters faced the gun. The prize list, it is pointed out, is a long and valuable one numbering 115 separate donations at the present time and always subject to enlargement. With a race of such proportions, the committee is keen to carry out strictly the suggestion of the Inter-Club Amateur Cycle Road Racing League, which calls for a halt on the acceptance of post entries. For this reason intending entrants are urged to send their entries at the earliest possible moment to A. R. Jacobson, P. O. Box 21, Station H, New York.

FIRST ROLLFAST SHIPMENT

LOUISVILLE, Ky.—The Century Cycle Company has just received a large shipment of Rollfast cycle tires from the D. P. Harris Hardware Company, of New York. These tires are the first of the new brand to be handled by the local company.

AN ALL-YEAR SPORT

(Continued from page 102)

opticon machine of this kind can be gotten for a few dollars and will more than pay for itself in the amusement it affords.

The various activities which I have enumerated in this article can, of course, be staged by the dealer alone; but I have laid stress upon the club idea, because I am firmly convinced that in no other way can the sport be fostered so well as by the formation of clubs. They draw all cyclists together because of their common interest in the sport. Riders united into one body absorb enthusiasm from each other and become effective boosters. And, speaking of advertising, there is no "ad" which returns a bigger revenue than a booster.

VITALIC TIRES

TRADE MARK
REG U.S. PAT. OFF.

The biggest opportunity you ever had to establish yourself in the *high grade* bicycle tire business, is *right now—the Spring of the Banner Bicycle Year.* There will be more and better bicycle equipment bought this year than ever before. Think how much more satisfactory to get in on this *high grade* business than to continue along with the troubles and complaints that go with a cheap tire business. It means *more money* to you—business that *sticks to you permanently*—and a reputation for handling *quality* products.

Vitalic Tires represent the highest standard of tire value. Make up your mind *now* to be known as the Vitalic Dealer in your neighborhood.

Write for Display Material, Dealer Helps and Vitalic Testing Section

Continental Rubber Works
1817 Plum Street
Erie, Pa.

Vitalic Tires
are built with two-plies of genuine *motorcycle* fabric, frictioned with pure rubber friction. The inner tube is of *pure white rubber,* extra heavy, eliminating any possibility of leaks. The heavy tread is also made of finest quality white rubber. The Vitalic tread is absolutely NON-SKIDDING. Because of the fine quality of fabric and rubber used, the Vitalic is very resilient and *keeps its life* long after ordinary tires have dried out.
Made in single tube, single and double clinch casings, and racing tires.

FRANK KRAMER'S LIFE STORY

The First Authorized Story of the Great American Bicycle Champion's Brilliant Career—By Harry Mendel

Fifteenth Installment

Jackie Clark once more was Kramer's strongest rival for the title in the 1911 season. At the end of the season the point score for the American Championship was: Kramer, 72; Clark, 52.

A STRONG finish gave Kramer the national championship in 1911 for the eleventh straight time. His rival was Jackie Clark, the little Australian rider who at present is running a large hotel in Newark. Alfred Goullet, the light haired Australian, also came to the front during the season of 1911, and finished third in the championship battle.

The year 1911 marked the advent of Frank Mihlon into the bicycle game and the erection of a new track, the saucer upon which the cyclists are now riding. It is a six lap affair and opposite the site of the old and famous Vailsburg board track. Frank Mihlon with John M. Chapman were the managers of the drome.

Kramer beat Clark and Lawson in match races besides winning the championship. The title holder also took a trip to Salt Lake City during the month of August. While on his trip he rode in three races, winning two and losing the other. When Kramer returned from Salt Lake City he had but a seven point lead on Clark. About a month later, when the series of championship races were ended, Kramer had 72 points against 52 for Clark.

Standing Stars on Their Heads

Kramer demonstrated that there was no limit to the wonderful things that he could do on a bicycle by uncorking two wonderful sprints, on Sunday afternoon, May 21. Kramer figuratively stood Jackie Clark and Floyd McFarland on their heads and they admitted it.

"Big Steve" with Willie Fenn as a partner defeated Clark and McFarland in two straight heats of a special match race at one mile. He then won the two-mile open professional race, again fighting off Clark and McFarland in the final sprint. In both the second heat of the match race and the final lap of the two-mile race, Kramer was forced to ride around McFarland and Clark when they were in full flight for the tape and on the last occasion he did it after he had received a switch from McFarland on the high bank of the last turn. A switch, such as was given Kramer, would have discouraged practically any other rider.

National cycling championship races were started on Sunday, May 28. Kramer won the initial event at one mile and eased up as neither Joe Fogler nor Jackie Clark, who was depended upon to give him a battle, could hold on to Frank in the final rush for the finish. Clark was second, beating out Fogler by half the length of his front wheel. On Memorial Day, Freddy Hill won the Shanley Handicap with Kramer coming home second. In the next meet a half-mile titular race was held in which Kramer beat out Clark by inches.

Kramer's gameness gave him a victory over Clark in a five-mile championship race on Sunday, June 11. The East Orange cyclist nipped Clark at the tape in a title race as Clark slowed down, thinking that the race was won. Kramer snatched victory from Clark in the last few yards and won by five inches. In the last mile of the race which was bitterly fought the champion was twice forced to work himself out of a pocket and he did it to the queen's taste. He then sprinted around the best riders on the saucer as if they were glued to the track.

Clark Took a Fatal Look

Clark feeling that victory was in his grasp as he neared the tape, turned around to see where Kramer was. It was a fatal look, for the champion was coming at an "express" rate of speed and drew up on almost even terms. Clark was riding low and Kramer riding in the centre of the track. The "Rocket" made one desperate kick—but it was too late. The champion went by and just held the lead by a scant five inches as he flashed over the tape.

In the early part of July Kramer was "off form" in the championship races and Clark was pulling up on him by winning consistently. The first championship race Kramer won in July was on the nineteenth of the month. By using a little gray matter and coupling it with speed, Kramer succeeded in outriding Clark in the quarter-mile championship race. Kramer won the race from Eddie Root while Clark could get only third place.

Frank Kramer's skill as a match rider was never better illustrated than in his contest with Alfred Goullet, the Australian, on Sunday August 6. The national champion captured the match in two straight heats and did it with the finesse of the past master that he is. He won from in front and from behind and used his head as much as his heels in bringing home the bacon.

The Battle with Goullet

A lap and one half from home in the first heat the riders quickened their action and pushed ahead of the pacemaker. Coming to the bell Goullet started to unwind and Kramer began to "ride" him. The champion would make a little spurt, then he would stall, all this time keeping Goullet under the lee of his elbow and watching for a move. Goullet did move when the back stretch was reached and then made Kramer straighten out to his work. Goullet came on gamely and for all he was worth; but he was not up to Kramer's speed and the champion won by three quarters of a wheel's length at the finish.

Kramer found riding from in front rather easy and elected to ride from the rear in the second heat. There was no pacemaker in the second heat. Kramer rode two lengths back of Goullet for the first four laps. On the fifth lap, the riders got down to work and the last half of the sixth lap saw them jump simultaneously. Both ducked their heads and put every ounce of speed and strength into their kicks. Kramer picked up a half length gradually jumping foot by foot around the turn. At the head of the home stretch Goullet still showed half a wheel in front. Kramer kept coming all the time and inch by inch gained until just as the tape was reached his last kick sent his wheel to the front. There was a mighty cheer from the crowd as Kramer proved to be the winner by inches.

On Friday, August 11, Kramer rode in Salt Lake City and beat Clark in two straight heats. Kramer won the first heat from in front and the second from the rear. He was riding around Clark and was about one foot in the lead on the last curve of the second heat when Clark carried him to the centre of the track. Kramer was too strong and when they came together Clark went down but was not injured. After the race an announcement was made at Clark's request in which he said he did not ride wide intentionally.

On Tuesday, Kramer won a four cornered match race in one of the best finishes ever witnessed at the Salt Lake track. It was run in one heat at one mile. The riders jockeyed for the first three laps and the order was Lawson, Hehir, Kramer and Clark. Lawson unwound one of his old-time sprints while he was leading with a lap and one half to go. Hehir and Kramer started at the same time, Kramer pasing Hehir and nipping Lawson at the tape. Lawson finished second, Hehir third and Clark fourth. After this race Clark, Kramer and Manager Chapman returned to Newark.

Put Out By the Jinx

Back in Newark on Sunday, Kramer won the one-mile titular race after a stiff fight with Fogler and Hill. Clark was disqualified for switching "Al" Crebs in the semi-final heat. On the following Wednesday, Kramer was put out of the championship race with a puncture. Clark won. Kramer came back strong on the first Sunday in September and increased his lead by winning the five-mile championship affair. He just nosed out Goullet at the finish. Clark was not in a position at the finish of the race to give Kramer a battle and it was not until the last few yards of the race that Kramer managed to forge ahead.

Kramer's speed carried him to an easy victory in a four cornered match race on Sunday, September 10, against Lawson, Goullet and Clark. Kramer won in straight heats. In the first one Lawson finished second, Goullet third and Clark fourth. In the second heat Goullet was second, Clark third and Lawson fourth.

It was a gala day for Kramer on Sunday, September 24, when he clinched his hold on the American championship for the eleventh year in succession by winning the two-mile championship race.

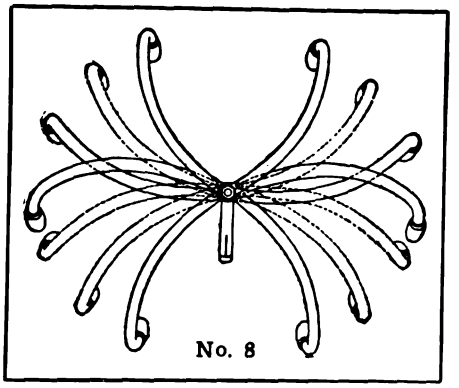
Kelly Handlebars



No. 8

"Get Busy"
"A million bicycles for 1916."

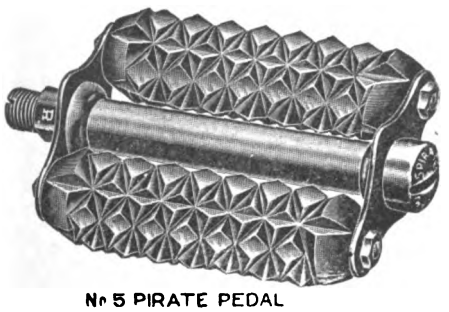
This can be accomplished by using Kelly Bars.

Jobbers and Manufacturers Who Seek Standardization

should invariably equip with KELLY HANDLEBARS—the standard of the world. No high-grade bicycle is complete without KELLY ADJUSTABLE HANDLEBARS. With these handlebars, 25 different riding positions are possible. No other bar made allows anywhere near this number of different positions. KELLY HANDLEBARS ARE THE STRONGEST SELLING POINT A BICYCLE CAN HAVE.

They are the ideal bars for racing, distance work, boulevard riding, etc. Adjustable to ANY position.

KELLY HANDLEBAR DEPT.
5017 Perkins Ave. Cleveland, Ohio

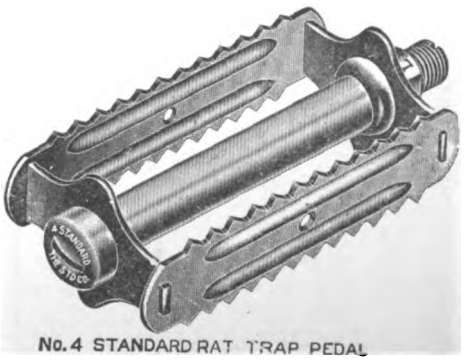


No 5 PIRATE PEDAL

Two Pedals That Are Immensely Popular

Their design and construction assure strength and comfort. Especially is this true of the No. 5 PIRATE, whose deep corrugated rubber cushions are not only soft to the feet, but absorb shocks and keep the feet from slipping.

The No. 4 STANDARD is a new addition to our large and comprehensive line of Rat Trap Pedals. It is strongly made, well designed and gives a splendid foot hold.



No. 4 STANDARD RAT TRAP PEDAL

The Standard Co. *Torrington Connecticut*

Manufacturers of

Diamond "E" Spokes and Nipples for bicycles, motorcycles, tricycles, velocipedes, invalid chairs, sulkies, carriages, cyclecars and automobiles. Pedals for bicycles, tricycles, velocipedes and motorcycles. Toe clips for bicycle pedals. Emergency axles for pedals. Screw machine products.

We are boosters for "One Million Bicycles in 1916"

"Sterling"

The Lamp that's True to its Name

Low in price, high in quality, absolutely reliable, the STERLING is offered to meet the steadily increasing demand for a low-in-cost kerosene oil lamp.

This new lamp represents the same high quality of material and workmanship as characterize all the 20th Century products.

The STERLING burns 12 hours on one filling, giving a steady, flickerless flame. It's large enough to furnish all the service necessary, small and light enough not to be cumbersome. Furthermore, the STERLING is fitted with a combination bracket for either head or fork.
Ruby jewel on the right, emerald on the left.

This lamp is sold at the unprecedented price of $1.25

Deliveries about June 15.

"Just Like New- You Can Do It Too"

DO your motorcycle and side car look so dull and dingy that you contemplate re-enameling? Do you know that you can save this money, and can, yourself, easily and quickly renew the original lustre? All you need is Johnson's Cleaner and Prepared Wax.

JOHNSON'S CLEANER

really cleans, it entirely removes all stains, discolorations, scum, road-oil, tar and grease. Even those spots that are ground in — mud freckles—and surface scratches that you thought were permanent — will disappear like magic under Johnson's Cleaner. After cleaning thoroughly with Johnson's Cleaner polish with Johnson's Prepared Wax.

JOHNSON'S PREPARED WAX

forms a thin, protecting coat over the varnish, adding years to its life. It covers up mars and scratches—prevents checking and sheds water like a duck's back.

A Dust Proof Polish

Mud and dust do not stick to Johnson's Prepared Wax. After a dirty, dusty trip, just wipe off your car—it isn't necessary to wash it.

USE COUPON FOR TRIAL PACKAGES

Going to sell your machine? If so, clean and polish it with Johnson's Cleaner and Prepared Wax—it will sell quicker and you can get from $25.00 to $50.00 more for it.

S C JOHNSON & SON, Racine, Wis. MI 1

I enclose 10c for trial can each of Johnson's Cleaner and Johnson's Prepared Wax—sufficient for a good test on my motorcycle.

HARWACO EXPANDS INTO LARGER QUARTERS

Unprecedented Demand for Rollfast Tires Calls for Acquirement of 50,000 Square Feet of Space—Harris, Returned from Coast, Is Optimistic

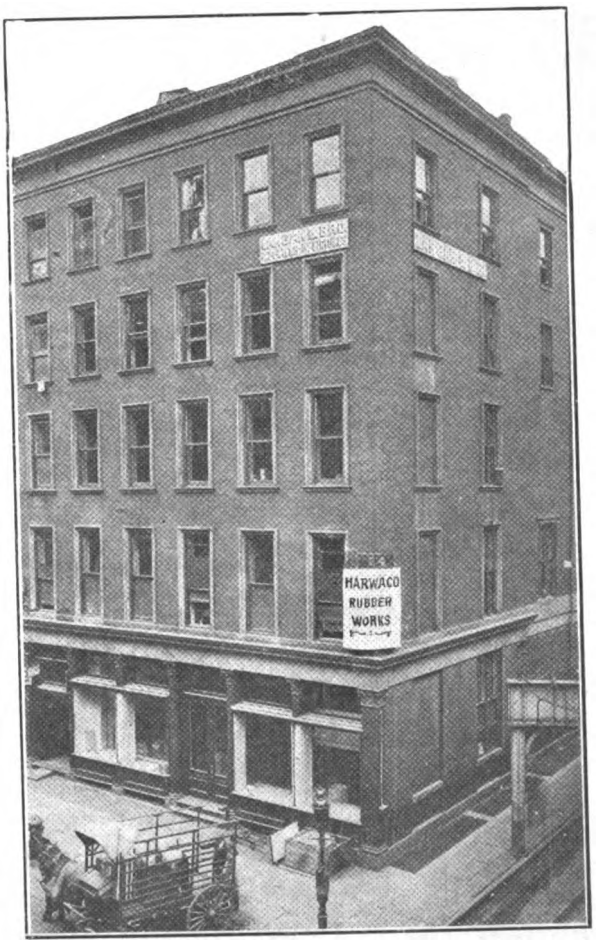
AFTER a whirlwind trip out to the Coast, our genial friend, D. P. Harris, heaved his comfortable bulk into his big desk chair and surveyed with satisfaction the depleted condition of the stock shelves.

Preparations were under way for moving the offices of the Harwaco Rubber Works Co. to more commodious quarters in the building which stands at the corner of Murray and Church streets, New York City. The company's offices and warerooms will occupy a floor space of approximately 50,000 square feet.

"Well, Sammy," D. P. said, with his deep-chested laugh, "if we'd waited another week to move we wouldn't have much *to* move." And Sam Munroe grinned a cheerful assent.

This remark was pertinent, for never before in the history of the company has there been such a tremendous influx of orders, not only for Rollfast tires, but for the other cycle accessories handled by the company.

Mr. Harris ascribes this business boom first to the war; second, to the well-known quality of the Rollfast line, and third, to the constant perigrinations of both himself and Stanley Wilson, his traveling man, among the dealers and jobbers.



Commodious Quarters Which Will Be Occupied by Harwaco Rubber Company in New York

"Every jobber on our list is wedded to the Rollfast line for life," says Mr. Harris, and further "we will not appoint any more jobbers for the Rollfast tires, for the simple reason that we can't undertake to handle any more business than these jobbers already on our list can produce. The factory, which I visited on my trip to the Coast, is running 24 hours a day."

Mr. Harris' trip, which he has just completed, covered a period of six weeks, during which time he visited the trade in Florida, New Orleans and other southwestern points to the Pacific Coast. He traveled up the coast as far as San Francisco. "I covered *some* mileage, even if I didn't use Rollfast tires," said Mr. Harris.

Rollfast distributors, so Mr. Harris reports, find the exclusive agency feature one of the strongest selling factors. When dealers realize that they can secure exclusive selling rights for their town or district on Rollfast tires they view the entire proposition from a more favorable angle.

NEW TRADE-MARK LAW IN ARGENTINE REPUBLIC

OF unusual interest to American manufacturers of trade-marked lines is the recent news from Buenos Aires of legal recourse against the pirating of registered American trade-marks.

By the recently reported resolution of the National Supreme Court of Argentina, foreign trade-marks registered without authorization of original owners can now be registered in Argentina by original owners, provided such marks are legally registered and in use in their own countries.

The Argentina law has in the past given possession of a foreign trade-mark to the individual first effecting registration in Argentina, without regard to original ownership. Under this enactment there have been frequent instances of American trade-marks registered and owned by local firms or individuals, without the knowledge or authority of American possessors, to the subsequent damage or even exclusion of original owners from this market.

The registration of his trade-mark should be among the first considerations of any manufacturer seriously interested in Argentine sales. Without adequate trade-mark protection he faces the possibility of expensive litigation, should his mark have been previously registered, which at the very least may result in disastrous delay in placing his products on the Argentine market.

MONOGRAM OILS FOR ALL MOTORCYCLE MODELS

"AN oil for every motorcycle" fitly describes the line of Monogram lubricants, produced by the New York Lubricating Oil Company, of 116 Broad street, New York. To this might be added a grease for every moving part of the machine which requires such lubricant, and it will be seen that the company has efficiently provided for all needs.

Monogram lubricants have been produced after a long series of experiments, both in the laboratory and in actual service.

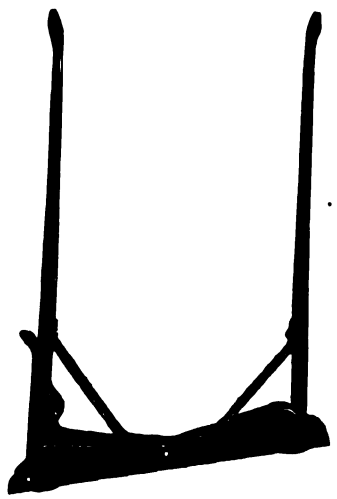
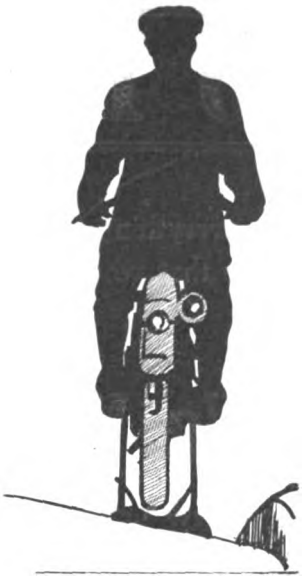
Start Your Motorcycle Anywhere!





Here's a really important improvement in stands—the MILLS adjusts itself to every road surface,- permitting the rider to mount and pedal his machine on the steepest incline.

Mills Adjustable Motorcycle Stand

Judge for yourself, from the photos shown here, what a really practical thing this new stand is! Is there any reason WHY, with the new MILLS Stand now on the market, you should be satisfied with the old-style, easily-tipped, unsteady stand—especially when the new Mills Adjustable Stand costs so very little more?

Just stop and count how many times your machine tipped over because the stand refused to hold it upright, on a slight grade. Bent handle-bars, busted hanger, maybe worse. Then think of the many advantages of the MILLS:

Can be started on any grade—made to fit any machine and can be attached in a minute—base only 12 inches—costs little more than old-style stands—simple to operate, small foot lever does it—stronger than the ordinary stand.

The MILLS Stand belongs on Every Motorcycle. If YOU Ask for It Your Dealer Must Get It for You. Insist on it.

DIRECT CONNECTION FEATURE ON AUSTIN PUMP

WIDESPREAD use of Austin pumps in both the motorcycle and bicycle models has demonstrated the desirability of their unique features, among which may be mentioned the means of connection with the tire valve. In these pumps, there are no tube connections, an offset to the pump-barrel extremity fitting directly over the valve stem and enables air to be sent directly into the tire without chance of leakage. There is a saving of time with these pumps in getting a tire inflated.

Homer F. Livermore, of 85 and 87 Pearl street, Boston, Mass., is more than gratified with the success of his products, the Austin pumps. One of the largest users of the motorcycle type inflator, No. M-100, is the Harley-Davidson Motor Company, of Milwaukee, Wis. On all this firm's models the Austin pump is stock equipment.

FIVE TRACK RACES SLATED FOR DAYTON, O.

DAYTON, Ohio, April 24.—Dayton is to have a busy motorcycle racing season if the plans of the Miami Racing Company of that place do not miscarry. The company has planned a series of five track races for Dayton as follows: June 10, July 4, July 29, August 26 and September 9. One race meet is planned to take place on Memorial Day, May 30 on the track at Wapakoneta, Ohio, also under the managment of the Miami Racing Co.

RED HEAD PLUGS HAVE SOOT-PROOF FEATURE

MOTORCYCLE sparkplugs in both porcelain and mica insulation are being produced by the Emil Grossman Mfg. Company, Inc., of Brooklyn, N. Y., under the firm's familiar "Red Head" trade-mark. These plugs are sturdy in construction and compact in size. The insulation in the porcelain plugs has a short extension within the shell to form a firing chamber of about one-half by three-quarters of an inch, a cavity which no quantity of carbon can choke up.

The "Red Head" porcelain motorcycle plugs are made with the porcelains of selected clay, properly aged. Following the forming, the clay is accurately turned and then baked carefully to avoid brittleness and porousness. When finished, it is unbreakable through heat. The price is $0.75 each in either ½-inch, ⅞-inch or metric. The plug can be had with platinum points in the same sizes for $1.50 each.

The mica plug, like the porcelain, is of the single-point type and is of standard outside dimensions. It comes in metric thread only. The list price is $0.75 each.

JOHNSON'S PREPARATIONS GIVE HIGH FINISH

The Cleaner Removes All Foreign Matter from Enamel and the Prepared Wax Gives It a Water- and Dust-Proof Lustre of Great Durability

DIRT and grime of all kinds, including road tar, can be removed from enameled surfaces by the use of Johnson's Cleaner, the product of S. C. Johnson & Son, of Racine, Wis. This cleaner, which

is in paste form, takes out the stains by simply rubbing with a clean rag, and in no way interferes with the enamel in so doing. It has proven very effective for taking out ground-in spots, such as mud freckles and surface scratches, as well as grease of all kinds, and its ability to eliminate the various kinds of road dressing alone makes it invaluable to the motorcyclist and automobilist.

The cleaner comes in handly little tins with air-tight covers. After it removes the foreign matter, the enamel surface is left in a fine condition ready for a polishing medium. To return the enamel to its former lustre, the company has brought out Johnson's Prepared Wax, a polish which cannot gather dust and which is waterproof.

The Prepared Wax when rubbed with a rag over the surfaces forms a thin protective coating over the varnish, adding years to its life. It covers up mars and deep scratches. The resulting polish is high and remains hard and dry. The wax can be used to build up a perfectly smooth and new body in cases where the enamel or varnish has become rough. For this purpose, several coats are applied, each being well polished before the next in put on.

Johnson's Wax will not become soft and sticky in the hottest weather, and surfaces treated with it will not blister, check or crack. Its use will often save the expense of having the machine refinished.

A further use of the wax is for livening up leather upholstery. It will not come off on clothing. The makers pack the Prepared Wax in sets of six tins within an attractive box with cover in several colors.

ROGERS CONTEST TO CLOSE ON JUNE 1

IT is pointed out by the Rogers Manufacturing Company, producing the Rogers sidecars, at 337 West Madison street, Chicago, Ill., that the date of closing for its photographic contest is June 1 and not July 1, as has been stated.

"These photographs will be used in the trade publications," says the Rogers firm, "and for this reason it is advisable to send in the prints on glossy paper, so that they can be reproduced.

"The subjects desired are real road or touring scenes, not simply posed photographs in front of a store or place of business. Pictures with human interest that make prospects decide that they really want a sidecar are the ones desired most."

CANADA CYCLE INCREASES SPACE AT MONTREAL

MONTREAL, Quebec, April 24.—Owing to considerably increased business in Quebec and the Maritime Provinces, the Canada Cycle & Motor Company, Limited, has greatly increased the warehouse and shipping facilities at its Montreal branch, 427 St. James street, the manager of which is L. Quevillon. The staff of the Montreal office has been increased and arrangements have been made with the different transportation companies for special deliveries both by express and freight to dealers to insure high-speed service.

A. E. Bregent, 206 St. Catherine street, Montreal, Smith Motor Wheel distributor in Eastern Canada, looks for the sale of 5,000 Smith motor wheels in his extensive territory during the present season. He also anticipates that the aim of Canadian bicycle dealers to sell 100,000 bicycles in the Dominion this year will be realized.

GOODYEAR CO. TO DOUBLE PLANT'S CAPACITY

AKRON, Ohio, April 22.—Reflecting clearly the present healthy state of the motor vehicle industry and carrying with it a well founded prospect of future growth and prosperity is the announcement that despite addition after addition to its plant, the Goodyear Tire & Rubber Co., is still lacking room adequately to take care of its orders and that further expansion which will practically double its capacity within the next ten months is planned.

In order to provide the necessary capital for this latest and most radical addition to the mammoth Goodyear plant it has been announced that the company will issue $10,000,000 of new preferred stock.

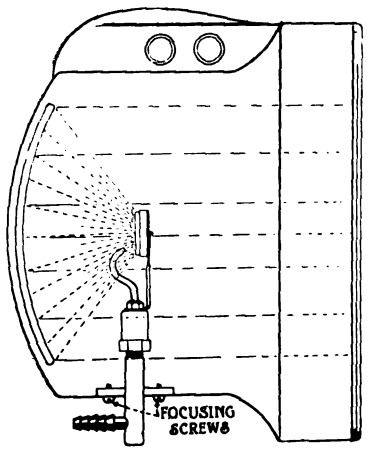
"BRILLIANT" BURNER GIVES POWERFUL LIGHT

Monosmith Product Has Novel Principle in Operation and Illumination Can Be Regulated to Suit Conditions

EXTRAORDINARY brilliance, combined with great carrying powers for the light, are obtained from "Brilliant" burners, the product of the Monosmith Brothers Company, Spencer, Ohio. These burners are unique in construction, embodying the principle used on all oxy-hydrogen lights



for projection purposes: the projection of the flaming jet of gas on an incandescing button. This type of burner has been tried out in the motor field as well as in the optical field and has proven most successful.

The manufacturers guarantee with this burner that the user can get more light and a stronger beam than with the bat-wing or other type of burner, without at the same time increasing the consumption of gas. The same light can be obtained with the new burner, moreover, at a fraction of the cost of the old burner. Should the rider fall, and the front glass of the headlight break, the "Brilliant" burner will not jar out.

The "Brilliant" burner is a simple brass burner in two parts and an incandescing button 7/8 inch in diameter. An acetylene jet is projected against the incandescing button.

To produce a full intense beam the jet or upper part of the burner is turned so that the face of the button is toward the reflector, as shown in the illustration. This is the position for ordinary driving.

To produce a diffused or spreading light the face of the button is turned toward the front of the lamp, thereby cutting out the reflector. This position enables the user to comply with ordinances requiring a reduced light. The burners are interchangeable with the ordinary acetylene jet and can be used in place of any standard size of gas burner. The price is $2 per set for motorcycles. If not obtainable from dealers, a direct order can be made to the factory at Spencer, O.

DEALER'S LOYALTY IS BIG TRADE ASSET

(Continued from page 53)

more thorough. The men in charge seek more diligently for ways of improvement and the men below them respond more readily.

The dealer will be benefited by larger sales and increased profits, for confidence will seek the prospect and grow as the sale develops. The prospect will be confident that the goods will measure up to the sample and will have confidence in the salesman's statements as to the quality of his product in all things. His efforts will create a national faith and confidence in the integrity of the manufacturer's methods. He will be pulling with the stream instead of against it. In short, it will mean a swifter and easier selling method which is the shortest and surest road to success.

STOLL TANDEM SALES HAVE REMARKABLE INCREASE

IN view of the growing tendency in the use of sidecars, the increase in sales of Stoll tandems, the product of the Stoll Manufacturing Company, of Denver, Colo., is really remarkable. It was thought by many that the increase in the use of the sidecar would seriously affect all tandem business, but such has not been the case with the Stoll products, in patricular.

The Stoll line of tandems includes the Dream Tandem No. 1, with back-rest and double set of springs. This tandem is quick detachable and is so sprung that smooth riding is had under all road conditions. It lists at $22. The other tandem is the No. 2 or combination, made with spring system which can be locked and made adjustable for different weights. This tandem has a hand-hold and, like the Dream, has cushion which snaps on or off. It lists at $11.

REEPS MFG. COMPANY IS NOW INCORPORATED

NEW YORK.—The Reeps Manufacturing Company, with offices at 50 Church street, New York, has recently been incorporated under the laws of the State of New York for twenty-five thousand ($25,000) dollars.

The firm is the inventor and manufacturer of the "Reeps" dashboard oil and gasoline gauges for automobiles; the "Reeps" warning signal for bicycles and motorcycles, and several other electrical and automobile appliances.

Chas. S. Shuman, who for several years sold Klaxon and Newtone horns throughout the country, is president and treasurer of the company.

GUTERMAN DOING WELL IN EASTERN OHIO TRIP

STEUBENVILLE, O., April 22.—Lou Guterman, traveler for the Reading Standard Company, Inc., of Reading, Pa., has been looking over the trade in this city, and will make his next big stop at Columbus. Since leaving New York State, Lou has signed up the following to handle the big brown twins: F. E. Gillette, Ashtabula; Woodland Avenue Cycle Company, Cleveland; Amos W. Dauberman, Canton, and R. M., Pearce & Co., this city.

MAKING A PAL OF YOUR MOTORCYCLE

(Continued from page 47)

whenever I feel inclined to swing a racket.

Many times my sidecar outfit has been called upon to provide double transportation to a dance, and the passenger has always thought herself lucky to have available such a convenient and satisfactory conveyance. And right here I claim a record. With my graceful form sheathed in a dress suit, well protected of course, I drove the outfit to a formal dance out at the club above mentioned through a good depth of snow and in a light snowstorm. It was done partly as a stunt; partly because it was the easiest way, outside of hiring a taxi, to get there. Can anyone beat that?

Swimming trips to the salt water, frogging excursions, fishing by day and by night, in salt and fresh water, after a score of different kinds of fish, in a hundred different places, scouting trips in search of new fields of outdoor activity—the list of ways in which my motorcycle makes good is practically endless. Do you wonder then that I regard the good old chugger as a necessity. It has become so much a part of my life that I accept it as a matter of course; without it I am utterly lost.

THREE NEW BUILDINGS FOR FEDERAL PLANT

MILWAUKEE, Wis., April 25.—The Federal Rubber Company, Cudahy, Wis., which recently passed into the control of the Fisk Rubber Company, has plans under way for an extensive expansion of the Cudahy plant that will provide three new buildings. One will be a storehouse and shipping station, 106x113 feet in size, the other two to be manufacturing departments, one 116x200 feet and the other 112x235 feet. All will be constructed of concrete and steel and the two manufacturing buildings will have foundations that will allow for seven-story buildings when occasion requires.

SHE GOT THE RUBBERS FOR HER DOLL, ALL RIGHT

NEW YORK.—One of the recent exhibits in the window of the United States Tire Company at 1790 Broadway was a display of tiny rubber overshoes, not over 1½ inches long. A sign in the window stated that a pair of these rubbers would be given to anyone that they would fit.

A small girl saw the sign and marched inside bearing her doll. She said that the doll needed a pair of rubbers. The rubbers fitted and the girl and the doll went out with them. She "called" the U. S. Tire Company.

This incident forms one of the first page features in the latest issue of *The Tire Journal*, the house organ of the United States Tire Company. Another feature is the "History of 8-0-4," being an account of how Dealer W. P. Yoerg made that number a business asset in Holyoke, Mass. He advertised the number along with U. S. tires and free service in a variety of ways and built his business to huge proportions on the strength of the three allied features.

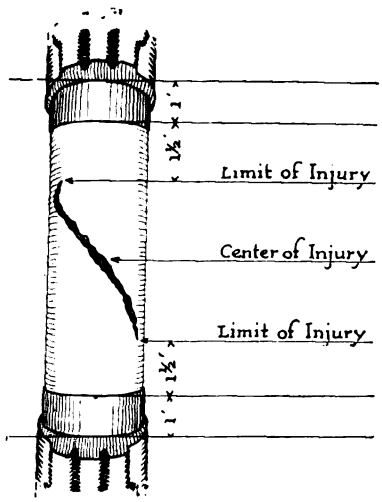
GOODRICH PROCESS REMAKES TIRE CASING

New Method of Repair Developed by Tire Firm's Experts Ensures Strong and Lasting Reconstruction of Casing at Only Slight Increase in Cost Over Former Methods

AS the result of a number of years of experiment, the experts of the B. F. Goodrich Company, of Akron, O., have developed a process of tire repair which will practically remake a casing at a cost that



How Casing Is Cut

scarcely exceeds that of the old methods. Any repairman can use this process—it is simply an adaptation of old ideas in tire repair.

The Goodrich company, in describing the new method, takes the case of a tire blown out from bead to bead. The injury is serious, but not so serious as to permit of scrapping the tire, as regards economy. In the injured tire, the fabric and tread are both torn apart.

Cutting the Tread and Plies

The first step in the repair is to find the center of the injury. If the repairman has a pattern, the center of the pattern should be placed on the center of the injury and the limits of the repair marked from the pattern. Should the repairman not have a pattern, he should leave at least 1½ inches between the end of the injury and the first cut or "step" on each side. At this distance, the tread of the tire is cut through two plies, in a four-ply tire. After cutting to the third ply and stripping the two upper plies away from each limit of the injury, the next cut should be made through but one ply on each side of the injury at one inch further away than the first cut. In other words, the "step" so formed should be 2½ inches from the limit of injury on each side. For a five-ply tire, three plies are to be taken off the top. The first step should then be cut 2½ inches away.

Now, with either the four-ply or five-ply tire, the cutting out of the fabric in steps, as mentioned above will give the repaired tire a maximum of strength. There will be, in the four-ply tire, two plies below the bead as well as two above. The inside ply must now be cut out, starting the cut one inch further from the injury than the point where the tread was cut and two inches from the cut of the first outside ply.

The tire will now present a series of steps inside and out. Without these steps, two or more splices would come one over the other and the tire would be weak at that point. When the repairman is ready for the repair proper, he should buff off all gum adhering to the fabric and dry the tire for three or four hours. If the tire is not thoroughly dry, the repair will surely go bad. The tire is then cemented, drying the first coat two hours and the second coat six hours.

To Protect the Steps

Preparatory to replacing the fabric, the Goodrich people recommend a thin strip of cement gum being placed over the edges of the fabric steps to protect them and keep them from chafing. The same precaution should be taken with the edges of the injury and enough gum used to fill up the hole in the ruptured fabric.

The fabric is to be cut so that the ends of the first two plies will butt evenly with the steps in the five-ply repair and the third ply should overlap and extend to the tread. In the four-ply job the upper ply should extend to the tread. On the inside of the tire there was but one ply removed. This is to be replaced so that the ends of the fabric butt with the splice. A reinforcing strip two inches longer than the section is put in as an added protection.

The inner and outer plies of fabric are lapped over the bead and covered with bead strip. Cushion gum is then applied, as well as side wall and tread, and the repair is ready for the vulcanizer. The repair will make the tire stronger than 90 per cent. of the repaired tires now on the road.

Secrets of Repair Success

The Goodrich company points out three secrets of repair success. These are: (1) Take the injury out of the tire; (2) use repair materials that harmonize; (3) step back the points from which plies of fabric are removed. In taking the injury out of the tire, enough fabric is to be removed to eliminate the weakness, and it is pointed out that a patch on top of an injury is a makeshift, not a repair.

NOVEL REPAIRS ARE MADE BY CLUBSTERS

National Capital M. C. Riders Use Ingenuity in Fixing Up Blowout and Improvising Substitute for a Lost Nut

WASHINGTON, D. C.—Members of the National Capital M. C. gather around the big table in club headquarters during the long winter evenings and discuss incidents of their trips. Some of these incidents contain valuable tips for riders, and two such are given herewith:

An unusual repair to an inner tube was made by a rider touring through a desolate stretch of Virginia. His inner tube blew out, resulting in a hole several inches long, and much larger than the largest patch his tool kit contained. After much puzzling he solved the problem by securing a piece of binder twine from a neighboring farmer and tying the same tightly around the inner tube about an inch or two from each end of the puncture in a direction away from the hole. He then wrapped his handkerchief tightly around the tube at the hole. This repair proved effectual and he was enabled not only to return home but also to ride the machine to a tire establishment to purchase a new tube the next morning.

On a recent trip through the Shenandoah Valley of Virginia with an Indian and sidecar, the nut came off the front axle on the side nearest the sidecar and was lost to sight. Fearing that the strain on the front wheel caused by the sidecar would eventually cause the front axle to slip out of the fork, we proceeded with great care to the nearest blacksmith shop. Nothing, however, could be obtained which would fit on account of the special thread used on Indian motorcycle bolts and nuts. However, with true Yankee ingenuity, the problem was solved by sawing the nut on the other end of the axle exactly through the middle, thus making two complete although thin nuts. With the aid of these nuts the journey was resumed and no further difficulty was experienced.

DOLLAR A POUND ORDER

BUILT RIGHT

BUILT LIGHT

That the ROGERS is Built Right has been thoroughly proven by the thousands in daily use.

In Design, Construction, Material and Finish, ROGERS SIDECARS have time and again demonstrated their supremacy.

It is the only All Steel sidecar with Autogenously Welded frame and One Piece All Steel body.

Every detail of construction developed to the highest mechanical perfection.

Finish, brushed and hand rubbed baked enamel that positively will not lose its lustre.

BUILT LIGHT

By the welded all steel construction ROGERS cars are from 40 to 65 pounds lighter and at the same time stronger and more durable than any other sidecar made.

Proof of these claims is clearly shown in the rapidly increasing sale of ROGERS SIDECARS which are now over twice that up to the same period a year ago and exceed in numbers the total of all other makes.

The owner of every ROGERS SIDECAR knows its superiority and tells his friends.

Write for catalog stating make and model of your motorcycle. We have a ROGERS car to exactly fit it that can be made to fit any other motorcycle equally well merely by changing a few inexpensive connections.

ANOTHER DOZEN SIGN FOR MIAMI POWER BIKE

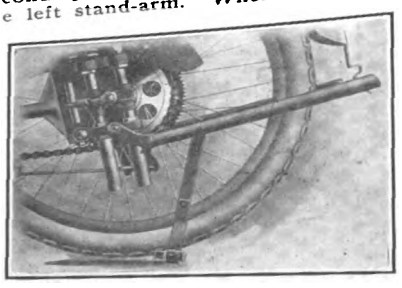
MIDDLETOWN, O.—To the long list of dealers who have signed up to handle the little belt-drive four-stroker, otherwise the Miami Power Bicycle, the Miami Cycle & Manufacturing Company announces an additional twelve. These are: Wm. E. Bascom & Smith, Lansing, Mich.; Wm. E. Metzger Co., Detroit, Mich.; Velt-man Manufacturing Co., Grand Rapids, Mich.; Harvey Williams, Lancaster, Pa.; Forster Bros., Manayunk, Pa.; A. Henry, West Chester, Pa.; Ray P. Cosgrove, Pittston, Pa.; Crawford & Wright, Manchester, Conn.; P. J. Maley & Co., New London, Conn.; C. A. Posner, New Haven, Conn.; L. Fenn, Bloomington, Ill.

MANY FIELDS COVERED IN HARLEY-DAVIDSON DEALER

HARLEY-DAVIDSON activities in various fields and in particular as regards the use of this machine with the U. S. Army in Mexico occupy most of the April issue of the *Harley-Davidson Dealer*, the house organ of the Harley-Davidson Motor Company, of Milwaukee, Wis. Feature articles of great interest are on the care of hub bearings, on tests made of different oils and on the subject of spokes. The cover shows the New Mexico Military Institute machine guns which are mounted on Silent Gray outfits.

POPE BRINGS OUT JACKSTAND FOR T-16 MODEL

AMONG the latest improvements on Pope models is an improved stand which at present is fitted only to the Model T-16. This stand, which is really a combination of jack and stand, has a secondary member which projects from the left stand-arm. When the machine



Pope Stand Ready to Operate

is to be raised on the stand, this member with the stand-arm drops down to the ground; upon foot pressure being applied to the stand proper, the stand-arms act as levers and the rear wheel is lifted from the ground. A slight rearward pull on the machine then swings the stand into the operative position.

This can be done when the rider is standing alongside the machine and holding it erect. It requires no great exertion and insures placing the mount on its stand a simple matter to even light riders. The new stand is a real improvement and yet it retains the original neat and compact form in which it was brought out by the Westfield designers.

SIDECARS DEMONSTRATE AT NATIONAL GUARD DRILL

NEW YORK.—Sidecar-equipped motorcycles gave a further demonstration of their adaptability to military service in an exhibition at the armory of the 71st Infantry, New York National Guard, on the evening of April 20. Eight combinations participated in the demonstration, made on the floor of the armory.

Seven of the combinations carried from one to two troopers, while the eighth, an Indian machine-gun apparatus, carried a Colts gun and its crew of two men. The sidecars brought the infantrymen to reinforce the firing line, while the machine gun was dismounted and put on its tripod and sent into action on the left flank. On the cease fire being sounded, the combinations again came forward and the gun was once more mounted on its traveling carriage and sent to the rear.

The demonstration was made before Major General John F. O'Ryan, commanding the New York National Guard, and that officer expressed himself as highly gratified with the performance. The motorcycles were under the direction of Lieutenant Ernest Schroder, of F Company, in charge of the headquarters motorcycle detachment of the Guard.

MARYSVILLE CLUB BANQUETS

MARYSVILLE, Cal.—The new motorcycle club in this city had an enjoyable banquet a short time ago. Nine new members were received in at the time. The idea of securing a club house was discussed and racing plans were also talked of.

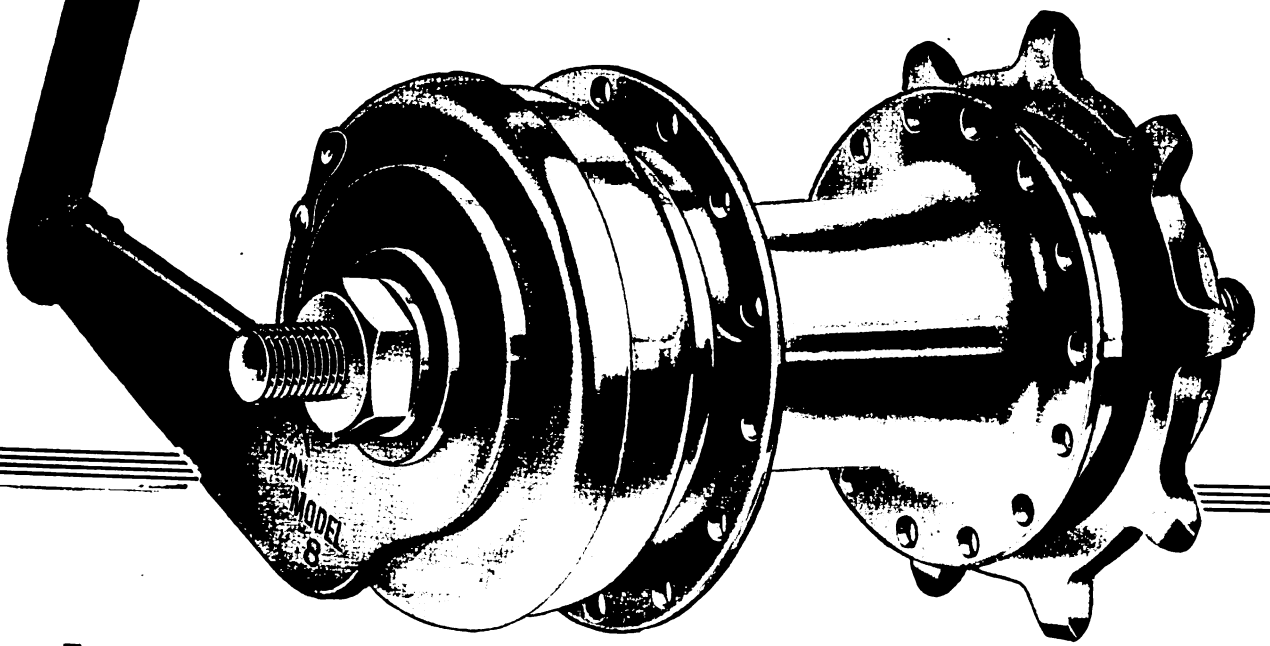
You Can't Beat The Big Brake



IT'S been tried a number of times but every time the famous

CORBIN

Duplex Coaster Brake

has demonstrated to the satisfaction of all riders its marked superiority.

And there is every reason that it should. Its large ball bearings assure smooth action, frictionless running, and durable service; its maximum brake surface gives it unequalled gripping power—this is an important feature; and its compact case prevents dirt, dust and rust from injuring the mechanism. Altogether it is a construction that can't be beaten.

Every bicyclist who has had any experience with coaster brakes knows this to be the case. The Corbin Duplex has been on the market too many years to be an experiment—*it is the standard brake equipment.* It should be on your wheel this season. See to it that it is. Your dealer will gladly equip it for you—he is used to doing this. For either the old or new bicycle specify the Corbin Duplex. Investigate today! Write for catalog.

STERLING IS LATEST 20th CENTURY MODEL

New Bicycle Headlight Burns Twelve Hours on One Filling of Kerosene and Gives Steady Light Under All Conditions—Has Combination Bracket

NEW YORK, April 25.—Sensing what it takes for a wide call for a bicycle lamp of that type, the Twentieth Century Mfg. Co., of 41 Warren street, this city, has brought out under the trade name "Sterling" a lamp, which, despite the use of the best of materials and workmanship of the best sort, is moderately priced at $1.25.

The lamp is not altogether new, a bicycle lamp of a similar type having been included in the 20th Century line some years ago, and having proved itself to the satisfaction of jobber, dealer and user alike. In its main conception, therefore, it is not an untried experiment, but is possessed of all of the qualities that have made 20th Century oil lamps an enviable reputation in the past.

It is stated that the lamp will burn for better than 12 hours on one filling of kerosene, will not smoke or soot up, and is guaranteed to give a brilliant, steady light under all road conditions.

It comes fitted with a combination bracket that is adaptable for use for either the head or the fork-side of the bicycle, eliminating the necessity of purchasing an extra bracket. It is jeweled with a red light on the right side and a green one on the left.

Despite the fact that deliveries cannot be promised before June 15, it is said that the manufacturer already has on hand a great many orders for this new offering, which tends to prove that it was not mislead in answering the call for a lamp of the Sterling sort.

SERVICE MAN CARING FOR DIXIES IN MEXICO

COLUMBUS, N. M., April 22.—As concrete evidence of the sort of service and co-operation which the accessory and parts maker is willing and anxious to render the purchaser of motor vehicles today stands A. F. Jacobs, a Splitdorf service man who has been detailed to keep all the Dixie magnetos being used on the motor equipment in the service of the American army in Mexico right up to scratch, so to speak. Jacobs not only takes care of the ignition needs of the heavier army trucks, but also sees that Dixie equipped motorcycles are always in prime condition insofar as the ignition equipment is concerned. He is now on a trip from Columbus to Cases Grandes with a squad of military motorcycle riders mounted on Indians and Harley-Davidsons to see that there is no delay on the line that Splitdorf service can overcome.

ROCKFORD M. C. PLANS FOUR-DAY SOCIABILITY

ROCKFORD, Ill., April 25.—Featured on the card of spring events to be promoted by the Rockford M. C. is a four-day sociability run taking in Milwaukee, Chicago, Aurora and intermediate points, which is scheduled for May 27-30, inclusive. A 24-hour endurance run over a 50-mile loop course to be staged some time in June, and several track meets are also in prospect.

TAKES ON SMITH MOTOR WHEEL

GUELPH, Ontario, April 24.—L. H. Buttrey, the thoroughly capable bicycle tradesman of Guelph, has taken the local agency for Smith Motor Wheels and is pushing the line for all it is worth. He is combining bicycle and Smith sales wherever possible and gives demonstrations of the motor attachment for the education of all prospects. He carries a complete line of bicycle accessories in a well-equipped store.

PLANS COMPLETE FOR INVINCIBLE RUN

All Details Have Been Attended To for 200-Mile Sociability Event of Brooklyn, N. Y., Club on April 30

BROOKLYN, April 25.—Once again, on Sunday next, April 30, the Invincible Motorcycle Club will usher in the riding season for the riders of the Metropolitan enthusiasts with its annual spring run. The plans have all been perfected for this 200-mile event, which this year partakes more of the nature of a sociability than an endurance contest. Club members state that the only things necessary to insure the whole hearted success of the event are a clear sky coupled with a moderate temperature.

Keen interest is being taken in the contest for the silver cup donated by the Silvex Co., which is to become the property of the club having the greatest number of riders who finish on time. Adding to the heat of this little side contest is the fact that New York State Commissioner George Ellis of the Yonkers M. C., and New Jersey State Commissioner E. B. Holton of the New Jersey M. C. of Newark both are anxious that the Silvex cup shall decorate their respective club rooms.

The contest is scheduled to start at 6.30 for the lightweight and single divisions and 7 o'clock for the heavier machines from Disbrow's garage, Hillside avenue and Hoffman boulevard, Jamaica. The start will be in charge of Bob Graves, while Fred B. Chase will officiate as referee.

ONE OF THE EMPIRE STATE'S FAIR RIDERS

Miss Jessie Hines, of Batavia, N. Y., a Harley-Davidson Enthusiast

PROVIDENCE BIDS FOR F. A. M. ANNUAL CONVENTION

PROVIDENCE, R. I., April 24.—If the 1916 convention of the F. A. M. does not come to Providence, it will be through no fault of the Providence Chamber of Commerce, which, after considerable correspondence with Dr. G. B. Gibson, secretary-treasurer of the national riders' organization, has formally entered a bid with President A. B. Coffman to stage this year's annual "big event" at the winter capital of the Cranberry state.

Perhaps the strongest point, and the one which may be the deciding factor, in the Chamber's bid is the offer of the use of the new Narragansett Speedway, an asphalt saucer, which, if it has not yet been proved the fastest speedway in the world, at least proved mighty swift during the speedfest that was staged there just after its completion last year. It was further pointed out that the 1907 F. A. M. convention was held at Providence.

BUYS LIGHTWEIGHT FOR SON

Dr. E. J. Cook, one of the most prominent physicians of Los Angeles, has just purchased of the Girton-Hoffer Co. an Excelsior light-weight for his son. This is another example of tendency of the motorcycle to appeal to the best class of prospects, who could easily afford automobiles but prefer the two-wheeler.

NATIONAL IGNITION

INTENSELY SNAPPY

The National "Midget" has taken the cycling world by storm. It's the one big hit of the industry. WHY?

BECAUSE THE NATIONAL "MIDGET" MAGNETO COMBINES THE ACCURACY OF A HIGH GRADE WATCH WITH THE STRENGTH AND ENDURANCE OF A STEEL BRIDGE.

Because it is the lightest, smallest, neatest and ABSOLUTELY THE MOST EFFICIENT MAGNETO ON THE MARKET. Weight 3 lbs., 10 ozs.

Because its many features, such as its one-piece frame, its water, dust and oil-proof construction, its snappy interrupter, its hot, fat spark AT ALL SPEEDS, its efficient oiling system make it an ignition-producer that is so crowded with real selling features that lightweight manufacturers find it one of their most powerful talking points.

You'll find the NATIONAL on motor-wheels, on the most popular lightweight motorcycles, on small dairy engines, on 'most every variety of small, highspeed motors.

LOOK FOR THE NATIONAL "MIDGET" ON THE MACHINE *YOU* BUY. IT'S A PLEDGE OF PERFECT IGNITION SERVICE.

Every bicycle and motorcycle dealer has in the Commercial Bicycle a means of corralling all the live business men in his city whose business does not warrant the use of a horse and wagon, but yet MUST give prompt delivery service.

The Commercial Bicycle

is the ONLY vehicle specially built for commercial service. It is designed primarily for the quick and safe transportation of loads, and every inch of its construction is SPECIALLY ADAPTED to this service. Note the smaller wheel in front, the big roomy basket, with frame around outside to protect contents in case of a fall, the long handlebars, the large, comfortable saddle and heavy mudguards.

Dealers can secure from us the names of concerns in their own town who have written us to say they are interested in the COMMERCIAL BICYCLE.

Write today. There are prospects in YOUR section.

JONES & NOYES, 227-231 West Austin Avenue, Chicago, Ill.

CLUBS PLAN JOINT RUN TO FREDERICK, MD.

WASHINGTON, D. C.—The Washington M. C. of this city and the Maryland M. C. of Baltimore, Md., have planned a social run to Frederick, Md., for Sunday, May 7. The plans call for a dinner in Frederick and a return to Baltimore in the afternoon for a street parade. Amateur speed contests will be staged along the route and various amusements will be arranged to entertain the participants.

THREE MORE AFFILIATE

WESTBORO, Mass., April 22.—Three clubs have affiliated with the F. A. M. during the past week, as follows: Western Motorcycle Club, Denver, Colo., with 22 members; Dubois Motorcycle Club, Dubois, Pa., with 20 members, and the Moundsville Motorcycle Club, of Moundsville, W. Va., with 15 members. One new repair shop has been added to the registration list, which now numbers 1,229. It is the shop of R. S. Woods, 145 North Broad street, Trenton, N. J.

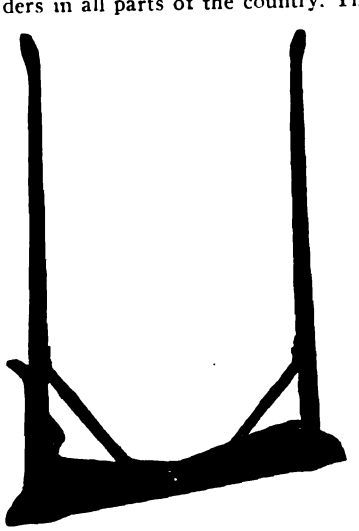
NO LAMPS FOR ATLANTA COPS

ATLANTA, Ga., April 24.—Bicycle policemen in this city will ride without lamps hereafter, in accordance with a recent order from Chief of Police Mayo.

"The headlights now in use," says the chief, "are all the warning necessary to a law-breaker that the police are approaching. They will be extinguished and we can catch our men."

KEEPS MACHINE UPRIGHT ON UNEVEN GROUND

ADAPTING itself to inequalities of the ground by the mere pressure on a small lever and thereby preventing the motorcycle overturning on any grade, the Mills adjustable stand is fast finding favor with riders in all parts of the country. This



stand, which is produced by the Mills Novelty Company, 225 South Green street, Chicago, Ill., will fit any motorcycle and can be attached thereto in one minute. It is neat and compact and has a 12-inch base.

The Mills adjustable stand has the base or lowest portion pivoted at the center. A short vertical lever is slidably pivoted at the left side on the stand arm. When the machine is jacked up on the stand, a foot pressure on the end of the lever enables the base to accommodate itself to the angle of the road and compensate for any grade, thus keeping the machine upright. It saves repair bills by preventing the machine from falling.

The cost is little more than that of an ordinary stand and its strength is superior in addition.

GRAND RAPIDS' FIRST RUN ON APRIL 30

GRAND RAPIDS, Mich., April 21.—The first run of the Grand Rapids M. C. will be held April 30, and assurances have been received that at least thirty riders will start on the route which will embrace Holland, Allegan and other cities for a distance of 250 miles. A cup will be awarded to the rider receiving the highest score.

The first six runs of the club will be of considerable importance, for the best riders in these will qualify for the big endurance run on July 2, 3 and 4.

WANTS $1,000 FOR HIS MOUNT

RENO, Nev., April 24.—Lawrence Lusich has brought suit in Judge Stoddard's court to recover $1,000 damages from Edward Barcos for the loss of the former's motorcycle in a collision with Barcos' automobile. Lusich alleges in his bill of complaint that the automobile was being operated on the wrong side of the street, which was the immediate cause of the accident.

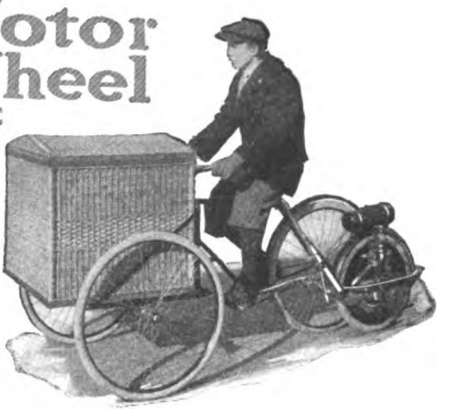
Smith Motor Wheel
DETACHABLE

Solves Delivery Problems

Big Profit Field Among Retail Merchants



Showing Smith Motor Wheel in combination with Commercial Bicycle of Machine Parts Co., Elyria, Ohio

In combination with one of the many commercial bicycles, the Smith Motor Wheel solves delivery problems for retail merchants. It attaches simply and easily in five minutes and gives immediate satisfaction. Prompt and safe deliveries are assured.

More than that, the Smith Motor Wheel, thus used, renders delivery work a pleasure for employes and enables the merchant to secure and hold the class of young man he needs for this important branch of his business.

Considering investment, operation and up-keep, it represents the most economical mode of motor-delivery obtainable.

Aggressive Smith Motor Wheel dealers have discovered this new profit field and their efforts are bringing the most pleasing results. Sales to brother merchants are always satisfactory and are easily made. One morning's trial of the "Smith" with a commercial bicycle will quickly bring a sale.

Let this suggestion increase *your* profits. It is just a friendly tip. The rest is up to you.

In certain localities we have not as yet appointed representatives. We invite correspondence with established dealers.

If the name "Smith Motor Wheel" is not on the flywheel of your motor it is not a Smith Motor Wheel.

DODGE CITY RACE MAY NOT BE RUN

Promoters and Track Owners Cannot Agree on Terms Calling for Big Guarantee Whether Meet Is Held or Not—May Be Left to City

DODGE CITY, Kan., April 25.—Present indications do not look favorable for the holding of the 300-mile motorcycle sweepstakes on the track here, which during the past two years has been one of the motorcycle classics of the season. The Speedway Corporation, which promotes the race meet, and Brown Bros., of Wright, the new owners of the track, have not been able to come to an agreement on a lease for the Independence Day affair, the owners insisting on a guarantee, which will net them a tidy little sum whether or not weather conditions are such as to cause a postponement of the contest. This sum will cut very deeply into the gate receipts.

Under these conditions, the promoters are unwilling to assume the risk, and are inclined to shift the burden onto the city or the Phoenix Industrial Club, neither of which has up to this time signified its intention of staging the contest. In past years the preliminary arrangements and advertising intending to bring in entries for the contest have been gotten under way long before this so that it would seem that if the race is to be run, some one or other of the bodies must assume the responsibility and get busy on the arrangements in a hurry.

POLICE SUPERINTENDENT LAUDS USE OF CYCLES

PROVIDENCE, R. I., April 18.—In the seven precincts of the city the police department uses thirty bicycles and two Excelsior motorcycles, according to the annual report of Superintendent of Police John A. Murray, which has just been issued. These were maintained last year at an expense of $171.41.

In five of the seven police precincts there are many long beats, which would require at least three times as many patrolmen as now cover the same area on bicycles and motorcycles. The value of cycles to the police here is attested to by the statement made by Superintendent Murray:

"They (bicycles and motorcycles) have fully demonstrated that better protection is given, especially in the precincts where the posts are necessarily long. The service rendered by the officers on the Excelsior motorcycles has been especially satisfactory, particularly in responding to emergency calls."

COMMERCE DEPARTMENT BUYS AN EXCELSIOR

WASHINGTON, D. C.—The Department of Commerce has purchased a 1916 Excelsior fitted with MIDCO generator system for the use of the secretary. The machine will be used to carry documents between the various bureaus of the Department and will replace an automobile which has been used for the same purpose.

This purchase is in line with the policy now in vogue in the various departments of replacing light automobiles with motorcycles by reason of the reduced cost of upkeep and operation of the latter. Motor trucks are used for hauling heavy merchandise.

WHEELINGITES ENJOY RUN TO WASHINGTON, PA.

WHEELING, W. Va., April 21.—The run of the Wheeling M. C. to Washington, Pa., last Sunday, was well attended, there being about fifty machines and their riders in line. The procession included all forms of passenger transportation with which a motorcycle could be safely employed. All enjoyed the trip to the full.

The club has started on its Spring house cleaning and a committee has been appointed to see that everything is gone over and put into shape. Each member has been assessed 50 cents to purchase the necessary paint and other materials and when the boys get through they will have a club room of which they will be justly proud.

RIDER STOPS RUNAWAY

FREEPORT, Ill., April 25.—Julius Kegel, a motorcycle enthusiast performed the daring feat of chasing and bringing to a halt a team of runaway horses belonging to a Lancaster township farmer. The horses took fright and started through the heart of Freeport.

Stewart

Motorcycle

Speedometer

$10

100,000 Stewart Equipped Motorcycles this Season

The motorcycle industry is keyed up to manufacture and sell 100,000 motorcycles this year.

And it can be done.

But motorcyclists today want something more than the ability to get somewhere and back.

They want the safety and pleasures of an automobile.

The Stewart (hand) Motorcycle Warning Signal now costs only $3.50. For safety in dense city traffic and on open country roads it is indispensable.

For real pleasure—to keep within the law and avoid the humiliation and expense of arrest—to get fair tire adjustments—a Stewart Motorcycle Speedometer is indispensable—it will save its cost of $10 complete in one season.

Stewart motorcycle accessories are leaders in quality and service.

Most motorcycle riders will take no substitute.

You can sell more Stewarts than any unknown make you have to force.

Line up for your share of this big boom in the motorcycle business.

Display and sell Stewart Products.

TO FORM ALL-CANADIAN TRADE ASSOCIATION

C. M. A. President Makes Initial Move Toward Interesting Local Bodies in Dominion—Wide Organization—Other Plans to Aid Dealers

TORONTO, Ontario, April 24.—President F. A. O. Johnston of the Canada Motorcyclists' Association has taken steps to interest the various motorcycle and bicycle trade associations of Canada in the riders' organization and the present indications are that his move will bring about an understanding between the different trade units. The ultimate result may even be, according to Mr. Johnston, the formation of a Dominion-wide trade association as a part of the Canada Motorcyclists' Association. There is no intention on the part of the C. M. A. to interfere in strictly trade matters but it is the hope of the C. M. A. officers to secure some sort of united support from the many dealers throughout the country.

The C. M. A. hopes to encourage the dealers in various cities to co-operate in the matter of holding race-meets, endurance runs, rallies, picnics, meetings and other features. The dealers will also be urged to lend united support to local club organizations to insure the permanent success of the latter.

Letters are being sent out by the C. M. A. to the trade associations already in existence. These are located at Ottawa, Toronto, Hamilton, London and Vancouver.

Not only is the C. M. A. dealing with trade associations already in existence but it will seek means to urge the formation of local trade bodies in cities where none exists, such as Montreal, Winnipeg, Calgary, Regina, Edmonton, Victoria and other places. President Johnston expresses the belief that trade associations in every city will work for the benefit of sport and industry alike.

MOTOR WHEEL MANAGER IS PLEASED WITH SALES

MILWAUKEE, Wis., April 24.—W. V. C. Jackson, general manager, Motor Wheel division, A. O. Smith Company, returned last week from an eastern trip, and above his great enthusiasm about conditions in the east was his loud praise for J. W. Grady & Company, Worcester.

"I spent an afternoon with Mr. Grady and his assistant, Mr. Farrell," said Mr. Jackson. "They were enthusiastic for a big year on the motor wheel. Grady hopes to sell 1,500 or probably 2,000 this season. They are doing the biggest bicycle business of their career. They cannot get them fast enough. Their stock now inventories about $300,000, and the conditions at Grady's store are a splendid barometer of the cycle wheel business as a whole all over the country."

The standing order of ten motor wheels a week which the J. W. Grady Company has with the A. O. Smith Company has been increased to twenty-five a week, and starting with May 1 they have specified fifty motor wheels a week, with expectations of leaving a standing order for one hundred a week for the balance of the year after June 1.

PERSONAL NOTES OF CYCLE TRADESMEN

Arthur E. Linsden, European manager of the B. F. Goodrich Co., Akron, O., is in the United States on a brief business trip. He has charge of the Paris factory of the company.

O. S. Johnson, formerly with the United States Tire Co. as district manager, has joined the Gibney Tire & Rubber Co., having been placed in charge of sales and service in Detroit as branch manager.

J. A. Leatherman, of the Portland, Ore., branch of the Goodyear Tire & Rubber Company, of Akron, O., has been promoted to manage the branch in the Rose City.

F. G. Richards is now manager of the Utica, N. Y., branch of the Goodyear Tire & Rubber Company, of Akron, O. He succeeds L. H. Vaughan, promoted to manage the Newark, N. J., branch. Richards was formerly a salesman with the Utica Goodyear forces.

R. S. Herman is now managing the Salina, Kan., branch of the Goodyear Tire & Rubber Company, of Akron, O.

The BENTON GUARANTEE IS IN ITS CONSTRUCTION—NOT ON A PIECE OF PAPER ALONE

When your spark plug "goes bad" on the middle of a long trip, and you're 'steen miles from nowhere, you get small satisfaction out of reading the makers' guarantee. You can't get sparks out of a guarantee.

BENTON CONSTRUCTION IS YOUR GUARANTEE!

The BENTON *never* fails you.

Why? Just glance at the sectional view and you'll see how the usual spark plug troubles are made impossible.

SPARK PLUGS AND SPARK PLUGS

Perhaps you've tried this brand and that brand of spark plugs with the same result—trouble. But you know that when you buy spark plugs at a fair price you have a right to expect at least a season of Perfect Service. "The Benton" makes this service sure and positive!

By using "The Benton" on your mount this spring you'll be insured against those spark plug annoyances that so often spoil a pleasure trip.

Write for our instructive booklet, "Spark Plugs—How to Make them Give Perfect Service." Free.

Maximum Quality at Minimum Cost

HARRIS

TRADE MARK REG. U.S. PAT. OFF.

OILS AND GREASES

You are doing business along modern lines these days and you have learned by now that customers buying Motorcycle Lubricants do not want to experiment. They want a high quality lubricant and upon finding that it gives satisfaction they stick to it.

It is this satisfying service that HARRIS Products give, due briefly to the following reasons:

1—Selected Crude—only the purest and highest quality Pennsylvania Crude oil used, insuring uniformity and dependability.

2—Careful processes in manufacture, based on thirty years' experience in solving lubrication problems.

3—Freedom from carbonaceous matter, preventing soot deposits and pre-ignition.

4—Increased power and greater mileage at lower proportionate cost—efficiency and economy combined.
That is what you hand your customer when you recommend HARRIS OILS.

"A Little Goes a Long Way and Every Drop Counts."

HARRIS MOTORCYCLE OILS are put out in the following grades: Extra Heavy Motorcycle Cylinder Oil (especially designed for high speed, air-cooled motors), Heavy, Medium and Light.

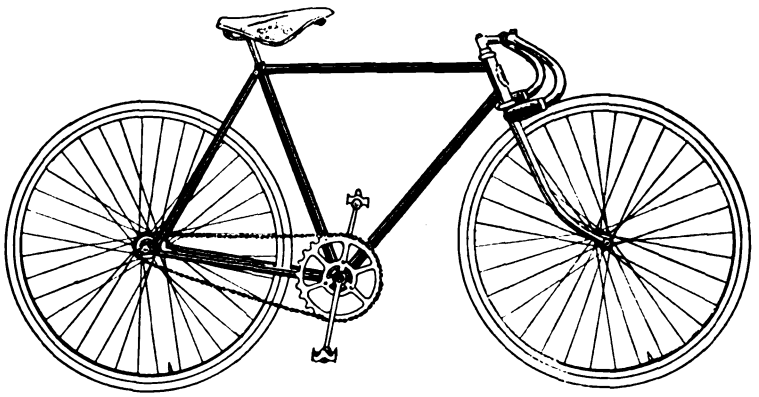
PIERCE

BOYS' PIERCE RACER

Here is the bicycle the boys just go crazy about



It is made up with our One Piece High Speed, Non-friction Hanger. Pierce Special Racing Hubs, front and rear (the kind Kramer uses). This bicycle, fitted with Kramer Drop Bars, Racing Saddle, Pedals and a High Grade Racing or Light Road Tire, is a whole lot the finest boys' racer that has ever been produced. This bicycle is light enough and will stand any amount of hard road work.

The Hubs are the finest ever produced and can be sold separately. Kramer, Moran, Wiley, and Ohrt use them.

Order some of these models today. Fit them up as a racing bicycle should be. Hang a $35.00 sign on them and watch the boys dig down in their banks.

The Non-Acid, Steel-Encased

EDISON
Motorcycle Special
Alkaline Storage Battery

Made of the same materials, the same rugged construction, possessing the same exclusive characteristics and giving the same steady white light, as the Edison Storage Batteries used in lighting our railroad trains and transcontinental flyers. Just as unbreakable, and absolutely reliable as the little Edison Batteries on which thousands of coal miners daily depend for the safety of their lives.

The Edison is the only battery you can charge whenever convenient and as often as required—lay it away indefinitely without injury—it's ready for use whenever you want it.

Made throughout of heavily nickel plated steel—the greatest amount of jarring "up hill and down dale" won't break the steel container, shake loose the active material, or slop over any of the solution.

The Edison is the "Don't-Worry" Battery.

Edison Storage Battery Co.

Keep your hands cool

Gloves add to the pleasure of summer driving, when you keep your hands cool and comfortable by wearing ventilated gloves.

On the backs of certain styles of Grinnell Gloves there are tiny vents that let in fresh air, which evaporate perspiration, and prevent hot, sticky hands on the hottest days.

Grinnell Gloves

Best for every purpose

"Limp-Kuff" is the first choice of motorcyclists. The soft, loose, light cuffs make it a very distinctive glove. "Speedway" and "Grip-Tite" are also big favorites. The soft, flexible Coltskin used in these gloves is washable in soap and water or gasoline.

"Limp-Kuff"

The year's sensation! Loose, limp cuff—so soft it wrinkles down naturally on wrist or may be pulled over sleeve. Rolls, crumples or folds up without losing shape. Ventilated back.

For over fifty years Grinnell Gloves have shown a steady increase in popularity. Select the gloves you need from the more than 900 Grinnell styles. Sold by best dealers.

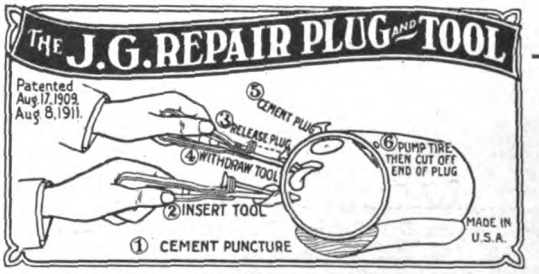
We can compile a list of owners of any particular Motorcycle you may wish a list of.

THE J.G. REPAIR PLUG AND TOOL



The only tool and plug made that will quickly and easily repair a punctured tire so that it will stay repaired.

Find puncture and then with the cutting edge of the Tool, bore a round hole about it, to give a good, smooth working surface for the insertion of plug and cement. Work a little rubber cement into the hole. Insert small end of "J. G." Plug into slotted end of Tool and draw small end of plug back, catching it within the claw. Insert plug and end of the tool into the hole. Release plug from claw. Withdraw tool. Work a little rubber cement around the stem and head of the plug within the tire. Pump up tire and test for leakage. Cut off plug stem even with the surface of the tire.

Dealers send for Free Sample of each plug.

JOSEPH GLANZ, Asylum Ave., Hartford, Conn.

PATENT YOUR IDEAS

Inventions bring fortunes when protected by good patents. New ideas in great demand. I will get a valuable patent for you and will help you make money from it. Ask about my free advice, or send sketches for free search of patent records.

An Edict of Fashion

Is it any wonder that bicycling is now the favored sport for women?

Dame Fashion has recently decreed bicycling the ideal outdoor exercise. Bicycle riding is now the vogue at Palm Beach, Aiken, Daytona and San Diego.

All through the south, wherever you go, women and girls are enjoying this newest recreation. As the season advances the northern women, too, are seeking this return to girlhood pleasures.

He is a wise dealer who notes the trend of women's wishes, and caters to them. Far, far more women and girls would even now be riding bicycles in your town, if dealers had tried to interest them in the right way.

As a builder of health the bicycle stands alone. It develops that sturdy, rosy, full-blooded health that comes from exercise in the open air.

Scores of noted physicians frankly recommend bicycling as the needed exercise for girls —needed because it brings all of the muscles into play, stimulates the circulation and affords pleasure every moment of the ride.

Bicycle dealers should meet this new demand. It takes so little time to make any bike shop inviting. Clean windows, clean floors and tidy arrangements are 50 per cent of a winning sales argument to women.

And don't forget that bicycles are better made today than ever in their history. Tires are better and roads are better.

All that the bicycle needs is enthusiasm on your part. The demand is waiting—it takes you to close the sale.

We want to co-operate. That is why we offer you our Square Deal Tire Policy. Blue Streak Tires assure you permanent, satisfied customers at a permanent profit.

There are no quibbles over prices or guarantees. The Goodyear Blue Streak has one price and one guarantee, whether ten pairs or a hundred pairs are ordered. When you buy Blue Streaks you don't have to overstock in order to earn a quantity discount.

If you are in favor of the effort to standardize the bicycle you are also in favor of Blue Streaks. These are the only bicycle tires made that meet the bike dealer half way.

We can send you a stock immediately from your nearby Goodyear Branch. Write us, or talk with the Goodyear salesman.

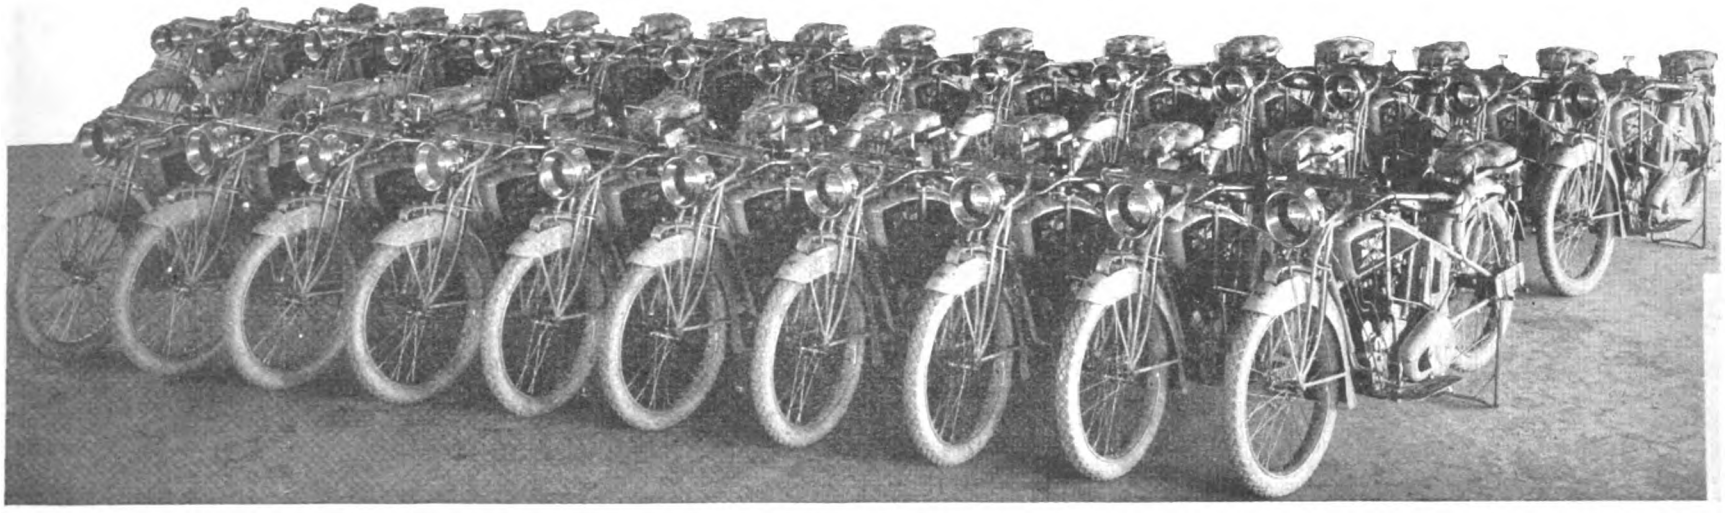
QUALITY WINS



Wisconsin's Choice

25 Model 17-3 EXCELSIOR AUTOCYCLES

Purchased by the Conservation Commission for the State of Wisconsin.

The superiority of the GOOD OLD X has been twice demonstrated during the past week.

First to the Conservation Commission of the State of Wisconsin, who, after careful consideration of all leading makes of motorcycles, selected 25 17-3 Excelsiors for the use of the Conservation Wardens of that state.

These machines were delivered in a single shipment, fully equipped with lighting systems, mechanical

The City of Chicago Confirms the Supremacy of the "X"

On April 26th, the city of Chicago ordered

150 EXCELSIOR AUTOCYCLES

comprising 100 Model 7C and 50 Model 17, as additional equipment for the Police Department.

These machines were selected by "men who know."

EXCELSIOR AUTOCYCLES to the number of nearly 200 have been in use by the Chicago Police Department for nearly seven years and have

Always Made Good

with the result that neither lower prices nor broad but unverified claims could offset their record for Service and Reliability.

Where Quality is the consideration and requirement,

The Good Old "X" Wins

and the awards of these two hard-fought-for orders are unquestionable evidence of real superiority.

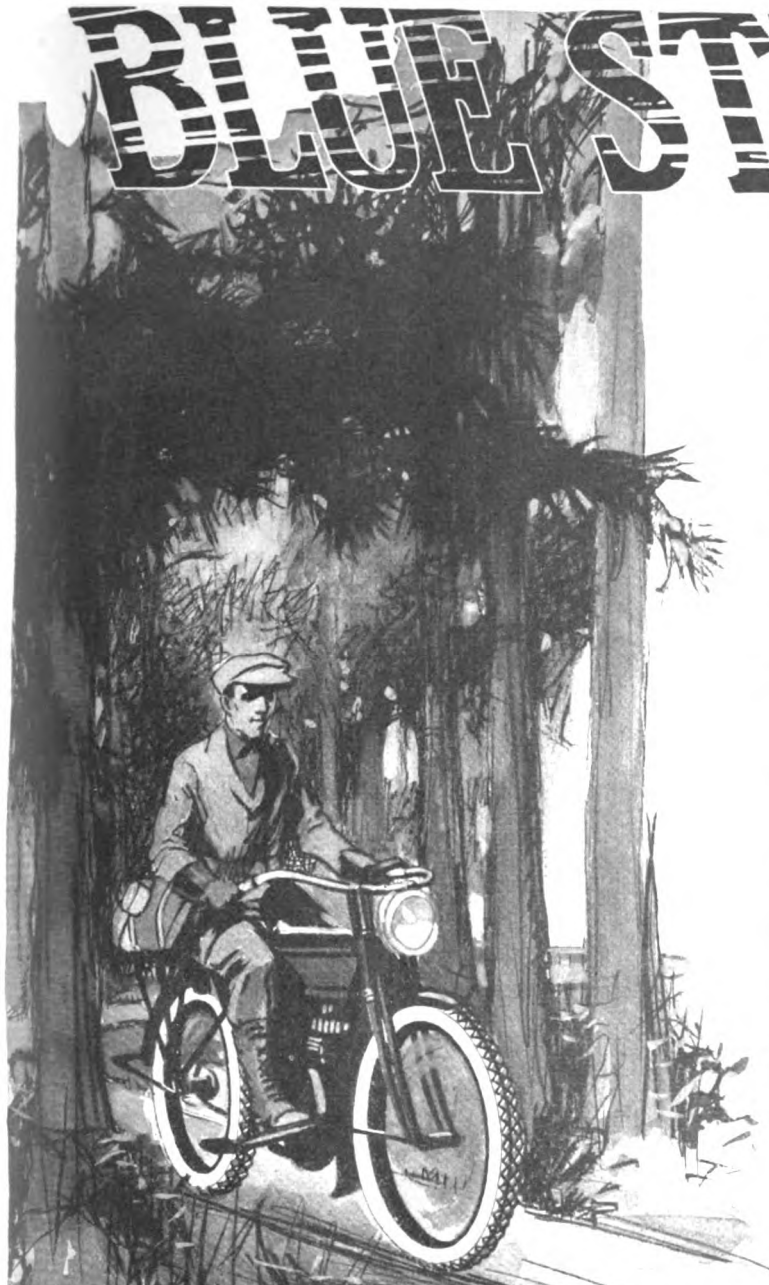
BLUE STREAKS



State and National Governments Depend on Blue Streaks

When a State and a great city concur with the U. S. Government in a choice of tires for its trusted messengers, there is ample reason for just pride on our part.

The Conservation Commission of the State of Wisconsin have specified Blue Streaks for twenty-five Excelsior Motorcycles recently purchased.

The Chicago Police Department have specified Blue Streaks on 200 Excelsiors just purchased.

This substantiates completely the purchase by the U. S. Government of forty-four sets of Blue Streaks for Indians used in the Mexican Service.

Over the sandy deserts of the great Southwest, along the forest trails of the great Northwest, and through the crowded thoroughfares of a great metropolis Blue Streaks are proving their absolute dependability.

But more significant even than this, is the remarkable way in which riders themselves are demanding Blue Streaks.

Because they have become the one universally demanded motorcycle tire, they sell in larger volumes and sales are quickly made.

They are in fact, the most profitable motorcycle tire for dealers to sell.

Harley-Davidson Winn

At Goulburn, Australia, April 24th, the Harley-Davidson won the Canberra Club's 50-mile road race.

At Mortlake, Australia, April 24th, the Harley-Davidson secured the fastest circuit trophy in the Victorian Club's road race, covering the 102 miles in 97 minutes.

At Fort Worth, Tex., April 23d, the Harley-Davidson, ridden by Sam Correnti, won every race on the program and broke the three-quarter mile track record by 2 4/5 seconds.

Harley-Davidson Motor Co.

Wings Open the Season

At Roanoke, Va., April 24th, Ray Weishaar, riding a single cylinder Harley-Davidson, won three of the four races on the program, and was leading by a half lap at 8 miles when he blew a tire in the 15-mile open event. In the 10-mile open the Harley-Davidson took first and second, lapping all competitors, including a special four-valve single and a ported single of other make.

In the 1-mile open event the Harley-Davidson broke the state record.

"Never Been Off the Rim"

Think of it—

For two years the United States Motorcycle Tire referred to never gave a moment's trouble.

We have records of mileages that seem almost staggering, but here is one that is remarkable for this reason,—that in two years' constant service it was "not punctured, and the fabric is not yet worn in the least."

We have the tire—we had to see it to be sure of our statement.

Perhaps you may not get as wonderful service from United States 'Chain' Tread Motorcycle Tires, but you are certain of remarkably good service, as thousands of owners attest.

Make the F. A. M. a Truly National Body and You Will Enable It to Protect You Against Unscrupulous Legislators

AKRON AND PROVIDENCE FILE BIDS FOR F. A. M. CONVENTION

Fine Program Would Be Assured in Either City and Federation Officials Are Figuring Hard to Make Fair Decision; Big Tire Companies Back Akron Invitation—Providence Chamber of Commerce Guarantees $1,500 Fund.

NEW YORK, May 2.—There is a movement afoot to make Akron, Ohio, the scene of the next convention of the Federation of American Motorcyclists. The tire town, and the big tire companies in it, are more than anxious to entertain the Federationists for their 1916 National Assembly, and those who know any of the boys in the automobile and cycle tire business need not be assured that Akron would entertain the visitors as an F. A. M. convention has never been entertained before.

The campaign to bring the convention to Akron was started at the recent Springfield meeting of the Motorcycle Manufacturers' Association, when the members of that organization were addressed by H. S. Quine and S. A. Falor, of the Goodyear Tire & Rubber Co. The question did not come officially before the meeting, because it is for the F. A. M. directors, and not the members of the Motorcycle Manufacturers' Association to decide when and where the F. A. M. National Convention shall be held. But after the meeting the question was formally discussed, and A. B. Coffman, president of the Federation, expressed himself as strongly in favor of accepting the Akron invitation.

It is true that Akron boasts of only a half-mile track, but it has been proposed that the convention be held in Akron, and the races, on the succeeding Saturday and Sunday, in Cleveland, which is only a few miles distant.

Akron is centrally located; in fact, it is the very hub of the cycle industry, approximately the same distance from Boston, New York, Philadelphia or Washington as it is from Chicago and St. Louis.

Saratoga, which many of the New York and New England riders seem to favor, appears to be out of the running for the reason that the owners of the track will not permit of its use for motorcycle racing until after the horse-racing season.

There is no question, however, that the convention will go to some city either in the East or the Middle West. Nor is it likely that any city further West than Akron will be chosen. In fact, it now looks as though the choice lay between Providence and Akron, and both are "good bets."

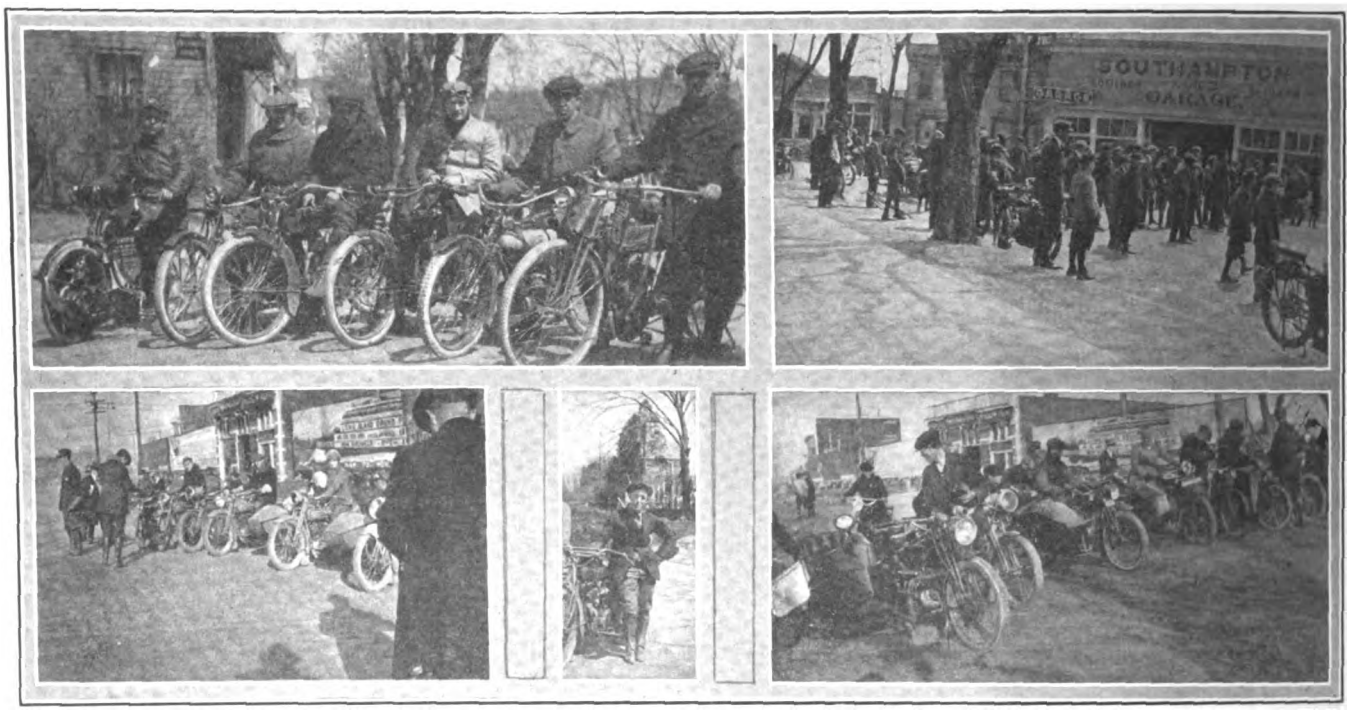
INVINCIBLE M. C. RUN BECOMES A SPEEDFEST

With Running Schedule Ignored, John U. Constant Covers 90 Miles in 1 Hour and 47 Minutes; Sidecars and Tandem Mounts Also Perform Well and Lightweights Show Ginger



Top Left--Driscoll, Funke, Barnard, Stein, Waughop and Stern—the Lightweight Division. Right—Watching the Arrival at Southampton. Bottom Left--Harley-Davidson Entrants. Center—John U. Constant, Indian. Right—Start of the First Division from Jamaica

BROOKLYN, N. Y., April 30.—Semi-official predictions that the nineteenth annual Spring run of the Invincible M. C. would give the speed boys all they were looking for in the way of a road-burning program were fulfilled today before the contestants were many miles on their way. The field went away on the jump and before the course was completed the riders were almost of one mind in saying that the affair should have been booked as the first annual 200-mile road race, instead of the nineteenth annual Spring run.

An insight into the character of the run is given in the performance of John U. Constant who rode ninety odd miles in one hour and 47 minutes on his Indian.

Motorcyclists of the Metropolitan district are evidently hard to please, if not impossible of pleasing. The annual Spring run of the Invincible club has always been an eye-opener, not only in the sense that it is the first big eastern event of the season, but also because the routes that are chosen are well calculated to sift out the "boulevard riders" at an early stage. The run held last year was, perhaps, the climax in the way of stiff endurance trials, and the "too hard" cry which went up after it led the Invincible club this year to give the boys the sort of run which they were led to believe would meet with general approval.

The course lay from Jamaica to Southampton, 90 miles, and back again to Brooklyn, 105 miles, the roads being some of the best that Long Island provides, and Long Island is right there when it comes to good roads. In every sense the contest was a boulevard affair, and the boys who had participated in Invincible runs of yesteryear, looked upon it as a sort of joke or, as they termed it, a "joyfest."

Either the contest was too lacking in endurance features to attract entries or else the lack of a prize list brought the same result, for only 48 starters in all classes, including the tandemites and the sidecar passengers, left Jamaica in the two divisions this morning. The first division pulled out at 7 o'clock and included, besides sidecar and tandem machines, a division for lightweights, in which class there were five starters. Half hour later the heavyweight division started.

Digitized by Google

The only requirements necessary for the entrant to be included in the medal winning class were that he check in at Southampton before 12 o'clock and finish at Brooklyn before 6 o'clock. He could take any route to Southampton he saw fit, and suit himself about speed.

As a matter of course, the contest soon developed into an out-and-out road race, with John Constant and Arthur Chapple leading in the fight for speed honors. Several other entrants with speed proclivities acted as runners up. It was not a day of real luck for Chapple and he blew a tire while traveling close to 70 miles an hour. The resulting fall only shook him up, but it was some time before he was able to get his Henderson in running condition again. Constant's Indian never faltered and he was able to ride into Southampton in one hour and 47 minutes; it was 37 minutes later that the second contender, Dresser, on a Harley-Davidson, checked in.

Snyder, with an Indian combination, was the first in the sidecar division to reach Southampton, having completed the distance in two hours and 44 minutes, while just one minute behind him came Stuart on an Indian with tandem passenger. In the lightweight division Barnard, on an Indian checked in first at Southampton at 9:55, having covered the course in two hours and 55 minutes.

All the riders started back in a body, leaving Southampton at 1 o'clock, and the rivalry between C. W. Waughop, on a Cleveland lightweight, and Barnard, on the Indian, was keen, a fact which developed a little lightweight road contest on the side. This contest had progressed to the full open throttle and full spark stage, when Waughop ran afoul of a speed cop and was detained some time, while that worthy made out his summons. Barnard finished in three hours and 46 minutes, and Waughop checked out 14 minutes later.

How They Finished

Constant made the homeward run in two hours and 10 minutes, being the first to check out.

Stuart checked out first in the tamdem class, finishing in three hours and 17 minutes.

Snyder won the sidecar honors, finishing in three hours and 38 minutes.

Second in the sidecar division was Lake, on a Harley-Davidson, who finished in 4:55. Practically every one of the 48 starters finished within the allotted time.

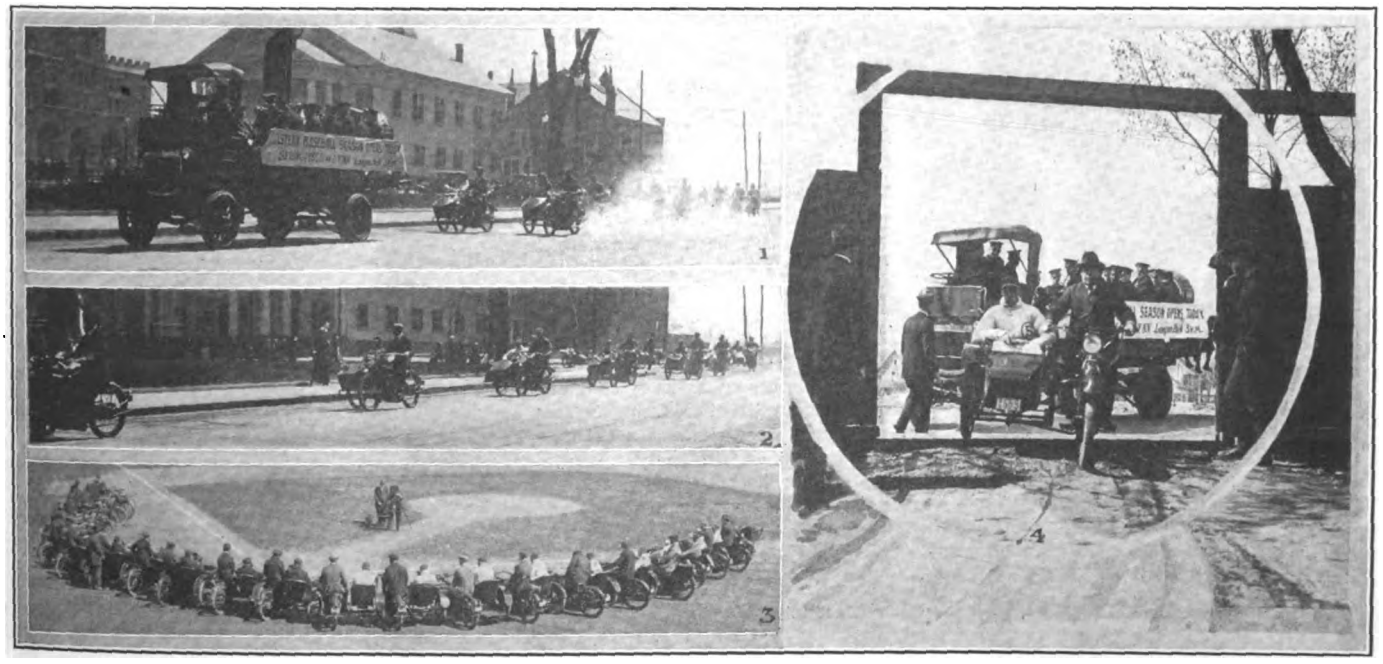
The detailed story as told by the checking sheets will not be available until the worthy checkers have had a chance to compare notes the latter part of the week.

Unless the final returns give the lie to present indications, the newly organized Speedway M. C. will take the Silvex prize which was offered for the club having the greatest number of members who finished within the allotted time. The Speedway club entered nine members, while the next best were the Empire M. C. and the Jamaica M. C. with four each. The affiliated riders and the clubs to which they belong follow:

John U. Constant, Frank Baker, Irving W. Barnard, Calvin R. Webber, William Von Lehn, John F. Carroll, Eugene Stein, Julius Stern, and John W. Beuwer, Speedway M. C.; Murray Cohen, William Driscoll, Miss M. Hinchy and George Eisentraut, Empire M. C.; Charles Mutter, Louis Timmerman, Herman Schmidt and H. V. Maurethe, Jr., Jamaica M. C.; Horace E. Stout, J. E. Piccard and J. R. Kellogg, Invincible M. C.; H. Deauc and Wallace Stuart, Audubon M. C.; Donald D. Dolan and Charles Cramer, Yorkville M. C.; C. W. Waughop and Harvey Snyder, New Jersey M. C.; George Grant, Staten Island M. C.; Emil Blucher, Riverside M. C.; George Smith, Bridgeport M. C.; Fred C. Krensky, Harlem M. C.

SPRINGFIELD BALL FANS IN MOTORCYCLE PARADE

Sidecar Cavalcade from Heart of City to Ball Grounds Ushers in the Baseball Season—"Ty Cobbs" of Eastern League Are Enthusiastic Over Two-Wheeler Ride



1, Motor Truck with Band of 24 Pieces Leading Procession of Players in Sidecars; 2, Part of the Springfield Team in Column; 3, Players in Cars Facing the Photographer; 4, A Springfield Player Entering the Grounds

SPRINGFIELD, May 1.—More Indian sidecars than most people ever saw gathered at any one time helped to give life and color to the opening of the Eastern League baseball season at Springfield, Mass., last Saturday, April 29. They were used in a street parade, each machine carrying a ball player of the Springfield or Lynn club in his new uniform. Twenty-four machines formed a double column behind a motor truck carrying the Second Regiment Band of twenty-four pieces.

The combination of the two popular sports, motorcycling and baseball, attracted the interest of a good many Springfield citizens who had never seen just this kind of a parade with motorcycles and a large crowd watched the assembling of the machines at Cooley's Hotel, the headquarters.

Everybody agreed that the parade was a pretty sight, the bright red enamel of the machines contrasting with the white sweaters of the Springfield players and mackinaw coats of the Lynn boys very effectively. When the parade was in motion it was even more impressive.

N. Y. SPORTING GOODS STAFF IN CONFERENCE

Officials, Headquarters Men and Travelers Discuss Possible Price Advances, Receive New Catalogs and Lay Plans for Extending the Scope of the Company's Business

NEW YORK, April 30.—The second of a series of meetings of the New York Sporting Goods Company's sales force was held at the Hardware Club, Postal Telegraph Building, Broadway and Murray street, on Saturday, April 22. The company's travelers were present in addition to Powhatan Robinson, president of the company; Frederic A. Baker, vice-president; James E. Murray, treasurer, and Henry T. Fowler, sales manager. Anthony Nadworny, William F. Casey and Fred DeWitt were also in attendance.

President Robinson gave a brief address in which he explained that it is the intention of the company to push the sale of sporting goods at wholesale aggressively, and called attention to the firm's excellent facilities for handling big business. It was asserted that the coming merger of Abbie & Imbrie, the pioneer fishing tackle house, with the New York Sporting Goods Co., will bring the latter into the front rank of sporting goods establishments in this country.

The new 1916 athletic goods catalog was placed in the hands of the road men, together with the new dealers' price list and delivery of the Sporting Goods Blue Book No. 66D was promised for an early date.

The matter of advanced prices on bicycles and bicycle supplies was discussed and practically all of the salesmen agreed that dealers under the existing conditions expect to pay more for goods. It was also pointed out that the dealers are placing large orders in expectation of further advances which manufacturers have predicted will affect many lines in the near future.

The new series of meetings is meeting with the enthusiastic approval of the New York Sporting Goods Company salesmen who welcome the opportunity to consult with officers of the company concerning the conditions encountered in their territories, and it is stated that the conferences will be continued indefinitely.

The company's sales force at present is made up as follows: John F. Pope, covering Long Island and the State of New Jersey; Howard J. Sanborn, Connecticut, western Massachusetts and the Hudson River valley below Kingston; George A. Carey, New York State; H. K. Lister, southern New Jersey, Pennsylvania, Delaware and Maryland; Arthur Brown and Lawrence F. Peck, Metropolitan District.

After November 1st there will be five additional men on the sales force, as it is the intention of the company to retain all of the road men of the Abbie & Imbrie Co. At the next monthly meeting the new salesmen as well as the selling force of the New York Sporting Goods Co. will be present.

U. S. TIRE CO. ISSUES AN ATTRACTIVE POSTER

AMONG recent snappy aids to agents handling United States tires is a large wall poster in red, blue and white, issued by the United States Tire Company, of 1790 Broadway, New York. This poster shows a prosperous dealer behind an attractive pile of United States tire accessories, such as reliners, patching cement, gum, inner tubes and horn bulbs. The goods are shown in the packages as issued by the company, and the poster serves a double purpose in depicting the line of goods as well as familiarizing the purchaser with the containers in which each article is received by him. The poster bears the words "I recommend U. S. Tire sundries and repair materials" in the upper part.

TWO VICTORIES FOR SILENT GRAY IN AUSTRALIA

MILWAUKEE, Wis., April 29.—The Harley-Davidson Motor Company, of this city, has received a cable from Bennett & Wood, Harley-Davidson agents in Sydney, N. S. W., stating that a Silent Gray won the Canberra Club 50-mile road race held at Goulborn on April 24. It also stated that a Harley-Davidson had made the fastest circuit in the Victorian M. C. 200-mile road race at Mortlake, the time being 97 minutes for the 102 miles. The rider of this machine received the prize for the fastest lap in the event.

BOSCH CO. DONATES TROPHY FOR AUTO RACES

FOLLOWING its custom of presenting valuable cups and cash prizes for the best performances on motor vehicles each season, the Bosch Magneto Company, of 223 West Forty-sixth street, New York, has donated a Bosch Trophy to be contested for by automobile drivers in A. A. A. sanctioned events. This trophy will carry a secondary title of "Champion Motor Car Driver Trophy" and will become the property of the driver winning it.

Accompanying the Trophy will be a cash award of $2,000. This will go to the winner of the highest number of points, according to the Bosch system of scoring. The driver getting the second highest point score will get a Bosch cash prize of $1,000, while the driver getting the third best score will get $500 in cash. While the Bosch Trophy is not yet completed it is stated that it will stand 30 inches high and will be of unique design.

SWAYNE AND YATES CAPTURE POPE SALES PRIZES

WESTFIELD, Mass.—The first cash prize for increased Pope sales during March has been awarded to Frank R. Swayne, who travels the Middle West. The second prize went to J. A. Yates, Pope traveler in the Northwest.

The company's salesmen have worked up much interest in the monthly sales contests and there was keen competition during the month of March. Several of the road men were running neck and neck for a time and it was only towards the end of the month that Swayne and Yates managed to pull away from the others.

S. K. F. HEADQUARTERS ARE NOW IN HARTFORD

HARTFORD, Conn.—Owing to the great increase in business in S. K. F. ball bearings, following the establishment of the new plant in this city, the S. K. F. Ball Bearing Company has removed its headquarters to the factory in this city.

A sales office is to be maintained at the former offices, 50 Church street, New York. The removal was made from the New York offices last week.

PREST-O-LITE DIVIDEND

INDIANAPOLIS, Ind.—The Prest-O-Lite Company, of this city, has declared a dividend of $1.50 per share, payable on May 1 to stockholders of record April 24.

NOT HANDLING YALE PARTS, SAYS DAVIS CO.

DAYTON, O.—"We are not handling the parts-order business of the Consolidated Manufacturing Company, formerly producing Yale motorcycles," was the statement given out by the Davis Sewing Machine Company officials this week, in response to numerous inquiries for parts for Yale power two-wheelers. "We are making Yale and Snell bicycles, as announced in the trade papers recently.

"All orders for old bicycle and motorcycle repair parts should be addressed to the Consolidated Mfg. Co., as in the past."

MORE MILEAGE ON CHARGES IS GASOLIXER CLAIM

GUARANTEED to increase mileage from 20 to 30 per cent. by the maker, the Gasoline Elixir Company, of 98 St. Nicholas avenue, New York, has brought out a preparation to be mixed with the fuel in the tank, known as Gasolixer. This preparation is stated to gradually absorb and discharge through the exhaust all carbon in the motor and by its continued use to keep the motor free from carbon.

The Gasolixer is in the form of a powder, which is put into the tank at the ratio of one teaspoonful to five gallons of fuel. It has no acid properties and will not affect metals with which it comes into contact. It comes in tins sufficient to care for 125 gallons of gasoline. The price is $1.

SOLD 20 INDIANS WITHOUT SEEKING ORDERS

SPRINGFIELD, Mass.—Hal H. Noyes, Indian traveler for New York State, has just returned from a trip through his territory. He did not contemplate selling any machines during the trip, but found in spite of this that he was obliged to take orders for 20 of the Powerplus models, an indication of how strong was the demand for this machine.

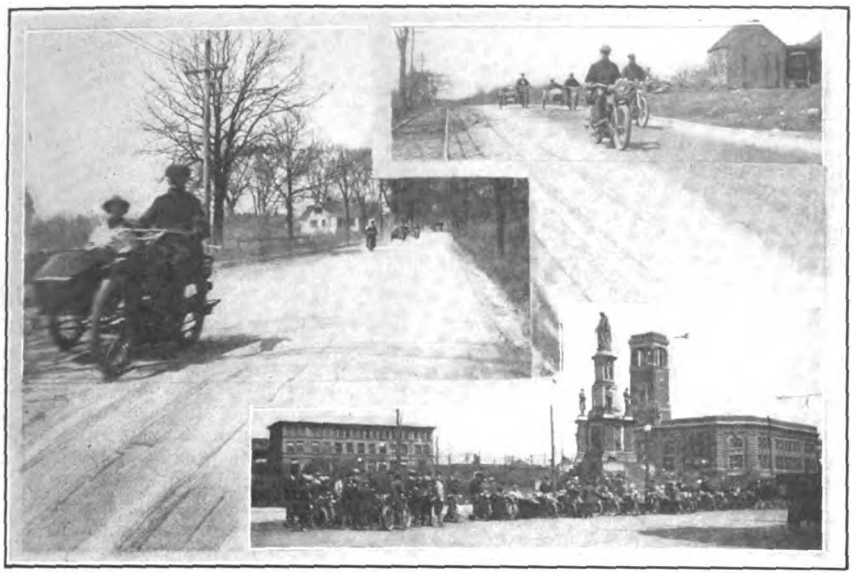
OVER 200 IN SWENSON'S "HERRING RUN"

Big Body of Rhode Island Riders Join Providence Indian Man in Annual Ride to Taunton to See Migration of Fish—Some Interesting Incidents of the Trip



Left, On Taunton Pike Near City Limits; Note Smooth Surface; Right, More Fine Going Near Taunton; Below, the Gathering in Exchange Place, Providence

PROVIDENCE, R. I., May 1.—Taunton, Mass., with its renowned "herring runs" was the Mecca of motorcyclists yesterday when B. A. Swenson conducted a huge party of riders from this city and surrounding towns to the scene of the annual journey of the fish to the breeding grounds. Yesterday's run was the 1916 affair conducted by Swenson, and was the latest in a long series of events which have been conducted by "The Indian Man" to watch the herring at about the same time each season. Like the preceding runs, it was decidedly a success.

While motorcyclists attend the runs in considerable numbers, there are always large crowds of spectators who come on foot, in automobiles and on bicycles and buggies to see the fish. However, the power two-wheelers far outnumbered the other vehicles on the spot yesterday and the riders formed no small proportion of the many spectators who lined the banks close to the weirs.

200 Riders in Line

A party of over 200 driving all types of motorcycles ranging in vintage from the 1907 model to the 1916 Indian Power-plus gathered in Exchange Place at 10:30 ready for the start. John Richards, Swenson's right hand man, was there, as was also the Swenson family. The Indian agent, however, did not show up until 10:45 o'clock, but, as is his usual custom, remained in his store on Sunday morning until 10:30. On this particular morning he was delayed because of being obliged to sell a machine, which was seen as the newest addition to the party.

The run was over College hill to East Providence for the first lap. When the party arrived at the foot of College hill, one of the steepest in Rhode Island and one which it was necessary, before a tunnel was built, to haul cars up with a dummy engine propelled by electricity, Swenson gave a demonstration of a little Indian Featherweight. He went up the long hill with a man 6 feet 4 inches tall, weighing easily 250 lbs. on the rear, the engine not once missing a beat. The party then proceeded.

Made Quick Time

The length of the trip is from 27 to 30 miles. Nobody timed themselves, but it it is known that more than one rider made quick time. Mr. DeMorris made the distance from what is known as the state line to Taunton, a distance of 22 miles, in 25 minutes. This shows what is possible on the Taunton turnpike. For miles this, road through wilderness, over hills, and through small villages, is as smooth as a carpet. It is the Mecca at all times, not alone for special runs for the motorcyclist.

The party arrived at Taunton in bunches and pairs and singly. Upon arrival there it was found that one of the party had been arrested. A vigilant copper in Taunton had found a motorcycle was minus the number plate and immediately got busy and haled the rider, who happened to be accompanied by a young lady, to the police station.

Upon arriving, Swenson was much displeased at the happening and proceeded to the station, where he was forced to remain several hours before he could make the necessary arrangements for bail owing to delay in reaching a judge. This case, however, was the only one causing any of the motorcyclists any embarrassment because of the law.

From Taunton Square many of the party proceeded to East Taunton to see the "herring run." This proved of great interest, especially to those who have never witnessed the spectacle. The long sluice-ways were alive with the salt water fish on their way up the Taunton river, several miles distant from the ocean, to spawn for the spring hatching. Cameras were working hither and yon in an attempt to "capture" some interesting pictures of the fish, but this year the water proved so muddy that many films will have gone for naught.

Many of the party returned early to Taunton, where Mr. Swenson had had prepared a lunch. This was served by the Taunton M. C. for the local Indian agent. This is always looked forward to by the participants in the party with much pleasure, and the feed set before them this year did not detract from the usual interest taken in it.

Speeding Brings Trouble

Not a few of the riders met with various forms of trouble on the trip, largely due, however, to an attempt to see just how many miles there were in each engine. There are no police officers standing guard over this long stretch of roadway and the speed mania has full sway. No less than a dozen had broken chains. Asked for causes, they replied: "Oh, just hitting her up a little too fast."

Swenson, upon returning to Providence late in the afternoon, stated that this trip was the best ever. More motorcyclists were out than ever before and many new machines were seen. He says that this will be the biggest season for the motorcycle that that machine has ever had. He stated that interest in this run was high and that the trips to take place later in the season will prove just as popular.

JAMAICA RUN IS POSTPONED TO MAY 21

JAMAICA, N. Y.—The Jamaica M. C. has postponed its endurance run from the date originally scheduled, May 7, to Sunday, May 21, with a rain date of May 28. Two sessions will be provided, a morning run to Patchogue and return to this city, and an afternoon run from Jamaica to Port Jefferson. The average speed will be about 20 miles per hour.

A time allowance is to be made for lightweight machines. The morning route will have checks at Seaford, East Islip, Patchogue, with the return via Farmingdale and Deer Park. Jamaica will be noon control. The afternoon route will have checks at Roslyn Northport, Port Jefferson, then back to Comack and Jericho.

A VETERAN RIDER

Motor Cycle Illustrated: Enclosed find money order for renewal of my subscription to your journal. This is my fourth year as a subscriber, and I must say that I am very much pleased with your weekly. It's improving every issue.

U. S. TIRE MEN TALK SALES IN DETROIT

Branch Managers and Salesmen Meet at Invitation of District Manager W. C. Standish and Discuss Various Phases of the Company's Extensive 1916 Campaign.

DETROIT, Mich., April 30.—W. C. Standish, district manager for the United States Tire Co., recently called a conference of the branch managers and salesmen in the district under his jurisdiction and many matters bearing upon the extension of the company's sales organization were discussed with a view of concentrating the efforts of the employees upon still more rapid progress for the current year.

The photograph opposite was taken following the meeting. Those in the top row, from left to right, are E. B. Stimpson, Detroit; M. J. Goldner, office manager, Grand Rapids branch; C. L. Sowers, resident manager, Grand Rapids branch; W. C. Standish, district manager; R. E. Sheahan, Detroit; W. B. Brady, special representative, Detroit; E. E. MacMaster, manager, manufacturers dept.

Middle Row. C. Q. Vaughn, resident manager, Toledo branch; W. C. Miller, office manager, Detroit; C. R. Gray, manager, Solid Motor Tire Dept., Detroit; E. E. Mann, office manager, Toledo branch; F. C. Grant, Detroit; S. Fleming, Detroit; W. J. Chisholm, Detroit.

Bottom Row, G. H. Wood, Toledo; F. E. Schultz, Detroit; C. S. Putnam, Detroit; E. A. Montgomery, Detroit.

CHICAGO POLICE GET MORE EXCELSIORS

One Hundred Single-Geared and Fifty Model 17 Mounts Will Go to Windy City Department—High Speed Guarantees

CHICAGO, Ill., April 27.—The Police Department of thtis city has awarded an order for 150 motorcycles to the Excelsior Motor Manufacturing & Supply Co., of this city. The specifications call for 100 single-geared machines with a guarantee of 60 miles per hour and 50 machines with a guaranteed speed of 80 miles per hour. The Excelsiors to be used will be Model 7C, single-geared and the new Model 17 with Ultra Power motor for the higher guaranteed speed.

The total number of Excelsiors now in use in the various departments in the City of Chicago is over 300. Of these the police have nearly 200 in the different branches. Excelsiors have been used by Chicago for police service since 1908, when belt drive singles were used.

Two of the new machines will be assigned to each of the 45 police precincts, and the remaining 60 will be given to officers with roving assignments. It is interesting to note that while the Excelsior figure was $13 per machine higher than the closest competitor in the bidding, the contract was nevertheless awarded to the big Chicago factory.

MISSIONARY SAYS A WORD FOR MOTORCYCLE OUTFIT

SPRINGFIELD, Mass., May 1.—That Indian motorcycle and sidecar which was presented by his classmates to Rev. William A. Junkin, an American missionary in China, is proving a revelation not only to the uninitiated natives but also to the missionary himself, take it from a letter written to one of his classmates at Austin College.

Dr. Junkin states that the machine is giving first-class service under most trying conditions on the wheelbarrow tracks that pass for roads in China, and that it never ceases to be a source of wonderment to the Chinese. It has enabled him to reach parts heretofore inaccessible and has considerably broadened his scope.

MORE HENDERSONS GO TO COAST POLICE

J. L. NICOLL and J. D. Rodman, of the Pasadena speed force, have just purchased new Henderson motorcycles of the Henderson Motorcycle Sales Corporation at Los Angeles. Another police sale has been made to F. G. Mulvihill, an oldtimer in the game, who patrols the roads of San Bernardino county. Mulvihill lives in Redlands and much of his work is over difficult roads in hilly country where he needs a powerful machine and one that handles easily.

FLEISCHER STARTS LONG SIDECAR TOUR

Nahant, Mass., Tourist Will Ride to Pueblo, Col., to Visit Parents and Expects to Reel Off About 2,500 Miles in 20 Days

BOSTON, Mass., April 30.—Walter Fleischer, of Nahant, started on April 26 with his Harley-Davidson combination on a tour to Pueblo, Col., his schedule calling for a mileage of at least 2,500 for the journey. He counts upon making a side trip to Chicago and Milwaukee, and expects to complete the outing in about 20 days.

Fleischer is 21 years old and is employed in a Nahant greenhouse. His parents live in Pueblo and he has not seen them for several years. He decided to combine a motorcycle tour with a visit to the old folks and accordingly purchased the Harley-Davidson and sidecar from W. J. Walker, the local retail representative, at 48 Spring street.

MILLIONAIRE AVIATOR CHOOSES BABY EX.

Boston Flying Man Selects Little Two-Stroker to Carry Him To and From Aviation Field—Also Interested in Twin

LOS ANGELES, Cal.—That the lightweight appeals to sportsmen of the most critical class is indicated by the purchase of such a machine by Porter H. Adams, the Boston millionaire aviator, who is planning a flight around the world. Mr. Adams is at present making his headquarters at the Alexandria Hotel in this city and has two aeroplanes at Nigger Slough, 18 miles from Los Angeles. He got his lightweight from the Girton-Hoffer Co., Excelsior representative in this city. It is an Excelsior two-stroke, with two-speed gear and induction oiling.

Mr. Adams will use his Excelsior lightweight to travel back and forth between the aviation field and his hotel. In purchasing the machine, he told Tom Girton that while in England, he had ridden a two-stroke machine which was very satisfactory and it was the similarity of the Excelsior design in many respects to the best features of this English model which first won his attention.

California mountain and desert riding is beginning to attrack the attention of Mr. Adams and he is looking with a good deal of interest at the big valve Ex. The fact that a sportsman of Mr. Adams' reputation with wealth sufficient to enable him to own any kind of automobile he might desire to drive prefers the motorcycle offers an example which should give dealers the greatest encouragement in approaching young men of this class, who in reality, are the best of prospects.

PATERSON CLUB DANCE IS WELL ATTENDED

PATERSON, N. J.—Over 400 riders and their friends attended the dance given by the Paterson M. C. of this city on April 28. In addition to a large representation of the club giving the affair there were a number of members from the New Jersey, Arrow, Passaic and Stockholm clubs with their ladies. Among the prominent guests were Elliot B. Holton, New Jersey F. A. M., Commissioner and Mrs. Holton. Dancing continued until a late hour, when the guests departed after congratulating the Paterson club members on the success of their affair.

TRACEY JOINS CANADIAN ARMY

SAN FRANCISCO, Cal., April 20.—John Tracey, one of last season's fastest riders in the ranks of the New Century Wheelmen, has joined the Canadian expeditionary forces as a cavalryman and expects to see active service at the front soon.

SCHICKEL OPENS AN EXPORT OFFICE

Pioneer Two-Stroke Motor Firm Establishes Foreign Department at 47 Broadway, New York—Selling Organization Being Built Up

NEW YORK, April 30.—Owing to the increasing demand for the Schickel line, it has become necessary for the Schickel Motor Company, of 59 Garden street, Stamford, Conn., to open an export office and show room, and this has been done at 47 Broadway, this city. This department will be in charge of J. E. Sitterly, who is one of the most capable foreign-sales managers in this country.

Mr. Sitterly's record includes, among other American products, the establishing of an international reputation and market for the Klaxon warning signals. He is a veteran in both the export and domestic fields, as well. Many sample orders are being shipped through this new Schickel department and some are of sufficient size to be a credit to any factory in the country. A selling organization is being built up as rapidly as possible in each country, in keeping with good export practice.

A recent letter from the Schickel company, makes the following interesting point concerning its export business:

"The export business of the Schickel Motor Company practically began to assume its present proportions and potential possibilities from their advertisement, which ran in the Export Number of **Motor Cycle Illustrated** last Fall. The number of inquiries received from this one advertisement was beyond all that could be expected. Actual orders came in from it without any additional expenditure whatever, except for postage (and cable services in one instance to the extent of $7) which more than paid for the cost of this advertisement, without taking into consideration at this time the connections which have been made, and on which negotiations are still pending, which will undoubtedly lead to a very large volume of business, and which has forced the company to open their export office in New York for the proper handling and development of this foreign business."

TO CONSERVE GAME WITH MOTORCYCLE'S AID

Wisconsin's New Conservation Commission Equips 25 Game Wardens With Excelsior Mounts—Will Conduct an Educational Campaign

THE state of Wisconsin has just equipped its enitre force of game wardens with Excelsior motorcycles and reports already received indicate that they are being used to good advantage. W. E. Barber, chairman of the Conservation commission, announces that this step was taken only after a thorough study of the situation, and in his opinion it is one of the wisest steps taken by the new commission.

There are twenty-five full time wardens in Wisconsin and as there are seventy-one counties it is necessary in most cases for each warden to cover several counties. Formerly the men were obliged to depend on trains and often it was necessary for them to hire a horse and carriage to take them into the rural districts where most of their work is done. With the motorcycles at their command it is believed that they will be able to make much better time and travel at greatly reduced expense.

The wardens are expected not only to prevent violations of game laws, but to carry on an educational campaign on game conservation.

FINISHES SAN JOAQUIN TRIP

LOS ANGELES, Cal.—C. L. Smith, who with Charles Tobey regularly makes the San Joaquin Valley trip in the interests of "Bear Brand" piston rings, has just covered the entire district to get better acquainted with motorcycle and bicycle dealers. Smith's products also include pistons, which, like the rings, are of vanadium iron and seasoned sixty days before final turning and finishing.

HARN CLEANS THE SAVANNAH PLATTER

Wins All Three Events in Benefit Meet on His Indian Single; Buckner a Game Runner-Up; Proceeds Go to Policeman's Widow

SAVANNAH, Ga., April 27.—Making a clean sweep of the three races here yesterday, Roscoe Harn, astride his stock Indian single, not only won out with ease but incidentally captured the title of champion of Savannah.

The races were held as a benefit for Motorcycle Policeman McGinley's widow and her seven children. McGinley was killed while on duty and left his family penniless. A subscription had been started to build a home for the widow and the entire proceeds of the race meet, amounting to over $200, will be added to the list.

The races were at five, ten and fifteen miles, and there were five entrants in each event. The first race brought out two Indians, a Thor and two Excelsiors. Harn won without difficulty, with Schroeder, mounting his Thor, in second place. Cafiero, Indian, finished third.

The ten-mile race brought out the same five machines. Buckner took Cafiero's place on an Indian in this event. Buckner gave Harn a hard fight for first money and finished a close second. Schroeder's Thor was third.

The last race, known as the Savannah championship event, furnished some excitement. Schroeder retired and Cafiero mounted the Thor. Harn and Buckner fought desperately for first honors, changing places at least a dozen times, but Harn managed to pull away a little at the finish. Buckner second, and Cafiero third.

Harn's time in the five-mile race was 6:59 in the ten-mile event, 13:56, and in the fifteen-mile race, 20:14.

BEARDSLEY LEADS IN BIG OREGON ROAD RACE

KLAMATH FALLS, Ore.—Elmer Beardsley, mounting a Powerplus Indian, won the 225-mile race over a 71-mile course, which was staged on April 16 by the Klamath Falls M. C. His time was 5:51:30. Floyd McMillan, Harley-Davidson, came in second, six minutes behind Beardsley, and Charles Faught was third. Faught also used a Harley-Davidson. Faught had a lead of 7½ minutes at the end of the first lap, but soon afterward mixed things up with a bicyclist who tried to cross the course, and it took him 17 minutes to get under way again.

PRIZE-WINNERS IN THE BICYCLE CONTEST

ANNOUNCEMENT has just been made by the sub-committee which examined the letters submitted in the contest conducted by the Million Bicycle Committee in connection with Bicycle Day. The contest was conducted for the purpose of securing a number of good bicycle sales letters, or selling talks, and a large number of splendid letters were submitted.

To Frank Rupert of Decatur, Ill., is awarded the first prize of $100.

The second prize of $50 is awarded to the writer of a letter which, though unsigned, is written on the business stationery of F. E. Wagner, Battle Creek, Mich., and it is assumed that the letter was written by either Mr. Wagner or one of his employees.

Third prize, $25, goes to E. H. Leng, of New York city, and the fourth and fifth prizes respectively, to F. H. Bell, Indianapolis, and T. N. Mudd, Jr., of Washington, D. C.

CONCOURSE CLUB HOLDS SUCCESSFUL BANQUET

BRONX, N. Y., May 1.—Over 125 riders and their guests attended the second annual banquet of the Concourse M. C. of this city, at Ebling's Casino, on the evening of April 29. The fair sex was well represented, practically every member of the Concourse and of the several other Bronx clubs participating, being accompanied by a wife or sweetheart. Dancing was indulged in between the courses of the banquet and afterwards.

The veteran president, John MacNally, of the Concourse M. C., had charge of affairs, being ably assisted by Secretary Herberger. The trade was represented by Michael E. Toepel, of the Splitdorf Electrical Company, of Newark, N. J.; M. J. Sullivan, of the Benton Spark Plug Co., Vergennes, Vt.; D. R. Hobart, representing **Motor Cycle Illustrated;** J. C. Foley, Gene

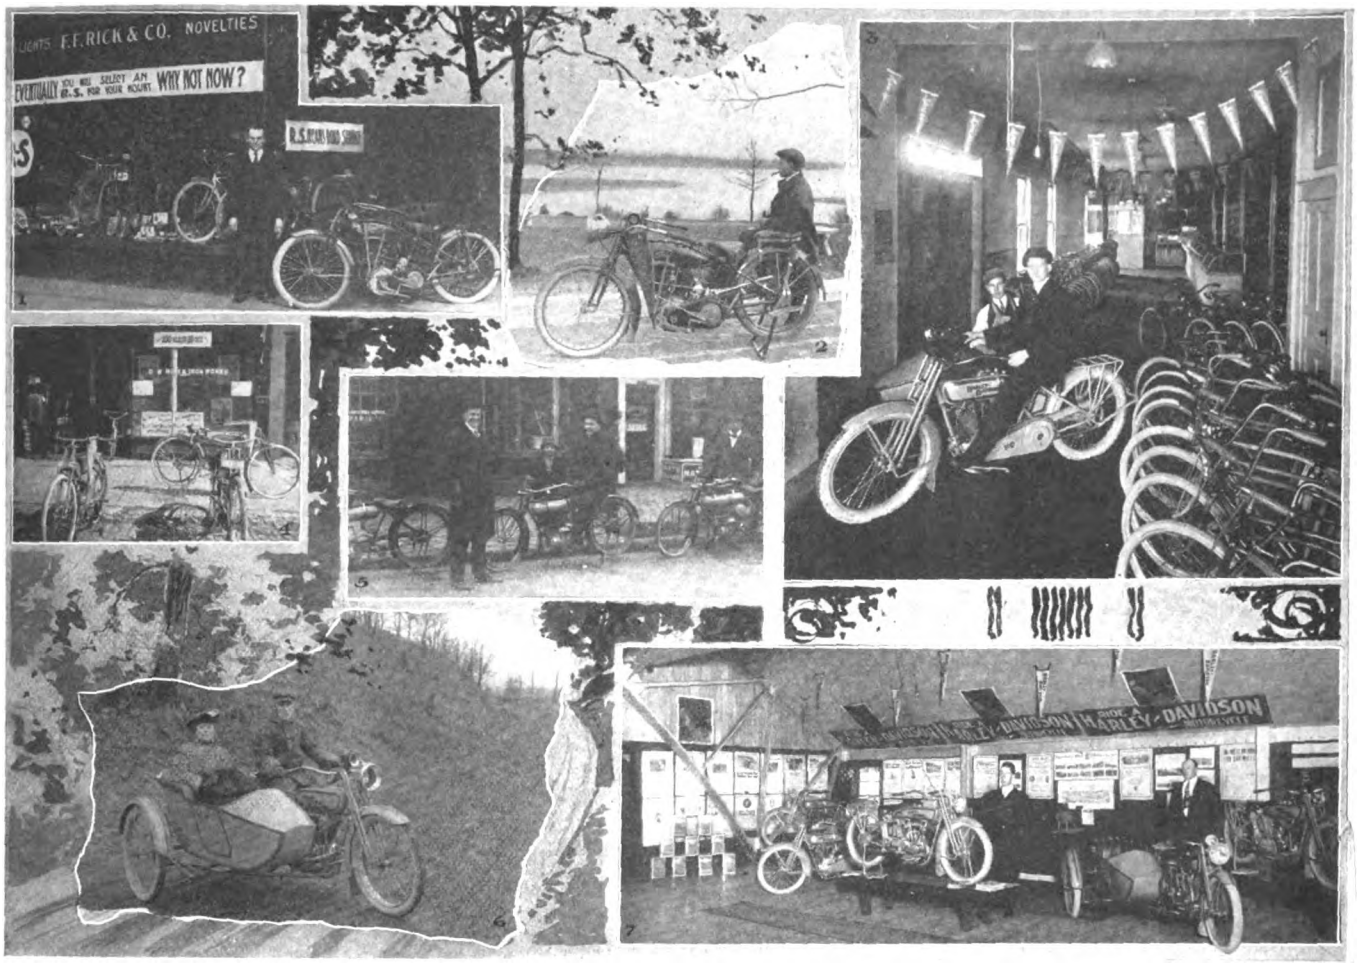
A BATCH OF LIVE DEALERS WHO ENJOY SEASON'S PROSPERITY



1, Headquarters of F. F. Rick & Co., Reading-Standard Agents in Buffalo, N. Y.; 2, H. E. Stout, R-S Agent in Toledo, O.; 3, Howard Beeny and Assistant in His Store at Newark, O., Where Harley-Davidson Is Handled; 4, Dowe Wire & Iron Works, Miami Power Bicycle Agent in Louisville, Ky.; 5, Cleveland Lightweight Boosters in Washington, D. C.; 6, George Ellis, Harley-Davidson Agent in Elmira, N. Y., with Mrs. Ellis; 7, Harley-Davidson Booth in Calumet, Mich., Show

Coughlin, Calvin Webber, Wallace Stuart, Irving Barnard, of the New York Sporting Goods Co. Addresses on motorcycle topics were made by Messrs. Toepel, Hobart and Webber, and by State Commissioner George Ellis.

Attractive souvenirs were given to each person present, the men getting neat wallets which comprised a bill-fold, stamp flap, calendar, and note book with pencil, while the ladies received a neat filigree fan.

PROVIDENCE M. C. LAUNCHES MEMBERSHIP CAMPAIGN

PROVIDENCE, R. I., May 2.—Immediately after electing its officers for the year, the Providence Motorcycle Club at its annual meeting last week decided to promote a membership campaign. Not only will they make every effort to bring new riders into their own fold, but the Rhode Island boys are particularly anxious to see the hand of the F. A. M. clock turn round at a cheerful clip.

Here are the live wires who will fill the various offices of the P. M. C.: President, Cleveland K. Joslyn; vice-president, E. L. Buffington; secretary, J. G. Edwards; treasurer, B. A. Swenson; captain, F. Shogrin; first lieutenant, D. W. Gravel; second lieutenant, Adolph LaCouture.

20-HOUR RUN FOR POUGHKEEPSIE RIDERS

They Will Travel from Midnight on Saturday, May 27th, till 8 O'clock the Following Evening; Attractive Prize List Is Assured

POUGHKEEPSIE, N. Y.—Local riders have about completed plans for a contest to be known as the Poughkeepsie twenty-hour endurance run, which will be held from midnight on Saturday, May 27, to 8 p. m. Sunday, May 28. Contestants will leave in pairs at one minute intervals, heading for Albany, where they will check in at 5 a. m. Then their wheels will roll towards Canajoharie to check at 8:45 a. m., from which point the route will lead to Oneonta, where the riders are due to check at noon. One hour will be allowed to Oneonta, but no repairs or adjustments will be permitted in the control.

The next control will be at Kingston at 6 p. m., the run to that point being made via Cooperstown, Delhi and Shokan. Leaving Kingston, the contestants will proceed to Highland-on-the-Hudson, opposite Poughkeepsie. The riders will then ferry across the river and sign the last checking sheet at 8 p. m.

The route calls for 228 miles of riding and both road and scenic attractions are strong. The run is limited to riders living within 30 miles of Poughkeepsie. There will be two classes, for solo machines and sidecar combinations, and all the entry money received from each class will be spent for prizes to be awarded to winners in that division. In addition to the prizes to be awarded by the club there are donations of tires and other accessories by the Firestone and Goodyear companies and from local dealers.

CYCLE EVENTS FOR "LIBERTY DAY" CELEBRATION

SHEEPSHEAD BAY, N. Y., April 30.—Two motorcycle and two bicycle events will be held during the "American Liberty Day Celebration" at the Speedway on June 4, by the United German-American and Austro-Hungarian-American Societies of New York and New Jersey. The first motorcycle race will be a four-mile open pro. event, and the second is a 15-mile open pro. race. Both are for the championship of Greater New York.

The bicycle events will be a two-mile amateur Metropolitan Championship and a six-mile open amateur handicap.

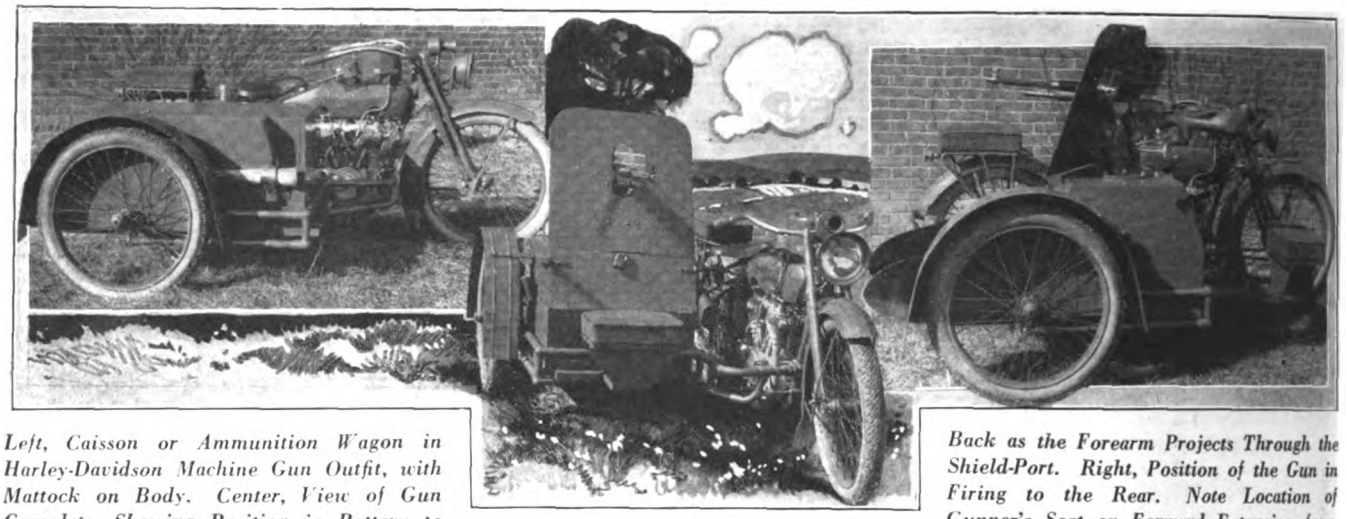
HARLEY-DAVIDSON DEVELOPS NEW MILITARY OUTFIT

Working in Collaboration with Federal and National Guard Officers, William Harley Perfects Mobile Machine Gun Equipment with Special Attention to Important Details



Left, Caisson or Ammunition Wagon in Harley-Davidson Machine Gun Outfit, with Mattock on Body. Center, View of Gun Complete, Showing Position in Battery to the Front. The Muzzle of the Piece as Far Back as the Forearm Projects Through the Shield-Port. Right, Position of the Gun in Firing to the Rear. Note Location of Gunner's Seat on Forward Extension from Chassis. There Is Also a Rear Seat.

MILWAUKEE, Wis., May 1.—Sensing months ago that all of the present agitation for adequate military preparedness would lead to a thorough investigation both by the Federal Government and by State military organizations of the motorcycle and special military sidecar, the Harley-Davidson Motor Co. has developed some new machine gun equipment which has proven a revelation even to the makers in its initial tryout by the Machine Gun Company of the First Regiment, Wisconsin National Guard.

The new equipment, which consists of two special Model 16-J Harley-Davidson motorcycles, one attached to the machine gun carriage mounting a Bennett-Mercer machine gun and the other to an ammunition car, represents the combined efforts and skill of William S. Harley, Col. W. S. Pierce and other officers of the Ordnance Department of the U. S. Army and members of the Wisconsin National Guard, notably Captain Guy D. Armitage, who assisted with valuable suggestions. The motorcycle machine gun car carrying 2,000 rounds of ammunition weighs 975 pounds, and with full crew, including the rider, a tandem passenger and the gunner it scales in the neighborhood of 1,475 pounds. The gun car is designed to carry 2,400 rounds of ammunition in addition to the army spare parts case, an extra barrel for the gun, two entrenching spades and a broad ax. The ammunition car with two men weighs 1,025 pounds, and has a carrying capacity for 4,800 rounds of ammunition.

Special Construction

The chassis of the cars are of double tube construction throughout and have more than twice the strength of the regulation Harley-Davidson sidecar chassis. The enormous weights carried at high speeds along all sorts of roads make the additional strength imperative and the hard test which the outfit was subjected to by the First Regiment Machine Gun Company gave evidence that the new chassis was not lacking on the score of strength.

The gun is so mounted that it can be arised, lowered or shifted around in a circle and instantly locked in any desired position, fitting it for a variety of uses. The armor plate protector, which provides a measure of shelter for the gunner, is also arranged so that it can be shifted around to any desired position, space being left in the armor plate to permit of the use of telescopic sights for long distance work. There is a seat for the gunner in front of the gun car as well as behind, and the ammunition boxes can be taken out either from in front or behind so that the gunner is afforded the full protection of the armor

Digitized by Google

plate, come the resistance from any angle whatsoever.

Of course the speed of the motorcycle is the chief advantage of its use in military service, but it is frequently desirable to use machine guns where transportation is impossible by any sort of vehicle, and to provide for this contingency the gun has been made readily demountable. Simply releasing a ratchet permits of the gun being taken off the car almost instantly, and the replacement is every bit as quick. During the recent trials Sergt. R. H. Wood, who was sent from El Paso as demonstrator and instructor, demonstrated that he could dismount the gun and replace it again in something less than 20 seconds.

The extra gun barrel is carried on the left side of the gun mounting ready for instant use. With the Bennett-Mercer guns, which are standard equipment both in the regular army and in the National Guard, gun barrels have to be frequently changed because of the extreme heat generated when in continuous use and which impairs the efficiency of the gun. Should it be necessary to dismount the gun to take advantage of buildings, gulleys, ravines or other natural eminences, the extra gun barrel case can be lifted off, too, in an instant. The entrenching spades and ax are carried in a separate case ingeniously mounted on the right side of the gun car, the case being held by a clamp which releases readily with a sharp pull. Both shovels are held securely by double hooks on one rod.

The motorcycle itself, as was said before, is a model 16-J fitted with one of the low compression sidecar motors, three-speed transmission, Remy ignition and electric lighting outfit and Firestone tires. The machine is equipped also with a Harley-Davidson carrier cushion, Johns-Manville speedometer and an extra tank for carrying an adequate reserve supply of oil and gasoline. The extra tanks which are mounted as a unit above the main tanks, well forward, serve for the operation of the machine in case rifle shot puts the main tanks out of business.

The specifications for the ammunition car are similar to those for the machine gun car. The ammunition box opens both front and rear and mounted on the right of the box is a pick mattock. Both units of the outfit are enameled army olive drab.

GOTHAM HITS AT SECOND-HAND DEALERS

New Ordinance, in Effect Since April 1st, Requires $15 License Fee and $100 Bond—Dealers Who "Trade In" Machines Exempted

THAT the Board of Aldermen of the City of New York have adopted an ordinance so amending an older one regulating second-hand goods dealers as to include motorcycle and bicycle dealers who handle used machines in that classification came to light with the figurative "hold-up" of O. Besanna, a bicycle dealer of nineteen years standing, for his license to deal in second-hand wheels after he had contracted to sell a bicycle coming under that category to a man whom he afterwards learned was a plain clothes detective. Besanna, whose store is located at 308 West 39th street, has fulfilled the conditions of the ordinance by taking out a license at the stipulated fee of $15 a year and putting up a bond for $100, by way of assuring the authorities that the provisions of the ordinance affecting his business will be carried out to the letter.

Police Are on the Lookout

The case of Bessana, aside from calling the attention of other dealers to the fact such an ordinance was duly approved by the Mayor and went into effect on April 1st, emphasizes the fact that the police authorities are on the alert to discover dealers who have not as yet complied with its conditions. For the benefit of those dealers who have not yet heard of the ordinance, it might be well to point out that its provisions as affecting the two-wheeler trade are not as hard on the dealer as might be assumed from a casual reading of the ordinance for there are incorporated in the city law several little "jokers," so to speak, which go a long ways toward letting the bicycle and motorcycle dealer, and especially the latter, "down easy."

Undoubtedly the new ordinance, which is aimed directly at the "fence" or go-between who knowingly purchases stolen goods, will help materially in locating stolen bicycles and to a lesser degree stolen motorcycles.

The ordinance defines as a dealer in second-hand goods coming under its provisions any dealer who purchases among other things manufactured articles composed wholly or in part of metals, which, of course, includes bicycle and motorcycle dealers. However, those dealers who handle traded-in articles or used articles for which they have exchanged new ones, the old machine covering whole or part payment, or returned machines for which they have allowed credit, are not construed as second-hand dealers coming under the provisions of the ordinance. Clearly this clause exempts the dealer who simply takes old two-wheelers as part payment on new ones. Dealers who make a practice of buying outright and selling either of the vehicles must take out the $15 license, and give either a bond or other acceptable surety for $100. They must, moreover, keep a book legibly written in English, giving a description of each vehicle bought or sold, the factory number or numbers and any other identification marks, together with a general description of the seller and purchaser and his name and address. This book must be open for police inspection at all reasonable hours.

Goods must not be purchased from a minor, apprentice or servant, nor must goods be purchased between the hours of 6 p.m. and 7 a.m. The business must be conducted at the place named or described in the license. In the provision making it necessary for the dealer to hold goods purchased for a stipulated length of time before reselling, the motorcycle and bicycle are excluded along with automobiles and other vehicles. The dealer must not engage in either the junk or pawnbroking business while conducting a second-hand business, and must hold himself in readiness to give what evidence he can to the police on demand should lost or stolen articles which have been advertised come into his hands.

ELLIS FIGHTS FERRY DISCRIMINATION

New York Central's "Push Rule" Enforced on 42nd Street Ferry Arouses F. A. M. Official's Ire—Seeks Relief for Metropolitan Riders

YONKERS, N. Y., May 1.—F. A. M. State Commissioner George A. Ellis, impressed by the unfairness and uselessness of the New York Central Railroad order which compels motorcycle riders to push their motorcycles on and off the ferry-boats owned and operated by that line, has inaugurated a campaign to have the order rescinded.

Ellis points out that in times past, when motorcycles were without clutches, two and three-speed gears and easily-operated controls, the order did work for the benefit of the community in that many accidents undoubtedly were avoided by its enforcement. With the control of the motorcycle developed to the point where it is equal if not superior to the control of the automobile, however, and with motors that can be throttled down to a walking pace if need be, Ellis sees no reason for the continuance of the order, which does not apply to automobiles.

As a matter of fact, all of the other ferries in and around the Metropolitan district have long since thrown similar rulings in the discard, treating the motorcyclist and the automobilist alike. The New York Central ferry at Forty-second street is the only one that discriminates, and Commissioner Ellis is taking the matter up directly with General Passenger Agent L. F. Vosburgh of the line and is also enlisting the services of F. A. M. State Commissioner E. B. Holton, of New Jersey, to do what he can from his side of the Hudson.

DON'T MISS THE DEPARTMENTS

¶ The Motorcycle Departmental Section begins on page 35. Whether trade man or rider you can't afford to miss it.

¶ A new department for dealers, under the heading "Catching the Public Eye," begins in this number. You will find it on page 37. It is a bright and practical addition to Motor Cycle Illustrated's list of service features.

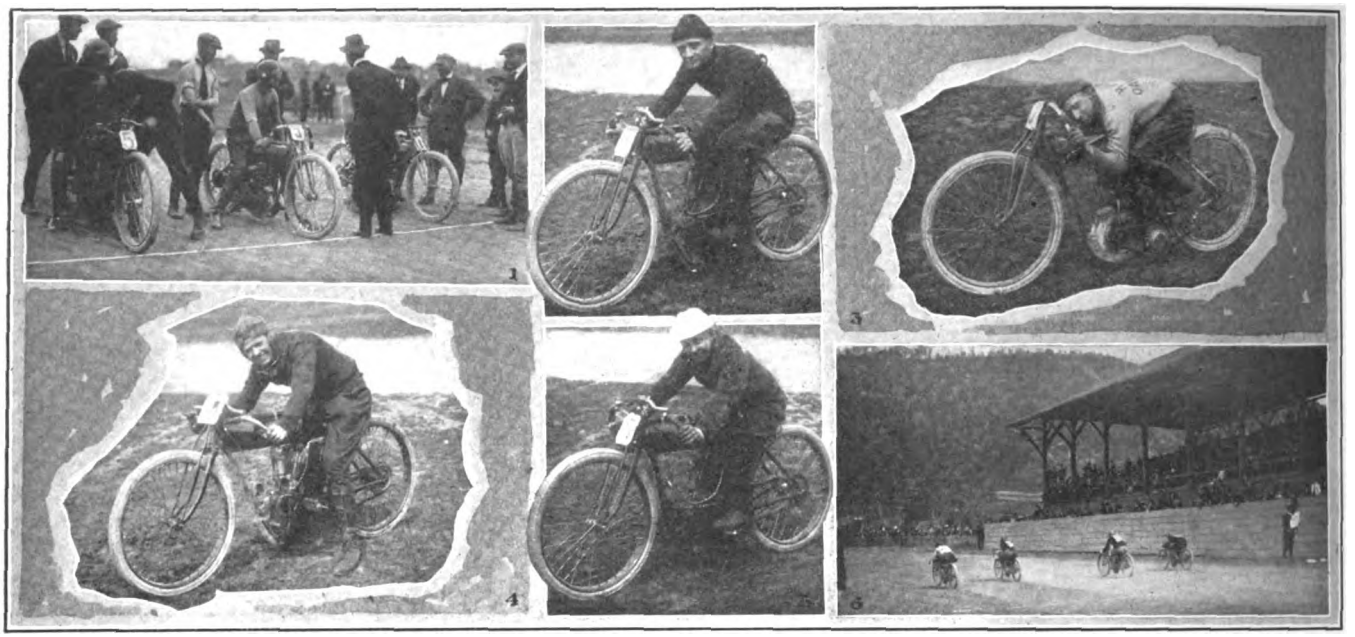
SPEED CRACKS ENLIVEN ROANOKE RACE MEET

Indian and Harley-Davidson Camps Have Well-Known Dust-Raisers on Hand for Program on Half-Mile Track—The New Harley-Davidson Four-Valve Racer Makes Its Debut



1, Start of Three Mile Match Race; 2, Lee Taylor on Indian; 3, Ray Weishaar on Four-Valve Harley-Davidson, Winner of Ten Mile; 4, Herbert Webb, Indian, Winner of Five Mile; 5, Shorty Matthews, Four-Valve Indian, Victor in Fifteen Mile; 6, Start of Match Between Matthews, Taylor, Weishaar and Bivins

ROANOKE, Va., April 30.—A successful race meet was promoted by the Dixie M. C. on Easter Monday, April 24. It was the first event of the kind held in the state on a half-mile track in which Class A Speedsters competed and a great deal of interest was shown.

Among the well-known riders participating were "Shorty" Matthews, Indian; Lee Taylor (of Savannah fame), Indian; Ray Weishaar, Harley-Davidson factory man, and B. B. Bivins, Virginia State champion, Harley-Davidson.

It is interesting to note that the new four-valve Harley-Davidsons were tried out at this meet for the first time, the two machines Weishaar and Bivins used being among the first of this type manufactured by the Harley-Davidson people. These special four-valves proved exceptionally fast.

Matthews rode a four-valve Indian stock racer, while Taylor's machine was the four-valve Indian Balke formerly rode, but this machine did not arrive until after the races on account of delay in expressing.

Five races were run off, a five-mile event closed to Roanoke riders; a three-mile match race between Matthews, Taylor, Weishaar and Bivins; a ten-mile open; a fifteen-mile open, and time trials.

In the five-mile event, H. Webb, Indian, took first in 6:54:2/5: J. W. Hollins was a close second, with H. I. McDonald third. Weishaar proved fastest in the three-mile match race—time, 3:43:3/5. "Shorty" Matthews was second, with Bivins third.

In the ten-mile event some fast riding was done. Matthews fouled a plug, giving the lead to Weishaar, who held it to the finish; Bivins second, and Webb third. Weishaar's time was 12:19.

Weishaar made the one-mile trial in 1:11:2/5, which was not lowered.

In the big race of the day, the fifteen-mile event, Weishaar led until the seventeenth lap, when he blew a tire, Matthews then holding the lead until the finish. Bivins was also out on account of tire trouble. The only other men then left on the track were Webb and McDonald, and these two local riders did some very pretty work for second and third places. Webb finished second. Matthews' time was 18:31.

The Dixie M. C. has adopted a "safety first" policy in all its race mets, F. A. M. rules concerning the condition of the track, fences, guard ropes being followed.

BUSINESS IS BOOMING IN LOS ANGELES

LOS ANGELES.—Tommy Butler opened up another carload of Indian machines last week, 50 lightweights and 25 of the Powerplus models. Butler says, "You can bet that business is looking up and we are selling them."

Santa Ana, Santa Barbara and Anaheim were all telephoning for machines, and the Los Angeles trade is showing all the indications of a very active spring season. The early opening of Long-distance touring is showing results. During the past week two riders dropped in from small towns in northern California, one on the way to Kearney, Neb., and the other bound for Houston, Texas.

A few days ago when Butler was on top of Lookout Mountain he found a couple of Indian Featherweight riders there who had gone up the steep grade, taking the double switchbacks with ease. In selling the lightweights Butler says there is no disputing the fact that they open up an absolutely new market which is not touched by the big machines.

FASTER DELIVERIES NEEDED

"If the factories do not hurry up deliveries we are going to lay in a stock of tricycles and skates," said one of the salesmen of the Pacific Motor Supply Co. a few days ago. "We simply cannot seem to get enough bicycles to satisfy our trade. Right now we are practically sold out on them, and also on second-hand motorcycles. We are hustling to get in stock to take care of the remarkable trade this season is bringing."

"17" EXCELSIORS GOING WELL

T. C. Girton, of the Girton-Hoffer Co., Excelsior distributors, stated some ten days before the carload of the 1917 models arrived that practically the whole lot was sold. At that time the distributors were completely sold out of big machines, and were waiting eagerly for the arrival of the new models.

LINING UP SPEED BOYS

L. H. Weilheimer, who is promoting the Fresno race to be held May 8, has been in Los Angeles obtaining entries of the prominent riders who are wintering here.

RISDEN'S PUBLICITY CAMPAIGN

C. Will Risden is starting a newspaper advertising campaign which will run for over three months in the Los Angeles *Tribune*, using display space and featuring copy prepared by the Indian advertising experts at the factory.

DOINGS IN AND ABOUT SAN FRANCISCO

SAN FRANCISCO.—W. E. & W. H. Jackson, western representatives of the Davis Sewing Machine Co., last week received their first carload of Dayton motor bicycles and within a few days the shipment was practically sold out. There are indications that the only difficulty from now on will be to obtain the machines fast enough to meet orders. One of the motor bicycles has been here for demonstration for several weeks and has attracted a lot of attention among dealers.

The first repeat order came from George Faulkner, of Oakland, whose initial shipment went out as soon as the carload arrived.

The first of these machines to appear for a license caused consternation in the license office as the man in charge couldn't say what kind of a license was needed, but the State officials at Sacramento have decided that a motorcycle license is right.

CLEVELAND LIGHTWEIGHT STOLEN

The advertising inspector of the Barnes Circus, which has been in San Francisco for the last week, bought one of the first lot of Cleveland lightweight machines that arrived here and found it a great help in making his inspection of billboard advertisements, etc., besides being more convenient to handle on and off trains than the heavier models. After having it a few days, however, he called on Hopkins & Alzina, the San Francisco agents, and reported it stolen. The machine has factory number 193 and California license number N 179.

HILL-CLIMB PLANS PROGRESSING

The Gilroy M. C. is completing plans for a hill-climb to be held May 7, taking the lead of the San Jose Club's recent success at Alum Rock. The San Francisco M. C. has not yet set a date for its climb, but the committee is looking for a good place just outside the city. The present plan is to find a hill that nobody can climb and make the contest depend on the distance climbed rather than on the time taken.

FRESH PICKINGS FROM TRADE CIRCLES

The Motorcycle Sales Company, of San Francisco, has just added the Flying Merkel bicycle to its lines, which included the Reading-Standard and the Henderson motorcycles.

Carl Reuter and George Budd recently started up a new bicycle and motorcycle shop in San Francisco under the name of the Motoraid at Thirtieth and Mission streets, and are working up a very nice business.

Hopkins & Alzina of San Francisco are sending out a great many of their patent cut-out devices, which were named "Kangaroo Wallopers" by Baker, who used one on his transpacific trip. They are this week sending a shipment to Chicago.

House & Showalter, Indian agents at San Jose, have been planning to move a block farther downtown, but have now decided to keep their old store, which they are having remodeled.

Ernest Gillett, formerly with the Pacific Motor Supply Company in San Francisco, has opened a bicycle shop at San Jose.

Tony Parra, of Parra & Reed's motorcycle and bicycle store at Gilroy, Cal., has bought over his partner's interest.

THE MANAGER OF WESTFIELD SALES

NUMBER ELEVEN IN A SERIES OF BIOGRAPHICAL SKETCHES ON TRADE LEADERS

Having Spent Twenty-Five of His Forty-Four Years in Boosting the Interests of the Bicycle, L. D. Harden Has a Sentimental as Well as a Business Regard For the Pedal Mount and His Success Proves That the Combination Is a Good One; A Keen Student of Industrial Problems, a Loyal Friend and a Strong Exponent of the Policy of Fair-Dealing and Perseverance In All Walks of Life

TAKE it from L. D. Harden, sales manager for the Westfield Mfg. Co., of that Massachusetts city, there is scant reason, judging solely by past events in Mr. Harden's life, why he should not at the age of 44 be wedded to the two-wheeler trade. He was, you might say, brought up in it; with the exception of a two years' digression, he has spent 25 of those 44 years plugging for the bicycle in general and Pope wheels in particular.

Mr. Harden first saw the light in Ellsworth, Maine, a typical New England town site, with a population of about 4,000 Yankees and a few others; the nearest place to Ellsworth discernible on the average map is Bar Harbor.

High School Diploma Pocketed

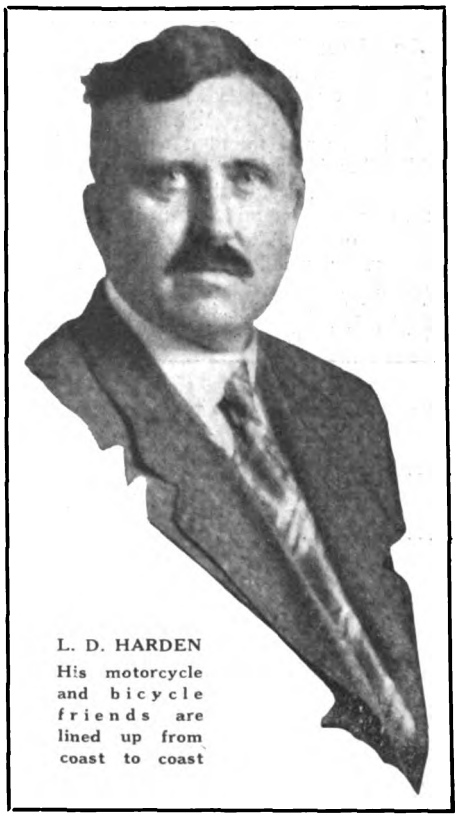
Amid those quiet surroundings, the youthful Harden wrestled with his school work when he could not "duck" it; but was off to the swimming hole when the ducking was better. In due time, no longer, nor yet shorter than the average, he completed all in the way of an education which his home town provided, and left Ellsworth and Maine with a high school diploma in his pocket and in his heart a firm resolution to prepare for college entrance in Boston.

Arrived at Boston, however, at the age of 19, the hustle and bustle of the business world impressed him and led him after some thought to give up all idea of taking a college course, except as a preparation for a business career. So that instead of being in a "prep" school laying the groundwork for a Harvard course in the year 1891, we find him enrolled with the Bryant Stratton Business Institute in Boston.

Having completed a short but pithy commercial course at the business institute, Mr. Harden readily found employment in the office of Col. Albert A. Pope, who at that time was manufacturing bicycles, both the "ordinary" and the newer safeties, on Franklin street, Boston. It was here that the foundation was laid for Mr. Harden's future career. He learned to ride a bicycle and that accomplished, he learned to love the bicycle; and until this day he has not lost one iota of the regard in which he originally held it. He had not been with Col. Pope very long before the "Father of American Cycling" made him a present of his first bicycle, and Mr. Harden still insists that despite the fact that this mount would make scant appeal to the enthusiast of today, it was the finest wheel he ever rode.

As soon as he had learned to ride, and ride well—and Mr. Harden relates many interesting as well as amusing tales anent his learning—Mr. Harden began to teach others to ride in connection with the bicycle school which Col. Pope conducted along with his ever-increasing bicycle business.

Mr. Harden followed the fortunes of Col. Pope in his move to the Columbus avenue establishment, still in Boston, and later, in 1893, to be exact, when Col. Pope decided to migrate from Boston to Hartford, Mr. Harden cast other considerations aside and followed the call of the wheel and the interests of the Colonel. He served the enlarged and ever growing concern in Hartford in many capacities, finally, after a comparatively short space of time, working himself into a post as head of the Order and Repair Department.



L. D. HARDEN
His motorcycle and bicycle friends are lined up from coast to coast

The tax on Mr. Harden's managerial and executive ability increased by leaps and bounds in this capacity as the bicycle outgrew the feeling of apathy with which it first was greeted, and the bicycle industry gamboled lightly into the boom days. As head of one of the busiest departments of one of the largest factories during that rush period, when everyone was riding, Mr. Harden had ample opportunity to learn those things anent bicycle production and bicycle construction which had escaped him when lower down the ladder, and it was while thus engaged that he laid the foundation for his selling career.

The days of great prosperity in the bicycle industry had not come without attracting attention from the world of capital. Capital flocks where business is good, and the bicycle industry was no exception in this regard. And the entrance of big capital presaged the formation of an enormous syndicate. The American Bicycle Co., by name, but more popularly known as the "Bicycle Trust," which absorbed about everything there was in the shape of a bicycle factory throughout the United States. The Pope plant entered into the combine, which was launched just after the bicycles had floated over the crest of the prosperity wave and when the business was somewhat on the wane.

His Opinion Substantiated

Mr. Harden, wary of the foundation on which the "trust" was built, forsook the industry to accept a post as superintendent with the Hartford Woven Wire Mattress Co. Events substantiated Mr. Harden's opinion, for the "trust" came to grief in a little over two years and Col. Albert Pope regained control of the Pope plant at Hartford. A short time later Mr. Harden was again installed, this time in a selling capacity.

A wide and diverse road experience, including several trips through southern territory, served to broaden Mr. Harden and in a comparatively short space of time he had worked himself into the position of assistant sales manager, under J. F. Cox.

For three years Mr. Harden continued in this capacity, finally assuming the sales managership—which he still retains—when Mr. Cox stepped out some four years ago.

KANSAS CITY TIRE CO. GETS ITS CHARTER

KANSAS CITY, Kas., April 25.—The Kansas State Board has granted a charter to the Kansas City Tire and Rubber Company, with factory and offices at Fourth street and Central avenue, Kansas City, Kas. The company is capitalized for $575,000. The officers are: Harry Goodman, of Chicago, president; Paul E. Werner, of Kansas City, Mo., vice-president; W. R. Swisler, of Chicago, secretary, and L. J. Smith, of Kansas City, Kas., treasurer.

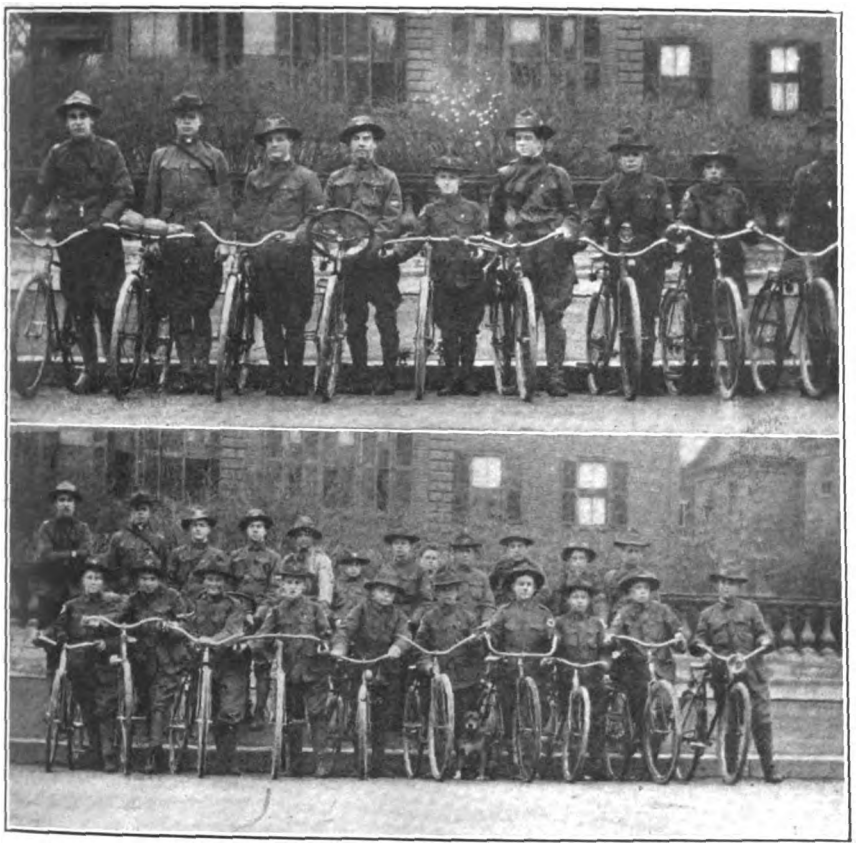
PROVIDENCE SCOUTS AWHEEL

Active Cycling Division Is Formed by Third Providence Troop; Ambitious Program Arranged for Summer Vacation



Upper, Officers of the Bicycle Division of the Providence Boy Scouts; Lower, Some of the Boy Scout Cyclists Ready for Their Weekly Drills

PROVIDENCE, R. I., May 2.—An active cycling club has been formed in this ity by the Third Providence Troop, Rhode sland Boy Scouts, numbering about 30 oungsters. This mounted division, the avalry of the service, will visit many parts f Rhode Island this summer in its drills, ikes and scouting trips.

Scoutmaster J. Harold Williams and Assistant Scoutmaster John D. Mitchell are i active charge of the club and they are ready mapping out an elaborate pro-am for its summer maneuvers.

The requirements for membership are iat every boy who belongs must own his wn bicycle and keep it in good repair. The oys are under the regular rules of the out organization.

The squad meets for drill and scout prac-e once each week, on Wednesday after-oons, and they go for long distance hikes very week, on Saturdays. Members of the squad wear a cycling badge on their left coat sleeves. The badge is a bicycle wheel embroidered in yellow.

The scouts attract a great deal of attention in the East Side section on Wednesday afternoons as they ride through the beautiful streets on their wheels in "company front," columns of fours, twos and single files. The lads make a neat appearance on their bicycles and have received in the short days they have been preparing for the summer much commendation for their work. Relay races, dispatch riding and various kinds of scout games on wheels will constitute part of each Wednesday's workout.

One or two hikes have thus far been held and in these the lads have been successful, having made long trips to the outskirts of Providence and to other towns. On the hikes the boys carry their cooking equipment and rations for the day, as well as signal flags, first aid kit and other scout equipment. Once out of the city the lads establish a camp in the woods for the day and practise scoutcraft and woodcraft to their heart's content.

The officers are: Scoutmaster, J. Harold Williams; assistant scoutmaster, John D. Mitchell; first sergeant, T. A. Roberts, Jr.; quartermaster sergeant, W. M. Daniels; sergeants, D. D. Armstrong, J. F. Bellows, W. C. Worthington, and corporals, R. T. Roberts, K. J. Clapp and John Langdon.

HOW DEALER DOLL FORMED A BICYCLE CLUB

AS indicating the service which our dealer-readers can secure by writing to the editors of this journal when they require information on any cycling subject, the letter reproduced below is very interesting. C. F. Doll, a bicycle dealer in Aberdeen, Wash., having read in these columns of the benefits to be derived from a bicycle club, wanted to form an organization but didn't know how. He asked us and we told him. Here's Doll's letter:

"Your letter of March 16 received, and I thank you for the help you gave me in organizing our bicycle club.

"We held our first meeting on April 6 and twenty-six riders joined the new club, which we have decided to call the Aberdeen Bicycle Club.

"I am offering a $5 prize to the member bringing in the largest number of new riders by May 1, and from the progress we have already made it looks as though we will have a couple of hundred members before long.

"Meetings are held Wednesday night at my store, at 592 East Heron street, and I invite every rider in the city to come round and see the boys. They will be sure of having an enjoyable time.

"We are going to charge twenty-five cents dues every three months, but these fees will be used to defray the expenses of our social affairs and as rewards for the return of bicycles stolen from our members."

FIRST MOTOR WHEELS GET TO SIDNEY

SIDNEY, Mont., April 30.—The Valley Hdwe. Co. has received its first shipment of motor wheels. Although the weather and roads are extremely bad, and demonstrators have been unable to get out on the street, they used the sidewalk, running the motor wheel up and down a couple of times. In exactly three minutes they sold one of the machines with a $27.50 bicycle to which it was attached, in spite of the fact that the streets are in such bad shape that autos do not use them.

100 CYCLISTS IN C. R. C. A. CENTURY

Steady Pace Set Over Long Island Course; Strong Representation From Invited Clubs; Gold Medals Given to Survivors

NEW YORK, N. Y., May 2.—More than hundred aspirants for century bars rode in the Annual Spring Century of the C. R. C. A. last Sunday. The pleasure divisions pulled out from Columbus Circle and Bedford Rest at seven o'clock in the morning, while the fast section left from the former point an hour and a half later.

The course of the one hundred mile run lay due east through Jamaica, Freeport, Amityvile, Bay Shore and East Islip, where the cyclists stopped for dinner. The return journey took the riders to Bellmore, Hempstead, Jamaica and back to the starting points.

In the pleasure division Chief Pacemaker Louis Zeno was ably assisted by Bill Winquist, L. P. Sattler and Sylvain Segal. In the line, representing other clubs, were Harry Aron, Brooklyn Wheelmen; C. F. Seward, Empire City Wheelmen; W. Moorehead, Acme Wheelmen; William Lock and Chas. Kurdle, C. R. C. of A.; C. E. Benton, Hudson County Wheelmen; Andrew Eckrich, New England Wheelmen. George Stepello set the pace for the "fast bunch," being relieved by John Marquart, Harry Aron, William Lock and Ernest Kuno.

A large crowd watched the New York pleasure division leave Columbus Circle. The boys pedaled over the Queensboro Bridge, which spans the East River, and were soon out in the country. A steady pace was maintained which enabled all cyclists to keep with the field. The wind was strong, however, and a few of the riders had to be pushed by willing hands. The pacemakers made a fine job of it, for P. J. Lanpshear, one of the oldest riders on the run who tips the scale at 247 pounds, claimed to be in condition to start on a second century after the journey had been completed.

Most of the roads were in excellent condition, only two bad stretches being encountered. No accidents nor punctures were recorded, which is certainly a remarkable record for a one hundred mile trip. Gold medals were awarded at the finish. The cup offered for the best representation from any club was captured by the newly organized Brooklyn Wheelmen.

On the Annual C. R. C. A. Spring Century; Upper Row, The Riders Resting at the Dinner Stop, East Islip, Long Island; Second, Coming Into Forest Hills Park. Lower Row, Leaving Babylon, L. I., Behind; Second, The Pacemakers of the Fast and Slow Divisions

BUFFALO TEEMING WITH ACTION

Two Monster Events Are Being Arranged for This Month; Bison City Mayor Will Start Twenty-five Mile Road Race

BUFFALO, N. Y., May 2.—Two bicycle events of more than ordinary interest are now being actively promoted by the Buffalo Bicycle Dealers' Association, according to John W. Henry, the chairman of that hustling organization. The first affair will be a mammoth bicycle parade, scheduled for the afternoon of May 14, while on Memorial Day a twenty-five mile bicycle road race will be staged in the heart of the Bison Town.

The parade will start from the city hall and follow this route: Franklin avenue, Niagara, Front, Massachusetts, Richmond, Bidwell Parkway to Delaware Park, through the park, and thence along Humboldt Parkway to Humboldt Park. A general invitation has been sent out to all bicycle riders to enter the parade and bring their friends with them. Twenty prizes will be awarded at the end of the parade, to be divided evenly among men, boys, ladies and girls. Adolph May, of the B. F. Goodrich Company, is in charge.

Fifty Prizes Now in Hand

Local dealers believe that the twenty-five mile road race for Memorial Day will break all records here for entries. They have already secured some fifty prizes and hope to double the list before the day of the big event. Starting from Lafayette Square, the course of the race will follow Broadway, Transit road, Genesee street, and finish at Humboldt Park. Automobiles will carry the contestants' clothes to the finishing point of the road race.

At the invitation of President Henry and Charles Haberer, of the road racing committee, the Hon. Louis P. Fuhrmann, mayor of Buffalo, has consented to act as honorary referee and will start the race at 10 a. m. on Memorial Day. Other prominent city officials have also been invited to witness the race.

All bicycle riders in or around Buffalo are asked to participate. The fact that it is to be a handicap affair will put the youngster and the oldest veteran on an equal footing for the awards. Entry blanks are being handled by Charles Haberer, manager of the Gloucester Cycle Company, Genesee and Ellicott streets. The committee, which is now busy gathering prizes, consists of John W. Henry, of the Vim Cycle and Hardware Co.; George C. Strauss, of Joe Strauss & Son; Edward Beil, of the Cycle and Auto Supply Co.; and Fred Brown, of the Pierce Cycle Co.

GARDEN CITY WHEELMEN WIN RELAY RACE

SAN FRANCISCO, Cal., May 1.—To the Garden City Wheelmen went the honor of winning the annual thirty mile relay novice race, held last Sunday at the Golden Gate Park Stadium, under the auspices of the California Associated Cycling Clubs. The New Century Wheelmen finished second and the Samson Wheelmen, of Stockton, were third.

In the third lap of the third heat Albert Hocks, New Century, spurted and got away from his opponents. A. Horner, Samson Wheelmen, made up the lead in the fourth heat and once more the teams were even. In the last lap of the sixth heat C. Hershey, Garden City, nipped W. Thompson, of the New Century, at the tape.

The N. C. W. have held the novice championship for four years and the boys put up a very hard fight to capture the honors this season. After the relay a one-mile novice was staged, which brought out 30 entries and had to be run off in five heats.

SPEARS HUMBLES EAST ORANGE WONDER

Meets Frank Kramer in Two-thirds Mile Match Race and Proves Himself Too Speedy for American; Art Spencer, of Toronto, Wins His First Event as a Professional

NEWARK, N. J., April 30.—Bob Spears, the lanky Australian, created a big sensation at the Newark Velodrome on Sunday afternoon by beating Frank L. Kramer, the national champion, in two out of three heats of a two-thirds mile match race. Spears won the first heat and Kramer got the second one. The deciding heat went to the Australian.

How Spears Won the Match

In the first heat Spears jumped off the last bank and took the lead going into the last lap. Although Kramer fought him all around the track. Spears still retained a slight lead and flashed over the tape a winner by inches. In the second heat, Kramer got the jump on Spears and the East Orange cyclist shot into the last lap in the lead. Spears was up to his sprocket all the way around the track and on the back stretch the riders looked like one person. Kramer was able to stave Spears off and crossed the finish mark half a wheel's length to the good.

There was intense excitement when the cyclists came out to ride the "rubber." There wasn't a fan in the crowd who did not think Kramer would win. But once more Spears proved to have the greater amount of speed. He jumped too quick for the champion and shot down into the home stretch leading into the last lap. Kramer tried to get around Spears but was unable to and Bob led him to the finish by inches once more.

Kramer secured revenge for his defeat in the match race by winning the five-mile open for the professionals. "Big Steve" rode a splendid race and won from a field of twenty-five starters. Bob Spears who vanquished Kramer in the match race, was fifth in this event. Reggie McNamara finished second, Joe Fogler was third and Willie Hanley fourth.

Root Gets Armlet

The Brassard race, at one mile, which gives $50 to the winner, was taken by Eddie Root, who defeated Bobby Walthour, the old warhouse from Atlanta. Bobby tried hard, but was not equal to the occasion and finished about a half wheel's length back of the Boston boy.

Bob Spears of Australia

Fogler Beats Belgian

Joe Fogler won the Australian pursuit match race against Michael Debaets, the Belgian cyclist. Fogler caught and passed Debaets after riding one mile and four laps.

Arthur Spencer, the Toronto boy, made an auspicious debut into the professional class. Spencer won the half-mile handicap for the professionals and rode a fine race. He was given a great reception for his victory. Spencer had fifty-yard handicap and easily beat Eddie Madden, Steve Senhouse, Gordon Walker and Martin Ryan to the finish.

Herman Flamm and Tom Bello divided the honors in the amateur class. Flamm, who trained Walter Rutt when the sensational German cyclist rode in this country, won the half-mile handicap for the amateurs, while Bello, whose long suit is plugging, took first honors in the two-mile open race for the amateurs. The summaries of the races are as follows:

Half-mile novice (amateur)—Won by Dominick Zurilla, Newark; John Flaws, Newark, second. Time, 1:21⅗.

Half-mile handicap (professional)—Won by Arthur Spencer, Toronto (50 yards); Eddie Madden, Newark (65 yards), second; Steve Senhouse, Australia (80 yards), third; Gordon Walker, Australia (40 yards), fourth; Martin Ryan, Newark (45 yards), fifth. Time, 0:51⅘.

Australian pursuit match race (professional)—Joseph A. Fogler, Brooklyn, vs. Michael Debaets, Belgium—Won by Fogler; distance 1 mile 4 laps. Time, 3:34⅘.

One-mile handicap (amateur)—Won by Herman Flamm, Germany (145 yards); Chester Smith, Baldwin, L. I. (65 yards), second; Fred Trahmer, Newark Wheelmen (135 yards), third; Clarence Bayard, East Orange (135 yards), fourth. Time, 1:59⅗.

The Brassard race, at one mile (professional), Eddie Root, Boston, vs. Robert A. Walthour, Atlanta—Won by Root. Time, 2:37⅕; last eight mile, 0:12⅖.

Two-mile invitation (professional)—Won by George Cameron, New York; Menus Bedell, Lynbrook, L. I., second; George Wiley, Syracuse, third; Floyd Thomas, San Francisco, fourth. Time, 4:18⅖.

Two-thirds mile match race (professional), Frank L. Kramer, East Orange, vs. Robert E. Spears, Australia—Won by Spears. First heat won by Spears; time, 2:08; last eighth mile 0:12. Second heat won by Kramer; time, 2:03⅖; last eighth mile 0:11⅘. Third heat won by Spears; time, 2:04⅕; last eighth mile 0:12⅖.

Two-third mile match race (professional)—Marcel Dupuy, France, vs. Frank Cavanaugh, Newark, won by Dupuy. First heat won by Cavanaugh; time, 1:52; last eighth mile 0:12⅖. Second heat won by Dupuy; time, 1:57⅕; last eighth mile 0:12⅕. Third heat won by Dupuy; time, 1:59⅖; last eighth mile 0:12⅖.

Two-mile open (amateur)—Won by Tom Bello, Unione Sportiva Italiana; Eddie J. Carroll, Oakland, Cal., second; William Spencer, Toronto, third; Gus. J. Lang, Irvington, fourth. Time, 4:39.

Five-mile open (Professional)—Won by Frank L. Kramer, East Orange; Reginald McNamara, Australia, second; Joseph A. Fogler, Brooklyn, third; William Hanley, San Francisco, fourth; Robert E. Spears, Australia, fifth. Time, 10:43⅕.

STEALS BICYCLE TO FLEE FROM HIS WIFE

KANSAS CITY MO., May 1.—"I have been having matrimonial difficulties for a long time," Bert Colton a resident of this city told the police last week, "and I stole a bicycle to make a cross-country tour to the Pacific coast. I wanted to leave my home. When the opportunity was offered I took a wheel at the Allen school and started on my way."

The janitor of the school saw Colton take the bicycle and notified the police.

SMITH COMPANY ENLARGES PLANT TO 32,130 SQ. FT.

MILWAUKEE, Wis., May 2.—A large addition to its plant, to be 510 feet deep and 63 feet wide, is now being completed by the A. O. Smith Company, maker of the Smith Motor Wheel, and will increase the total area of its factory to 32,130 square feet. This addition will be used for steel storage. Branching out from this is a solid concrete structure, now under way, intended for a pickling room. An expanding business has necessitated the acquirement of other facilities, among which are another spur track and a third traveling crane.

In the rapid growth of the Smith plant, the motor wheel has played an important role, according to General Manager Jackson, of the company's motor wheel division. The present production is in excess of the estimate made three months ago, and the motor wheel division has enlarged to an extent that has crowded the other departments out of the main plant, thus necessitating the construction of the new additions.

And Mr. Jackson feels certain that other departments of the company will soon have to give way to the motor wheel's demands. For the company is fortunately not affected by the shortage of materials, being so large a user of steel and other materials that it has entered long period contracts, and will be able to cope with all orders received. In fact, a comfortable advance production is now in hand which ensures rapid-fire service to the trade.

MILWAUKEE WHEELMEN AT ANNUAL BANQUET

MILWAUKEE, Wis., April 30.—With songs and stories of a quarter of a century ago, before the time of the automobile and motorcycle, when their membership was in the thousands and they possessed a club house that was the finest in the northwest, the active survivors of the old Milwaukee Wheelmen gathered around the annual banquet table laid in the Calumet Club last Saturday night.

Reverence to the memories of William L. White and William Dawes, who died during the time intervened between this and last year's reunion, was paid in a silent toast. The committee which arranged for this year's banquet comprised Fred Holmes, "Terry" Andrae and William Simonds, and the latter, one of the old presidents of the Milwaukee Wheelmen, presided.

Disabled German Soldier with Artificial Hands Riding Bicycle

It was decided to revive the annual outing this year in July, the objective point to be Pewaukee Lake, and immediately the smoky air was filled with challenges to ride the old high wheelers in the annual outing.

BRONX COUNTY CLASSIC RECEIVES PRIZES

BRONX, N. Y., May 2.—The third largest borough of the Metropolis is to see a big bicycle road race staged on the Grand Concourse and Boulevard—one of the finest avenues in the city—on the morning of June 16. The race, called the "Bronx County classic," will be a ten-mile handicap, under the auspices of the Acme Wheelmen, whose headquarters are at 9 Jerome avenue.

The manufacturers and dealers have shown themselves to be liberal in their donation of prizes, an attractive list having been acquired so far, which promises to bring out the cream of the city's amateur riders. Prizes and applications for entry can be forwarded to E. O. Spillane, 248 E. 119th street, New York.

DEMAND FOR LADIES' BICYCLES

BALTIMORE, Md., April 30.—Henry Keidel & Co., local jobbers and Southern distributors for Emblem bicycles and motorcycles, Pierce and Iver Johnson bicycles, report that business has been very good thus far this year, running well ahead of this period for last year. The demand for ladies' bicycles, they say, especially has been unprecedented, an infallible sign that the bicycle is indeed coming back into its own. Juveniles also are going "great guns," so to speak, and with the opening up of the roads after a prolonged siege of bad weather prospects are bright for even bigger sales.

PERSONS HEADS PRIZE COMMITTEE

Veteran Saddle Manufacturer Will Oversee Collection of Offerings from Cycle Tradesmen for Use in Road Races—Over 5,000 Prizes Expected

WORCESTER, Mass., April 30.—Charles A. Persons, of the Persons Mfg. Co., has been appointed to head a committee to secure from bicycle, parts and accessory manufacturers and bicycle jobbers donations suitable for prize offerings for use in connection with bicycle road races the country over. It is the hope, if not the intention and expectation of the committee, that it will be able to obtain some 5,000 or more prizes, which, of course, will go a great way toward creating enthusiasm for the bicycle in general and the racing bicycle in particular.

The prize committee was appointed by the Million Bicycle Committee, headed by H. S. Quine, of the Goodyear Tire & Rubber Co., which has done so much to boost the bicycle in every possible way since its inception January last at the midwinter session of the cycle trades bodies. That it will be successful in securing the expected number of donations can be anticipated from the fact that already one jobber has placed at its disposal 100 bicycles, while the trade papers and other trade folk have given liberally. Donations should be sent to Mr. Persons.

FRANK KRAMER'S LIFE STORY

The First Authorized Story of the Great American Bicycle Champion's Brilliant Career—By Harry Mendel

1912 was one of the most notable seasons in Frank Kramer's career. Two strong riders of international reputation competed against him—Andre Perchiot and Alf. Grenda—for the world's title.

FRANK L. KRAMER reached the zenith of his career and realized his fondest ambition in 1912, when he captured the world's championship. He annexed the honors in the final heat of the world's championship race at one mile at the Newark Velodrome on Labor Day, Monday, September 2. Kramer won the world's title by defeating Alfred Grenda, the champion of Australia, and Andrea Perchiot, the champion of France.

Grenda Finished Second

The world's championship race was one of the greatest events ever staged in Newark. Only inches separated the three cyclists at the finish. Big Alf Grenda came in second and Perchiot was third.

Though beaten, Grenda put up a hard fight. Finding his strength a great factor, Grenda from in front repelled one attack from Kramer by pulling ahead on the last turn, after having been caught down on the back stretch. Grenda only surrendered to Kramer's speed a few yards before reaching the tape. Kramer, pedalling like mad in the center of the track, finished about a foot ahead of Grenda, while Perchiot, still higher up on the saucer, came to the finish mark only inches behind the lanky Australian.

A big factor in Kramer's victory was his keen generalship in getting Grenda's wheel while the big Australian was in front on the fourth lap. Kramer all through the race tried for Grenda's wheel and wanted to have Perchiot in third place. Grenda, surmising what Kramer wanted, rode "all over the track." Perchiot, a very clever rider, also knew what such a position meant, and was anxious to swing in back of Grenda.

Beat Him by an Eyelash

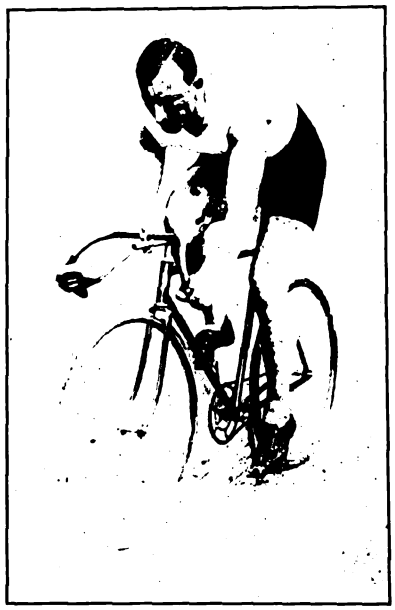
When Grenda jumped forward, Kramer and Perchiot made a dive for Grenda's rear wheel. Kramer was leading at the time and beat the Frenchman to it by an eyelash. This bit of maneuvering on the part of Kramer practically won the race for him, as it would have been almost impossible for him to pedal around these two riders.

After the race Kramer was treated to a wonderful demonstration worthy of his big victory. While still mounted on his wheel he was decorated with the world's championship sash and a wreath of flowers was placed on his shoulders, while a big bouquet was thrust into his hands. Then the band played the "Star Spangled Banner"; the crowd stood up, shouted and cheered for the new champion, while Kramer rode around the track, bowing and smiling to his host of friends.

A crowd waited outside of the Velodrome until Kramer appeared in his street attire and cheered him to the echo, demanding a speech. The champion, modest as he always is, hurried to his motor car, all smiles, waved his hat to the throng and shot away from the track.

Many Notable Victories

The winning of the world's championship overshadowed Kramer's winning of the national championship for the twelfth consecutive time. Kramer not only won the world's and national championships but scored many other notable victories during that season. In match races he defeated "Tricky" Comes, Alfred Grenda, Jackie Clark and Emil Friol, the crack sprinter of France. Friol had previously beaten Floyd Krebs, Frank Cavanagh, Alf Grenda and Pete Drobach.



Alfred Grenda

Kramer's match races with Friol were the biggest drawing cards of any events staged in Newark. The first race was run on Wednesday night, August 7, and drew 15,000 people. This is the biggest night crowd that ever turned out in Newark. The demonstration Kramer received after beating Friol was one the like of which has rarely been witnessed at any sporting event ever held in the city of Newark. The crowd went wild when Kramer, riding from the front position, led Friol over the tape a winner by three feet in the first heat, and the fans howled with delight when the American champion in the second heat, making his run from behind, showed the doughty Frenchman the way home by a scant few inches.

The match created tremendous interest because of the showing Friol had made in his match races against Krebs, Cavanagh, Grenda and Drobach. In the first heat Kramer had to display all his power and endurance to remain in front to the end, and in the second heat the East Orange boy had so little to spare at the finish that just inches separated it from being declared a dead heat.

Once more, on the following Sunday, the speed of Kramer was too much for the speed of Friol, and the American champion defeated the greatest rider in all Europe in the second of a series of match races. Kramer won in two straight heats. Kramer's margin in the first heat was twelve inches and in the second heat it was just about twice that distance. Kramer won by riding from in front in both heats, and it required the greatest effort on each occasion to lead the Frenchman to the finish mark.

Too Fast for Tandem

On Wednesday, August 14, the third and last of the series of match races was contested. Kramer won, as he had done in the two previous occasions, in two straight heats. This victory, however, was scored a good deal easier than in any of his previous races with Friol.

Kramer with Friol competed in the world's championship tandem races, but Friol and Kramer proved to be too fast a team for the machine to carry.

This star team was put out of the race on the last lap just before rounding the first turn into the backstretch, when the rear wheel of their machine collapsed. Kramer and Friol were leading at the time and would have been sure winners of the heat. Fortunately neither was badly hurt, although Friol was rendered unconscious by the fall. Kramer got off with a badly scratched arm and a good shaking up.

Frank attributed the accident to the fact that the six-lap track was not fast enough to hold the speed that he and Friol were producing. The cyclists pedaled beautifully and seemed to be flying, yet Kramer said they had not been putting forth their best efforts.

In the world's sprint championships, Friol was eliminated in the semi-finals by Perchiot. This robbed the championships of a little interest, but as things turned out, Perchiot proved to be a very worthy competitor for Kramer and Grenda.

Kramer, after winning the world's championship, repeated his remarkable riding the following Sunday, when he showed to the fore over Grenda and Perchiot in the "World's Championship Revenge." Kramer again lowered the colors of Perchiot and Grenda, after Perchiot had gotten the jump on him with a lap and one-half to go, compelling Kramer to fight him to the tape to win by inches.

The idea that Donald McDougall, the world's amateur champion sprinter, stood a chance of defeating Kramer was also exploded in the 1912 season. Kramer and McDougall met in a match race and Kramer simply toyed with the amateur kin, winning with ease.

WENIGE'S TEN BUSINESS COMMANDMENTS

Head of Bicycle & Motor Sales Company, of London, Ont., Tells Briefly How He Reached the Top —His Salesroom Is a Model and the Other Departments Keep Pace With It

By JOHN KANUCK

Spacious Salesroom of the Bicycle & Motor Sales Company. The Office Is on the Gallery in the Rear, Just in Front of the Repair Shop

IN Canada the retail bicycle business is a respected occupation. This is not a distinctively Canadian feature, but there seems to be a particularly large number of pioneer bicycle tradesmen in the Dominion who have grown up in their respective communities and who are among the first citizens of these communities. They have sold bicycles to grandfathers, fathers and sons, and many are also selling motorcycles to succeeding generations. They are not in a rut, though possibly they are landmarks. Also, they are known beyond the rotunda of the post office in their home towns. Occasionally the word is passed around that Mr. So-and-So, of some place or other, has become wealthy through selling bicycles and motorcycles.

25 Years in Business

One of these widely-known Canadian cycle merchants is H. A. Wenige, head of the Bicycle & Motor Sales Company, of London, Ont. People buy Indian motorcycles and Canadian Brantford bicycles from him because they know him; they know his methods and they are attracted to his fine store, which is said to be a model for the trade. Wenige has been associated with the bicycle business for over twenty-five years, and has learned to carry on his business along business lines. Mr. Wenige bases the success of his work upon ten reasons which he is willing to pass along to help fellow-dealers. The reasons as outlined by Mr. Wenige are: 1. Knowledge of the business. 2. Hard work. 3. Enthusiasm. 4. Full steam ahead always. 5. Belief in the future of the business. 6. Salesmanship. 7. Good advertising. 8. Use of a prospect list. 9. Good goods. 10. Last but not least, a good store.

Right Up to Mark

These reasons are exactly as they were outlined by Mr. Wenige, and he has everything to show that he has a successful establishment. "The store and repair shop, and in fact everything in connection with the business, has always been kept right up to the mark," declared Mr. Wenige recently, in discussing the features of his house. "Stock has never been allowed to become depleted, even during dull seasons, as I have discovered that nothing is such a big hindrance to a successful business as empty shelves. For that reason our stock has always been kept right up to the mark.

"Our advertising is also a big factor in the success of our business," he continued. "We keep after it all the time. We run advertisements daily, and in other ways we keep the business before the public. I make every worker a partner. We work together. My workmen are on a profit-sharing basis. They treat the business as their own."

The Value of Neatness

Every department of the company's headquarters is operated according to the system which has been most efficient. This service is important, but Mr. Wenige believes that the neat and attractive appearance of the store at all times is responsible for the splendid patronage which he enjoys to a great extent. The company's repair department is arranged to make repairs or replacements in the most efficient manner in the shortest possible time. This saves both the customers and the company money. This service, with the reliable products sold, courteous treatment on the part of employes and the all-important feature of attractiveness of display have been responsible for the development of one of the best businesses in Ontario.

The store of the Bicycle & Motor Sales Company would serve as a model for most any kind of salesroom. Judging by the continued and persistent neatness, a visitor

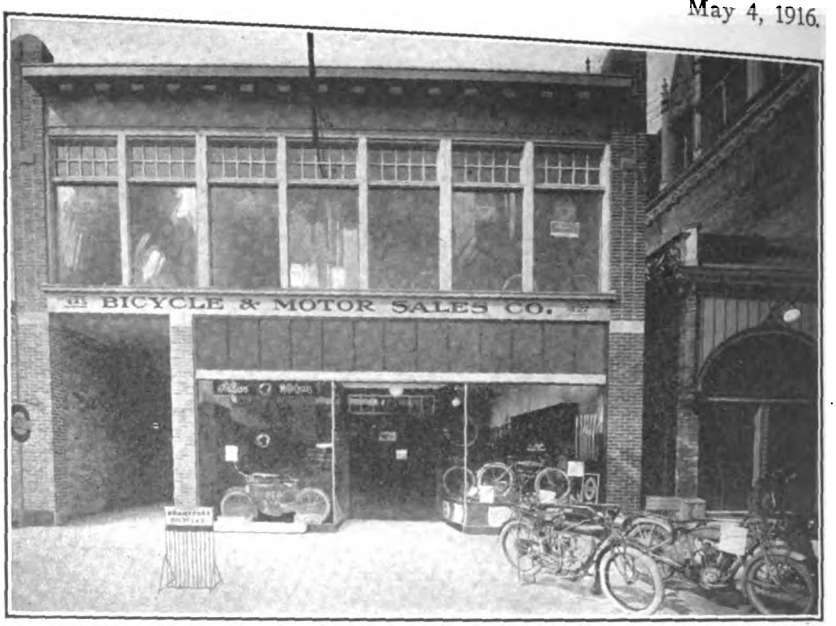
to this salesroom might, at first, imagine that little trading is carried on within the four walls, but such is not the case. The stock is complete, but an overcrowded appearance is studiously avoided. Excess supplies are stored beyond sight, and all goods within view are kept fresh-looking. A complete range of both bicycle and motorcycle models of the makes handled are kept constantly on the floor and, incidentally, it is some floor—hard maple, well oiled and always clean. The accessory showcases are spacious and well-illuminated, and contain only display samples. The large solid oak cupboards, which have many drawers, hold the supply of all kinds of small wares in systematic order. Samples of motorcycle clothing, as well as other large articles, hang along one wall, which is done in brown burlap, panelled with Georgia pine, stained brown to match the oak fixtures. The general office is on a mezzanine floor, and only those who have business reach the top of the short stairs.

Shutting Out the "Sights"

In having the structure built to order, Mr. Wenige adopted an idea which not only saves the appearance of the store from a cleanliness standpoint, but also prevents the possibility of the mingling of motorcycle or bicycles in use with those still to be sold. This structural feature is a passageway, or side entrance, leading straight into the repair shop in the rear. On account of this archway, no muddy or ill-kept machines are allowed through the salesroom, with the result that prospects are not shocked by even a glimpse of "sights" when they are in the act of making first purchases.

Front of Building All Window

The front of the building occupied by the Bicycle & Motor Sales Company is all window. The entire store-front is glass, and the whole of the second floor is faced with windows through which are seen the latest models, in simple, yet striking, array. Every sign in the windows and store is neat and attractive—else it goes into the discard. A poor poster would look out of place in the Wenige establishment.



Exterior of establishment. The second floor is used for storage. Machines for repair are brought to the shop through the passage shown at the left

The large repair shop in the rear is light and airy—there are five windows and a large door in the outside walls, while a large skylight gives the sunbeams a chance from above. There is no unnecessary junk littering the department, and intruders in the work shop are *personae no gratae*. The results speak for themselves.

The repair department of the Bicycle & Motor Sales Company. This is one of the best lighted and most thoroughly equipped shops in Canada

ATTRACTIVE PRIZES FOR F. A. M. WORKERS

Accessory Manufacturers Donate Valuable Prizes for Workers Bringing in Most New Members in 20,000 Membership Campaign.

THAT the spirit of F. A. M. progressiveness is actively at work in trade as well as riding circles is indicated by the fact that ten well-known accessory manufacturers have already come forward with donations of prizes to be awarded to those turning in the greatest number of new members. Other manufacturers have signified their willingness to carry on the good work, and it is safe to predict that the most attractive array of prizes ever lined up in connection with a motorcycle movement in this country will soon be at the disposal of the F. A. M. officials.

The list of those who have donated prizes to date is as follows: Corbin Screw Corporation, New Britain, Conn., one motorcycle speedometer; Diamond Chain & Mfg. Co., Indianapolis, Ind., one set of No. 149 chains suitable for the Harley-Davidson motorcycle; Eclipse Machine Co., Elmira, N. Y., one Eclipse clutch suitable for any motorcycle designated by the winner; Hagerstown Shoe & Leather Co., Hagerstown, Md., one pair of Artillery leggings; Hawthorne Mfg. Co., Bridgeport, Conn., one complete lighting outfit consisting of headlight, bracket and tail-lamp; International Stamping Co., Chicago, Ill., one set of motorcycle drop side mudguards and braces and one set of bicycle drop side mudguards and braces; Frank Mossberg Co., Attleboro, Mass., one set of motorcycle wrenches; Person Mfg. Co., Worcester, Mass., one Pan-Dandy motorcycle saddle; Wald Mfg. Co., Sheboygan, Wis., 24 No. 420 tandems and footrests; H. L. Peters, Buffalo, N. Y., two Bison lamp and Prest-O-Lite tank brackets.

At present the individual bringing in the greatest number of new members each week will be given his choice of the prizes donated. The contest will commence on May 7, and the first award will be made on the records shown up to and including May 13.

Later on the Membership Committee will announce the conditions of awards as regards clubs. In case of a tie for any prize, prizes equal in value to the prize tied for will be awarded to each one of the tying contestants.

CHAMPION DISPLAY STAND HELPS SALES

Toledo Spark Plug Concern Issues Attractive Counter Device Showing Six Models Which Can Be Examined By Customers

BELIEVING that goods well displayed are half sold, the Champion Spark Plug Company, of Toledo, O., is putting out a handsome counter display stand in the lower part of which are fitted six Champion plugs. This stand is given free to every dealer who places an order with his jobber for 100 or more Champion plugs, no matter what the size or model. For the motorcycle dealer, Champion plugs are to be had in ⅞ inch, metric and half-inch sizes, with standard reaches.

This display stand, frequently referred to as the "Little Champion Salesman," has been well received by dealers throughout the motor vehicle industries because it carries the articles which it advertises and enables the customer to see the actual plugs. The stand and its equipment involves a free gift of $5.25 worth of Champion plugs and the demand for it has been very great. The stand has the plugs in series of three, each plug being labeled with its size and model and resting in a separate recess. The upper portion of the stand is formed to represent a crown in outline, with the center a huge Champion plug giving off its characteristic spark. The whole effect is extremely striking.

SHAKESPEARE CARBURETER HAS ONE ADJUSTMENT

QUICK and easy starting at all temperatures with a wide range of speed without change of adjustments are features of the Shakespeare motorcycle carbureter, the product of the Shakespeare Company, of Kalamazoo, Mich. The mixture at all running speeds is maintained constant in quality, the air for mixing being automatically-controlled while the primary air is kept constant. Apart from the air-valve there is but one moving member, the throttle.

The Shakespeare carbureter has but one adjustment, the automatic valve taking care of every condition throughout the speed range irrespective of change in humidity, temperature or atmospheric pressure. The adjustment is for the opening of the jet, the nozzle itself being moved away from or toward a fixed needle to give the desired opening. This adjustment is made by a T-handle at the base of the carbureter. The float chamber, located at the lower portion of the instrument, has top feed from the fuel tank and is fitted with a drain-plug at its lowest part. The float chamber surrounds the jet-holder and jet, directly above which is the carbureting or vaporizing chamber.

Priming is made by moving a small lever at the upper side of the float chamber. The throttle is of the butterfly type, with the arm adjustable on the spindle to suit various conditions of fitting. A minimum stop screw is fitted to the arm. The carbureter is side-outlet, the air for the mixture passing horizontally through the mixing chamber and into the manifold.

Not only does the Shakespeare carbureter give a wide range of speed when fitted to a twin or single cylinder motor, but it also permits of obtaining great efficiency, insuring a maximum mileage with minimum consumption of fuel. The carbureter is sold with the guarantee of the firm of absolute satisfaction or money returned. The list price is $10.

PREST-O-LITE INCREASES REFILL PRICES

INCREASE in the cost of chemicals is given as the reason for an advance of ten cents in the price of refilled Prest-O-Lite tanks, by the maker, the Prest-O-Lite Company, of Indianapolis, Ind. The motorcycle tank costs 70 cents, instead of the former price of 60 cents. The price is for exchanging an exhausted tank for a fresh one.

6,347 MOTORCYCLES ARE USED IN DENMARK

IN a recent consular report from Copenhagen, Denmark, it is stated that on September 1, 1915, there were 6,347 motorcycles in use in the Danish Kingdom.

TEST SETS ENABLE RIDER TO CARE FOR TROUBLES

IN order to enable the rider to care for his own ignition troubles and thus prevent unnecessary delays and excessive repair charges, Haese & Co., of Punxsutawney, Pa., have brought out two test sets, one for the user of an electrically-equipped motorcycle and the other for the user whose mount has a high-tension magneto fitted. These sets are of convenient size and contain all articles necessary to test out for troubles and to repair the same, as well as an instruction book entitled "Care, Repair and Road Troubles." Each book refers to the troubles and remedies therefor in each case.

The test set for electrically-equipped machines includes the following: hydrometer, magneto file, pair of pliers, electrician's knife, sandpaper, small coil of rosin core solder, roll of tape, small coil of wire, screwdriver, voltammeter and the instruction book. This set lists at $5.50. The set for standard motorcycles, with magneto equipment, has a magneto file, electrician's knife, pair of pliers, sandpaper, rosin core solder, tape and small coil of wire, with an instruction book for such models. This set is priced at $3.50.

AUBURN PLUG MAKER MOVES TO NEW QUARTERS

AUBURN, N. Y.—The New York Mica & Manufacturing Company, formerly located at 38 Market street, has moved to new quarters at Green and Clark streets. Increased demand for Auburn spark plugs in all sizes made such a move necessary, and the firm selected its new location and is now in enlarged quarters.

INCORPORATIONS

COLUMBIANA, O.—The Best Service Tire Company has been incorporated with a capital of $10,000 to deal in tires. Elizabeth Hammond, Walter D. Rupert, Howard R. Orr, C. E. Shipman and Hazel Roller are the incorporators.

PLATTSBURGH, N. Y.—Banker & Martin have been incorporated in this city to operate a motorcycle station. The capital is $2,000. Incorporators are James E. Banker, Charles E. Martin and Grave C. Martin, all of Plattsburgh.

GOOD FOR RIDER, DEALER AND MAKER, SAYS EWING

Editor: Find enclosed two dollars for another year's subscription to your paper, as I get lots of good information from same. You have a good publication for the motorcycle rider, dealer and manufacturer.

LUTHER E. EWING.
Atlanta, Ga.

Down the Stretch

May 7, Providence, R. I.—Annual run to Westerly of M. C. of Rhode Island.

May 14, Detroit, Mich.—Race meet of Detroit Motorcycle Dealers' Association.

May 14, Bronx, N. Y.—Second annual endurance run of the Crotona M. C. to Monticello, N. Y. and return, 250 miles.

May 21, Providence, R. I.—Annual photograph run to Roger Williams Park, M. C. of Rhode Island.

May 21, Newark, N. J.—200 mile observed run for lightweights, auspices of New Jersey M. C., to Philadelphia and return.

May 21, Jamaica, N. Y.—Endurance run of Jamaica M. C. to Patchogue and return.

May 21, Harrisburg, Pa.—Endurance run of Keystone M. C. to Altoona, Shamokin, Pottsville, Reading and return.

May 27-28, Providence, R. I.—Week-end run of Providence M. C. to North Adams, Mass., and return.

May 27-28, Poughkeepsie, N. Y.—Endurance run of the Poughkeepsie M. C. through Poughkeepsie and Dutchess Counties; 20 hours.

May 28, Milwaukee, Wis.—Lightweight race of Milwaukee M. C. on Cedarburg track.

May 28-30, Boston, Mass.—Three-day endurance run of Bay State, M. C.

May 30, Washington, D. C.—National Capital M. C. endurance run, 128 miles in 24 hours.

May 30, Roanoke, Va.—Race meet of Dixie M. C.

May 30, Wheeling, W. Va.—Race meet of Wheeling M. C.

May 30, Philadelphia, Pa.—300-mile race on Hatboro Speedway.

May 30, Seattle, Wash.—Run of Seattle M. C. to Portland, Ore.

May 29-30, Newark, N. J.—400 mile run, day and night of New Jersey M. C.

June 4, Sheepshead Bay, N. Y.—Motorcycle race meet in connection with "American Liberty Day" celebration.

June 10-11, Worcester, Mass.—Fifth annual 24-hour endurance run of Worcester M. C.

June 18, 19, Wheeling, W. Va.—336 mile endurance run to Bedford, Pa., and return, of Wheeling M. C.

June 25, Detroit, Mich.—Second race meet of Detroit Motorcycle Dealers' Association.

June 30, Wheeling, W. Va.—Sealed time run of Wheeling M. C.

July 2-3-4, Grand Rapids, Mich.—Michigan State F. A. M. reliability trial, under auspices of Grand Rapids M C.

July 4, Roanoke, Va.—Race meet of Roanoke M. C.

July 4, New Brunswick, N. J.—Elimination run of the New Brunswick M. C.

July 4, Savannah, Ga.—Race meet of Savannah M. C.

July 4, Galesburg, Ill.—State F. A. M. championship races under auspices of Detroit Fair Association.

July 4, Wheeling, W. Va.—Race meet of Wheeling M. C.

July 16, Wheeling, W. Va.—Tri-State endurance run and open house, distance 100 miles, Wheeling M. C.

July 30-August 12, Wheeling, W. Va.—Run to Atlantic City and return, 600 miles, of Wheeling M. C.

August 10, Colorado Springs, Colo.—Races on Pike's Peak highway.

August 11-12, Roanoke, Va.—500-mile endurance run of Dixie M. C.

August 13, Detroit, Mich.—Third meet of the Detroit Motorcycle Dealers' Association at Detroit Oval.

September 3, Harrisburg, Pa.—Endurance run of the Keystone M. C.

September 4, Roanoke, Va.—Race meet of the Dixie M. C.

September 4, Milwaukee, Wis.—Fourth annual Goodfellowship tour, Milwaukee M. C.

September 6, Wheeling, W. Va.—30 mile road race of Wheeling M. C.

September 17, Detroit, Mich.—Fourth meet of the Detroit Motorcycle Dealers' Association.

October 1, Providence, R. I.—Annual Triangle run, Providence-Boston-Providence of M. C. of Rhode Island. B. A. Swenson in charge.

October 8, Detroit, Mich.—Meet of the Detroit Motorcycle Dealers' Association at Detroit Oval.

BANQUET MARKED CLAMPING OF SAVANNAH'S LID

SAVANNAH, Ga.—The Savannah M. C. marked the clamping down of the Prohibition lid in this city with a banquet on Saturday night, April 22, and it proved to be "some" affair. It was termed a wine festival, but the drinkables were not limited to wine, and, in the words of the poet "all present had a large and luscious time." There were eats aplenty also, but with prohibition going into effect the next day, it stands to reason that no one could afford to waste much time in eating. That could be done later.

The club's annual banquet, booked for June 4, will be as dry as a bone, but the boys are preparing to make up the deficiency in other ways.

Several changes have been made of late in the officers of the club. President Scroder and Vice-President R. W. Boyd resigned and the staff is now made up as follows, pending the regular election on June 4: George A. Porter, president; J. L. Hetzel, first vice-president; Mark Silvers, second vice-president; H. C. Gould, treasurer; O. A. Meyer, secretary; J. S. Cañero, captain; Earl Williams, lieutenant.

HOFFMAN FARM RUN TO OPEN PATERSON SEASON

PATERSON, N. J., April 29.—The Paterson M. C. will open its 1916 riding season on Sunday, May 7, by making the annual trip to the William Hoffman farm at Augusta, 53 miles out of this city. Road Captain Stone and his aides have collected about 50 prizes for the winners of the different events that will be staged after dinner at the farm. Departure from the club house will take place at 7 a. m. and the route will be via Mountain View, Boonton Lake Hopatcong, Andover and Branchville

Catching the Public Eye

THE first in a new series of publicity pointers and window decorating suggestions for motorcycle dealers appears below, and others will be published weekly. The purpose of this department is to place in the hands of dealers as many practical ideas as possible to assist in catching and holding that elusive element known as "public interest."

Give a thought an original twist and you make an appeal to the imagination of the prospective buyer; pound away along cut-and-dried, stereotyped lines and you may burn up a lot of energy without obtaining the desired result. It will be the aim, therefore, to co-operate with the dealer by injecting the ginger of originality into his sales arguments, and to provide him with pictorial designs and window lay-out hints that can be applied to his business at slight expense.

The idea embodied in the drawing on this page is a result-getter. There is hardly any town in which this picture will not make an appeal, and it is certain to start business men and other workers thinking along motorcycle lines. For best results the dealer should have his local sign painter make up a duplicate of this drawing—enlarging it from three to five times.. The sign, which should have some touches of red, or another bright color, in addition to the black, can be placed in one corner of the show window—or in the center of the window at the bottom. Care must be taken to see that the sign does not shut off the view of the motorcycle in the window from the street.

To the saddle of the motorcycle on display can be fastened a neatly-lettered card with the inscription: "This seat is reserved for you," and from the saddle a ribbon should be carried to the sign which will be pasted against the window. In this way the idea will be put across with a punch. The eye of the passerby will first be caught by the drawing in the window, and he will be given a strong suggestion that it is foolish to submit to the delay and inconvenience of the crowded trolley car when he can, at comparatively slight cost, have his own mount and operate it to suit himself. His eye will then be carried along the ribbon to the saddle of the motorcycle itself and it will require only a little imagination for him to picture himself on that comfortable seat—prepared to laugh at crowded trolleys and all the other annoyances of public transportation.

Motor Cycle Illustrated will pay one dollar for every contributed suggestion that is found suitable for use in this department.

If the dealer does not wish to have an enlarged sign made up, he can cut out the picture on this page, mount it neatly on a larger sheet of heavy paper, or on pasteboard, and use it in the present size. Better results will be obtained, however, by having the picture somewhat larger. But don't fail to use the idea in some form. The outlay will be trifling and the appeal that will be made to passersby is certain to bring results. Get this picture in the window today. It's yours. Make the most of it. And watch for other strong suggestions along similar lines.

OVERWORK TAXES HALL'S STRENGTH; ILL AT HOME

OVERWORK indulged in during the past two years both in his regular business and in the interests of motorcycling has resulted in broken health for J. A. Hall, former New York State F. A. M. Commissioner. Mr. Hall is now confined to his bed in his home, 322 East 22nd street, Brooklyn, with nervous prostration.

In recognition of his efforts in behalf of Empire state riders and riders of the Metropolitan district in particular, those in attendance upon the annual banquet of the Concourse M. C. last Saturday evening extended a vote of thanks to the former state commissioner and accompanied their letter with a substantial purse.

Questions and Answers

READ SPRING NUMBER

AS a result of reading a number of motorcycle catalogs with the idea of purchasing my first machine, I am appealing to you to help me choose. I wish to know which is the best of three makes, and whether a twin or a single is desirable.

Palo Alto, Pa. J. A. LYNAGH.

Your trouble in choosing is a tribute to the forceful arguments in the makers' catalogs. Unfortunately, we cannot, on principle, advise you as to one machine being superior to another. Get a copy of our Spring Number and read pages 62 and 63; these will help you to decide which type of machine to purchase. Then go to Reading and see W. R. Schaeffer, on Penn street, and let him help you.

WRITE CHICAGO CYCLE FIRM

PLEASE tell me where the Sturmey-Archer hub gear for motorcycles can be had in this country. Also if any other three-speed hub can be fitted to my twin machine. R. E. WHEATON.

Alma Center, Wis.

We have no record of the manufacture of Sturmey-Archer three-speed hubs for motorcycles in this country. Those fitted were obtained from Nottingham, England, the home of this make. This, of course, applies to the motorcycle Sturmey-Archer and not to the bicycle type. The latter type can be had from the Chicago Cycle Supply Co., 815 South Wabash avenue, Chicago, Ill. This firm might have a motorcycle hub on hand.

The Sturmey-Archer motorcycle hub is not made to take motors of more than 6½ horsepower satisfactorily. There is no other three-speed hub obtainable for motorcycle service.

MISALIGNMENT OF GEAR

THERE is a noise in my motor which neither the local repairman nor I can remedy. It appears to be in the distribution casing, near the dynamo and has a whirring not. I would like to overcome it.

JOSEPH SULLIVAN

St. Louis, Mo.

As yours is an electrically-fitted machine, it is very probable that the noise is due to misalignment of the gear driving the dynamo. There have been lots of cases of this during 1915 and the present season, and the cause is wear of the shaft-bearing in the aluminum case cover. By this shaft, I refer to the one carrying the dynamo driving gear. The remedy is realigning the shaft and bearing in the casing, by shimming or by autogenous welding and re-machining. The fact that you have had the machine only 40 days should put it up to the manufacturer to give you a new case cover or remedy the trouble at his expense. There is no real harm in the noise, as the misalignment is not serious.

CYCLE HOME TRAINERS

I AM desirous of fitting up a home trainer for use in the show window of my place and wish you would advise me where I could get such an article. C. C. J.

Baltimore, Md.

We cannot give you the name of any maker of motorcycle home trainers, as we do not believe that such articles exist. Nor can we advise you to make one up. The use of a motorcycle on a home trainer, especially of a powerful twin, would be very dangerous, and we strongly condemn the idea.

For bicycle home trainers, apply to A. G. Spalding & Brother, Nassau near Beekman streets, New York. This answers the inquiry of Dan Willis, Canton, O., and a number of others.

AIR LEAK THE CAUSE

MY 1914 twin machine is difficult to start and will not run well at low speeds. On high speed, however, it runs finely. I have had it overhauled recently and the spark, valves and magneto are in time. The compression is also good.

HARRY SOLOMON

Chicago, Ill.

There is probably an air-leak between the carbureter and either or both inlet valves. Tighten up the collars on each end of the inlet manifold and test at all joints for leakage by squirting oil. The overhauling must have been a careless job.

SPROCKET IS SLIPPING

I AM having a peculiar action on the part of my single cylinder motorcycle. When riding solo, it runs nicely up to about 32 miles per hour, then the motor seems to run faster than it should for the speed of the machine. The same thing happens when I take a tandem passenger up.

ALFRED MILLER

Cheyenne, Wyo.

There is probably a slip in the front drive sprocket on the motor shaft, which will account for the action of the motor. This is very likely, as the sprocket has a taper fit on the shaft and is keyed also. The key has sheared and the taper fit holds the sprocket until the load is heavy or the speed rises. Put in a new key.

CLEANING THE MACHINE

HAVING tried gasoline to wash my machine after a run, I find that it soon affects the gloss of the enamel. I would like to know if there is anything which will remove stains, dirt and the like and not dull the finish. "CLUBSTER"

Harrison, N. J.

There are a number of cleansing preparations on the market which will do the work very satisfactorily, and among these may be mentioned Johnson's Cleaner. This is applied with a rag and requires little labor. We have personally used this preparation and found it very effective, as also the firm's Prepared Wax to polish the enamel afterward.

NO FOUR-CYLINDER MODELS OF FIVE HORSEPOWER

I WOULD like to get a good four-cylinder motorcycle of about 5 horsepower for solo or very light sidecar work. Please give me the names of any makers of such mounts, with the price and date of delivery.

Chattanooga, Tenn. W. J. McC.

There are no four-cylinder motorcycles made in as small a power as 5 horsepower at present. About the only one we know of is the F-N, formerly made in Liege, Belgium, but this factory is now devoted to making metal products for the German army, and no motorcycles are being made in it. The only four-cylinder machine on the American market is the Henderson, of 8 horsepower. Details of this you can get from your local agent.

SHELLAC AND PAINT KEEP NUTS FROM LOOSENING

THERE are some nuts about a machine which do not require to be removed from the beginning of the season till the annual overhaul, and if these are not fitted with lock-washers they are liable to start loose, especially on a new machine.

A touch of shellac will, however, hold them in place. If they are out of reach of the cleaning rag, cover them with paint—both the nut and the bolt thread—and this will effectively prevent any turning, as well as eliminating any chance of rust.

BUFFALO CLUB TO PICK A SUMMER HOME

BUFFALO, N. Y.—A special committee of the Buffalo M. C. has been appointed by Otto H. Peters, the president, to report on the selection of a summer clubhouse to be located within 15 miles of this city. Several sites along the lake shore are now under advisement. A full report will be made this week. The idea of a summer clubhouse is not a new one. It has been under consideration for a number of years but as yet has never come to a head. With President Peters in active leadership of the club it is fast becoming a reality.

Along Technical Lines

WITH the widespread use of electric lighting on motorcycles comes the need of a few gentle reminders to the recent owners of this sort of illumination. One of these is to see that all connections are on and tight on, in order that serious battery trouble will not take place. This was brought very forcibly to my attention by the presence of two electric models of 1916 vintage which were reposing in a garage suffering from discharged storage cells and no apparent reason could be found—by the mechanics—for the situation.

The answer was: loose terminals, touching the frame and short-circuiting the battery. The means of detection—now known to the mechanics, after I showed them—a gentle pull on each wire and a shake close to each terminal. The remedy, careful connection of all wires and a positive coupling or attachment, not a hurried slapping together. The preventive, an examination of each cable after a run.

Get in the habit of switching off whenever you stop the motor for any length of time. This is another good point which will save batteries, no matter what the system used on your machine. One good little wrinkle which every user of an electric model should fit and watch regularly, is a voltmeter. If you haven't one, it will pay to get one and wire it in the system.

SAFE PLACE FOR CARRYING A MECHANICAL HORN

THERE are a number of places to carry a mechanical horn on a machine, but some of them are unsafe for the rider, although they may be very convenient. One of these is on the top tube just ahead of the "hump," or in other words, behind the toolbox on some models.

It's nice and convenient there, but when you come down in grease or by hitting some hulking brute of a dog, the letters on the handle of the horn will impress themselves vigorously on your bread-basket. The horn will sound—too late, in this case—and you will also make a noise, but not one that indicates joy. Then you will move it somewhere else. The object of this little warning is to prevent such a thing happening to you.

If you have the horn further forward on the top tube, you run the risk of knocking it with your eye or some other part of your anatomy which you need in your regular line of business. So put it either on the handlebar close to the grip or so far ahead that you will dodge it when you take a fall. Personally, I like it on the grip, for when the machine flops, the horn will merely move around on the bar and not be injured, and it won't damage me, either.

Speaking of mechanical horns of the push-down type, use the thumb to get the sound out of them. Put one finger under the barrel of the horn and then press with the thumb; this will make the stubbornest horn sound in short order, whereas, a pressure with the palm will take more time to start the plunger going.

KEROSENE AND SOME OTHER CARBON REMOVERS

WITH the price of gasoline soaring toward the fleecy white clouds, and the prospect of tires and other accessories taking a turn upward, it is up to the rider to take more care of his machine than ever. I am not going to give a list of dos and don'ts here, but will refer all hands to the article headed "Sensible Riding Gives Long Usage" in the Spring Number of this publication. If you follow out the dope handed out by the author, you will have a machine that will bring a good allowance from the dealer at the end of the 1916 season, or earlier, if you become enamored of a "Firefly" because it flits a bit better on the road than your present mount. The particular points that bear the closest attention are the proper use of brake and clutch, and the putting in of kerosene after a run to cut carbon.

Speaking of removing carbon, I am getting the usual spring batch of letters asking about the wonderful properties of the many carbon-removers and preventers, with which the market is annually crowded. Some of these things are absolutely harmful to use in a motor, while others are harmless to the extent of creating a feeling that the carbon is being removed or prevented without any chance of its being affected at all. To put it plainly, these liquids are like the pink water sold to farmers' wives in the good old days, to prevent kerosene oil from exploding.

GOL-DARN IT!

This Rider Has Just Discovered That He Put a Tube of Tooth-Paste Into His Repair Kit Instead of the Tire Cement. Don't Snicker—It Might Happen to You

Not having the time or the means to test out each new preventer and remover, and wishing to give everyone his due, I won't do any picking out of sheep or goats, but simply say this: Use kerosene, an oxygen flame (not oxy-hydrogen or oxy-acetylene), or a good scraper. Then you will be sure of getting the carbon out, and in the case of the kerosene, of keeping it down so low that it will have no effect on the running of the motor. All but the oxygen flame are inexpensive, and there will be no chance of damaging the valves by the presence of acid, as in some of the miraculous-virtued liquids now on the market.

DOUBLING UP ON THE IMPROVISATION BUSINESS

THE motorcyclist who can improvise things in case of trouble is the one who will keep going for the longest time. Usually, the improvising comes from lack of having proper materials on hand, such as copper wire, for instance. I recollect one case in which I figured as the improviser, due to the carelessness of an acquaintance. He was just learning to drive a sidecar, and wanted me to go along to watch his "style." He had a second-hand motorcycle as the means of propulsion.

We got along nicely until the hand oil pump let go with its check valves, and the motor promptly took one quart of oil into its internal workings from the tank. We took turns in working the oil out of her, catching it in envelopes and returning it to the tank, after fixing the pump valves, of course. Improvisation No. 1—the envelopes. Then the magneto went bad and I had to get to the contact-maker by taking off the foot-board, the clutch control rod and pedal, and a few other things. On putting them all back there was no cotter pin for the clutch pedal nut; it had been lost in the dirt. And there was no copper wire in the toolbox.

Fortunately, we were on a main road with plenty of automobile traffic. We hunted along the road and found a hair pin, dropped by some fair passenger. The hair pin became a cotter for the time being. Improvisation No. 2. We got home all right, and I saw that the man's kit had wire and a few cotter pins before I went out with him again.

If you get stuck for a cotter pin in some city, look along the sidewalk in front of any millinery or dry goods store, and your efforts will be rewarded. Hair pins are there by the dozen.

Wives who are deserted over holidays and week-ends by motorcycling hubbies may not have grounds for divorce—but almost any court would uphold their right to a little sidecar alimony.

CANADA'S FLOOD OF BICYCLE PROSPERITY

Intensive Exploitation by Advertising and Direct-Sales Boosting Has Resulted in Bicycle Demand Far in Excess of Supply—Other Two-Wheeler News from Across Our Northern Border

HAMILTON, Ont.—The bicycle sales campaign continues to surge along at a good swing and large stocks of wheels in a number of retail stores have already been disposed of. On Saturday, April 29, several local dealers almost stripped their shops and it was with difficulty that the day's demand was satisfied. In some cases the bicycles in nicely dressed windows were taken by late customers because the floors of salesrooms had been practically cleared during the rush. The dealers are experiencing the most active spring for many years and the business is due, to a great extent, to the Bicycle Week held late in March, it is believed.

A striking feature which has recently made its appearance in this city has been an array of big 36-sheet posters on the billboards. These call attention to the bicycle in an impressive manner as the large signs are clean-cut and well designed. These advertisements bear such slogans as "Bicycling is three times as easy as walking and twice as fast."

The T. Eaton Company, Limited, Toronto, which has established a bicycle assembling plant to take care of large sales this year, recently ran full-page advertisements in a number of Canadian daily papers. Many of the small dealers have also found the advisability of using newspaper space and are continuing to use the papers. This advertising idea is fast becoming general throughout Ontario province.

In other Canadian cities the bicycle trade is also very brisk and factory shipments to dealers are numerous and heavy. It is really a big bicycle year in Canada.

MOTORCYCLES IN CANADIAN NATIONAL EXHIBIT

TORONTO, Ont.—The Canadian National Exhibition will be held in Toronto for the thirty-ninth successive year during the two weeks starting August 28. As usual, arrangements are being made by the management for the accommodation of motor exhibits, including motorcycles, tires, accessories and bicycles. Considerable space has already been sold and it is reported that applications from American manufacturers in general are unusual, thus indicating that companies in the States are paying considerable attention to the Canadian market.

As usual the big annual fair will probably form the only occasion for the display of motorcycles, bicycles, etc., in Toronto or Ontario during the year and those who desire to use space so that they may reach hundreds of thousands of Canadian people in a direct manner are advised to forward applications at an early date. It is estimated that all space will be sold before May 20. The actual paid attendance at the 1915 fair in Toronto was 864,000. The city is overrun with out-of-town visitors during Exhibition time each year.

JOHNSTON ISSUES "SAFETY FIRST" EDICT

TORONTO, Ont.—In view of a number of unfortunate accidents in various cities for which motorcyclists have been held to blame, President F. A. O. Johnston of the Canada Motorcyclists' Association, has issued an offiial statement in which he has urged all motorcycle riders to employ extreme care in the operation of machines on city streets. He asks all new riders to be particularly careful in the use of motorcycles and to avoid recklessness. He urges that motorcyclists should employ judgment in operating a motorcycle so that the established beneficial effects of riding will not be offset by the appearance of lawlessness.

"Keep the name of motorcycling in high esteem with the general public by the careful control of your motorcycle," declares President Johnston in his message. The statement has made a good impression among the civic authorities and with dealers and others who are interested in the welfare of motorcycling.

TORONTO POLICE TAKE SIX MORE HENDERSONS

TORONTO, Ont.—The Toronto Police Department has decided to increase its motorcycle equipment by the purchase of six Henderson motorcycles which, with one Henderson already in use, will be employed in the regulation of traffic on Toronto's narrow streets. The local police also have nine Triumph motorcycles which are to be used, in future, for ordinary patrol work. It is estimated that one motorcycle policeman does the work of four "pavement pounders" and, in this way, the nine motorcycle constables will replace thirty-six walking policemen. At the present time, the department is short of men because of enlistments in the army.

The seven "speed cops" on Hendersons will wear civilian clothes as usual and this flying squadron will cover the whole city. The nine patrolling motorcyclists, who will wear the regulation uniform, will cover regular beats in various sections of the city.

TORONTO M. C. GETS A DOSE OF PEPPER

TORONTO, Ont.—The warmest meeting of the Toronto Motorcycle Club for the past two years was the special session called for Wednesday evening last when a real debate as to the policy to be adopted by the club was heard. Representatives of the Canada Motorcyclists' Association were present, while many of the older club officers and members turned out to give their views. That the club needed an injection of pepper was the consensus of opinion and as a number of the speakers at the meeting reached the boiling point, it is anticipated that the club will travel with a full head of steam for the remainder of the season.

A large percentage of the membership has gone to war but there was no more need for the club to close its doors, it was urged, than for the dealers to stop selling motorcycles. To give the old club another good chance, a number of former boosters have promised to do "another bit" and a programme of great activity for the entire season is being drawn up. The club was awakened practically by a sharp "note" from the Canada Motorcyclists' Association in which the organization was advised to maintain its dignity as the largest motorcycle club in Canada.

MOTORCYCLES INCREASED BY 15 PER CENT. IN P. I.

NEW YORK, N. Y., March 28.—The number of motorcyclists registered in the Philippine Islands in June, 1915, was 986, which showed an increase of 15 per cent. in six months. Motorcycle imports, while not shown separately in the statistics, are almost entirely American. The fact that motorcycles can be used on long stretches of road there, which cannot otherwise be traversed by anything faster than bullock carts, makes the power-driven two-wheeler more than ordinarily valuable in the Philippines for certain purposes.

CLIFTON COPS OUT ON CYCLES

CLIFTON, N. J.—The bicycles and motorcycles of the police department have made their appearance after a long seige of winter. The township, which covers about twelve square miles of territory, has many outlying districts and these are patrolled in an efficient manner by means of four officers mounted on Iver Johnson bicycle and two Harley-Davidsons. The Silent Greys are used for emergency calls.

Soaring Gasoline Sells Lightweights

With the price of gasoline going up, more and more riders are beginning to warm up to the sturdy lightweight with the small appetite.

The man who is thinking of riding a motorcycle to work each day—and who expects it to run on saved carfares and show a profit besides—is the man who can't "see" any other machine than a lightweight.

So the demand is growing—growing—every hour, for the

Pope Lightweight Model H-16

After its six years of making good, there are few who will deny that it is the most popular lightweight in America.

It is an ideal machine for the man who wants a thoroughly dependable, easily-operated, low-priced motorcycle. It is not built to do any freak hill-climbing stunts, but it will do more than you expect of it on ordinary grades. It won't beat an express train—but it will go faster than most states permit—45 miles an hour.

It's not a toy or a freak, but a REAL motorcycle, built light yet strong, of the best materials obtainable. Equipped with high-grade products like Schebler carburetor, Eclipse clutch, Spartan V-belt, imported high tension magneto, and U. S. MOTORCYCLE tires.

The sooner you are stocked up on Pope Lightweights the bigger your 1916 profits will be. Write for catalog and dealers' prices.

In the Dealer's Realm

SEAMARK'S INDUSTRY WON OUT

For Seventeen Years He Was on the Job Twelve Hours a Day and Working Vigorously; Gave Square Deal to All and Guaranteed the Goods He Handled

By HARRY COHEN

SIXTH IN A SERIES OF SUCCESS STORIES ABOUT DEALERS

PERSEVERANCE and hard work, from early morning till long after sunset, brought Harry F. Seamark from a boy-of-all-work in 1889 to the ownership of one of the largest and most complete establishments in Washington, D. C., and in fact, in the whole South. For 17 years Seamark has run his own business, bringing it from a small basement quarters on F and Sixth streets to the occupancy of two large buildings at G and sixth streets. Seamark is now a heavy stockholder in one of the leading bicycle factories, and has a good cash balance in the bank.

From the first days of his business career, Seamark did two things. He gave everybody a square deal and was on the job from 7 a. m. to 7 p. m. every week day. His start was made in the employment of the old Pope Bicycle Co., and he retained his position with this firm until 1899. He then took a basement store at F and Sixth streets and opened for himself as a bicycle dealer. He kept that store open for 12 hours a day on weeks days and built up his business gradually. He handled Flying Merkel and Emblem bicycles during this period.

Ten years after opening the basement store, Seamark's business was of such a volume that he took the lease of a building at G and Sixth streets. This was in 1909. His trade had been built up by hard work and by a reputation for square dealing to all comers. In 1910, he took the building adjoining his store, and this is used as a repair shop and store room today. The old building is fitted up for a salesroom.

When the Merkel and Emblem motorcycles were put on the market, Seamark took the agency, in addition to his representation for the bicycles bearing the same names. In 1914 he added the Thor motorcycle to his other lines and sold 50 the first year. In 1915 he took on the Miami Power Bicycle. He has continued to sell the same brands of bicycles that he started with over ten years ago.

Twelve Hours a Day

With the expansion of his business, Seamark continued to keep open from 7 a. m. till 7 p. m. Until a short time ago, he himself was there to see that the doors were opened on the minute. Now his manager, T. N. Mudd, Jr., attends to the opening and Seamark does the closing. Traveling salesmen frequently remark that they meet the statement that the boss is out and will be back soon less frequently in Seamark's place than in almost any other store in the country.

Business men who complain of the frivolous attitude of their employes toward customers and the tendency of salesmen to make exaggerated statements, would do well to visit Seamark's shop. It is against Seamark's policy to make claims or promises which cannot be fulfilled. He feels that he has the right goods, and after stating their merits concisely and accurately in a business-like manner, the sale is left to the purchaser. Prices on each article are plainly marked, with both a cash and a time-payment figure and no cutting of prices is allowed. This policy has brought the establishment many customers and all are today regular patrons.

Seamark stands back of the things he sells. He has a guarantee sign conspicuously placed in his store, stating what he will and will not do in the matter of service. This sign reads: "Our guarantee on bicycles and motorcycles is against defects in material and workmanship, and same will be made good by repairs or replacement, but under no circumstances does it apply when damaged by accident, misuse or neglect. All tires guaranteed by their manufacturers. All repair work guaranteed." This sign tells every customer what to expect and all arguments are avoided. No deviation is allowed from its terms.

Seamark is a firm believer in the lightweight motorcycle and is

Absence of vibration not only produces greater comfort and smoother riding, but increases the life of all parts of the machine. Notice a Henderson running on the stand—there is no quiver of the handlebars, no shake nor rattle. The experienced rider understands how this elimination of vibration does away with crystallization of metal and weakening of frame and motor parts.

Such steadiness and perfect balance is, of course, possible only with a four-cylinder motor.

SECOND-HAND SHOW FRUITFUL IN BUFFALO

Novel Method of Disposing of Used Mounts Brings Big Returns in Bison City—Auctioning Used on Private Owners' Machines

BUFFALO, N. Y., April 29.—The first second-hand show for motorcycles and automobiles has just closed its doors at the Broadway Auditorium, and has been a success from start to finish. It was the idea of the sales staff of the Spear Motor Sales Co., of this city and will undoubtedly set a precedent for further exhibitions of a like nature. In all probability, it was the first show of its kind in any part of the country.

There were no restrictions as to who could exhibit. Anyone who had a motorcycle to sell was privileged to show it upon paying a $5 entry fee. The Spears Motor Sales Company then undertook to sell the machine for its owner, charging a commission of 10 per cent. of the price set on the machine. Every evening, each machine was placed on the auction block and bidding and sales were brisk.

No admission was charged to the show. Cabaret exhibitions were held on several of the nights before the auctioning began to draw the crowds. No motorcycle was permitted to leave the building before it was entirely paid for in cold cash. Checks were refused except in cases where the managers of the show had sufficient time to have them cashed before the mount was taken from the Auditorium.

Not only were private owners invited to exhibit their machines, but dealers were also welcomed. The charge for dealers was $43.20 for 144 square feet of space and this carried with it the privilege of selling their own machines. The dealers' motorcycles were not placed on the auction block unless a special agreement was made. Neal, Clark & Neal, the Buffalo Indian agents, were the chief dealers to occupy a booth.

SEAMARK'S HUSTLE WON OUT

(Continued from page 42)

bending his efforts to popularize it in Washington. He carries a number of Miami Power Bicycles in stock in order that immediate delivery can be made. He stocks up well on the other lines for the same reason. It is characteristic of him that should he not get a machine in time for a customer he will refund the deposit, and this he has done a number of times when models did not come from the factories fast enough.

With regard to time-payments, the Seamark policy is: $100 deposit for any motorcycle in stock, with $20 per month payments and an extra charge of 10 per cent. for the accommodation. Miami Power Bicycles are sold at $50 cash and $10 a month payments. Bicycles are sold with a $10 deposit, monthly payments of $5 and a $5 charge in addition for the credit accommodation. The terms are strictly adhered to by Seamark and all his employes, and a violation of them will result in dismissal of the offender. All sundries and repairs are sold on a strictly cash basis. Interest is charged on all overdue payments.

Neat Salesroom

A neat and well-arranged salesroom is naturally in line with Seamark's plan, and his is always kept in the pink of condition. The pictures in the layout show the main showroom with large parts cabinets, each drawer being properly labeled. New motorcycles are kept on a raised platform in the center of the room, with new bicycles on one side and used motorcycles on the other.

Demonstrator motorcycles and bicycles are in neat racks at the front of the store. Palms and other decorations add much to the attractiveness of the place. The shop is equipped with the best of tools and appliances, and work is performed quickly and thoroughly. Any work on either motorcycles or bicycles can be performed in it. The reserve stock is very large and access to it is quickly had.

GEORGE MELCHER OPENS STORE

MILWAUKEE, Wis., April 25.—George Melcher, former parts department manager of the defunct Wisconsin Motorcycle Company, has opened up a store of his own at 1218 Fond du Lac avenue, one of the busy northwest thoroughfare of the city, and will handle a full line of motorcycle and bicycle accessories and repairs. Melcher managed the recent successful exclusive motorcycle show held under the auspices of the Milwaukee Motorcycle Club in February at the Auditorium.

Tips for Exporters

REQUEST FOR CATALOGS FROM ARGENTINIAN

WE are in receipt of a letter from Lionel Smith, automobile and cycle dealer, Trelew-Chubut, Argentine Republic, in which he advises that he is desirous of obtaining catalogs from American manufacturers of motorcycles, bicycles, parts and accessories. Manufacturers who are already represented in the Argentine Republic are requested by Mr. Smith to give him the name and address of their agent in that country.

BIG INCREASE IN EXPORTS IS INDICATED

AT the present rate, exports of American goods during 1916 will be valued at approximately $3,300,000,000, as compared with about $2,500,000,000 for the previous year. Of course, there have been tremendous increases in exports to the warring countries, but it is to be noted that every other part of the world is now taking more American goods than ever before.

For example, during the past eight months we have exported to North American countries goods to the value of $442,000,000, as against $309,000,000 a year ago; South America, $112,000,000, as compared with $52,000,000; Asia, $132,000,000, as against $66,000,000; Oceanica, an increase of $18,000,000, that is to say, from $48,000,000 to $66,000,000; Africa, an increase of $10,000,000, from $17,000,000 to $27,000,000.

TRADE REPORTS STATE DEMAND FOR CYCLES

MANUFACTURING conditions in Great Britain are leaving open markets for American-made goods, according to recent reports to the Bureau of Foreign & Domestic Commerce. The reports state that British manufacturers are so busy on war and domestic orders that they are obliged to pass by a great deal of foreign business, particularly with Continental countries, and that this situation is America's opportunity. It is pointed out that export restrictions, lack of shipping and railway congestion are factors which have materially aided in bringing about this situation.

One report mentions a big European demand for cycles and parts; one that has far exceeded British anticipations. Rubber goods are mentioned as being in great demand, as well as articles in leather and the hides themselves.

RUSSIAN FIRM IS LOOKING FOR CYCLES

REQUESTS for American motorcycles and bicycles for export to Russia are being made by the Robert Dollar Company, with headquarters at Petrograd. This company is well organized to care for trade throughout the Russian Empire, and controls the Dollar Steamship Line, with ships steaming fortnightly between Seattle, Wash., and Vladivostok, across the Pacific, with full cargoes for the Russian Government. Thus it is in a position to handle goods to the best advantage in Russia.

The Dollar Company requests catalogues of bicycles and motorcycles, as well as full particulars, in duplicate. This will include blueprints, photographs and any other illustrated matter for general advertising purposes. The firm also requires the weights and measurements of machines packed for export, together with prices f. o. b. the factories in this country.

PREPAREDNESS STORY TELLS HOW TO IMPROVE BUSINESS

By PRACTICUS

UNDER the title of "Preparedness," an automobile supply house has brought out a vigorous article in its house organ to show its dealers the way toward getting a bigger and broader grasp of business. This article will apply to the motorcycle trade as well as to those who handle four-wheelers, and I am giving it below.

The main idea in this article is to keep your accessories in stock and in sight. You, yourself, probably do this, but there are others who do not and who are losing business as a result of not doing it. It's good business talk all the way through and worth the time of anyone to read. Following it means more sales and increased profits. This is the article:

"Suppose your gasoline tank stood empty for a month—long enough for every one of your customers to know that it was empty. How many calls for gasoline would you have during the next week? Maybe a few tourists would be fooled by your sign, but that would be about all, wouldn't it?

"Similarly—how long do you expect that your customers will continue to come to you for accessories that you are always 'just out of.' For the love of Mike, why *shouldn't* they buy from the mail order houses?

"If you intend to make a permanent success of the garage business you've got to use every possibility it offers to make money, or some day you will discover that the drug store, or maybe the ten-cent store, has the accessory business, a curbstone agent has the machine rights, and you have just what you are working for—a repair shop.

"This is going to be the biggest year you've ever had—*if you make it so.* Never was there a better opopportunity to make a cleaning on accessories. But you must handle them in a merchant-like way. First, put in a stock. Second, let your customers know you have it.

"Wash that window. Put in a display shelf with a background. Never mind if it does shut out a little sunshine. Electric lights are a whole lot cheaper than sunshine that comes through a window that ought to be selling enough accessories to pay your rent.

"Get a showcase or two. Put in a few shelves. Have your jobber send you circulars and window displays.

"And what will be the result? We can tell you because we've seen it happen.

"You'll increase your profits. You'll be selling accessories you never had a call for, simply because you'll have those accessories out of sight. You'll put your business on a level with merchants."

BOSTON, MASS.

HUB CYCLE COMPANY, distributing the Cyclemotor for New England, has recently signed up the following as local agents: Harry Katz, Cambridge; S. J. Beckwith, Boston; F. S. Jones, Beverly; Malden Cycle Co., Malden, and the Lynn Cycle Co., in Lynn. These Massachusetts agents were obtained by Joseph J. Hoffman, traveler for the Hub Cycle Co.

BOISE, IDAHO

CRIS MORLER has taken the agency for the Dayton Motor Bicycle for this section. He is also handling the Dayton line of bicycles. The contract was signed with the Washington Cycle & Supply Co., holding Washington distributing rights.

Greatest Self-Advertiser

THE Smith Motor Wheel is the king of self-advertisers. Everywhere it is ridden it attracts instant attention—and, mind you, friendly attention. For people take kindly towards Motor Wheeling.

Any dealer may prove this for himself.

Try the Smith Motor Wheel on any town or country street, boulevard or highway. You will find the answer.

One hundred automobiles may pass—many of them the latest models and high-priced cars—but they attract comparatively little attention from the passerby.

Then let one Smith Motor Wheel chug along the same street. The spunky little motor will attract *hundreds*.

People will stop to look. They will turn about and follow the course of the novel device. And it will hold attentlon wherever it appears. That's the kind of advertising which Smith Motor Wheel dealers find their greatest asset in business. And it's the kind which brings in a multitude of inquires—all the kind which are readily turned into sales.

For when a prospect learns that the Smith Motor Wheel attaches to *any* bicycle in five minutes, when he learns its simplicity and all the joy of new travel that it will bring—the sale is half made. A short demonstration-ride finishes the good work.

Being Motor-Wheeling headquarters means big extra sales for dealers, besides, in new bicycle, tires and accessories. For the Smith Motor Wheel is the busiest business booster which dealers have ever found.

MOTOR WHEEL DIVISION

VIM APPOINTS SEVENTEEN NEW DAYTON MOTOR BICYCLE AGENTS

BUFFALO, N. Y., April 22.—The Vim Cycle and Hardware Company, distributor of the Dayton Motor bicycle, announces the appointment of the following new agents: Coleman Motorcycle Shop, Akron, O.; Towner Brothers, Rochester, N. Y.; A. H. McGraw, Syracuse, N. Y.; Quick & Thomas Company, Auburn, N. Y.; Orange County Motor Supply Company, Middletown, N. Y.; E. C. Need, Cortlandt, N. Y.; United Repairs Shop, Dubois, Pa.; John W. White, Jamestown, Pa.; Leonard Asken, Falconer, N. Y.; F. R. Campbell, Kane, Pa.; A. O. Anderson, Warren, Pa.; R. C. Searls, Oakfield, N. Y.; J. M. Antres, Jr., Elmira, N. Y.; Joseph F. Coupe, Utica, N. Y.; Lang's Hardware Store, Olean, N. Y.; Barter & Company, Watertown, N. Y., and F. W. Partiss, Bradford, Pa.

LYNN, MASS.

W. J. WALKER, of Boston, has acquired the business and store of the Lynn Motor Cycle Co., and has opened a branch in this city for the sales of Harley-Davidson products. The Lynn company formerly sold the Silent Gray and the Pope lines.

The local branch of the Walker establishment started in by selling four Harley-Davidsons to the Lynn police department, with more to come. The branch is managed by R. W. Haskell, formerly with the Boston store.

KANSAS CITY, MO.

W. BELL, handling the Pope in this city, has been obliged to sell his demonstrators as fast as he gets them from the factory, in order to meet the increasing demand for Pope machines. "It's a hard matter to keep a Model H on the salesfloor" says Bell, "for they all fall for the little belt driver and I sell it and then wait for the next. After that comes, I repeat the performance."

NEWBY BROTHERS, handling the Henderson, Thor and Flying Merkel, recently moved into their new quarters at Grand Avenue and 24th street. The agency is now better equipped and better located than ever before. Orville Newby sold 5 Hendersons during the past two weeks in the new location.

BROOKLYN, N. Y.

PROPRIETOR RANKIN, of the Rankin Motorcycle Shop, at 270 Chauncey street, has taken a sub-agency for the Reading Standard from Distributor A. H. Paterson. Rankin has received his demonstrator and started a vigorous campaign to popularize the powerful brown machines in this city.

TACOMA, WASH.

WASHINGTON CYCLE & SUPPLY CO., which has the distributing rights for Dayton Motorcycles, the Motor Bicycle and the Dayton bicycles, is well pleased with the prospects for the front-drive machine. During the last three weeks, the company has placed 12 agencies in the State of Washington.

The Fuller Cycle & Supply Company retails the Dayton Motor Bicycle in this city.

ELIZABETH, PA.

C. F. WINTERBURN has taken the agency for the Dayton Motor Bicycle for this city and vicinity. He signed up directly with the Davis Sewing Machine Co., of Dayton, O.

Stewart

Motorcycle

Speedometer $10

The Call of the Open Road

A good motorcycle fills that desire to spin out into the open road, through highways and byways better than any other vehicle.

On your motorcycle you are master of distance and independent of main thoroughfares of traffic. Wherever you want to go it will take you.

But half the fun of riding a motorcycle whether it's a real speed boy or a lightweight is in knowing how far and how fast you are going.

Put a Stewart Motorcycle Speedometer ($10 complete) on your motorcycle and you'll know every moment by glancing at the big plain figures in front of your eyes just exactly "how far" and "how fast."

With a Stewart aboard there's no chance of arrest for untimely speeding—no quibbling over tire mileage—no guessing as to consumption of gas and oil.

For safety you must have a real Warning Signal—the Stewart. Only $3.50

In present day traffic conditions you dare not trust your life to an old fashioned bulb horn—a weak little buzzer or your own voice.

Install these standard Stewart Products today and make your motorcycle as complete as an automobile.

No. 3 MOTORCYCLE PEDAL

No. 3 STANDARD MOTORCYCLE PEDALS

When you buy a motorcycle, make sure that it is equipped with STANDARD PEDALS.

Most manufacturers have reasoned out that "STANDARD" EQUIPMENT means increased value on the machine.

STANDARD PEDALS are big, roomy, soft and minimize the shocks. Deeply corrugated to insure positive foot grip. Insist upon STANDARD EQUIPMENT.

Our products comprise:

Diamond "E" trade mark brand Spokes and Nipples for Bicycles, Motorcycles, Tricycles, Velocipedes, Invalid Chairs, Sulkies, Carriages, Cyclecars and Automobiles. Pedals for Bicycles, Tricycles, Velocipedes and Motorcycles. Toe Clips for Bicycle Pedals. Emergency Axles for Pedals. Screw Machine Products.

The Standard Company

TORRINGTON, CONN.

We are boosters for "One Million Bicycles in 1916"

WASHINGTON, D. C.

AUGUST ZIMMERMAN, handling the Harley-Davidson, is feeling the effects of the boom in sales caused by the arrival of real Spring weather in this city. He reports that he has already disposed of more machines since January first than during the entire 1915 season and expects to more than double last year's sales.

F. L. LEISHAAR, handling the Indian, is getting rid of them quickly. One day last week he received four Powerplus twins by express and two more by freight, and delivered all six before nightfall to purchasers.

HOWARD A. FRENCH & CO., local Indian branch, has disposed of its first carload of 1916 Indians and is awaiting the second shipment of equal size. The bicycle business is increasing by leaps and bounds.

HARRY F. SEAMARK, local representative for the Thor, Flying Merkel and Emblem, as well as the Miami Power Bicycle, has sold twelve of the little four-strokers so far this month, and has orders for Flying Merkels for May first delivery.

HAVERFORD CYCLE CO., handling the Excelsior, has received the first shipment of Series 17 models and disposed of the lot. "Sales of the 17-3 and 17-3E are measured only by ability to make deliveries," says the Haverford manager.

OAKLAND, CAL.

C. F. SOLOMONSON, handling the Thor in this city, reports the sale of more machines up to April 1, this year, than for the entire 1915 season. He attributes this partly to the fact that he has been able to get machines as he needed them and also to the generally-improved service which the Thor people are offering in this district.

CINCINNATI, O.

THE BRENDAMOUR SPORTING GOODS CO. has added to its line of cycles and motorcycles by taking on the Cyclemotor. The first Series 17 Excelsior which was received went the day after it was displayed, and the same thing happened to the next two. The Brendamour firm has also taken on the Cygnet Rear Car and is now demonstrating a van and pleasure model.

LA CROSSE, WIS.

J. E. SMITH, a well known cycle man, has taken the sales rights for the Dayton Motor Bicycle for this city and vicinity. The contract was obtained by the Milwaukee Sycle Supply & Sales Co., of Milwaukee, distributors.

ELKINS, N. C.

THE SURRY HARDWARE CO. has ordered a Dayton Motor Bicycle demonstrator from the Davis Sewing Machine Co., of Dayton, O. The firm signed up with W. H. Grover, of Norfolk, Va., holding distribution rights for the front-wheel drive machine.

TOMAH, WIS.

CENTRAL HARDWARE CO, of this city, has taken the agency for the Dayton Motor Bicycle for 1916. The contract was signed by the Milwaukee Sycle Supply & Sales Co., of Milwaukee, Dayton distributors.

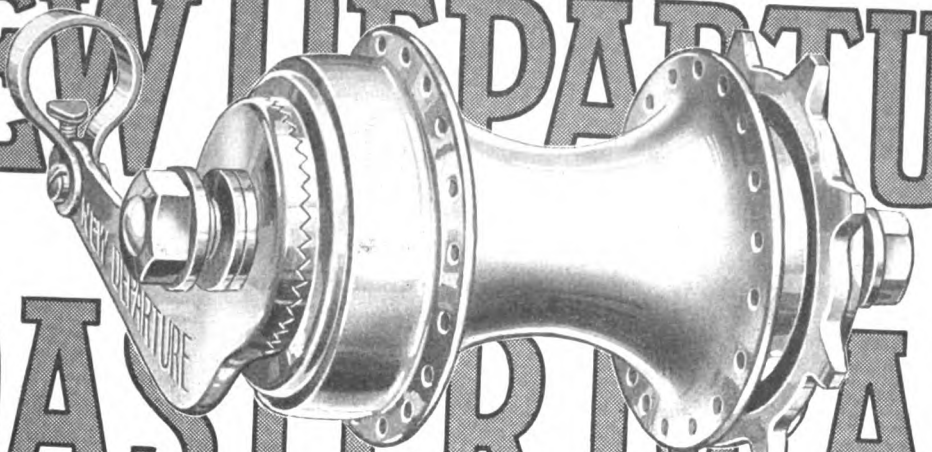
THE NEW DEPARTURE COASTER BRAKE



The Brake that will sell your share of the Million Bicycles in 1916

Write for The New Departure Catalog

—it tells you all about the New Departure Coaster Brake, New Departure Hubs, Bells, Cyclometer and Sundries.

It tells you also of our plans to help the dealer.

Every Dealer should have a copy.

The New Departure is the brake that brought the bike back. It still holds the place it then made for itself in the affections of the cyclist.

It did this by sheer force of merit.

It rounds out the utility, the sureness, the beauty, the efficiency of the bicycle of today, as completely as it did the bicycle of yesterday.

It is built for long life. Its few parts respond to the will of the rider with a certainty that we guarantee.

Let the New Departure be your biggest talking point this year, let it prove itself to you as an unequalled booster of bicycle sales, as it has to thousands of dealers in every part of the civilized world.

The NEW DEPARTURE MFG. CO., Bristol, Conn., U.S.A.

R-S

Means Real Service

As a hill climber it has no equal—it is almost impossible to stall this machine. Watch the R-S Rider and see how easy he rides up steep grades—grades that are known to stall almost every other mount.

The Mechanical perfection—exceptionally high grade material and improved design make the R-S the best and most desirable of all Motorcycles. Among experts, it is recognized as a peer without an equal—It is without a doubt the World's Master Motorcycle.

EACH MAN IN A STORE SHOULD BE ABLE TO SELL MOTORCYCLES

By HARRY B. COHEN

AS an evidence of the mistaken idea held by a good many motorcycle dealers that only one or two persons connected with the establishment should be well informed about the good points of the machine handled, the experience of a Government departmental clerk will be interesting. This man, knowing nothing about motorcycles, went shopping for one recently and visited quite a number of dealers' places, seeking information regarding the machine and the service to be rendered to the customer. He had previously invited bids from the agents visited, the condition of the bids being that adequate service was to be rendered after the delivery of the motorcycle.

At the first agency he visited, the manager was sick at the time and his assistant was out making a demonstration. The remainder of the employees could not answer his questions and he left. He met with a similar experience at a second agency. At the third place he was met by the sales-manager of the motorcycle department and given a cheerful and thorough demonstration of the machine and shown through the service department of the agency. A complete description of the essential details of the machine was given by the aid of a parts-board.

The bid which the prospect had received for the machine handled by the third agency was considerably higher than those of the first two agencies visited, but the purchase was made from the third agency on the ground that he could secure better service.

This is just an instance of what might have been done by the other two agencies had they had the staff trained to care for prospects—trained to answer all questions and to co-operate with one another. Of course there has got to be a head to every business, but this idea should not be carried to such an extreme that all hands become paralyzed as soon as the head is away from the place. If the men had been informed as to what terms the visitor might expect, they would have probably been able to land the sale.

DAYTON, O.

THE B. B. L. COMPANY, of this city, is making a strong play for public favor with the Dayton Motor Bicycle, for which it holds the local agency. The firm has already sold a number of machines, all of which have proved highly satisfactory to their owners. The company has a big card just now in the high price of gasoline and its argument that the little Dayton will run 100 miles to the gallon is one of the best that it has.

BUFFALO, N. Y.

GEORGE HAIER, formerly chief accountant for a big Buffalo firm, has joined the sales staff of Herman L. Peters, Western New York agent for the Harley-Davidson. He will travel through Buffalo and adjacent territory for Peters.

Haier is one of Buffalo's pioneer riders and has been an active and popular member of the Buffalo M. C. since its start. He combines selling, accounting and riding experience in his make-up and cannot help be successful.

SEEBER & HOFFHEINS, Buffalo agents for Henderson and Thor motorcycles, have placed an order for 100 Pierce bicycles with the Pierce factory in this city. While motorcycle sales have been by no means behind hand, sales of bicycles are showing a decided increase.

Prest-O-Lite For Motorcycles

The Choice of Experienced Riders

Everywhere the experienced motorcyclist uses Prest-O-Lite. Notice the mounts shown below—25 Excelsior Autocycles, bought by the State of Wisconsin for the use of their Conservation Commission. All are equipped with Prest-O-Lite.

Prest-O-Lite is used by more riders than all other systems combined. You can get it on any motorcycle you buy.

Prest-O-Lite gives perfect riding light; is simple and trouble-proof, and not injured by jolts and bumps. Prest-O-Lite will not fail in emergencies—it's as sturdy as your motorcycle itself.

From a money standpoint, Prest-O-Lite costs less to buy and less to use. It needs no attention you yourself cannot give easily and inexpensively. An attractive combination is "Prest-O-Lite, a lamp and a good mechanical horn." Ask your dealer about it.

Dealers: Start the rider right with Prest-O-Lite. Every equipment combination you sell like the above, makes a friend. You give the rider the most for his money in brilliancy, reliability and economy.

Send today for one of the most profitable and satisfactory offers a dealer can make. Details on request.

"149"

The Peer of Motorcycle Chains

Accurate Every part is micrometer gauged for accuracy and pitch and each chain is carefully inspected and tested before leaving the factory.

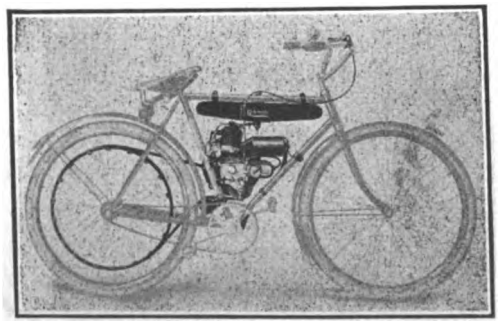
Strong The breaking strength is several times what is needed for actual service. This provides a good factor of safety.

Durable No. 149 will give steady, day after day service when operated under anything like normal service conditions.

Diamond Chain & Mfg. Co.
Indianapolis, Indiana

High Speed

in a gas engine means perfect balance of parts, resulting in total absence of vibration. It means smooth, even running with plenty of reserve power, and instant acceleration. Combined with the **two-stroke** principle it affords the highest achievement possible to engineering skill, the perfect motor attachment for bicycles.



Weight Properly Distributed

Interested dealers should write at once for further particulars and our paying proposition.

CYCLEMOTOR CORPORATION

Arlington Bldg. **Rochester, N. Y.**

1916 IS BIG MOTORCYCLE YEAR, SAYS BUFFALO SILENT GRAY DEALER

BUFFALO, N. Y.—Otto H. Peters, manager of the motorcycle department for H. L. Peters, the Buffalo Harley-Davidson man, figures 1916 as one of the biggest and best years in the history of the Peters' business. "In order to keep pace with things," says Otto, "I have been down to the store at 8 a. m. each day and remained until nearly midnight every day for the last two months. Our business, taking into consideration the repair department, sales department, and the making of Bison brackets, has swelled to vast proportions. This year, to date, we have sold 172 machines as well as 72 sidecars and every second-hand machine we had on hand.

"From the big sales which we have made this year, I am convinced that the Harley-Davidson is becoming more popular and is every day creating a greater demand for itself than at any time in its history. Last week, we delivered seven electrically-equipped twins to the Buffalo police department. Thus far, we have supplied the majority of motorcycles used by the local police squad."

PATERSON, N. J.

W. EDWARD MACDOUGALL CO., Harley-Davidson agent in this city, is moving to 131 Broadway from Washington and Van Houten streets, its former location. The new place is much more spacious and has better accommodations than the Washington agency.

Manager Elmer G. Havenstrite who came to this city over a year ago, admitted that he settled in too small a place at the start, but by making the change he will profit exceedingly. The Broadway location is on the main thoroughfare between New York and this city.

FRED VASTANO, formerly repairman for the Excelsior Auto Cycle Co., of this city, will shortly open a store at 392 Union avenue, as a sub-agency of the MacDougall Co., distributing the Silent Gray in this city. Vastano will handle the same line of motorcycles and will carry a complete stock of accessories and repairs.

ANAHEIM, CAL.

HARRY BOON is continuing to have splendid sales of motorcycles and lots of business in the repair shop. Until about a month ago, Boon's establishment was run by the firm of Minyard & Boon, but Minyard retired to go into another line.

MARION, IND.

MOTORCYCLE DEALERS in this city are experiencing the opening of the Spring season with a vengeance. There are three at present, and all are kept busy in demonstrating. They hardly get a chance to uncrate the machines before they go to customers.

WASHINGTON, D. C.

F. L. LEISHAAR, handling the Indian in this city, has just sold five of the Powerplus models to Hecht & Company, large department store owners, for the use of their investigators and collectors. Last year, the Hechts bought two Indians for their credit department men, replacing two automobiles with the red twins. The results shown by these two machines have caused the new order for five, to mount all collectors and investigators.

HARRIS
TRADE MARK REG. U.S. PAT. OFF.
OILS
AND
GREASES

Make a Good Motorcycle Better

Because they increase its efficiency. Motorcycles are especially susceptible to poor lubrication—likewise, they quickly respond to good treatment. Cheap oils not only give poor results, but injure your machine. Special care is taken in making our motorcycle oils, and the same high standard of quality found in our other products is maintained. Only the *best* crude stock is used, and every process of its manufacture is carefully tended by experts.

Treat your motorcycle right—lubricate it with HARRIS OILS—it will fully repay you in service.

"A Little Goes a Long Way And Every Drop Counts"

A. W. HARRIS OIL CO.
326 S. Water St., Providence, R. I.
Branch: 143 No. Wabash Ave., Chicago, Ill.

INDIANAPOLIS, IND.

LIGHTWEIGHT motorcycles are going well in this city, these days, practically all the local dealers having sold several. The Merz Motor Company has just placed one of the Excelsior lightweights in the service department of the Indiana Inspection Bureau, to be used by inspectors in their work through the streets of Indianapolis and its suburbs. Several more lightweights are to be installed if the little fellows stand up under the service they will be called upon to do.

THE DOUGLAS & TALBOTT COMPANY, handling the Cleveland, has sold several of the worm-and-chain drive two-strokers. It uses one in its service department, also.

G. H. WESTING CO., has sold all the Featherweight Indians it has been able to get to date. Several of the machines have gone to riders who work at the local post office for delivery service. Orders for several more Featherweights are on the books of the company and will be filled as soon as the next shipment arrives.

CARR SALES COMPANY, handling the Dayton Motor Bicycle, is busy showing the little front-drive four-stroker to agents in Indiana, many of whom are visiting Indianapolis for the purpose.

PROVIDENCE, R. I.

B. A. SWENSON, the Indian Man, has sold the Providence *Journal* two more Indians with vans attached for delivery purposes. He also sold Reverend Father Joseph Sauteux, of one of the Woonsocket congregations, a Featherweight for use in making parochial calls.

The following firms have added 1916 Powerplus models to their equipment: Newport Telephone Company, Narragansett Pier Telephone Company, Narragansett Electric Lighting Company, Providence Gas Company, Providence Telephone Company, Pawtucket Gas Company, and Pawtucket Telephone Company. The city of Providence is now figuring on two machines for use in the Highway department.

EGG HARBOR, N. J.

OSWALD BOTT has got his store ready for the Spring season, and has ordered a large shipment of Pierce and other bicycles as a preliminary. Bott has an agency for the Indian motorcycle and line of bicycles, also.

PASADENA, CAL.

H. A. GOULD, who represents the Thor in Pasadena, made one of his first sales of a V-6 model to a lady rider. In this city, says Gould, the ladies are taking a great interest in light motorcycles and the 6 horsepower Thor twin seems to fill the bill for them, judging by their comments.

PULLMAN, WASH.

THE PULLMAN TIRE SHOP, which recently took the agency for the Thor, sold its first two machines within six hours after arrival. The next day, the firm wired a repeat order to the San Francisco branch of the Aurora Automatic Machinery Company.

HAYWARD, CAL.

S. C. EDWARDS has bought the stock, good will and fixtures of Frank Bodoures, of this city. Edwards has the Indian agency here.

PRIZE WINNERS IN DRESS-UP PARADE

Ray Day, Indian Dealer, and Charles Sanders in Full Dress Clothes After Riding in Celebration Display in Tacoma, Wash. Rain Necessitated the Use of an Umbrella at End of Trip

ELLSWORTH, KAS.

PAUL WARNER, Indian agent in this city, has sold 25 Powerplus models so far and 6 Featherweights. His repair business is very brisk and there is a considerable demand for accessories. "Motorcycle sales are on the boom now," says Warner, "and they will boom well into the Summer."

SAN FRANCISCO, CAL.

MAGINNI & PERKINS, handling the Harley-Davidson in this city, have made a number of commercial sales recently and the latest has been to the F. J. Heinze Shoe Hospital Company. This company operates three cobbling shops and shoes stores in the Mission District. The sale was of a Harley-Davidson van combination.

COLUMBUS, O.

THE BELT MOTOR COMPANY, Indian agent in this city, has just sold the local office of the Fleishman Company two Featherweight two-stroke models to be used in conducting a coupon-saving contest. The two machines will be awarded as prizes in connection with the giving away of several ponies.

LEWISTON, PA.

J. RALPH McCOOK, Wigwam representative in this city, has sold nine of the Powerplus and Featherweight models during the past month. He has delivered five Powerplus twins of this lot, as well as one sidecar. Business is so good that McCook has taken on an assistant and will keep open day and night.

READING, PA.

HETTINGER BROTHERS, dealers in motorcycles and bicycles, have taken on the Dayton line of motorcycles for 1916. They report a fine demand for both the power and pedal two-wheelers.

LIFE OF KRAMER

(CONTINUED FROM PAGE 30)

Then, to top off the afternoon of strenous endeavor, Kramer returned to the track for the five-mile open and this time he defeated everyone, American and foreigner, by finishing first after a good ride.

On Sunday, September 16, Kramer vanquished Jackie Clark in two straight heats at three-quarters of a mile, and a few weeks later defeated Perchiot in straight heats of a match race.

On Saturday, December 7, Kramer won the indoor professional championship by defeating Gordon Walker and Joe Fogler at Madison Square Garden. Kramer competed in the six-day race with Frank Moran and finished seventh. On the last day of the long grind, at 1:19 in the morning, while Moran was on the track, the team was lapped. The judges accused Moran of throwing himself deliberately off his wheel.

(To be continued)

BUTLER COUNTY MEET ON JULY 4

HAMILTON, O.—Four events are to be run off at the Butler County Fair Grounds, this city, on July 4, at the meet of the Hamilton M. C. in connection with the annual outdoor entertainment of Butler Aerie, F. O. E. The first event is for the five-mile amateur championship of Butler County, and the other three are respectively 5, 10 and 25-mile pro. races, for which large money prizes are offered. Entries for these races will close July 1, and application should be made to the Hamilton M. C., at Hamilton, O.

SPRINGFIELD BALL FANS IN MOTORCYCLE PARADE

(CONTINUED FROM PAGE 13)

No difficulty was experienced in holding the motors to a reasonable parade pace of about ten miles an hour, which with the length of the parade, gave all the spectators an eye-full. The parade leaving Cooley's went south through Main street, detouring around Court Square and back up Main street to the ball park. Old timers along the street thought it was as good as a circus parade. The ballplayers enjoyed the ride.

J. H. O'Brien was chief marshal with H. H. Noyes as first assistant and the following riders contributed their machines and services: Z. Godin, Eugene Madden, William Gurley, Bert Barrows, A. G. Gruendler, Richard Malone, Lester Miller, Eugene Pomponio, G. F. Dutton, Ted Driscoll, Baxter Potter, Thomas Crombie, Charles Cooley, Carl Modig, Michael Johnson, Bert Edgerton, Gene Walker, Fred Corbin, Emil Thereault, Donald Kain, Frank Record and C. V. Pendleton, Jr., of Norwich, Conn.

GARDEN CITY WHEELMEN WIN RELAY

(CONTINUED FROM PAGE 27)

Two gold medals were hung up for this event by Walter Hammitt. W. Thompson won the sprint easily, while C. Hershey was second and R. Johnson, N. C. W., third. Summaries:

Relay race—First heat—Won by W. Cassilles (S. W.); J. Stalker (N. C. W.), second; R. Rondoni (C. C. W.), third. Time—15:47⅘.

Second heat—Won by E. Shinglee (S. W.); W. Hafley (G. C. W.), second; R. Gillette (N. C. W.), third. Time—16:16.

Third heat—Won by M. Almerson (S. W.); A. Slocks (N. C. W.), second; W. McGettigen, third. Time—15:01.

Fourth heat—Won by A. Sterner (S. W.); J. Bell (N. C. W.), second; O. Wink (G. C. W.), third. Time—14:28.

Fifth heat—Won by M. Cassilles (S. W.); H. Warden (G. C. W.), second; M. Bernberger (N. C. W.), third. Time—14:37.

Sixth heat—Won by C. Hershey (G. C. W.); W. Thompson, second; H. Horner (S. W.), third. Time—15:05.

One mile sprint—Won by W. Thompson (N. C. W.); C. Hershey (G. C. W.), second; R. Johnson (N. C. W.), third. Time—2:28.

MANY LIGHTWEIGHTS ARE OUT

Kansas City., Mo., April 25.—Sunday trips and week ends in the small towns about Kansas City have begun in fine style. One of the most noticeable features of these trips is the number of lightweights that are seen on the road. It is a common sight to see suburban dwellers riding their lightweight machines to and from the city and it is obvious that their friends, the "strap-hangers," have also taken notice.

DECIDE RUN DETAILS

WHEELING, W. Va.—The regular weekly meeting of the Wheeling M. C. was held on April 25, and plans for the annual endurance run to Bedford, Pa., were approved. It was also decided to have the Uniontown, Pa., run in two sections on May 7, one section to be for old riders and the other for new riders and sidecars.

Avoid the dangers of riding with a dim light at night, by

using a 20th Century *lamp*

Their clear rays add much to the safety of bicycling and motorcycling. Neat in appearance. Easy to care for. Reasonable in price.

THE BEST DRIVE SPARTAN FOR LIGHTWEIGHTS

Mr. Dealer—Be Particular In Your Specifications

When selecting the Lightweight you are going to add to your selling line this year, you naturally will select one having belt transmission—belt drive because it will be free from numerous additional parts, and have that much desired appearance of simplicity.

However, there is one point you must consider carefully. It is the kind of belt supplied with your Lightweight. It is obvious that belt transmission is just the drive for Lightweights, but belt transmission is made or marred by the kind of belt used.

Therefore, to be sure of your Lightweight's success, see that its silky smooth belt transmission is assured long life and positiveness by giving attention to the kind of belt supplied —an ordinary belt won't satisfy your type of knowledge, your kind of customer. You only will be satisfied if your Lightweight is fitted with the long-lived moisture-proof

SPARTAN BELT

"I Specify Morrow Brakes on all Bicycles that I buy"

"I find that the Morrow is the easiest running, most positive brake on the Market"

Cordele, Ga.

Eclipse Machine Company
Elmira, N. Y.

Gentlemen:

I am mailing you under separate cover a few MORROW Coaster Brake parts for which please ship new parts and oblige.

I specify Morrow Coaster Brakes on all bicycles I buy, and I use them altogether in repair line.

I have been in the bicycle business about twelve years and have used all kinds of coaster brakes, and I find that the MORROW is the easiest running, most positive working brake on the market; in applying the brake it don't hold with a jerk as most other brakes do, but it takes a firm hold and with very little pressure on the pedal it will stop the wheel instantly.

Trusting that you will ship me the new parts at once, I remain,

Yours truly,

G. L. RILES.

Sufficiency!

PREPAREDNESS

United States 'Chain' Tread Motorcycle Tires stand for preparedness—preparedness against skidding—preparedness for long, faithful, efficient service.

That is why so many of the motorcycles now in use in the United States Army and in the organized militia are equipped with 'Chain' Treads.

For long, hard service there is no better tire made.

See that your motorcycle is equipped with 'Chain' Treads, and prepare to receive thorough tire satisfaction.

MOTORCYCLE RIOT GUN OUTFITS SUGGESTED FOR NEW YORK POLICE

Member of Metropolitan Motor Squad Has Completed Design of a Combination Intended for Everyday Use in Department With Van or Sidecar and for Machine Gun Service in an Emergency

NEW YORK, May 10.—Preparedness, with a capital P, has struck the New York City Police Department, and one of the brand new ideas that has been called to the attention of the officials within the last few days involves the use of a specially-equipped motorcycle sidecar body to carry a machine gun for riot service. The details of the outfit have been carefully worked out by a member of the New York motorcycle police squad, who is prepared to superintend the designing of the combination if the authorities give their O. K.

The striking illustration which heads this page shows how the proposed outfit would appear in action. It will be noted that the shield on the sidecar is intended to safeguard the gun-operator against missiles thrown from upper windows and roofs, the experience of the police having demonstrated that those are the greatest sources of danger. In this connection, it should also be stated that the machine gun is to be capable of firing almost vertically, this high-angle arrangement enabling the operator to clear rioters from windows and roofs.

It is the intention to use the motorcycle combinations in everyday service in the department, with either regulation sidecars or vans, and to have the machine guns stored at a central point where they could be quickly attached with the shields in an emergency. Motorcycle policemen who have had the matter brought to their attention are of the opinion that the machine gun oufits would prove invaluable to the department in the event of an uprising in the city following a possible declaration of war, or a serious disturbance of any other character. They argue that the mere appearance of ten or a dozen machine gun motorcycle outfits would quell almost any riot, and that it would not be the intention to open fire except under the most extreme conditions. The remarkable mobility of the motorcycle which would enable a handful of officers to man the machine gun combinations in a jiffy and reach the scene of an outbreak before there had been serious loss of life is the feature that naturally makes the strongest appeal to police advocates of the idea.

It is pretty well known, even outside police circles, that the New York City force has for months past been going through a special "Preparedness" campaign and that the department could be placed on practically a military basis on a moment's notice. This determination to be ready for any emergency has led to numerous suggestions for equipping the men more effectually, and the motorcycle machine gun idea is one of the most practical and at the same time sensational propositions that has come to light.

Police Commissioner Woods is strongly in favor of increasing the New York motorcycle police squad, owing to the excellent results obtained through the two-wheelers, but he has had nothing to say concerning the machine gun phase of the matter as yet.

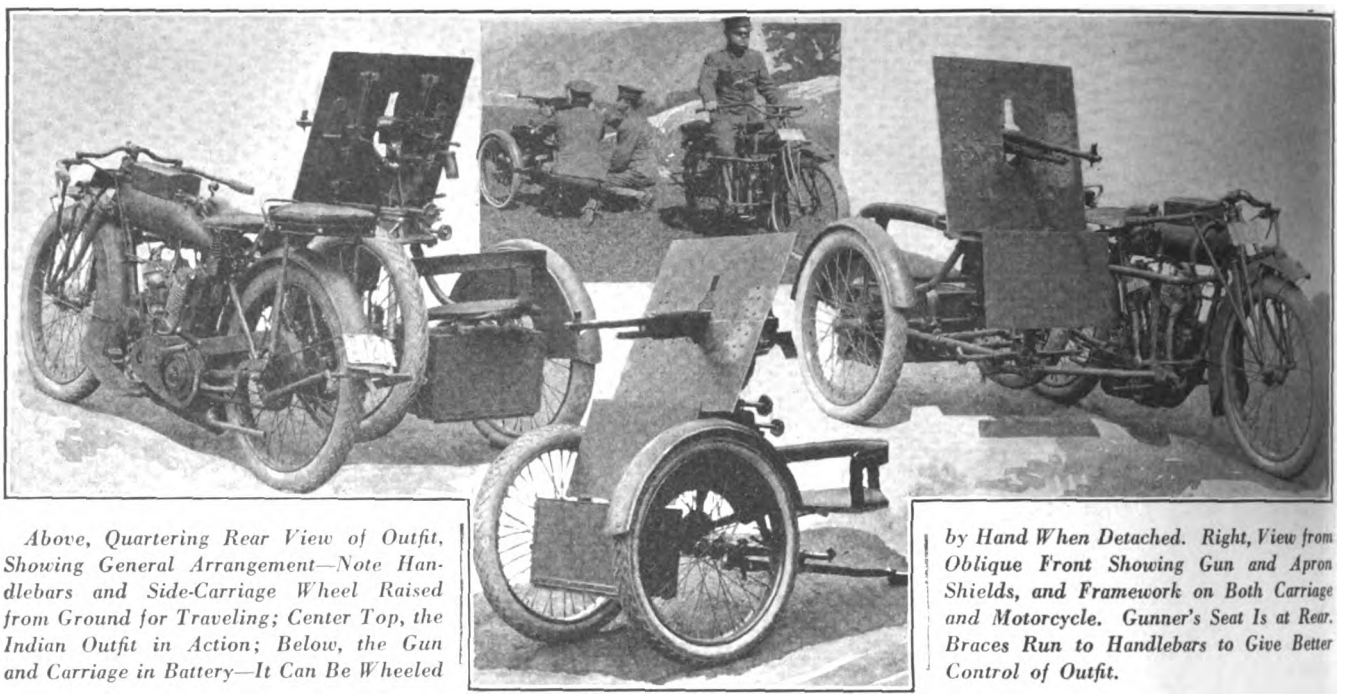
BRAND NEW INDIAN GUN OUTFIT IS UNIQUE

Carriage Is Fitted with Two Wheels Which Remain in Position for Action and When Traveling—Special Frame on Motorcycle for Attaching, With Quick Action Connections



Above, Quartering Rear View of Outfit, Showing General Arrangement—Note Handlebars and Side-Carriage Wheel Raised from Ground for Traveling; Center Top, the Indian Outfit in Action; Below, the Gun and Carriage in Battery—It Can Be Wheeled by Hand When Detached. Right, View from Oblique Front Showing Gun and Apron Shields, and Framework on Both Carriage and Motorcycle. Gunner's Seat Is at Rear. Braces Run to Handlebars to Give Better Control of Outfit.

SPRINGFIELD, Mass., May 8.—Extreme mobility both when in action and when attached to the motorcycle is a feature of the machine gun carriage just put out by the Hendee Mfg. Co., maker of Indian motorcycles, from its big works in this city. The mobility of piece and carriage when detached from its motorcycle is obtained by the use of side wheels, both of which remain in place when the carriage is again "limbered" to the motorcycle. This is a distinctly new feature in both carriage and military construction, and its operation in service will be watched with interest by all military men.

The Hendee machine gun carriage consists, briefly, of a two-wheeled frame on which is fitted a tripod. There is a tubular portion of this frame which extends forward when the carriage is attached to the motorcycle, and this carries a gunner's seat on a curved piece of flat section. Attached to the narrowed front end of this framework is a tubular trail ending in a blunt spade, somewhat on the lines of that used in field pieces. This trail forms one of the connections to a framework on the motorcycle for attaching the carriage.

Frame on Motorcycle

To the motorcycle on the right side is fitted a tubular frame, leading horizontally from the diagonal tube below the steering head cluster to the right and then to the rear. At a point opposite the rider's knee this framework inclines downward and is attached to the rear construction of the Indian motorcycle, which, by the way, has a rigid frame. A second and lower frame attaches to the diagonal tube and extends to the right, terminating in a knob. This is attached to and braced by a special forging to the upper frame and to it is attached by a special clamp the trail for the carriage.

The carriage chassis is designed to attach to this on its left side and the carriage when on the road is transported with its left-hand wheel in the air and its right-hand wheel doing duty as a regular sidecar wheel. This is an innovation in carriage construction, and has great advantages in enabling the gun to be brought into action over a considerable distance by hand as soon as it is detached from the motorcycle.

Carriage Construction

To return to the carriage. On the upper carriage is a pedestal carrying a rifle-calibre machine gun, with means of traversing and elevating it, these movements being controlled by hand-wheels. There is a gun shield fitted, although this can be folded on the upper carriage and swung away from the gun, thus giving the crew unimpeded view. There is an apron shield to protect the tripod and pedestal, as well as the gunner, when in his seat.

Below the gunner's seat when the carriage is limbered is a steel chest for ammunition. At each end of the chassis, at the center of the end member, is a square socket bracket. In traveling position the gunner's seat and its arm fits into the bracket on the main axle and the apron shield into the socket on the other end member. When in action the gunner's seat and apron shield are exchanged in their sockets. Clamps hold the parts when in place. There is a steel mudguard over the right-hand wheel of the carriage, this guard having a valance in one piece.

Motorcycle Details

The motorcycle, a Powerplus, with rigid frame, is fitted with a tandem attachment and foot rests for the gunner. The seating arrangement of the whole apparatus enables three to be carried—driver, gunner on tandem and gunner on carriage seat. The handlebars are of the semi-T. T. type, braced to the axle ends at each side. Finish is standard army color all over. All wheels are the same size and carry the same profile of tire.

With the new Hendee carriage, the gun has universal fire when in battery, as it has a wide traverse on the pedestal, and the whole carriage can be moved. When limbered it can be fired without the gun shield in a wide arc and with the shield up in over 180 degrees from front to rear in a clockwise direction. The shield arrangement protects those serving the piece from rifle fire. All clamps on carriage and connections are made for quick detachment or attachment, so that no time shall be lost in going into action or limbering for travel. Details of the caisson have not as yet been announced from the Wigwam.

LISTS OF NEW YORK STATE RIDERS NOW OBTAINABLE

THE attention of manufacturers, jobbers and dealers who are doing business in New York State is called to the advertisement, elsewhere in this issue, of the Capitol Auto List Company, Room 233, Capitol, Albany, N. Y. This concern makes a business of compiling automobile and motorcycle lists. In view of the fact that the New York State motorcycle registration law went into effect only recently, it was impossible until now to secure the names and addresses of New York motorcyclists.

Lists, containing any number of names desired, or of riders in any particular section of the State, or of any special make of machine, can now be obtained at a low price from the Capitol Auto List Company. Dealers will find the lists useful for circularizing prospects in their territory, for example, in soliciting their repair and accessory business.

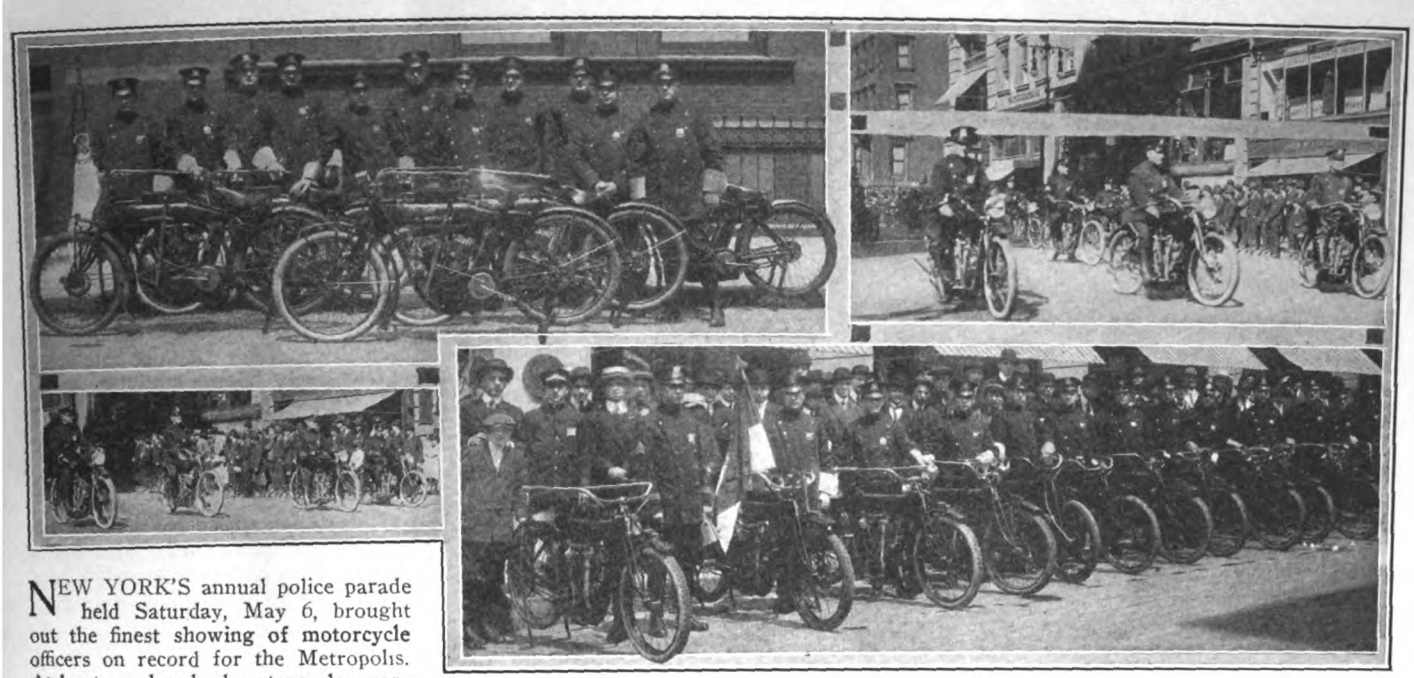
NEW YORK'S MOTOR COPS IN ANNUAL PARADE

Motorcycle Division Was One of the Most Interesting and Impressive Features of Big Police Demonstration; Skill of Riders Evoked Commendation from Department Officials



NEW YORK'S annual police parade held Saturday, May 6, brought out the finest showing of motorcycle officers on record for the Metropolis. At least one hundred motorcycles were in line at various stages of the program, and the skill of the riders in jumping their mounts into action like a flash or ticking along at a walking pace, as the circumstances required, won them the unqualified commendation of the department officials. The accompanying photographs, taken along the line of march and at the starting point, give only a faint idea of the success of the motorcycle end of the program.

New Yorkers are justly proud of their motorcycle police, and their feeling is shared by the men themselves. Enthusiastic applause of this branch was given by thousands of spectators along the streets.

SOLVE INSTALMENT PROBLEM FOR INDIAN DEALERS

Indian Motorcycle Guaranty Co. Has Been Formed to Finance Time-Payment Sales; Hendee Mfg. Co. and Edwards-Crist Mfg. Co. Subscribe Equally to Capital Stock of $200,000

CHICAGO, Ill., May 9.—With a paid up capital stock of $200,000, the Indian Motorcycle Guaranty Co. has been organized, and incorporated under the laws of Illinois, to finance Indian motorcycle dealers in selling new and used machines on the time payment basis. Many dealers have seen opportunities during the last year or two to stimulate their sales by operating on the instalment plan, but have been deterred by lack of ready capital. The Indian Motorcycle Guaranty Co. aims to give these dealers the backing they need and place them in a position to take advantage of every business opportunity that presents itself.

The officers and directors of the company are as follows: President, Jesse Edwards, of the Edwards-Crist Mfg. Co.; vice-president, George M. Hendee, of the Hendee Mfg. Co.; secretary, Richard J. Collins, of the Edwards-Crist Mfg. Co.; treasurer, Frank J. Weschler, of the Hendee Mfg. Co.

Messrs. Hendee and Weschler spent several days in Chicago going over the details of the new proposition with Mr. Edwards, who, by the way, is recognized as the pioneer in the field of motorcycle instalment sales in this country. Mr. Edwards has for some time past been operating a highly satisfactory system of financing instalment sales for Indian dealers in the five states controlled by the Chicago Wigwam, and although Mr. Hendee had considered various instalment methods, including that commonly used in the motor car field, it was finally decided that the Edwards system perfectly met the requirements of the motorcycle industry, and it was formally adopted.

Stock Is Equally Subscribed

The capital stock of the new company was subscribed equally by the Hendee Mfg. Co. and the Edwards-Crist Mfg. Co. The headquarters will be at the Chicago Indian branch, 1255 Michigan avenue.

In order to give the dealers as great an opportunity as possible to benefit by the instalment plan during the current buying season, it was decided to put the proposition into effect at once. Dealers who wish to avail themselves of the financing plan are invited to communicate with the Indian Motorcycle Guaranty Co. at the address given above. The necessary documents and full instructions concerning the proposition will be forwarded promptly, so that instalment sales now in prospect can be put through without further delay.

It is also stated that Indian dealers who have made instalment sales of late are at liberty to apply the new system to those deals as well as to business obtained in the future. In other words, the policy of practical and prompt co-operation for the dealer will be given its broadest application.

The financing plan will entail no additional cost to the dealer. In fact, as soon as the sale is made the agent will receive through his customer and the Indian Motorcycle Guaranty Co. more than the cost of the machine. This will also tend to increase the satisfaction of the purchaser, as it will be possible for him to take the motorcycle away at once if the agent has the mount in stock. If the machine is not in stock the buyer can have one shipped to him immediately by simply forwarding the necessary deposit and the documents properly filled out. The financing company will apply the money it furnishes on the purchase price of the machine.

Mr. Edwards is authority for the statement that about 75 per cent. of the motorcycles sold by his company during the past few years have been put out on the instalment basis, and that the percentage will be much higher this year.

The principals in this new and radical proposition freely predict that it will materially increase the sale of Indians.

EDWARDS-CRIST EXPANDS; KIRK INSTALLED

Former Thor Sales Manager Goes to Head Jobbing Department for Chicago Indian Distributor—Will Reach Out for Country-Wide Trade

CHICAGO, May 9.—Coincident with the announcement that the Edwards-Crist Mfg. Co., Indian distributor for five states, is broadening the scope of its motorcycle and bicycle sundry jobbing department to include the entire country, comes word that H. N. Kirk, formerly sales manager for the Thor, has been selected to manage the sales of the jobbing end of the business. Mr. Kirk's broad experience in the cycle trade, of which he has been part and parcel since the early nineties, including jobbing experience with the Excelsior Supply Co., one of the pioneer cycle jobbers fits him ideally for the post he is about to assume. At the same time, having kept right in touch with the motorcycle dealers through his connections as sales manager of both the Excelsior Motor Mfg. & Supply Co. and the Aurora Automatic Machinery Co., he has an intimate working knowledge of the dealer's needs which cannot fail to stand him in good stead in his new berth.

H. N. Kirk, Now with Edwards-Crist

In connection with the announcement of the broadening of the scope of the jobbing department of the Edwards-Crist Mfg. Co., it is stated that a large and varied stock of both motorcycle and bicycle parts and fitments will be carried on hand at all times, and that rapid deliveries and painstaking service, such as have made the company a factor in the more or less localized jobbing business which it has confined its efforts to in the past, will be extended to include its entire business.

CHAMP. RACE FOR NEW YORK CONVENTION

State F. A. M. Meeting Plans Incorporate Star Pro. Event with $1,000 in Cash as Prize to Winner on July 4

SHEEPSHEAD BAY, N. Y., May 8.—Plans are now being perfected for a meet of the Speedway M. C. on July 2 and 4, in connection with the New York State F. A. M. Convention, which is to be held on those dates. The meet and convention will be held at the big speedway in this city.

For the July 2 date there are seven events on the card. These include a one, two, five, 10 and 25 mile amateur New York championships, a two mile national professional championship and a 10 mile pro. open event. For these prizes to the value of $1,000 will be offered. Aeroplane flights, races between aeroplanes and motorcycles, etc., will also be given during the day.

On July 4 there will be held a 200 mile international championship race for pro. riders. This will have $1,000 in cold cash for the winner, with an additional $1,000 in cash to be divided up for second, third and fourth places. This race will be the biggest race ever pulled off in this country, and will undoubtedly attract the cream of speedsters in this country. In no other major event has $1,000 been offered for first place in motorcycle circles.

Details of the State convention have not yet been given out. Clubs and parties desiring touring information, reservations as to space at the track, etc., should communicate with **Motor Cycle Illustrated.**

FEBRUARY FIGURES SHOW EXPORTS BOOMING

Foreign Sales of Both Motorcycles and Bicycles During Second Month of the Present Year Indicate Marked Increase—February Cycle Imports Also Jump

NOT only did foreign buyers take more of our motorcycles during the month of February, 1916, to the amount of 110 per cent., than during the corresponding month of 1915, but they also paid a higher price for them, the average valuation of the machines shipped during the second month in 1916 being $195, as against the average of $185 for those shipped during that month a year ago. The total number of machines shipped during February of the present year was 1,689, as against 724 for the year previous, and the valuation of the shipments during February of this year reached the enormous total of $329,825, showing an increase of approximately 195 per cent. over the valuation of the shipments made during February of last year, which totaled in value $134,424.

Some Startling Increases

Even more interesting are the figures dealing with the eight months ending with February, as contrasted with the similar period ending with February of last year. During the eight months ending with February just past we shipped to foreign buyers 10,826 motorcycles, valued at $2,125,230. In point of valuation this shows a percentage increase of better than 320 per cent. over the machines shipped during a like period ending with February, 1915, and in point of numbers the percentage increase is just slightly greater than 300 per cent., a fact which also reveals that the average price of the motorcycles shipped out during the eight-month period ending with this year is somewhat higher than the value of the motorcycles shipped last year. During the eight-month period ending with February, 1915, 2,388 separate machines were exported, which totaled in value to $498,643.

Bicycle Exports Encouraging

The figures dealing with the bicycle export trade, while encouraging, are not so pyrotechnic in character. During February of the present year, for instance, we exported bicycles and parts to the value of $64,302, which is just about a 30 per cent. increase over the business done during February of 1915, which totaled $49,598. More inspiring are the figures which cover the totals for the eight-month periods ending, respectively, with February of 1915 and February of 1916. The figures for the first period show that bicycles and parts to the value of $258,254 were exported, as against a valuation of $490,580 placed on the exports for the latter period. The percentage increase is just a bit better than 90 per cent.

The more than ordinarily healthy condition of our domestic cycle market is reflected in the fact that the imports of bicycles and motorcycles during the month of February showed an increase of better than 150 per cent. over the imports of February last year. The valuation of such imports during February, 1916, was $4,602, as against $1,494 for the second month of 1915. That there is no cause, however, for the American manufacturer to take alarm at this increase in cycle imports is revealed by the figures covering the eight-month period ending with February. During that period ending in 1915 the total imports of such goods were valued at $65,410, whereas during a like period ending with 1916 the valuation was only $22,163, showing a falling off of 66⅔ per cent.

Hawaii took a few more cycles and cycle parts during February of 1916 than during the same month of last year, the valuation for the respective months being $6,201 and $5,980, showing an increase of approximately 8 per cent. During the eight-month period ending with February, 1916, the total valuation of such shipments to Hawaii was $61,963, as against $41,148, the figures for the corresponding period ending with February, 1915. The percentage increase amounts to very nearly 50 per cent.

While our trade with Porto Rico showed a slight jump during February of this year over the business done during February, 1915, this is offset by a considerable slump in the business transacted in cycle goods during the eight-month period as contrasted with the same period of last year. Cycle goods to the value of $1,927 were shipped from American ports to Porto Rico during last February, as against a valuation of $1,377 on the goods shipped during February, 1915. However, the valuation of cycle goods shipped during the eight-month period ending with February, 1916, was only $17,494, as against $19,697 for the corresponding period ending with February of 1915.

Philippine Exports Drop

Just the reverse seems to have occurred in our trade with the Philippine Islands. The valuation of the exports during February fell off from $1,438 for February of 1915 to only $475 for the February just past, while during the eight-month period ending with February, 1915, we shipped cycle goods to the value of $21,844, as against $35,242, the valuation of such goods shipped during the eight-month period ending with the present year.

STOLL TANDEM SALES ARE HUMMING

Dealers All Along the Line Bombard M. Walter Stoll With Orders as He Makes Business Trip; Factory Staff Enlarged

NEW YORK, May 9.—M. Walter Stoll, of the Stoll Mfg. Co., Denver, Colo., producer of the well-known line of Stoll tandems, breezed into New York today on the most successful business trip he has ever made. Mr. Stoll has been on the road about a month and he has at least another month of traveling ahead of him before he can get back to Denver and draw a full breath. He has been striking all the large cities throughout the East and will follow the same policy as he moves westward.

M. Walter Stoll

"In spite of the 10 per cent. increase in the prices of our tandems which recently went into effect," said Mr. Stoll, "our business is exceeding all expectations. The fact that our advance in price has had no unfavorable effect upon sales, and that our increase in business has been even more rapid since the advance than before it, is sufficient proof that we are giving the riders a dependable product that meets all the requirements of the road.

"We have enlarged our factory staff several times of late and are still taking on men. In fact, it has become necessary to put on a night force in order to live up to our reputation for prompt shipments. We will continue to make prompt deliveries no matter how many men we have to take on. As long as the riders are so anxious to obtain our tandems, we will see that they get them and get them on time.

"An idea of how business has been piling up with us will be gained from the case of W. J. Walker, the Harley-Davidson representative in Boston, Mass. Up to the time when I arrived in Boston a few days ago Mr. Walker had sold 150 Stoll tandems of this year's output, and he has given me a repeat order for 118 more. Mr. Walker is of the opinion that he will dispose of nearly 500 of our tandems this year, judging from the present demand.

"All the dealers along the line are placing repeat orders and howling for quick deliveries, and many of them tell me that they expect to sell out on our tandems about as fast as we can ship them from the factory."

FIRST ALL-LIGHTWEIGHT RUN TO BE HELD MAY 21

New Jersey M. C. To Conduct Officially-Observed Two-Stroke Event from Newark to Philadelphia and Return on That Date—Consumption and Condition to Be Noted

NEWARK, N. J., May 6.—What will undoubtedly be the first officially-observed motorcycle run and the first all-lightweight run in the United States is to be held from this city to Philadelphia and return on May 21. It will be a limited event for lightweights having two-stroke motors of less than 25 cubic inch piston displacement. The organization holding the run is the New Jersey M. C. of this city.

Each entrant in this run will have an observer who will watch the performance of the entrant from a sidecar which will accompany the entrant at all times. The observer, a technical man in each case, will be with an entrant on a different make of machine from that ridden by the entrant, and will in addition not be a rider of the same make of machine as the entrant.

The observer will see that the contestant's tank is filled at the start and will measure the amount of fuel put in. He will note in writing the cause of all stops and the duration of the same. He will see that the contestant does not have outside assistance in making roadside repairs or adjustments, and that the contestant does not make repairs to his machine during a noon stop. After the run is over, the observer will measure the amount of fuel left in the tank and report on the fuel consumption.

Each machine will be examined at the end of the run for condition and any loose or broken parts will be noted in writing. A certain penalization will be inflicted for such parts.

At the present writing the contestants will be: E. A. Robertson, of the Splitdorf Electrical Company, Indian featherweight; Jack Neis, of the same company, Excelsior lightweight; C. W. Waughop, Cleveland lightweight. The observers will be: D. R. Hobart, of **Motor Cycle Illustrated,** for Robertson; E. F. Hallock, for Neis, and Elliot B. Holton, for Waughop.

The start will be made from the New Jersey M. C. headquarters on Broad street at 7 a. m. A scheduled speed of 20 miles per hour has been proposed, but the final rate has not as yet been decided upon.

HOTEL PHISTER FOR M. M. A. MILWAUKEE MEETING

MILWAUKEE, Wis.—Announcement is made that the Motorcycle Manufacturers' Association in this city, June 14, will be held at the Hotel Phister. This is one of the older Milwaukee hotels, but it has more available room and the trade visitors will be assured of comfortable accommodations.

The manufacturers located in Milwaukee have already worked out a tentative program for entertaining the visitors following the business session, and it is stated that several of the M. M. A. members contemplate having their wives accompany them on the Milwaukee trip.

FISK APPOINTS SULLIVAN AS ADVERTISING MANAGER

CHICOPEE FALLS, Mass.—The growth of business for the Fisk Rubber Company has brought about increases in various departments, and this has been the case as regards the advertising department in particular. On June 1, 1916, George L. Sullivan, formerly with the Bromfield-Field Advertising Agency, in New York, will become advertising manager of the Fisk firm.

Miss M. G. Webber, who has supervised Fisk advertising in the past and who has been responsible for many of its ingenious ideas, will act as an assistant to Manager Sullivan, as will also George B. Hendrick, who was in charge of Fisk publicity.

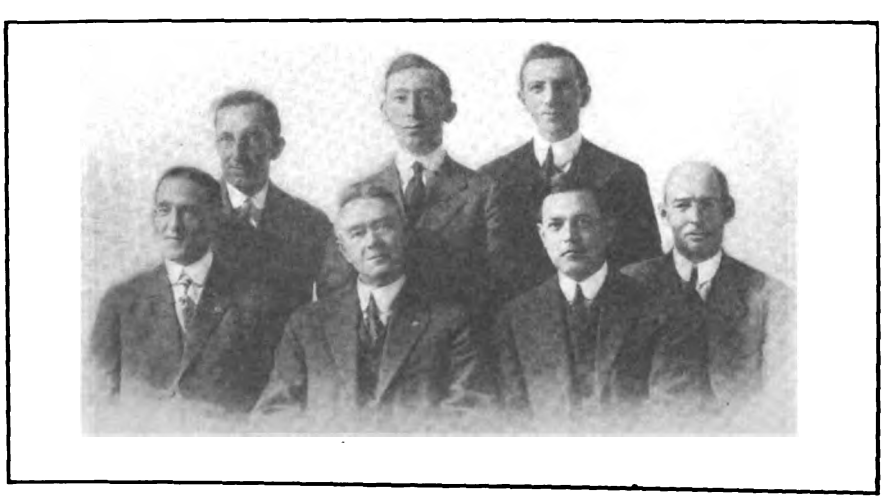
Mr. Sullivan has had advertising and sales experience with the American Locomotive Company and with a number of tire and rubber concerns.

KANSAS CITY COPS WILL GET NEW MOUNTS

KANSAS CITY, Mo., May 8.—The Kansas City Police Department recently asked for an appropriation of about $800,000, and according to the chief and those who know, a large slice of this melon will be bestowed upon motorcycle dealers in Kansas City.

Last year the Police Department bought seventeen new Indian motors, but since that time the force has grown, and some of the machines are doing service twenty-four hours a day, while others are on duty only for the half day shift.

LIVE ROADMEN OF NEW YORK SPORTING GOODS CO.



Back Row, Left to Right, H. K. Lister, L. F. Peck, A. C. Brown; Front Row, Left to Right, H. J. Sanborn, J. F. Pope, H. T. Fowler, G. A. Carey

LACK OF INTEREST CANCELS ALBUQUERQUE RUN

ALBUQUERQUE, N. M., May 2.—Lack of co-operation and even interest on the part of both the motorcycle factories and other motorcycle clubs has resulted in the Albuquerque M. C. calling off its record breaking endurance run which has been scheduled for May 28. The run, which was to have gone for 1,347 miles, and which would have been the longest run of its kind yet staged, was announced a couple of weeks ago.

Despite repeated letters and telegrams to both factories and other clubs, however, no great amount of interest seemed to be stirred up in the long event, so that at its meeting last night the Albuquerque M. C voted to call off the contest.

CORCORAN-VICTOR COMPANY IS NOW IN FULL SWING

CINCINNATI, Ohio.—The Corcoran-Victor Company, the result of the consolidation of the Corcoran Lamp Co. the Victor Lamp Co. and the Victor Auto Parts Co., has been formally incorporated with a capital stock of $2,250,000, and the plants involved are doing business under the new organization.

The incorporators of the company are John Grau, Clifford Wright, F. G. McLaughlin, C. H. Richards and Charles McKnight.

$300 IN PRIZES FOR THE HILLSGROVE RACE MEET

PROVIDENCE, R. I., May 6.—B. A. Swenson, local Indian agent, who is promoting the Decoration Day motorcycle races at the Hillsgrove track, states that some substantial prizes will be offered the competitors, about $300 having been contributed by the Hillsgrove Racing Association.

Following is the program: 5 miles for lightweights with two-cycle motors rated at not more than 2½ h.p.; 5 miles for professionals on non-ported single-cylinder mounts; 10 miles for amateurs on singles; 5 miles for twins with sidecars; 10 miles for professionals, with non-ported singles.

FIRESTONE HOUSE ORGAN IS BRIGHT AND NEWSY

AKRON, O.—The May number of the Firestone, the house organ of the Firestone Tire & Rubber Co., maintains the pace set by preceding issues and is readable and artistically illustrated throughout. News of men and developments in the big Firestone factory occupies considerable space, and in addition there are snappy stories and photographs dealing with service given by Firestone automobile and motorcycle tires under unusual conditions all over the country.

One of the most interesting motorcycle features is a photographic layout showing the Firestone-equipped machines now with the United States expeditionary force in Mexico.

ALTOONA TO HAVE MEET ON MEMORIAL DAY

ALTOONA, Pa.—The newly-formed Altoona Racing Association is planning what will probably be the biggest race meet ever held in this city. The place will be the Altoona Driving Park track and the date will be Tuesday, May 30. The program has not as yet been completed, but at least five motorcycle races will be held.

The track is being banked and widened for the affair. Extra large cash prizes are being offered for each event and entry blanks will be ready for mailing in a few days. Applications should be made to W. A. Morgan, of 1211 Third avenue, Altoona.

SIX EVENTS IN WHEELING MEET ON MAY 30

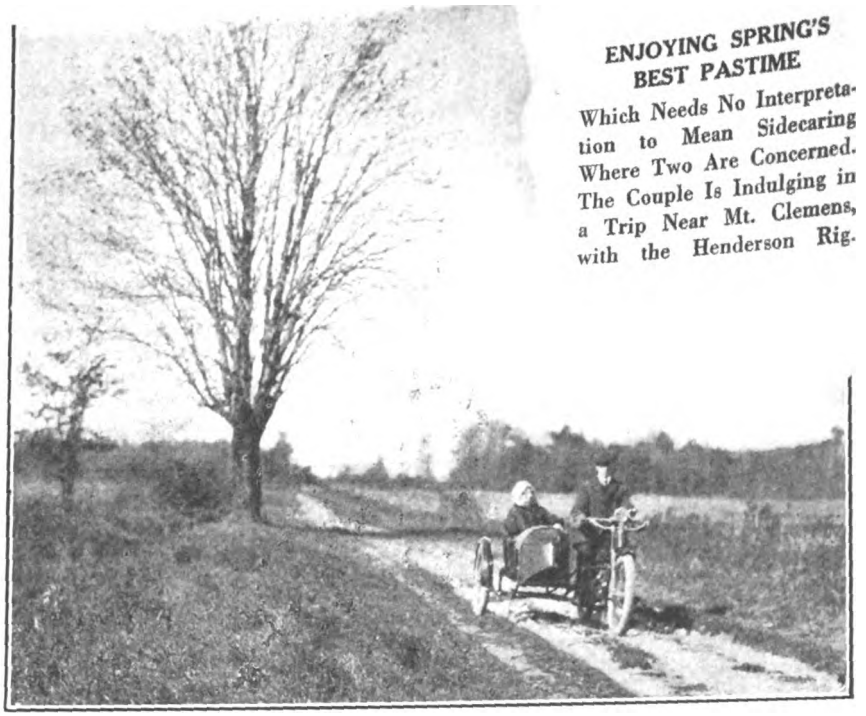
WHEELING, W. Va.—The Wheeling M. C. will hold its first race meet of the 1916 season on May 30, the following events being booked: Two miles, for lightweights; 5 miles, for motorcycles with ports and pocket valves only; 10 miles, for machines of same class as those in preceding event; 2 miles, for sidecar combinations; 5 miles, free for all; economy contest for 61 cubic inch machines.

The races will be exclusively for local riders and a number of cups will be awarded in addition to medals.

ABOVE THE SNOW-LINE ON A FEATHERWEIGHT

STOCKTON, Cal.—The first lightweight motorcycle trip to the Calaveras Big Trees was accomplished April 23 by W. F. Horr of the Stockton Motorcycle Supply Co. on an Indian Featherweight. The Big Trees are in the Sierra Nevada Mountains at an elevation of 4,702 feet and 170 miles from Stockton. There are some long, steep grades, and, as a rule, the air is very still and of little help in keeping the engine cool.

Mr. Horr, who weighs 190 pounds, did not walk a step with the Indian, and stopped only once to let the engine cool. That was on a three-mile grade from 10 to 25 per cent. The two-stroke motor ran sweetly all the way, requiring no adjustments. Mr. Horr states that it was in first-class condition at the finish and ready to do the same thing over again.



ENJOYING SPRING'S BEST PASTIME

Which Needs No Interpretation to Mean Sidecaring Where Two Are Concerned. The Couple Is Indulging in a Trip Near Mt. Clemens, with the Henderson Rig.

CROTONA RUN PLANS ARE COMPLETED

Course Is Posted For 256-Mile Endurance Event of Active Bronx Club on May 14, and Other Details Arranged—Valuable Prizes

BRONX, N. Y., May 8.—Final details regarding the endurance run of the Crotona M. C. of this city, on May 14, have been arranged and all is practically in readiness for the event. The course has been thoroughly posted and has been examined by club officials twice a week since posting to see that no markers have been displaced.

The run will total 256.3 miles, divided into two periods. The first period from 5:45 a. m. till 12:10 p. m. will lead from this city through Greenwood Lake Junction, Sussex to Monticello, where lunch will be served. As in the 1915 run, the Monticello people will provide the Crotona run contestants with the lunch. The second or afternoon period, starting officially from Monticello at 1:10 p. m., will include Cuddebackville, Crows Nest, Newburgh and back to the Bronx. Ample time is allowed in the schedule for both ferries across the Hudson, and special arrangements have been made for the boats.

Four silver cups are offered as trophies for the run. The Coughlin Cup, donated by Gene Coughlin & Co., will be awarded to the sidecarist making the highest score. The Hendee Trophy, donated by the Hendee Mfg. Co., will be given to the Indian rider making the highest individual score. The Harley-Davidson Cup, donated by the Harley-Davidson Motor Co., will be awarded to the professional solo rider making the highest score. For this cup no team member is eligible. Another cup will be given to the club having the greatest number of riders to finish.

Solid gold medals will be awarded to each contestant getting a perfect score (1,000 points). Gold plated medals will be given for scores of 900 to 999 points and bronze medals for riders who score from 750 to 900 points. A long list of accessory prizes is on hand, and these will be distributed among all contestants finishing.

There will be two secret checks in the run, one in the morning and the other in the afternoon period. These will be used in making consistency awards.

TWO RUNS ON SCHEDULE FOR READING M. C.

READING, Pa., May 9.—Two runs are scheduled to make May an interesting month for members of the Reading M. C. The most important of the events will occur on Memorial Day, May 30, and will be to Lebanon, to witness the match racemeet which the Lebanon motorcyclists are to engage in with picked riders from Harrisburg.

The other run will precede this one, occurring on Sunday, May 28, and will carry the riders to Harrisburg. At its meeting last night, the Reading M. C. gained another member in Raymond Spangler, a newly-made motorcycle enthusiast.

COLLEGE POINT CLUBSTERS HOLD SUNDAY RUNS

COLLEGE POINT, N. Y.—The last three Sundays have been spent by members of the College Point M. C. in sociability runs, that on April 23 going to Springfield, Mass., while the April 30 run was to Albany, N. Y., and return. These two runs total 640 miles and all participants enjoyed a fine time on both occasions.

Vice-President Clarence Horn has started a tour of New York State and expects to cover some 1,800 miles within a week. He will stop at Albany, Plattsburg, Watertown, Malone, Niagara Falls and Syracuse on his trip.

NEW YORK STATE DEALERS ARE HAMPERED

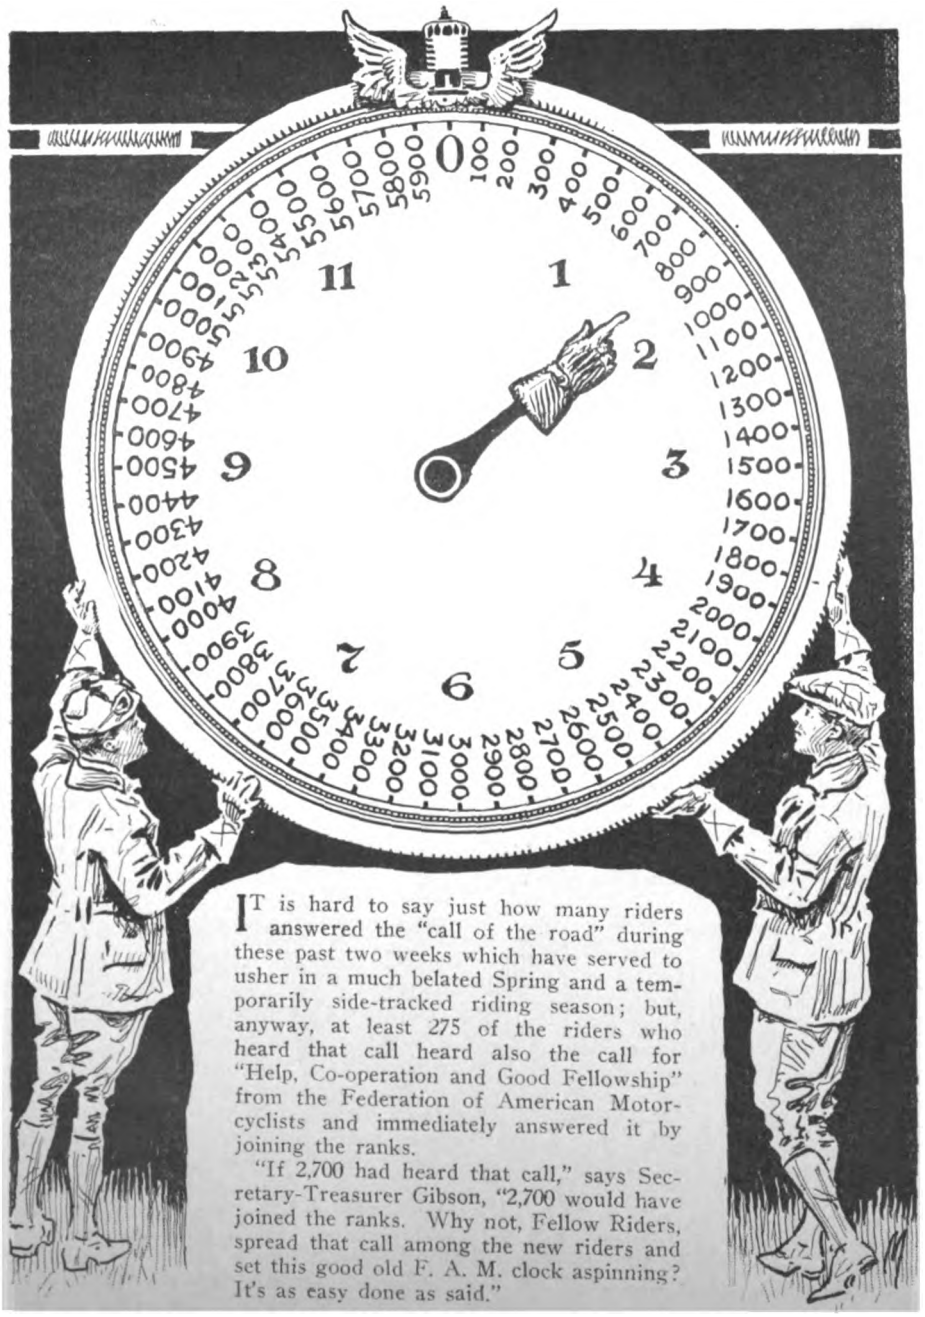
Motorcycles in Stock Need Not Be Registered Under New Law, But Every Demonstrator Must Carry Separate License; Ellis Suggests Fee for Dealers Covering Three License Plates

NEW YORK, May 9.—Several motorcycle dealers in New York State, who had interpreted the new motorcycle registration law to provide for registration of every machine in an agent's stock, brought the matter to the attenion of Chairman Johnson, of he F. A. M. legal action committee, and have been informed that no such course is necessary. Chairman Johnson took the matter up with Secretary of State Hugo, and has been advised that motorcycles in a dealer's stock do not come under the provisions of the new law until they are taken out and operated on the highway.

It should be understood, however, that as soon as a machine is taken from stock and demonstrated on the road, it requires registration and a license plate. Under the circumstances the average dealer will find it advisable to use only one machine as a demonstrator, and have it properly registered. When a motorcycle is sold it will be necessary for the purchaser to obtain a license for it before he can ride it away from the agency.

State F. A. M. Commissioner George A. Ellis is framing a petition which he will submit to Secretary of State Hugo, recommending that a $5 license fee be imposed upon motorcycle dealers, that fee to cover all the machines in stock, and to provide for three license plates for use on demonstrators. If additional license plates are desired it is suggested that they be supplied to dealers at one dollar each.

OVER THIRTEEN SCORE ANSWER THE F. A. M. CALL; KEEP THIS HAND ASPINNING!



IT is hard to say just how many riders answered the "call of the road" during these past two weeks which have served to usher in a much belated Spring and a temporarily side-tracked riding season; but, anyway, at least 275 of the riders who heard that call heard also the call for "Help, Co-operation and Good Fellowship" from the Federation of American Motorcyclists and immediately answered it by joining the ranks.

"If 2,700 had heard that call," says Secretary-Treasurer Gibson, "2,700 would have joined the ranks. Why not, Fellow Riders, spread that call among the new riders and set this good old F. A. M. clock aspinning? It's as easy done as said."

THE BEST OF 'EM

Editor Motor Cycle Illustrated:

Here's wishing your magazine continued success, and that I may never be placed where it cannot reach me, —as I consider it the best of the motor magazines.

JAMES W. PAUL,
Bogalusa, La.

GOODYEAR COMPLETES "OLD GUARD" TOWER

AKRON, O.—An innovation in the method of paying tribute to the faithfulness and loyalty of veteran employees is the completion of the eight-story tower, known as the "Old Guard" tower by the Goodyear Tire & Rubber Company. This tower, which stands on the site of an old mill, has a mammoth clock with four dials on the top floor; the clock being a memorial of the faithfulness of employes who have been with the company ever since its start.

The "Old Guard" was organized about three years ago, and its membership consists of men who were with Goodyear nearly 16 years back. President F. A. Sieberling is one of its members. Ever since its organization the Guard has held an annual dinner in some portion of the factory and in future all functions of this body will take place in the observation room of the tower. In this room a bronze plate with the names of the "Old Guard" will soon be placed.

When these men first became associated with the Goodyear company only carriage tires and bicycle tires were being made. For 1916 Goodyear will equip one of every three automobiles manufactured.

DAYTON FROWNS ON SPEEDING

DAYTON, Ohio.—Motorcycle policemen and motorcycle and automobile speeders have been busy during the past week or so in Dayton, the motor cops especially so, in consequence of the determined efforts of the municipal authorities to eliminate speeding. The court has declared that suspended sentences in speeding cases are a thing of the past, and that hereafter speeders must go to jail. The result has been a natural emphasis on the soft pedal by those inclined to try out their engines, and everybody except the mile-a-minute fiend is happier.

LOUIS SCHWAB'S CONSISTENT CLIMB

NUMBER TWELVE IN A SERIES OF BIOGRAPHICAL SKETCHES OF TRADE LEADERS

The Youthful Schwab Had Been at Work Only a Week on His First Job When He Received a Raise in Wages and as the Unfailing Business Generator of Stevens & Co. Today He is Applying the Same Principles of Thoroughness, Integrity and Fairness That Won Him Early Recognition; His Conservative Buying Policy For Jobbers

"IT is quite a long while ago, but I remember very distinctly the time of my first raise," remarked Louis Schwab, of Stevens & Co., in speaking of his business career. "It was in January, 1893, when I got my first job at $4 a week with Butler & Ward, saddle manufacturers, in Newark, N. J. I was being 'broken in' to act as shipping clerk. When my first Saturday came 'round, I found besides my four, a raise of fifty cents a week, and the second week a raise of the same amount. I was some pleased boy, believe me. I worked for the B. &. W. Co. for five years, during the fifth year doing a little road work. One of the best orders I booked was John S. Leng's Son & Co.'s contract for their next season's supply of saddles."

Seeking a Broader Field

It was through securing the contract mentioned that Schwab became acquainted with C. W. Leng, of whom he speaks in the highest terms. Butler & Ward failing to appreciate that the boy had grown up, young Louis stepped out and accepted a position with John S. Leng's Son & Company in the capacity of salesman, on a salary basis. The Leng Co., having received a share of the export bicycle business which this country enjoyed at that time, Schwab was sent, after six month of road work here, to Europe, to increase their foreign business.

"I well remember my feelings on shipboard going over," said Mr. Schwab; "I was only a dub salesman 22 years old, remember, but I felt that I was no ordinary drummer, but a world-wide traveler, and my hopes and ambition ran accordingly high. My trip was a flat failure, as far as orders were concerned, for the European market was almost stagnant, but that same trip was worth an incalculable amount to me, for all my conceit and high-and-mightiness were knocked clean out of me and I returned with my tail between my legs, but a man nevertheless."

His Policy Won Recognition

When he came back, after three months' visit to France, Holland, Belgium, Sweden and Germany, Mr. Schwab was put on the road again, covering eastern Pennsylvania, northern New Jersey and southern New York, but it took him almost two years to educate his trade into buying his way. Schwab advocated a policy of buying only when goods were needed and only sufficient to cover those needs, repeating when necessary, rather than buying in large quantities at one time. It is interesting to note that he still advocates this policy. At the beginning of the third year Schwab began to reap the benefit of his good missionary work and a true recognition of his honesty and integrity were being realized by the trade.

"We passed through some awfully lean years," said Mr. Schwab, "and many a time I encouraged some of the boys who were blue with discouragement. 'Boys,' I used to tell them, 'I'm going to stick if I have to be the last man in the game. There will be bicycles sold as long as there is any use for baby carriages.'"

"But you made good with Leng," interpolated the scribe; "on what do you base your success as a jobber's salesman?"

His Success Formula

"Mainly because I tried to give my customers a square deal, and, secondly, hard work. But I can see now that the fundamental reasons go back years before the work began. I would advise every young man when starting out on his business career to take an inventory of his stock

LOUIS SCHWAB

in trade—himself. He should try to estimate accurately what he can do, what he would enjoy doing, what he wants to make of himself, if possible to set for himself a definite goal, an ideal. He should try to decide which is the shortest and straightest road to that goal and then work hard to travel it, not permitting himself to be turned aside, except as temporary emergencies may make necessary. The boy who will do that will succeed.

"This may sound like preaching to your young readers, but it is the naked truth. There is a greater opportunity today than when I started for a boy or young man to succeed. This holds true not only of the individual, but of a business concern as well. How many of our dealers and jobbers are working without a plan, sailing the sea of business without a chart? Many a dealer is tinkering with side lines when he should concentrate on making himself the best bicycle dealer and repairman in his town; the jobber may be doing the the same thing or trying to cover six states when if he would calmly study himself, his business and his conditions, probably the logical thing to do would be to make himself *the* jobber in only three states.

Of course, there are some exceptions; some dealers wisely handle sporting goods, some bicycle dealers can profitably add motorcycles, some motorcycle dealers can sell bicycles, and so on. The Simmons Hardware Co. successfully covers the entire country, more so than some jobbers do their own natural territory—but my plea is for the principle involved. Find out what you want, use every means within your power to fit yourself for it, and then stick to it until the cows come home, *and they will.*"

A Plug and a Plugger

It was while filling in at the Boston branch for the Leng Company that Mr. Schwab met R. W. Sampson and became deeply interested not only in this young man's personality, but also in the brass plug that he had invented and was marketing. Schwab decided to try and sell some and began in a modest way by traveling some of the Eastern States on his bicycle with his wares upon the small of his back, so to speak.

Encouraged by the moderate success of his first year's effort, he repeated the experiment the next year, covering much of the country north of the Ohio River and east of the Mississippi. This time he used a motorcycle, Joe Merkel's first model, of which experience he has some interesting recollections. Those were not the days of magnetos, three speeds, twin cylinders, free engine clutches, etc.

This was the humble beginning of marketing, in a national way, the "Sampson Brass Plug," today one of the livest items in the trade and to be found in every bicycle shop in the country.

It is interesting to trace the growth and development of Mr. Schwab and his business enterprise, from the young hustler full of dogged determination, ambition and persistence, starting with his small room at home as his business office, packing and shipping department and storehouse all in one, to the serious young man with

FIVE SCORE IN RUN FROM QUAKERTOWN

Promise of Inclement Weather Fails Materially to Affect Entry List for Motorcycle Club of Philadelphia's Easter Sociability.

PHILADELPHIA, Pa.—An early morning rain which continued until after eight o'clock and dampened the spirits of many riders as well as the surrounding country, did not materially reduce the number of participants in the annual Easter Sunday sociability run of the Motorcycle Club of Philadelphia to Atlantic City. More than five score riders lined up at the starting point before nine o'clock, the appointed hour, and escorted by a squad of motorcycle police wound their way slowly to the Camden ferry.

The ride to Atlantic City was accomplished in something less than three hours, and souvenirs in the shape of a neat little vanity case for the ladies and a pocket pencil and comb set for the men, coupled with a most enjoyable luncheon, made the stay at the seaside resort most enjoyable.

On Tuesday evening, April 25th, a reception was given to the non-members of the club who took part in the run with the result that several of the guests applied for membership.

Sunday, June 4th, has been set aside as the date for the club's annual secret time run to Reading and back, and this affair bids fair to be a forerunner of a season of big event.

PLANS MATURING FOR THE C. M. A. FALL RALLY

DUNNVILLE, Ontario.—Further arrangements have been made for the motorcycle rally of the Canada Motorcyclists' Association to be held at this place. The date set for the attractive event is Friday, September 15, with a possible extension of special activities on the following day. Five races will be staged on the local half-mile track, and these events will be the feature of the Dunnville annual fall fair.

Invitations to participate in the tours from Hamilton, Toronto, Guelph, London, Buffalo and other places are being prepared and will be sent out to the riders very shortly. A very attractive prize list is also being arranged.

CHIPPEWA RIDERS ORGANIZE AND ELECT

CHIPPEWA FALLS, Wis., May 12.—Walter Schwaner was elected president of the newly organized Chippewa Motorcycle Club, which held its initial meeting last week in the store of Lueck Brothers. The other officers chosen are: Vice-president, George Camastral; secretary, Walter Schaller; treasurer, Walter Lueck; photographer, H. E. Magnus; directors, Fred Zeck, A. J. Ickstadt, George Murphy, E. Stuart and I. Finstad.

While the purpose of the Chippewa organization is largely for pleasure, the members intend to make the club a strong booster for better roads in the vicinity of Chippewa Falls. The club starts out with a good membership.

No effort will be made to secure club rooms until the riding season is over.

ATLANTA CLUBSTERS BUCK A RAINSTORM

Deluge Strikes Them in Red Clay District and Some of the Boys Considered Themselves Lucky to Get Home Next Day

ATLANTA, Ga.—Several members of the Atlanta Motorcycle Club recently ventured into the red clay hills of northern Georgia for a pleasant Sunday spin. A stop for dinner and rest was made at Canton, Ga., far off the top roads and deep in the foothills of the Blue Ridge range.

While the riders were distributed over the hotel furniture in various more or less comfortable positions a rainstorm stole up on them. The return trip became a wild dash for the top roads and good riding, but the rain struck them just out of Canton. Driving into their faces in torrents, it almost blinded them. Rider after rider came to grief as the sticky red clay clogged his wheels. Mudguards were removed and placed in Captain Aiken's sidecar and ropes and wires were tied around tires to prevent skidding—but it couldn't be done.

About 5:30 Sunday afternoon, Captain Aiken arrived at the club, his sidecar loaded down with mudguards. He was followed one hour later by Luke Moon, the first solo rider to return. The others drifted in at irregular intervals, some not returning till next day.

No serious accidents were reported, although every man had at least three bad falls. H. L. Johnson took the wrong road and didn't get home till next day.

EXCELSIORS PROVE EFFECTIVENESS IN RADIO WORK FOR NAVY

THE MOTORCYCLE'S BRIGHTEST YEARS ARE AHEAD

Power Two-Wheeler Has Established Itself in a Definite Field and Is Daily Becoming More a Part of Our National Life; Great Middle Class of Buyers Offers Wonderful Opportunities

By FRANK J. WESCHLER
Treasurer and Sales Manager the Hendee Mfg. Co.

Frank J. Weschler

THE best years of the motorcycle are those directly ahead of us. I believe that I can tell you why. I believe I can point out clearly the permanent elements in the motorcycle business—the thing that all of us can tie to and build big things on.

At the present time a good many people are making mistakes in their motorcycle thinking. They are trying to lay out the motorcycle's future according to conditions of today. Obviously this is wrong and I intend to get away from this fundamental error at the start. If we are to have a correct idea of the motorcycle for the next five years we should base our conclusions on what will probably take place during that time—and not what is going on now.

One of the important things which we must consider is the automobile.

The development of the low priced four-wheeler has undoubtedly brought about a condition wherein the automobile market and the motorcycle market touch, but these two can hardly be called competitive.

They will, rather, from now on make parallel progress—a condition which I venture to say is a help more than a detriment to the motorcycle's future. And the reason that it is a help is this: The motorcycle market thus becomes sharply defined and we can now proceed within our own outlined field without the waste of effort which always attends the hit-or-miss method of marketing a product.

In other words, we are going to know more and more just where we are at. We are going to know positively just what our channels of sales are. We are going to be in a position to sail a perfectly chartered course. Guess work is eliminated.

Isn't this a very important point for the motorcycle trade to have settled? Isn't it going to mean a great deal for us to be able to decide just what our own field is and then to develop every inch of it? I think so.

At the present time the heavy increasing demand for sidecars shows for one thing how little the low-priced car affects the motorcycle.

And the sidecar success today means surely a continued vogue in the future, because women are favoring it to a greater degree than ever before.

Low up-keep cost I need only to mention. The smallness of motorcycle running charges draws a marked line between it and the automobile, which the motor car can never hope to cross.

Transportation—both for business and pleasure—is today as much of a demanded commodity as soap. It is a great concern with rich and poor alike. It is one of the foremost considerations of modern mankind. It is a universal need.

How, then, can the motorcycle go unheeded in the future? It can not. Millions of people are bound to give it the recognition it deserves. It is a truly wonderful mechanical achievement. It gives the owner more speed, more power, more comfort, more satisfaction per dollar of cost than any motor vehicle in the world. Nobody disputes this.

Millions of people have not yet realized the motorcycle facts; but I expect that more and more people will realize them as time goes on.

LET us agree, then, that from now on the bulk of motorcycles will be sold to that class of people which cannot afford even the low-priced automobile. This gives to the motorcycle a market of millions of people whose incomes range from $25 per week downward—the very market, in fact, which the majority of American manufacturers of and dealers in popular-priced products have found, and will continue to find, substantial and wealth yielding.

The motorcycle doesn't need a better and richer market than this to prosper. With hard times disappearing and with the smoothing out of unsettled world conditions not a long way off, that vast group of people who are the workers and wage-earners will become once more active buyers of merchandise of all kinds. Even this year I believe that the people will have more available purchasing money than they have had for years back. I furthermore believe that in another year the total producing capacity of the motorcycle industry will be taxed to its utmost.

The motorcycle has never been overproduced. In no single year has it put out a total of 100,000 machines. The great advantage of this lies in the fact that motorcycle sales have nowhere reached the point of saturation—the larger part of the motorcycle-buying public still remains unsold. In other words, our market is still fresh and new and capable of very extensive development.

The motorcycle dealer can figure out his future sales possibilities according to his territory. In the small towns and villages he can conservatively count on the sale of one machine per three hundred population. Our own records indicate this. In the large cities the percentage is not so great—it should be, roughly, one machine per thousand population. These figures make allowances for women and children who, of course, are not prospects except indirectly. Surely one hundred machines per one hundred thousand population is not an unreasonable expectation, because even today Indian sales show this percentage in a number of districts.

Other factors in the future of the motorcycle are the decreasing of price, the utility side which is coming into widespread recognition, and the extension of the part payment plan. I expect to see the part payment plan highly perfected during the next few years—and with it we shall also see hundreds of dealers, who are only doing moderately well now, become extremely well-off merchants. The decrease in price will undoubtedly enlarge the market by tens of thousands each year. The adoption of the motorcycle for utility reasons will likewise open up a rich field.

My use of the word "utility" does not in this instance mean "commercial"—the commercial application being a big subject that needs separate treatment—but refers, rather, to the use of the solo machine in going to and from work, in covering a sales and collection route, and in doing those hundred and one things where quick, cheap, comfortable transportation is essential.

A good example of utility is this: The bicycle is a fixed part of the English workingman's equipment in going to and from the factory—so much so that most factories provide big sheds with row after row of racks for the accommodation of their employes' wheels. The English workingman would no more be without his bicycle than without his shoes.

When it comes to the American workingman, I expect to see him adopt the motorcycle instead of the bicycle. He earns more and can afford the motor machine. He wants better things—is used to having them. American workingmen will take to the motorcycle in the future in large numbers, not only for its pleasure value, but for its great essential usefulness.

Motorcycle racing cannot, I believe, ever lose its vogue. It has those elements which make for permanent popularity—speed, power, gracefulness, excitement, and all

JERSEY CLUBMEN HEAR PREPAREDNESS TALK

Big Newark Organization Turns Out in Numbers to Hear Addresses on Motorcycle Warfare and Need of Defense Measures

NEWARK, N. J., May 3.—A rousing big patriotic meeting was held by the New Jersey M. C. last night in the club rooms, when over 80 members and friends heard Dr. David Kraker, of the National Guard Hospital Corps talk on "First Aid." Dr. Kraker also spoke on the part that the motorcycle can play in modern warfare. He was followed by George D. Love, of the National Security League, who enlightened the audience on the grave dangers which beset the United States from lack of organization and equipment for a defensive war against a possible foreign invader.

That the meeting will bear fruit in the formation of a motorcycle detachment is probable, the only hitch at present being the fact that the State will not recognize an organization unless it is part of the militia. The New Jersey boys fear that after they have enlisted they will not be used as the nucleus of a motorcycle company, but would, in all probability, be mustered into the unfilled ranks of an infantry regiment.

Were the State to guarantee the boys an enlistment in the Signal Corps, a stampede to sign papers would follow, but the military authorities will not commit themselves, and the indecision of the riders is the result.

SIDECARS EXEMPTED FROM THE FERRY "PUSH RULE"

NEW YORK, May 9.—State F. A. M. Commissioner George A. Ellis announces that the New York Central Railroad Company has made a concession with reference to sidecar combinations carried on its ferryboats, as a result of his objection filed recently against the rule which required motorcyclists to push their outfits on and off the boats without motor power. Hereafter the sidecar combinations can be run on and off the boats under power, but solo motorcycles must still be pushed on boarding and leaving the boats.

Commissioner Ellis took a strong stand in favor of granting the same privilege to solo riders as to sidecarists, but General Passenger Agent Vosburgh turned a deaf ear to such arguments.

THREE EVENTS ON CARD AT COSHOCTON MEET

COSHOCTON, O.—The Coshocton Motor Club has arranged to hold three motorcycle events at the Fairlawn Park meet scheduled for May 30. The first event will be a five-mile open, with prizes of $20, $10 and $5. The second will be a ten-mile stock, with prizes of the same value, and the third will be a 25-mile open, with $50, $30 and $10 awards.

MORE ROAD CONTRACTS ARE LET IN OHIO

COLUMBUS, O.—Contracts have been awarded by the Ohio Highway Commission for the improvement of 175 miles of highways in various parts of the State. The work is being done under the State-aid law at an expenditure of $3,000,000.

FIVE EVENTS IN SAVANNAH MEET JULY 4

Club Decides to Abandon Road Races and Go in for Track Programs; Application Made for Several F. A. M. Championships

SAVANNAH, Ga., May 6.—One of the most important flat track meets ever slated for this section of the country will be held here on July 4, under the auspices of the Savannah M. C. At least five events will be run off and about $200 in cash prizes will be offered in addition to minor awards. At the latest bi-monthly meeting of the club it was decided to stage the racemeet instead of a road contest; this means that the club has run its last road race over the Grand Prize course.

The club, through Secretary Meyer, has taken up with President Coffman, of the F. A. M., the matter of obtaining several national championships for the July 4 racemeet. This is the first application of the kind that the club has made to the F. A. M., and it is hoped that the national body will grant the club's request.

Should the half-mile track races on July 4 prove successful, it will mean that a big speed card will be arranged for Thanksgiving Day, with at least $500 up in cash prizes.

At the latest meeting the club decided to move to larger quarters. The present ones have been occupied nearly three years and the club has outgrown them. A committee is looking for new and more commodious rooms.

A number of city and county officials have accepted invitations to speak at the seventh annual banquet of the club, which will be held next month in connection with the election of officers.

DARING ATHENIAN RIDES UP STONE MOUNTAIN

ATHENS, Ga.—Harmon C. Rorison, one of the most enthusiastic motorcyclists of this vicinity, recently attracted much attention by riding his three-speed Indian to the summit of Stone Mountain, known as the largest solid rock in the world. Not only did Mr. Rorison make the perilous ascent successfully, but he managed to complete the down trip, which in some respects was even more hazardous than the upward climb.

At times it was impossible for the machine to get traction in going up, and it was necessary for the rider to back up a little and then strike the sheer rock on the bias in order to make headway. Stone Mountain has been climbed only three times by motorcyclists, Rorison being the third successful aspirant. Both the other climbers were factory men, and were thus considered somewhat in the light of professionals.

A STRIKING ISSUE

Editor Motor Cycle Illustrated:

Permit me to take this opportunity of congratulating you on your very excellent Spring number, which I have read with a great deal of interest.

The issue was striking, not from a standpoint alone of being a complete resume of everything of interest to the motorcycling fraternity, but also because of the convenient and artistic composition that the entire issue exhibited.

With best wishes, I am
Cordially yours,
FELIX LEWIN,
Manager New York Branch
Henderson Motorcycle Co.

Of a Personal Flavor

George K. Culp, special representative of the Cycle Tire Department of the United States Tire Company, has been attending conferences at the general offices at 1790 Broadway, New York. Mr. Culp is exceedingly enthusiastic over the business outlook in his territory, which includes everything west of Buffalo, N. Y., as far as Denver, Colo., for both United States motorcycle and bicycle tires.

R. M. Linnell, manager of the Hub Motorcycle Company in Providence, R. I., said this week that he is planning to form a Cosmopolitan Motorcycle Club, the officers of which would not be affiliated with any agency. He has been approached on the subject by so many enthusiasts that he has been really forced to form the organization.

C. H. Williams, who recently was transferred from the Portland (Ore.) branch of the Goodyear Tire & Rubber Co., to take charge of the Chicago branch, had the pleasure of entertaining W. J. Cameron, assistant sales manager of the motorcycle and bicycle tire department last week. Mr. Cameron jumped from the Rubber City to the Windy City for a conference with the Chicago branch manager.

L. S. Pugh, representing the Eclipse Machine Company, spent a few days in Cincinnati recently showing Morrow coaster brakes to dealers. He reports spotty conditions in the bicycle trade, some cities showing more bicycles on the streets than ever before, while others are comparatively slow. The hills in Cincinnati have operated to hold down the bicycle business, he has found, but he declares that dealers are going after customers more energetically than ever before, and prospects seem to indicate a growing success for their efforts.

M. E. Morris is now manager of the salesmen's department of the Goodyear Tire & Rubber Company, of Akron, O. He was formerly Pacific Coast manager for the company.

Harry C. Miller, sales manager of the pneumatic tire department of the B. F. Goodrich Company, of Akron, O., is now convalescing after a minor operation. He will resume his activities in a short time.

E. M. Ford has been appointed sales manager for the National Coil Company, of Lansing, Mich. He has already entered upon his new duties

Eddie Swenson, the 14-year-old son of B. A. Swenson, the Indian man in Providence, R. I., lays claim to being the youngest demonstrator in the United States. He delivered an Indian Featherweight to one of the Providence policemen recently and in two hours left the officer fully capable of handling the machine. Eddie is following in his dad's footsteps.

Arthur O. Lemon, traveler for the Henderson in Ohio, was in Akron last week looking over things and giving expert demonstrations on the four-cylinder mount. He co-operated with the local Henderson company to such good effect that the books show a considerable number of fresh orders.

Albert H. Brandt, formerly with the Hearsey-Willis Company, of Indianapolis, Ind., is now in charge of the automobile accessories department of Hurst & Co., of the same city.

DATES SET FOR SEASIDE TRADE CONVENTION

ERIE, Pa., May 9.—W. J. Surre, of the Continental Rubber Works, and Chairman of the Committee of Arrangements of the Cycle Parts and Accessories Association, comes forth with the welcome news that instead of four as usual, five days are needed for the full enjoyment of the program which the Parts Makers are arranging for the Tenth Annual Convention of the Allied Cycle Trades bodies at Atlantic City. Those five days are July 31 to August 4 inclusive, and if the program of yesteryear can be taken as a criterion they will be a quintette of thorough enjoyment from sun up till moon down tempered just slightly with some real serious business that will undoubtedly be accomplished by each of the associations.

As usual, the St. Charles will be the headquarters but the visitor will find it a remade hotel, for the management has recently completed a 10-story modern fireproof addition which undoubtedly will accommodate a greater number of the trademen than in years gone by.

Mr. Surre states that the program for the festivities is well under way and that undoubtedly it will prove the most attractive one that the commitee has yet had the pleasure of arranging—which is going some, as any trademan who has attended former conventions can attest.

With the Manufacturers

STOLL BRINGS OUT SPRING FOOT-REST DEVICE

IN order to further add to the comfort qualities of the No. 2 Combination tandem, the Stoll Manufacturing Company, of 3234 Walnut street, Denver, Colo., has brought out its spring foot-rest attachment No. A, listing at $3.85. This attachment, which can be fitted to any 1915 or 1916 Stoll No. 2 tandem, attaches to the main seat frame on each side and to the lower part of the tandem frame. There are springs incorporated in the attachment, and the passenger is thus carried with a smooth, springing action. As the tandem and the foot-rests move as one, the feet are relieved of all jars and shocks.

The attachment incorporates folding foot-rests and is pivoted at all joints. The springs are enclosed and are long to give an easy action. Application should be made to the factory by dealers and jobbers for prices, etc.

NEW AUBURN SPARKPLUG HAS GIANT PROPORTIONS

BUILT along the lines of the familiar Auburn mica motorcycle sparkplug, but in giant proportions is a new plug, the latest offering of the Auburn Ignition Manufacturing Co., Inc., of Auburn, N. Y. This plug, shown in phantom herewith, is constructed of Indian ruby mica as in the type previously issued. It has a larger shell, one that will take a ⅞-inch wrench instead of a ¾-inch, and there is much more room for insulation and clearance.

Advantage of the increase in sizes has been taken to incorporate more insulation in this plug than in the previous Auburn models. The new Auburn plug is furnished with a combination terminal to fit all connections.

The output of the Auburn firm has steadily increased since the new management took charge in 1913, and an expansion has been found necessary. The capital stock has been increased from $25,000 to $60,000 in order to secure more efficient manufacturing facilities and working capital.

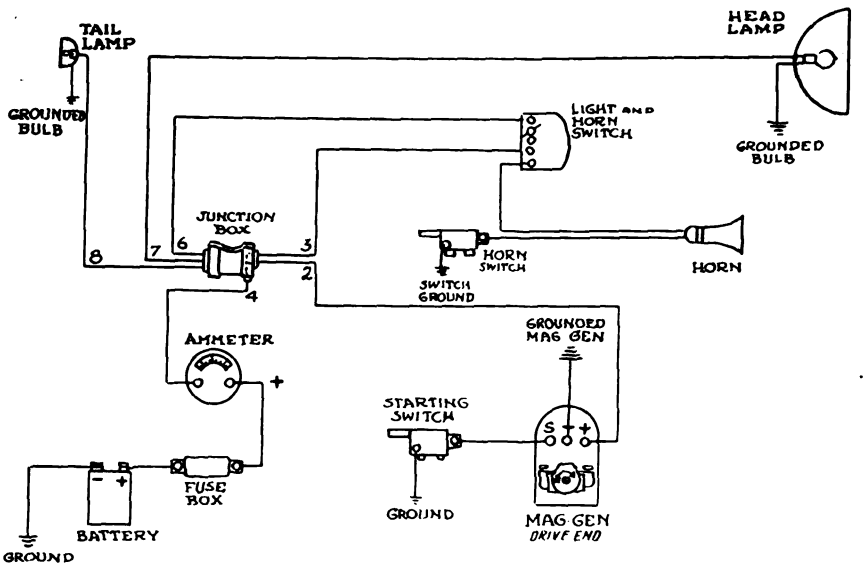
The management will be unchanged for the increase. It is as follows: S. M. Kitchin, general manager; C. A. Franke, productive manager, and H. G. Kitchin, sales manager.

MARKO INCORPORATES

NEW YORK.—The Marko Storage Battery Depot of New York has been incorporated, with a capital of $5,000. Incorporators are Paul M. Marko, M. H. Tuttle and Jos. Kresse, all of Brooklyn, N. Y.

SPLITDORF ONE-WIRE SYSTEM FOR INDIAN

Newark Company Introduces Wiring Scheme to Replace the Two-Wire Arrangement Used on 1915 Machines of Hendee Make



FOLLOWING its policy of improving its apparatus in every possible way for the benefit of both rider and dealer, the Splitdorf Electrical Company, of Warren street, Newark, N. J., has perfected a single wire system for the 1915 model of electrically-equipped Indian. This system replaces the two-wire system previously used and can incorporate an ammeter in the circuit or omit the ammeter as desired However, the ammeter is recommended for excellent reasons.

The new system is shown clearly in the accompanying wiring diagram. The ammeter, it will be noticed, has its positive post connected to the wire from the fuse box, while a wire from its negative leads to 4 on the junction box. When the ammeter is omitted, a wire from the plus connection on fuse box leads direct to 4 on the junction box.

The diagram can be readily followed by any rider or garageman. The grounds marked are, of course, on the frame and in the case of the lamps are through the body and brackets with frame return. Applications for this diagram should be made to the Splitdorf company at Newark.

ANOTHER GOODYEAR WINDOW DISPLAY CAMPAIGN

ONE of the most elaborate and comprehensive window display campaigns ever launched in this country, featuring tires, is the one just inaugurated by the Goodyear Tire & Rubber Company, of Akron, Ohio. Some time ago the Goodyear folks became interested in window displays as a means of increasing tire sales, and secured the services of Charles Speed, an expert window display man from the Marshall Field forces in Chicago. A national window display campaign was prepared and carried out with such satisfactory results that a Window Display Department was organized as a regular part of Goodyear sales activities. The Goodyear company has proved conclusively that tire buyers are as susceptible to the influences of an attractive display of tires as are the shoppers by tasty displays of wearing apparel and other necessities of life, and that the dealer's window, if properly used, is a valuable factor in promoting sales.

Goodyear's present national display campaign is being conducted on a scale not heretofore attempted by any tire company and involves the use of 28 carloads of materials. Six separate and distinct displays are provided, featuring automobile tires, both fabric and cord, motorcycle tires, bicycle tires, lawn hose, and tire accessories, and so arranged that the setting for any one of the six displays may be used in making up the other five, so that a dealer may feature all of the six different products.

"A CRACKER-JACK"

Editor Motor Cycle Illustrated:

Just received a copy of your special Spring Number and must say it is a cracker-jack. You can feel justly proud of it.

C. B. Colin,
Deepwater, W. Va.

Questions and Answers

PISTON DISPLACEMENT

PLEASE tell me how to figure out the piston displacement of a motor. When I worked out the bore and stroke of my motor according to the dimensions given in the catalog, I fell shy just 9 cubic inches. I presume the makers included the capacity of the valve chamber in their calculations. INQUISITIVE.

Liberty, N. Y.

If your calculations were correct, the error was in the maker's catalog. The piston displacement is the volume of the cylinder itself, and does not include the valve or combustion chamber. It is reckoned as follows: Bore X bore X stroke X 0.7854 X number of cylinders. For the cubical capacity of a cylinder the entire volume of that cylinder (including valve chamber and combustion space) is figured. This is usually found by placing the piston at the top dead center and pouring in kerosene until the space is filled. The kerosene should come from a graduated vessel so that the amount filling the space mentioned can be read directly. If in cubic centimetres, divide by 16.38 to get cubic inches. Add the figure obtained to the piston displacement to get cubical capacity.

DRY CELLS CAN BE USED

A RECENT law in this state calls for sidecar lamps. I propose using dry cells with an electric lamp for the purpose and am asking whether such a battery would be suitable.

Newark, N. J. P. L. GALLEGHER.

We think that the dry cells will be all right for the purpose, provided that examinations of the cells are regularly made to see that they are not exhausted. Dry cells are of 1.2 to 1.5 volts and run from 20 to 30 amperes, so that if a four-volt bulb is used, the battery should consist of three cells. A set of cells will give all the light required by the law.

ACTION OF RUBBER BUMPERS

FELLOW-RIDERS with machines like my own use rubber bumpers in the scrolls of the front springs and claim that their action is beneficial. I say that the bumpers deaden the spring action and that the springs were not designed to use such devices. F. X. SULLIVAN.

Chicago, Ill.

If the bumpers are soft enough they will act as additional springs in preventing too great a closing of the scroll and consequent breakage close to the end of the leaf spring portion. If the bumpers are not soft, they deaden the action of the spring and make riding somewhat harder as regards spring action. The bumpers are supposed to act as shock-absorbers when in position. They are certainly an auxiliary device to the spring, for the latter was obviously not originally designed for their use.

NOT OVER A 2 C.P. BULB

I AM thinking of putting a sidecar light on my electrically-equipped machine. Will the battery stand the extra light? I am using tail and head lights and horn. C. WILBUR GATES.

South Bend, Ind.

If the sidecar light is not more than two candlepower, the battery and generator will take care of the extra load, but possibly the horn would be a little weaker in tone. Generally speaking, we hesitate to advise adding another light to an electrically-equipped machine, as the extra current used has to be drawn, in part at least, from some of the regular lighting or signalling equipment.

NO SUCH RECORD

PLEASE tell me the present coast-to-coast and return record, who it was made by and when. I have ridden a motorcycle for several years, and think I should like to try for that record (Los Angeles to New York and return) this season. Flagstaff, Ariz. ALAN T. BEDELL.

There is a coast-to-coast record, Pacific to Atlantic, but none for the round trip. The one-way record is held by Erwin G. Baker, 7 h.p. twin Indian, his trip leading from the Pacific Coast east. If you are going to try for the round-trip record, let us know when you will start.

GRAPHITE GREASE IS O. K.

I HAVE heard that graphite grease is first rate for lubricating my three-speed gearset and would like to know if this is so. ALBERT L. PERSON.

Denver, Colo.

Provided that you get a grease suitable for such work we can unhesitatingly recommend it for gear-box use. The grease must get more or less fluid when the shafts and gears are in motion and must not pack so that the wheels will merely cut a path through *without* taking off any lubrication. There are a variety of fine brands on the market for this purpose, and you should be able to make a choice with the advice of the makers. It would not be a bad idea to use oil mixed with the grease.

USING MOTOR AS AN AUXILIARY BRAKE

It Is Particularly Valuable When Sidecar Is Attached and Exhaust Valves Are Lifted—Better Effect Than Magneto Cut-Out

By D. B. PANGBURN

IN descending any long and steep hill, there is a large heating effect and a great strain on the brakes, particularly when a sidecar is fitted to the motorcycle. In fact, the brakes, designed primarily for solo work, are subjected to the extra strain of holding back the weight of the passenger and the sidecar. For this reason, many sidecarists use a magneto cut-out and put the motor in gear, so as to let the latter act as a brake.

If you have ever spun a motorcar motor over against compression, or whirled a motorcycle motor without lifting the valves, you will remember that while it takes some effort to get it started it takes comparatively little energy to keep it going. This is because the work done in compressing the charge in the cylinder is nearly all expended again when the charge expands without exploding.

The same effect takes place when the motor is used as a brake with a magneto cut-out. At first it brakes well and then acts less and less to retard the outfit. A better retarding effect, and a continuous one, will be found to take place if the exhaust valves are lifted, so that the motor has actually to do the work of filling the cylinders with air and pushing the air out again at *every* stroke instead of alternate strokes as when using the cut-out. In other words, the braking effect will be about twice as great as when using the cut-out and there are very few hills indeed, where the motor in low gear and with the exhaust valves lifted will not prove a sufficient brake.

BIG FEATURES BOOKED FOR COLUMBUS TRACK

COLUMBUS, Ohio. — The Interstate Racing Association has closed a contract with the lessees of the Columbus Driving Park for holding motorcycle meets during the current season and the following dates have been selected: June 4, June 25 and September 3. Elaborate plans have been worked out for the season's racing here, and it is announced that such features as a 200-mile Ohio sweepstakes race, a 100-mile interstate championship and a 100-mile handicap will be put on in addition to the less important events.

The mile track at Columbus is regarded as the best course on the Interstate circuit and it is for that reason that the Association has switched the big speed features to this city.

SUGGESTING A NEW FORMULA FOR HILL-CLIMBING

Professor Callender's Calculations Give Unfair Advantage to Motors of Small Displacement at High Speeds and a Better Rating Means Is Suggested—This Includes Air and Tractive Resistances

By PERCY P. CHARLES

THERE has been considerable discussion with regard to hill-climbing, and I have noticed that Professor Callender's formula is used in the majority of cases. The first notice this year was in the article by Arthur Chapple, a few weeks ago, in relation to classifying the lightweight. This formula, as the reader is probably aware, includes the weight of the rider, the weight of the machine, the piston displacement and the time consumed in making the ascent, as follows:

M equals W_1 plus W_2 divided by C × T, when M is the figure of merit, W_1 is the weight of the rider, W_2 is the weight of machine, C the piston displacement and T the time of the ascent. The highest figure of merit wins.

An Unfair Advantage

Now, I cannot see the advisability of using this formula. After calculating the results of some recent hill-climbs in the 30½ and 61 cubic-inch classes by the Callender formula, I find that it gives the 30½ cubic-inch machine an unfair advantage. The formula, furthermore, does not take into account a very important factor—the air resistance.

The weakness of the Callender formula lies in the higher speeds. At speeds about 25 miles per hour, for example, a 61 cubic-inch machine would have to go twice as fast in the climb as a 30½ cubic-inch mount to win. On most hills, when the smaller motor makes the ascent in 30 seconds, the 61 cubic-inch machine seldom climbs the same grade in less than 20 seconds, or 50 per cent. faster. Hence, I would like to submit a more accurate formula. This is:

M equals (R_1 plus R_2 plus R_3) T divided by C, when M is the figure of merit, T the speed in miles per hour, R_1 the tractive resistance, R_2 the air resistance, R_3 the force of gravitation. The highest figure of merit to win.

Factors Considered

Now, R_1 is the weight of the rider multiplied by the resistance per pound of weight. The latter is 0.03 pounds. R_2 is the product of the surface offered by rider and machine (4½ square feet) and the resistance at the speed traveled. See Kent's Engineers Pocketbook, page 597. R_3 is the weight of the machine and rider divided by the percentage of the grade. C is the piston displacement in cubic inches. We now have:

M equals R T divided by C, when R is the sum of R_1, R_2 and R_3.

You can get the value of R from a series of curves plotted for different weights, say, 300 to 500 pounds. The ordinate would be the speed in miles per hour and the abscissa would be the value of R in pounds. The curve itself would be that for a given grade, say, 5 per cent., and the intersection of the speed with the point of the curve would give the value of R at once. Naturally, there would be a different curve for every different weight of machine and rider combined represented as W in the formula.

Two other changes that I think are desirable in the existing rules are the formation of four classes: a 15¼, a 30½, a 45¾ and a 61 cubic-inch class, in place of the 30½ and 61 classes. The other would be to have but one machine used by one rider in hill-climbing or any record trial.

MORE ABOUT THE FAITHFUL PLUG

Also a Few Words on the Magneto and Sharp Edges

By COURIER

PERHAPS you thought that material with regard to the spark plug was about exhausted, after a whirl of it in two or three numbers recently. Well, it isn't. There's lots more to write about the little red-hot proposition that gives zip to the compressed gas—red-hot when you touch it with the naked fingers, for the most part. For instance, it has a gasket to keep the gas from leaking past the screw threads, and this gasket often acts like a spoiled child. As our dictionary-educated brethren would say, it has its vagaries.

The copper-asbestos spark plug gasket or washer is a faithful friend when new, but appears soon to tire of its care of the joint between the plug and the motor and goes on strike, so to speak. It gets hard and allows gas to leak past it. On the first sign of a weak motor, I ring the spark plug gaskets around with oil and then "turn her over" to watch for the bubbles that show leaks. These washers can be brought to terms after becoming hard by heating them to a dull red and then allowing them to cool. After that they will be ready for use again, unless burnt by escaping gases. A blackened and flattened washer should be discarded, and a new fat washer fitted in such cases, as riders and repairmen often screw the plug in harder than is necessary to make the joint gas-tight.

Occasionally, you get hold of a gasket that will not take a heat and the cooling which should follow and remains fat, but minus its joint-plugging qualities. It is best not to do anything to it, but spin it into the discard and unbelt for the price of a new one. And, here's a nice little thought: carry an extra one along.

Concerning the Magneto

I have said nothing about the ignition system, as this very seldom gives trouble except through the carelessness of the rider. Beyond feeling the cables for tightness in the terminals and posts, little need be done, unless there has been gasoline or oil spilled on them. Feeling them with the fingers will show where any insulation has rotted, and under such conditions a new cable is the best remedy. If the magneto has not been oiled for 500 miles, a few drops of 3-in-1, or magneto oil (not cylinder oil) will be desirable. It should be put into the little cups at each end of the casing. See that the felt pad on the armature shaft where it enters the drive casing is in good condition, so that leakage of oil past it will not cause the armature windings to become oil-soaked.

Sharp Edges

This is just about the right time of year to create a demand on the part of riders for cleanly-finished fittings on every motorcycle. To the experienced rider, sharp edges are abominable looking anywhere and show too much hurry or slipshod work. These edges are unpleasant, especially on the control fittings, where the bare hands are likely to be cut or torn by contact with them. On wire mechanism, the corners cut the strands in course of time, and then there is a howl about the unreliability of wire in general and the good kinds are cursed with the failures of the bad.

May 14, Bronx, N. Y.—Second annual endurance run of the Crotona M. C. to Monticello, N. Y. and return, 250 miles.

May 21, Providence, R. I.—Annual photograph run to Roger Williams Park, M. C. of Rhode Island.

May 21, Newark, N. J.—200-mile observed run for lightweights, auspices of New Jersey M. C., to Philadelphia and return.

May 21, Jamaica, N. Y.—Endurance run of Jamaica M. C. to Patchogue and return.

May 21, Harrisburg, Pa.—Endurance run of Keystone M. C. to Altoona, Shamokin, Pottsville, Reading and return.

May 27, New York, N. Y.—Six-mile motorcycle race at Sheepshead Bay Speedway, in connection with naval and military demonstration.

May 27-28, Providence, R. I.—Week-end run of Providence M. C. to North Adams, Mass., and return.

May 27-28, Poughkeepsie, N. Y.—Endurance run of the Poughkeepsie M. C. through Poughkeepsie and Dutchess Counties; 20 hours.

May 28, Milwaukee, Wis.—Lightweight race of Milwaukee M. C. on Cedarburg track.

May 28-30, Boston, Mass.—Three-day endurance run of Bay State M. C.

May 29-30, Newark, N. J.—400-mile run, day and night, of New Jersey M. C.

May 30, Washington, D. C.—National Capital M. C. endurance run, 128 miles in 24 hours.

May 30, Providence, R. I.—Races at Narragansett Speedway.

May 30, Coshocton, O.—Race meet of Coshocton Motor Club at Fairlawn Park track.

May 30, Roanoke, Va.—Race meet of Dixie M. C.

May 30, Wheeling, W. Va.—Race meet of Wheeling M. C.

May 30, Philadelphia, Pa.—300-mile race on Hatboro Speedway.

May 30, Seattle, Wash.—Run of Seattle M. C. to Portland, Ore.

June 4, Sheepshead Bay, N. Y.—Motorcycle race meet in connection with "American Liberty Day" celebration.

June 10-11, Worcester, Mass.—Fifth annual 24-hour endurance run of Worcester M. C.

June 14.—Meeting of the Motorcycle Manufacturers' Association, Hotel Phister, Milwaukee, Wis.

June 18-19, Wheeling, W. Va.—336-mile endurance run to Bedford, Pa., and return, of Wheeling M. C.

June 25, Detroit, Mich.—Second race meet of Detroit Motorcycle Dealers' Association.

June 30, Wheeling, W. Va.—Sealed time run of Wheeling M. C.

July 2, Sheepshead Bay, N. Y.—New York State F. A. M. meet at Speedway and amateur championship races, auspices of Speedway M. C.

July 2-3-4, Grand Rapids, Mich.—Michigan State F. A. M. reliability trial, under auspices of Grand Rapids M. C.

July 4, Sheepshead Bay, N. Y.—New York State championship races, under auspices of Speedway M. C.

July 4, Roanoke, Va.—Race meet of Roanoke M. C.

July 4, New Brunswick, N. J.—Elimination run of the New Brunswick M. C.

July 4, Hamilton, O.—Meet at Butler County fair grounds of Hamilton M. C. in connection with F. O. E. annual entertainment.

July 4, Savannah, Ga.— Race meet of Savannah M. C.

July 4, Galesburg, Ill.—State F. A. M. championship races under auspices of Detroit Fair Association.

July 4, Wheeling, W. Va.—Race meet of Wheeling M. C.

July 16, Wheeling, W. Va.—Tri-State endurance run and open house, distance 100 miles, Wheeling M. C.

July 30-August 12, Wheeling, W. Va.—Run to Atlantic City and return, 600 miles, of Wheeling M. C.

August 10, Colorado Springs, Colo.—Races on Pike's Peak highway.

August 11-12, Roanoke, Va.—500-mile endurance run of Dixie M. C.

August 13, Detroit, Mich.—Third meet of the Detroit Motorcycle Dealers' Association at Detroit Oval.

September 3, Harrisburg, Pa.—Endurance run of the Keystone M. C.

September 4, Roanoke, Va.—Race meet of the Dixie M. C.

September 4, Milwaukee, Wis.—Fourth annual Goodfellowship tour, Milwaukee M. C.

September 6, Wheeling, W. Va.—30-mile road race of Wheeling M. C.

September 17, Detroit, Mich.—Fourth meet of the Detroit Motorcycle Dealers' Association.

October 1, Providence, R. I.—Annual Triangle run, Providence-Boston-Providence of M. C. of Rhode Island. B. A. Swenson in charge.

October 8, Detroit, Mich.—Meet of the Detroit Motorcycle Dealers' Association at Detroit Oval.

SWENSON ENTHUSIASTIC FOR F. A. M. CONVENTION

PROVIDENCE, R. I., May 1.—B. A. Swenson, the Indian agent here, in an interview this week stated that he was quite enthusiastic over holding the F. A. M. convention here this year, providing he has assistance in arranging the local programme. "B. A." is one of the busiest men in Providence and within five minutes after making a statement that he would like to have the convention in Providence, he said he had sold more machines up to the present time this year, than he did in all last year put together.

Regarding the convention, Mr. Swenson said: "In 1907 it was a big success here and I believe the Providence Motorcycle club is anxious to have it again. We had good facilities for taking care of our visitors at that time and a good track for our races. We have now a far better track in the Narragansett Speedway and with the experience gained through the former convention this ought to be made a hummer.

"In case the national officers decide to hold the meet here I shall do my utmost to arrange as successful a programme for the convention as it is possible."

HEAVYWEIGHT RIDER PROVES FEATHERWEIGHT

HARRISBURG, Pa.—The claim that the Indian Featherweight is a machine for universal use is borne out very strongly by Samuel A. Froelich, of this city. Froelich tips the beam at 340 pounds and has for several years ridden Indians of the big twin types, but on the appearance of the Featherweight he immediately became much interested. It carries him with ease and is a good proof that the machine has ample power for heavy riders.

Our Canadian News Letter

QUEBEC LUKEWARM TO THE MOTORCYCLE

Report of the Provincial Secretary Shows That Only 296 Machines Were in Use in 1915—Probably Because License Fee Is $12

QUEBEC CITY, Que.—The official report of the Provincial Secretary for the French-Canadian Province of Quebec for 1915, shows that only 296 motorcycles were in use in the whole province, of which 173 were owned by residents of Montreal, the largest city in Canada. In 1914, there were exactly 205 motorcycles in use in the whole province.

The motor cycling situation in Quebec has always been a real enigma. The Government has spent millions of dollars for the improvement of roads—more in the past few years than any other Canadian province. The population is slightly more than two milions—almost equal to the population of Ontario. Montreal, the largest city has over 700,000 people and is said to be the sixth city on the American continent. The scenery of the province is most attractive and the people most interesting. Yet the number of motorcyclists is almost negligible.

One hindrance to motorcycle enthusiasm probably is, however, the registration fee exacted by the government, which is $12 per year. At the same time, the provincial authorities claim that the riders have never made a complaint about this tax.

According to the dealers of Quebec City, the motorcycling prospects for 1916 are very fair, however. The Quebec Skate Company, handling the Indian, is enjoying a good measure of trade while a new motorcycle dealer here, Rod Douville, has already taken orders for twenty-five Excelsiors this year. This is the first season in the motorcycle business for Douville. The Miami power-bicycle has made a hit in this, its first, year here. Not long ago J. E. Poulin took the agency for this make of lightweight, and he has already disposed of eight machines. He has also made arrangements for the early delivery of five more. This showing is somewhat surprising in view of the hilly nature of Quebec's streets and environments. Quebec's population does not exceed 100,000.

TEACHING TORONTOITES TO AVOID ACCIDENTS

TORONTO, Ontario.—The proposal has been made that Toronto have a "Walk Right Day" on which all pedestrians will endeavor to observe every traffic regulation and so learn how to use Toronto's narrow streets without walking into dangers. The special day is to be preceded by a campaign of education so that everybody will know the proper way to cross at intersections and to be on the lookout for vehicular traffic. The proposal was first made to the civic authorities by the Canada Motorcyclists' Association.

LIVELY MEET PLANNED FOR WINNIPEG M. C.

WINNIPEG, Manitoba.—Although many of its riders have gone to war, the Winnipeg Motorcycle Club has decided to go ahead with arrangements for holding the annual spring race-meet on May 24 this year. As usual the events will be staged on Exhibition track and to F. W. Marples has been entrusted the duty of having the track repaired, as the local speedway is now in very poor condition. The card consists of eight events, three of which are for professional racers. There will be a five-mile sidecar race and a one-mile time trial feature for both amateurs and professionals. Both classes of riders will be allowed to use motorcycles having engines of 61 cubic inch displacement. The distance of any race does not exceed ten miles.

Several fine trophies have again been brought into commission for the coming speed-tests, including the Empress, Olympia and Birks cups. The handsome Olympia cup is awarded each year to the rider making the best time in the time trials. Other prizes, such as tires, saddles, etc., are also given along with the cups.

HERE'S RECIPROCITY WITH CANADA AFTER ALL!

TORONTO, Ontario.—Local motorcyclists are planning to unite with the automobile enthusiasts in a celebration to commemorate the enactment by the Ontario Government of the measure to provide for the reciprocal recognition of motor licenses belonging to international tourists. The long-expected announcement by the Provincial authorities will be made within the next two or three weeks, it is understood, and the motorists of several large Ontario cities will celebrate the occasion by a tour to the Niagara River boundary line for the purpose of a formal handshake with the autoists and motorcyclists of Buffalo, Rochester and other nearby American points.

It is hoped to have present at the ceremony two important Government officials in the person of the Hon. Francis M. Hugo, of Albany, Secretary of State for New York, and the Hon. Finlay Macdiarmid, Toronto, Minister of Public Works and Highways, under whose jurisdiction is the issue of motor licenses in Ontario.

RUELINS, CRACK CANADIAN CYCLIST, WOUNDED

OTTAWA, Ontario.—The name of the first Canadian bicycle racer now at the front has appeared in the official casualty lists issued by the Militia Department, Ottawa. The rider is Private Fred Ruelins, 2nd Canadian Pioneer Battalion, a former resident of Toronto. He was wounded in action late in April somewhere in France. Reulins comes of Belgian parentage and he also has a brother in the Canadian army overseas, who is also a crack cyclist. Probably more than forty Canadian racing cyclists are with the colors.

HAYWARD SETS GOOD EXAMPLE

CALGARY, Alberta.—Private C. L. Hayward, of Calgary, a member of the 137th Overseas Battalion, has offered his services to the country as a despatch rider and has donated a 1916 Power Plus Indian for his own use with the colors. Hayward is one of the most prominent motorcycle enthusiasts of Western Canada.

PORT CREDIT'S ROADS NO CREDIT

PORT CREDIT, Ontario.—Residents of Port Credit and other nearby towns along the shore of Lake Ontario declare that the roads are positively the worst that they have ever been during the past forty years owing to the great depth to which the frost descended last winter. What there was of a road surface on a number of highways has been broken up on this account and quagmires have resulted.

MILITARY STADIUM FOR ONTARIO

ALLISTON, Ontario.—The latest plans for the establishment of a large military training camp near this place provide for the erection of a large stadium to accommodate more than 5,000 people, according to an announcement by Captain T. C. Flanagan, the director of military sports in this district.

One of the interesting features of the stadium is to be a four-lap bicycle track on which soldier-riders will engage in cycling events at frequent intervals.

LONESOME WITHOUT IT

Editor, Motor Cycle Illustrated:

Enclosed find three dollars for a year and a half subscription to Motor Cycle Illustrated. I have been a reader of your valued journal for many years, and upon being transferred to the Philippine Islands from the States I neglected to renew my subscription. But I certainly feel very lonesome without it; hence the renewal.

—And The Indian Keeps On Winning

MORE victories! More of the same old famous Indian stuff! More repeating on the very spot where so many Indian triumphs have been celebrated before!

At the Fresno meet May 7, Indian took FIVE FIRSTS—carrying away the honors in the expected Indian dashing style.

Digitized by Google

Don Johns

Morty Graves

Here are the events:

Five Mile Open—Don Johns, Indian, FIRST.

Ten Mile Open—Morty Graves, Indian, FIRST.

Ten Mile Club Race—Tice, Indian, FIRST.

Fifteen Mile Event for County Riders—Tice, Indian, FIRST.

Twenty-five Mile Australian Pursuit—Don Johns, Indian, FIRST.

In addition, Don Johns also lowered the track record to 48 3/5 seconds.

The most significant fact about Indian winnings is the regularity with which they occur. Each week heralds a conspicuous triumph for the justly famous red machine.

INDIAN SHOWS ITSELF SUPERIOR IN ALL FORMS OF COMPETITION. IT IS THE STAR PERFORMER WHENEVER IT IS ENTERED. IT HAS BEEN THE BIGGEST SPORT FACTOR MOTORCYCLING HAS EVER HAD. FIFTEEN YEARS OF RACING — AND EVERY YEAR AN INDIAN YEAR!

British Sport and Trade

By OLD RAMBLER

LONDON, Eng.—I won't worry you with the lengthy personal reminiscences here and now, but in my collection of "antiques" I have a photograph of an 1878 "Coventry Express" tricycle (unreproducable, alas!) which has some interesting features. This progenitor of the modern motorcycle and bicycle had a sprung seat with back-rest, tiller steering (like the early automobiles), and hand brake (though this acts on the road instead of on the wheels). A glance at such ancient curios ought to make the modern youth thankful that he has entered this mundane vale of tears at a time when motorcycling and cycling are shorn of most of their physical tortures.

One of the most noticeable advances in British motorcycle design, as soon as the war allows of ideas being put into practice, will be the springing of the rear construction. The front wheel is pretty adequately provided for already on every British mount of any importance; but it has rested with the Hendee people to set us a rousing example of how to do the whole job properly, by fitting shock-absorbers "somewhere" under the saddle. It doesn't matter whether the springs are affixed to the saddle lug or to the back fork ends; theyv'e got to come.

Front Brake Fittings

Some American firms are as interested as European concerns in the effective equipment of motorcycles for war as well as peace times. One thing that calls for a revolution is the front-brake fittings. As it is, it forms a veritable curse and provokes many a thousand others. War experiences have brought out the weakness of the usual front brake. Makers point out that there is a positive danger in a too-powerful front wheel brake; that the rider is liable to do a somersault over the handlebars and all that sort of thing. But the mischief is that many models are not powerful enough, except for the lightweights that are so much "in the air" just now. The standard type is a horseshoe pattern of brake, worked through guides and acting by means of fibre blocks on the wheel rim. There is too much liability for the brake shoes or blocks to get out of order and foul the spokes, thus leading to worse accidents than a "header" over the handlebars.

Front Brake Troubles

There are drivers in the motorcycle gun section of the army who regard the average front brake as a tom-fool fitment, not fit for hard service, and machines on which army recruits are taught are actually stripped of the brake shoes. These blocks give infinite trouble to a man who wants to take out the wheel, for tire or other repairs.

The type that ought to be fitted, for simplicity and efficacy alike, is the band brake, of the metal-to-metal type, or with fibre or leather acting on a metal drum. The orthodox rim brake for motorcycles is a survivor of the bicycle type. The latter is good enough for its purpose—and bad enough, also, when one wants to remove the wheel. This, of course, leads one to say that American practice—the fitting of back-pedaling hub brakes, such as the New Departure and good old Morrow types—is highly commendable.

Watching the Rookies

For a bit of riotous fun, a motorcycle enthusiast could want nothing better than to see recruits receiving their lessons at our instructional school. Some of the fellows come along without any previous experience, but they are as keen as mustard and pick up the tricks of the trade with amazing alacrity. Other chaps come along with really expert knowledge and soon learn all the ins-and-outs of motor machine guns on sidecars. The novices, however, make an onlooker's sides ache with laughter. There's a good deal of the spirit that an N. C. O. who has to put "rookies" through their places in the cavalry—you must learn as quickly as you can, in any way you care to adopt. If you have a nasty fall, what on earth did you do it for?

It's a bit rough on a recruit to be put on a machine that has already been battered and knocked about by a score or hundred other ignoramuses. True enough, he first goes out in a sidecar with an expert driver, but with the music of the exhaust, the whistle of the air and the novelty of all things, the tyro misses a lot more than he hears of the advice yelled out by the instructor. However, they soon change places and of all the bungling and boggling of levers the army recruit's display beats everything.

Of course, the kick-starter fails to kick through the exhaust lifter and carbureter controls getting confused in the "rookie's" mind. When he is told to declutch, he gets into an absolute fog. The instructor howls: "Let the clutch in gen——" but the words do not get finished, for Private R. E. Cruit feels a sudden and fearful lurch; he changes up when told to change down and at cornering some fearful things happen.

You will be familiar with the name and exploits of Hugh Gibson, the British speed and long distance merchant—he of the 20,000 miles in 20 weeks and 40,000 miles in 40 weeks, as instances—who did big things with Bradbury, Singer and Clyno machines. Well, he was shot out of the sidecar three times in one morning recently by recruits whom he was tutoring. There are places as lively as the battle-zone.

Talking of sidecars, they are so much a fixture on a big proportion of machines in Britain that some parts of the motorcycle ought to be more accessible. What was right enough for solo mounts brings a heap of trouble to the sidecar owner. If anything goes wrong with the transmission, the contact-breaker on the magneto, the clutch and its control, a man has to be a bit of a contortionist to get down to the affected parts. To put the thing in a nutshell, we ought to have most or all parts accessible from the side of the cycle which is away from the sidecar. Of course, there are difficulties in bringing this about, and it may hurt some conservative firms to make drastic changes, but the firm that complies with the public want is the one that will collar the trade.

More Accessibility Needed

What does a mechanic at a garage do if he wants to get at the clutch or transmission? He removes the sidecar to do his work properly, which proves clearly enough that the working parts of cycles need to be fitted more accessibly. A man stranded on the road doesn't want to begin by detaching the sidecar. You hear fairy tales about sidecars that can be detached in 3 minutes, 2½ seconds, but practical riders who have been in trouble know otherwise.

But for the war, a good deal would probably have been known by this time of W. S. R. Ridgeway's two-stroke engine. He's, by the way, no novice at clever designing and he was the inventor of the well-known Saxon forks. The feature of the new engine is its oscillating movement; its first adaptation to an internal combustion engine. The connecting rod is rigid with the piston and as the bottom end of the cylinder is closed, a much better pump is provided for incoming gas than the crankcase of an ordinary two-stroker. Gases are absolutely expanded by the descending piston and immediately upon the upward movement beginning, there is a strong suction in the inlet pipe. The gases reach the lower half of the cylinder through the hollow bearing shaft on which the cylinder oscillates.

Experts unhesitatingly consider the Ridgeway engine the best two-stroke of all the bunch, but they forsee possible anxieties as to perfect lubrication.

Apropos of engines the Hendee company has made some European firms put on their thinking caps. The abolition of inlet-over-exhaust valves on Indians has been a blow for those who deemed the said type of valve arrangement to be indispensable.

Tips for Exporters

NEW ZEALAND CLASSIFIES VEHICLE PARTS

ACCORDING to a recent Governmental classification, a number of accessories have been made subject to duty as parts of motor vehicles, cycles and motorcycles, even when imported separately, in New Zealand. These are: bells for cycles and motorcycles, dress guards, gear cases, inflators (hand, foot and power), connections for inflators, lamp brackets, luggage grids for motor cars, parcel carriers for motorcycles and bicycles, pump clips, saddles and parts therefor, sirens and horns, horn bulbs, toe-clips, tool bags or tool boxes, tool kits or tool rolls with contents (oil cans and brushes), and watch holders.

The following articles are dutiable as parts of motor vehicles, etc., only when they accompany the motor vehicle or cycle, and if imported separately will be classified under their appropriate tariff numbers: cyclometers, speedometers, recorders, electric batteries and switchboards, funnels for motorcycles, handlebar baskets for cycles, lamps and lamp covers and acetylene generators, lubricators, mascots, handlebar mirrors, reflectors, spiral springs, watches and clocks.

CHINA'S BICYCLE IMPORTS SHOW SMALL GAIN

IMPORTS of bicycles into China have heretofore never been large, and for a number of years they have represented practically the same annual value, as follows:

1912	$75,475.00
1913	82,115.00
1914	95,847.00

The United Kingdom furnishes the greater portion, while Japan, Germany, Austria, Belgium and the United States have, up to the present, supplied the balance. Cheap machines are chiefly in demand.

A small number of motorcycles have been imported in recent years, and their employment seems to be increasing, though they are used only by foreigners in the country. Imports in 1914 totalled in value $23,703.00, nearly three times as much as in the preceding year. Practically all the motorcycles used in China come from Great Britain and the United States.

MOTOR IMPORTS INCREASING IN VENEZUELA

THE importation of motor vehicles is one of the most striking of recent trade developments in Venezuela. This business may be said to have begun in 1911, but importations that year were not sufficiently important to be included in the consulate's trade report. In 1912 they totaled $117,000; in 1913, $202,000; in 1914, $157,000, and in 1915, approximately $200,000. Practically all of this business is now done by American manufacturers.

Realizing that better transportation is the supreme need of Venezuela, the government encourages the import of motor vehicles by putting them in the lowest or first custom's class, the duty amounting to only 68 cents per hundred pounds gross weight. There appears to be a bright future for American motor vehicles in Venezuela. The government is building a number of good roads, and every few days the newspapers publish items to the effect that some journey has been made by motor vehicles in two days which formerly required approximately two weeks.

AMERICAN TRADE METHODS IN NORWAY

IMPORTERS and local agents complain that American firms often change their representatives in Norway. The result is that Norwegian import agents and importers do not know how long they will be in possession of agencies or in connection with their respective American exporters. Importers and agents state that such treatment would never happen from Germany or England, except for very good reason.

This consulate has repeatedly informed exporters and manufacturers in the United States, in replying to their inquiries, that only one agent or one dealer should be addressed at a time. The city of Christiania—the population of which is 251,000—is a comparatively small city, where all these dealers and agents have some knowledge of one another. They inform one another that they have been addressed by such and such a firm, and the result is that such goods will not be handled and the exporter, perhaps, not answered.

All the local agents belong to an organization, the object of which is to see that no one acts dishonestly or unfairly. The agent or dealer whose actions are unsatisfactory to the organization is expelled and practically put on the blacklist. All adhere to the rule that no two agents must represent the same American exporter at the same time.

A prominent business man, member of a well-known automobile firm in this city which represents a certain American motor car, stated that a man of this city left for the United States a month ago to secure the sole agency of said car in Norway, after the firm in question had had the trouble of introducing the car for three or four years, and he further stated that his firm gradually had worked this special motor car successfully on the Norwegian market. Said firm is of good financial standing and of excellent repute.

BETTER PACKING IS NEEDED, SAYS ATTACHE IN CHINA

"CONSIDERABLE evidence of bad packing on the part of American shippers has been in evidence here," says Commercial Attache Julean H. Arnold, of the American Legation, Peking, China, in a recent announcement. "Bales of American cotton sheetings have arrived in Shanghai in very bad condition, owing to inferior packing, while alongside these poorly packed American bales were beautifully wrapped British bales. Machinery has arrived in Shanghai with parts broken on account of careless packing. I have myself received furniture from American manufacturers in a most dilapidated condition on account of the packing. All our consuls in China have probably had specific instances brought to their attention.

"There is one phase of American packing for foreign shipment which does not seem to have been included in criticisms directed against American shippers. Perhaps, instead of using the expression 'bad packing,' it would be better to say 'unintelligent packing,' for there have been numerous instances in which goods were packed too well, involving unnecessary expense. For instance, recently in Shanghai, American hardware-trade possibilities were investigated, and several dealers said that much American hardware came to China packed too well, materially increasing the cost of the goods in this market. Some articles which would carry easily without any chance of breakage were packed like glassware. Packing boxes were placed within packing boxes, adding to the freight charges.

"In several instances American manufacturers and exporters have taken the liberty of adding charges for crates and packing without much consideration for the proportionate cost which these items bear to the articles shipped. One big American mail-order house, which has a very extensive trade throughout the Orient, is credited with being extremely careful in regard to its packing, but is criticised because its added charges for crates and packing are disproportionately high.

"I would suggest that American shippers place in packages shipped a printed slip calling for comments from the consignees on the packing of the parcels received by them, and in this way, in course of time, they will probably receive valuable suggestions. The only way to overcome this criticism is to understand wherein the fault lies in each specific instance."

A BRAZILIAN OPENING

Motor Cycle Illustrated is in receipt of a letter from Armando Dias, Rua De Malcher 31 A., Belem, Brazil, who desires to obtain the agency for an American motorcycle.

Let Motor Wheelists Do Your Selling

The best salesman for a SMITH MOTOR WHEEL is a SMITH MOTOR WHEEL. What do we mean?—Why, just this—

Ten SMITH MOTOR WHEELS standing bright and shiny in your salesroom are a certain asset. But they are not as valuable as real sales boosters as ONE SMITH MOTOR WHEEL in use on the streets of your city.

The livest SMITH MOTOR WHEEL dealers are finding that it pays best to discover the kind of prospect who will help sell more wheels after he buys his own.

For example—a dealer in a big middle west city picked out the company in his town which employed the biggest number of collectors—men who needed to get about their business quickly and conveniently. Many of them were using bicycles. He sold one man and within ten days he had signed up twelve for SMITH MOTOR WHEELS.

The Motor Wheeling bee is one that is passed on in a cheerful, neighborly way. One man uses a SMITH and soon his friends in the same line of business find that they can't do without one.

All the dealer does is to discover the logical direction in which to extend his efforts. As soon as he gets a start the ball is rolling and sales come in just as easy as he could wish.

The SMITH MOTOR WHEEL attaches in five minutes to any bicycle, gives instant and consistent satisfaction. Sales, the Motor Wheel Way, run along just as easily and you sell more bicycles, tires and accessories, too.

SMITH MOTOR WHEEL dealers are a big family of money-makers. Don't keep your private brand of selling schemes all to yourself. Be neighborly and pass the good word along to us. We'll help your brother dealers cash in the same way you are doing.

In certain localities we have not as yet appointed representatives. We invite correspondence with established dealers.

If the name "Smith Motor Wheel" is not on the flywheel of your motor, it is not a Smith Motor.

BRINGING GROWN-UPS INTO THE RANKS

Jack Brady Tells How a Live Merchant Blazed a Trail to Bigger Profits

By FRANK HARDY

IT was a bright, cool morning in the early part of May that Jack Brady, sporting his usual smile that won't come off, stepped into the spacious bicycle store of Hap. Raffles in Uniontown. Brady had been on the road for several weeks and beat all his previous sales records in landing fat, juicy bicycle contracts with dealers.

"Promises to be a corking fine bicycle year!" Brady greeted Raffles, wringing the dealer's hand until the poor chap winced.

"Leggo my paw!" yelled Raffles. "'Course it's going to be a fine year. Fact is, I'm having a crackerjack season right now, so you needn't talk about 'promising to be a corking fine year.'"

"Does my old heart good to get such an earful," sang out Brady, dropping his huge bulk into a comfortable chair. "Everybody's saying the same thing all along the line. But, you know, there's one point I'm a bit doubtful about—a sort of little cloud on an otherwise bright horizon, as the poet might say."

"Gosh, that's talking some, Jackie, m'boy." Raffles started to jolly the genial traveler. "When there's actually a season that the guy Jack Brady can find only one point to be doubtful about, then the bicycle business must sure be riding on the crest of the prosperity wave! Yes siree, take it from me. And now, m'lord, what may the doubtful point be?"

And Jack Brady Told Raffles the Interesting Experience of the Pennsylvania Dealer.

"DO you honestly believe," asked Brady, "that dealers are making the most of the growing demand for bicycles which one sees everywhere? Are they exploiting all possible prospects? Or, to paraphrase a popular song, are you fellows half the dealers that the manufacturers thought you'd be?"

"Soft pedal on the sentimental stuff!" rumbled Hap. Raffles. "If we were but half the dealers that the manufacturers thought we'd be, then by heck we'd be traveling a bit. Now, I think that most dealers are doing their utmost. Why shouldn't they? The more we boys sell, the more sheckels pour into our cash register, the ring of whose bell is sweet music to our ears."

"Of course," smiled Brady, "the majority of the dealers are striving hard. But from what I've seen this year the bicycle is not making as broad an appeal as it should. We have all of us been aiming at the boy and the girl, and also hammering at commercial business. But have we accomplished much in attracting the attention of adults to the pleasures, joys and health-building qualities of cycling?"

"Now, say," interposed Hap., "isn't it a fact that the bicycle today is being used almost entirely by kids and for utility purposes? You don't see many grown-ups ride—and one naturally concludes that adult people do not care for cycling."

BEST LETTERS IN "MILLION BICYCLES" CONTEST

Dealers and Clerks Show Keen Insight Into Selling Methods by Essays Submitted in Sales Talks Contest; Two Best Letters Received by Committee Are Reproduced Below

FIRST PRIZE LETTER

By FRANK RUPERT

I HAVE been in the bicycle business as a clerk and also as a repairer, for the past seven years, and I am always interested in display windows or advertisements, or in fact anything that I think can benefit me in selling more wheels.

The Million Bicycles Campaign is a movement advertising bicycles that I have often thought of myself, and in which I think every dealer ought to co-operate in an effort to make it one big yearly boost.

I am speaking as a clerk only, and not as a proprietor, although I have handled the business, in the way of selecting my stock and the quantity that I thought would be a benefit to both proprietor and myself. If I selected goods that the trade did not care for just in order to have an assortment I would be doing injustice to his business financially and to my own salesmanship.

Display of Machines Important

I have always found it easier to sell bicycles, when they were of up-to-date patterns, and when they were shown in the proper way, than when they are put into a corner where no one pays any particular attention to them except when someone may ask to look over your wheels. I have found it very convenient to have wheels placed on the floor in stands or, setting on stands that originally belonged to the wheels.

When a person comes into your place of business, whether it be a man, woman, or child, with no intention of buying anything except what they came for, and you have your goods displayed in the right way before their eyes, invariably you will make a sale.

This applies to bicycles, as to everything else. If you have floor space large enough to arrange a first class line of bicycles with all the flashy colors, you are going to sell bicycles.

Know Your Line Thoroughly

But here is where the most important part comes in: After a clerk has all of the above named conveniences in his favor and a good place to show wheels he must know his line. Unless he does know it, he is going to lose sale after sale, by not knowing how to explain a wheel satisfactorily to his customer.

That is exactly the reason why I am writing this letter, for I hope to be able to pick up some new ideas from other clerks. The old saying, "We are never too old to learn," is a good one. I have found it to be full of helpful truth.

I have pretty strong competition to contend with, there being eight firms to compete with, in this city of 40,000 inhabitants. However, making sales of over 100 bicycles a year isn't so bad as it might be, but I believe I can do even better. I am not satisfied with doing as good as my competitors. I want to do better if it is possible for me to do so.

I believe two-thirds of all sales are made by a salesman's knowledge of how to handle his customers, and by his clear explanation of the mechanical points and the guarantee.

The time of guaranteeing an article to a customer is a big one. If you know what a guarantee really covers it is well worth while to thoroughly explain everything that is at all necessary. Otherwise if you are not familiar with the bicycles and what the guarantee really covers you had better get busy before you say too much, or you may have trouble with a dissatisfied customer.

When a customer comes in our place to look over the line of wheels, I do all I can to show him the stock. But I have been in stores in which about the first thing the clerk would say to a caller would be: "About what price do you desire to pay?" That may be all right in some cases, but the majority of people that I have dealt with—and I think they are all about alike—don't really know what kind of bicycles they want or much of anything about prices. They don't know the price they will have to pay until they decide what suits them best.

The third and fourth prize letters are now in type and would have appeared in this issue but for lack of space. These will be produced in full in next week's issue.

Whenever a clerk asks that question it always strikes me that he is too lazy to show his other wheels, and that if he can find about what price the customer desires to pay it will save him extra trouble.

It has always been my policy to show what I have, and if you have sold many wheels and given your customers the prices as you go along, you can "feel out" each customer and readily learn about what they want.

I have found also that some customers can best be handled by deferring to their own judgment, by which, I mean, that if they make up their minds to buy a certain wheel, sell it to them. Don't persuade them to buy something that they do not want.

Emphasizing a special feature of the frame forks, handlebars, or tires or offering to make a change in equipment often makes a good talking point that takes well with the trade.

I am not much of a writer on such topics, but I do say that if you come into our store with the intention of buying a bicycle, I will give you a hard tussle to escape me.

SECOND PRIZE LETTER

By F. E. WAGNER

WHEN customers enter your store see that they are waited upon at once. Do not make it necessary for them to wait and rap on your show case or travel the full length of your store and possibly into your repair shop and ask you to show them your line of bicycles; instead show them that you are interested in serving them in the best possible manner.

If known to the salesman, address your customers by their names, as this makes them feel at once less like a stranger; also it helps to get the confidence of the customer, which is a great advantage.

Study your customers closely and you will find that in looking over your line of bicycles they unconsciously will give you ideas upon which to work by their marked attention to some particular bicycle or equipment which, not having been mentioned, makes your customer feel that you know just about what he wants and which will be found to be a great advantage. Explain the good qualities and features of your own bicycle instead of the faults and defects of your competitors, as this only arouses the curiosity of your customer to see the other fellow's line, which often results in a sale for your competitor.

Show and Explain Equipment

Do not be afraid to show and explain your different grades of tires, saddles, pedals and other equipment, as this often results in a better sale, which possibly would not have been made had you not taken the trouble to show them.

To the customer who has not used the coaster brake explain and demonstrate the pleasure, safety and comfort that can be found in its use and to the customer who has used the coaster brake show him the improvements, such as thicker hub shells, larger spoke holes and non-slip clutches, which are undoubtedly all improvements over his old brake, and which are sure to interest him.

Do not make it necessary for your customer to ask you in regard to all of these things, and in fact, sell himself a bicycle, for this is exactly what he expects you to do.

Do Not Argue With Customer

Do not let your customer arouse the wrong side of your disposition should he happen to differ with you on some particular part of the bicycle or equipment, in fact, do not argue with customers at all, as you are there to sell them as near as possible what they want; explain what in your honest judgment will give them the best service, and if you still find that they do not agree with you, agree with them; sell them what they want and they will be better satisfied.

When your customer tells you that he can send out of your city and buy a bicycle for less money do not tear down the foundation you have already built by telling your customer that he cannot do anything of the kind and that you do not compete with mail order houses, or that if he can buy somewhere cheaper, that is the place to buy it; instead explain how in a very short time his cheap wheel will cost him as much in the way of replacing cheap spokes, chains, rims that are seconds and not properly cured and other cheap equipment as the bicycle you have shown him, also that you are in a position to make replacement on any part of his bicycle which might prove defective without being out the use of a wheel.

Digitized by Google

Explain the necessity of keeping the tires well inflated which will avoid rim cuts and give your customer better satisfaction, also how an occasional application of some non-rust preparation, which by the way you might carry in stock, will prevent the nickel parts from rusting, keep his wheel in better condition and make a better advertisement for yourself.

Insure Full Satisfaction

Before turning a wheel over to the customer care should be taken to see that all cones are properly adjusted, all nuts are tight and that the handle bars and saddle are adjusted to the proper height and position to give your customer the most pleasure and comfort in riding.

Do not drop your customer as soon as he has paid you for the bicycle, but show the same interest that you did in making the sale by seeing that the door, which is usually equipped with a heavy spring door check, is held open for him, and the little courtesy which is so often forgotten, the "I thank you, Mr. Jones, and should you find that your wheel needs any further adjustments we will be very glad to make them for you." It will make your customer feel that you have taken a personal interest in him and that when he finds himself in need of anything in your line he will know exactly where to go for it.

PRIZES COMING IN FOR "ONE MILLION" RACES

WORCESTER, Mass., May 10.—Mr. Chas. A. Persons, of the Persons Mfg. Co., who is chairman of the "One Million Bicycles" road racing committee, is meeting with considerable success in his efforts to secure prizes for road races which will be held throughout the country the entire season.

Sets of prizes will be guaranteed to organizations promoting races in various cities and towns, the number of prizes to be given by the committee being dependent on the size of the town and the entries. Mr. Persons, among other donations, has just received one hundred subscriptions to **Motor Cycle Illustrated.**

GOOD DEMAND FOR BIKES, SAY COLUMBUS DEALERS

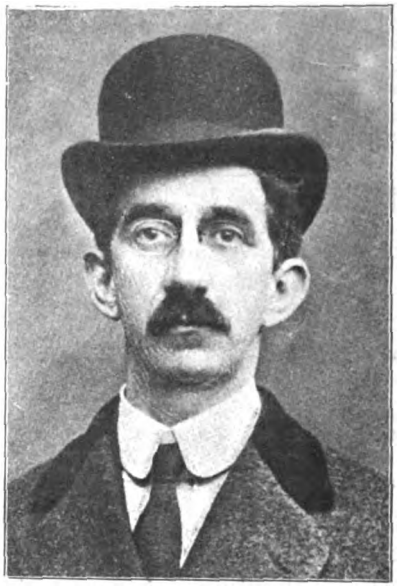
COLUMBUS, O.—All retailers of bicycles in this city report a good demand for the two-wheelers these days. As the Spring opens, more and more of the pedal two-wheelers are purchased for utility, especially by workmen and salaried men going to and from work. It is held on all sides that 1916 will be the best in years.

RAIN PREVENTS MEET AT NEWARK VELODROME

NEWARK, N. J., May 9.—Inclement weather, which in the East, at least, has been in the nature of a drug on the market for weeks past, caused the postponement of the bicycle meet at the Velodrome track yesterday. Along with the dark clouds, however, came a bit of silver lining in the shape of Harry Kaiser and George Cameron of New York, and Martin Ryan, of this place, who have defected from the ranks of the "outlaw" bicyclists and come back into the folds of the N. C. A.

WINNERS IN THE SELLING TALKS CONTEST

F. E. Wagner, Battle Creek, Mich.
Second Prize



E. H. Leng, New York City
Third Prize

H. Bell, Indianapolis, Ind.
Fourth Prize

T. N. Mudd, Jr., Washington, D. C.
Fourth Prize

THIS contest was staged in connection with Bicycle Day by the "One Million Bicycles" Committee. The first prize was $100 (this was won by Frank Rupert, of Decatur, Ill., who has failed to send in his photo); second prize, $50; third prize, $25; fourth prize, $25 (this was divided between Bell and Mudd, for their letters were considered of equal merit by the judges). One hundred handsome toilet sets were given for the best one hundred letters not winning prizes. Honorable mention in this contest was awarded to H. Cline, with Geo. W. Nock, Philadelphia, for a selling chart; and special mention was given to F. H. Fyffe, with Jones & Noyes, Chicago, for a commercial bicycle talk, and to L. Maggini, with Bean Sons Co., San Francisco, and J. F. Wandstrat, with Brendamour Co., Cincinnati.

ALL VIM SALES RECORDS BROKEN IN APRIL

BUFFALO, N. Y., May 6. — "Last month," declared John W. Henry, president of the Vim Cycle and Hardware Company, "we did more business than in any previous month in our many years of existence. In fact we ran over 25 per cent. ahead of any other month."

"This is very encouraging, of course, and is proof that the bicycle is again coming back to its own. Another reason for this wonderful increase in our business is that we had the merchandise to ship promptly. Judging from the orders coming in at this early period of the month," he said, "it is safe to predict that this month will be another record breaker."

News of the Bicycle Trade

MOVE TO ORGANIZE KANSAS CITY DEALERS

Goodrich Tire Man and Local Newspaper Writer Are Getting Together Bicycle and Accessory Agents to Form Association

KANSAS CITY, Mo., May 4.—H. C. Smith, the Goodrich tire man in this city, and Charles Stevenson, a newspaper man, have been endeavoring to organize the bicycle dealers and bicycle accessory men to form an association.

Stevenson says that so far nearly every dealer has been invited to join the association, which will be formed next week at a luncheon, and each dealer has signified his intention of joining.

The plans of the organization, however, are not yet quite complete. Smith and Stevenson and the dealers have worked out a rough draft which they expect to follow. The main organization will be the Retail Bicycle Dealers and Bicycle Accessory Dealers' Association. This association will grant charters to bicycle clubs in the various residence sections of Kansas City; probably based upon the present school division of the city. Each one of these clubs will hold road races or hikes over the hills every other Sunday and finally near the close of the season the main organization will promote a large road race for the best riders among these clubs. Over 100 men and boys have already signified their intention of joining. Enthusiasm among youngsters here is on the increase.

WESTFIELD CO. GIVES TIMELY ADVICE TO DEALERS

WESTFIELD, Mass., May 3.—"All through this 'Million Bicycles Year' the sale of women's bicycles is running that of the men's models a close second," says the Westfield Mfg. Co., in its circular letter for May. "But when May comes, it swings the balance in favor of the women's machines, and gives you the biggest opportunity of the year to pile up profits from sales to the women and girls in your city.

"For the thirty-one days of May you must forget that man is the only important creature on earth. You must plan your picnics and outdoor events to include the fair sex. You must consider all the women and girls who ride, or could ride, bicycles to the golf course, to the tennis courts, to business, to school. It is to your interest to cultivate women prospects to your window displays and by keeping women's bicycles out on the best part of your floor space. And last but not least, be sure that your store and repair shop is not the kind of place that a woman is afraid to enter."

PLAN JUNIOR BIKE COPS

MILWAUKEE, Wis., May 9.—Frank Duke has been made marshal of the newly organized junior mounted civic police force to comprise 100 Milwaukee newsboys with bicycles. The city will be divided into six sections to be patrolled by a captain and squad. This is to aid the trial court of the Newsboys' Republic of Milwaukee.

CYCLE JOBBERS WILL MEET AT BUFFALO

BUFFALO, N. Y., May 10.—Keyser Fry, president of the Cycle Jobbers' Association, has requested Secretary J. W. Henry to notify directors of that organization that the next meeting will be held in Buffalo, May 15, instead of at Hot Springs, Va., as was planned originally. In his letter Mr. Fry stated that some of the directors of the association preferred a cooler place than the Virginia resort at this time of the year.

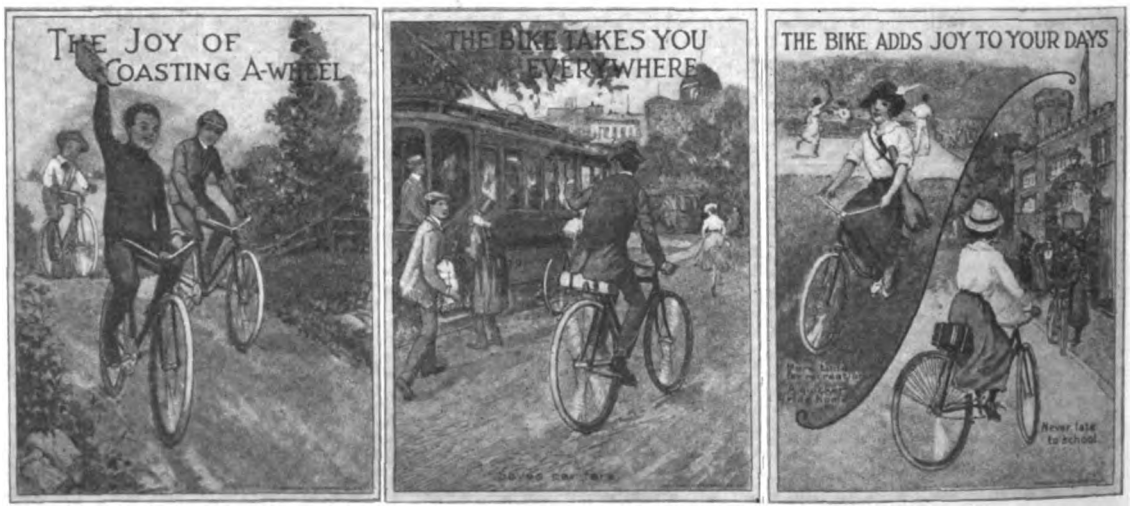
Though the first session of the jobbers' meeting will be held at the Lafayette Hotel on the morning of May 15, Mr. Henry will ask the members of the association to be in the Bison City the day before, when the big Buffalo bicycle parade will be held.

HARRIS IS ARRANGING HIS NEW HEADQUARTERS

NEW YORK, May 6.—The new quarters of the D. P. Harris Hardware Company, at Murray and Church streets, this city, will be ready in a week or so for the transaction of business in even greater volume than heretofore. The offices will be new throughout, both as regards fittings and arrangement, and will be most luxurious.

Show cases will be placed in position around the entire balcony and everything done to make the establishment look and act the part of a big business house doing a big business and doing it efficiently.

SOME MORE EFFECTIVE SALES HELPS FOR LIVE DEALERS



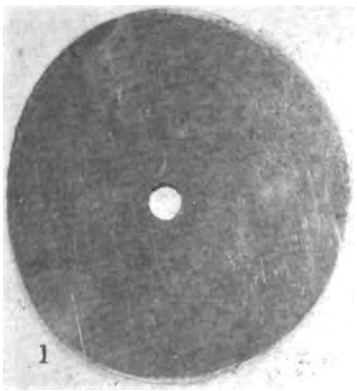
BRISTOL, Conn., May 9.—The New Departure Mfg. Co., maker of the New Departure coaster brake, has just gotten up a new and attractive series of folding mailing cards that will form a part of the advertising material which this company is furnishing to dealers. There are three sets of cards—and three cards in a set—one being for boy prospects, another set for girls and the third for men.

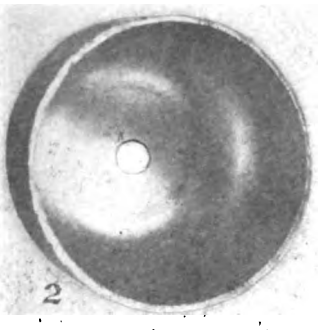
All the dealer has to do is to supply the New Departure company with a list of the names of good bicycle prospects, and the company will then print the dealer's advertisement on the fourth page of the folder and mail it to the addresses given. One card, of whatever set would be appropriate, is mailed each week, so that the prospect received a message three times as coming from the dealer.

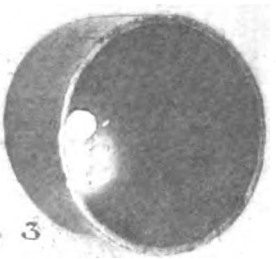
There are, of course, four pages to the folder, one being for the address of the prospect; the second bears a striking picture in three colors to illustrate the bright, breezy text on the third page; the last page, as stated above, is for the dealer's ad. New Departure coaster brake is mentioned only incidentally.

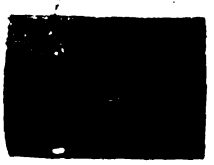
Digitized by Google

EIGHT STAGES IN EVOLUTION OF POPE BOTTOM BRACKET









THE fellow who imagines that the bottom bracket of the bicycle he rides is simply a section sliced off of a length of steel tubing of suitable diameter and suitable thickness is dead wrong—that is, at least, if he happens to be astride a Pope bicycle or any of the wheels turned out by the Westfield Mfg. Co. Strange as it may seem, the bottom bracket of the Pope bicycle, which, of course, is tubular in shape, is as a matter of fact formed from a flat disc of steel.

Passes Through Press

The evolution of the Pope bottom bracket is well illustrated in the accompanying photo plate. A circular steel plate, of suitable size and thickness, first is stamped from the raw stock, the disc being pierced with a central hole during the stamping operation—this hole serves as a vent to prevent trapping the air when the plate is formed over the dies in subsequent operations.

Next the disc is passed through a press in which suitably formed dies act to "cup" it, as shown at (2) in the plate. This "cupping" operation acts just the same as tempering and renders the metal brittle, so that before passing on to the next operation it must be "annealed." This includes heating and slowly cooling, and leaves the metal soft and easily worked.

Finishing Operations

The piece then passes on to smaller cupping dies, which in three more operations, between annealing heats, bring it down to the shape of an elongated cup, just the diameter of the finished bottom bracket. The ends of the cup are then cut off to just the proper length, leaving a perfectly shaped steel tube which then is pierced at the points where the frame tubes are to be attached and the edges of the holes are formed into lip-like extensions, as shown at (7) in the plate. The bracket is then ready to receive the frame branches which are forced into place and held by means of flanges. Over these branches, the frame tubes are forced and the whole is brazed into a solid piece.

RAMSEY REPORTS BICYCLE SALES ACTIVE

BALTIMORE, Md., May 12.—Frank Ramsey, the genial and popular salesman for the newly organized Holland-Baden-Ramsey Co., bicycle jobbers, has just returned from a trip to York, Harrisburg, Waynesboro, Shippensburg and other towns of the Cumberland Valley, and Frederick and Hagerstown, Md. He reports bicycle business in this territory as being excellent indeed, and showing a marked increase over previous years, indicating that the bicycle has really come back into its own again. Mr. Holland, manager, states that the firm's other salesmen are on the hop.

COMBINES LOAD-CARRYING WITH STAND FEATURES

COMBINING load-carrying with all the desirable features of a stand, the Simplex Bicycle Stand occupies a unique position in the commercial field for the pedal cycle. The upper portion consists of a substantial wire basket, while the lower part incorporates a stand. The article is made by the Simplex Specialty Company, 2721 Lincoln avenue, Chicago, Ill. It is reasonably priced at $1.75.

The basket or upper portion of the Simplex stand is carried on a vertical yoke of flat stock, reaching to the axle ends of the front wheel. Pivoted on the axle within the first yoke is a double U structure, also of flat steel stock, the pivot being at the center. One portion of the structure arches over the wheel, while the other forms a stand with a broadened base.

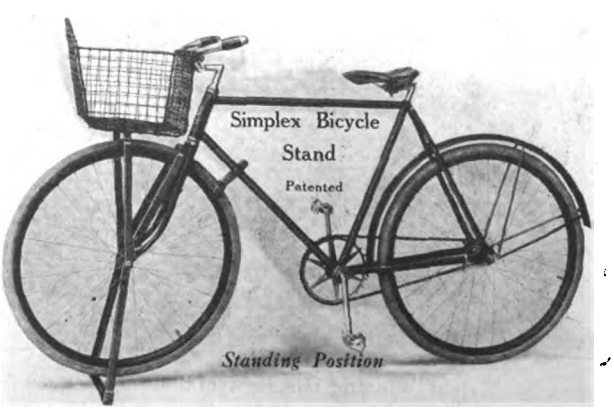
In the normal position, the stand portion is up at an angle in rear of the front wheel and the opposite portion leans forward. To use the stand, the broadened part is brought forward and downward and the front wheel lifted. There is a clip to be attached to the diagonal tube which is unfolded to hold the front wheel from turning to one side when the machine is on the stand.

The use of the stand does away with the necessity of purchasing special bicycles for delivery purposes, for it will fit any machine. If not obtainable from the nearest bicycle dealer or jobber, direct application should be made to the company at Chicago.

HUB CYCLE TAKES BIG TERRITORY FOR CYCLEMOTOR

ROCHESTER, N. Y.—The most recent and one of the largest additions to the long list of Cyclemotor representatives announced by the Cyclemotor Corporation, of this city, is the Hub Cycle Company, of Boston, Mass. The Hub firm will act as exclusive distributors for the Cyclemotor in Massachusetts, Rhode Island, Connecticut, New Hampshire, Vermont and Maine.

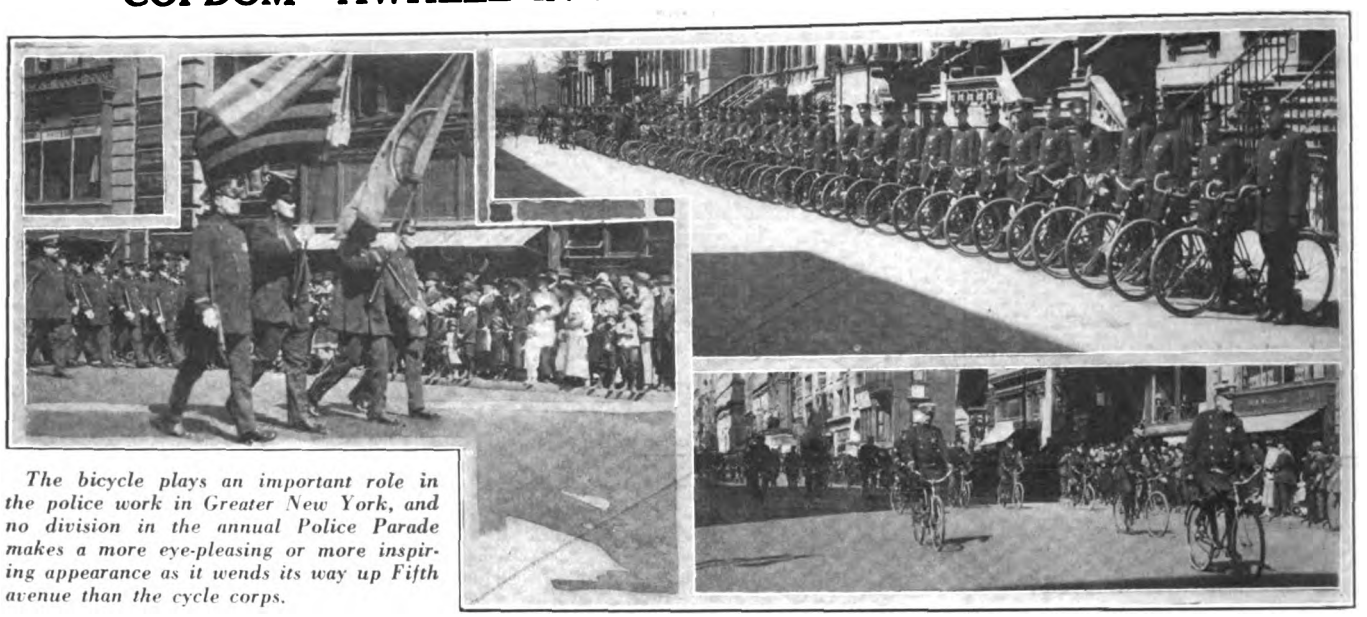
"The action of the Hub Cycle Company is another case where an old-established concern has been cautious to feel out and test merits and the practicability of a device before adopting it," say the Cyclemotor people. "Before recommending the Cyclemotor to its trade, this firm made careful examinations and finally endorsed our bicycle motor device as the most popular equipment for its riders."



Simplex Bicycle Stand in Operative Position

Digitized by Google

"COPDOM" AWHEEL IN PARADE OF GOTHAM'S "FINEST"



The bicycle plays an important role in the police work in Greater New York, and no division in the annual Police Parade makes a more eye-pleasing or more inspiring appearance as it wends its way up Fifth avenue than the cycle corps.

ORIOLE DEALERS HOLD GALA DAY

Three Races Are Run Off For Boys Under the Auspices of the Local Cycle Merchants; Big Day for Crescent Club Riders

BALTIMORE, Md., May 9.—Favored by a perfect May day, the Gala Day of the Cycle Dealers' Association of Baltimore on Saturday last was a big success. Two races for boys aged up to 14 years and from 14 to 18 held on the seven-eighths of a mile lake drive course were the magnets that attracted 75 boys of all ages and sizes, ranging from the little fellows nine years old to the youths of 17 and 18. The gravel course, which had been rolled, was in splendid condition and lightning fast.

Walter V. Iglehart of the Crescent Bicycle Club, who won the boys' race on Bicycle Day, February 29, was the winner of the race for boys aged up to 18 years, defeating by inches Wilbur Wright, son of Wm. T. Wright of Crescent Club mileage fame. It was a big day for the Crescents, whose junior members also accounted for the fourth and sixth positions, Walter Doersch and Ernest Nitz being the other point winners. Amos Wright, who was entered in the 14-year-old class, finished first in his heat and third in the final, while even little nine-year-old Herbie Wright managed to qualify in his heat, although unable to place in the final. In fact, it might be said that the Crescents were "all wright."

Abe Harrison won the race for 14-year-olds, M. Zbar finishing second. Owing to the large number of entries it was necessary to run both races in heats, three heats and a final decided each event. A large crowd turned out to watch the racers, who were well rewarded for their efforts, fifteen prizes being hung up in each event. Spirited sprints marked each heat except those won by Iglehart and Wilbur Wright, who defeated their respective fields by big margins.

Nicholas G. Grimmell, the "one-armed wonder" of the Curbstone Cycle Club, gave an exhibition ride against time between heats, covering the distance in 2 minutes and 3 seconds.

Upper, W. Wright Winning His Heat of Baltimore Race for 18 Year Old Boys; Below, Starting Point; W. Igelhart, Victor of Race

LADIES' CYCLE CLUB FORMED BY TOLEDO MISSES

TOLEDO, O., May 10.—A ladies' bicycle club has been organized by the Toledo Sporting Goods Co., which has furnished a clubroom for the girls, where they meet several times each week and plan trips.

The ladies' club was started as an experiment, but it has already proven a great success and exceeded even the most sanguine expectations of Mr. Rivers, manager of the sporting goods store. The club has a membership of fourteen girls, and Mr. Rivers looks forward to having about fifty members by June 15. Mr. Rivers' claims that he has been able to form a ladies' club as the result of a well-thought out plan formulated by him. In a near future issue of this journal he will explain his plan.

QUAKERS ON RUN

PHILADELPHIA, Pa., May 9.—The Pennsylvania division of the Century Road Club of America held a pleasure run to Three Tuns, Pa., and return last Sunday. Rain overtook them and the return was made in a heavy downpour. Those finishing were Yorke, Franklin, Worthington and Canzannelli. Runs are called for every Sunday in May, and there will be a tour to Bushkill, Pa., over Decoration Day.

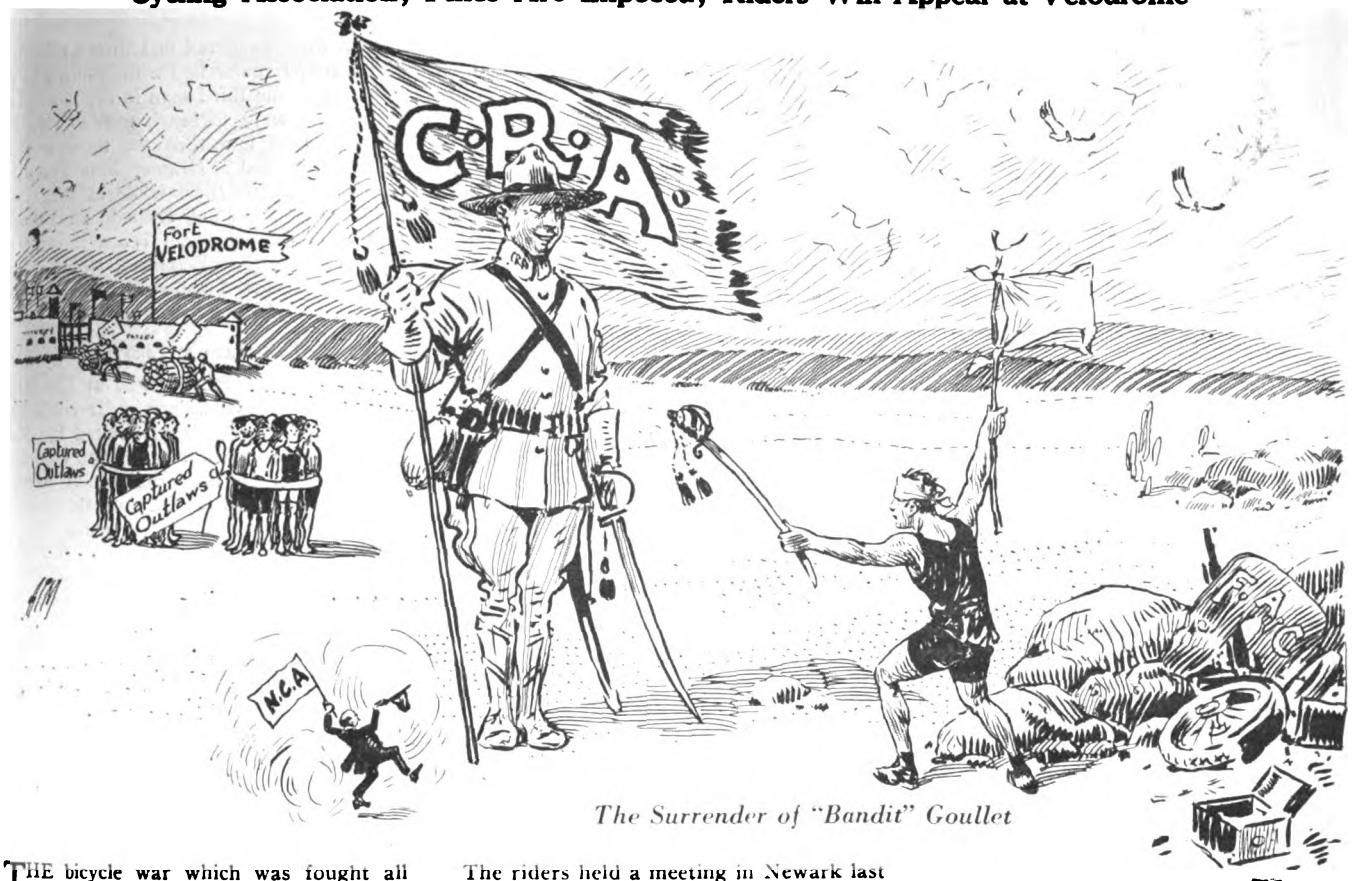
OUTLAW MOVEMENT BROUGHT TO ABRUPT END

Inability of the F. A. C. to Build Tracks Causes Outlaws to Apply for Reinstatement by the National Cycling Association; Fines Are Imposed; Riders Will Appear at Velodrome



The Surrender of "Bandit" Goullet

THE bicycle war which was fought all winter is over. The outlaw cyclists who broke away from the National Cycling Association and joined the rival body, the Federation of American Cyclists, have thrown up the sponge and are ready to compete at Newark once more. It is expected that by Sunday all the outlaw cyclists will be reinstated by the National Cycling Association and that they will ride at the Newark Velodrome. Harry Pollok, who is supposed to be erecting a track in Brooklyn, has raised a "holler" since he heard that the riders have all returned to the fold, but it is doubtful if anything will come of it. Pollok's Brooklyn track has not yet begun to take shape.

The riders held a meeting in Newark last week when Goullet talked to the cyclists. He told them that it did not look as if the New York promoters intended going through with the erection of tracks, and that the wisest thing to do was to get "back on the band wagon."

The riders applied for reinstatement into the N. C. A., and will be taken back on the payment of the following fines: Goullet, $300; Drobach, Kopsky, Verri and Lawson, $100 each; Magin, Lawrence, Madonna, Ohrt, Young, Coburn, Smith, Corry, Wohlrab, Anderson, Ruddi-Russe and Grimm were each fined $50. The fines, when collected, will be turned over to the Newark City Hospital.

ACCESSORIES WANTED BY BIG JOBBER

Complete List of Articles Desired by a Reputable Concern Is Given Below; Quick Response Requested from Manufacturers as the Goods Are Needed at Once

MOTOR CYCLE ILLUSTRATED is in receipt of a bona-fide order for a long list of bicycle accessories. If the concerns who manufacture the articles listed herewith, and who are in a position to supply them immediately, will write to us at once, we will send them the name and address of the company by whom the goods are wanted. Part of the order which they have asked us to co-operate with them in filling, is as follows:

Twelve doz. Liberty bells, No. 35C; 12 doz. frame pumps, No. 12; 6 doz. telescoping frame pumps with clips, 19 in.; 100 ft. rubber tubing, ¼ in., black; 2 doz. Nassau road saddles, No. 8; 3 doz. pcs. forward extension handlebars, No. 16E or 18E; 3 doz. Perfect grips, plain; 3 doz. rubber corrugated grips; 6 doz. cowhide grips; 12 doz. wound leather grips; tire tape; 1 grs. foot pumps, No. 17; 6 doz. Expert pedals; 10,000 spokes and Nipples, No. 5B.

Twelve pcs. Universal saddle springs, No. U; 12 pcs. Perfection saddle springs, No. P; 1 doz. roller block chains, assorted sizes; 1 doz. Diamond tool bags, brown leather, No. 2; 1 gross No. 40 hand pump connections for telescoping pumps, Nos. 12 and 20; 1 gross Acme rubber tire setters, No. A; 100 lbs. Grade C Hartford baby carriage tires; 50 lbs. Grade H Hartford baby carriage tires; 1 gross G, & J, valves complete; 6 doz. valves and stems; 6 doz. Tom-Tom bicycle horns, No. TT; ½ doz. Double Chime horns, No. 60.

Two doz. right angle style horns, No. 1 nickel; 1 doz. Bull Frog horns, No. 30 nickel; 5 gross black enamel trouser guards; 3 gross nickel plated trouser guards; 1 pc. complete tire vulcanizer.

AMERICA'S HANDICAP RACE IS POSTPONED

WEST HOBOKEN, N. J., May 12.—The twenty-five mile bicycle handicap road race of the New Jersey division of the Century Road Club of America, which was to have been held over the Hudson County Boulevard last Sunday, was postponed because of inclement weather, until next Sunday, May 14. Post entries, costing $1.25, can be had from Emile E. Fraysee, 724 Syms street, West Hoboken.

CANTON SEES PROOF OF BICYCLE ACTIVITY

CANTON, Ohio.—A bicycle club, which in numbers recalls the flourishing organizations of the palmy days of wheeling, has been formed in the Canton Y. M. C. A. Already sixty boys have registered, and others are coming in rapidly, lending color to the assertion that there is more bicycling right now than ever before.

The club will make long runs into the country every week, on Saturday. John Brothers is captain, Richard Buchman chaplain while Tom Witter serves in the capacity of lieutenant.

TRACEY JOINS CANADIAN ARMY

SAN FRANCISCO, Cal., April 16.—John Tracey, one of last season's fastest riders in the ranks of the New Century Wheelmen, has joined the Canadian expeditionary forces as a cavalryman and expects to see active service at the front soon.

FRANK KRAMER'S LIFE STORY

The First Authorized Story of the Great American Bicycle Champion's Brilliant Career—By Harry Mendel

Seventeenth Installment

In 1913 Kramer took another trip to Europe, riding against some of the best riders abroad. He also rode the full season in America.

THE year of 1913 held no fears for Frank L. Kramer, who, not in the least superstitious, went out and won the professional championship of America for the thirteenth time. Even this double hoodoo could not stop the American champion's speed astride a wheel. Kramer made his third trip to Europe that year and, competing for the most part in France, had a highly successful season.

The Men Frank Encountered

In Europe the American champion scored notable victories over Leon Hourlier, Thorwald Ellegaard and Andre Perchicot. Here in America his biggest victories were scored over Jackie Clark, Alfred Goullet and Francesco Verri, one of the best cyclists Italy has ever produced.

Kramer was very much pleased with France and said the people were very enthusiastic over cycling. All in all, Kramer said they treated him royally in Europe. "Of course, they did not like to see their best men beaten," Frank declared recently, "but once I proved that I was superior, they became my friends and applauded my efforts."

Kramer is known for his modesty, but he confessed he grew rather fond of the hero-worshiping of the foreigners. "You just can't help liking the Franch way of applauding you and making much of you, and after awhile you get used to it and really expect it. And if you want their friendship and their demonstration you must show appreciation, so during that season I learned to smile and to bow as well as to say *mercez bien*."

Leaves for Europe with Mihlon

It was on January 11 that Kramer left for Europe. He sailed along with Frank Mihlon on the steamer *Rochambeau*. A party of more than a dozen friends gathered about the boat to see Kramer and Mihlon off. Flowers were there in profusion for the two men.

Kramer rode his first race in Paris on Sunday, February 9. He crossed the tape a winner in the quarter-mile handicap, in which he started from scratch. The American champion overhauled the field easily and won with plenty to spare. Kramer's time was 34 seconds. There was a great ovation for the East Orange rider for this victory.

Leon Hourlier was vanquished in a match race the following Sunday. The race called for the best two out of three heats, and Kramer won in straight heats, but only by inches each time. Hourlier, who has been killed in the present war, was looked upon as the best man in France at that time. His defeat at the hands of Kramer brought forth volumes of applause.

Kramer was in rare form and he rode a brilliant race. He outmaneuvered the Frenchman at every angle and forced him to take the lead in both heats. Kramer jumped in the first heat when sprinting time came, but Hourlier was with him to the tape and there was very little to choose between them at the finish. About the same tactics were employed in the second heat and the result was even closer, but the American was again a few inches in front when the men dashed over the finish line.

Defeats Danish Champion

On Sunday, February 23, Kramer's marvelous speed again defeated Thorwald Ellegaard, the Danish rider and former world's champion in two straight heats of a special match race. Kramer's victory was more pronounced than his triumph over Hourlier the week previous. Kramer won each heat with enough to spare. He rode from behind as he usually does in match races and confined his battle to the final sprint. He came around Ellegaard each time and won with lots of leeway. There was the usual big Sunday crowd to witness the match and Kramer got a tremendous hand after the victory.

Kramer's first defeat occurred when he finished third to Hourlier and Ellegaard on Sunday, March 9. The race was decided at the Velodrome d'Hiver. Hourlier won the race, with Ellegaard finishing second. Kramer was up against a combination, the two Europeans teaming against him. In the final dash he was given a rough ride, and when it came time to dig for the tape Kramer was unable to get around his opponents.

A big crowd turned out to see that race and there was much jubilation among the fans over the victory of Hourlier. A little "booing" was also indulged in because of the treatment handed out to the American cyclist.

Lowers Hourlier's Colors

Kramer squared accounts the following Sunday with Hourlier by lowering the Frenchman's colors in two straight heats of a match. The affair was a "match revenge" put on to give Hourlier an opportunity to even up with Kramer for the defeat the Americon rider administered to him on the occasion of their first meeting.

While the match only went two heats, it was no easy job for the East Orange rider to win. He had to ride hard each time coming from the rear. The race was fought out in the last lap, Kramer employing his usual tactics of tacking behind and then coming from the rear down the home-stretch.

Kramer showed at that time that he was as fast as ever by establishing a new track record, doing the final lap in 14⅕ seconds.

In a three-cornered match race ridden at Bordeaux, Kramer tied with Hourlier; Perchicot was the third man in the race. The conditions were for each man to ride the other a heat and then the three men to meet in a final. Kramer beat Perchicot and so did Hourlier, while in the battle between Hourlier and Kramer, the Frenchman was the winner. When it came to final heat between Perchicot, Hourlier and Kramer, Kramer finished first, thereby creating a tie which was not run off.

Last Race at Charleroi

Kramer's last race, staged at Charleroi, Belgium, was run under similar conditions only that Duprey was substituted for Perchicot to ride against Kramer and Hourlier. Kramer won all three heats. A pursuit race followed between the same three riders and Kramer won this after going a little over three miles.

Kramer arrived home on Wednesday, April 16, on the *Kaiser William de Grosse*. His first appearance at the Newark track was on Sunday, April 21. The season was scheduled to get under way much earlier, but the opening day was put off continually on account of rain. Kramer in his first event rode a one-sixth mile against time. He turned the distance in 16 seconds.

Frank scored his first big 1913 victory in this country early in May, when he beat Jackie Clark and Alfred Goullet in a three-cornered team match race. In the first heat Kramer, Goullet and Clark went over the tape almost simultaneously. The finish was very close, but Kramer won out by inches over "Goullie," with Clark third. Cavanagh was Kramer's partner, Clark had Grenda, while Goullet and Fogler comprised the other team. In the second heat Kramer again was the winner, with Clark second and Goullet third.

Match with Alf. Goullet

Kramer showed his heels to Goullet in a match race and proved conclusively to the crowd that whatever may be the result in other events, when the field was larger, he was always capable of outriding Goullet with only two men on the track. The match went to Kramer in straight heats, and at no time in the race did Goullet ever have a chance.

Frank rode the race pretty much to his own liking. He made his finish from the front in the first heat and after trailing Goullet slowly for four and one-half laps he caught the Australian asleep with a "jump" on the middle of the backstretch, and by doing some clever stalling and sprinting alternately, carried Goullet on his hip all the way around and into the last turn. Kramer then put on full speed in his dash to the tape. In the second heat Kramer kept behind all the way to the twelfth pole. Kramer came around Goullet on the last turn and won by half the length of his wheel.

The name of Francesco Verri, of Italy, was added to the long list of those who

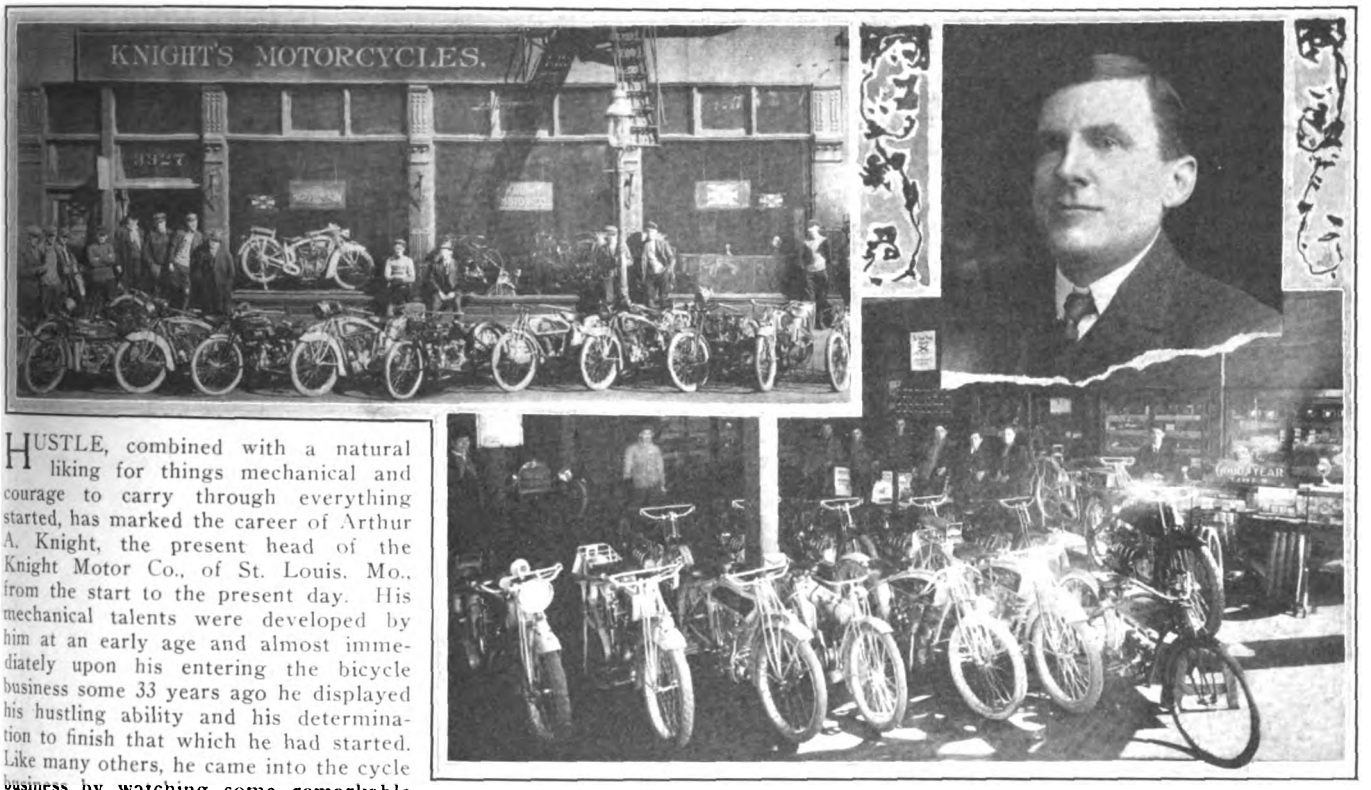
KNIGHT'S HUSTLING ABILITY DID THE TRICK

From His First Cycle Racing Experience to the Present Day, This St. Louisan Kept Right On the Job and Won Out Handsomely—Big Percentage of Sales on Time Payments

By LOUIS RESNICK

SEVENTH IN SERIES OF SUCCESS STORIES ABOUT DEALERS



Interior and Exterior Views of Knight Store; Above, Arthur A. Knight

HUSTLE, combined with a natural liking for things mechanical and courage to carry through everything started, has marked the career of Arthur A. Knight, the present head of the Knight Motor Co., of St. Louis, Mo., from the start to the present day. His mechanical talents were developed by him at an early age and almost immediately upon his entering the bicycle business some 33 years ago he displayed his hustling ability and his determination to finish that which he had started. Like many others, he came into the cycle business by watching some remarkable performance.

Arthur A. Knight, now just passing his 56th year, was born in Owen Sound, Ontario, in 1859. He entered the bicycle game as a result of watching the performance of Jack Prince on a bicycle in racing a dummy train from Spanish Fort to New Orleans, La. The possibilities of the wheel as a racing proposition appealed to him right away, and he took the train for St. Louis in short order. At the big city on the Missouri he purchased a Columbia light roadster and took up racing. This was in 1881.

Early Racing Experiences

"They tell me I displayed some of my youngster's recklessness during this period," said Knight. "I used to be pretty careless and take long chances, but I cut that out very shortly afterward. From that time on I saw the coaster brake come into being; I attended the L. A. W. meeting at Buffalo and saw the first safety with pneumatic tires win a race over all solids. Those were the happy days when Willie Windle cleaned up everything, and later, Arthur Zimmerman got 100 firsts in a season against all comers."

Knight entered the selling end in due course, following the example of most of the other racers. He boomed with the boom and slumped right afterward with the slump in bicycles. Then he took up sewing machines, talking machines and typewriters in turn. In 1903 he went into the automobile business as a side line, still running the Knight Mercantile Company, which dealt in the sewing, talking and typing machines, and bicycles by that time. The automobile was crude and Knight soon closed out his agency and went in strong for bicycles.

This was at the old store at Olive and Twelfth streets. It was one-story high and "no great shakes" for looks. Soon business grew under Arthur Knight's vigorous application and a move was made to a 150 x 50 foot building, with three stories and basement, at 3325-3329 Locust street. In this building, the Excelsior motorcycle agency was taken on. But within six months after moving, Knight's business had expanded so that he was pressed for room and again had to look for larger quarters.

So he moved the whole outfit to the present quarters, within a few feet of the Lindell-Locust Cut-off, or the gateway to Automobile Row. The store is within two blocks of St. Louis' busiest corner, at Grand and Olive streets. Fully half the motorcycles in St. Louis pass the Knight place each day.

With the expansion of business came an increase in territory for his motorcycle and bicycle lines. He became a distributor for the eastern half of Missouri and part of Illinois for the Excelsior and then added the Reading Standard, Henderson and Flying Merkel lines. His latest addition was the Tiger lightweight, taken on late in 1914. An automobile agency is also held.

The Knight plant is equipped with two elevators, a steam heating set, and full automatic sprinkler equipment. The 18,000 square feet of floor space con-

Digitized by Google

tains one of the largest stocks of motorcycles west of New York. The fronts of the first and second floors are used as show-rooms, the lower for new machines and the upper for used mounts. In the rear of the first floor is Knight's office and directly over this is the repair shop. The third floor is used for storage.

The Knight Bulletins

Knight issues bulletins at regular intervals, regarding the used machines he has on hand. In no case will he allow the merits of the machine to be overstated. In his bulletins he gives the present price, the original price, the year made, the condition of engine and compression, the state of the tires, the condition of frame and forks and of the nickel and enamel. For the very old mounts he adds to this whether there is a clutch fitted on or not, the type of ignition and the form of drive. From this bulletin, the intending purchaser can get an excellent idea of what he can buy without chance of being deceived, and as a result the Knight business by mail has been huge. Another form of advertising used is a series of snappy catch-phrases which are used in the regular newspaper advertisements of the company. These also have proved good business-getters.

"I have always sold on the installment plan," says Knight, "and have given the riders ample time to pay for their mounts. Thousands of dollars have yet to be charged off my books, it is true, but I don't expect I'll lose even a small percentage of the sum. I maintain that there are piles of people who have not the continuity of purpose to save enough for the price of a machine. While the installment business is not a sure one, it is absolutely necessary to success in many sections of the country.

"Speaking of installments, one little slogan brought in a number of customers. This was Number 10, referring to the heading 'Pay us 10 cents for every mile you go till paid for.' We tried the plan out and it worked finely with a bunch of riders."

NEW DEAL ASSURES RUNNING OF DODGE CITY RACE

DODGE CITY, Kans., May 9.—Despite conditions, which a week ago seemed almost insurmountable, the Third Annual 300-Mile Motorcycle Sweepstakes will be run on the two-mile speedway here on July 4. Some sort of a deal has been entered into between the new owners of the speedway and the Dodge City Motor Speedway Corp., which is to promote the contest, and preparations are now well under way for the running of the classic of the Middle West. While the date is too early to predict the "bigness" of the event, it is stated that entries are already coming in in first class style.

SERIES 17 EXCELSIORS GET HEARTY GREETING

LOS ANGELES, Cal.—There was a big crowd on hand to join with Tom Girton and Fred Hoffer in welcoming the Series 17 Excelsiors in this city, where, it is understood, the first machines to go on the road under their owners were received from the factory. The salesmen were so crazy to ride that they had hard work to keep off the machines while they were helping the owners uncrate and set up those that were on hand to ride back home.

As soon as they could Wells Bennett and L. E. Reed got on a couple and tried them out in fine shape. Reed says the combination clutch and brake pedal on the left side are what he has been looking for. He threaded the Broadway traffic in the densest hour and never touched his hand clutch or foot brake all the way through the tangle. Reed used only the combination lever and found, as he says, that the machine handles better than any control he ever saw.

MILES AND MARTIN TO DEAL IN USED MOUNTS

LOS ANGELES, Cal.—Lester Miles, formerly sales manager for Passmore & Sayre, retailing the Harley-Davidson in this city, has opened a store in partnership with Gus Martin under the name of Martin & Miles. They will deal in used motorcycles.

The second-hand motorcycle business in this city has been very active this Spring, and Miles has been making a careful study of it. He believes that there is a good field for a firm which will conduct this kind of business in a high-class way, giving men real value for their money, and handling only such propositions that are in shape for the buyer to get real service from.

Over 11,000 Miles

On Vitalic Tires!

What ordinary bicycle tire could come anywhere near that record? None! It took VITALICS to do it.

Out of over 60 tires used during a period of 25 years by Dr. F. S. Cate of Florence, Cal., the Vitalic was the only one to reach anywhere near this mileage. Among the 60 tires used were the *very best* of other makes, a number of them much higher priced than the Vitalic. But Vitalics ran *more than three times* the average mileage of the seven next best makes of tires used (based on an accurately kept mileage record sworn to before a notary).

It is this unmatched *mileage* which Vitalics are giving wherever used that proves beyond question their unequalled standard of construction; highest quality of rubber instead of the cheaper grade put in ordinary tires; two plies of heavy *motorcycle* fabric, frictioned with pure rubber, instead of common *bicycle* fabric; an extra heavy inner tube of pure white rubber.

Write for the testing section and examine these features of construction thoroughly.

VITALIC TIRES

"BAREFOOT" RUBBER

There is only ONE Motorcycle Tire made of the genuine Black "Barefoot" Rubber —and that's the GOODRICH. It's the identical tread, mind you, that goes on the big Goodrich "Barefoot" Automobile Tire—the strongest tire ever turned out of the big Akron factories. "Barefoot" Rubber is a distinct advance in the compounder's art. It CLINGS (like your bare foot) to a surface—doesn't GRIND over it. It DOES NOT gain Traction at the expense of Mileage. It is harder to puncture—harder to wear out. And note this—NOT ALL BLACK TREADS ARE MADE OF "BAREFOOT" RUBBER. The Market is full of "Me-too-Black Treads." Look for the name "GOODRICH" molded on the sidewalls —THAT points out the genuine.

NEWARK, N. J.

THE SMITH-FRASER MOTOR CO., of 284 Halsey street, has taken the agency for the Cleveland lightweight. The firm has opened up with Leslie Wintsch, the former agent, and Douglas Shotwell as salesman.

The firm is composed of Leonard B. Smith and E. W. Fraser, both of whom have been employed by the Bosch Magneto Co. for five years. The new store will be the headquarters of C. W. Waughop, traveler for the H. F. L. Funke Co., distributing the Cleveland in the Middle Atlantic States.

CARL W. BUSH CO., distributing the Harley-Davidson in Essex and Morris Counties, has disposed of 130 machines so far and has a carload on the way from the Milwaukee factory. The first carload since the incorporation was received on March 25. Over 40 sidecars have been sold since that date.

Bush is selling a $20 equipment consisting of X-Ray headlight, Old Sol tail-lamp, Prest-O tank, and Handphone, and a $25 outfit consisting of Old Sol head and tail lights, Bison brackets, Prest-O tank with copper tubing and a Stewart-Warner hand horn. Both outfits have proven very popular with customers.

Rear of Showroom in Harley-Davidson Agency of August Zimmerman, Washington, D. C., with Parts Cabinet and Office

EASTON, PA.

A. W. SMITH, proprietor of the Indian Service Station, has sold 7 Powerplus models to date. This is the first year the firm has sold motorcycles and the number is considered by Smith as good. The machines were all fitted with Splitdorf Mag-Generators and two had sidecars attached. Smith is trying to organize a club among Easton riders and has given a room over his store as a first step.

SAN DIEGO, CAL.

SAN DIEGO MOTORCYCLE SHOP reports the sale of 55 Harley-Davidsons of 1916 model to date. Twenty-two went to sailors on the warships which are anchored in the harbor of San Diego.

JERSEY CITY, N. J.

MORTON D. LANTZ, distributing the Harley-Davidson in Hudson County, has added the Cleveland two-stroke lightweight for the 1916 season.

THE 20th CENTURY IGNITION

A DEMONSTRATION OF MAGNETO RELIABILITY

A report by A. F. Jacobs, Splitdorf Service Man, sent in from Columbus, N. M., upon his return there after a trip to Casas Grandes with the first train of trucks to cross the Mexican border in the hunt for Villa:—"On my trip with 23 DIXIE Equipped *Jeffery Quad* Trucks from Columbus to Casas Grandes only had one case magneto trouble which was adjusted in a few minutes. They have ordered a hundred and eight DIXIE equipped *Jeffery Quads* on the strength of the wonderful showing through desert and mountain trails. Likewise they are keeping all parts and extra DIXIE Magnetos for trucks carrying other forms of ignition to act as replacements. Am now returning to the front with DIXIE equipped *Indians* and *Harley-Davidson* Motorcycles to see that there is no delay anywhere on the line that Splitdorf Service can overcome."

The Packard Motor Car Company report to us that there are now 56 *Packard* Trucks on Mexican soil, more than half of which are DIXIE Magneto equipped—the DIXIE Magnetos are giving remarkable service, standing up where other makes are giving trouble.

The Hendee Manufacturing Company report that the 30 DIXIE-equipped *Indian* Motorcycles, shipped to the Mexican border for the U. S. Army, are making a splendid record for reliability and dependability.

DIXIE equipped trucks have demonstrated magneto reliability where real speed and power under terrible disadvantages were necessary to save human life.

DIXIE equipped motorcycles have furnished the information for advance—the scouting for innumerable purposes where the ignition pick-up and get-a-way meant the difference between success and failure.

DIXIE Magneto equipped automobiles can be relied upon for dependable ignition—the ignition that gets the most of the motor—the ignition that conserves gasoline usage—a self-contained unit independent of auxiliary batteries and outside contraptions.

From actual photographs taken in Mexico by Underwood and Underwood.

TACOMA, WASH.

RAY DAY, handling the Indian in this city, recently sold two of the Powerplus twins to the Standard Oil Company, and so well have these stood up that he received a re-order for two a short while afterward. Day has been busy in demonstrating the ability of the side-by-side-valves Indian in a number of ways, and a recent one was in the motorcycle division of the motor vehicle parade which opened the baseball season. With seven people up on his sidecar, Day negotiated the severe Carr street hill in fine style, showing that the claim "no hill too steep" is a legitimate one.

NEW DAYTON motorcycles have arrived at the headquarters of the Fuller Cycle & Supply Company and are now being shown in company with the Henderson models, the firm being agent for both lines. The four-cylinder machines came in a carload last week. Both the red twins and the blue four-cylinders are gradually decreasing in number under the onslaughts of customers, and a new line will soon have to be formed.

FRED AMBLADE'S place is getting to look like a club-room more and more, each night in the week. There are over 50 machines at the curb, on an average, and their riders are packed into the two rooms, swapping yarns and discussing 1916 models. Fred has just put up a bright red sign with his name in white letters, and this can be read several blocks away.

E. J. BERGSTROM, a newcomer on "Motorcycle Row" set a new record last week by selling three Miami Power Bicycles in one hour. They were three separate sales, not bunched, says Bergstrom. "Miami general business is good" says Bergstrom, "and I am getting my share in both the Power Bikes and the Flying Merkels."

EXCELSIOR headquarters is at present in a chaotic state, as Harry Goble is no longer with the General Cycle & Supply Company, and the new management is not yet announced. However, sales are being made and it is expected that things will soon be back to the normal and sales will boom.

F. M. BAILEY, who is handling the Smith Motor Wheel, has sold his entire stock of Pierce bicycles as a result of taking on the little booster. He is now awaiting another carload of Pierces from the Buffalo factory. Bailey keeps his show window full of Motor Wheels, and there is always a crowd around, for the exhibit catches the eye right away.

RED BANK, N. J.

LOU TETLEY, handling the Indian for Monmouth County, is having a fine season with the Powerplus. Fourteen sales of this model were recently made by him to employees of a nearby powder mill. His sales include two Featherweights also.

ELIZABETH, N. J.

A. MANZO & CO., have taken the agency for the Harley-Davidson for this city. The headquarters is at 1151 Elizabeth avenue.

LEWISTON, PA.

L. A. NIGHTHART, at 318 Valley street has taken the local agency for the Dayton line of motorcycles.

WITH THE HARLEY-DAVIDSON AT THE POLO GAMES.

BOSCH MAGNETOS have been used seven years by THE HARLEY-DAVIDSON

THE best proof of the superiority of Bosch Magnetos is found in the fact that most motorcycle makers use Bosch and that one of the largest and best known, the Harley-Davidson Company, has used Bosch regularly since 1910.

The reason for this continuous use seems obvious, just a well directed desire on the part of the Harley-Davidson engineers to produce a dependable product, a product that would give them a permanent and lofty position in the motorcycle world.

Bosch Magnetos must be good to be so widely and so regularly used. They cost the motorcycle makers a trifle more, but they eliminate the puzzling ignition troubles, and, through their extraordinary reliability and efficiency, give the Bosch-Equipt motorcycle a higher value.

Be Satisfied — The motorcycle you sell CAN be Bosch-Equipt, too. Insist if you must. — Specify Bosch

Correspondence invited.

GET POSTED ON COSTS AND USE THEM TO CLINCH SALES

By PRACTICUS

THIS little lecture might be entitled "Selling a Motorcycle from An Automobile Agency," and the title would be partially right. However, the main idea is that the automobile man lost the sale through not being thoroughly posted as to the real cost of operating the car he sells. Here goes.

I have a friend with aspirations for something big and impressive-looking. He wanted a car; the appearance took him and he hoped to graduate from the motorcycle class. But—here he showed the best kind of sense—that car must not be too expensive to run and must not beat the sidecar rig by more than one or two cents a mile. After hearing his raptures at the idea of getting a car which should be economical and a "good looker," I consented to go with him to an agency for a moderate-priced automobile.

Running Costs Only

We went. The salesman showed us figures which stated that several owners had used his make of car for 2½ cents a mile. This included gasoline, oil and wear and tear for 5,000 miles. This statement interested my friend, but then the business part of his brain began to work and he asked some questions. What would it cost to insure the car? The license fees? Garaging? Depreciation?

The salesman figured it out for him. Then my friend took a pencil and divided the total of the interest on his money, the cost of licenses and insurance and the estimated cost of garaging by 5,000 and showed the salesman that he was about 5¾ cents out of the way per mile. Salesman had never been up against that way of figuring before and went dumb. No sales. He couldn't give figures on the sidecar outfit, for he didn't know anything about that kind of a vehicle. My friend now owns a sidecar combination as before.

Now, Brother Dealer, what would you do if someone came in and asked you these questions? You wouldn't know, eh? And you'd lose in two ways: a sale for yourself and a motorcyclist turned automobilist. You would be minus a nice little dealer's percentage and you would have added another member to the big list of car owners who are pinching to keep up the white elephant that they bought so easily and which is putting the kibosh on their salaries. If you are not primed on this material that's what happens.

Have It Ready

Now, you don't need all this for every customer, but when you do need it you want it as bad as the Texan said about his revolver. Have it ready for him in black and white when he springs the question about overhead cost. Overhead costs are interest on money invested; license fees; insurance and garaging. Figure interest at 6 per cent. Add the overhead costs and divide by 5,000 for the average rider will cover at least 5,000 miles a season. You get the overhead cost per mile. The factory will furnish you with the running cost per mile and the total will be the sum of overhead and running.

To get back at the would-be automobilist, make up a chart of overheads for the automobile and also the running costs and show the prospect the totals and the costs per mile of both your motorcycle and the automobile. Show him that he saves so many dollars a season by using the motorcycle and sidecar, and if he has any sense at all he will think matters over seriously.

A good deed often means a good deal—Please mention MOTOR CYCLE ILLUSTRATED.

More Speed Than The Fastest Stock Machine

The Pope Single Speed Twin has long been recognized as the fastest stock motorcycle made.

Full use of the explosive charge in the motor, with the quick action that is so necessary for a speedy "getaway" is assured by the Pope overhead valves.

Unequalled road comfort is provided by the Pope spring fork and rear suspension.

But a motor has been perfected with more power—more speed—than has ever been obtained before; resulting in the

Pope Model L-16 Special at $235.00

This special model is equipped with the cylinder heads that were developed in designing the new Three Speed Twin—cylinder heads with larger intake passages, larger rocker-arm yoke stems, using a one-inch carburetor—that provide an increased maximum power development of two horsepower, with 13% increased running efficiency.

Riders who have tried the Model L-16 Special are enthusiastic. They find that they breeze up hills and pull steadily through the bad spots in the road—and never have to eat anyone's dust.

We have an unusual offer for Pope dealers—with immediate deliveries. Write for it.

TRENTON, N. J.

READING STANDARD models are good sellers, according to the Howard Cycle Company, of this city. That's what the firm says today, although the talk was a little different about eleven weeks ago. It was with some degree of doubt that the Howard folks signed up for one R-S twin in March, but during the past ten weeks, a regular order for two twins a week has been sent to the factory in Reading, Pa. "Finally, the requests for the brown boys got so strong that we had to telephone to the factory recently" said the Howard Cycle man, "and order 15 at a clip. We got them in short order and they are practically all gone." The total sales to date have been 35.

DETROIT, MICH.

WILLIAM E. METZGER COMPANY, veteran representative for the Wigwam, has just delivered three Indians to the sheriff's office in this city for the use of the deputies.

WHEELING, W. VA.

EARL BRAUNLICH, handling the Harley-Davidson, celebrated his recovery from an attack of measles by selling three of the Silent Grays to local speed merchants. Two of these were electrically-fitted and the third had a Prest-O-Lite outfit.

WESLEY HOUSE, who takes care of Wigwam interests in this city, has sold seven of the Powerplus models and has orders for a number of Featherweights to date.

WALTER BOWMAN, of the T. A. Hoge Company, states that prospects are very bright now, as the roads are ridable. The firm is holding several machines for delivery till the weather is better. The big valve Excelsior is very popular, and four have already been sold with three more on order.

ALAMEDA, CAL.

F. D. JACKSON has signed up to handle the Dayton Motor Bicycle from his headquarters at 1516 Park street. The contract was taken with W. E. & W. H. Jackson, Dayton distributors for this part of California.

AUBURN, N. Y.

H. H. PULLMAN has contracted to handle the Reading Standard for this city during the 1916 season. He signed up with Lou Guterman, R-S traveler, a short time ago.

HACKENSACK, N. J.

JOHN W. TERHUNE, handling the Harley-Davidson for Bergen County, has disposed of 24 machines to date. Most of these have been fitted with Prest-O-Lite tanks and 12 in all were sold with sidecars. Terhune has sold the Teaneck and East Rutherford police departments several machines.

SALISBURY, N. C.

W. F. AREY, of the Arey Hardware Co., Inc., has opened a motorcycle and bicycle repair shop in connection with the firm's hardware and sporting goods establishment. The agency for Indian machines has been taken for Rowan, Cabarrus, Iredell and Davidson Counties.

ELISCO

Light Gauge, Cold Rolled

Steel Tubing

Accuracy—Uniformity—Finish

The ELISCO process of manufacturing welded seamless steel tubing utilizes automatic machines to ensure the utmost in Mechanical Accuracy, and Smoothness of Finish.

Each of these huge machines combines seven operations in one handling; it forms, welds, burrs, rounds, straightens, smooths and cuts the finished tubing to length ready for inspection and shipment—eliminating entirely the human element of error.

In our new Cleveland plant there are twenty of these huge units with a total yearly capacity of over twenty million feet of tubing—and additional machines are being added.

Furnished in straight lengths or formed to suit your requirements. Reasonably prompt deliveries on sizes up to 2-inch, outside diameter.

I AM A MOTORCYCLIST BECAUSE——

Motorcycle riding satiates, as no other sport not prohibitive in cost can, my appetite for outdoor recreation.

The thrill born of speeding merrily along the open road on a machine which obeys instantly my every command strikes a sympathetic chord within me.

The motorcycle provides a ready, pleasurable and inexpensive means for me to satisfy that feeling of "Wanderlust" which "gets me" periodically.

By means of the motorcycle, I can reach the far away tennis court or golf links, the distant swimming hole or trout stream, and a thousand and one other pleasure haunts without recourse to crowded trolleys or smoky steam roads.

The motorcycle brings me into contact with other folks both in my own and in other walks of life; it opens the door to goodfellowship and true comradeship.

As a vehicle, the motorcycle fits my every whim; if I am moody, I can travel by myself absorbed in my own company; if solitude is obnoxious, the tandem seat or the readily-attachable sidecar provides the means of relieving the condition.

The motorcycle serves me well when rapid and certain transportation is my need; in business as well as in pleasure, I can depend upon the motorcycle to get me where I want to go when I want to go there.

Riding keeps me in the open air, provides me with a moderate amount of exercise and makes for all-around good health.

The power-driven two-wheeler satisfies an inherent craving within me to study mechanical devices, and provides food for thought along both mechanical and electrical lines, and a certain amount of manual work which makes for versatility.

The sport the motorcycle provides dovetails well into my scheme of things; it fits my pocketbook and still provides a pleasurable occupation for my every free moment.

The motorcycle has taken me from a rut and keeps me from again becoming mired; it has broadened me and become an incentive to study; for me it has been an education and a liberal one.

By means of the motorcycle I can readily reach out of the way spots and take in much eye-pleasing scenery which is inaccessible to other types of vehicles.

Photography is one of my hobbies, and the motorcycle opens the way for me to obtain pictures of varied character and intense interest.

Through the intermediary of the racemeet, the economy contest or the endurance run, I can measure my skill against that of the other contenders and the ability of my machine against the best that his can do,—and competition is a never-ending source of enjoyment.

LONG ISLAND CITY, N. Y.

THE PLAZA MOTORCYCLE EXCHANGE has signed up to represent the Miami Power Bicycle. When the demonstrator comes, it will have two big signs fitted to it, one on each side, calling attention to the saving in carfare and time as compared with other forms of transportation. The machine will be ridden every lunch hour and quitting time in front of the many auto factories in this city.

Names—Names—Names!

By the hundred, or the thousand, as many as you want—Mr. Dealer and Mr. Manufacturer—Names and addresses of the motorcyclists and automobilists who are registered at the New York State Capitol. The motorcycle registration law just went into effect, and here is a splendid opportunity to get business by circularizing the riders of any part of, or the entire State of New York.

We Furnish These Names at Lowest Prices

We copy official automobile and motorcycle records in the Capitol here and can compile a list of the auto or motorcycle owners for your section of the State, at lowest rates, sending you supplements, giving the additional registrations. We can compile a list of owners of any particular motorcycle you may wish a list of.

Dealers are making good money, and creating a lot of new business, by using our lists. Now is the time to write riders in your territory for repair work and new accessories. Get our list now. Beat your competitor to it.

LIFE OF KRAMER

(Continued from page 40)

have trailed behind Kramer in a match race. Verri was disposed of in two straight heats in a one-mile match race. In each heat Kramer had a lead of one full length.

Wins Two-Mile National

On Sunday, July 6, Kramer rode a dead heat with Grenda in the final of the two-mile national championship race. It was a great finish, with Kramer just getting Grenda at the tape. On the same afternoon Kramer and Cavanagh won the three-cornered team match race from Goullet and Fogler and Grenda and Clark.

Sunday, August 10, Jackie Clark went down to defeat twice before the speed of Kramer. He was beaten in straight heats. Kramer had an easy time in the first heat; he dashed out ahead of Clark as the bell sounded and led all on the last lap. Clark closed the gap and there was a half a wheel between them at the tape. In the second heat Clark had a lead all the way around, and it was only by a final jump that Kramer won out at the line.

(To be concluded)

KEEN FOR BICYCLE THEFTS

DAYTON, Ohio.—As the season of bicycle thefts rolls around again, the police are increasing their vigilance. Quick work in a typical case recently resulted in the arrest of a pair of youthful bicycle bandits before the owner of the machine had missed it. They were reported by a dealer to whom they tried to sell the machine, and the rest was easy.

ANOTHER DOZEN TAKE MIAMI POWER BIKE AGENCY

MIDDLETOWN, O.—Three Maine dealers, two from New Hampshire and as many from New Jersey, are among recent additions to the long list of representatives for the Miami Power Bicycle, made by the Miami Cycle & Manufacturing Co., of this city. The Maine dealers are Walter Reed, of Fort Fairfield; Darling Auto Co., of Auburn, and A. E. Darling, of Portland.

In Trenton, N. J., John Sykes, Jr., has signed up and George F. Karch has followed suit in Princeton. W. H. McCarty in Nashua and the Queen City M. C. Garage in Manchester represent the most recent New Hampshire additions. In San Leandro, Cal., M. C. King has signed up, as has George E. Myers in Davenport, Iowa. R. L. French has taken the little four-stroke agency for Baltimore, Md., and in St. Joseph, Mo., the F. P. Lee Cycle Co. has signed up. The Frazier Cycle Co., of Lincoln, Neb., completes the dozen.

SCHWAB'S CONSISTENT CLIMB

(Continued from page 15)

a store and bookkeeper, and finally to the man doing a nation-wide business first under his own name, then in connection with Stevens & Company.

In the latter firm Mr. Schwab has put his vigorous personality, and his house follows out rigidly the business policy that he early adopted as his own—namely, honesty, integrity and service. Today Schwab takes as much interest in developing the men in his organization as he did formerly in developing his business, and his organization does credit to him. "I have never done a man unselfishly a good turn but what I have been well repaid sooner or later," he says. "It always pays well to serve the other fellow better than he expected."

Boom to Continue

Asked for his opinion as to how long the present period of prosperity would continue, he replied: "I look for no let-up in the present tremendous volume of business for this year, and if the war continues I believe the trade boom will be with us in 1917. But I am one of those who feel that with the end of the war, whenever it comes, we shall experience a readjustment period, the duration and severity of which I have found no one willing to make even a rough guess at; but I feel every business man should keep in view and consider what effect it will have on his affairs, and make such preparation against the future as recurring events would seem to warrant."

Mr. Schwab has a commodious home in East Orange, N. J., and a summer home at Lake Hopatcong. He is never too busy to give his family, consisting of his mother, wife and four children, a reasonable share of his time and care. He is ardently fond of outdoor sports and regularly every Spring takes a trout-fishing trip to Canada, not so much to fish as to be out in the "big outdoors" during one of the finest seasons of the year.

BRINGING THE GROWN-UPS INTO THE RANKS

(CONTINUED FROM PAGE 33)

"THAT'S the conclusion which many dealers seem to have arrived at," agreed Brady, handing Hap. a cigar and lighting one himself. "And that conclusion is acting as a bulwark, warding off thousands of sales each year. There is no reason why an able-bodied man or woman should not ride a bicycle. You'll agree with me on that point, won't you?"

"Sure, I'll do that little favor," acquiesced Raffles "there's no good reason why anybody, in good health and able to use his hands and feet, shouldn't ride a bicycle. But," added Raffles with a sly grin "grown-ups don't ride bicycles to any extent."

"You said it!" shot back Brady, puffing vigorously at his cigar. "They don't ride and the reason is that dealers aren't after them. Many of you fellows have arrived at a certain, fixed conclusion and you hold tight to it, as though your very life depended on it. You must change your attitude. Cycling is the sport for old and young—and everybody fond of outdoor life is a bicycle prospect. Get that?"

"Gotcha, kid," nodded Hap.

Wallop the Prejudice

"BUT unfortunately," added Brady, "cycling as a sport among adults is a fad or fashion—call it what you like—which has been allowed to gather dust on the shelf, as it were. And the opinion seems to prevail that riding is good sport for the kids but nothing for older people. Now, that prejudice must be walloped on the head—and we've got to make a clean job of it."

"The best way to overcome that prejudice and bring cycling back where it belongs among grown-ups is by ocular demonstration," continued Brady. "By that I mean that someone's got to take the lead and show the way. You've got to have some older riders on the streets of this town boosting the bicycle by their very appearance, and then only can you expect the rest of the folks to sit up ond take notice.

'What monkey sees, monkey does' is a hackneyed little phrase that's used a lot. But there's certainly a heap of truth in it. Once get the adults to believe that cycling is not a sport restricted to kids, but is a dignified, exhilarating, health-giving pastime for any able-bodied person—no matter what his age may be—and you're on the road to a comfortable addition to your present business."

Making the Start

EVERYTHING in Hap's store was quiet for a minute or two, while the dealer and traveler were meditatively pulling away at their cigars. Then Raffles broke the silence:

"Sounds all right, Jack. But who's going to start the mill turning?"

"The dealers, of course," replied Brady; and Hap. gave evidence of not liking the positive way in which the former put it. "It's the dealer," continued Brady, "who will make the money, so why shouldn't he go out and stir things up? But it isn't nearly as difficult to get things started as one might think. Take for example the case of a live dealer I know down in Pennsylvania.

"He decided that the sport would really have to be brought to the men in this town. So the next time he went round to a lodge meeting he invited some of his friends to go on a little cycling outing with him on the following Sunday. Most of them had ridden bicycles

always were better than all other side cars. Now their superiority is even more pronounced because of the

TRIANGULAR FRONT BRACE

which is being used on all Pullman side cars. It has so many advantages over the old construction that we have printed them all in a pamphlet which we will mail to you upon request.

before and upon listening to the dealer's glowing description of the fine time they would have readily consented. The dealer allowed them to use free of charge some of the bicycles he had for hire.

"WHEN the fellows," continued Brady, "had gone on a few of these Sunday outings, their oldtime enthusiasm for riding was revived. They wanted some more—and they did get some more; but not on the dealer's machines—they bought their own bicycles from him. On these outings the dealer would incidentally call their attention to great usefulness of the bicycle—its ability to take them to and from work cheaply, and the value of having it around the house for rush errands and teaching their youngsters to ride.

"Not only did this dealer succeed in selling bicycles to his friends, but he also sold quite a number of machines to grown-ups whom he had never met. He sold these machines, so he found out later, largely through recommendation on the part of his friends and the contagious cycling enthusiasm which they radiated. In my opinion the big point brought out by the Pennsylvania dealer's experience is that cycling can be revived among grown-ups by bringing them in actual contact with the sport, and enlisting their aid in shattering the growing prejudice that the bicycle is now used only by children and for commercial purposes.

"Now Raffles, old man," concluded Jack Brady, "I do not believe for a moment that the scheme of our friend in Pennsylvania can be tried with equal success by all dealers or in all communities. But it certainly is food for serious thought and shows what can be accomplished when a dealer brings his ingenuity and resourcefulness to bear on the problem of extending the use of the bicycle and broaden his business."

HOW ILLUSTRATIONS OF PARTS HELP THE RIDER

By JOHN O'BANNON

ONE of the useful little wrinkles that make friends of customers and customers of acquaintances is a series of illustrations showing the different vital parts of a motorcycle motor; these illustrations, along with explanations to be hung on the wall so that anyone can see them. By the vital parts, I mean the carbureter, magneto, clutch, three-speed (or two speed) gear and brake.

There are lots of occasions when a new rider wants to adjust his mixture and does not quite know how. He may have mislaid his instruction book, or he may be one of the many who never read it after the first glance through its pages. Such being the case, he will ask you, the dealer, or one of the men in the place, and take up time. Then, some men can't tell how to do it in words or at least definitely enough to create an impression.

How to Work It

If you have an illustration of the Schebler carbureter, for example—and if that is the carbureter used on your motor, of course—paste it on a card along with directions for setting it. You will get these from one of the carbureter maker's catalogs, or from the instruction book issued by the motorcycle factory. With it on the wall, the rider can study it at his leisure and if any further questions are asked you or the other fellow can show him on the illustration as well as on his own carbureter. The result will be that you will interest the rider, train him in the bargain to take care of himself on the road and make him a better rider all around. He won't bother you for help in that direction some time when you have little time to spare.

MOTORCYCLE'S BRIGHTEST YEARS ARE AHEAD

(CONTINUED FROM PAGE 17)

the absorption of the spectacular. It is, furthermore, a sport that costs but moderately and is therefore available for everybody. It will always be an important part of motorcycling and will exert a stimulating trade effect.

A Separate Development

So now we are coming to our best years. The farm field for the motorcycle is opening up very rapidly—a splendid opportunity for the small dealer, by the way. The public is hearing more and more of the merits of the motorcycle. And, best of all, the motorcycle is, I think, going to be regarded less and less as a substitute for the automobile. For the motorcycle is not a makeshift motor car. It is a separate development. It can do things that no automobile can do. Its riding sensation is different, yet just as pleasurable. It is just as reliable—at less cost. It gives a service just as substantial—with less care. It is now getting within the reach of everyone—a truly great accomplishment of manufacture.

I have said before that people are going to recognize these things more and more. But we must all of us lend every effort to see that people do learn how remarkable the motorcycle really is.

Our future is there—but we also must be there with it, heart and mind, if the motorcycle is to enjoy the porsperous years that are surely its due.

LAST MINUTE BICYCLE NEWS

BETTER CLASS OF PEOPLE BUYING BICYCLES

BUFFALO, N. Y., May 10.—The Gloucester Cycle Company, which handles several makes of bicycles, reports that business for the first four months this year is fifty per cent better than for the corresponding period last year. According to its manager, Chas. Haberer, the difficulty being experienced this year is not so much in cultivating prospects as in securing enough machines to satisfy immediate demands.

"It is certainly both interesting and encouraging to note," said he recently, "that a better class of people are now buying bicycles. This fact is revealed by the purchase of a larger number of machines on a cash basis, and also that those who are buying on the instalment plan are asking for the higher grade of bicycles and making generous initial payments."

DAN BEARD WRITES BOOK ON CYCLING

NEW YORK, N. Y.—Dan Beard, national commissioner of the Boy Scouts of America, has written an interesting booklet for the United States Rubber Company, which he calls "Camp Hints for Hike and Bike." The book is one of the best boosts for bicycles which has appeared in some time, giving, as it does, a very enthusiastic and spirited endorsement of cycling as a sport for boys. Many practical pointers on camping are presented, and the pages are prettily illustrated with line drawings. Copies of Dan Beard's booklet can be had from the U. S. company by writing to their New York office at 1790 Broadway.

BIKE RACES WILL FEATURE CELEBRATION

SACRAMENTO, Cal., May 8.—Six bicycle events will be included in the card of athletics that will be a feature of the "Causeway Celebration" in Sacramento on May 14. There will be a one-mile novice, a half-mile scratch, two-mile team race, one mile scratch, five-mile handicap and one mile consolation. Gold, silver and bronze medals will be awarded in each event. E. O. Putzman is chairman of the racing committee, and further information can be secured from him at 1122 10th street.

OHRT DEFEATED ON TRAINER

SAN FRANCISCO, Cal., May 6.—In a special three-mile home trainer race held last Friday night at the Tivoli Theatre, Hans Ohrt, the national amateur champion, was decisively defeated by Walter Hammitt, captain of the New Century Wheelmen.

20th Century lamps have proven by more than 17 years of use, their superiority. That's why they are so popular—why you find

more 20th Century lamps

used than any other lamp made. It is a good reason, too, why you should use the 20th Century lamp also.

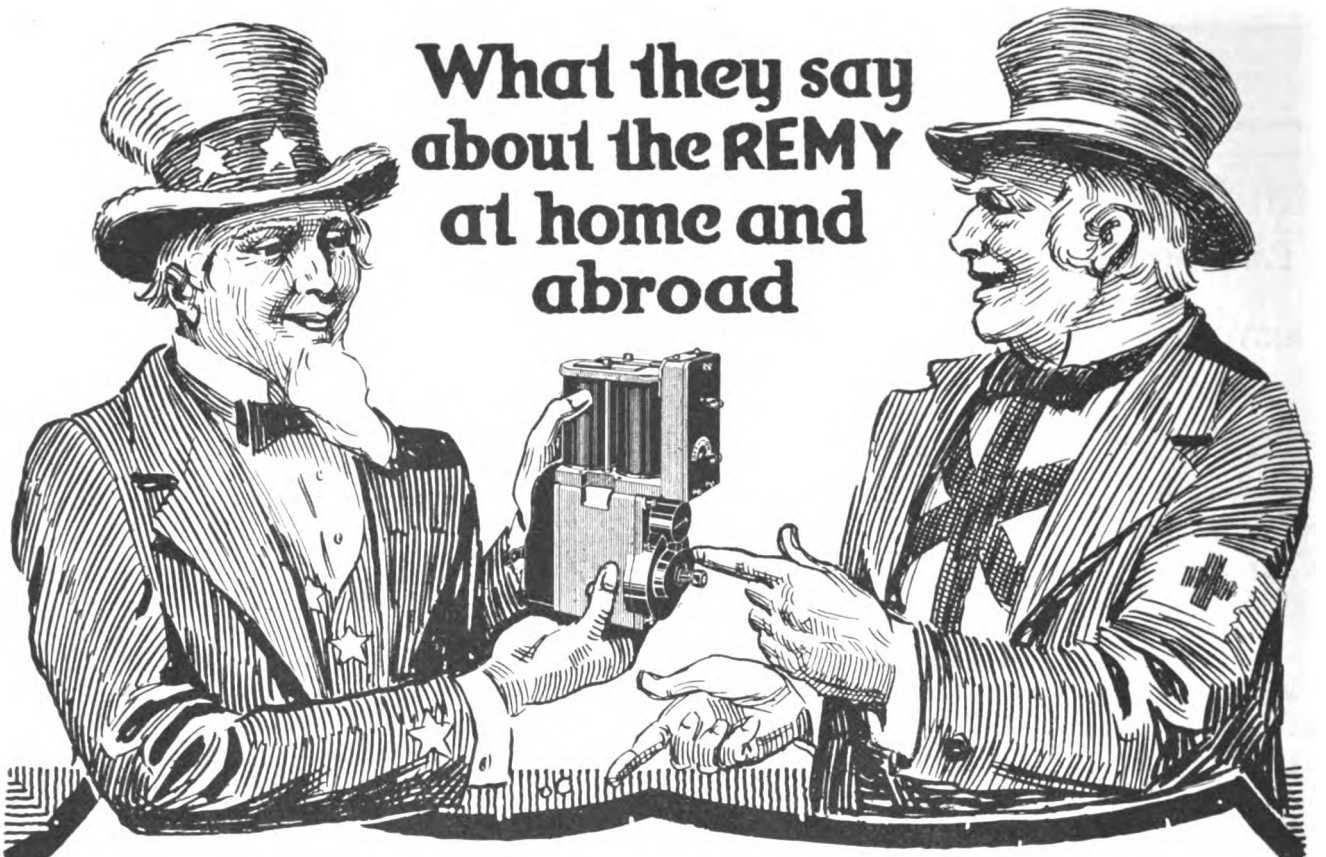
What they say about the REMY at home and abroad



"The Remy part of motoring is a dream—I wouldn't be without it"—that's the statement recently made by a Harley-Davidson owner of Reading, Pa., who is enjoying the advantages of the Remy system.

From a Harley-Davidson rider in hospital service in England—

"The model we were driving was equipped with the Remy Lighting-Ignition system which also worked the horn. We cannot say too much for the entire system. The head lamp was of the two-bulb variety and we had occasion to use the small bulb in traffic on our return to town and found it most satisfactory. The lighting, ignition, in fact, the entire machine is excellent.

Motorcyclists everywhere use the

REMY

Motorcycle Lighting-Ignition System

It furnishes strong, reliable, synchronized ignition. A big hot spark no matter how slowly the motor is turning over. It provides a white, intense, non-flickering light at the turn of the switch—and power for your horn. The Remy System never fails—it's trouble-proof. Wiring is protected—battery can't spill. Compact and light of weight.

263,000 Remy systems have already been ordered for 1916 delivery.

Ask any Harley-Davidson dealer to show you the advantage of the Remy system.

EVIDENCE of Popular Approval

A Carload of Series 17 EXCELSIORS delivered to the American Express Co. for shipment to Haverford Cycle Co., Philadelphia

That the new 17-3 Big X has made the hit of motorcycle history is evidenced by the enormous demand for these machines wherever they have been seen.

Express shipments come high and while dealers may order single machines as samples, shipped in this way, they seldom order express shipments in quantity for delivery to their customers.

The Haverford Cycle Company ordered

FOUR CARLOADS

to be shipped by express as fast as the carloads could be made up.

The above illustration shows the first of these carload shipments loaded on the motor trucks of the American Express Company for transportation to the express depot at Chicago.

Wise buyers make their selections on the basis of QUALITY and

MODEL 17-3 EXCELSIOR

has made the biggest hit in the history of the motorcycle industry. If you have not examined this superb machine, do it now. It is

STREAKS

Bicycle Caps for Dealer's Distribution

Get the Boys Talking for You

There is no better advertising than your customers themselves.

It is good business to get them working for you. They go where you don't. They know people you don't. Their word among their friends means business for you.

The Blue Streak Bike Caps were made for just this purpose. They go everywhere and create favorable comment about you and your store.

There is no reason why you cannot repeat the success other dealers have had in giving out these caps to the boys and men in their neighborhood.

In just a few days' time, with the use of these caps, you can turn the attention of the entire community on you and your store.

You can create a very definite impression among these people that you are *the* bicycle merchant in your city or town. That means you will get the tire, sundry and sporting goods business as well.

These caps are white, checked with blue blocks, and your name is in beautiful colors across the front. These caps we will send you at a trifling cost. We gladly print your name and address on free.

You don't need to give these caps away. Most dealers give them with purchases only. Such a method pays for their small cost immediately.

Over 80,000 of these Blue Streak Bike Caps have already been distributed to purchasers by Goodyear Dealers.

We want you to see a sample of these caps. Simply fill in attached coupon, tear off and mail today and you will receive sample cap with complete information and prices by return mail.

On the Road

Delivery of the first Pope Three-Speed Twin has just been made. It was ridden right from the factory and covered 95 miles without a hitch.

The dealer who bought it says: "Engine runs like a top and sings as sweet as Caruso."

The second dealer to receive a Model T-16 writes: "The Model T is a wonder, the motor is smooth and very quiet, and the riders are all pleased with it.

Pope Model T-16

is being rushed through the Westfield factory at a record pace. Road testers are humming back and forth over the good Massachusetts roads all day long to prove that every machine is in good running order before it leaves the factory.

Shipments of demonstrators are being made in the sequence in which the orders were received. If you haven't yours already, it will be only a short time now before you get it.

Make sure that every rider and prospective rider in your city sees it on your floor or on the road. Impress upon him the points of excellence—the 16-18 hp. Pope overhead valve motor—the three speed gears that are constantly in mesh, with a shift so locked that the clutch must be disengaged before they can be shifted—sector type direct starter—famous Pope rear suspension and spring fork—combination hand control of clutch, brake and gear release—splasher panels on mudguards—new jackstand—efficient muffler.

Despite all the obstacles met in production, Model T-16 promises to be the best-selling Pope ever put out. Make it bring home the bacon for you.

Westfield Manufacturing Company

The Road Champion

By winning the big 400-kilometer national road championship of the Argentine Republic, the Harley-Davidson has shown South America a sample of the stamina that has made the Harley-Davidson the favorite of North America's keenest motorcycle enthusiasts.

24 starters represented 9 different makes—the very pick of the motorcycles of Europe and America.

Arnoldo Bernasconi's winning Harley-Davidson averaged 63.68 kilometers an hour, breaking all previous Argentine road records.

BLUE STREAKS

Built for War, for Race Tracks and for Roads

FIFTY-ONE motorcycles, each equipped with Goodyear Tires, are now in the United States service in Mexico. This is the highest indorsement any tire could receive. It substantiates completely the 1916 tire choice of the largest majority of motorcycle riders—three out of every four. It emphasizes the good tire judgment of every leading motorcycle manufacturer, also the supremacy of the Blue Streak racing tire, which holds every important world's record. It is but another of the many reasons why tire dealers have found Blue Streaks the most profitable tire to sell.

How Long Will They Last?

That's the first question to ask when you buy a Motorcycle tire.

A tire that is durable—that gives maximum service—is the sort of tire you want.

There's only one way to know that the tire you buy is going to give you real service. And that way is to get the opinion of those who know from experience what that tire will do.

Ask any man who rides on 'Chain' Treads. He'll tell you, like one man we know, that "I have ridden all makes and 'Chain' treads outlast them all."

Vol. 11 MAY 18, 1916 No. 20

CROTONA SPELLS WATERLOO FOR 21 OF 66 CONTESTANTS

Broken Roads and Mud Retire Many in Mongaup Section, While Bull Hill Eliminates Its Share in Bronx Club's Gruelling Contest—Six Sidecar Combinations and a Tandem Among Survivors

BRONX, N. Y., May 16.—Out of a field of 66 starters, 45 completed the gruelling course of the second annual endurance run of the Crotona M. C. on Sunday, May 14. Of this number, 19 were Indians, 10 Harley-Davidsons, five Hendersons, one Reading Standard, two Thors and one Excelsior solo machines, one Excelsior tandem, four Harley-Davidson sidecars and two Indian sidecars. Among the solo entrants was an Indian Featherweight, ridden by Irving Barnard.

This run brought out the biggest collections of entrants of any in the last three years in the East. Both the hardened veteran and the new amateur entered, and all tried hard to get through. Clear weather prevailed for the most part, although there was some rain near noon, when the field was coming into Monticello, the noon control.

While official returns are not yet forthcoming, the following competitors are believed to have obtained perfect scores: John Cobban, Jr., solo Henderson; Wallace Stuart, solo Indian; Calvin R. Webber, solo Indian; J. U. Constant, solo Indian; Gene Coughlin, Harley-Davidson sidecar; Orrie Steele, Indian sidecar, and Harvey Snyder, solo Indian. Stuart, Webber and Constant formed a team in the run. Corrected reports may affect their standing and probably add others to the perfect score list.

There was considerable rivalry among several Indian entrants as to who should first cover the course. Fred Christman, Indian, Crotona M. C., was the first man to check in at the home control after covering the course, although his score undoubtedly suffered in the process.

The Competition Committee of the Crotona M. C. had carefully worked out schedules for the different stretches of the course, these schedules being consistent with the nature of the roads in each case. At no place was a speed of over 25 miles per hour calculated for, and in the rough stretches as low as 16 miles average was set down. The rough stretches even with this low average accounted for a number of retirements due to breakages and tire troubles.

The start was made at Southern Boulevard near the Crotona M. C. headquarters, the first man being sent off at 5:45 a.m. In less than 18 minutes the entire starting line of 66 was on the way toward the first control at Greenwood Lake, N. J. Special arrangements had been made with the ferry company at Dyckman street, New York,

for the riders, and all got across in fine style and bowled at a fast clip along the road through Suffern to Tuxedo Park; then through Sterling Forest and to the lake. Following along to Warwick, the field came to poorer roads with dust to Sussex, the second check.

Leaving Sussex, the riders crossed into New York State again, over dusty and rutted roads, but the only trouble on this stretch was with tires, and there were few spills. At Port Jervis the riders filled up with gas and oil in a hurry in anticipation of roads to come. Things went fairly well along the Delaware River and up into the mountains at Hawk's Nest, but after Glen Spey was reached the roads became interesting. As one competitor expressed it, this section was originally made by a wandering cow followed by its driver, and chosen several generations later by the Crotona club men as suitable to test riding abilities. The chief things that centered the interests of the contestants were the "nigger heads," or rocks which came up out of the clay and mud and speckled the way on both sides of it for several miles.

This stretch as well as that further along —the Mongaup Valley—accounted for several entrants. Holderman, H-D, came off and injured his foot, but went right on through. Irving Barnard, Indian lightweight, broke a frame and was out. Keyser, Indian, who spilled hard in getting out of the Bronx control, had carbureter and chain trouble and retired. Irving Lewin, Henderson, had five blowouts before reaching Mongaup Valley and rolled into Monticello with his rear tire in fragments, and then

Digitized by Google

withdrew. Gene Coughlin, Harley-Davidson sidecar, spilled, but righted and continued. Moore, Indian sidecar, turned over, but also righted again and went on. Solo riders took spills by the score, but most of them mounted again and continued. The newer riders went out in this stretch.

About 17 miles from Monticello, the first secret check was encountered, and many entrants lost consistency points right away. Monticello was reached over goods roads and there the whole town turned out to see the riders come in. The town set up luncheon for all hands.

During the halt for luncheon, Frank Forrie, Flying Merkel, amused the natives with demonstrations of trick-riding, even though his frame was broken. Forrie did not continue with the crowd, who started off between 1:45 and 2:00 p.m. for Cuddebackville, the first afternoon control. It was State road riding through Middletown, Goshen and Monroe to Central Valley, and then came the notorious Bull's Hill.

This incline was a slaughterer. It is steep and tries any machine by its long pull. Chain breakages and defective brakes on both the ascent and descent accounted for nearly a score of withdrawals or cripplings. Few sidecars made a clean ascent and many of the soloists faltered before reaching the crest. Down below a fine road led to Crows Nest for a check and then the crowd sped for home. A secret check about six miles from the Nest snared many and further crimped the scores.

SCHRADER AND U. S. TIRE FORCES IN PREPAREDNESS PARADE

NEW YORK, May 16.—The above picture shows the A. Schrader's Son, Inc., regiment, five hundred strong, preparatory to marching in the Rubber Division of the Preparedness Parade in New York, May 13. Colonel M. C. Schweinert is in the right foreground. This big body of men was officered as follows: Colonel, M. C. Schweinert; Regimental Adjutant, J. Volkhausen; Regimental Quartermaster, C. Cameron; Right Guide, W. E. MacPhail; Left Guide, Herman Linke; Major commanding first battalion, H. P. Kraft; Adjutant, M. H. Tisné; Major commanding second battalion, W. T. Hunter, Jr.; Adjutant, J. Hoerger; Major commanding third battalion, E. H. Caddy; Adjutant, D. K. Johnstone; Major commanding fourth battalion, J. H. Elsers; Adjutant, S. Kostick; Captains, Noll, Hoffman, Sigmond, Conklin, Sreyberger, Rawald, George A. Hunter, Erdman, Hammelbacker, Wenger, Lapham, Geo. Schmidt, Kautzman, Moore, Morrill, Carpenter, Strathman, Martin, Preusch, Beringer, William Schmidt, Holmes, Magee, Timans, Lenz, McDonald and Mulvey.

Heading the rubber division was a regiment made up of the employees of the United States Tire Co., commanded by Col. R. C. Fisher. D. A. Wilcox made a most excellent Adjutant, while J. J. House acted in the capacity of quartermaster. Battalion A of the United States Tire forces was under the command of Major J. H. Sheldon, with H. E. Cook serving as Adjutant.

BAKER HANGS UP A NEW CROSS-COUNTRY MARK

NEW YORK, May 16.—"Cannon-Ball" Baker has "gone and done it" again, this time leaping from crag to crag and gasoline station to gasoline station, all the way from Los Angeles, in the more or less sunny State of California, to New York City, with an eight-cylinder Cadillac roadster in seven days eleven hours and fifty-two minutes. Baker was accompanied by W. F. Sturm, an Indianapolis newspaper man.

The mileage was 3,471, made up of all the varieties of roads and "near" roads that the country possesses. The railroad distance between Los Angeles and New York is 3,240 miles and twenty-two locomotives are used in covering the trip in a little less than four days. On this trip Baker lowered his own cross-country record, established some time ago in another make of motor car, and also his motorcycle record, which was made on an Indian. Both "Cannon-Ball" and his companion were on the verge of collapse when they reached New York.

United States Nobby Tread tires were used on the record-breaking car, and "Bake" states that they contributed largely to the success of his trip.

PUBLICITY FEATURE FOR MONOGRAM DEALERS

A FEATURE of the widespread advertising campaign being conducted by the New York Lubricating Oil Co. that will doubtless make a strong appeal to dealers is a stereopticon slide for use in motion picture houses. This is made up artistically, showing a picture of a racing man astride an Excelsior and also one of the neat cans of Monogram oil for which the company is building up a national reputation. The bottom section of the slide is left blank for the name and address of the dealer who uses it.

The slides can be obtained by application to the Chicago office of the New York Lubricating Oil Co., 1549 Michigan avenue.

"WIGWAM WORLD" MAKES BOW IN SPRINGFIELD

SPRINGFIELD, Mass., May 12.—Today witnessed the appearance of Volume 1, Number 1 of *The Wigwam World*, a full size newspaper which is to be gotten out every two weeks by the advertising department of the Hendee Mfg. Co., in the interests of and for distribution among the thousands of employees of the Indian factory. Aside from many an interesting news item gathered from each and every department in the large plant, the first issue contains a personal letter from Mr. George M. Hendee to the factory folk, a short history of the Indian plant, and departments covering the various social and sporting activities, including a women's department, calculated to interest every employee.

REEPS COMPANY PURCHASES WEED BACK-REST

NEW YORK, May 16.—President Shuman, of the Reeps Mfg. Co., 50 Church street, announces that the company has bought out the Weed Folding Back-Rest Co., of Stamford, Conn., and that the already popular device will be manufactured and energetically marketed hereafter by the Reeps organization.

President Shuman argues that the time has arrived when motorcyclists are giving considerable attention to comfort, and that the Weed back-rest ought to sell on sight to the rider who wishes to increase the ease of roadwork without unduly encumbering his machine or in the slightest way detracting from its appearance.

CLEVELAND TO INCREASE ITS CAPITAL TO $300,000

CLEVELAND, O.—The Cleveland Motorcycle Manufacturing Company, of 7209 Platt avenue, this city, has filed papers with the Secretary of State to increase its authorized capital from $100,000 to $300,000. The sum is to provide for extensions and additions to its plant.

Big increase in sales of Cleveland lightweights all over the country have made the increase in capitalization desirable. Additions to the plant will be commenced as soon as the proper authorizations are obtained.

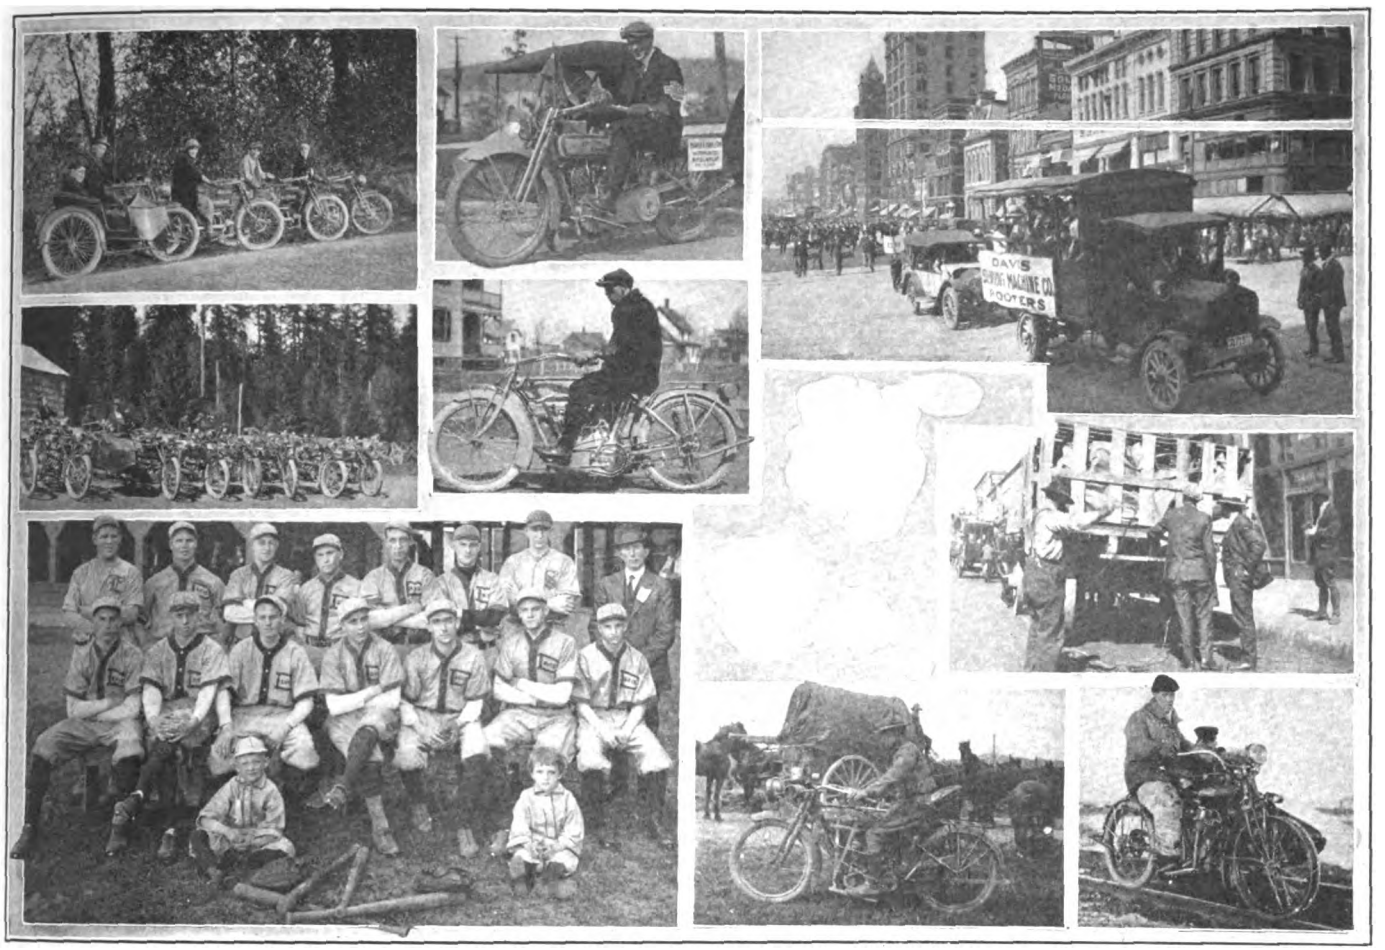
HERE AND THERE WITH MOTORCYCLE ENTHUSIASTS



THE photo in the upper left corner and the one below it are Hendersons taken on a recent run of the Seattle M. C. to Lakeside Inn, 75 miles out of Seattle. In the middle of the top row Miss Esther Johnson, who was chosen queen of a recent Tacoma carnival, is shown in a Harley-Davidson sidecar driven by John Poor. Directly below is a photograph of a Pope tester giving one of the new Model T-16s a final tryout. At the right of the top row is a view of a parade of Davis Sewing Machine employees through Dayton streets after the factory team had beaten the City Hall team in Dayton's Municipal league and the lower left picture shows the winning Dayton team as follows: Top row, Friend, pitcher; Hucking, first base; Stocklein, short stop; Brewer, center; Kirby, catcher; Flannery, third base; Donovan, substitute; bottom row, Reisensein, catcher; Lape, pitcher; Carr, left field; Turner, right field; Slater, pitcher; Leming, second base; Tavanor, utility; Ed and Bob Frawley, mascots.

The picture on the extreme right of the middle row shows the first shipment of Series 17 Excelsiors to be delivered reaching the Los Angeles store of the Girton-Hoffer Company. In the middle of the bottom row is shown a picture of a private in Battery D, Third field artillery on his R-S twin just prior to entraining for the trip to the Mexican border. At the right of the bottom row is a picture of Rev. C. T. Melly, a frontier missionary at Imperial, Sask., Canada, who uses an Indian with sidecar on the Canadian Pacific tracks to make the Sunday rounds of his churches.

STEVENS MEN ACQUIRE 20th CENTURY

Veteran Lamp Concern Passes Into Hands of Stevens Interests. Two Concerns Will Retain Identity

NEW YORK, May 16.—While it is made emphatic that the two concerns will be run entirely separate, it became known today that the interests behind Stevens & Co., the well known cycle parts makers, have acquired control of the 20th Century Mfg. Co., one of the oldest manufacturers of bicycle and motorcycle lamps in the country. Coincident with acquirement of control, Louis Schwab assumed the presidency of the 20th Century company and F. L. Parker became its secretary-treasurer.

The present factory of the 20th Century company will be maintained at 41 Warren street, the only outward change being in the location of the offices which have been transferred to 373 Broadway. J. E. Henderson will remain with the company in the capacity of manager, and it is understood that C. B. Brooks will attend to the selling end as heretofore. For the present, at least, the new owners contemplate no change in the replete line of both oil and gas lamps for both motorcycles and bicycles which the 20th Century company puts out.

The 20th Century company has been engaged in the manufacture of bicycle lamps for the past 20 years and its uniformly fine product has won for it an enviable reputation. About two years ago the company was purchased from the Wilson estate by Messrs. Henderson and Brooks and within the past twelvemonth was removed from Ogden street, Newark, to the Warren street address. The acquirement of control by the people behind the Stevens company undoubtedly augments the provision of the needed capital to carry on the fast increasing business of the concern on an even broader scale than heretofore.

COURSE MAPPED FOR PORTLAND ENDURANCE RUN

PORTLAND, Ore., May 16.—H. B. Du Gas and O. P. T. Daentiz have just completed a trip to Roseburg in this state, during which they not only mapped out the course but also completed all arrangements for the annual spring endurance run of the Portland M. C., which this year will be run to Roseburg and back, May 26, 27, 28.

The distance to Roseburg is 225 miles and the schedule calls for the completion of the distance there and back in two stages and at an average running rate of 25 miles an hour; the second day of the contest will be spent at Roseburg, where a strawberry carnival will be holding the boards and where the riders can spend the day.

RAYMOND AND WHITNEY QUIT M. & A. M. BOARD

NEW YORK.—H. E. Raymond, formerly sales manager for the B. F. Goodrich Company, of Akron, O., and C. E. Whitney, president of the Whitney Mfg. Co., of Hartford, Conn., have resigned from the directorate of the Motor & Accessory Manufacturers. Their resignations were made at the last meeting of the M. & A. M. in this city. Mr. Raymond stated that his resignation was simply the carrying out of his policy of retirement, while Mr. Whitney left the board by reason of having to devote all his time to his chain business in Hartford.

Both men were among the pioneers who were active in bringing the M. & A. M. to its present thriving condition. Mr. Raymond was vice-president for four years and president for two years and has been on the directorate since 1904. Mr. Whitney has been on the board since 1905.

WON PAIR OF U. S. TIRES

In our story of the recent Invincible Club run, we overlooked mentioning the fact that the United States Tire Company had donated a pair of Chain Tread motorcycle tires, to be awarded to the club having the largest attendance in the run. The members of the Invincible Club outdistanced all others in attendance, and the tires were won by them.

HOLIDAY MEET AT MARION

MARION, Iowa.—Plans are being perfected for a racemeet to be held on the Marion track on the afternoon of Memorial Day. From ten to fifteen entries are promised, and some of the best riders in the State are expected. Five professional events and three for amateurs will make up the card.

NEW CLUB FOR POMONA

POMONA, Cal.—Local motorcyclists have organized and affiliated with the F. A. M. The officers of the club are as follows: Thomas Waters, president; Howard Hunter, vice-president; Harold Brehaut, secretary-treasurer; S. P. Hunsaker, captain; Charles Johnson, first lieutenant; Paul Cline, second lieutenant; W. L. Williams and H. D. Weaver, directors. The club has thirty-two charter members.

SPRINGFIELD M. C. OFFICERS

SPRINGFIELD, Ill.—The Springfield M. C. has just elected the following officers: S. A. Wight, president; William Londrigan, vice-president; Rudolph Blucke, secretary; Herman George, treasurer. The club has held its first social ride of the season, and is planning others.

INDIANS STAR AT GILROY HILLCLIMB

GILROY, Cal., May 12.—Indian riders took the first three places in the Gilroy hill climb Sunday last. The hill was about 38 per cent. grade, giving a better opportunity for speed than some of the stiff climbs recently held, and the distance was about 300 feet. Riando was first, in 8 seconds flat. Margason made the next best time, 8⅕ seconds, but as he was not a club member his run did not count in the official returns, second place going to Zutta, 8⅖ seconds; and A. Mainero, in 9 seconds, took third place. The climb was held about five miles out from Gilroy, on the road to Gilroy Hot Springs. Twelve machines took active part in the contest.

LIBERTY DAY RACES TO DRAW BIG CROWDS

SHEEPSHEAD BAY, N. Y., May 16.—Entries are being received for the motorcycle events at the Speedway on American Liberty Day, June 4, and practice arrangements will shortly be completed and dates announced. The motorcycle committee consists of Irving Barnard, J. U. Constant and Calvin R. Webber, of the Speedway M. C., which organization is directing the races.

Over 50,000 tickets for the affair have been sold to date, and it is figured that between 200,000 and 300,000 people will attend. All entries should be in the hands of either Mr. Barnard, 15 Warren street, New York, or F. W. Jansen, 150 Nassau street, New York, before May 24.

JAMAICA RUN TO HAVE BIG ENTRY LIST

JAMAICA, N. Y., May 16.—The entry list of the Jamaica M. C. for the run slated for May 21 has assumed goodly proportions, and it is figured that at least 100 will start in the event. Five silver cups have been donated as prizes, and there is a big list of accessories to be awarded to those scoring in the affair.

Among the Eastern riders who will compete will be A. G. Chapple, I. W. Barnard, Bob Brazenor, J. U. Constant, Wallace Stuart, C. R. Webber, Harvey Snyder, William Vom Lehn, F. P. Baker, G. Walker, C. Carleton and John Cobban, Jr.

HOGG NOW TRAVELS TANDEM

LOS ANGELES, Cal., May 6.—John E. Hogg, well-known Los Angeles cyclist, long-distance tourist and writer of feature stories for **Motor Cycle Illustrated**, was married here this evening to Miss Ruth Ashbrook, of this city. After the ceremony Mr. and Mrs. Hogg sailed from San Pedro in a thirty-five foot yacht for a honeymoon in the De Cedros Islands.

COURT DISPOSES OF SUIT OVER TIRE FLUID

A LETTER from the Indiana Rubber & Insulated Wire Co., of Jonesboro, Ind., relative to a suit brought by the Buffalo Specialty Co. in connection with a puncture-healing fluid for pneumatic tires, states that the Indiana company "gained a final victory when the United States Circuit Court of Appeals for the Seventh Circuit, under date of April 18, 1916, affirmed the action of the United States District Court for the District of Indiana, the District Court having dismissed the complainant's bill for want of equity.

"The Buffalo Specialty Co. had contended that it had made a shop license agreement whereby it was to have exclusive sale of a patent fluid to heal punctures in pneumatic vehicle tires, and that the Jonesboro company was not to manufacture it for sale except in a local way. The Jonesboro company contended that they had the right to use the material in connection with the manufacture of its bicycle tires and sell such treated tires wherever they chose."

BE CAREFUL IN KENOSHA

KENOSHA, Wis., May 12.—Sheriff Stahl is well prepared for the joy riders this year with the installation of three motorcycle riders on his staff. Fritz Rudy, the man in charge of the sheriff's motorcycle squad last year, will have the same job again this season. Fritz has one of the longest record of "pinches" of any deputy in the state outside of Milwaukee. Guarding the roads starts a month earlier this year than last.

MAY JOIN AUTO CLUB

SAN FRANCISCO.—Ed. Laudenclos, of the Motorcycle Sales Company, local agent for the Henderson, has just returned from a trip to Los Angeles, and notes that the Henderson people there are working in behalf of the new motorcycle department of the Automobile Club of America, which is finding considerable favor among the southern people. Mr. Loudenclos was impressed with the advantages offered by membership in this organization, and is bringing the subject to the attention of local riders. The new section of the automobile club, he says, will conflict in no way with the local club, the intention being to co-operate in every way possible and boost the game along.

ANONYMOUS LETTERS BARRED

A SUBSCRIBER.—The standing rule in all publishing houses against the printing of anonymous letters prevents our devoting space to your contribution concerning the Invincible M. C. run.

NEW GOODYEAR KIT

A newcomer in the accessories field that will be welcomed by motorists is the Goodyear Tire-Saver Kit, a collection of just those articles a motorist should have to combat tire accidents. These are neatly packed in a khaki-colored canvas roll, and can be secured from all Goodyear dealers.

Doings on the Pacific Coast

LOS ANGELES TOURISTS GET UNDER WAY

Alfred LeRoy, Crippled Enthusiast, Starts 50,000-Mile Journey with Unique Sidecar Outfit; Others Head Northward and Eastward

LOS ANGELES.—The first week in May was a notable one in Los Angeles for the starting of touring parties. Charles Fuller Gates left on an Excelsior to run across the Southern route to Eastern points, and was followed shortly afterwards by Alfred Le Roy, the young cripple who has lost both legs and one arm, and who is noted as one of the earliest men to cross the country with a motorcycle and sidecar. Le Roy of course uses a sidecar outfit on this trip, and is starting on a tour which will cover a large portion of the United States.

He intends to complete 50,000 miles with his 1916 Harley-Davidson three-speed and Superior sidecar. The latter is attached on the left-hand side of the motorcycle so that his good hand is next the machine. Le Roy is accompanied by his dog "Speedometer." He will support himself selling postals of himself and his outfit. He is carrying along an autograph book headed by the signature of Mayor Sebastian of Los Angeles, and intends to pick up as he goes along the autograph of the mayor of every city and other notable persons.

Leo Harding and a companion left for Portland with a Henderson 4-cylinder machine and sidecar, carrying advertising matter for the photoplay "Civilization," which is now running in Los Angeles and which is to be featured in a short time throughout the country.

1917 EXCELSIORS BRINGING IN MANY RECRUITS

LOS ANGELES.—Mrs. T. J. Hayes, one of the most enthusiastic lady riders in southern California, was one of the first to purchase one of the 1917 Excelsiors, buying one of the classy three-speed machines, with a sidecar to carry her daughter.

Another interesting sale was to a 16-year-old youngster who was rather small for his age. He drove up with his father in an eight-cylinder Cadillac and looked over the series 17 Excelsiors. The salesman had to let the saddle clear down to the frame, but when this had been done he got aboard and with very little instruction was able to handle the machine nicely, although he had never before ridden a big machine. His dad pulled out his checkbook and closed the transaction.

BERRY VISITS MIAMI FACTORY

LOS ANGELES.—T. E. Berry, Los Angeles Miami Motor Bicycle agent, is spending a few days in the East at the Miami factory. While he is gone Mrs. Berry is in charge of the store and from the sales activity about the establishment it looks as if Berry would have to look to his laurels as the champion Miami agent in point of sales.

LEE ON ANOTHER TRIP

LOS ANGELES.—Tennant Lee, of the Henderson Motorcycle Sales Corporation, Los Angeles, is making another trip in northern California on his four-cylinder machine, with a sidecar to carry his baggage. He will visit San Francisco, Marysole, Chico and many other points and expects to place several agencies.

CLUBSTERS IN BEACH RUN

LOS ANGELES.—Laguna Beach, some 48 miles south of Los Angeles, was the Mecca to which the club riders turned out in good numbers last Sunday. All but two of the machines carried tandem passengers, and the day was enjoyed in swimming and picnicking on the beach.

NEW A. B. C. GENERATOR MODEL

LOS ANGELES.—The A. B. C. Generator Co., of Los Angeles, has just brought out a new model of the A. B. C. lighting generator for motorcycles, which combines a great reduction in weight with increased efficiency in generating lighting current.

MAKE GOOD TIME ON MIAMI

LOS ANGELES.—H. A. Brunell, of T. E. Berry's Miami motor bicycle store, accompanied by Dave Morse, made good time on a run from Los Angeles to San Diego and back last week. They averaged 30.8 miles per hour in the 137 miles going, took a good look at the San Diego Exposition, and in 12 hours from the time they started from home were back in Los Angeles.

SELLS SEVEN MIAMIS QUICKLY

OXNARD.—Dan E. Rolston, formerly a watchmaker at Oxnard, who had never ridden a motorcycle in his life got the chance to ride a Miami lightweight and was so impressed with the machine that he promptly took the agency. Already he has taken his seventh Miami. He comes into Los Angeles on a Miami frequently, and makes the 66 miles in about 2½ hours. Going back he never has any trouble with the Cahuenga Pass grade, which is a heavy grind for almost any machine.

SELLING THE FIFTH CARLOAD

LOS ANGELES.—C. Will Risden, coast distributor for the Cleveland, takes exception to the report recently given publicity in Chicago that he has sold three carloads. As a matter of fact, on May 10 the firm had sold two-thirds of the fifth carload which arrived on the preceding Thursday.

FRESH TRADE NOTES OF THE SAN FRANCISCO FIELD

MR. ANGWIN, of the Motorcycle Sales Company, is on a demonstrating tour through the San Joaquin valley towns with the Reading-Standard.

Fred H. Bente notes an exceptionally active demand at present for second-hand machines, especially for sidecar outfits and three-speed Excelsiors.

Hopkins & Alzina, who started business on Van Ness avenue a few months ago with the Cleveland lightweight, have arranged to handle also the Dayton motorcycle for San Francisco.

W. E. & W. H. Jackson, coast representatives of the Davis Sewing Machine Company, have received a very encouraging report on the new motor bicycle from the Washington Cycle & Supply Company of Tacoma, which has the distribution of this line for a large territory in the Northwest.

Word has also been received from the Dayton Cycle Company of Portland, covering Oregon, reporting a very active motorcycle business in that state, with an order for all the machines that could be shipped from here.

DAYTONS ARE MOVING WELL

SAN FRANCISCO.—W. E. & W. H. Jackson, distributors of Dayton motorcycles, report that more motorcycles went out of their store last week for points in northern California than in any previous week in the last six months. They are also having rush times in the supply department, and while they usually make a point of shipping orders the same day they are received, they were unable to do so on several occasions recently.

ATTENDED SACRAMENTO FESTIVAL

A regular run of the S. F. M. C. was held May 14 to Sacramento, to attend the festival celebrating the opening of the Yolo Causeway. As on the last occasion, the club is holding two runs simultaneously, and the practice will probably be frequently followed in future, as there are enough members to make two good crowds almost any day, and some would rather make a short run and picnic in some pleasant spot, while others prefer to spend most of the day riding. The short run on this occasion was to Walnut Creek, at the foot of Mount Diablo, where there are many delightful spots for an outing.

DELIVERY CAR FOR BREAD

SAN FRANCISCO.—A large baking firm in San Francisco, which distributes its output daily among a great number of consumers, recently purchased a number of Harley-Davidson sidecar delivery outfits, the specially built car of which holds about 100 loaves.

SHAPING THE "JOY SESSIONS" FOR ATLANTIC CITY

"Bill" Surre and C. E. Morehouse, the C. P. and A. A. Committee, Working Hard to Give Tenth Annual Convention Program an Unusual Tingle—Where Accommodations Can Be Had

ERIE, Pa., May 16.—Preparations are well under way to make the "Tenth Annual," which is to be inaugurated at Atlantic City on Monday, July 31, by far the happiest of cycle trades conventions at which the Cycle Parts and Accessories Association has had the honor of playing host to the other trade bodies. The full plans for the joyfest have not yet been completed, nor will the labors of the committee incidental to so fixing things that there will be "something doing every minute" be finished for some time to come, but it goes without saying no pains will be spared to make the session memorable. The only detail of the joy schedule which has been given out has to do with a bicycle race-meet which is scheduled to be Thursday's feature.

W. J. "Bill" Surre, of the Continental Rubber Works, and C. E. Morehouse, of the Standard Co., constituting the committee of convention arrangements appointed by the Cycle Parts and Accessories Association, have as yet but little to say regarding the remainder of the program which they are now formulating, aside from the fact that they firmly and truly believe that it will be the biggest and the best of the sort that they have ever had the pleasure of getting up.

Undoubtedly they are arranging some surprises which will not be divulged for some time to come; but the fellow who has been there in past years and who has enjoyed the golf tournament, the baseball match, the water polo contest, the latest Belasco offering at the Apollo theater, the session at the bowling alleys, and that night of wild hilarious joy at Steeplechase pier, is not likely to be disappointed in not finding these stand-bys on the program for the 10th annual convention of the Cycle Trades bodies.

As was stated in the last issue, the St. Charles will again be the headquarters, and while the capacity of this hostelry has been greatly augmented by the completion of a new ten-story addition, it is, nevertheless, essential for those who care to locate under the roof with the cycle trades gathering, that they make reservations at the earliest possible date. Especially is this so, in view of the fact that hotel managers at Atlantic City are expecting this year to be a record-breaking in point of attendance.

But the fellow who does not heed this advice until it is too late to locate under the hospitable roof of the St. Charles, need not miss the good times which Bill Surre and Mr. Morehouse are at pains to provide, for right in the immediate vicinity of the St. Charles are many good houses where accommodations undoubtedly can be secured. Among them are the Lorraine, directly opposite the St. Charles, the Raleigh and the Dolphin. Where last year stood the Rudolf, just a stone's throw away from the St. Charles, a new modern hotel is building and will open this year under the name of the Breakers. And if the season should be so phenomenal that accommodations can be secured in none of these, there are, of course, the Strand, the Chalfont and the Traymore, all good stand-bys which can always be relied on for accommodations.

Unlike the conventions of previous years, the "10th Annual" will be inaugurated on Monday instead of Tuesday, and as the program starts from the moment you get off the train at the Atlantic City depot the committee most earnestly suggests to every trade member that he do his utmost to get to the "city by the sea" on the opening day.

The Enlarged St. Charles Hotel, at Atlantic City, Which Will Again Be the Official Headquarters During the Cycle Parts Convention

FIRST PRO MEET IN TOLEDO POSTPONED BY RAIN

TOLEDO, O., May 14.—Twenty-one riders were prepared to face the starter in the initial meet here today of the Interstate Racing Association, but were doomed to disappointment. The weather man had prophesied rain, and rain it certainly did. The same card of races will be held next Sunday.

Ray Creviston and Krazy Horse Verrill were among the eleventh hour entries. They left their mounts in this city and will be on hand for the curtain-raising events. The rain not only interfered with the pleasures of the local fans, but also embarrassed a party of thirty-two Detroit riders who came here on their machines and were marooned by the storm.

DECISION SOON ON F. A. M. CONVENTION CITY

PROVIDENCE, R. I., May 16.—B. A. Swenson, the Indian man, who is arranging to have the F. A. M. Convention in this city, has received a letter from President A. B. Coffman, stating that he would be notified of the decision of the National Board of Directors on the vote now being taken regarding the place for the 1916 Convention.

The F. A. M. President's letter stated that July 18-22 would be the best dates for the big affair and asked Swenson's opinion on this matter. Swenson replied that although the dates were somewhat early to adequately prepare for the Convention, it would be otherwise quite satisfactory, and in the event of Providence getting the vote, he would do his utmost to pull off the biggest convention ever held.

CENSUS FIGURES PROVE INSPIRING

Show 111 Per Cent Increase in Cycle Products Between 1909 and 1914—The Cycle Trade a $25,000,000 Industry

WASHINGTON, D. C., May 9.—That the cycle industry made a jump in the valuation of the products of better than 110 per cent. during the five-year interval between 1909 and 1914 is disclosed by figures just issued by the Bureau of the Census, Department of Commerce. The figures, which are given in full below, are calculated to inspire manufacturer and dealer alike engaged in the two-wheeler industry to even greater efforts, and no doubt this, the first publication of matter of this sort, will have its effect in increasing the total valuation of the industry, given at better than $25,000,000 in the figures for 1914, to a point much nearer the $50,000,000 mark before 1919.

Reports were received from some 94 establishments engaged in the manufacture of motorcycles, bicycles and their parts during 1914, and the total value of their products was $25,486,942. The census of 1909 showed that there were 122 establishments engaged in the industry, but the value of their products amounted to only $12,069,687. The figures, therefore, show a decrease of 28 or 23 per cent. in the number of plants and an increase of 111.2 per cent. in the valuation of their products. There were reported as manufactured during 1914 62,793 motorcycles, valued at $12,306,447, and 398,899 bicycles, valued at $5,361,229.

In 1909 the output was made up of 18,628 motorcycles, valued at $3,015,988, and 233,777 bicycles, valued at $3,228,189. The production of motorcycles, as disclosed by the figures, increased 237.1 per cent. in number and 308 per cent. in value, while the output of bicycles increased 70.7 per cent. in number and 66.1 per cent. in value.

Of the total number of establishments reported for 1914, 16 were engaged primarily in the manufacture of other products and reported motorcycles, bicycles and parts as subsidiary products. Of the 122 establishments reported during 1909, 27 were engaged primarily in the manufacture of goods other than cycles and cycle goods.

PATERSON M. C. MAY RUN IS BIG SUCCESS

PATERSON, N. J.—Despite showers and mud, the May run of the Paterson M. C. held on May 7 was a big success. Eighty-four riders with tandem and sidecar passengers rode to the Hoffman farm at Augusta and there enjoyed a dinner and sports. The latter included three-legged race, rooster-catching event, a peanut hunt, crawling race, and a hurdle race. There were eight events for the girls also. Accessory prizes for the events were donated by local motorcycle and bicycle dealers.

RICHMOND M. C. EXTENDS THE GLAD HAND

THE Richmond Motorcycle Club of that Indiana city, is desirous of extending the "glad hand" to touring riders who visit Richmond. The club rooms are always open to fellow riders and the members are ready to do their mite toward making the tourist's trip to Richmond a most enjoyable one.

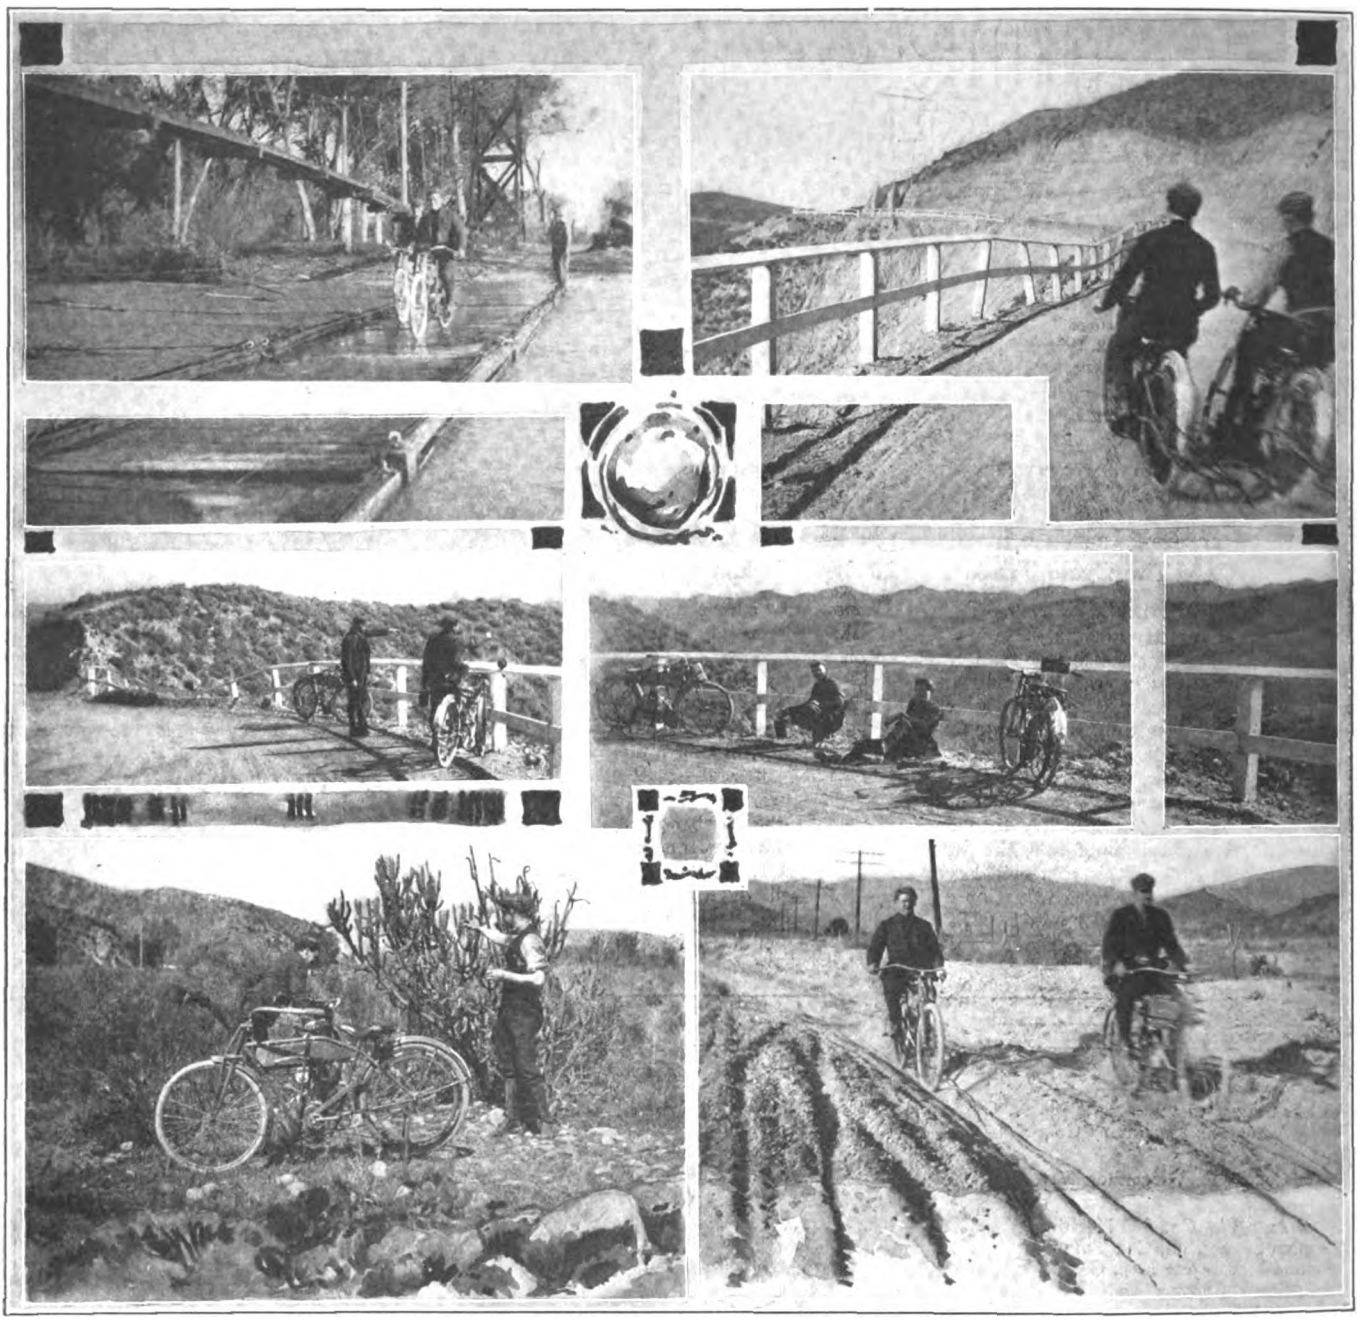
MIAMI POWER-BIKES ON RIDGE ROUTE OUT OF LOS ANGELES



In the upper left-hand picture is T. E. Berry, Miami Power Bicycle Agent in Los Angeles, Cal., leading his partner across the improvised pontoon bridge over Castaic Creek, while at the right the pair are nearing the top of the grade. The left-center picture was taken near the summit of the long grade; the valley is half a mile below. To the right the riders are resting.

Cactus and sage brush are notable in the lower left-hand view and Berry says that the spines on the ground were fine for puncturing tires. The last picture shows Berry and Frank Reed near Saugus in the sand that marked much of the trip.

RACING REVIVED IN BUCKEYE CAPITAL

COLUMBUS, Ohio, May 12.—August Nagora won the 30-mile bicycle race Sunday over the King-Fifth course in 1 hour 30 minutes flat. There were ten starters in the race, but only two finished, Charley Louthan, the Ohio champion, leading at 7 miles, crashed into the fence rather than collide with a dozen or more spectators, who crowded onto the course at the bridge turn. Though badly cut up, Louthan resumed his pace and soon gained the half mile lost, when at the ninth mile he punctured and was out of the running.

This marks the revival of bicycle racing in the Buckeye capital, which will be continued throughout the summer. Arrangements have been made for a 50-mile race, May 14, over the same course.

RACES FOR SHEEPSHEAD BAY MILITARY EXHIBITION

SHEEPSHEAD BAY, N. Y., May 12.—Motorcycle races between Army and Navy speedsters will be a feature of the Naval and Military Exhibition at the Speedway on May 27. So far only one event has been scheduled, this being a 6-mile open.

CONTRACT AWARDED FOR THE CINCINNATI SPEEDWAY

CINCINNATTI, Ohio.—The contract for the construction of the Cincinnati Speedway has been awarded by Architect Harry Hake to Edward Ryan & Co., as general contractors, at $375,000. The contractors agree to complete the work by August 5. The directors added $30,000 to the cost by deciding to make the track 70 instead of 60 foot wide. The directors of the local association will at once make arrangements for the speed events to be held on Labor Day, as well as for other dates, such as Sept. 4.

THE HARLEY-DAVIDSON COMPANY'S PRESIDENT

THIRTEENTH IN A SERIES OF BIOGRAPHICAL SKETCHES OF TRADE LEADERS

Steam Engineering, Electrical Research and Bicycling All Influenced the Youthful Activities of Walter Davidson and This Broad-Gauge Combination Accounts for His Remarkable Versatility and Dynamic Personality Today; His Life Policy in Brief: "Whatever Walter Goes Into He Goes Into Right."

TACKLING the job of writing about Walter Davidson for the **Motor Cycle Illustrated** series of Success Stories of big men in the motorcycle industry brings one at the outset to the dilemma of determining whether it should be said that he came in by the steam route, by electricity, or pedaled into the business of manufacturing motorcycles. As steam engineering, electric motive power and pedal bicycles had a combination influence in qualifying him for the manufacture of motorcycles, probably the best way is just to go ahead in chronological fashion and tell how all three contributed to his early training and assisted in fitting him for his responsibilities as president and general manager of the Harley-Davidson Motor Company.

His First Bicycle

Walter Davidson bought his first bicycle in 1893, a second-hand Remington weighing 35 pounds, that he picked up at an auction sale for $35—$1 a pound. It had a 30-inch wheel in front and a 28-inch rear wheel. His first bike was geared at 59, which was pretty high considering the weight of the bicycle and the hilly country in and around his home town. Immediately he became a bicycle racer, taking part in the road races for which Milwaukee in those days was famous—although it since has become famous for many other things, including motorcycles.

"I thought a good deal of that old Remington bike," he said when caught one day in a reminiscent mood and told that **Motor Cycle Illustrated** was determined to print something about his connection with the motorcycle industry and wanted to know about his entry into the sport. "We thought it great sport to ride until we were all in, or 'all out,' as the Britishers call it. I remember one time that I wanted to see how fast I could ride the 90 miles from the State capital at Madison. I was so tired after I made the trip that I couldn't stand up or even lie down with comfort. But I satisfied my curiosity as to how long the trip would take with my 35-pound Remington. It took ten hours."

Taking It Apart

His mother's recollections of those days are chiefly of Walter taking his bicycle apart and putting it together again, doing the work in the kitchen. William A. Davidson and Arthur Davidson, works manager and sales manager, respectively, of the Harley-Davidson company, testify to the same thing—that Walter always insisted upon having his bicycle in perfect condition and that he got as much fun out of overhauling it frequently, cleaning the bearings and truing up the wheels as he did out of riding.

The mechanical proclivities of the present head of the Harley-Davidson Motor Company were manifested years before that, as a matter of fact. When he was 13 or 14 years old he became interested in electricity and converted the basement of the Davidson home into a workshop. First, he solved for himself the mysteries of electro-plating. Walter made an electric plating outfit and then the family had to watch out to save everything in their home from having its finish changed to something else. Copper plating, nickel plating and silver plating were worked out in turn.

Next came a curiosity to work out the details of storage battery manufacture. About that time Milwaukee's first electric street car line was put into service. Living not far from the new electric line, Walter watched the cars, considered them about the most wonderful thing ever and then went back to his workshop to develop his storage batteries. Needless to say, he made a successful storage battery—and that was fully twenty-five years ago.

WALTER DAVIDSON
The Machine Is One of the Early Models

Because of his interest in electricity it was natural that when Walter Davidson was through school and went to work he should continue in the same line. Employed by an electrical contractor, he worked for three years wiring buildings and putting in electrical installations. He was not satisfied, however, until he became a full-fledged mechanic, and the following years saw him pedaling his bicycle to and from work at various Milwaukee industries including the Harvester Works, the West Milwaukee shops of the Chicago, Milwaukee & St. Paul Railway Co., the A. O. Smith Company, the Johnson Service Company, and the Bucyrus Steam Shovel Company.

His steam engine experience already mentioned was obtained in the Milwaukee road shops, with the Bucyrus company at South Milwaukee, a short time in the railroad shops at Minneapolis and then in the shops of the Missouri, Kansas & Texas Railway Company (better known as the Katy Road) at Parsons, Kan. At West Milwaukee, Walter worked beside his brother "Bill," who was tool room foreman for the C. M. & St. P. system. The knowledge the two Davidson brothers gained there in tool making has proven invaluable in the manufacture of motorcycles.

The Pioneer Motorcycle

Walter was at Minneapolis in 1901 when Arthur and Harley made the first Harley-Davidson motorcycle. Really it should have been called a motor bicycle because it was simply a motor put into a bicycle frame. Harley and Arthur had visions of going many miles per hour with their first motor bicycle, but when completed and put to the test it went down hill all right but lacked sufficient power to get up most of Milwaukee's steeper hills. So they had to begin all over again.

The marriage of "Bill" Davidson in 1903 brought Walter Davidson back to Milwaukee. Arthur wrote him at Parsons, Kan., "When you come home for Bill's wedding, we will have a motorcycle for you to ride." This interested Walter so much that instead of merely "laying off" to be present at the wedding he resigned his position with the "Katy Road," and the certificate of service he received April 17, 1903, is still on file. For anyone interested in the history of the American motorcycle industry this document has exceptional interest because it really marks the entry of Walter Davidson into the business of motorcycle manufacturing.

Gets His Certificate

"Service and conduct satisfactory," was the annotation of the master mechanic upon the certificate showing that Walter Davidson had resigned voluntarily his position as machinist in the shops of that company. And the word service appearing on that certificate has ever since been the motto of the Harley-Davidson Motor Company in the manufacture of motorcycles. With his certificate of service in his pocket, Walter attended his oldest brother's wedding and then hurried to take a look at the motorcycle built by his younger brother and Harley.

NEW DEPARTURE AND REMY IN BIG MERGER

DeWitt Page a Director of the New $60,000,000 Company—Over $3,000,000 of Underwriting of United Motors to Be Subscribed in Bristol—Company's Men to Go In On It

BRISTOL, May 17.—DeWitt W. Page, president of the New Departure Manufacturing Company, when interviewed yesterday by a representative of **Motor Cycle Illustrated**, about the recent merger of the New Departure Company in the United Motors Company, said:

"The board of directors of the United Motors Corporation for the first year will be composed of Alfred P. Sloane, Jr., of the Hyatt Roller Bearing Company, of Harrison, N. J.; E. A. Deeds, of the Dayton Engineering Laboratories Company, of Dayton, O.; DeWitt W. Page, of the New Departure Manufacturing Company, of Bristol, Conn.; S. A. Fletcher, of the Remy Electric Company, Indianapolis, Ind., and L. G. Kaufman, president of the Chatham & Phenix National Bank, with the following officers: A. P. Sloane, Jr., president; A. E. Deeds, vice-president; DeWitt Page, secretary and treasurer, and L. G. Kaufman, chairman of the finance committee.

"To go back about a year, William C. Durant, chairman of the board of the General Motors and Chevrolet Companies; C. W. Nash, president of the General Motors Company, and John N. Willys, president of the Willys-Overland Company, made a visit to Bristol and investigated the plant of the New Departure Company. The recent merger, to a considerable extent, is the result of the investigation made nearly a year ago. This merger is really a strong co-operative arrangement between big interests in the automobile industry for two purposes: First, insuring a steady, stable market for the entire product of each of the factories involved; second, guaranteeing of satisfactory sources of supply of such important accessories as ball and roller bearings, starting and lighting systems, demountable rims, magnetos, axles, transmissions, brakes, etc. It also follows, as a matter of course, that both selling and distributing economy will be realized.

"The company will control steel and tube mills and numerous other sources of supply, very much to the advantage of everybody involved. The merger cannot help but result in large business for the New Departure and prosperity for Bristol.

"The New Departure Company will not lose its identity in any way, nor will the merger influence unfavorably the broad public spirited loyalty to public interests it has endeavored to maintain at all times. The management will remain unchanged and all officers and heads of departments will continue to form a well balanced organization.

In addition to all that has been done, the company will gain the support and increase in financial strength and interest that will represent millions of dollars. Over 3,000 hands will undoubtedly find employment in the company in the next few months, and I hope the townspeople will exert their influence to provide suitable housing, rooming and boarding accommodations for the new workmen coming to Bristol. Over $3,000,000 of the underwriting of the new United Motors Corporation will be subscribed to by Bristol interests."

Mr. Page has offered to the company's foreman and his associates in the local factory stock in the new corporation under the same conditions as he himself will participate in it. Under the new arrangement, many Bristol people will become stockholders in the United Motors Corporation.

DeWitt W. Page, who was elected secretary and treasurer of the new corporation, at the organization meeting in New York, is also one of the five directors of the corporation. He is the general manager of the New Departure plant, and will remain in this capacity.

W. C. Durant of the United Motors Corporation, and L. G. Kaufman of the Chatham & Phenix Bank, of New York, have returned to New York after spending a few days in this city as guests of Mr. and Mrs. Page.

VAN CLEEF PRODUCTS CATALOGUED

The library of cycle literature has been enriched by the addition of a new catalog just gotten out by Van Cleef Bros., makers of Dutch Brand cements, enamels, cleaners' oils and other similar products. The book is handsomely illustrated and should be added to every cycle dealer's catalog collection.

NEW INCORPORATION

COLUMBUS, O.—The Independent Tire Company has been incorporated to deal in motorcycle and automobile tires. The capitalization is $10,000. Incorporators are: Frank F. Cain, Merwyn R. Hatch, M. R. Hatch, A. B. Hatch and M. E. Cain.

SLANTS AT THE MOTORCYCLE THROUGH MILITARY GLASSES

In the upper left hand picture is a squad of U. S. Army regulars on their Indians at the Mexican border, preparatory to going on patrol. Below is a scene in Great Britain depicting a commander in his sidecar and accompanied by his orderly fording a stream. At the right is an Excelsior sidecar combination hitting the mud in a run during National Guard manoeuvres in Wisconsin. The American motorcycle is rapidly proving its military value in all parts of the country and is receiving the official recognition which has been long delayed.

POWERPLUS RIDERS COVER MOHAWK TRAIL

Keene, N. H., Indian Sidecarists Find Plenty of Tough Going in Spring Run Over Historic Route

KEENE, N. H., May 12.—Ben Butler and Jim Keane have gone over the Mohawk trail during the Spring and found it all that it was cracked up to be as a section of the toughest going in New England. This, of course, refers to its condition in Spring and Winter, what with washouts and mud-wallows. They started out on April 27 and finished yesterday, spending one day at the Hendee factory in Springfield, in the meantime.

Butler and Keane left in the evening with a Powerplus and sidecar and stopped overnight in Greenfield, Mass. The next morning, they hit the trail early, and soon after passing Charlemont, the first way station, they got an idea of what a muddy road looks like. Hewn right out of the mountainside, the Mohawk Trail, so beautiful in Summer, is mud-washed and treacherous all through the Spring thaws.

At one point in their progress, Butler and Keane were advised by a farmer to turn back, as they couldn't make it over that road, he said. Nevertheless they ploughed along, through stretches of mud from 6 to 8 inches deep, and finally arrived at North Adams, Mass., in time for lunch.

From North Adams to Pittsfield the roads were about the same as from Keene and rain was falling, also. The rest of the day's run to Springfield, Mass., was made in fairly good time over the State road. On April 30 they went through the Indian factory and then rode home to Keene.

GOODYEAR LETTER SERVICE

ONE of the many ways in which the Goodyear Tire & Rubber Company, of Akron, O., is helping its dealers to increase sales is by furnishing a letter Service, which constitutes a series of letters that dealers may send their regular and prospective customers with a view to increasing their business or combat some special form of competition. The letters are written by men who have given careful thought to the problem. The only part the dealer is asked to perform is to sign and mail the letters.

NEWARK'S CELEBRATION HAS MOTORCYCLE FLAVOR

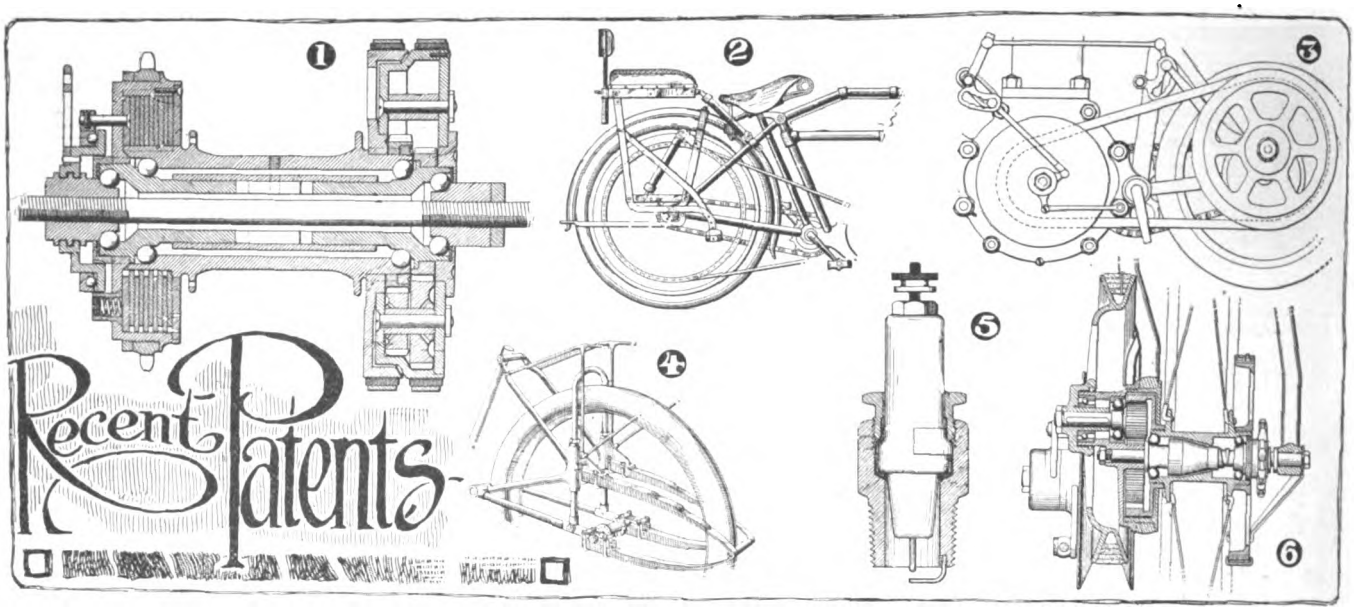
NEWARK, N. J., May 16.—Newark's anniversary industrial exposition in commemoration of the 250th anniversary of the settlement of the city, which opened up in the First Regiment Armory on Saturday, May 13, and which will continue to hold the boards for three weeks, is given a distinct motorcyle twist when the eyes of the spectator wander over toward the booth of the Essex Varnish Co., which, among other things, is displaying a fully-equipped motorcycle.

Likewise the booths of the Splitdorf Electrical Co., of Newark, maker of the Splitdorf Mag-Dynamos and Dixie magnetos; the Lovell-McConnell Mfg. Co., also of Newark, maker of Klaxon horns and warning signals, and the Edison Storage Battery Co., of West Orange, maker of batteries exhibit motorcycle products.

FOUR MORE FOR POLICE

MILWAUKEE, Wis., May 12.—The committee on public welfare of the common council at its last meeting recommended the purchase of four additional motorcycles for the police department.

Digitized by Google



1, Dudley Two-Speed Hub; 2, Pendleton Spring Tandem; 3, Combination Transmission Designed by Osborn; 4, Van Geert Rear Spring Suspension; 5, Stranahan Spark Plug; 6, Secondary Gearing in Osborn Transmission

TWO-SPEED REAR HUB

A TWO-SPEED hub has been invented by George L. Dudley, Washington, D. C. It comprises inner and outer hubs, and change speed gearing connecting the hubs. The inner hub comprises sections connected for rotation in union and relatively longitudinally adjustable. The patent is 1,181,861.

AUXILIARY SPRING SEAT

AN auxiliary spring seat for motorcycles has been invented by Frank H. Pendleton, Denver, Colo., the patent being issued to John B. Fuller, of Denver, and to Elmer I. Garner, of Grand Island, Neb., who acquired full interest in it. The frame members supporting the auxiliary or rear seat are pivoted. The spring is held to its normal position by four spiral springs, each encased in tubes. Two of the spring members are connected to the forward end of the seat, and two are mounted on the seat supporting frame, disposed in a diagonal position that brings the springs into play whenever a rough place in the road is encountered. The casings in which the springs are mounted are also pivotally connected to the frame at their ends so that full advantage may be taken of the movement of the springs. The patent is 1,181,796.

TRANSMISSION SYSTEM

ALDEN E. OSBORN, New York City, is the inventor of a motorcycle power-transmitting mechanism which permits the attainment of two or more speeds without adding any more pulleys or gears than are contained in the inventor's earlier construction giving one speed only. The combination consists in a rotary driving member, a rotary driven member, a countershaft substantially parallel with both members, a countershaft carrier whereby the countershaft is movable about the axis of rotation of the driven member, means for connecting the countershaft and the driven member to transmit motion from one to the other, a pulley on the driving member, a belt to transmit motion between the pulleys, and means whereby two or more different speeds can be given the pulley on the countershaft without altering the speed of the pulley on the driving member. Means are also provided for revolving the countershaft carrier about the axis of the driven member to regulate the tension of the belt, and a lever is provided for controlling the mechanism, connected both with the speed changing means and with the belt tension regulating means. The former connection includes a cam so shaped as to cause the speed changes to occur in proper relation to the movement of the belt tension regulating means. The speed of the driven member may be varied in relation to the speed of the driving member by altering the position of the belt from one set of belt supporting surfaces to another and also by regulating the belt tension, as the tension may be so much released as to allow the driving member to revolve independently of the driven member. The patent is 1,181,476.

SPRING SUSPENSION

A REAR spring suspension for motorcycles, invented by Maurice P. J. Van Geert, Birmingham, England, is the subject of U. S. patent 1,181,047. It comprises a frame, radius rods pivoted to the frame and carrying the wheel spindle, guides on the frame, guide rods on the radius rods engaging the frame guides, a pair of laminated springs carried by the frame, a pair of laminated springs attached to the radius rods, and a connection between each pair of laminated springs.

SPARK PLUG

A NEW spark plug, invented by Robert A. Stranahan, Toledo, Ohio, is the subject of patent 1,180,799, issued to the Champion Spark Plug Company, Toledo, Ohio. The new feature is the gasket. This gasket has a cushioning part which is gripped in opposing relation by the shell and porcelain when assembled. The gasket has a portion at one side of the cushioning part in centering contact with the shell and a portion at the other side of the cushioning part in centering contact with the porcelain. The gasket comprises a metallic part and a fibrous cushioning part which jointly receive the opposing thrusts of registering portions of the shell and porcelain when assembled.

RHODE ISLAND M. C. FORMS IN PROVIDENCE

PROVIDENCE, R. I., May 13.—A new organization to be known as the Rhode Island M. C. is in the process of formation here. At a meeting held last evening at the salesrooms of the Harley-Davidson company on West Friendship street, 19 motorcyclists signed as charter members and temporary officers were elected.

The officers who will hold chairs until the permanent club is formed next Friday night are: President, I. C. Hyllested; treasurer and secretary, J. O. Crafford of the Harley-Davidson company; road captain, C. H. Wells.

A committee was selected to draw up by-laws and a constitution and it will report at the meeting next Friday night.

PROVIDENCE M. C. STARTS BALL ROLLING

PROVIDENCE, R. I., May 13.—The Providence Motorcycle Club held a meeting at its club rooms, 522 Broad street, Thursday night, at which plans were made for boosting the club and the sport of motorcycling. It was unanimously voted to open a membership campaign.

Plans were also laid for several runs, and it was voted to have a smoker and social in the near future. It was also proposed to have a hill run at an early date, in addition to other events. The committee in charge of this will be J. G. Edwards, C. K. Joslin and A. V. House.

100 CYCLISTS START IN AMERICA'S HANDICAP

New Jersey Classic at 25 Miles Won by New England Wheelmen; 39 Contestants Figure in Finish; Accidents and Spills Mar Race; C. R. C. of A. Wins Team Trophy

WEST HOBOKEN, N. J., May 16.—Joseph Palmier, sporting the colors of the New England Wheelmen, with a handicap of six minutes, was the victor of the Hudson County Boulevard 25-mile handicap, staged last Sunday morning by the Century Road Club of America. Close on his rear wheel came Chas. Miller, of the promoting club; J. Tomosulo, of the C. R. C. A.; C. Eiler, New England Wheelmen, and E. Kuno, of the C. R. C. A., who started from the same mark with the winner.

Three-Lap Course

The course, which had to be covered three times for the required distance, was for the most part in first-class condition, except for a few stretches where deep holes caused several spills. A combination of reckless riding and obstructions in the road brought a crowd of thirty-four riders crashing into an automobile. Mosuiti, of the America's, heading this unlucky bunch, sustained a broken knee and was rushed to a nearby hospital. Other riders suffered from slight scratches and bruises.

Motor Cop Causes Spill

In the first half lap, Kissman, of the New England Wheelmen, took pace from a motorcycle policeman who was riding ahead to clear the course. He was almost a half mile in the lead when he passed the judges. Then came a group of eleven riders, also paced by a motor cop and headed by Fred Taylor. As the officer neared the judges, he swerved directly in front of the riders, thereby almost losing control of his machine and throwing Taylor and Sossi heavily to the ground.

57 Riders at End of Second Lap

The first lap was covered by Kissman, who was soon caught by Kuno and his co-markers. The scratch riders at this stage of the race were being led by Aickelin. Nothing of importance occurred until a lap and a half had been ridden, when the 3, 4 and 5 minute men were brought together. It was then that the thirty-four cyclists, sprinting desperately, figured in the collision which sent Mossuti to the hospital. Only fifty-seven riders were counted at the end of the second lap, while thirty-nine of the one hundred starters finished.

Woisin's Fine Performance

The first time prize went to Fred Woisin, of the Acme Wheelmen, riding the twenty-five miles in 1.06:12, which breaks all previous records for the course. Woisin's riding last Sunday is especially remarkable in view of the fact that right after finishing the America handicap, he traveled to Celtic Park, L. I., where with a clubmate he entered a twenty-five mile team race and won second place.

The scratch riders were the only ones to complete the grind without a spill, this being due to the generous handicaps allowed, for an interval of three minutes separated them from the group of contestants immediately ahead. To Emil E. Fraysee much credit must be given for the successful handling of the race, and also his able assistants, Taborelli, Knopf and Gerard. Summaries:

On Road and Track

CHICAGOANS IN MICHIGAN RACE

GRAND RAPIDS, Mich., May 16.—Local riders are training hard for the cycling meet which will come off here on May 27, between the local Y. M. C. A. and the West Michigan Cycle Club. Entries have been received from several well-known out-of-town amateurs, among whom are E. Kochler, Will Tell and E. Nelson, of Chicago.

Frank Meissner, C. M. Shook, C. Beyers and R. O. Denison are some of the local men who have already announced their intention of entering the races. The card at the present time includes a miss and out race, one, two and five mile handicaps and a novice. Entries close May 23 with R. O. Denison, Y. M. C. A.

ANNUAL RACE TO LAGOON

SALT LAKE CITY, Utah, May 16.—The famous bicycle road race from this city to Lagoon, which has been an annual feature here for the past twenty years, will be held this year on Decoration Day. The "Mormon" classic will be promoted by "Ted" Heagren, a dyed-in-the-wool devotee of cycling. "Ted" reports the roads in better condition this season than ever before and this, coupled with the fact that the prize list is calculated to bring out a crack field of riders, inclines him to believe that the old record for the course will be crimped.

WANT TO FORM CLUB

TERRE HAUTE, Ind., May 16.—Bicycling promises to become an organized sport here if efforts now being made to form a club prove successful. The local Indian agent at Fourth and Ohio streets is back of the movement. Cyclists are invited to call at the agency any evening to meet the riders who are interested in establishing a club.

25-MILE TEAM RACE

CELTIC PARK, Long Island, May 15.—Ten teams lined up for the 25-mile bicycle team race which was staged on the four-lap dirt track here under the auspices of the Monument A. C. Victory went to the Laux-Gaffeney team, of the Empire City Wheelmen, which rolled up 59 points. Woisin-Reinecke, of the Acme Wheelmen, were in second place with 64 points, while the Bowker brothers, representing the Glencoe A. C., came into third position with 85 points.

SIXTY-MILE BIKE RACE

DALLAS, Tex., May 15.—Odey Messeroll romped home in first place in the sixty-mile bicycle road race from this city to Forth Worth and return on Sunday, May 7. C. Caldero was second finishing seventeen minutes behind the winner, while C. Parr accounted for third position.

SPENCER DEFEATS BATTLING FOGLER

Goullet Given a Royal Welcome Upon His First Appearance at Newark; Kramer Beats Field of Fifty Riders in Three Mile Open

NEWARK, N. J., May 15.—Pessimists who believe that Frank Kramer is getting old and stale were given a great shock yesterday afternoon at the Newark Velodrome when the champion met a field of fifty riders in a three mile open race and flashed across the tape first.

Among those fifty starters were many of the young outlaws who had just returned to the fold of the N. C. A., such crack riders as Alfred Goullet, Alfred Grenda and Reggie McNamara. A lap and a half from home Reggie shot out for the front and Frank tacked right on to his rear wheel.

With a half lap to go, Grenda was leading and put up a strong fight to maintain his advantage. But Kramer rode round the tall Tasmanian and beat him down the home stretch by four full lengths. McNamara who started Kramer on his way finished in third place, while Goullet was "nowhere."

The really big surprise of the afternoon was the defeat of the veteran Joe Folger by the youngster Arthur Spencer, of Toronto, who is riding his first season as a professional. The Canadian boy vanquished his opponent in two out of three heats in a special two-thirds mile match race. In the first heat Fogler just nipped Spencer at the tape, but in the next two Arthur rode from the rear and beat the old cyclist.

Goullet was given a rousing reception when he appeared in the second heat of the one mile handicap for professionals. With Grenda he started from scratch, but "Goullie" was shut out, being caught in a pocket. Grenda won the heat, Gordon Walker finishing second and Marcel Dupuy third. In the first heat McNamara nosed out Kramer at the tape. The handicaps proved too great for the back markers in the final of the one mile handicap, Jake Magin, from the fifty yard mark, winning.

Half-Mile Novice (Amateur)—Won by Ben O. Sicky, Newark; Harry Selvae, Newark, second. Time, 1 min. 17⅖ sec.

One Mile Handicap (Professional)—Won by Jake Magin, Newark (55 yards); Menus Bedell, Lynbrook, L. I. (70 yards), second; Eddie Root, Boston (75 yards), third; Alfred Grenda, Australia (scratch), fourth; Reginald McNamara (15 yards), fifth. Time, 1 min. 48⅕ sec.

Two-Third Mile Match Race (Professional) Arthur Spencer, Toronto, vs. Joseph Fogler, Brooklyn—Won by Spencer. First heat won by Fogler. Time, 1 min 58 sec. Last eighth mile, 12⅖ sec. Second heat won by Spencer. Time, 1 min. 55 sec. Last eighth mile, 12⅗ sec. Third heat won by Spencer. Time, 1 min. 54 sec. Last eighth mile, 13 sec.

Two Thirds Mile Open (Amateur)—Won by William Spencer, Toronto; Edward Byron, Australia, second; Chris Dotterweich, Newark, third; Harry Hoffman, Olympic Club, San Francisco, Fourth. Time, 1 min. 33 sec.

The Brassard Race, at One Mile (Professional) Eddie F. Root, Boston, vs. A. Jackie Clark, Newark—Won by Root. Time, 2 min. 47⅗ sec. Last eighth mile, 12⅗ sec.

Australian Pursuit Match Race (Professional)—Won by Reginald McNamara, Australia; Oscar Egg, Switzerland, second; Victor Linart, Belgium, third. Distance, four miles, four and one half laps. Time, 10 min. 5⅗ sec.

Two-Mile Invitation (Professional)—Won by John Bedell, Lynbrook, L. I.; Robert A. Walthour, Atlanta, Ga., second; Edward Madden, Newark, third; Harry Kaiser, Bronx, fourth. Time, 4 min. 12⅗ sec.

Two-Mile Handicap (Amateur)—Won by A. L. Kopp, Irvington (220 yards); Charles K Browne, Colonial Club (220 yards), second; Bennie Clark, East Orange (260 yards), third; Chris Dotterweich (50 yards), fourth. Time, 4 min. 12⅘ sec.

Three-Mile Open (Professional)—Won by Frank L. Kramer, East Orange; Alfred Grenda, Australia, second; Reginald McNamara, Australia, third; Jake Magin, Newark, fourth; Eddie Root, Boston, fifth. Time, 5 min. 58⅖ sec.

MORE THAN 1,000 CYCLISTS RIDE IN PARADE

CLEVELAND, O., May 15.—The largest and most impressive bicycle parade in over a decade was held in this city on Saturday afternoon, May 6, in which more than one thousand enthusiasts, both old and young, merrily pedalled over a course that was thronged with spectators.

The affair was held under the auspices of the Cleveland Bicycle Dealers' association which furnished balloons, banners and buntings to all those who participated. Many of the wheels were pretilly decorated and some of the cyclists were dressed in fancy and fanciful costumes.

The Boy Scouts took an important part in the big celebration, and readily demonstrated the popularity of the bicycle as an adjunct to their activities.

So large was the crowd present that Thomas Lister, the chief Marshal, had no little difficulty in getting everyone in line. Several city officials took active part, among whom was Recreation Commissioner I. F. Potts. The parade ended at the ball park where a game between two local teams was witnessed and prizes were distributed to the cyclists.

ALL READY FOR IRVINGTON MILLBURN RACE

NEWARK, N. J., May 15.—Everything is now in readiness for the famous Irvington-Millburn 25-mile road race which is to be held on Decoration Day morning by the Cycle Racing Association. The first prize of a $1,000 automobile has brought the entry list up to a record-breaking figure. The hundreds of place and time prizes being offered have attracted wide attention in the East, and riders are writing in from all of the New England as well as some of the Southern States. That the Irvington-Millburn race this season bids fair to eclipse its well remembered predecessors of the boom days appears a certainty, according to the promoting officials.

News of the Bicycle Trade

BICYCLE RACES AT CYCLE PARTS CONVENTION

Surre and Morehouse Now Working Hard to Secure Big Prize List; Races Will Be Held at Ventnor, a Suburb of Atlantic City, Aug. 3

ERIE, Pa., May 16.—Bicycle races will be staged this year in connection with the Cycle Parts Convention at Atlantic City, the date chosen by the committee being Thursday, August 3, when a large crowd is expected to be present. This announcement has just been made by W. J. Surre, Continental Rubber Works, and C. E. Morehouse, The Standard Company, who, constituting the committee of arrangements, state that Ventnor, a suburb of Atlantic City, will be the scene of the races.

This place is easily accessible from the famous coast resort by trolley car. Ventnor was selected because of the fine course there, which will be entirely roped off and so arranged that spectators can witness the entire race from any position.

Efforts are now being made to secure a large prize list and both manufacturers and jobbers are being requested to make donations. In such instances where the products of manufacturers are not suitable for prizes, the committee would be glad to receive small cash contributions which will be used to defray the expenses.

Prizes or cash contributions should be sent to W. J. Surre or C. E. Morehouse, care of Haverford Cycle Company, Atlantic City, N. J.

JAMES SHAW SELLS STORE TO HIS NEPHEW

WASHINGTON, D. C., May 16.—James Shaw has purchased the interest of his uncle, J. B. Shaw, in the Acme Bicycle Company, located at 1749 Pennsylvania avenue, N. W. The business was established over 20 years ago at this location by the elder Shaw, who is now 74 years of age. He is retiring from business with a competence more than sufficient for the remainder of his years.

The new owner has been connected with the business for a number of years, and it is his intention of continuing the firm's policy of handling high-grade bicycles only. This firm handles the Pope, the Iver Johnson and Cornell bicycles and has the District of Columbia agency for the Cyclemotor.

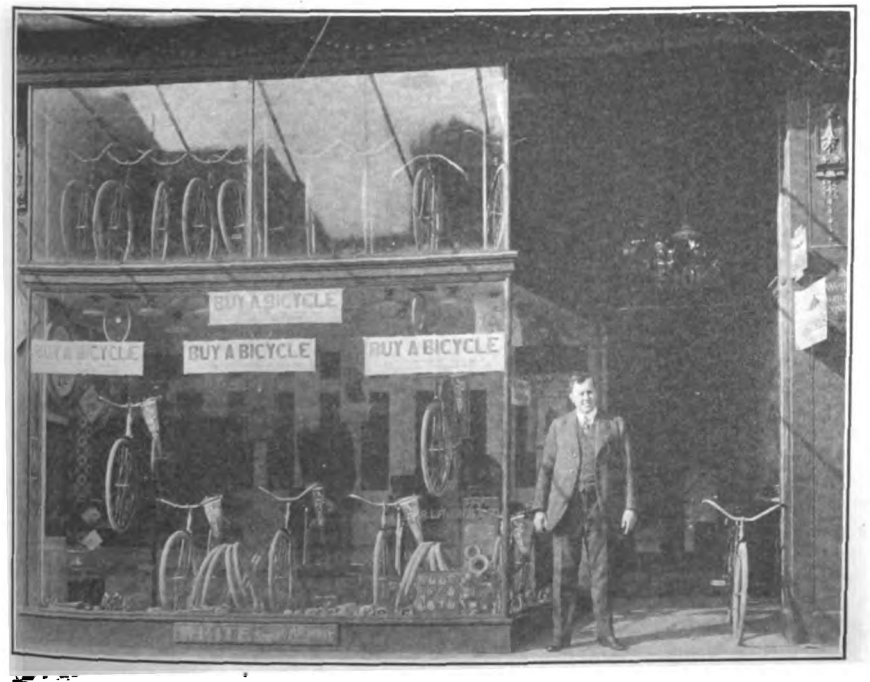
NEW MOTOR WHEEL DEALERS

MILWAUKEE, Wis., May 12.—On May 1 thirteen new dealers for the Smith Motor Wheel were signed up, one-half of them by Billy Cahn, who is traveling in New York State. The list of new dealers follows:

Jesse Albin, East Port, L. I.; Herbert C. Tooker, Southampton, L. I.; C. H. Thomas, Easthampton, L. I.; Mattituck Service Station, Mattituck, L. I.; Leroy H. Osborn, Greenport, L. I.; F. N. Elliott, Candor, N. Y.; Chas. Schneider, Venita, Okla.; E. A. Esper, Miles City, Mont.; Henry H. Mattison, Gafney, Pa.; V. Smith Boggs, Las Aminas, Colo.; Detwiter Bros. Hardware Co., Aledo, Ill.; E. W. Jewell, Dike, Iowa; W. H. Dilton, Morristown, N. Y.

The A. O. Smith Co. is urging its dealers to go after the factory business direct, and is supplying its dealers with a special factory poster, 36 x 38 inches, in two colors, to be hung in factories for the purpose of interesting employees. Already results are coming in and reports from dealers everywhere indicate this to have been one of the most productive moves made toward special motor wheel sales.

WHERE THE RACYCLE IS HANDLED IN BALTIMORE



The Attractive Store of R. L. French, Who Has Recently Closed a Contract for the Flying Merkel and Miami Power Bicycle Agencies

JACKSON ISSUES COMPLETE ACCESSORIES CATALOGUE

SAN FRANCISCO, Cal., May 15.—A very comprehensive and practically arranged catalogue of 248 pages, describing and illustrating bicycle and motorcycle supplies and accessories, has just been issued by W. E. & W. H. Jackson, Pacific Coast distributors of the Dayton bicycles and motorcycles. A feature of the catalogue is the index in the back which renders it easy for one to find the page on which any particular part of accessory appears. Copies of the catalogue will be mailed to any Pacific Coast dealer on request, the Jackson establishment being located at 785-87 Mission street.

DES MOINES DEALERS ORGANIZE

DES MOINES, Ia., May 15.—Dealers here formed a permanent organization to promote interest in bicycling and have planned to stage a racemeet on Saturday, May 27. Wallace Moore, of the Iowa Cycle Company, was elected president of the association and Ed. Anthony, of Hopkins Brothers, vice-president. Preceding the race on May 27, a big bicycle and motorcycle parade will be held.

MAKES SPECIAL INDUCEMENT

PADUCAH, Ky., May 10.—Gleaves & Sons are now agents for the Crescent, Crown, Pope and Cleveland bicycles and are handling a full line of sundries. In order to stimulate interest on Bicycle Day this company made a special offer of a complete electric lighting outfit with any bicycle retailing for $30.00 or more.

JOBBERS MEET MAY 22

BUFFALO, N. Y., May 16.—Keyser Fry, the president of the Cycle Jobbers Association, has postponed the meeting of the directors from May 15 to May 22. The meeting will be held here at the Lafayette Hotel.

BUFFALO PARADE POSTPONED

BUFFALO, N. Y., May 14.—Owing to rain this afternoon the Bicycle Parade has been postponed until next Sunday, May 21.

MORE PRIZE WINNING SALES TALKS

Contestants Agree on Value of Neat Stores and Attractive Window Displays; Price-Cutting and Knocking Frowned Upon; All Boost for Better Bicycles and Proper Service

ON these two pages we present the third and two fourth prize letters submitted in the "Million Bicycles" Committee's selling talks contest. In last week's issue appeared the first and second prize talks. These letters were written by dealers and clerks of experience and are well worth reading.

THIRD PRIZE LETTER

By E. H. LENG

THE first appeal to the customer is made through the display, which must be both clean and simple. Only a few things should be shown attractively in the window. Next comes the interior of the store, which must by all means be kept spic and span. Nothing but new goods should appear in the show room; the floors should be well swept and the wares neatly arranged.

If a dealer makes repairs, the department devoted to this end of the business ought to be separate from the show room. And if a dealer has a one-room store, then the repair shop should be divided from the rest of his establishment by means of a five-foot partition. There is a two-fold advantage to be attained in doing this; first, the customers are kept out of the repair department; and, second, the dealer is still able to greet prospects as they enter the store.

Bringing Out Strong Points

It is also important that the man who waits on customers should present a neat appearance.

With all these points carefully considered and with a reliable line of merchandise in stock, a sale is half made before you utter a word, for the customer will feel glad to deal with you.

Now comes the sales talk. Here's the way I tackle a prospect:

"Good-morning, Mr. ——. I want to show you the new —— bicycle. It's a real beauty. It is equipped with —— tires, guaranteed by a million-dollar concern. The saddle is made by ——; has been on the market for 20 years, and has always given satisfaction. It has very good springs, full grain leather top that will not get out of shape or roughen up; and in addition to that the saddle is well padded and very comfortable.

"The coaster brake used on this bicycle has been the standard of superiority ever since coaster brakes for bicycles came into use, and is guaranteed to give first class service by its makers. The hanger is of the one-piece type, which has revolutionized hanger construction and done away with all hanger troubles. The cups screw into the hanger shell, which moves a perfectly true bearing and gives the least possible resistance to the main bearing in your bicycle.

Playing Up the Finish

"All the metal parts that are nickel-plated are first copper-plated, thus practically preventing rust. The enamel used is the very best obtainable, and the enameled parts are first dipped in a red rust-proof bath. The coating of enamel is then rubbed down, after which a second coating is applied, which when dried is skillfully striped and baked in an oven, the heat being varied according to the color of the enamel, as some delicate colors are baked at a lower temperature than dark ones. The result of this painstaking method is that our bicycle has as fine and durable a finish as you will find in the market.

"The chain is of the roller type, which was considered a luxury in the old days and only used on the highest-priced wheels. Nowadays you will find it on very good bicycles, for it has completely obliterated chain troubles. You will notice that the front hub matches the coaster brake.

A Bicycle for Everybody

"We have all styles of bicycles in stock; the diamond, double bar and arch bar frames, and also the motor bike. We keep these in various sizes, so we can surely give you exactly what you desire. The advantage of buying from us, right in your own home town, consists in the fact that we are right here to take care of any small adjustment necessary; our prices are right and the terms as reasonable as any good business man can offer you.

"Perhaps you might be interested to know that we are forming a bicycle club and will stage a road race on Decoration Day. We will give handsome prizes for first, second and third places; and in addition to that we offer a prize to the club with the largest representation, and also to the rider making the best appearance."

Now, Mr. Dealer, you have told your story without giving the prospect a chance to talk, assuming all along that he is going to buy a bicycle from you, and the only question under consideration is picking a machine which strikes his fancy. Close the deal at once, if possible, and don't let the customer out of your store until you have some of his money. Don't talk about the weather, or your business troubles, talk BICYCLES, and you'll win.

Soliciting by Mail

If you fail to sell the customer, be sure to get his name and address. Then write him a few days later, asking when you may expect him to come and make a selection. Keep a book with all the prospects' names and addresses, which will constitute your mailing list. From time to time send him your catalogues or circulars. I believe that solicitation by mail is very effective.

In closing I might add that it is good policy to have prices marked plainly on all goods. If you are selling on easy terms, then mark the easy term price and allow a cash discount. Do not cut prices—the greatest enemy-maker is the cut-price cycle dealer.

FOURTH PRIZE LETTER

By T. N. MUDD, JR.

CONTINUED success with any line of merchandise depends on quality of goods, neat, attractive display, snappy advertising, fair prices and courtesy, first, last and always.

A high-grade bicycle of good quality will make a lasting impression on your customer. The fact that he paid a few more dollars for it in the beginning will be forgotten, but the thing that counts, "satisfactory results," are with him every day he rides it.

It is poor policy to sell a cheap wheel because it is easier to make the sale, for the very good reason that the cheap bicycle will not, as a rule, satisfy its owner, and he will be more apt to tell his friends than to tell you.

On the other hand, the fellow to whom you sold the quality wheel will tell everybody, and you will be sure to hear from it in the way of more sales on this satisfactory article.

Catchy little advertising stunts are necessary from time to time to keep the prospects interested in your store; get up something the other fellow has not thought of, it may be a little thing, but if it is new and original it will be sure to obtain results.

In the meantime always keep the show windows clean and tastefully decorated; don't make the mistake of trying to put

FRANK RUPERT

He Captured the First Prize in the Contest, Winning $100. Rupert Has a Bicycle Store in Decatur, Ill.

everything you have in stock in the window at one time. Don't crowd; you lose the effectiveness. Change the windows often and have something different every time.

A clean, bright store, with stock well arranged and wheels polished up, has a wonderful effect on your prospect, because it will be different from the average bicycle shop and will be favorably noticed.

Always study your customer; try to learn just what use he is going to make of his wheel, whether for business or pleasure. Sum up in your mind just what you think will suit him best and show him samples along that line, always remembering to keep that quality wheel to the front as much as is consistent with the needs of the customer in hand.

Let the Customer Talk

Don't try to do all the talking; let your customer get in a word; in fact, if he wants to talk, let him go as far as he likes. Listen to what he has to say, it will create in his mind a pleasant feeling toward you and give you a much better chance when your time comes.

Don't try to overcharge; always be fair with your prices, *but don't cut*. And, above all things, be courteous and polite at all times, whether you are taking his money at the time of the sale or adjusting a loose bearing *free of charge* for him later on. Courtesy and politeness cost nothing, but always bring good results.

INTRODUCING ROLLFAST TO QUAKER CITY

Display Used by George W. Robb, of Philadelphia, When He Announced the Distributorship of the Rollfast Tires

FOURTH PRIZE LETTER

By F. H. BELL

WHEN a prospective purchaser comes into the salesroom and asks for a certain bicycle, calling it by name, if you have such a bicycle in stock show it to him—talk it up to the best of your ability and avoid the mention of any other bicycle.

The chances are that through former experience, through recommendation, or for some other reason he has had his interest aroused, and that he bears a favorable impression of the machine he has named.

In such a case the bicycle is half sold, and it only remains for the salesman to carefully pave the way to close the deal.

In cases where the dealer does not happen to have the particular bicycle asked for and when the prospect happens to be familiar with the bicycle named a great deal of tact and discretion is often required to convert the prospect, to favorably impress him with a bicycle bearing a different nameplate, and to effect a sale.

Skillful Tactics Required

Such an emergency calls for skillful tactics and requires a strict regard for honesty in any comparison he may be called upon to make of the two machines.

If, on the other hand, the prospect has not made up his mind as to the bicycle he wants, it is easier to impress him with those features you have picked out as your talking points.

It is presumed that the average dealer prefers to dispose of that bicycle which will render him the best ultimate returns—measured by the satisfaction given the purchaser, the prestige the bicycle will have in creating other sales, and at the same time render a satisfactory profit.

The higher priced goods are better quality, cost more, and, of course, should yield a larger profit, and when the prospect does not limit himself to a specified expenditure, it stands to reason that it is easier to make a sale when you can hold the prospect's attention to the better quality of goods.

When offering the cheaper makes of bicycles, or those which for some reason it is desired to close out, misrepresentation or exaggerated claims should be avoided, as any tendency toward such practice will result in disappointment and dissatisfaction to the customer and disaster to the dealer through the loss of the customer's business and his friendship.

Giving Absolute Satisfaction

Where a customer leaves it to the salesman to make the selection, it is proper that he should sell him something that will give him the best results for the money expended, and that the customer be satisfied when he has put the bicycle into service.

Avoid unscrupulous tactics; don't misrepresent; don't knock a competitor; don't argue with a customer; don't offend him; have a respect for his opinion though it differs from yours; don't use technical and confusing terms; dwell on simplicity, and when anything arises to take the prospect's mind from the sale of the bicycle remember that you are off the track. Remember that your one object is to sell a bicycle.

Be constantly on the alert for converts. Never miss an opportunity to boost the bicycle. When you have sold a customer a rod or a gun or anything else, ask him if you could not interest him in a bicycle. Tell him that if he does not already own a bicycle that he has possibly not fully investigated the possibilities of the bicycle.

Tell him how cheap bicycles are being sold today, and if he has not got the ready money that you can provide for him to pay for it in easy installments each week.

Tell him how much time he can save going to and from his business or his work. Tell him how much he can save in car fare—how he can go home to dinner, of the exertion saved over walking, the healthful and exhilarating exercise he will get each day.

Doctors Recommend It

Tell him that doctors recommend the use of bicycles for those who are not well or strong, and that they recommend them to those who are to preserve their health.

Explain to the merchant what a convenient, economical means of transportation the bicycle is for light and rapid delivery.

Tell the father he owes it to his boy to give him a bicycle. It makes them happy, healthy, contented and the industrious boy can make extra money after school and during vacation time if he has a bicycle.

The bicycle is the cheapest known means of transportation today, and, together with its simplicity of construction, its lack of complicated mechanism or parts, its improvements in design and construction, the absolute safety of control through the use of the coaster brake, the bicycle is a practical and complete vehicle of itself, but the many mechanical attachments now being offered by the trade makes it possible to quickly and cheaply convert any bicycle into a power propelled vehicle at only a fraction of the cost of a motorcycle, and at an insignificant cost for maintenance.

WANTS LINE OF BICYCLES

PLYMOUTH, Wis., May 16.—Harvey Chaplin, proprietor of Chaplin's Light Shop, contemplates the handling of the Harley-Davidson and accessories in connection with his present business. He also plans the organization of a motorcycle club. Chaplin is now looking for a line of bicycles.

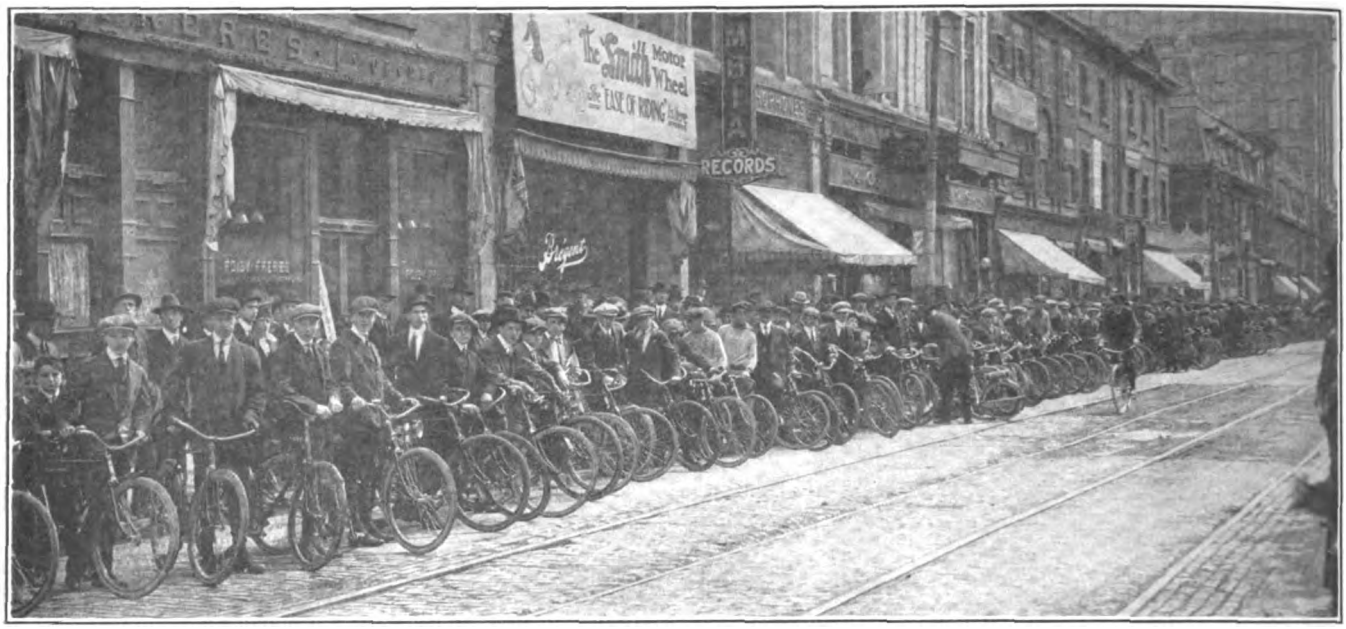
HOST OF RIDERS TURN OUT FOR MONTREAL PLEASURE RUN



Line-up in Front of the Bregent Store, Montreal, Before the Ride. Over 3,400 Spectators Saw the Start

MONTREAL, Que., May 14.—The honor of staging the most successful bicycle run ever held in all Canada goes to Fred. St. Onge of the A. E. Bregent Company, Montreal, distributor of the Smith Motor Wheel.

On Sunday, May 7, in the presence of 3,500 spectators, 274 cyclists started on a twenty-mile pleasure tour, headed by Alderman Louis Rubenstein, president of the Canadian Wheelmen's Association, and thirty Smith Motor Wheel riders, including St. Onge, who acted as guides and lieutenants. Alderman Rubenstein was pacemaker for the whole distance, although he had not been on a bicycle since 1902.

Everyone of the 274 starters checked in at the finish and their names were taken for the distribution of souvenir watch fobs consisting of a miniature Smith Motor Wheel in raised relief. A feature of the outing was that a sixteen-year-old French girl, Hortense Gelinas, covered the whole route on her bicycle, and she was the only young lady in the tour.

The event had been advertised well in advance, but the ultimate success of the outing was feared because Montreal people are inclined to be a little slow in taking part in a demonstration of this nature. But the street in front of the Bregent store was so crowded when the hour of the event came that the police had to be called to regulate the traffic.

Ten miles out from the city a halt was called, and, at this point, St. Onge made four speeches to the crowd on the subject of bicycle riding. The line of cyclists extended for an eighth of a mile and St. Onge had to speak four times, even with a megaphone, in order to reach everybody.

Cameramen of the Pathé Company were on the scene to take moving pictures of the cyclists and next day every paper in town published a lengthy report of the unusual event.

St. Onge now proposes to hold a half-century run and many inquiries have already been received regarding the event. In the recent outing, absolutely no racing was permitted and all participants were able to keep up with the pace. The result was that there were no casualties and every cyclist finished the run with more enthusiasm than when he started out.

STRONG FIELD FOR C. R. C. A. HANDICAP RACE

NEW YORK, N. Y., May 16.—The scratch riders who will apear in the C. R. C. A. ten-mile handicap at Floral Park, L. I., next Sunday, are the pick of the eastern amateurs. Among them will be seen Edwin Jensen, Inter Club League Champion for two years; Fred Wosin, 1913 Inter Club League champion and first time prize winner in the America's 25-mile race last Sunday; Louis Heban, of Cedarhurst; L. Gaffney and George Laux, the latter two having made up the team which won the recent Monument A. C. 25-mile team race, and Eugene Aickelin.

With the one-minute bunch will appear W. J. Lock, of the C. R. C. of A.; J. J. Marquard, of the C. R. C. A.; A. Attardi and other speed merchants. Of the 110 entries handicapped, from the limit of four minutes, the riders are well spread on the various marks all the way to the two-minute mark. An effort has been made to so handicap that the low mark men will be accorded a good opportunity of establishing the best time of the day.

HOW SELLING TALKS WERE JUDGED

Committee of Judges in the "Million Bicycles" Contest Discloses the Points Which Were Considered in Deciding the Winners

NEW YORK, N. Y., May 12.—Believing that it might prove of interest to dealers to know the basis on which the judges in the "Million Bicycles" Committee's selling talk contest arrived at their decisions, the following letter from the judges has been released by Secretary Charles F. Olin:

Dear Mr. Olin: Supplementing our report of the awards in the Bicycle Salesmanship contest, for the good that it may do, the Committee of Awards believes it worth while to point out that in reaching its conclusions the following points weighed most heavily:

1.—Confidence.

2.—Nature of appeal.

3.—Practical ideas most likely to sell more bicycles or better bicycles or both.

Of these three elements we rated "Confidence" at 50 per cent., as without confidence in himself and in the goods he has for sale, and ability to make the most of such qualities, salesmanship counts for little. In other words, a salesman must have such faith in himself and his goods that he must first be able to sell to himself before he can sell to others.

In the case of Mr. Frank Rupert, to whom first prize was awarded, this confidence was reflected in almost every line of his paper; and withal, he presented his case in a thoroughly natural manner, and submitted proof that, in face of stern competition, his faith and appeals have proved effective.

What Mr. Rupert says concerning the

MISCELLANEOUS MOTORCYCLE NEWS CONTINUED

ANDREWS DISCUSSES INDIAN EXPORTS

Assistant Export Manager For Hendee Mfg. Co. Tells of Remarkable Expansion and Considers the Problem of the Future

SPRINGFIELD, Mass., May 12.—That the Indian export business has increased tremendously this year over that for the twelvemonth ending a year ago, disregarding machines sold for military purposes; that the company's foreign business has been broadened to include markets not touched heretofore, and that in the case of the British colonies, at least, the whims of these new customers must be religiously catered to if any large proportion of the newly-created trade is to be retained when the war is settled and things go back to normal, are points of interest in a statement on the export situation by C. K. Andrews, assistant export manager for the Hendee Mfg. Co. At the present time, during the absence of Export Manager W. D. Blood, on a foreign business-building trip, Mr. Andrews is in full charge of the Indian export business.

"The increase in the business is traceable not alone to the fact that foreign motorcycle factories are turning out war munitions and military motorcycles almost exclusively, which, of course, results in the cream of the export trade being turned into American channels," said Mr. Andrews, "but also from the fact that we have been consistently plugging and digging for it, as is exemplified by Mr. Blood's present trip. He has succeeded in making many connections which otherwise, no doubt, would have escaped us. Then again, having among American motorcycle makers been longest in the foreign field, we have been best known abroad, and this fact has contributed measurably to the enormous increase in foreign trade during the past year.

"Nevertheless, we are now catering, and will have to continue to cater, to the foreign buyer, especially to the customer in the British colonial possessions, if we are to maintain our present showing when peace has been consummated. I am an Englishman myself, and, believe me, when I tell you that our newly-made customers on British soil will have to be mightily pleased with our goods, our methods and our treatment of them, else as soon as conditions are again normal they will at once proceed to again form connections with British exporters of motorcycles and bicycles with whom they have dealt for years.

"This same condition holds in the case of other foreign markets which have been supplied before the war by the British two-wheeler manufacturer. They are used to the careful, steady attention which the British exporter gives his foreign customers, and unless we make our new customer feel that we are doing our utmost to please him, not only with well-made goods at the right prices, but, also, with any attention to little details which make for his convenience, we are bound to lose this trade back again to Great Britain when the war is over."

MAKES FIRST PACIFIC HIGHWAY RUN

Indian Rider Covers 1,370 Miles Between Los Angeles and Portland, Ore., in 6¼ Days Without Having to Open Toolbox or Touch His Tires

PORTLAND, Ore.—The honor of making the first motorcycle trip in 1916 over the Pacific Highway from Los Angeles to this city, goes to H. A. Boyd, who rode the 1,370 miles without trouble on his 1915 three-speed Indian. He made the trip more for the fun of it than anything else and will remain in this city for about a week and then ride back to Los Angeles.

"It only took me 18 hours to cover the 500 miles between Los Angeles and San Francisco, but it took 5½ days to come the 870 miles from San Francisco to Portland," said Boyd. "In making a distance of about nine miles coming up the Siskiyou grade I had to battle with the mud for two hours in the rain. I also had quite a tussle at Comstock in Pass Creek Canyon, where I found that several automobiles had been stuck for some time.

"I didn't have to open my tool box on the entire trip, nor even clean a spark plug. Neither did the Goodyear tires on my machine suffer a single puncture all the way from Los Angeles to Portland."

Boyd's feat is but one degree removed from the remarkable since he is an amateur rider in every sense of the word and totally unused to the rigors of long hard trips such as this one.

MOTORCYCLE WON HIM A JOB

EAST YOUNGSTOWN, O.—The ownership of a motorcycle, and consequent familiarity with the operation thereof, resulted in the appointment of Edward Farris, son of D. J. Farris, a member of the city council, as temporary motorcycle policeman. He will serve in that capacity until some other officer can be broken in to the work, and perhaps may be retained permanently.

HERE'S A SALES BOOSTER FROM HENDEEVILLE

"FINDING the Wonder Places with the Indian Sidecar" is the title of one of the most attractive pieces of Indian literature that has been gotten out by the advertising department of the Hendee Mfg. Co. for some time. The booklet, which comprises 16 pages and a handsome cover done in two colors, is profusely illustrated with beautiful photographs, depicting just a few of the "wonder places" that the Indian passenger outfit has made it possible to locate, while the interestingly written text matter is calculated to enthuse even the most pessimistic and turn his thoughts Indianwise. Undoubtedly the booklet, which is intended for distribution by the dealers, will make many a new prospect. Dealers who have not already received a supply of these new booklets are invited to write immediately to the advertising department of the Springfield manufacturer for them; these are supplied gratis to Indian dealers.

NATIONAL CHAMPIONSHIP EVENT FOR FRESNO

FRESNO, Cal., May 16.—L. H. Weilheimer, promoter of the last two meets at the Fresno track, is arranging for another meet to take place September 3 on the Fresno Fair grounds track. Permission to use the track as well as an F. A. M. sanction have already been secured.

Four events are carded for the day as follows:

First, one-hour race for the professional National Championship, with prizes of $125, $100 and $75, besides the F. A. M. gold, silver and bronze medals. Second event will be at five miles for California riders in district north of but including Bakersfield; this will be a strictly stock affair. A club trophy is offered as prize. Third event will be a five-mile free-for-all, prizes $35, $20 and $15. A contest similar to the second event for California riders will ring down the curtain.

DETROIT CLUB GETS OLD AFFILIATION NUMBER

DETROIT, Mich.—The Detroit M. C. has received its certificate of affiliation with the F. A. M., bearing its old number, 12. It was one of the first clubs in the country to join the Federation. Sundays runs are to be made to see the various interstate race meets, the next in Dayton being slated for May 27.

READING TOURISTS ON THE JUMP

READING, Pa.—Louis Reaser, one of the oldest motorcyclists here, and Edward M. Weaver, have returned from a 213-mile trip all over northeastern Pennsylvania, covering three days. In two weeks they will make a trip to the Gettysburg battlefield, a 250-mile trip.

LIMA M. C. PLANS MIXED MEET

LIMA, Ohio, May 16.—Two five-mile events, a ten-mile and a 25-mile event, and a sidecar contest that will go for three miles, comprise the motorcycle portion of a mixed motorcycle and bicycle racemeet, which will be staged by the Lima M. C. on the mile track at the Lima Driving Park on Decoration Day, May 30. The bicycle program consists of two half-mile events.

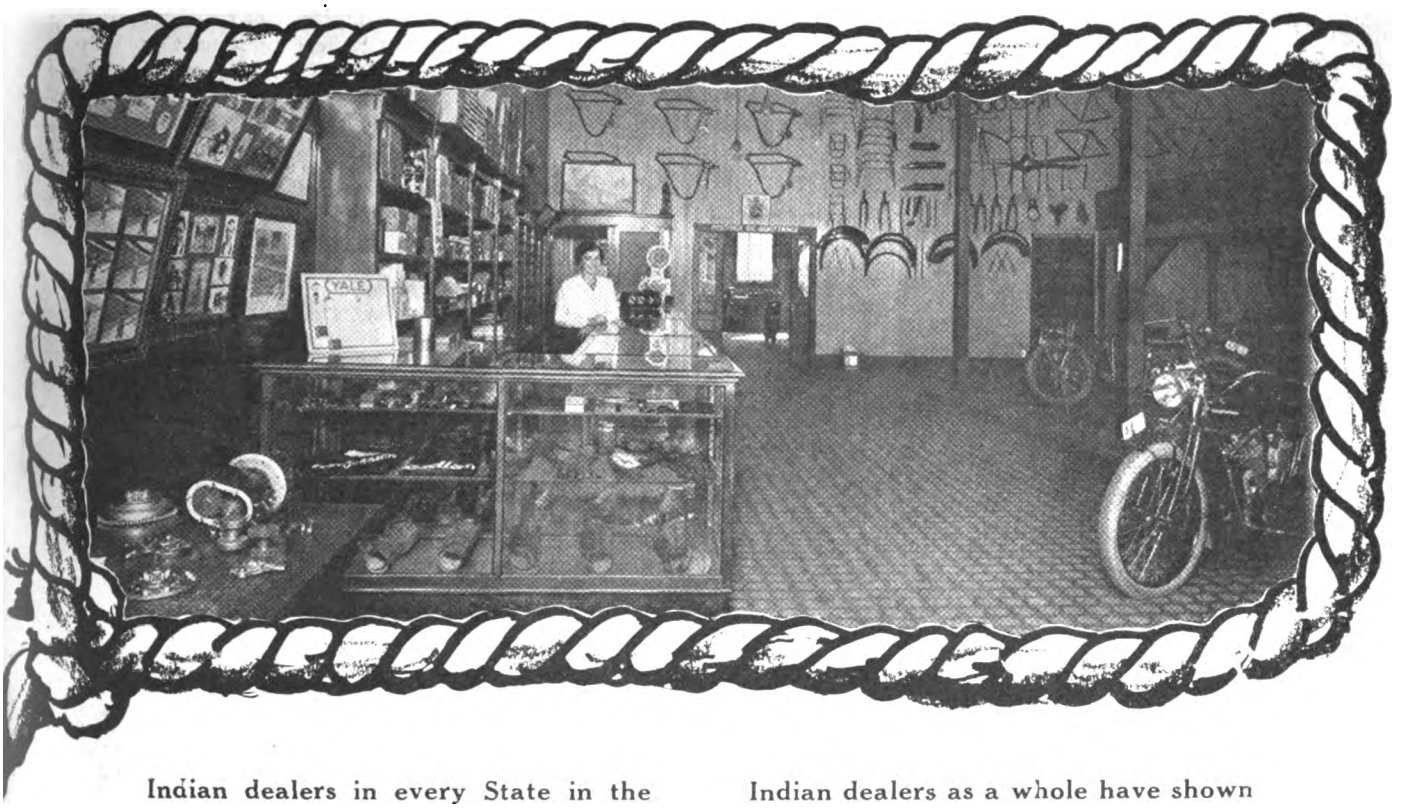
THE INDIAN SIGN IS THE DOLLAR SIGN

TIE IT UP TO YOUR STORE

The advertiser wants to know—Therefore mention MOTOR CYCLE ILLUSTRATED.

Digitized by Google



Indian dealers in every State in the Union—with the exception of a few subject to adverse weather conditions—are ahead of last year in 1916 sales.

Among these a very large number *have already exceeded to date the total of machines sold during the entire 1915 season.*

Indian sidecar sales are nearly as much again as the very fine business done in the corresponding period last year.

Indian parcel car sales are 25% ahead.

The Indian Bicycle line found a demand which, since the first announcement, has kept production at the very limit all the time.

But the greatest outstanding phase of the 1916 selling season has been this—

Indian dealers as a whole have shown more real merchandising strength than ever before in the history of motorcycle retailing. Indian dealers have become better advertisers. Indian dealers have become better business thinkers. Indian dealers have become more aggressive and skillful merchants.

If your volume of business is not up to expectations ask yourself these questions:

Do you just keep a store or do you sell?

Do you develop sales in a haphazard way or by a systematic, air-tight method?

Do your prospects happen to drop in or do you go get 'em?

Are you still a business student?

TYING THE DOLLAR SIGN TO YOUR STORE DEPENDS UPON HOW YOU CAN ANSWER THE ABOVE QUESTIONS.

THE 1916 INDIAN IS 100% RIGHT.

ARE YOU?

JOHNS IS STAR AT FRESNO MEET

Rider of 8-Valve Indian Captures 5-Mile and Australian Pursuit and Sets New Track Record—Kenney, Cyclone, Wins Thrilling 25-Mile Event

FRESNO, Cal.—The feature race of the Fresno M. C. meet held in this city on May 7 was the 25-mile free-for-all, which came fifth on the card. In this race, Kenney, Cyclone, shot into the lead and held his place until about five laps from the finish, when he developed motor trouble. Don Johns, 8-valve Indian, riding second, gradually crept up to Kenney, but the latter kept ahead, crossing the line just six feet ahead of Johns. The crowd got to its feet to see the finish, and thereafter took greater interest in the meet. Kenney's time was 21:27. E. Tice, Harley-Davidson, came third.

Johns copped the 15-mile Australian pursuit event, No. 6, with M. Tice, Harley-Davidson, second. He also took the 5-mile free-for-all in 4:08, with Ludlow and M. Graves, 8-valve Indians, second and third. Johns went out for a mile time trial during the afternoon, and cut Creviston's time of 49 seconds by ⅖ of a second, setting a new figure for the track. Morty Graves, Indian, won the 10-mile free-for-all with Ludlow, second, and M. Tice, Harley-Davidson, third. Time, 8:36⅖.

The Tices shone in the 5-mile events, cut from 15 miles. In the Valley Riders free-for-all, M. Tice was first and E. Tice second, in 4:24⅕. In the Club Trophy race, E. Tice led his brother across the tape in 4:22. He won the Warner cup in this event. M. Tice received the Splitdorf gold-plated plugs for winning the Valley Riders race. The five-mile amateur race went to J. Hess, Harley-Davidson, in 5:32, with J. W. Titus, Excelsior, second.

PRIZES WORTH $3000 FOR BAY STATE RUN

Nearly 150 Entries Expected for 1000-Mile Endurance May 28-29-30—Quick Announcement of Results Promised by Officials Through Novel Method of Scoring

BOSTON, Mass., May 16.—Present indications are that the 1,000-mile endurance run which the Bay State M. C. will stage on May 28-29-30 will draw well over 100 entries—the most sanguine expect 150 to check out on the trip to Buffalo, N. Y., and back. Entries for the event will close on May 18, but post entries will be taken up to within half an hour of the start.

The first day's run will carry the boys from Boston, where they start at 3 a. m., through Worcester, Springfield, Pittsfield, Albany, Fonda and Utica to Syracuse, where they will check in at 7 p. m., having covered 332 miles. The second day's schedule embraces 343.4 miles and leads from Syracuse through Geneva, Rochester and Batavia to Buffalo and back by the same route to Syracuse. The third day calls for a repetition of the first day's performance in the reverse direction. The riders will check in at Boston at 7 p. m. The total mileage is 1,007.4 and the schedule calls for an average speed of just slightly better than 20 miles an hour.

One of the innovative features of the run is the fact that arrangements have been made to give out the results of the run within two hours after the last man checks in at the finish. This will be accomplished by means of relay riders who will start from Buffalo and pick up the checking sheets on the way to Boston.

The prize list is a formidable as well as tempting one, exceeding in value $3,000. In part, it follows:

Ever Dry Riding Suit, Hub Cycle Co.; Stewart Speedometer, Stewart Warner Co.; Stewart Horn, Stewart Warner Co.; $25 Tesbestos Friction Discs, American Asbestos Co.; 1 Disc Brake, Eclipse Machine Co.; Solar Head Light, Louis Goldsmith; 1 Electric Horn, Elec. Spark Appliance Co.; 1 Horsey Pony Vulcanizer, Horsey Mfg. Co.; 1 Rogers Side Car, General Motorcycle Sales Co.; 3 Air Pressure Gauges, Improved Gauge Mfg. Co.; 1 Prest-O-Lite Tool Box, International Stamping Co.; 1 pair Drop Side Mud Guards, International Stamping Co.; 1 Reflex Spark Plug in case, Reflex Ignition Co.; 1 Cyclephone, The Sireno Co.; 2 Gold-plated Splitdorf Plugs in case, Splitdorf Electrical Co.; 1 Cyclometer, Veeder Mfg. Co.; 2 Midget Tail Lamps, Van Cleef Bros.; 1 doz Tubes Cement, Van Cleef Bros.; 5 rolls Tape, Van Cleef Bros.; 2 Twitchell Air Gauges, Twitchell Gauge Co.; 1 No. 145 Whitney M. C. Chain, Whitney Mfg. Co.; 1 Fox Tandem, Fox Mfg. Co.; 1 pair Dimmer Goggle, Chicago Eye Shield Co.; 1 Motorcycle Suit, Lamm Bros.; 6 Benton Plugs in case, L. F. Benton Co., Vergennes, Vt.; 2 Endurance Tubes, Endurance Tire & Rubber Co.; Route Books, B. F. Goodrich Co.; 10 gals. Harris Oil, A. W. Harris Oil Co.; 1 pair Leggings, Syracuse & Ellridge Glove & Mitten Co. Bay State Motorcycle Dealers' Association—14 28x3 U. S. Chain Tread Tires, 14 28x3 U. S. Inner Tubes, 14 28x3 Goodyear Blue Streak Tires, 14 28x3 Goodyear Blue Streak Tubes, 10 28x3 Firestone Tires, 10 28x3 Firestone Tubes, 1 Nickel Plated Schebler Carburetor, Wheeler & Schebler; 2 Mott Rims, Mott Wheel Works; 1 Cygnet Rear Car, Cygnet Rear Car Co.; Vacuum Oil to all riders en route, Vacuum Oil Co.; Silver Loving Cup, Westfield Mfg. Co.; 2 Vacuum Cup Casings, Pennsylvania Rubber Co.; Set Auburn Spark Plugs to all riders reaching Auburn, Auburn Spark Plug Co.; F. N. Tandem, Fentress Newton Co.

"OUTLAWRY" HALTS DETROIT TRACK MEETS

Unsanctioned Automobile Meets Net a "Three A" Ban for Saucer, Which F. A. M. Must Respect—Dealers Disappointed

DETROIT, May 16.—Detroit and the Detroit Motorcycle Dealers' Association are keenly disappointed in the news that there are to be no motorcycle races on the Detroit oval this year. The program, which had been tentatively outlined, and which included a series of meets covering the entire riding season, has been canceled.

The cancellation came as a result of the action of the American Automobile Association in "out-lawing" the Detroit track, after its owners had permitted the promotion of a series of unsanctioned automobile events on the course last year. The understanding between the F. A. M. and the "Three A.'s," of course, makes necessary the "out-lawing" of the track by the motorcycle body also, until such time as the track management comes to an agreement with the automobile organization and the ban is lifted.

That the dealers are keenly disappointed is evidenced by the fact that the Detroit Motorcycle Dealers' Association called a special meeting on May 7 to discuss ways and means of having the ban lifted, at least insofar as motorcycle events are concerned. The meeting took place at the Detroit Wheelman's Club, and Chairman John L. Donovan, of the F. A. M. Competition Committee, made a special trip to Detroit to attend it. Others present at the session were: Joe Adcock, representing the Wm. Metzger Co., Indian dealers; John B. Trossell, the Reading-Standard agent; William Wandersee, Harley-Davidson dealer; Roscoe Brown, salesman; Paul J. Bailey, advertising manager, Henderson; Tom Martin, of Harry Svensgaard Sales Corp., Excelsior dealers; Hap Scherer, Michigan F. A. M. Commissioner and Harley-Davidson traveler.

The situation was gone into from every angle and Mr. Donovan explained the situation.

DOVER JOINS THE RANKS

DOVER, N. H.—The Dover M. C. has just been organized here with fifteen members, all boosters. The club is planning Sunday and holiday runs. The officers: William T. Boothby, president; Kirk Wallingford, secretary; Milburn Girkerson, treasurer.

JULY 4 RACES AT GALESBURG

GALESBURG, Ill.—Four events have been placed on the card of the July Fourth racemeet to be staged by the Galesburg District Fair Association. The races will begin at 1:30 in the afternoon of the Fourth, and will be run as follows: 5-mile novice, for fully-equipped twins ridden by amateurs; 10 miles for professionals, 61 cu. in. class; 10-mile amateur State Championship, 61 cu. in. stripped stock class; 100-mile professional race, 61 cu. in. class.

Orders received by one dealer from a plumbing company—from a Furniture concern—from a Public Service Company.

Read the telegrams reproduced here. They show that within *five days* one dealer sold three CLEVELAND Light Motorcycles to *three widely divergent industries.* This experience is daily being duplicated by many other CLEVELAND dealers. What is the reason for this strong demand on the part of commercial buyers? The answer is simply this—

The Cleveland Light has demonstrated its *absolute* practicality

Its lightness, its low saddle position, its ease of handling, its simplicity coupled with its high quality structural features have commended the CLEVELAND LIGHT to all who have seen it—and the fact that it has passed the critical test of commercial usage is another proof of CLEVELAND perfection.

The CLEVELAND Agency is a valuable one to obtain. Some good territory still unoccupied.

A TIMELY TALK ON TWO-STROKE MOTORS

Like All Other Pieces of Mechanism They Have Their Cranky Moods, But the Methods of Keeping Them Up to Maximum Efficiency Are Not Difficult; A Trouble Chart

By HERBERT F. L. FUNKE
President of H. F. L. Funke Co., Eastern Distributor for Cleveland Lightweight

NOW that the small two-stroke is coming into its own in this country, it may not be amiss to point out to riders and prospective riders some facts and hints regarding this simple motor.

During the past few years it has been my privilege to visit the plants of a number of leading manufacturers abroad, and the following notes are the results of actual experience and no doubt will be useful to my fellow-riders. For some of the information given below I am indebted to Messrs. Brown & Barlow, the well-known carbureter manufacturers, who have done a vast amount of experimenting along these lines, and whose riders have covered many thousands of miles under all sorts of weather conditions.

Two-stroke motors, as a rule, do not develop their full power until from 300 to 500 miles have been covered. The performance, therefore, of accessories such as magnetos, carbureters, plugs, etc., cannot be properly judged, and it is, therefore, unwise to alter any factory adjustments until this distance has been run, as any such alterations are likely to be found incorrect after the machine has been properly run in.

Any particular fault which develops should, of course, be rectified.

The so-called overheating of two-strokes is usually caused by either of the following conditions: Unsuitable spark plugs or faulty lubrication.

HERBERT F. L. FUNKE

SPARK PLUGS are the greatest source of trouble in two-stroke motors, and in this country but few plugs can be obtained which will stand up for any length of time under the temperatures at which a two-stroke motor is normally run. The electrodes of the plug should be very heavy and designed to conduct the heat away from the points which are not cooled by the incoming charge, as in the case of the four-cycle engine.

Lubrication is divided into two classes: the "Gasoil" system and the drip feed method. The former has the great advantage of proportioning the amount of oil used to the work actually done by the engine. The usual proportion of oil to gas is 14 to 18 per cent. by volume, which is about one pint of oil to a gallon and a half of gasoline. When this system is used it is advisable to turn the gasoline off at the tank a few hundred yards before the machine is stopped, so that the float chamber of the carburetter will then be practically empty. If this is not done there is a tendency for the gasoline to evaporate, leaving heavy oil at the bottom of the float chamber, which may choke the jet and cause difficult starting.

Attention to Lubrication

Lubrication by the drip feed method requires most careful attention, as the drip is largely affected by the crank case suction. Suppose, for instance, that the drip feed is working satisfactorily at slow speed, with the throttle only slightly opened. Under these conditions the crankcase suction is very high; but on opening the throttle to accelerate or climb a hill the vacuum in the crank case is partially destroyed, and consequently the drip feed slows up just at the very time when oil supply should be increased. The lubrication of these motors should be so regulated that there is always a certain "blueness" about the exhaust without the engine smoking objectionably. This necessitates two settings, one for city riding from 15 to 25 drops per minute, and the other for the country, about 25 to 50 drops, regulated according to the speed.

To obtain really slow running with a two-stroke motor, it is necessary to retard the spark fully, as a much greater advance is usualy given to the magnetos on two-stroke motors than is the case with the four-cycle engines. It is also necessary to make the mixture a trifle richer.

A Tip About Starting

Poor magnetos are often the cause of much trouble, and these in most cases make starting difficult. Don't be deceived by the spark your magneto will give when you pull your plug out to test it. Even a magneto that will fail utterly to spark under compression, will usually spark in the open air. If a two-stroke engine does not start as soon as the decompressor is released, the engine merely pumps gasoline into the crank case and the mixture soon becomes too rich to fire, even if the magneto has in the meantime commenced to spark. In such cases alternate lifting and dropping of the decompressor lever will usually effect a start.

Small two-stroke motors develop a wonderful amount of power, but it is well to remember that it is not unlimited and that their "reserve power" is very slight. It is well to see that the wheel bearings are properly adjusted, that belts or chains are running at the right tension and that the mudguards are not clogged up, as each of these has some slight effect in the absorption of power, while altogether the effect makes a marked reduction is speed.

A Helpful Chart

The following symptoms of trouble and probable causes of the same may be useful.

(1) Engine stops suddenly on hills with "popping back" in carbureter, which working of the carbureter air lever will not overcome.—Choked jet; spark plug overheated or lubrication failed.

(2) Engine stops suddenly without any apparent cause.—Choked jet; gasoline supply failed. Spark plug sooted.

(3) Engine will not produce its customary amount of power, and acts erratically.—Partial stoppage of gasoline supply or partially choked jet.

(4) Misfiring.—Spark plug faulty: points of same too close or too wide. Magneto points burnt or badly worn. Water on high tension terminal of magneto. Wet high tension wire. Over lubrication.

(5) "Four-cycling" at low speeds, or missing alternate revolutions.—Over-lubrication. Too large a jet in carbureter. Ignition too early.

ELLIS TO START MAY 29 ON SEVEN-STATE RUN

YONKERS, N. Y., May 8.—George A. Ellis, who is to ride through seven States, beginning in the last week of the present month, calls attention to the fact that he will start on May 29 instead of May 27, as given in the preliminary announcement in these columns recently. The hour of departure is to be 9 p. m., from the Hollywood Inn, this city, instead of in the morning. Ellis' plans called for the earlier start on Saturday instead of Monday, May 29. He will be gone over Decoration Day.

SANDUSKY TO ADD TWO MORE MOTORCYCLE COPS

SANDUSKY, O.—City Manager Ward has decided to add two more motorcycle officers to the police force. He points out that the efficiency of such officers is much greater than that of an ordinary patrolman, by reason of the greater radius of action. The force will be reduced accordingly.

All policemen in the city will be examined as to their fitness to be motorcycle officers, however, and the presumption is that those who do not fill the requirements will be the first to be dropped.

Tips for Exporters

ACTIVE DEMAND FOR CYCLES IN SIAM

Recent Trade Report States Demand for Two-Wheelers Has Continued During 1915—Comparison of Machines Imported.

IN a recent consular report from Bangkok, Siam, it is stated that the demand for cycles has continued active for the last six months of the fiscal year 1915. During that period 474 machines have been landed in that city, as against 432 for the corresponding months of 1914. Statistics of Bangkok's cycle trade for the five years ending March 31, 1915, show that 874 cycles were landed in this port in 1911, 2,032 in 1912, 1,428 in 1913, 1,811 in 1914 and 1,221 in 1915. In these figures are included motorcycles as well as bicycles, as separate statistics were not furnished by the Siamese Government prior to 1914.

Imports for 1915 included 25 motorcycles, valued at $4,369, and 1,106 bicycles, valued at $19,372. Three bicycles came from the United States, 1,116 from Great Britain, 63 from Germany, 10 from Singapore and four from Denmark. The value of the bicycles from the United States was $107. Three of the motorcycles also came from this country, with a valuation of $658, 14 from Great Britain, 2 from Germany, 2 from Belgium, 3 from Denmark and 1 from Singapore.

The Daily Consular and Trade Reports give the type of machines favored by the Siamese buying public thus:

"From information obtained in the local market and from other sources it appears that while American machines are appreciated for their strength, durability and easy running, objection is made to their heaviness, fixed wheel and lack of finish and 'trimmings' as compared with English and German makes. The roads in the vicinity of Bangkok are level and smooth, and the average weight of the Siamese and Chinese buyer is about 125 pounds, so that only a light machine is needed for this market.

"An English-made bicycle at present advertised in the Bangkok newspapers is described as 'built for the Far East, light and strong, Dunlop tired, free wheel, two brakes, Middlemore saddle, dustproof and oil-retaining hubs,' and retails for only $29 complete. The retail prices for machines most in demand range from $18 to $44, a higher-priced bicycle being called for occasionally."

The Bangkok consulate general will be glad to receive for its commercial reading room catalogs with price lists and other literature relating to cycles, monthly lists of which are distributed to every cycle importer or merchant in this city and other trade centers.

BAKU AGENT WANTS BICYCLES

REQUESTS for illustrated catalogs of American-made bicycles have come to **Motor Cycle Illustrated** from F. Kamano, of Baku, Russia. M. Kamano desires that the prices on each model shown in the catalogs be plainly marked and in the Russian language. His address is F. Kamano, care of D. Vanter, Merkulowskaiy ul., No. 18, Baku, Russia.

JAVA RUBBER SHIPMENTS

There were tremendous increases in shipments of rubber from Java to the United States during the first nine months of 1915 compared with the corresponding period in 1914. The total was 5,706,000 pounds, as against 118,800 pounds during the same period in 1914.

Questions and Answers

TROUBLE WITH TIMER

MY seven h.p. twin runs finely up to 35 or 40 miles per hour, and then starts to miss. I am satisfied that it is not in the carbureter, so figure that the fault is in the timer. Would the platinum points cause this, or would it skip all the time if the points were worn out?

GLENN A. HALL.

Auburn, N. Y.

If the platinum points are worn there might be misfiring at high speeds, but if they were badly worn there would probably be misfiring at any speed. The blade of the contact-maker might have lost its springiness and not vibrate fast enough, thus causing misfiring when the speed was high enough. We are figuring that you use a timer, as your letter states, and not a magneto. The same thing occurring to the contact-breaker of a magneto would cause a similar trouble.

THREE-SPEED HUB

PLEASE give me the names of makers of two-speed and three-speed hubs for both motorcycles and bicycles.

GEORGE C. KIEDEL.

Newark, N. J.

The Sturmey-Archer three-speed hub is made in models for both motorcycle (lightweight) and bicycle. We cannot tell you whether you can get the motorcycle Sturmey-Archer model at present. The bicycle model can be had from the Chicago Cycle Supply Co., 815 South Wabash avenue, Chicago, Ill. This is the only make of hub which can be had for motorcycle and bicycle. The Corbin people make a two-speed bicycle hub, but not one for motorcycles. We do not think that you could get one hub which would work satisfactorily on both the bicycle and the motorcycle.

A STYRIA MOTORCYCLE

I HAVE a motorcycle with two cylinders in V-shape, which is evidently foreign-built. The tank is green and almost square. On the crankcase are the initials "J. P." The throttle is operated by a twisting grip, but there is a lug below the handlebar on each side which evidently was used for a brake-lever. I need new bearings, and would like to know where to get them and some other parts. Also the maker of the machine.

RAFAEL COLUMBIA.

Havana, Cuba.

Your machine is a Styria, made by Johann Puch, Graz, in Styria, Austria. It is at least seven years old. The Puch works stopped making this model in 1909. They have not been making motorcycles since the opening of the European war, in 1914, and we doubt whether you could get parts for your machine, even if you could get them through from Austria. You will have to get a new bearing made at some machine works. We suggest that you dispose of it and get a more modern model. The initials J. P. refer to Johann Puch.

PENALIZATIONS IN TRIALS

OUR club intends to hold a reliability trial this season, and would like to get some information on the subject. Should the condition of the machines be counted in awarding final scores, after a hard course had been gone over? What penalties should be given for damaged or broken parts?

RELIABILITY.

Chicago, Ill.

An article on this subject will shortly be published in this paper. In the meantime you will do well to study the results of the all-lightweight trial, which is to take place on May 21 from Newark to Philadelphia and return. In this trial it is proposed to have each of the entrants observed by a man in a sidecar accompanying the contestant, and the condition of each machine will be reported upon at the finish of the run. If this trial is not held, for any reason, write the Technical Editor for a list of reliability penalizations, etc.

A 17-TOOTH SPROCKET

I AM looking for a 17-tooth front sprocket for my machine, but cannot get one from the makers. The latter have a 14-tooth sprocket as their largest size. Please tell me where I could get one made.

E. V. SCHRADER.

Dalton, Mass.

The factory which made your machine ought to be willing to do a special job for you, but, if not, try Charles E. Miller, the supply man, in Boston. You will have to give the following information to get the sprocket to fit your motor shaft: Pitch of sprocket; inside diameter or the diameter of the hole in the center; pitch of thread in the center hole, or taper, if it does not screw on; width of sprocket. An old sprocket sent the company will enable the company to get the required dimensions as regards width, size of center hole, etc. If you can't get it from Miller, the firm will let you know where to go for it.

ALIGN IT EXACTLY

IN attaching a sidecar, should the sidewheel incline toward or away from the motorcycle, and to what degree? I have been told that the wheel and sidecar should lean out about 2 degrees from the vertical.

JOHN NICHOLLS.

Denver, Colo.

Do not incline the sidecar toward or from the motorcycle at all. To do so will cause uneven wear on the tires and may strain the frame of the motorcycle on rough roads. Keep the wheels in alignment both vertical and horizontal. See the Motorcycle Manual, pages 37 and 38. As far as the two degrees out of the vertical are concerned, if you have it that far out, the difference will be so slight as to have it practically vertical. The difference, in fact, is less than ¼ of an inch.

SOMETHING MORE ABOUT THE UNSUITABLE MACHINE

Rider Points Out Advantages Gained by Dealer Recommending the Proper Power of Mount

By COURIER

WHAT frequently happens to the novice when he asks the dealer to choose him a machine, and also when he gets his first machine without any preliminary consultation with the agent is expressed in a letter to Courier from "An Enthusiastic Rider." The author of the letter holds that the dealer before advising the novice as to what machine should be got, ought to know all about the road conditions where the novice is likely to use his machine. That many dealers do this goes without saying, but that others do not is often evident.

"The recruit rider in selecting a machine must trust to the dealer's judgment, because, never having owned a motorcycle he knows nothing about what it will do. So the rider tells the dealer about what the road conditions are and the dealer, armed with this information, guesses what the rider needs." That's what the author of the letter says. Then he relates his own experience:

The Single Cylinder

"In 1913 I purchased a new machine—a single cylinder of 5 horsepower, of reputable make. I had never owned a motorcycle before and did not know what it would do or stand. I live on a road with some steep hills in both directions, so I told the dealer the grade of the hills and that I wanted a machine capable of negotiating them coupled with as low running-expenses as possible. He recommended the single, which I purchased.

"This is what happened. During the first four months everything went finely. The mount did all that was claimed for it. Then it gradually lost power and knocked fearfully when climbing. When the roads were heavy from rain, it was necessary to slip the clutch frequently, and this put extra strains on the whole machine when the motor raced. Gradually the power fell off until the machine as a road vehicle was far from being satisfactory even on the level."

No Care Taken

I'm going to horn in right here. Evidently the writer of the letter did not know how to care for his machine and expected it to run forever without adjustment. There are lots like him—presuming that he did not look after his mount. Regular attention and an annual overhaul would probably have resulted in the letter never being written.

"Now I don't want you to get the idea that the dealer was trying to do me," the letter continues. "On the contrary, he was doing his best to please me and sincerely thought he had, but if he had studied the road conditions and sold me a twin, some people in my home town would be boosting his make, instead of not riding at all."

PRUSSIAN MOTORCYCLE SCOUT ON OBSERVATION DUTY

All Kinds of Machines Have Been Put Into Service. The One Shown Is a Big Twin for Speed Work, Modified to Suit Military Purposes.

Right here, I question this. If he let his machine go, the power would fall off just the same and the rider would be disappointed at its performance in a like period of time.

The Other Case

"On the other hand, a recruit comes to the dealer and without telling him anything about roads, etc., asks for a big twin. The dealer sells him one, and as the rider lives in flat country, his machine has three times more power than he can ever use, with much higher running expenses than a single or a lightweight. The result is, he soon sells his machine at a loss, as he does not want to pay for something he cannot use—his reserve power. The idea is apt to cling to him that a motorcycle is a costly piece of property and he tells this to his associates. In his case and in the one I gave above, a machine to fit conditions would mean gradually increased sales for the dealer and satisfaction for the rider."

Right you are. It's up to the dealer to find out the machine a man needs—one that will be ample for road conditions and yet not too powerful or expensive. If the recruit wants the big twin, a first-class dealer will find out why, and make an honest recommendation; then if the recruit persists, sell him what he asks for, with the caution that it may be too heavy for him, etc. This can be done diplomatically, without rucking the novice's feelings.

It is for just such cases, that the article on how to choose the right mount was written in the Spring Number of this publication. A study of this article and others along similar lines will do away with the dissatisfaction caused by the novice getting an unsuitable motorcycle.

KEEP YOUR EYES ON ROAD AND AVOID DANGER

IF there is one thing which I would heartily impress on sidecar drivers who are taking up the pastime this season it is "Keep your eyes on the road." You may admire something by the roadside—a girl or two, perhaps—but by the time you get your eyes back on the road, the outfit is mighty close to the ditch, if not in it. And you have to give a big lurch to bring the machine back on its course.

You may not mind this, but the passenger usually gets peeved at being headed for the bank or ditch and then swung in a sickening swoop back to safety again. When you do this sort of thing, you are no better than the automobilist who never considers the rear seat passengers but drives like Sam Hill over pot-holes and thank-ye-ma'ams, treating his guests like dice rather than people he wishes to have a good time. Cut out the thrills, both intentional and unintentional. They don't attract people to the pastime and may result in killing a few sales for some dealers.

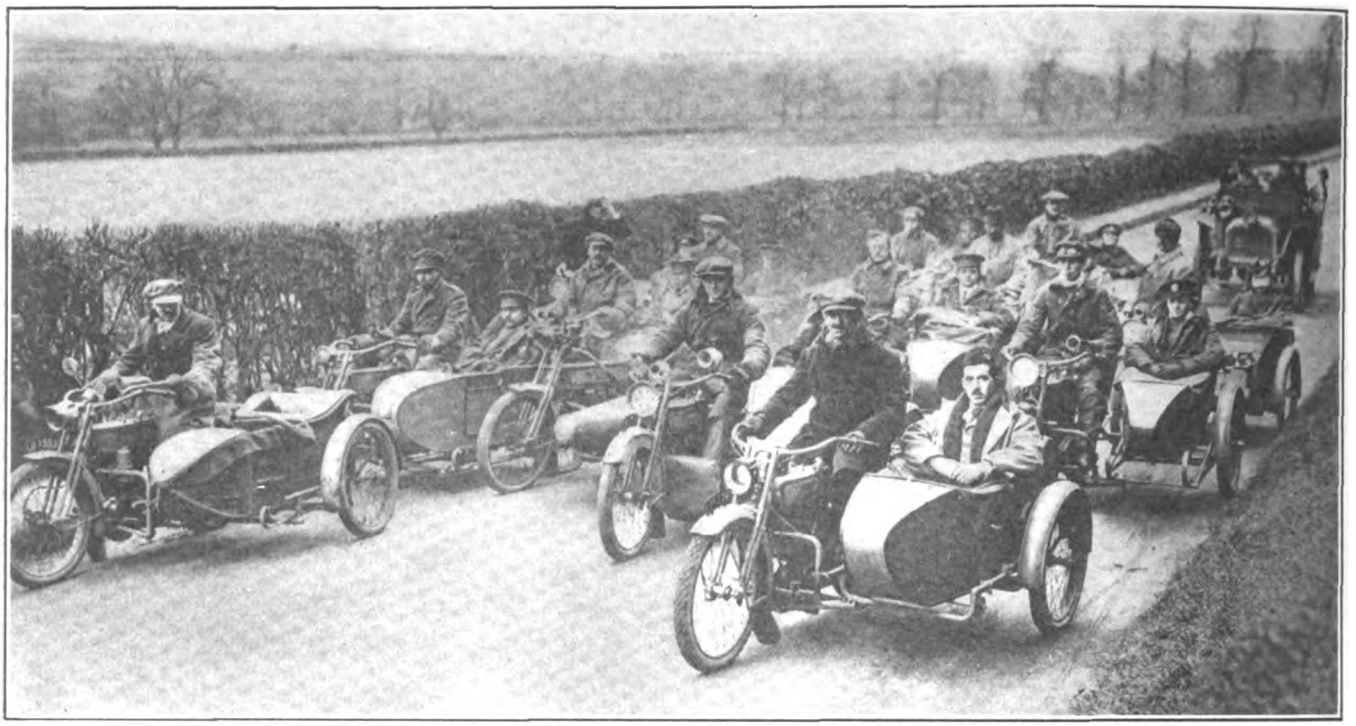
DOING THEIR BIT IN BRINGING HEALTH TO THE WOUNDED



Party of British Sidecarists Taking Convalescent Soldiers for Daily Rides on England's Magnificent Roads. This Is But One of Many Ways in Which Motorcyclists in Britain Aid the Various Branches of the Army

THE HARLEY-DAVIDSON COMPANY'S PRESIDENT

(Continued from page 21)

The things that Walter said about that motorcycle still rankle a bit with Harley and Arthur Davidson. The upshot of it was that they said, "If you think you can build one so much better, do it." The first two models which Harley designed and for which Arthur Davidson had made the patterns were turned out in the machine shop of a friend. As both of the boys were working, Harley as a draftsman and Arthur as a patternmaker, they had done little of the machine work. Nevertheless the criticism of Walter was taken to heart and they invited him to "go to it."

The First Factory

The machinist, late of Parsons, Kan., accepted the invitation with a new design and new patterns turned over to him by Harley and Arthur Davidson. A shed 10 by 15 feet in size was put up in the back yard of the Davidson home, just a block away and overlooking the present factory with over 300,000 square feet of floor space and with an annual output valued at $5,200,000. A heap of night work had been done prior to that time by Bill Harley and Arthur Davidson, but the building of the first Harley-Davidson factory marked the beginning of a period of two years in which the lights burned bright every night with the exception of Sunday and an occasional Saturday night. The first year Walter worked alone during the day, the other boys helping at night, but it was not long before the growing business required additional workmen.

Milwaukee is second only to Pittsburgh among the industrial cities of America. There are over 4000 industries in Milwaukee and of all these industries the largest consumer of electricity is the Harley-Davidson Motor Company. In fact, the company not only is the largest user of electricity for power and lighting, but also is the largest individual consumer of gas, this honor coming from the large amount required for its enameling ovens and heat-treating furnaces.

The first "power plant" of the embryo motorcycle factory seems ridiculous now when one takes a trip through the present plant and sees six floors of whirring machinery over a ground area of many acres. Much of the work in the first little factory was necessarily bench work. The first stationary engine purchased was a gasoline motor rated at four horsepower. To Harley and the Davidson brothers it seemed like a whopper of a big power plant, and it certainly was more than sufficient to run their first lathe and drill press.

Added More Machinery

"As we grew we kept adding more machinery, decreasing the size of the pulley on the little gas engine and speeding it up," said Walter Davidson. "We have to smile now as we think of how we kept adding to the load on that engine, but in those days, and nights, too, because Arthur and Harley helped me at night, it was a serious problem to furnish power for the additional machinery that we had to purchase. We found in 1903 that there was a market for motorcycles, C. H. Lang, of Chicago, having heard of us in that year and buying one-third of our output. We made three motorcycles that year—Lang bought one of them. For the next two seasons thereafter he took one-third of the output.

"It may be a matter of interest to state that the first motor had a bore of 2⅛ inches and a stroke of 2⅞ inches. The flywheel was 5 inches in diameter, and designed for use in an ordinary bicycle frame. For carbureters, mixing valves were made. The first motor that showed much of any power was the 1902 model, with a bore of 3 inches and a stroke of 3½ inches. It developed about three horsepower. The flywheel was 11½ inches in diameter. The motor had side-pocket valves and radiating flanges 1 inch deep.

"All the time we were working to obtain better motor proportions, better carburetion and better ignition. We also decided in that first year that the conventional diamond frame of the safety bicycle was not adaptable for motorcycles, and then evolved the loope frame, in general use today. It was a big day for us when the first Harley-Davidson was completed in our own shop.

"Business had increased so that we had to double the factory in 1905, putting on an addition, also 10 by 15 feet, like the original factory. Pattern work slackening up in the fall and winter, Arthur made a new set of patterns with many little refinements such as brackets to hold the engine in the frame, thinner flanges, etc. The bore was increased from 3 inches to 3⅛ inches, and the stroke was retained at 3½ inches. The 1905 model developed 3¼ horsepower. It was in the following year that we built upon the site of our present main factory, and what has happened since then is so recent as to be familiar probably to all who might be interested."

Answering the Phone

The flashing of an electric light at that moment caused Mr. Davidson to step to the nearest telephone; Harley, Bill Davidson or someone wanted to see him. At any rate the interview was interrupted at that point, so the interviewer stepped into the next room and saw Arthur Davidson.

BETTS CALLS THE ROAD-BURNERS TO TIME

Veteran Cyclist Argues That Power Two-Wheeler Is Not Fully Appreciated by the Public and Says That Speed Fiends Are to Blame for the Existing Feeling of Enmity

IN the interesting letter printed below an effort is made to "get at" the bottom of the conditions which appear to be retarding the spread of interest in the motorcycle, and to place the blame for the continued lack of appreciation where it belongs. The writer, R. G. Betts, a veteran booster in cycling circles and the holder of F. A. M. card No. 1, is convinced that the speed fiend is responsible for much of the antagonism worked up against motorcyclists, and that club events in which the running schedule is not carefully regulated exert harmful influences at wholesale. Mr. Betts expresses himself characteristically, as follows:

Editor, **Motor Cycle Illustrated:**

What's the matter with motorcycling?

Of course, I realize that the question savors of heresy or pessimism, or something like that, and that asking it does not constitute a short cut to popularity, but for the good that it may do I'm willing that the chips fall in my direction, if need be.

Time to Be Frank

I've heard the question asked many times by word of mouth, but isn't it about time to ask it in print? Isn't it time to be frank and plain-spoken and for all concerned to quit "jollying" themselves and to face the facts.

We all know that motorcycling and the demand for motorcycles is not what it might be or ought to be or what it was hoped or expected it would be. The adoption of the slogan "100,000 motorcycles in 1916" is substantial evidence of the truth of this assertion and is quite enough for present purposes. Why, back in 1901 and '02 and '03 some of us at least saw or thought we saw an output of 250,000 within 10 or 12 years.

Yes, there *is* something the matter. What is it? Within the last month I put the question to a man who makes his living from the sale of them.

"The public hates motorcycles," was his response.

Feeling Against Motorcycles

This seemed an exaggeration, but when later I so remarked to another man equally interested and well informed, he answered slowly:

"Yes, it is an exaggeration, but it is a fact that the public certainly entertains some feeling against motorcycles."

Granted that it is true and with betterment in view, let us trace the situation in logical sequence. Why has the public, or any considerable part of it, a feeling against motorcycles? I asked that question of the man first referred to and he answered: "Because the public considers them dirty, noisy little things and too many riders are indifferent to their personal appearance."

But we heard all that 14 or 15 years ago, when barking, oil-throwing motors were the rule and when nine riders out of ten wore black leather garments that suggested deep-sea divers.

Today the average motor is silent and oil-tight and though easily soiled khaki has in large measure replaced black leather; all of those factors give evidence of marked betterment.

Admitting, nevertheless, that they still are sufficient to be considered hurtful influences, are they enough to cause the public to hate motorcycles? I doubt it very much. If I were selecting a far greater cause for such feeling as may exist, I would name such "sociability" runs as that which occurred on Long Island some two weeks ago, and the means that render them possible, to say nothing of the "glorification" of such occurences.

What Would You Do?

Think of a hundred or a half hundred "sociable" motorcyclists dashing over public roads and through towns at the rate of 50, 60, 70, or 80 miles an hour! Think of it! And if you resided in one of those towns or used those roads, say if you would *love* motorcycles or *hate* them?

That's at least one of the things that's the matter with motorcycling—organized lawbreaking—call it by its right name—and disregard of public opinion, which is bad enough, but when the lawbreaking is glorified by advertising, a direct incentive for others to go and do likewise—what hope can there be for lessening the evil and earning the decent regard or good will of the public?

I am laboring under no misapprehension about such things. I know men have scorched since the beginning and will scorch, but when they do it on such a scale and at such speed, not glorification but condemnation, or punishment, should be their deserts.

For they are not merely flouting the law: they are making the public hate motorcycles.

Admitting that advertising a 70 or 80-miles-an-hour "sociability" promotes the sale of 10 or 100 or 1,000 motorcycles, who will dare say that in its ultimate effects it does not hurt the sale of 10, or 100, or 1,000 times as many?

At any rate, if it is agreed that my contentions lack merit and since it is undoubtedly true that feeling does exist on the part of the public, will not the good of both the sport and the industry best be served by tracing the causes and applying the correctives that will remove the feeling? How else will betterment ever be effected?

I have no axe to grind. While I have not been in the thick of it during recent years, I have never been wholly out of touch with motorcycling. To a certain extent, being on the outside, looking in, has advantages and affords views that are not to be denied. In what I have said I bear ill-will to none and am actuated solely by the same desire to help things that actuated me when first the motorcycle movement was being shaped 16 years ago. Some of the "sociable" Long Islanders and those who glorified their "sociability" I know well, and my chief regret is that I should seem to aim at them when I am aiming at the evil generally.

Less Power and Less Weight

There ought to be twice 100,000 motorcycles sold each year, and when such evils are minimized and when manufacturers give *less* for the money, I still believe twice 100,000 is possible. I mean less than 70 miles an hour, less power and less weight.

Oh! Yes I know there is a back-to-lightweights-and-sanity movement and I sincerely hope it will gather force, but somehow I can't believe that excusing or apologizing for the existence of the lightweight or damning it with faint praise is just the way to speed up such a highly desirable movement.

For I very firmly believe that the lightweight is the one sure means of lessening or wholly eradicating that hatred of the public, or whatever else one may care to term it, in that it is the surest means of inducing a constantly increasing number of the same public to ride motorcycles and more of them.

In the Dealer's Realm

NOW IS THE TIME TO TALK "GAS" ECONOMY

Showing How the Dealer Can Benefit by Those Whose Wallets Have Been Gouged by the Upkeep of the Cheap Automobile in Both Pleasure and Commercial Service

By GEORGE M. JOHNSON

HOW many dealers fail, I wonder, to take full advantage of their opportunities? Many of them, without a doubt. It so often happens that the circumstance which at first seems a serious blow to business prospects may be turned by the live-wire agent into an actual first-class selling argument. Your always-on-the-job dealer sails under the motto that "It's an ill wind that blows nobody good," and if the ill wind blows, he figures that *he* is the particular somebody who will derive what profit there is.

The ill wind that I have in mind just at present is the big rise in the price of gasoline. This may do some harm to the motorcycle dealers by decreasing their sales a trifle, though there is more than a reasonable doubt of that fact; but even so, is there no way by which this apparent disadvantage can be turned into a gain? Let me illustrate the proposition by coming down to some facts.

The Automobile Bug

I drive a motorcycle and own a sidecar, the latter being attached more than two-thirds of the time. Out of a mileage of 5,600 miles last season the sidecar missed less than 1,500. I have been a motorcycle fan for seven seasons. I am now starting my eighth—and twice in that period have been bitten by the automobile bug—once three years ago and again last spring. The last time the auto madness struck me was when I was paying only twelve cents a gallon for gasoline in five-gallon lots; it could be obtained in my town in fifty-gallon lots for a cent less. I wanted an automobile, and the low price of gasoline was in part responsible for my belief that I could gratify that desire.

Now, I don't want an automobile, or, at least, have given up all thought of getting one—and the high price of gasoline (I paid $2.30 for ten gallons a short time ago) is the reason. Instead I am pondering deeply the problem of whether to use my 1914 two-speed for the coming season or trade it on a 1916 three-speed.

A personal friend of mine owns a Ford; I should say *owned* a Ford, for only the other evening he told me he had sold it. He is a chap, like myself, of moderate income. But he had seemed a very enthusiastic motorist, and I was surprised when he told me he had sold his car.

"Great Scott!" was the way he put it. "The old tub ran all right and was mighty convenient to have, but I couldn't afford to keep it on the road with gasoline going up the way it is. It's a darned sight cheaper to pay carfare!"

And on the very same occasion I learned that another acquaintance, who had been a great Ford booster, had also gotten rid of his flivver, and for the same identical reason.

And both these cases hit at a car that is popularly supposed to have about as low an upkeep figure as any on the market, not to mention the low original outlay.

Good Out of Ill

Now is where the good begins to come out of the ill wind. The cheap car bugaboo has frightened a good many dealers in the past. Right now, however, instead of moaning over the increased cost of gasoline and its possible—but very doubtful—effect on the sale of motorcycles, they should be waking up to the fact that right here is one of the most telling arguments it is possible to urge against the four-wheeler and in favor of the two, possibly with the sidecar added. With gasoline selling at twenty-five cents and more a gallon, still going up, and absolutely no sign of a drop in price, that precious liquid becomes about the highest item in car upkeep, running a close second to tires, if not actually getting ahead.

Let the dealer get hold of illustrations such as the two I have just mentioned—there must be some such in every town—and use them on the motorcycle prospect who dares to talk automobile. Without being too personal the agent might even throw out the suggestion that his prospect may be about to make the serious mistake of trying to run an automobile on a motorcycle income. Tell him that thirty cent gasoline—and that price has been reached already in some cases, while fifty cents is quoted as a possible price—means at the very lowest estimate about a cent and a half per mile alone, and probably nearer two cents even for vehicles of the light car classification. This will be but a small part of the total cost of operating his car.

Pushing the Sidecar

If he wants a machine for more than one passenger, why not sell him a sidecar? Ask him to talk with someone who has had considerable sidecar experience, referring him to some definite persons who would boost the sport. Take him for a ride, and better still, if he is married, try to get his wife into the sidecar for a demonstration ride; that ought to go far towards landing a sale. Many of my friends and acquaintances have scoffed a bit at my sidecar, but a brief ride has invariably turned their scoffing into enthusiasm; they always express surprise and admiration at the comfort and easy riding qualities of the handy little vehicle.

Show your sidecar prospect how the outfit can climb, how it will pull through mud of the bottomless variety or deep snow, how it will pick up, getting under headway from a traffic jam before the automobile is half started. Why, there are a hundred ways of convincing the chap with the light car bug buzzing around his bean that for him the only logical machine is the sidecar outfit. Now is the best time on earth to drive your arguments hard. With gasoline way up, and the automobile themselves rising in price in many cases, it ought to be easy sailing.

Then don't overlook the fellow who has burned his fingers in the automobile game. The man who has seen his upkeep bills soaring into the blue empyrean like a scared biplane until he finally felt compelled to sell the car, is just the per-

CENTER OF INTEREST AT SOUTH BEND SHOW

Attractive Exhibit of Frank Andrews & Son, Featuring Excelsior Motorcycles and Bicycles at Motor Display in Indiana City

Digitized by Google

son with whom the upkeep figures for a sidecar outfit ought to make a decided hit.

And now is the grand time for the live dealer to place delivery outfits with retail merchants. The small combination grocery and meat markets which are becoming numerous in the residential portions of most cities offer a good chance, and the same is also true of the downtown markets in smaller towns. Every one of them has to deliver goods; in fact, a fair proportion of their business comes in the shape of telephone calls from housewives who are too busy to go out and do their dinner marketing in person.

Van vs. Light Car

Many of these stores have to keep up two or even three delivery rigs to take care of their customers. Some of them are beginning to switch to the light delivery car, but the rising price of gasoline cannot fail to make the average storekeeper think twice before he buys. He reads that the days of fifteen and sixteen cent gasoline are gone, never to return—as is undoubtedly true but sad—and he reasons within himself that he, for one, will stick to a nag or two and a cart. There is not likely to be any steady or alarming increase in the cost of fodder, and he can always figure out in advance just what the upkeep on his delivery system will amount to.

If I were a motorcycle dealer, I would get after these fellows with a punch in both hands and a kick in each foot. I'd have a delivery van hitched to a three-speed as a demonstrator, and I'd offer to do free all the delivering of a merchant, preferably one who had to use at least two rigs, for two or three days. Of course, I would take pains to put a good man in the saddle of the bus, a man who was familiar with the section of the city where most of the deliveries were to be made. It would pay any motorcycle agent to go to this expense, if by so doing he could prove to the storekeeper that one motorcycle and delivery van could do the work of two or three ordinary rigs.

I would keep a careful record of the mileage covered during the test and know exactly how much gasoline and oil had been consumed, how many deliveries had been made, the driver's wagons, and so on. I'd prove to the storekeeper that even if gasoline went up to forty cents he would save money by getting a motorcycle outfit, though I would be extremely careful not to misrepresent in the slightest degree the cost of keeping the van outfit on the road.

Good Driver Needed

I would tell him frankly that he couldn't afford to buy a two hundred and seventy-five dollar motorcycle with a sixty dollar van attached, and then turn it over to the tender mercies of the average fifteen or sixteen-year-old boy. Fellows of the latter sort—or even younger—seem to be the ones generally favored as drivers of the delivery wagons. This is not a reflection on the boys as a class, for a sixteen-year-old boy *could* drive the van all right if he were level headed and had had the necessary experience. But if I were paying out the price of a new outfit, I should not prefer to have any sixteen-year-old boy acquire his experience at my expense. In short the motorcycle salesman must impress upon his customer the importance of getting a reliable driver and paying him more than he would have to pay any rattle-headed Tom, Dick or Harry who might apply for the job, perhaps half induced to do so by the prospect of the fun he'd get in driving the outfit around.

After placing a delivery van the motorcycle dealer's main concern is that it give satisfaction; upon this hinges the possibility of future sales not only to the storekeeper who bought the one, but to others as well. If I run a grocery store and see my competitor delivering goods by motorcycle, I am going to watch him like a hawk. It's going to be my business to find out exactly to what extent the experiment is a success or failure. If he is saving money and getting more business because of his new delivery system, I shall want to get into the swim myself. And on the other hand—or alternate paw, as Grantland Rice would phrase it—if the outfit fails to make good, I shall congratulate myself that he stood the expense of the experiment and that I get the benefit of it with no loss.

Watch the Performance

Therefore it behooves the motorcycle dealer to do all in his power to see that the van he has placed does give a good account of itself. He would do well to insist that the outfit be brought to the shop at least once a month for an examination if nothing else. A few nuts might have worked loose, a valve adjustment might be required, or some other little thing which might escape the driver's notice but which would instantly be apparent to the eyes of a motorcycle expert.

Look Ahead!

See that hill. Well, it would be a cinch to coast if your wheel were equipped with a

CORBIN

DUPLEX COASTER BRAKE

All you would have to do is to sit back comfortably on your saddle, keep your feet on the pedals which remain at rest and by a slight pressure of your foot, control the speed of your wheel to a fraction of a second. If you don't believe this try it once. Borrow a bicycle that is equipped with a Corbin Duplex and you'll soon find out for yourself why it is the most popular brake on the market and always has been. Just try this once.

DEALERS

A Corbin Duplex on the hub of any bicycle you carry is an added sales argument. All bicycle manufacturers furnish it when specified. Your jobber will gladly supply you. Catalog, price list, discounts on request.

NOVEL ADVERTISING ATTRACTS AT BUFFALO MIAMI HEADQUARTERS

BUFFALO, N. Y.—Poppenberg Brothers, handling the Miami Power Bicycle, are doing a bit of novel advertising in their show windows. They recently stuck up a huge poster at the top of which in bright red letters were the words: "Cheaper than Carfare." This was particularly attractive because of the rumor that the street car men were thinking of going on strike.

Underneath the headline were a number of mysterious lines; mysterious until one came closer and read the words written above, below and around them. Two of the lines, which began in the center of the top of the poster and ran to the two corners on the bottom, represented a distance of 100 miles each. Over one was written: "One gallon of gasoline will take you over 100 miles on a Miami." On the other: "¼ pint of oil will take you over 100 miles on a Miami."

Between these two lines were a number of others showing the relative position and carfare between a few of the surrounding towns. The poster pointed out that Niagara Falls, 24 miles from Buffalo, costs 30 cents on the cars and only 8 cents when made on a Miami. Dunkirk, 40 miles out, may be made for 14 cents on a Miami against $1.06 carfare.

The poster attracted crowds and brought fruitful results. The Poppenbergs will get out some more comparative posters during the summer months.

BROOKLYN, N. Y.

BEN RUDERMAN, handling the Thor in this city, has sold out his contract number of Thors and has wired to the factory for eight more as a preliminary to a second big order. "This season is going to be the best for me since I started in business eight years ago" says Ben. "From May first to the eighth, I have sold $4,351 worth of Thors and will keep up the good work indefinitely."

SHAMOKIN, PA.

W. O. RHOADS, representing Indian and Excelsior in this city, has just sold a 17-3 Excelsior to the J. H. & C. K. Eagle Silk Co., of this city, for its Motive Power department. The machine will be used to travel to and from the different mills, of which there are five. Two mills are eight miles from the depot.

NEW HAVEN, CONN.

SAM SCHWARTZ, representing the Miami Power Bicycle in this city, is holding a Power Bicycle Week now and is making things hum in the interests of the little Middletown-made four-stroker. He is being assisted by C. F. Pineau and C. A. Van Doren of the Miami forces.

Schwartz is the leading cycle man in this city and has gained much renown in the athletic field as a heavyweight wrestler. He and his brother have a bicycle store at Danbury, Conn., which is considered one of the livest in the city.

COLUMBUS, O.

L. P. BIRKENBACH CO., has taken the agency for the Dayton Motor Bicycle and has started in selling these machines with a swoop. The bicycle business is about 100 per cent. better than in 1915 and the end of the season is yet a long way off.

L. P. Birkenbach is now in Florida for his health, having left several weeks ago. He is improving nicely and intends to return within a few weeks.

Prest-O-Lite

for
Motorcycles

Get this Brilliant, Dependable Light on your Motorcycle

It will add to your pleasure and safety. Good lighting is no less important than fuel.

Prest-O-Lite gives you perfect service and satisfaction at all times—is unaffected by bumps or jolts. It furnishes a mellow light, will not go out suddenly or fail you in emergencies. Its operation is thoroughly simple. Any rider can easily give it all the attention it needs.

Because of its reliability, efficiency and freedom from trouble, Prest-O-Lite is used on more motorcycles than any other system of lighting. It costs little to buy and little to use.

Of Proven Value on all Makes of Motorcycles

Your dealer can supply you with Prest-O-Lite on any make of motorcycle you buy. One of the most popular combinations of complete equipment, offered by many dealers, is a Prest-O-Lite, a lamp and a good mechanical horn. You save money both on the purchase price and in upkeep cost by **insisting** on this kind of equipment.

Dealers find it profitable

to tell their customers about Prest-O-Lite in their sales talk. By giving the rider more for his money, you make more yourself. If you're not "cashing in" on the Prest-O-Lite demand, put yourself in a position to do so at once. Send for details.

CAREFUL WORK SWELLED MAC'S PROFITS

He Put the Best of His Efforts in All Undertakings and Delivered Everything on Time—Gives Square Deal to All

By HARRY B. COHEN

LESS than a dozen years ago Samuel McPherson, then a young man, secured a position with a Washington, D. C., bicycle concern to do odd jobs of repairing. Today he is conducting his own store, a large one, at 709 H street N. W., with the District of Columbia agency for the Dayton Motor Bicycle, and a sub-agency for the Indian. In slightly over four years McPherson has built up a well-paying business on a shoestring investment, has supported his family and established them in a comfortable home in the meantime, and has built up a fine following. The names McPherson and "square deal" are recognized as one and the same in the National Capital.

During the time that he was with the bicycle concern McPherson learned to become a good all-around bicycle and motorcycle mechanic. After a few seasons he secured a position with Miller Brothers, Washington Excelsior agents, and worked for them until they discontinued the business. Being now a married man, "Mac" looked about for a source of greater income, and, although having an insignificant capital and a small stock of tools, he rented a little store at 816 Ninth street and started on his own hook.

Kept on Plugging

For some time business came in slowly, but McPherson plugged away. He economized by living over his shop and in other ways. Soon trade picked up and increased more and more as the quality of his work became known.

At the outset of his career as a business man he adopted a policy exemplified by the name of his establishment. This policy has been the foundation of his success. His establishment is known by the name of the "Neutral Motorcycle Garage" to signify the fact that riders of all makes of machines were equally welcomed and the same attention would be shown to all.

Prompt Deliveries

In addition, McPherson has always made it a policy to deliver all work when promised, and makes no promises impossible of fulfillment. All work was carefully and painstakingly performed, and now that "Mac" has several assistants working under his direction, he insists on the same lines being followed and personally, inspects all work before it is delivered. All charges for repairs are made on a basis of time and material, thus insuring a fair price to all.

The fruits of this policy resulted in the expansion of "Mac's" trade and his move to the H street location. He now handles the two agencies in the same large quarters, and stocks a goodly line of motorcycle supplies and accessories. Those who know him say that he has not yet finished expanding his business, and look for a big increase in his quarters.

MANY DEALERS AND RIDERS VISIT POPE PLANT

Motorcycle Necessities

Your Life Depends On Them

In buying accessories for your motorcycle always bear in mind the service they have to perform—the dependence of life and property you have to put in them.

Remember that in an emergency your life and the lives of others depend on the quality, reliability and commanding voice of your warning signal.

Pay the price of certain safety—$3.50 for the reliable, handsome Stewart Hand Operated Motorcycle Warning Signal. You can't get real quality and reliability for less.

A Stewart Motorcycle Speedometer is worth the $10 it costs just for the extra pleasure you'll get in always knowing exactly "how far" and "how fast."

It will more than pay for itself in a season for it costs less than one fine for exceeding the speed limit and is an undisputable record of mileage in getting fair tire adjustments and in keeping accurate record of gas and oil consumption.

HOW SELLING TALKS WERE JUDGED

(Continued from page 30)

salesman who asks his customer "About what price do you desire to pay?" justifies emphasis in that it clearly indicates not merely a keen appreciation of salesmanship, but a way to sell bicycles of a better grade.

In the other papers to which prizes were awarded the elements of confidence and logical appeals and fruitful ideas, and a general grasp of the general necessities of storekeeping and salesmanship are so marked as to have rendered "picking the winners" not so easy as may appear to be the case. In the contributions that all those gentlemen to whom an honorable or other mention has been given, there is one idea or more, which, applied more generally, cannot well fail to assist in attaining the goal marked out by the "Million Bicycles" Committee.

Some Talks of Narrow Scope

In a number of the papers submitted it is observable that a restricted or too literal view was taken of the title of the competition "Selling Talks," and as a result the competitors' ideas took the form of imaginary conversations between salesman and customer.

In not a few of these papers it is observable that the entire selling appeal is based on mechanical features of the bicycle; in others, on its utilitarian value or economy for commercial purposes, which is to say that, judged purely on these conversations, the virtues of health and pleasure, which are the strongest of all human appeals, and to which the bicycle most attractively lends itself, are not being made the most of. Each of the papers was considered from these standpoints.

L. A. M. C. BARBECUE PROVES HUGE SUCCESS

LOS ANGELES, Cal.—About 225 riders and guests from this city took part in the annual barbecue held last week of the Los Angeles M. C. The girls turned out in fine shape to see how well the men could cook. The destination and "place of eats" was Devil's Gate, 22 miles out of the city. On arrival the party waited a short time for the cooking committee to prepare all things, and then set to work on the roast pig, the half bullock and other savory things in the feast.

The cooks started the night before to make things ready, so that when the horde arrived it was a case of only a few minutes' wait at most. Following the eats came a series of events, such as the sparkplug race, the tire-pumping contest, sprints backward on foot and other amusing stunts —to the spectators. In the sparkplug event, the competitors were blindfolded and given plugs and at the gun went to their mounts, put both plugs in place and adjusted the cables. In the pumping contest, the air was let out of each rear tire and it was the victim's duty to get the tire inflated as quickly as possible. Two minutes was assigned as the limit.

After the sports a dance was held and then the party started for home. The barbecue was such a success that a lot of new members joined the club that night.

HAESE & COMPANY ADD THIRD TEST SET

HAESE & CO., of Punxsutawney, Pa., have added a test set for motor-cars, following the introduction of their motorcycle sets referred to in our last issue. The latter come in two styles, one for magneto-ignited machines, and the other for motorcycles fitted with electric-outfits. The motor-car set is very similar to the motorcycle sets, and has been subjected to a series of tests by New York engineers to determine its value. The set has passed the proof successfully, and accordingly it will be pushed by the makers.

As the motorcycle test sets are practically of the same composition, with the exception of the instruction books which accompany each, the makers are confident that they will pass any proofs to which they may be subjected. Those interested in the sets should address the makers at Punxsutawney, or should apply to their regular jobber.

DAYTON IS ONLY ONE TO GO UP ON TOP GEAR

STEELTON, Pa.—In a recent hill-climbing contest held by private owners of five different makes of machines on "Loop-the-loop" hill, a Dayton twin was the only one to make the ascent on top gear. The hill has local fame as a "killer" as there is not any chance for a rolling start and the surface is nothing extra. The terms of the contest were to see which rider could ascend on top gear.

Full details on request.

WASHINGTON, D. C.

HOWARD A. FRENCH & CO., local branch, has delivered a three-speed Powerplus to the Washington Gas Co. as a preliminary to the turning over of nine more to fill that firm's order for ten. The Gas Company requires that its inspectors, trouble men and meter inspectors shall be capable of handling a motorcycle, and has installed a separate motorcycle garage with an efficient mechanic in charge. This has been done by reason of the superior economy and dependability of the motorcycle as compared with that of the automobile, and all of the latter machines used previously have been disposed of.

HARRY F. SEAMARK, handling Miami Power Bicycles, Emblem, Thor and Flying Merkel motorcycles, has just sold two of the Emblem little twins to private users last week. Seamark says that there is also a good demand for the 6 h. p. twin Thor and the sales of this model lead in his motorcycle lines.

HAVERFORD CYCLE COMPANY, local branch, is experiencing a run on Cygnet Rear Cars these days. Over a dozen have been sold within the last two weeks. The demand for Excelsior models has been great and also for Triplex seats.

F. L. LEISHAAR, local Indian agent, reports big business in Indian Maid and Rogers sidecars, and a good demand for Cygnet Rear Cars. Ten of the sidecars have been delivered during the last three weeks. "Very few solo mounts are to be seen on Washington streets," says Leishaar, "it's practically all tandems or sidecars. The F. N. tandem sells the best, to both riders and sidecarists."

JACK HINES, handling the Cleveland lightweight, has moved to a new store at 906 I street, in the heart of Motorcycle Row. The little two-stroker is proving itself very popular in the city and Hines reports an increasing demand for this model.

SPOKANE, WASH.

THE SPOKANE CYCLE & SUPPLY CO. now employs 32 men in its various departments. The demand for Indian motorcycles and bicycles has been very great as is the case also with the Miami line of cycles, for which the firm is agent. J. D. Alexander, who founded the company, is its president and manager, while J. B. McKenzie is secretary and Reuben Crandall is vice-president.

The present season is Alexander's twelfth in the cycle business. He took the Indian agency in 1905 and has held it ever since.

FALLS CITY CYCLE CO., handling the Harley-Davidson, is building an addition to its place at 106 Bernard Street. "Since locating here last April" says Manager C. W. Miller "every department of the business has grown to such an extent as to make us look for more room. We are now constructing a room 45 x 25 in rear of the store for a repair shop. Convenient rear entrance, stalls for machines and provisions for riders who wish to adjust their mounts are among the features of the new building."

INLAND MOTORCYCLE CO. has received its first shipment of Dayton Motor Bicycles and is demonstrating the little front-wheel driver throughout Spokane County. The Smith Motor Wheel is also featured.

ASK YOUR JOBBER

The Judge of Real Chain Value

will instantly see in "The Coventry" Chain certain refinements, certain features that are contained in no other chain made. And that rider will give these SPECIAL features in

"The Coventry" Chain

"THE MOTOR'S TRUE MATE"

the consideration they justly deserve. For instance, there is the special heat treatment of the Sheffield steel that gives that marvelous durability to "The Coventry." Add to this the doubly strong roller, with shoulders at the end of the enlarged rivets to permit of easy repairing, and you have some of the main reasons for "The Coventry's" deserved popularity.

Write for our booklet, "The Motor's True Mate"

HERBERT F. L. FUNKE CO., Inc.
112 Broad Street New York

BUFFALO, N. Y.

SEEBER & HOFHEINS, who handle the Thor in the Bison City, are experiencing a steady demand for the 16-V and 16-U models. In fact, within the last few weeks, business has been coming their way to such an extent that they have sent telegrams to the factory to ship machines by express until further notice.

ADOLPH KELLNER, Bison City agent for the Excelsior, says that sales on both motorcycles and bicycles are considerably better than for the two past seasons. "The bicycle business this Spring has been unusually good" says Kellner, "I have been able to get all the wheels that I want and to make quick deliveries."

GEORGE HAIER, who is identified with the local agency for the Harley-Davidson, has been appointed official checker for Buffalo in the Bay State endurance run to this city. The riders in this event will arrive at 11 a. m. on May 29.

POPPENBERG BROTHERS, Bison City agents for the Miami Power Bicycle, are using a novel method of displaying their lines of motorcycles and bicycles. In order that the passerby shall see the machines from all angles, they have installed several revolving platforms in the show window. The machines are placed on the platforms and the current turned on, when the platforms revolve slowly.

NEWARK, N. J.

WATSON KLUCZEK has received five Reading Standards this week and they are all gone to customers. With this quintette went four Pullman sidecars and one Rogers sidecar. Kluczek has sold a Reading Standard delivery van to the Newark Typewriter Exchange.

WALTER GOERKE, Indian man, has delivered seven blue Powerplus twins to the Essex County Park police. Three of these are three-speed models and the others single-geard. All have Mag-Generator equipment and have Sterling "Vacuum Bar" tires. The men will use their new machines for the first time at the annual inspection of the department on May 20.

CHARLES KREBS, Pope agent, has his first 1916 three-speed twin of Westfield make. His place at 31 Springfield avenue is thronged with motorcyclists eager to see the new arrival.

MANAGER BUNKIN, of the Haverford Cycle Co., is busy seeing Excelsiors uncrated these days. Five came in last week and five more this week, while eight are due within the next few days. Bunkin is saying nothing but sawing wood. He has disposed of two Cygnet Rear Cars and over a dozen Motor Wheels.

PATERSON, N. J.

JOHN STEELE, local Indian representative for Passaic and Bergen Counties, has taken the store adjoining his present place at 95-97 Broadway and has thus made his establishment the largest in this section of New Jersey. Steele has but a few more machines on his first contract to dispose of, and this showing is considered by him to be the best he has made since taking the Indian agency.

Steele's new repair department will be in charge of Hans Mumenthaler, an expert repairman who formerly ran a shop in the Riverside section.

Motor Wheel Headquarters
-what it means to the live dealer

Smith Motor Wheel
DETACHABLE

A. O. Smith Company dealers everywhere are *motor wheeling into bigger business.*

As the selling season advances, as pleasant outdoor days multiply and as the natural friendliness towards the Smith Motor Wheel is steadily growing, our dealer representatives are learning more and more just what it means to be Motor Wheel Headquarters in a community.

Every bright red *Smith* that chugs along city boulevard or country lane is humming its song of advertising. People pause. There is a friendly smile of approval. And that's the way new prospects are won for the dealer.

Local advertising in newspapers, linking the dealer with the big national magazine publicity of the A. O. Smith Company, does the rest and your Motor Wheel Headquarters begin buzzing with new business.

Five minutes to attach to any bicycle, a simple demonstration and another sale is made. Profit from new bicycles, tires and accessories are another profit feature for the fortunate dealer whose store is Motor Wheel Headquarters.

You bet it pays! We wish all of our dealers could spend a day at the factory and wade through our correspondence. That's where you may read the story of successful selling. And there are letters by the hundred telling of happy sales records dealers are piling up.

And they tell us that the Smith Motor Wheel *itself* does most of the work of selling.

MOTOR WHEEL DIVISION

A. O. SMITH COMPANY, Milwaukee, Wis.

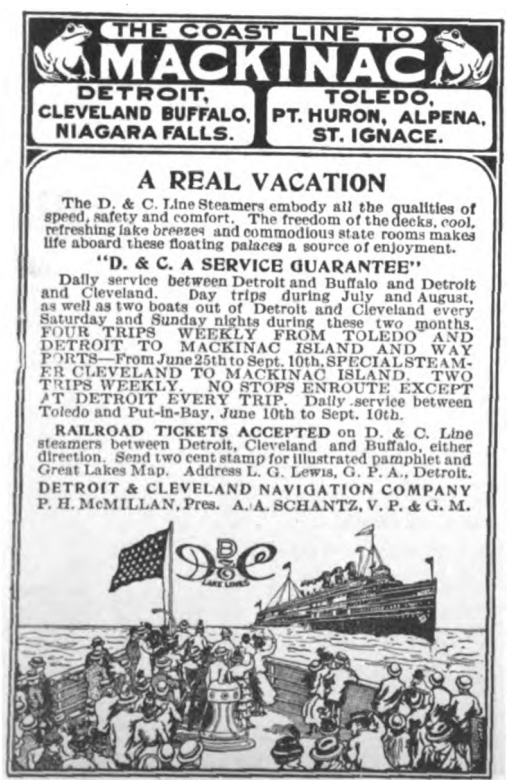
NAMES——

By the hundred or the thousand, as many as you want—Mr. Dealer and Mr. Manufacturer—names and addresses of the motorcyclists and automobilists who are registered at the New York State Capitol.

We Furnish These Names At Lowest Prices

Dealers are making good money, and creating a lot of new business, by using our lists. Now is the time to write riders in your territory for repair work and new accessories. Get our list now. Beat your competitor to it.

Capitol Auto List Company
Room 233, Capitol **Albany, N. Y.**



KANSAS CITY, MO.

C. HAHN, representing the Dayton, has just received a shipment of Motor Bicycles and pedal cycles this week. The bicycle end has been increasing nicely and Hahn has his files full of prospects.

A. F. CROCKER, representative of the Hendee Mfg. Co. in this city, says that business throughout the entire Western territory is progressing most favorably, but looks for a big increase within the next few weeks. He recently returned from a short visit to Indian dealers in Kansas.

CHARLES HANSON, local Indian agent, recently sold four new machines to the Kansas City police department. This will bring up the number of Indians in use by the local police to 22, all of which were supplied by Crocker within the last twelve months.

LOUISVILLE, KY.

J. S. ETEEN, proprietor of the new Cycle Shop, has been doing finely in his quarters at Broadway & Preston streets. In slightly over a month, he has sold three Hendersons in Louisville and shipped a fourth to a customer in Owensboro. He has also delivered two Cygnet Rear Cars to natives of this city and has had eleven applications from his district sent him by the factory. The Silver King bicycle is another line handled by Eteen. M. Romano, formerly connected with the old Dayton Motorcycle Sales Co., is in charge of the repair department.

KLINE BROTHERS, handling the Harley-Davidson, have delivered 19 machines of 1916 model to date and have orders for several more. The vulcanizing and repair departments have been kept busy and retail sales of supplies have been excellent.

SUTCLIFFE COMPANY, handling the Smith Motor Wheel and several makes of bicycles, has made a big improvement in the establishment. The rear of the building has been remodeled and a mezzanine balcony put in. The office is now on the balcony, leaving the fourth floor free for storage. The bicycle department is directly under the balcony and a new brick shop is being erected on grounds directly in rear of the store.

SOUTH MANCHESTER, CONN.

MADDEN BROTHERS, handling the Indian in this section, have just received an order for a 1916 Powerplus three-speed machine for the service of the local police department. This is but one of a number of sales which the Maddens have recently made to local users and is considered the forerunner of other demands for Indians in municipal service in this section.

PEORIA, ILL.

VOSS BROTHERS, local Indian and Excelsior agents, have just sold a 17-3 Excelsior to the Peoria police department, for the use of its traffic men. This is the sixth Excelsior which the department has had since 1911, in which year two single cylinder machines of that make were purchased from the Voss establishment.

SACRAMENTO, CAL.

H. CAMERON, of the Cameron Hardware Company, has sold two Indians in one day last week. "Just by way of showing a trade visitor that we could and did sell Powerplus machines" says Cameron.

HARLEY-DAVIDSON COMPANY'S PRESIDENT

(Continued from page 42)

"That's a fine system you have for calling people in the factory," was the opening with him. Arthur beamed. Then he told of the time it saves every day. Group lights of different colors—a different signal for each of sixteen men—are flashed simultaneously from stations throughout all departments of the factory. This calling system is characteristic of the Harley-Davidson organization. Further questioning developed the fact that the installation cost $1,100—but it paid for itself quickly in time saved.

Walter's Early Exploits

"Walter shot out of the room in response to his signal just as he brought us up to 1905," was explained to Arthur Davidson. "Please go on from there, especially telling of Walter's influence in the development of the business." Arthur sat silent for several moments as he reviewed in perspective that period in Harley-Davidson history.

"The heavy end of the machine work was all done by Walter," he began. "We put up our first factory building on this site in 1906 and it was in that year that Bill, our oldest brother, left the Milwaukee road and came into our factory. Walter, like the rest of us, did anything and everything that was to be done. We made motorcycles, tested them, crated them and sold them. It can be said quickly, but there was a lot to it. There were no good roads anywhere near the factory then so Walter rode the new machines on the railroad tracks—used to race with the trains. Much of the crating was done outside on the sidewalk, or rather where the city had provided space for a sidewalk on the newly-opened street.

"More fun was found by Walter in making motorcycles and riding them than in anything else. Rapidly he built up for the Harley-Davidson a reputation for speed and endurance. Walter's riding ability in those days was a big factor in stimulating sales. But I'll never forget his first race. It was at the Milwaukee State Fair track in 1905. We thought we had a machine that was a real motorcycle. The best it could do was 1:40. The rest of us were a bit discouraged, but his experience on the track that day only served to make Walter more determined than ever.

"The way he went to it to make a motorcycle that would travel was something to see. He put all his energy into the job, and on July 4, 1906, went down to Chicago, made a cleanup and won his first cup. After that he won many trophies. I remember, for example, the race meet of the Chicago Motorcycle Club at Crown Point, Ind., July 4, 1907. Walter won first in the one-mile open, second in the three-mile open and first in the five-mile open. In the endurance contest of that same club, September 14-15, 1907, he won a perfect score. His first opportunity to show real speed on the Milwaukee track was on July 27, 1907, at a race meet promoted by Barney Oldfield.

"National honors for the Harley-Davidson were first obtained by Walter in 1908. We were a pretty proud bunch of fellows in that year when Walter went into competition with the best riders of the day and in the F. A. M. endurance contest in the Cattskill Mountains won the diamond medal and perfect score of 1,000 plus 5, being the only one who has ever received that honor from the F. A. M. The contest was held June 29 and 30. Walter's motorcycle was a single cylinder with a piston displacement of 30.13 cu. in. and was rated at 3½ horsepower.

"The world's economy record was won just a few days later by Walter. Under the rules of the F. A. M., Walter on July 3, 1908, was awarded the gold cup, covering 50 miles on one quart and one ounce of gasoline. This still stands as the record for machines under 30.50 cubic inches, with pedaling prohibited. The winning of the gold cup by Walter was all the more noteworthy because he had had no intention of entering the contest and used a brand new machine taken out of the stock of the Thomas-Roberts Company, at that time our New York dealers, and had no opportunity to tune it up.

A Foothold in the East

"Walter's invasion of the East was exactly what we needed then to put us on the map. As a comparatively young concern our reputation prior to that time for building motorcycles with speed, power, dependability and low gasoline consumption was not very extensive, but the F. A. M. meet in 1908 with Walter winning the diamond medal, 1,000 plus 5 score and gold cup attracted wide attention with the result that our standing as motorcycle manufacturers was assured. It has always been Walter's way that whatever he goes into he goes into right."

At this moment the flashing of a green

(Continued from page 58)

and white light summoned Arthur Davidson to the nearest telephone and as the urgency of the call required his attention elsewhere in the factory, just as the red light had called Walter Davidson a short time before, there was nothing to do but wait a bit for the answers to further questions as to when Walter was married, his family and the stock question concerning "your favorite sport," without which no biography really is complete. When Walter had a few minutes to spare again he disposed of the stock biographical questions in a hurry. "Married in 1910; two boys, Gordon, five, and Walter, junior, three; bowling next to motorcycling my favorite sport," he said. Above his desk hangs a finely-mounted yellowtail weighing 32 pounds that he caught last year at Catalina Island. But when questioned about his prowess as a fisherman he laughed and advised that nothing be said on that subject.

"If it's a fishing story you're after, you had better see Bill, Arthur or Harley," he suggested. "That is the only fish I ever caught." Mr. Harley came in at that moment and hearing the remark laughed heartily.

"When we go fishing Walter rows the boat," he said. "Walter's surplus energy is fine stuff around the factory and in the Harley-Davidson bowling club, but when we go fishing the only way we can use it is to have him furnish the motive power." As a matter of fact, Walter Davidson's chief pleasures in life are almost equally divided between the factory and his home. During the day he gets more fun out of building motorcycles than anything else, and his apparently unending energy and capacity for assimilating knowledge has made it possible for him to learn every end of the business thoroughly and, as a result, he is in touch with every department, and his advice is sought many times a day on a bewildering variety of matters, many of which require technical training and experience.

Studying Walter Davidson at close range there seems to be no better way of summing up than to repeat the closing words of the interview with Arthur Davidson:

"It has always been Walter's way that whatever he goes into he goes into right."

MORE GOOD NEWS FOR OHIO MOTOR TOURISTS

CINCINNATI, Ohio.—One of the finest links in the Dixie Highway, when the improvement of Springfield Pike decided upon recently by the county commissioners of Hamilton county and the engineers of the C. H. & D. railway is completed, will be that road, inasmuch as the improvement in question will eliminate a bad spot at the the C. H. & D. crossing. This is an underpass, which, however, is just wide enough for the car tracks, leaving little room for the motorist.

It is proposed to widen the underpass from 25 to 60 feet, making it uniform in width with the remainder of the road, and enabling traffic to pass in both directions at the same time with street cars. The improvement will cost $85,000.

N. J. GAME WARDEN SHOWS MOTORCYCLE'S WORTH

CLIFTON, N. J.—The motorcycle plays an important part in preserving the game and fish in the northern part of this state. Its value in covering the ground and standing the strain under all sorts of conditions has been demonstrated time and time by Game Warden William C. Klein, of this municipality.

All northern New Jersey is under the protectorate of Mr. Klein and his Indian sidecar outfit may be seen along any of the fields and streams of the state. His duty is to prevent violations of the fish and game laws and in addition Mr. Klein often stocks streams and woods. Recently he had occasion to set out partridge and quail, and in one afternoon, released almost 100 birds between here and Greenwood Lake.

The Morrow Coaster Brake Is Stronger Than it Ever Need Be

The man who rides a wheel equipped with the MORROW COASTER BRAKE is safe. That's the most important essential. There are varying degrees of safety. There's the coasting safety, that means a gradual, jolting grind to a halt on a downgrade. There's the sliding, slipping stop on a level road.

But with the MORROW, you get *real safety*—the sort that means an abrupt, silent, velvety hold on the steepest down-hill—a quick, effective stop from speed on the level path.

Then, too, there is the indescribable delight of the free coasting of the MORROW. One pedal push generally means a block of coasting on the level road. Hills become half as hard to climb—the rider "rests" between pedal strokes.

The dealer who harnesses MORROW quality and MORROW reputation to his stock makes a clean-up in his territory.

Harley-Davidson Service

Each dot on this map represents a Harley-Davidson dealer — a Harley-Davidson service station, where Harley-Davidson riders can expect courteous, intelligent service when touring or when service should be desired.

Each star on the map represents a *special service center,* where dealers from surrounding territory can secure prompt attention on any special or *unusual* service demands.

Riders and dealers say that Harley-Davidson service is the best in the business. We have every reason to believe that it is, for we have spared no expense to make certain that Harley-Davidson owners get unmatched service, not only in the motorcycle itself, but in dealer service after purchasing.

We believe that service is the one most important consideration from the standpoint of motorcycle owners.

Motor Wheel Headquarters
-what it means to the live dealer

Smith Motor Wheel
DETACHABLE

A. O. Smith Company dealers everywhere are *motor wheeling into bigger business.*

As the selling season advances, as pleasant outdoor days multiply and as the natural friendliness towards the Smith Motor Wheel is steadily growing, our dealer representatives are learning more and more just what it means to be Motor Wheel Headquarters in a community.

Every bright red *Smith* that chugs along city boulevard or country lane is humming its song of advertising. People pause. There is a friendly smile of approval. And that's the way new prospects are won for the dealer.

Local advertising in newspapers, linking the dealer with the big national magazine publicity of the A. O. Smith Company, does the rest and your Motor Wheel Headquarters begin buzzing with new business.

Five minutes to attach to any bicycle, a simple demonstration and another sale is made. Profit from new bicycles, tires and accessories are another profit feature for the fortunate dealer whose store is Motor Wheel Headquarters.

You bet it pays! We wish all of our dealers could spend a day at the factory and wade through our correspondence. That's where you may read the story of successful selling. And there are letters by the hundred telling of happy sales records dealers are piling up.

And they tell us that the Smith Motor Wheel *itself* does most of the work of selling.

MOTOR WHEEL DIVISION
A. O. SMITH COMPANY, Milwaukee, Wis.
World's Largest Manufacturers of Automobile Parts

Add Class To Your Motorcycle

Stewart motorcycle accessories have something more than the best built-in quality, backed by nation-wide service.

They have a high grade, snappy appearance that will add real class to your motorcycle.

You can't expect a motorcycle to look the part if you put on a cheap, flimsy, shabby looking warning signal and speedometer.

The Stewart Motorcycle Speedometer looks every bit the reliable, sturdy, accurate instrument thousands of motorcyclists have found it to be. It costs only $10 complete.

Get yours today.

Nothing will dress up your motorcycle as much as the handsome, up-to-date Stewart Motorcycle Warning Signal.

We are able to put a price of $3.50 on this certain safety signal because our volume is now doubled and we make and sell more than all our competitors combined.

All your friends will appreciate the class of Stewart accessories on your motorcycle, for they are the best known in the world.

PROVIDENCE LANDS F. A. M. CONVENTION

Substantial Support Given By Chamber of Commerce Prompts Directors to Award National Meet to Rhode Island Metropolis; Tentative Dates Set for July and August

PROVIDENCE, R. I., May 23.—After a lively discussion, nation-wide in scope, which has had many of the most progressively aggressive motorcycle clubs in the country up on their toes rooting hard for their home towns as the best possible places for staging the national convention, the directors of the F. A. M., upon mature consideration of all the claims laid before them, have decided on Providence as the scene for this year's gathering of motorcycle fans.

This announcement was made on Monday by President A. B. Coffman, who stated that no definite dates had yet been determined. From those "in the know" here, however, comes the report that the convention will be held on either July 26-27-28-29 or August 9-10-11-12. But these dates are only tentative, and it still remains for the directors to choose.

Perhaps the strongest factor in swinging the national meet to the metropolis of Rhode Island is the substantial support which the local chamber of commerce has accorded to the presentations of the Providence Motorcycle Club, which won over all but one of the directors, and he failed to cast a vote either one way or the other.

In recognition of his whirlwind activities, which resulted in large measure in securing the convention, A. B. Swenson, the Indian distributor, has been selected chairman of the Providence committee which will have charge of the convention arrangements. It was Mr. Swenson who forcibly brought before the chamber of commerce the advantages which would accrue to the city from the national gathering of motorcyclists.

A rollicking good time is promised for all those who attend and tours are already being planned from various sections of the country. The tentative program as now drawn up includes motorcycle races at the Narragansett Speedway, hill climbs, boat rides, clam bakes and a host of other things that will make this year's convention, according to President Coffman, "the most successful in the history of the organization."

AD MEN TO DISCUSS MOTORCYCLE PLANS

M. M. A. Calls Them Into Session at Milwaukee on June 13 to Evolve Plans for Business Betterment—Manufacturers Meet Later

MILWAUKEE, Wis., May 23.—Plans are well afoot to boost the motorcycle by the employment of tactics similar to those employed by the "Million Bicycle Committee" came to light when President Henderson of the Motorcycle Manufacturers' Association called a special meeting of the advertising managers of all the members of that association to be held at the Hotel Pfister, here, on Tuesday, June 13, at 10 o'clock; the ad. men's convention occurs a day prior to the regular meeting of the manufacturers' organization.

The advertising men will get together with the avowed purpose of discussing ways and means of making the motorcycle more popular, and while as yet no details of the plans to be discussed there have leaked out, undoubtedly sales promotion plans as well as publicity plans will be advanced and perfected and the organization wheels will be started to get them under way.

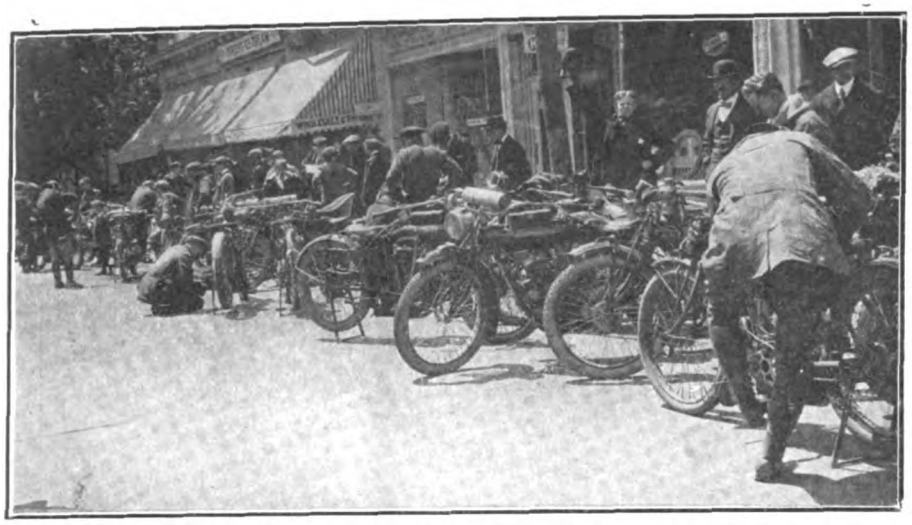
TWO SCORE START; 32 FINISH JAMAICA RUN

Spills Are Many on Annual Endurance Contest But Five Solo Teams Pull Through Within Time Limits—Indian Featherweight Among Survivors



Competitors at Start in Front of Hurvin's Agency, Jamaica

JAMAICA, N. Y., May 22.—Out of a field of forty starters in the annual endurance run of the Jamaica M. C. yesterday, 32 completed the course of over 200 miles. The survivors included an Indian Featherweight, three Indian sidecars, a Harley-Davidson sidecar, and an Indian tandem, the remainder being solo entrants. Five Indian teams came through with complete membership in each case. The sole Henderson representative, John Cobban, Jr., came through in ample time. Although official returns will not be in for a few days, it is estimated that the Team Cup will be awarded to Indian Speedway team, consisting of Calvin Webber, J. U. Constant and Sam W. Hanna.

The start was made from Hurvin's headquarters, the first man checking out at 7:10 a. m. Inside of 12 minutes the entire field was off for Seaford, 18 miles out. As far as East Islip and Patchogue the roads were fair, but on cutting back via Deer Park and Farmingdale bad stretches were encountered, sand and ruts predominating. Many riders lost the course here, due to signs having been removed by some malicious parties. The first secret check was in Wyandotte. Most of the competitors reached the noon control in this city within schedule time. In this stretch Conaty, Harley-Davidson, had repeated tire trouble and did not check at the noon control. Sant Angelo, Harley-Davidson, spilled near Deer Park and retired.

The afternoon section saw all but one survivor start. Merkel, Excelsior, could not get started and was declared out. Roslyn was the first check on this trip and shortly after passing this town the field ran into the second secret check. Roads were good to Port Jefferson and then tough going was once more encountered. Many spills were taken on the road between Comack and Smithtown, and several withdrew at this juncture. Carlsten, Harley-Davidson sidecar, with Mrs. Bob Brazenor as passenger, hit a horse and buggy near Smithtown,

(Continued on page 21)

"LITTLE FELLERS" PROVE ROAD STAMINA

Cleveland and Indian, with Waughop and Robertson Up, Finish Trial from Newark to Philadelphia and Back with Clean Records; Broken Gas-Line Retires the Excelsior

Entrants in the Run: Left, Jack Neis, Excelsior; Center, C. W. Waughop, Cleveland; Right, E. A. Robertson, Indian Featherweight

NEWARK, N. J., May 21.—Perhaps the official "technical observers"—there were three of them at the start, but after leaving Elizabeth one of them played neutral and became a regular fellow—will tell you that C. W. Waughop, astride a Cleveland, made the trip on 49 2/10 drops of gasoline and a few squirts of oil; or that E. A. Robertson, with his long limbs wrapped around an Indian, covered the course and only changed gears twice. But the ordinary onlooker who followed the lightweights in the first officially-observed two-stroke lightweight run of the New Jersey Motorcycle Club, and incidentally the first affair of the kind to be held in this country, from Newark to Philadelphia, knows only one thing—that the said Indian and said Cleveland matched stroke for stroke and explosion for explosion

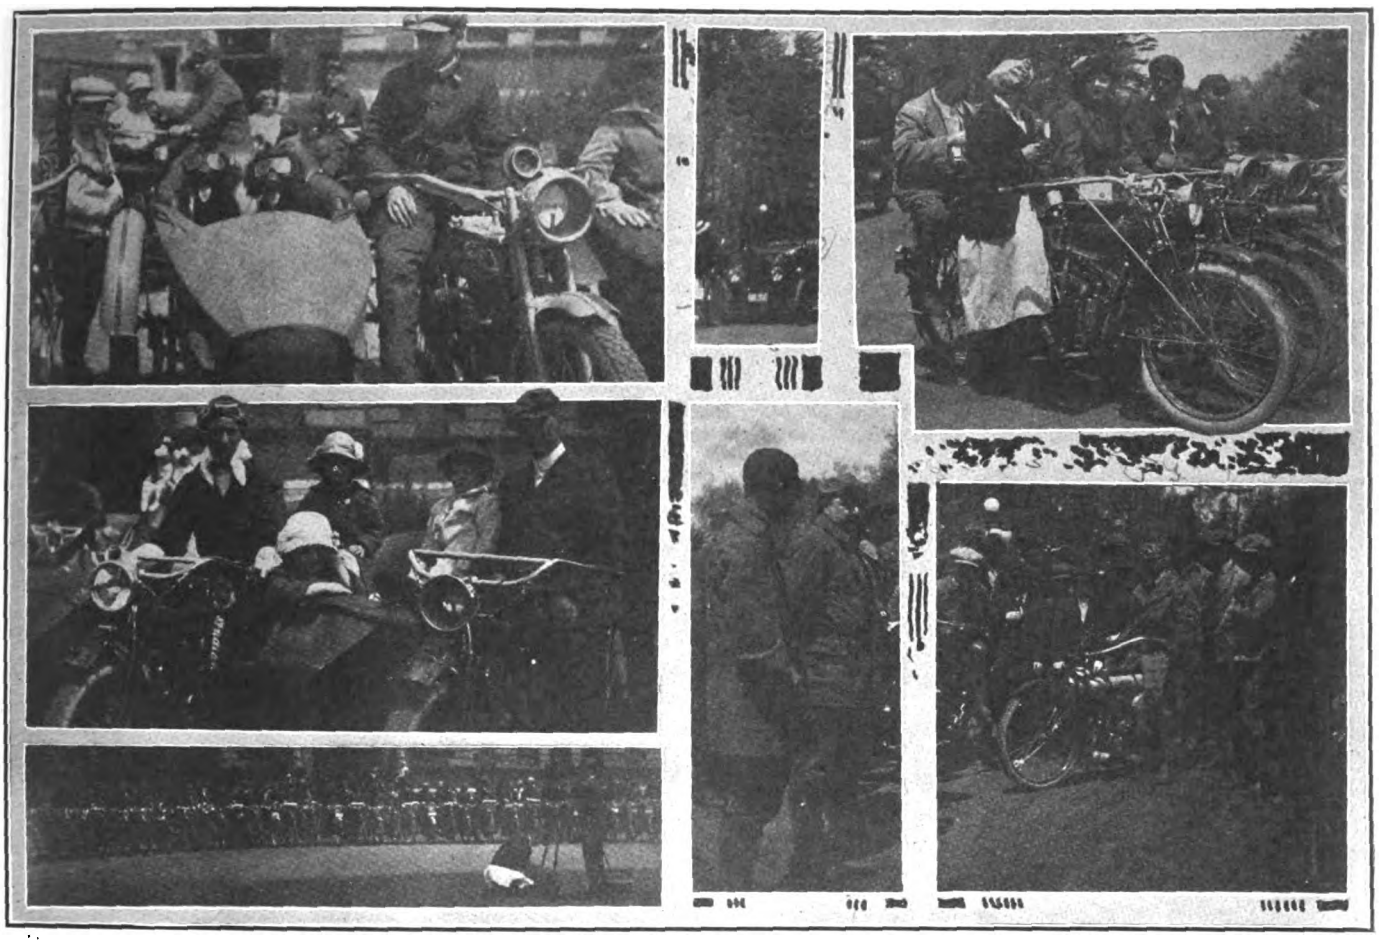
HUNDREDS ATTEND PROVIDENCE M. C's PICTURE-FEST

Swenson Again Plays the Leading Role in Annual "Mugging" Session—Sidecars and Tandems of Enthusiasts Swell Attendance to Unprecedented Figure



Annual Picture Run of the Providence M. C. Picturized—Various Views of the Day's Activities

PROVIDENCE, R. I., May 21.—Motorcycles of all makes, ridden by riders of both sexes, sidecars with small and big loads, with passengers ranging from bird dogs, babies in arms, and children of tender years, to the grownups, gathered together in Roger Williams Park today, where the annual picture taking fest of the Providence M. C. was held.

Over 300 of the two and three-wheel vehicles came from all parts of the state, many cities in Massachusetts, including Brockton, New Bedford, Taunton, Middleboro, Attleboro, Wrentham, Fall River, Woods Hole, Falmouth, Springfield and from many places in Connecticut, including New Britain, Stonington, Pomfret, Danielson, Norwich and Putnam. This was without doubt the largest assembly of this type of vehicle seen in Rhode Island at a similar meet in the history of the state.

The annual "picture run of the Providence Motorcycle Club," as it is called, was arranged under the auspices of B. A. Swenson, the Indian agent in this city. It is the one day of the year when all the motorcyclists get out in full numbers to get "shot" by the camera men. And there were lots of the latter there, including the "movie" men.

The meet was advertised for 11:30. The first machine arrived on the grounds of the park in front of the Roger Williams museum at exactly 11:15. From this time on they came singly, in pairs and in bunches, the Massachusetts contingency coming largely together. By 11:45, the hour Mr. Swenson and the camera men arrived, it was estimated that there were fully 325 cars grouped about the spacious grounds.

Shortly after the arrival of Mr. Swenson, William Mills arranged the great circuit camera and then began the work of posing the "subjects." The single motorcycles were grouped first. Placing them in a circular position was no easy task and it required about 15 minutes to get the 120 machines in line for this. After the first group was taken, then came the machines with sidecars; 75 were included in this group. Then came the rest in two groups of 50 to 100 machines.

During the taking of the pictures, Mr. Swenson made an announcement that there would be a run to Hillsgrove to give the visitors an opportunity to view the race tracks.

BAY STATE 3-DAY RUN TO BE A HUM-DINGER

"WE have sixty-four entries to date for the big three-day run of the Bay State M. C., May 28-30," heliographs the indefatigable Jes Campbell, from Boston, Mass., "and from present indications we are going to be able to put across a history-maker for this section of the country. Everybody's enthusiastic, there are quite a few entries still in prospect and you will be safe in saying that this whole program is going to be a regular hum-dinger."

If that's the way Jes feels about it, the odds are fifty to one that the Boston-Buffalo endurance affair will prove mighty interesting from start to finish, because if there is any motorcycle booster east of the Rockies who knows an endurance run when he happens upon it, Jes is that booster. He has entered a Harley-Davidson sidecar team.

HERE'S THAT BIG CYCLE PARTS PROGRAM

Any Tradester Who Finds a Dull Moment in the Five-Day Affair at Atlantic City Will Be Permitted to Make a Speech About It From the End of Young's Pier

NEW YORK, May 22.—Well, folks, that five-day program for the 1916 convention of the Cycle Parts Industries at Atlantic City has received the finishing touches, and it is only fair to say that it meets all expectations—and then some. Of course, programs are only programs, and it is the spirit of the participants that puts the Success Punch in any trade affair, but when you find a combination of balance and ingenuity in the program and a trainload of old-fashioned enthusiasm to back it up—as is always the case at the Cycle Parts seaside conventions—the ultimate outcome is certain to reflect credit upon all concerned.

Which is just another way of saying that Committeemen Surre and Morehouse have framed a jim-dandy layout of attention-getters for the five days from July 31 next to Friday, August 4, inclusive, and that the convention crowd knows from experience how to make the most of the opportunity.

The only detail that cannot be announced at present is the title of the play that will be witnessed by the conventionites on Thursday, and that's a small matter. If it's in the Surre-Morehouse program it's sure to be satisfactory, say the wiseacres, "so we should agitate ourselves!"

MONDAY, JULY 31

10:00 a.m.—Golf.
3:00 p.m.—Committee meetings.
8:00 p.m.—Steeplechase Pier.

TUESDAY, AUGUST 1

10:00 a.m.—Golf, qualifying.
3:00 p.m.—Joint meeting of the Jobbers Association, Cycle Parts and Accessories Association, Bicycle and Motorcycle Manufacturers, to hear the report of the "Million Bicycles" Committee, and other special business.
8:15 p.m.—Theatre party at Keith's Garden Pier Theatre.

WEDNESDAY, AUGUST 2

10:00 a.m.—Ball game between teams representing the Jobbers and Manufacturers.
3:00 p.m.—Meeting of the Cycle Parts and Accessories Association.
Meeting of the Cycle Jobbers' Association of America.
Meeting of the Motorcycle Manufacturers' Association.
5:00 p.m.—Meeting of the Bicycle Manufacturers.
8:30 p.m.—Bowling contest, Columbia alleys.

THURSDAY, AUGUST 3

10:00 a.m.—Joint meeting.
3:00 p.m.—BICYCLE ROAD RACES—Ventor.
8:00 p.m.—Theatre party Nixon's New Theatre.
11:15 p.m.—Cabaret and dancing, Hotel Islesworth.

FRIDAY, AUGUST 4

10:00 a.m.—Joint meeting.
2:00 p.m.—Final in golf tournament.

BAKER IS STRONG FOR U. S. NOBBYS

Record-Breaking Transcontinentalist Gives Much Credit to His Tires

Advertising Manager Ashcroft of United States Tire Co., With Baker at Finish of Run

NEW YORK, May 22.—Folks who have had a chance to talk with E. G. Baker since his arrival in New York after his record-breaking trip across the country in an eight-cylinder Cadillac roadster have been impressed by "Cannon Ball's" enthusiasm over the service given him by the United States Nobby tread tires with which the car was equipped. "I sometimes feel that it would have been impossible for me to get through without just the kind of tire service that those Nobby treads gave me," says Baker.

The accompanying photo shows Baker perched upon the U. S. tires on his Cadillac with Advertising manager Ashcroft, of the United States Tire Co., at the trancontinentalist's right. It will be noted that Manager Ashcroft is wearing a smile that speaks volumes concerning his satisfaction over Baker's most recent performance.

Since Baker's arrival in New York his motorcycle friends have again revived the rumor that he will soon tackle another cross-country trip by motorcycle with the idea of lowering his own cycle record. "But what's the use?" inquires 'Bake.' "If some other chap will only get out and beat my motorcycle mark he will find me after him in no time; but there's no sense in a fellow losing sleep when he already holds the record."

STERLING PLANT NOW AN ORDNANCE WORKS

BROCKTON, Mass.—The plant of the Sterling Motor Co., in this city, has been purchased by the Consolidated Ordnance Co., a munitions firm. The plant was for years engaged in the manufacture of Eagle and M. M. motorcycles, the Sterling company being the successor of the pioneer American Motor Co. The ordnance firm will use the Sterling factory for making shrapnel, cartridge cases and shells.

"MOSLER ON SPARKPLUGS" IS VALUABLE BOOK

OF INTEREST to sparkplug users in motorcycle lines is the booklet just issued by A. R. Mosler & Company, of Mt. Vernon, N. Y. This booklet, which has the title "Mosler on Spark Plugs," gives valuable information on gaps between the electrodes, reaches and the necessary data to be supplied in order to get the proper plug for any motor. This is followed by a table of sparkplugs of Mosler make for all motorcycles, automobiles, and tractors.

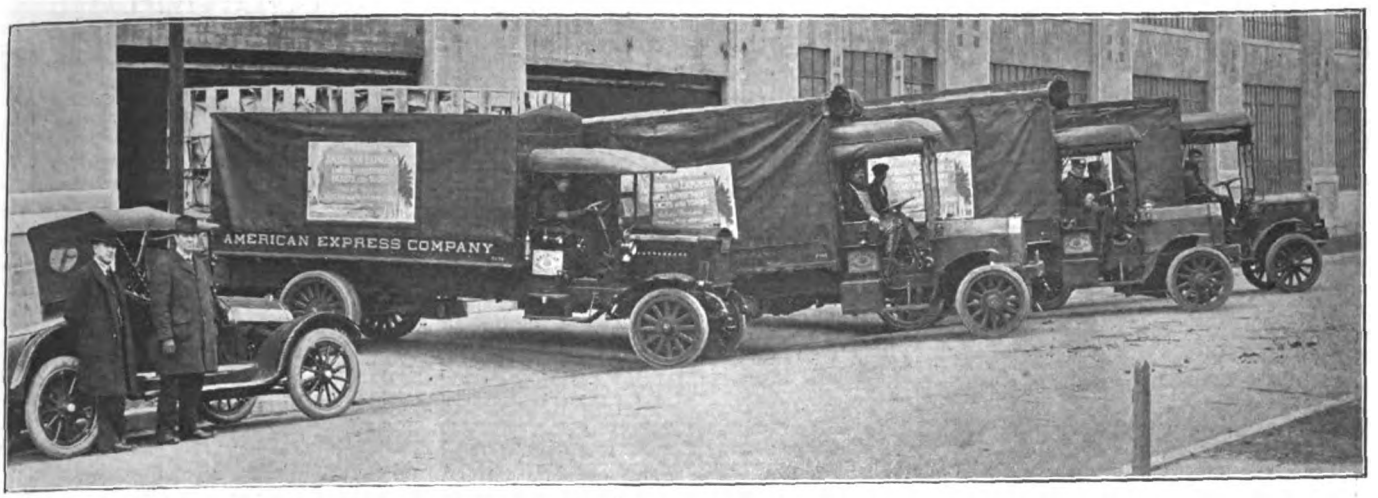
HOW HAVERFORD CYCLE HEADQUARTERS GETS 17-3 EXCELSIORS



Motor Trucks Containing Crated Big X Twins Which Arrived in One Carload Shipment in Philadelphia, Pa., For the Haverford Firm at Market and Fifth Streets. This Is but One of Four Similar Shipments Which Have Been Received by the Company

BOSCH COMPANY AGAIN OFFERS TROPHY

Well-Known Ignition Specialists Follow Annual Custom of Putting Up Handsome Cup for National Amateur Champion

NEW YORK, May 22.—Following its annual custom, the Bosch Magneto Co. has again donated to the F. A. M. a handsome silver trophy to be competed for by amateur riders at the National Meet of the Federation in July. The trophy, as in past years, will be awarded to the contestant scoring the greatest number of points in the National championships. The F. A. M. Competition Committee, as a whole has tendered a vote of thanks to the Bosch company in appreciation of its consistent efforts to keep amateur motorcycle racing on the plane of true sportsmanship.

In connection with the Bosch trophy announcement, Chairman John L. Donovan, of the Federation Competition Committee, calls attention to the fact that State F. A. M. organizations, clubs and other promoters should take steps at once to run off the State championships. Quick action is needed in order to permit the winners of the State championships to enter for the National events. Chairman Donovan invites all F. A. M. workers to write him without delay if they are in need of assistance in connection with the staging of the State programs. He will give prompt co-operation.

HAVERFORD NOW IN LARGER CLEVELAND QUARTERS

CLEVELAND, O.—The demands of increasing business have been such that the quarters of the Haverford Cycle Co., at 235 Superior avenue, this city, have been found somewhat inadequate, and a change of address has been made. The firm has moved its establishment to 405 Superior avenue, where better accommodations have been obtained and where 6,000 square feet of floor space will be utilized.

The floor arrangements in the new location duplicate those in the main Haverford office at Philadelphia, Pa. Everything which can facilitate the usual prompt service to Haverford customers will be done in the new place.

REMY FLOOR AREA TO BE 170,000 SQUARE FEET

ANDERSON, Ind.—Additions are being completed for the factory of the Remy Electric Company, maker of Remy lighting and ignition outfits for motor vehicles, which will give 170,000 square feet of floor area for manufacturing purposes. This makes the Remy factory the largest devoted exclusively to the production of electric lighting and ignition apparatus. A further addition is contemplated in the near future, to meet the steadily-increasing demand for Remy products here and abroad.

The Boston branch of the Remy firm has been moved from 214 Pleasant street to a better location in the Motor Mart at Park Square. A Remy parts station has been established at Houston, Texas, in charge of the Hurlburt-Still Electric Company, at Capitol and Fannin streets, for the convenience of Remy patrons in Texas.

MACHINE GUN CAR CHIEF ARTICLE IN "DEALER"

PREPAREDNESS in the form of the new Harley-Davidson machine gun car occupies the greater part of the May edition of the *Harley-Davidson Dealer*, the house organ of the makers of the Silent Gray Fellow, in Milwaukee, Wis. The opening chapter and the center pages are given over to the subject, the latter pages showing the outfit complete.

The electric system is described in full detail in eight pages with profuse illustrations. The remainder of the issue is given over to dealers and speedsters' matters. On the front cover is the forward view of the machine gun car.

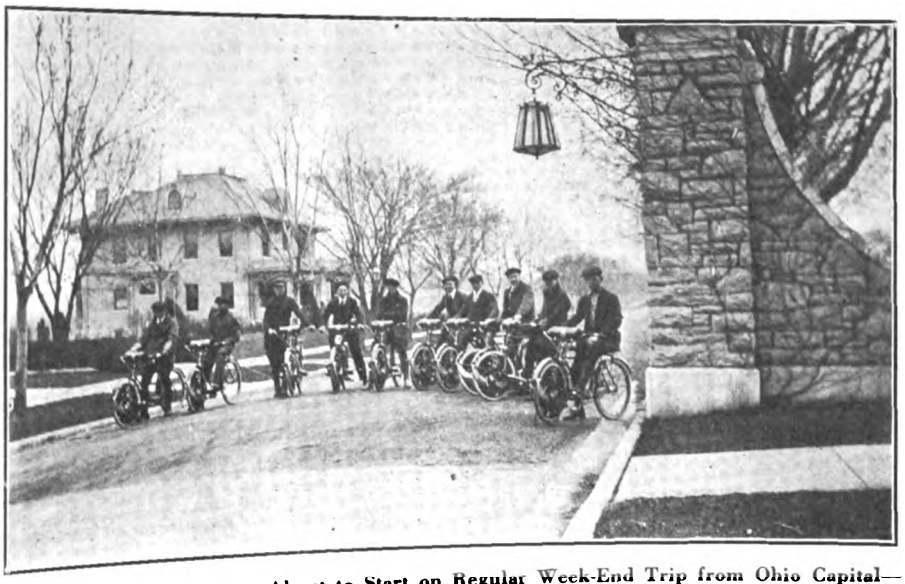
HERE'S A HAPPY DAYTON FAMILY CIRCLE



Motor Bicycle Enthusiasts About to Start on Regular Week-End Trip from Ohio Capital—Runs of This Kind Are Growing in Favor All Over the Country

GROWING COMMERCIAL DEMAND FOR THOR MACHINES

CHICAGO, Ill.—Export business continues to boom at the plant of the Aurora Automatic Machinery Co., and one of the latest shipments to go out comprised twelve Thors for Madrid, Spain. Backing up this export activity at the home of the Thor is a marked domestic demand for the commercial outfits. A few days ago five Thors were sold to the Commonwealth Edison Co., of Chicago, for use in the line department. Two Thors have been placed with the Consumer Co., also of Chicago, the largest coal and ice distributors in the city. These machines will be used in the paymaster's department, and will replace six men who formerly traveled on street cars.

The People's Gas Light & Coke Co., of Chicago, which has quite a number of Harley-Davidson motorcycles in use, and which has used that make exclusively for several years, has just purchased a Thor sidecar outfit.

COLONEL POPE RETAINED AT HEAD OF N. A. M.

AT the annual meeting of the Board of Directors of the National Association of Manufacturers at the Waldorf-Astoria on May 20, New York City, following the conclusion of its twenty-first annual convention, Colonel George Pope of Hartford, Conn., was re-elected for his fourth consecutive term as President of the association. Other officers re-elected are Treasurer, Henry Abbott, General Manager and Assistant Treasurer, J. P. Bird, and Secretary, George S. Boudinot, all of New York.

BURGLARS PAY A VISIT TO RISDEN'S STORE

LOS ANGELES, Cal., May 15.—Thieves early today entered the Cleveland Motorcycle store of C. Will Risden, opened the safe and departed with $350 in cash. Entrance to the building was gained by breaking a skylight in the roof and descending into the store by a rope. The safe was opened by the sand-papered finger method.

Detectives who are working on the case are of the opinion that the theft was accomplished by someone who was familiar with the premises, and finger prints on the safe and skylight are expected to disclose the thief's identity.

CHAMPION FLOAT ATTRACTS IN CLEVELAND PARADE

CLEVELAND, O.—The unique sidecar float shown herewith was one of the chief attractions in the recent motorcycle parade held by the Haverford Cycle Co., of this city. The sidecar was

equipped with a bower or arch made from Champion cartons, while the front of the car carried the Champion beauty on her globe.

U. S. RUBBER GOLD NOTES ARE ALL PURCHASED

NEW YORK.—The $2,000,000 remainder of the issue of three-year 5 per cent. Morgan & Wright gold notes issued by the United States Rubber Company, has been taken by Lee, Higginson & Company, of this city. The issue amounted to $5,000,000 in all.

The same banking firm took the $3,000,000 in notes that the company issued some time ago. They are secured by Morgan & Wright properties of the company and are due December 1, 1918.

MRS. CRIST ENTHRALLS BIG CROWD AT RECITAL

CHICAGO, Ill.—It will no doubt be remembered that a short time ago Mr. R. C. Crist, the well-known motorcycle distributor, in Chicago, married a Miss Ruth Olson, a very talented pianist.

Tuesday, May 16, Mrs. Ruth Olson Crist gave a piano recital in the Florentine Room of the Congress Annex Hotel, and a very large attendance was in evidence; as a matter of fact, the hall should have been twice as large to accommodate the enormous crowd. The recital was a huge success, Mrs. Crist playing eight selections, the seventh selection being the Carnival by Schumann, which lasted 33 minutes. Mrs. Crist is to be highly congratulated on her wonderful talent, and if she could only put music into sales talk, Mr. Crist would sell more Excelsiors in one year than all the dealers combined.

After the recital Mrs. Crist received quite a large number of bouquets from her many friends, and in appreciation of same she played an encore. The only happening of the evening to mar the program was that Fred Hart, who handles the Excelsior advertising, lost a white glove.

It was the consensus of opinion, by those who attended, that they hoped to have the pleasure of hearing Mrs. Crist at another recital in the very near future.

MILITAIRE COMPANY WOULD CHANGE NAME

BUFFALO, N. Y., May 23.—The Militaire Autocycle Company of America, Incorporated, this city, manufacturer of the Militaire motorcyle, has made application in the Supreme Court to change its name to the Militaire Motor Vehicle Company of America, Incorporated. In its application the company states that the name desired tells more accurately the purposes and activities of the corporation, as set forth in its incorporation papers.

ANDERSON BECOMES A CHICAGOAN

CHICAGO, Ill.—A. A. Anderson, superintendent of the motorcycle factory of the Aurora Automatic Machinery Co., has been in the habit of coming into Chicago from Aurora, where he had his home, a distance of 37 miles, every day since the Thor factory was moved to Chicago, but he has now decided to make his home in Chicago, where he can be on the job at all times.

FINDS INDIAN CHEAPER THAN RICKSHAW

Traveler in Pekin Has Proved Superiority of Motorcycle to Regulation Form of Transportation in Chinese Capital—Says Field Is Good

MOTORCYCLE riding in Pekin, China, is cheaper than getting around in a rickshaw, according to H. O. Stone, traveler for a cigarette company in that city. He rides an Indian to cover his territory, and finds it much more convenient than any other form of transportation, also.

"A driver must keep his wits about him," says Stone, "as streets are narrow and filled with rickshaws. The Chinaman always walks with his head in the air, never looking where he goes or at what is coming.

"The horn shipped with his Indian machine is an excellent one, but it would take something like a cross between the explosion of a 42-centimeter gun and a clap of thunder to avoid accidents."

His firm has two Indian motorcycles in use. The foreigners who ride have been planning a trip over the highways to Tientsin, a distance of 150 miles over the worst Chinese roads, which were made about 2,000 years ago and have constantly been unmade, says Stone, ever since.

Getting the Chinese interested, in his opinion, could be accomplished easiest by starting them with a machine like the Indian Featherweight, because it is easily handled. The Chinese are very susceptible to the pleasure of doing what foreigners do, and it is expected that this desire to emulate will result in quite a number taking up riding. Many thousands ride bicycles in China.

It is an especially good field for motorcycles, Stone thinks, because the roads while not suitable for motor cars, offer less difficulties to motorcycles.

NO-LIFT STAND HAS TWO OPERATIVE POSITIONS

BROOKLYN, N. Y., May 19.—A stand which gives two operative positions instead of the usual one has been brought out by G. Bowen and John J. Hazelton, of this city, under the name of the No-Lift. The two positions are the normal in which the rear wheel of the motorcycle is raised from the road to the regulation height, and the secondary, in which the wheel is raised to a greater height to permit its ready removal. The construction of the stand is such that the machine can be put on the stand with the minimum of effort, a slight pull being all that is necessary, even for the heaviest machine.

The stand is made up of a triangular construction on each side, both sides being connected at the rear with a cross-bar. There is a step or foot-piece on the left end of the cross-bar. The base of each triangle is of T-section, while the front and diagonal members are made of flat stock of ample size to take care of all loads. The apex of the triangle is slightly below the point where the construction pivots to the frame of the motorcycle and each diagonal member has a short arm projecting forward.

When the machine is to be put on the stand, the base is dropped to the ground and the foot applied to the step, when the machine can be drawn into position by pulling on the carrier. For the secondary position, the machine is further pulled to the rear and the stand moves upward until the short arm on the diagonal member abuts against the stand lug on the motorcycle frame. The machine rests on the rear angle of the triangle and is sufficiently raised to enable the back wheel to be withdrawn.

The No-Lift stand can be fitted to any motorcycle and will latch with the latch already fitted to the machine. It is priced at $3. Communications should be addressed to Mr. Hazelton, at 377 Quincy street, Brooklyn.

THORS SHIPPED TO DENMARK AND HOLLAND

CHICAGO, Ill.—Fifty light Thor twins were shipped last week to Hans Lystrop, of Slagesle, Denmark, who has been working up a lively demand for these machines of late.

A second export shipment of Thors was to H. Englebort, the Hague, Holland, comprising twelve machines. Reports from both of these Thor representatives are to the effect that the motors have given excellent returns under endurance tests as well as in general road service.

Both the Denmark and Holland shipments were equipped with United States chain tread tires.

CAHILL JOINS THOR FORCE

CHICAGO, Ill.—J. J. Cahill is a recent addition to the service department of the Aurora Automatic Machinery Co. Mr. Cahill was formerly in the storekeeper's department of the People's Gas Light & Coke Co., of this city, and is well qualified for his new duties.

NEW CLEVELAND ENGINEER

C. A. NERACHER, chief engineer of the Cleveland Motorcycle Mfg. Co., has accepted a similar position with the Essex Motor Truck Co. of New York. W. G. Johnson, formerly Mr. Neracher's assistant, has succeeded him as chief engineer.

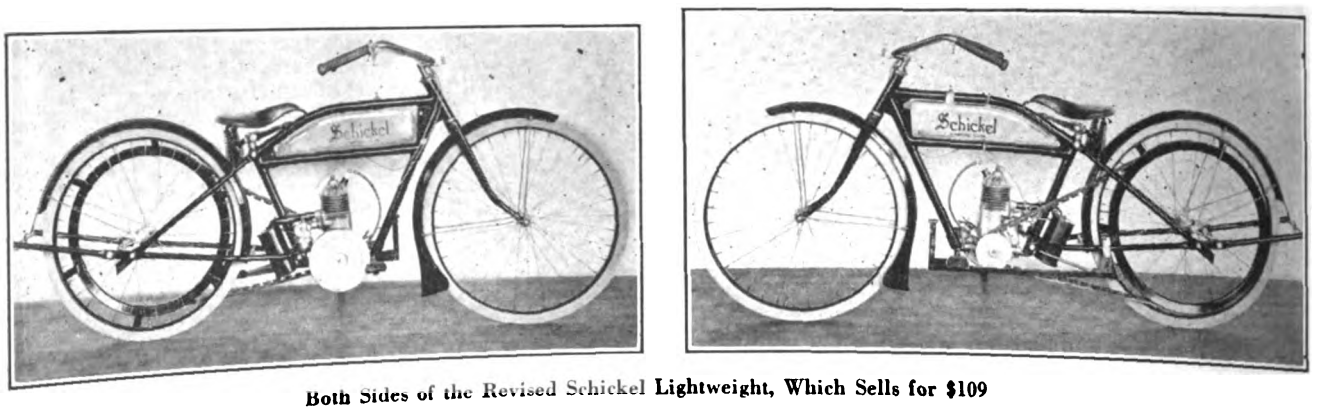
NOVEL MAGNETO ON 1917 SCHICKEL LIGHTWEIGHT

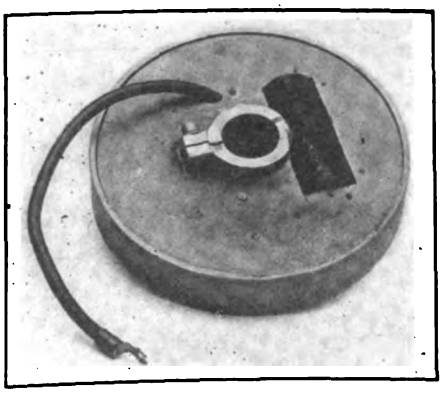
Pioneer Two-Stroke Manufacturer Offers Machine With "Built-In-Flywheel" Magneto, New Muffler, New Tank and New Front Guards for $109—Many Minor Improvements



Both Sides of the Revised Schickel Lightweight, Which Sells for $109

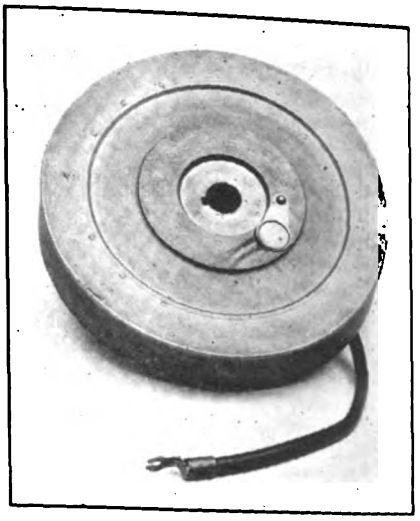
STAMFORD, Conn., May 23.—Pioneer in the manufacture of two-stroke motorcycles so far as America is concerned at least, and pioneer also in the production of two-stroke lightweight machines, the Schickel Motor Co., maker of Schickel motorcycles, is once again setting the pace. It has adopted on its 1917 offering here announced for the first time, an innovative construction which bids fair to come into general use throughout the motorcycle field in time. The outstanding feature of the 1917 Schickel offering—that is, the Schickel lightweight offering—is the magneto, which is unlike anything that has been seen before in the motorcycle field.

Taking its cue from the large measure of success which has attended the use of a magneto of that type in the outboard motor field, and on the Ford car, the Schickel Motor Co. has incorporated the ignition device in the flywheel of its 1917 lightweight, thus at one stroke doing away with the necessity of providing room for the device at the forward end of the motor, and also eliminating the drive system, which the use of the orthodox magneto entails. The arrangement makes the Schickel two-stroke the simplest power plant on the market. The two-stroke principle dispenses entirely with valves, and the gears and cams incidental to their use, while the built-in type of magneto also eliminates gears and sprockets, the only drive taken off the crankshaft being the main belt drive to the rear wheel.



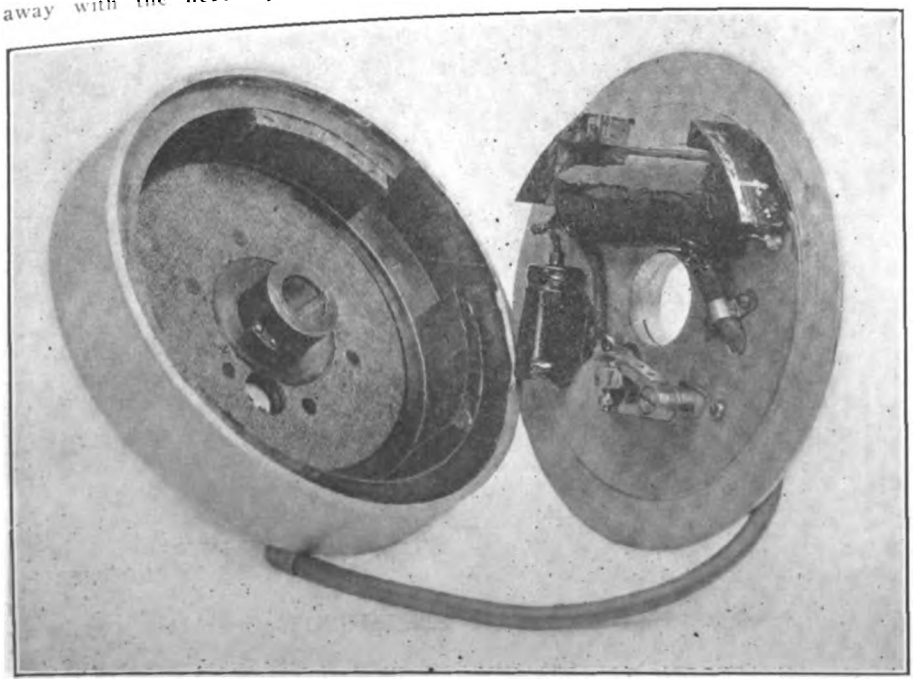
Rear of Flywheel Magneto

This, however, is not the only change which has been wrought in the new Schickel lightweight, which is now coming through the plant. Perhaps, to the rider with an eye for appearance, the new design of pressed steel tank will be the first improvement to attract notice. The new tank, which is made of slightly heavier stock than the old, is finished with neatly rounded corners which add materially to the appearance of the machine. There is also a new muffler of the automobile type, neat in appearance, and embodying original Schickel features, and which effectively quiets the noise of the exhaust.



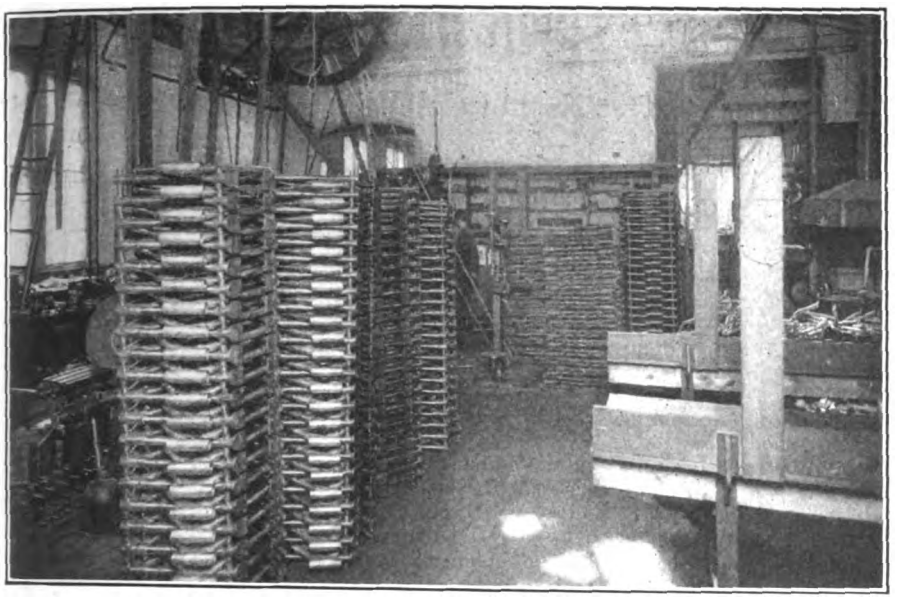
Front of Magneto Showing Timing Port

Also adding considerably to the appearance of the 1917 Schickel lightweight is the new design of front wheel mudguard, which has been given a much longer front extension, and which is also longer in the rear. It is, moreover, formed with a considerable flare at the



New Schickel Flywheel Magneto Dissected

Digitized by Google



One Corner of the Schickel Plant Where the New Lightweights Can Be Turned Out at the Rate of a Score a Day

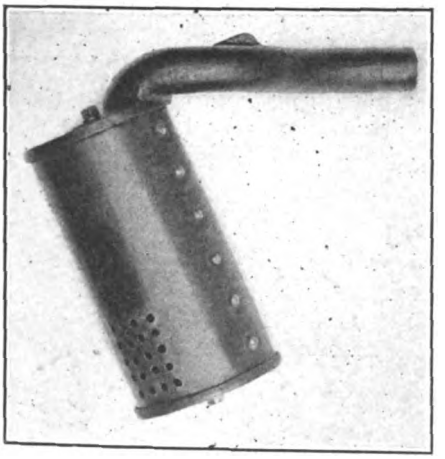
end, which adds to its efficiency as well as to its appearance.

These are the chief features which distinguish the new Schickel offering from the 1916 product. There are many more of slighter import—the brake, for instance, now is lined with Raybestos—as well as many little changes in workmanship and processes of manufacture which go a long way toward making it an even more efficient machine than it has been in the past. Most noticeable among these minor details is the improvement in the finish, which now is comparable with the finish of many higher-priced machines.

New Magneto in Detail

In designing the new magneto the flywheel, which on older models was on the left side of the motor, has been increased somewhat in size and has been shifted over to the right side of the motor. The wheel is made with a heavy rim and a webbing which is flush with the outside of the wheel. Between the outer rim and the hub, however, there is considerable space and this is made use of to house the non-rotative parts of the magneto. Attached to the inside of the rim of the flywheel are a pair of permanent magnets which, of course, rotate with the flywheel. On a plate fastened to a boss extending from the crankcase of the motor, and which is made to fit snugly into the opening of the flywheel without, however, contacting with the rim, are carried the armature coils, the circuit-breaker and the condenser. At every revolution of the flywheel the field magnets are brought in proper relation with the armature to induce the igniting current and at just the proper instant a cam mounted on the flywheel hub operates the circuit-breaker, causing the spark to jump the plug gap.

Timing is effected by loosening the clamps attaching the plate to the crankcase boss and rotating the plate slightly in the proper direction to achieve the desired result. As heretofore, the Schickel operates on a "set spark"; that is, there is no provision made for the rider to advance and retard the ignition point. It is, however, set to give the best all-around results, and that the Schickel engineers have not gone far astray on this point is proved by the fact that the 1916 Schickel gave highly satisfactory results on this as on every other score. The armature-carrying plate serves as a very effective cover to prevent the ingress of dirt and moisture; a small door or sight in the webbing of the flywheel and normally closed with a hinged cover provides the means through which the points of the circuit-breaker may be examined from time to time, and by means of which the proper timing is effected.



The Automobile Type Muffler

The new muffler is positioned directly behind the motor, being attached by means of strap clamps to the seat-post mast. The muffler consists of an outer pressed steel shell between two pressed steel headers, and is provided with suitable baffle plates which serve to silence the exhaust, without, however, creating any appreciable back pressure. This is a point in connection with two-stroke motors, where the exhaust is expelled only by the force of the explosion itself, and not by direct piston action, that is of considerably greater import than with the four-stroke motor.

As for the rest of it, the 1917 Schickel lightweight bears all the earmarks of the 1916 product. The motor is of the square type with bore and stroke of 2½ inches, which figures out for a cylinder volume of 12.26 cubic inches. The cylinder is cast integral with the crankcase, provision being made for the introduction of the crankshaft, piston and connecting-rod. Its outstanding feature, aside from the port arrangement, which is perfected to accomplish both inspiration and exhaust with the greatest facility and without causing the spent gases to dilute the new charge, is the cylinder-head which is separable from the cylinder. The attachment is by means of a thread which permits of ready removal and replacement. The joint is made permanently gas tight by means of a copper asbestos gasket. Turning of the head serves to release it from the cylinder or to lock it firmly in place, as the case may be. The cylinders on the 1917 model are finished by means of a new process which ensures a perfect surface and the almost total elimination of gas leakage past the piston.

Automatic Carbureter

The mixture is supplied through the intermediary of a Schickel carbureter, specially made for the Schickel motor. The carbureter is of the automatic type with a single control which acts directly on the barrel throttle-valve. A quick-starting device, which increases the gasoline supply and provides a rich mixture, is provided.

Lubrication is accomplished by mixing the requisite amount of oil with the gasoline, thus doing away with the oil tank and lubricating appendages.

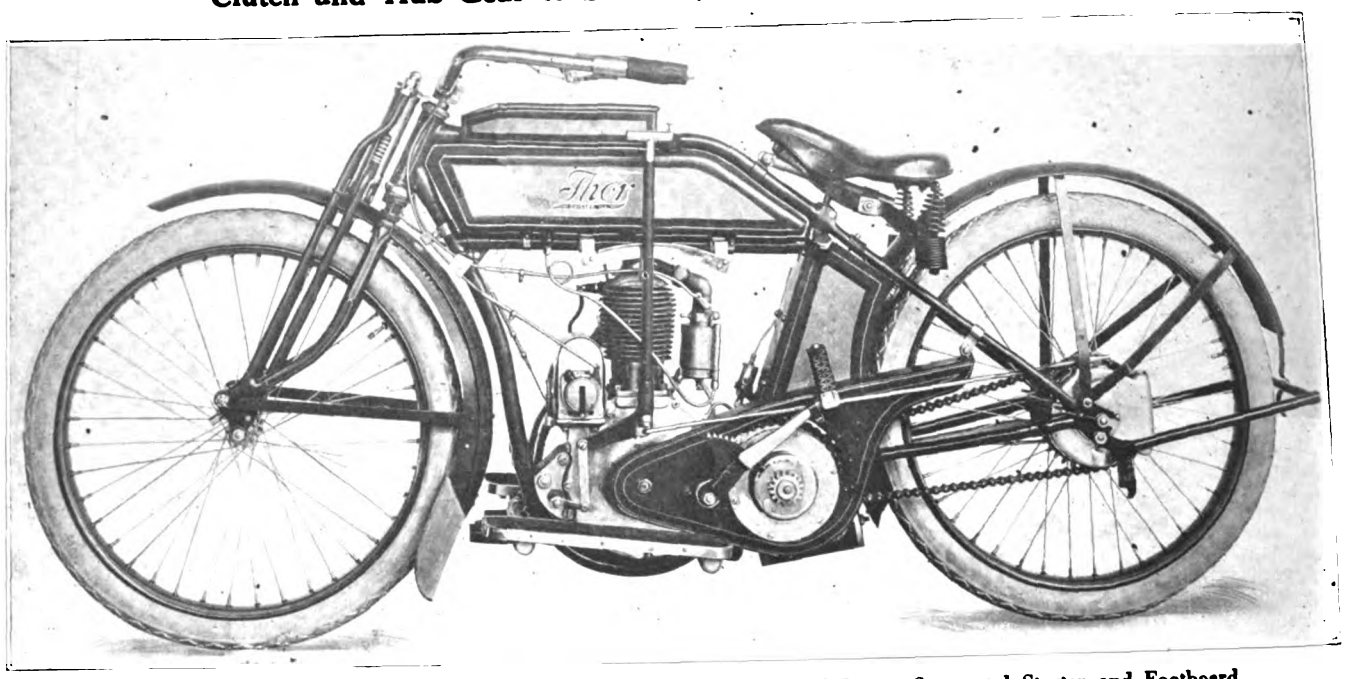
TWO-SPEED SINGLE IS LATEST THOR OFFERING

Aurora Automatic Machinery Company Brings Out New Model With Foot-Starter, Dry-Plate Clutch and Hub Gear to Sell at $200—The Full Specifications



Left Side of New Thor Showing Combined Gear and Clutch Control Lever, Segmental Starter and Footboard

SPECIFICATIONS FOR MODEL 17-Y THOR

MOTOR—4 horsepower; bore, 3¼ inches; stroke, 3.6 inches; piston displacement, 30½ cubic inches. Roller bearings on big ends and drive side of main shaft.
VALVES—Inlet over exhaust, both mechanically-operated; inlet rod has ball-and-socket joints. Both valves readily adjustable.
CARBURETER—Schebler, ¾-inch size, special for this motor.
IGNITION—Dixie magneto.
LUBRICATION—Thor mechanical oiler, without valves; hand-pump as auxiliary.
MUFFLER—Improved Thor type.
STARTER—Thor segmental type, countershaft-acting.
CHANGE GEAR—Thor planetary type in rear hub; operated from clutch lever.
CLUTCH—Dry plate type on countershaft with lever control.
DRIVE—Chain to countershaft and chain to rear hub; ¼-inch pitch heavy duty chains.
HANDLE BARS—Widely supported and cross-braced.
FRAME & FITTINGS—Extra Heavy, reinforced throughout. Rear fork ends designed to make removing and replacing of rear wheel easy.
FRONT FORK—Shockless coil cushion spring fork.
HEIGHT—31 inches.
WHEELBASE—55 inches.
WHEELS—29", 40 spokes, front and rear.
TIRES—29x2¾".
GUARDS—Extra long, rolled edge, separate side splash, leather splasher on front.
BRAKE—Thor coaster brake with foot control on right.
GASOLINE TANK—Capacity, 10 quarts.
SADDLE—Troxel Truform.
OIL TANK—Between seat post mast and rear guard, capacity 3 quarts.
FOOT BOARDS—Very long, rubber covered.
TOOL BOX—Located back of handle bars on tank.
FINISH—Elaborately decorated, two shade Thor blue, paneled tank, tool box and band striping.

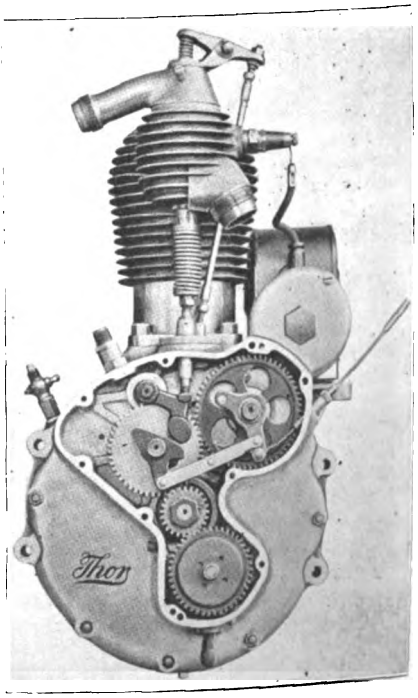
FROM the thriving factory of the Aurora Automatic Machinery Company in Chicago, Ill., comes the latest addition to the Thor line in the Model 17-Y, a 4-horsepower single cylinder machine, with two-speed gear and Thor foot-starter. It will retail at $200.

The motor on the new model is along the familiar Thor lines, with inlet over exhaust, but unlike the big twin models, the rocker for the inlet is not encased. The inlet long rod is fitted with ball-and-socket joints as in previous Thor constructions. The carbureter is a Thor on the machine shown, but a special Schebler will be used. The bore of the motor is 3¼ inches and the stroke is 3.6 inches, with a piston displacement of 30½ cubic inches. The motor is rated at 4 horsepower, but 6 to 7 is claimed for it on test.

Roller Bearings Fitted

Large roller bearings are fitted to the big ends. The flywheels are balanced in a new manner which will enable the rider to throttle the motor down lower and reduce vibration. Chain drive to the countershaft and final drive by chain to the rear hub is fitted. There are extra long roller bearings on the drive side of the motor to take the chain pull. Mechanical lubrication is provided, as well as a sight-feed oiler and hand pump for emergency service. Ignition is by Dixie magneto.

The clutch is countershaft-mounted, with left-hand control. It is of the multiple-plate type, with dry plates. The gearset is the Thor type, hub-located



Power Plant of Model 17-Y

Digitized by Google

and is operated by the same lever which actuates the clutch. The gear is of the planetary type, with a ratio of 3.6 on high and 4.62 on low. The drive chain is ¼-inch, heavy duty type. The brake is the Thor coaster external type, with foot control from right footboard.

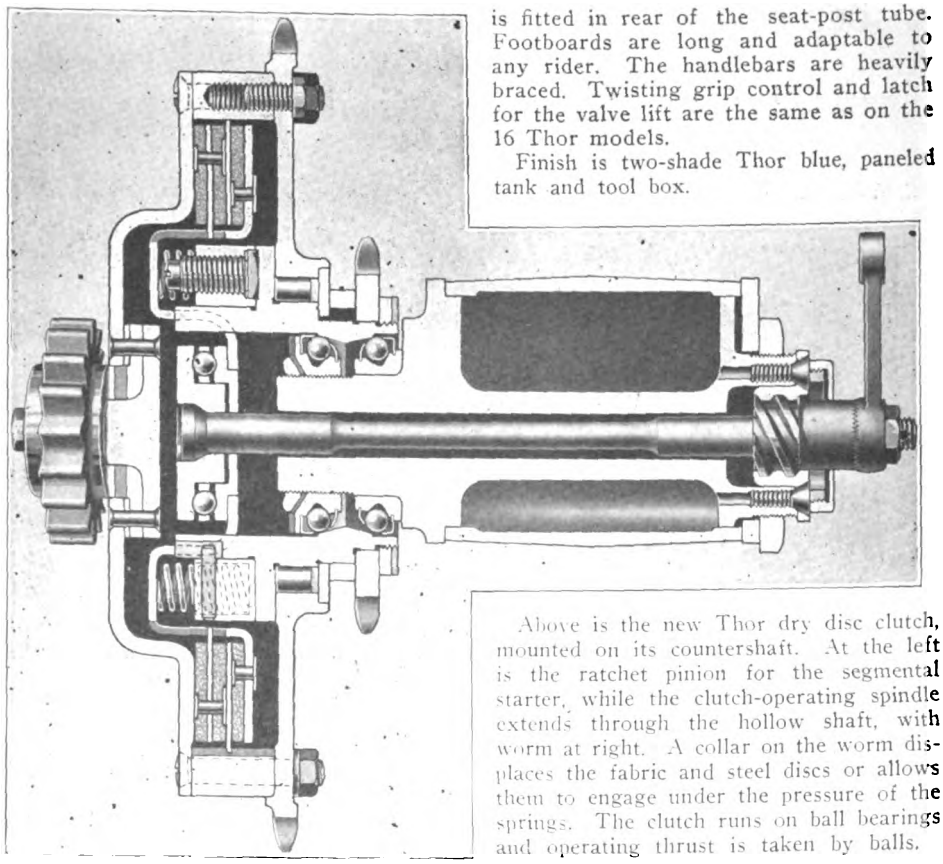
The wheelbase is 55 inches. The motor is centrally located in the lower frame, and while low, gives ample clearance under the crankcase for work on all kinds of roads. The frame is made of heavy gauge seamless steel tubing, with ample reinforcements. Drop-forgings are used throughout.

Single Plunger Fork

The front fork is the same as on the 16-V twin, consisting of a single plunger operating between shock and recoil springs in a cylinder located on the axial line of the frame. The rear fork and mudguard are designed to allow of removal of the rear wheel without lifting the machine higher than when on the stand. Both front and rear guards are fitted with side splashers and there is a leather flap for the lower end of the front guard.

The saddle height is 31 inches normal. The seat post is of the Thor type such as is used on the 16-V twins. A pressed-steel fuel tank is fitted, with a capacity of ten quarts. The oil tank is of steel, lead coated, and holds three quarts. It is fitted in rear of the seat-post tube. Footboards are long and adaptable to any rider. The handlebars are heavily braced. Twisting grip control and latch for the valve lift are the same as on the 16 Thor models.

Finish is two-shade Thor blue, paneled tank and tool box.



Above is the new Thor dry disc clutch, mounted on its countershaft. At the left is the ratchet pinion for the segmental starter, while the clutch-operating spindle extends through the hollow shaft, with worm at right. A collar on the worm displaces the fabric and steel discs or allows them to engage under the pressure of the springs. The clutch runs on ball bearings and operating thrust is taken by balls.

TWO SCORE START; 32 FINISH JAMAICA RUN

(Continued from page 12)

buckling the side-wheel and slightly injuring his passenger. The latter was taken home in her husband's machine.

The other two secret checks were at Jericho and Floral Park. Poor posting of the course is claimed as the reason for a number of riders missing these and the club may have several protests on the matter. Many were delayed at checking stations en route and scores suffered unnecessarily.

The only lightweight entrant, Irving Barnard, Indian, was well up to the others at the finish. There being no competition for the Speedway Cup for lightweights, no contest was declared for this trophy.

Following are the finishers:

Speedway Indian Team—Calvin Webber, J. U. Constant, Sam W. Hanna, all pros.

Indian Solo Team I—Frank P. Baker, Paul Rick, J. F. Carroll, mixed.

Indian Solo Team II—Fred Kaiser, Arthur Eicholz, William Vom Lehn, amateurs.

Indian Solo Team III—Bert Walker, F. P. Bristol, Paul K. Boehm, mixed.

Crotona Team—Victor Pelezarre, Fred Christman, Kenneth Hoffman, Indians, amateurs.

Irving Barnard, Indian Featherweight, pro.; Charles Mutter, H-D, amateur; Sam Bulette, Indian sidecar, pro.; H. V. Mauritho, Indian, amateur; William Diedrich, Indian, amateur; Wallace Stuart, Indian sidecar, pro.*; Al. Deane, Indian sidecar, amateur*; Fred S. Frenger, Indian tandem, amateur.

William C. Bollhofer, Harley-Davidson, amateur; Louis Roeper, Harley-Davidson, amateur; J. G. Davis, Indian, amateur; Harry F. Danfkinch, Indian, amateur; Harvey Edwards, Harley-Davidson sidecar†; Louis Timmerman, Indian, amateur; H. N. Pember, Harley-Davidson, amateur; Edward R. Schroeder, Indian, amateur; John Cobban, Jr., Henderson, pro.

Non-finishers were George P. Conaty, Harley-Davidson, amateur; William Merkel, Excelsior, amateur; John Bankert, Harley-Davidson, amateur; Charles Kopp, Flying Merkel, amateur; A. Sant Angelo, Harley-Davidson, amateur; W. F. Doherty, Indian sidecar, amateur; Jos. Gildersleeve, Harley-Davidson, amateur; Charles Carlsten, Harley-Davidson sidecar, amateur.

(*Teamed with Doherty; †teamed with Carlsten.)

SHEEPSHEAD BAY EVENTS FILL WELL

Entries for Seaside Speedfest, June 4th, Closed May 24—Many Well-Known Local Stars in Lineup

ENTRIES for the two events, which are to be run on the Sheepshead Bay saucer on June 4 in connection with the America Liberty Day celebration, closed on May 24, and both numbers filled well. All of the larger factories are represented; among the more prominent riders who will compete are J. U. Constant, J. J. Cox, Pete Cronin, John DeMott, S. W. Hanna, Warren Edwards and Wm. Metinger.

The track will be open for practice after May 31 only for those who have entered, to whom practice passes will be mailed. The officials are:

Referee, T. J. Mahoney; E. B. Holten, starter; P. T. Winkelstein, assistant starter; Geo. A. Ellis, clerk of course; Gene Coughlin, assistant clerk of course; judges, D. R. Hobart, O. S. Brant, Walter Goerke, Geo. Ashley; umpires, M. Topel, J. French; scorers, C. R. Webber, J. C. Foley, B. Rudderman, C. Moehle, S. Dubon; timekeepers, W. Stuart, A. H. Patterson, F. Kaiser, G. Woods, Robt. Brazenor, H. King, J. Leo Sauer, M. L. Ullman, A. Burt, W. Moehle, John Steel.

Full information concerning the motorcycle end of the program can be had on application to I. W. Barnard, care New York Sporting Goods Co., 15 Warren street, New York City.

RIDER AT FRONT WELCOMES SPRING-FRAME INDIAN

TORONTO, Ont.—In a very enthusiastic letter to the H. M. Kipp Co., Indian dealer in this city, H. F. McCrosson, a Canadian sergeant at the front in France, states how glad he was to have an Indian assigned him for convoy work. He wrote that his back did rejoice in the spring frame Indian.

The roads, he said, were badly cut up and full of little pot-holes.

OLD-TIMERS GET COPS' MOTORCYCLES AT PICNIC THROUGH STRATEGY

Bluecoats Are Fed Up on Barbecued Beef While Picknickers Enjoy a Little Speed

Old Timers Lined Up for the Camera Man at the Barbecue Given in Los Angeles. Photo Sent by Frank Reed

LOS ANGELES.—Was it the first time in history? Some say it was and that whether it was or not it is a sure thing that at the barbecue of the Old Timers' Club a fine bunch of Los Angeles city and county mounted police officers got themselves worsted in a contest of wits. It all happened at the barbecue given by Leon Escalier, vice-president of the International Bank, of Los Angeles.

A special invitation was extended to speed cops to be present and bring their machines. It seems that the old timers who attended this barbecue are much younger in spirit than would be advertised by the whiskers some of them display, and it is reported that some of them wanted a chance to try out the 1916 model motorcycle without any risk of interruption. The photograph proves clearly enough by the presence of the cook upon the right-hand machine that the officers were present at the barbecue, and also that by force or guile their machines passed into the control of the Old Timers.

With the machines beneath the Old Timers, and the officers digesting the banker's barbecued beef, and the splendid boulevard system leading away from the ranch, what a cinch for the Old Timers!

REGULATING HOME GARAGES

NEWARK, N. J.—The Bureau of Combustibles has had so many complaints regarding the wooden shacks built in backyards to store motorcycles, it has decided to regulate the character of these so-called garages especially within the fire-limits. "The flimsy wooden shed that is a menace on account of its inflammable nature must go," says Captain Gasser, "but the fireproof structure will be sanctioned."

McNAUGHTON'S TRIP SHOWS CONDITIONS ARE FINE

SPRINGFIELD, Mass.—J. B. McNaughton, of the Sales Department of the Hendee Manufacturing Company, who recently returned from a tour of observation through the East, Middle West and South, states that conditions in nearly all localities are fine. In fact, he says, in some sections things were exceptionally booming. McNaughton's trip totaled 7,000 miles.

J. B. McNaughton

He left this city on Wednesday, May 17, on a similar trip through Kansas, Nebraska and Missouri. McNaughton will work in collaboration with A. H. Crocker, district manager in Kansas City, in conducting sales conventions for dealers and promoting general publicity in the States mentioned.

100-MILE RACE FEATURE OF MAY 30 LAUREL MEET

WASHINGTON, D. C.—In connection with the run of the National Capital M. C. to Laurel, Md., there will be a race meet at the Laurel track in which five events are scheduled. The first of these will be a two mile amateur race for lightweights, with a gold medal as first prize. The second will be a five mile amateur for 61 cu. ins, stock mounts, while the third will be a 10-mile pro. for 61 cu. ins. stocks. A sidecar race for five miles is slated for the fourth event and a 100-mile pro. open will be the last and the feature of the meet. The first prize in the long race is $150, and the second is $75.

PROGRAM OF SIX RACES FOR NORWICH MEET, MAY 30

NORWICH, Conn.—Six events are scheduled for the May 30 meet of the Connecticut Amusement Association at the Norwich Fair Grounds. These are: 5 mile pro., 30½ cubic inches; 5 mile novice, 50 cubic inches; 10 mile pro., 30½ cubic inches; 3 mile pro., 61 cubic inches; 15 mile pro. and 5 mile consolation, both 30½ cubic inches. Entries will close at 6 p. m. on Wednesday, May 25. Application should be made to C. V. Pendleton, Jr., 35 Broadway, Norwich. Fee for each race is $1.

SECRETARY OF THE SPLITDORF COMPANY

FOURTEENTH IN A SERIES OF BIOGRAPHICAL SKETCHES ON TRADE LEADERS

M. W. Bartlett Began His Business Career Under Auspicious Conditions and Quickly Justified the Predictions of His Friends That He Would "Deliver the Goods"; Prepared by Newspaper Work, Salesmanship Training and Natural Adaptability for the Important Post He Now Occupies With Splitdorf Firm

AFTER having been buttonholed on several occasions and threatened with the displeasure of the Press and other forms of retribution too intricate to consider unless he "came across" with complete and specific information concerning the policies through which he has progressed so rapidly in business, M. W. Bartlett, secretary of the Splitdorf Electrical Company, finally consented to an interview and this biographical sketch is the result.

Mr. Bartlett resorted to all the excuses of the busy man who is approached for personal data. He began by asserting that there really wasn't anything startling to say about himself, and finished with the argument that even if there should be something of interest he didn't have time to recall the details. But the interviewer from **Motor Cycle Illustrated** called up his reserves, rolled out the big guns and demanded the story,—in a deep, hoarse voice. That settled it.

Modesty Personified

When the matter of a portrait was mentioned, Mr. Bartlett again waved a hand in mute protestation. He might find time to give a few details concerning his career and business policies, but the photograph was hardly necessary, and he didn't have one handy,—what the dickens did the interviewer want to reproduce it for anyway? Once more the power of the Press was brought to bear, and, backed up by a threat to have an artist make up a pen portrait from memory, it scared Mr. Bartlett into producing the goods. All of which will serve to give an insight into Mr. Bartlett's temperament, of which modesty is one of the chief characteristics.

Mr. Bartlett is an American by birth, by preference and by compulsion, which accounts in large degree for the traits of character that have aided him on the road to success. Not many young men, however talented, are enabled to start their business life with a private secretaryship, but such was the position to which Mr. Bartlett first brought his initiative and resourcefulness.

His Start with New Departure

The company to which he devoted his initial services was the New Departure Mfg. Co., of Bristol, Conn., his position being that of secretary to Mr. A. F. Rockwell, president of the big organization. Although the work was much to his liking and the surroundings and general conditions highly congenial, Mr. Bartlett decided after three years there to shape his course along literary lines. With that end in view, he associated himself with the Hartford Post, Hartford, Conn., and worked diligently and with considerable success at this job for two years. During that period he gained a great fund of general knowledge and an insight into the "well-known" human race which have since contributed to his efficiency and his ability to meet whatever conditions arise.

American Brass Co. Experience

To this abstract training the youthful Bartlett added a knowledge of buying, and two years after taking the position with the Hartford Post he joined the American Brass Co., of Torrington, Conn., as head of the purchasing department. It was while ably filling that position that Bartlett came in contact with Mr. John Alvord, whose business enterprises were even then of considerable magnitude.

M. W. BARTLETT

After 13 years of consistent endeavor with the American Brass Co., Bartlett resigned to accept the position of private secretary to Mr. Alvord, whose main office was then at 98 Warren street, Newark, N. J. From his close association with the Splitdorf Electrical Co., one of Mr. Alvord's many business interests, Mr. Bartlett obtained a thorough knowledge of the policies and general basis of operation of the Splitdorf company. It was therefore no surprise to his associates when he was elected secretary of the Splitdorf organization at the last annual meeting of the directors.

Mr. Bartlett has always had the knack of concentrating his full energies upon whatever work is in hand,—and to his credit be it said that he can play now and then industriously as he can labor. In brief, he makes the most of the moment's opportunities, and this policy serves to keep him up to date,—if not a little ahead of it. When asked what he enjoyed most, Mr. Bartlett unhesitatingly answered, "Hard work"—and next to work his inclinations trend toward motoring and baseball.

While keeping up with his other varied interests Bartlett has found time to become a member of the Aero Club of America, and he is also a member of a Masonic lodge. At home Mr. Bartlett is in the masculine minority, having a charming wife and an equally charming daughter; although the question trembled on the lips of the interviewer, Mr. Bartlett was not asked whether he advocated Suffragism.

His Selling Qualities

There is no better way of summing up, perhaps, that to say that Mr. Bartlett is a big man, with a most promising future, who still preserves the essence of modesty and combines with it a true and unfailing democracy. He gauges his responsibilities and authority at their proper value, but is keen enough to recognize human limitations and philosophical enough to take what life offers from day to day and work it all into the fabric of success.

WAR DEPARTMENT ASKS BIDS ON TEN SIDECARS

WASHINGTON, D. C., May 23.—Bids have been asked by the War Department for ten sidecars for use in connection with the machines in service at the different bases of supplies and at expedition headquarters in Mexico. The bids will be opened on May 24 and decision made within a week.

The New York Sporting Goods Company, of 15 Warren street, New York, has registered a bid to supply the cars, as have a number of other metropolitan firms, Philadelphia and local houses.

LE ROY COMPLETES FIRST STAGE OF JOURNEY

LOS ANGELES, May 23.—Alfred Le Roy, who is starting on a tour of 50,000 miles with a 1916 Harley-Davidson three-speed and sidecar, made the first and one of the worst runs of his journey in quick time from Los Angeles to Needles on the Arizona border. He arrived there May 12 and wrote back that he covered terrible roads, that the machine was running fine and that all he had to do was to put the gas in the tank.

INDIANS BAG THREE CROTONA TROPHIES

Amateur, Hendee and Sidecar Cups Go to Riders of This Make and Bridgeport Indian Trio Gets Team Prize—Holt Wins Harley-Davidson Cup

BRONX, N. Y., May 23.—The official findings on the Crotona M. C. endurance run held on May 14, award the Amateur Trophy, for the amateur solo rider making the highest consistency score, to Elliot B. Holton, Indian, of Newark, N. J. Holton had 999 points for consistency and 999 for his regular score, losing but one point at a known control. The Sidecar Trophy, for the driver of a sidecar making the highest consistency score, goes to Orrie Steele, Midland Park, N. J., Indian combination, with 998 points.

The Hendee Trophy, for the professional solo Indian rider making highest consistency score is awarded to Harvey Snyder, of Bridgeport, Conn. His score was 996. The Harley-Davidson Trophy was won by William G. Holt, of Yonkers, N. Y., scoring 979 in consistency. The Club Trophy goes to the Crotona M. C., finishing ten members. The team prize, of three casings, is awarded to Snyder, Walter Wright and Arthur Dunham, Indian Bridgeport team II, with a total of 2,960 points.

Five Hendersons out of six starters finished the course, two—John Cobban, Jr., and Charles Drude—being perfect score men, while the others all obtained better than 992 points. Amadeus Steinfeldt brought through an Excelsior with a tandem passenger, the only tandem rig to complete the course. Sidney Heim brought through the only single-geared Excelsior in the run. Louis Horacek and Frank Lyons, the latter on a 6 h.p. twin, brought in Thors with high scores. The only bronze medal awarded (score between 750 and 900) goes to William Rumpleton, Indian, with 888 points. In all there were eight gold medals earned.

Following is a table of results:

	Consistency Score	Regular Score	Awards
Elliot B. Holton, Indian	999	999	Amateur Trophy, Plated Medal
Paul K. Boehm, Indian	998	1000	Gold Medal
Orrie Steele, Indian sidecar	998	1000	Sidecar Trophy, Gold Medal
Chas. S. Drude, Henderson	998	1000	Gold Medal
William E. Brasted, H-D	996	1000	Gold Medal
Harvey Snyder, Indian	996	998	Hendee Trophy,* Plated Medal
A. G. Chapple, Henderson	996	997	Plated Medal
J. H. Ruddiman, Indian	995	996	Plated Medal
Walter Wright, Indian	995	995	Plated Medal*
A. P. Lane, Henderson	990	999	Plated Medal
O. S. Rosenberg, Henderson	989	993	Plated Medal
Arthur Dunham, Indian	989	989	Plated Medal*
Wallace Stuart, Indian	988	1000	Gold Medal
William G. Holt, H-D	979	995	H-D Trophy, Plated Medal
Frank Lyons, Thor	979	985	Plated Medal
John Cobban, Jr., Henderson	970	1000	Gold Medal
August Chaston, H-D	970	986	Plated Medal
Carl Currie, H-D	969	970	Plated Medal
A. E. Eicholz, Indian	967	992	Plated Medal
Thomas Monti, H-D	966	967	Plated Medal
Victor Pelezarre, Indian	962	980	Plated Medal
Harry Most, Indian	962	975	Plated Medal
Howard E. Hill, Indian	962	970	Plated Medal
C. R. Webber, Indian	959	999	Plated Medal
Jacob Henkel, H-D	951	999	Plated Medal
Joseph A. Wasko, H-D	950	998	Plated Medal
Louis Horacek, Thor	949	969	Plated Medal
William Vom Lehn, Indian	947	986	Plated Medal
John Osowsky, Indian	947	953	Plated Medal
Leon D. Mammini, H-D	946	978	Plated Medal
Chas. Carlston, H-D sidecar	945	975	Plated Medal
Sidney Heim, Excelsior	944	959	Plated Medal
Gene Coughlin, H-D sidecar	942	1000	Gold Medal
R. E. Stuebinger, Indian	939	981	Plated Medal
J. W. Reherman, Indian	935	970	Plated Medal
Daniel B. Moore, Indian sidecar	927	953	Plated Medal
Russell Holderman, H-D	915	929	Plated Medal
Ben Goldstein, H-D	911	927	Plated Medal
Harry Edwards, H-D sidecar	898	955	Plated Medal
Amadeus Steinfeldt, Excelsior	870	925	Plated Medal
Wm. Rumpelton, Indian	858	888	Bronze Medal
John C. Constant, Indian	750	1000	Gold Medal
Carl Wolken, H-D	498	748	.....
Jos. Janoschek, Reading Standard	382	642	.....
Fred Christman, Indian	290	574	.....

NOTE.—*Winners of team prize.

EIGHT ARE PERFECT IN GRAND RAPIDS RUN

Only Twelve Start in Annual Endurance Contest in Preparation for Jack Pines Run Through Northern Michigan, July 2, 3, 4 and 5

GRAND RAPIDS, Mich., May 23.—Because of the threatening weather here Sunday only twelve motor enthusiasts lined up for the start of the second endurance run of the season. Of this number eight finished the 150-mile grind with perfect scores after traveling through miry country in some places and riding for miles in a drizzling rain. Except for being affected by the rain in spots the course was in good shape.

Those who finished the grind with perfect scores are: Steel, Harley-Davidson; Cline, Harley-Davidson; Long, Excelsior; Galloway, Harley-Davidson; Heth, Excelsior; Livingston, Harley-Davidson; Smith, Harley-Davidson; DeYoung, Indian.

Genevan, riding a twin Indian, took the wrong road at the outset and lost so much time that he withdrew. Sinz, Excelsior, lost 21 points near Grant when he was forced to stop to fix a broken exhaust spring. He did not have an Excelsior spring to meet the emergency, but as an experiment tried out a Ford spring and had no more trouble. Levanduski on an Excelsior and Whittier on a Harley-Davidson both were four and one points, respectively, short of a perfect score.

This run was to help prepare the riders for the 800-mile Jack Pines trip July 2, 3, 4 and 5, which will take them up the western side of the state as far as the straits and back the eastern route.

BUSINESS IS BOOMING SAYS STANLEY WILSON

NEW YORK.—Stanley Wilson, secretary of the D. P. Harris Hardware Company, of 48 Warren street, has just returned from a trip through the Middle West, including Maryland, Pennsylvania, Ohio, Indiana, Illinois, Wisconsin and Michigan. He states that business is booming and that the demand for Harris products is unprecedented.

"The bicycle and accessory business this year should be of an extraordinarily great magnitude," says Mr. Wilson, "and even at that the demand will be greater than the supply."

BUSINESS OPENINGS FOR MANUFACTURERS AND JOBBERS

ROCK ISLAND, Ill.—Charles E. McKinley has started in the hardware line in this city and requests catalogs on lubricating oils and small tools.

FOREST CITY, Iowa.—Catalogs on automobile accessories, oils and tools are requested by the Forest City Implement Company.

MASON CITY, Iowa.—Carey Jaeger has purchased the interest of F. A. Stevens in the Mason City Hardware Company and will continue the business under the same name. Catalogs on bicycles, automobile accessories, oils and tools are desired.

BROWNS VALLEY, Minn.—John M. Henry has opened a hardware store in this city and requests catalogs on bicycles, automobile accessories, lubricating oils, varnishes and small tools.

FORT PIERCE, Fla.—The Fort Pierce Hardware Company has just been organized to deal in automobile accessories, bicycles, oils, varnishes and tools. Catalogs are requested.

JANESVILLE, Minn.—F. B. Volz wishes catalogs on bicycles, oils and small tools. He has just started a general hardware business.

JUDSON, Minn.—The firm of Goodell & Jones has changed its name to Goodell & Son. Catalogs are desired on bicycles, automobile accessories, small tools, lubricating oils and enamels.

KING'S MOUNTAIN, N. C.—The King's Mountain Hardware Company has been incorporated, with capital of $25,000. Catalogs are requested on bicycles, lubricating oils and small tools.

PLEVNA, Mont.—The Anderson Implement Company has purchased the stock of the J. Borgerding Company. Catalogs on automobile accessories and lubricating oils are desired.

HASTINGS, Okla.—The Stone Hardware Company, recently organized, wishes catalogs on lubricating oils, small tools and automobile accessories.

INDIAN MACHINE GUN MAKES BOW AT SHEEPSHEAD

SHEEPSHEAD BAY, N. Y., May 22.—The new Indian machine gun car made its debut at the speedway on Saturday during the opening day of the military exhibition. The gun was in charge of J. Howard O'Brien, of the Hendee staff, and was put through its paces under his direction.

The ease with which the piece and carriage were handled when detached from the motorcycle, and other details, were favorably commented upon by military authorities who attended the exhibition, and it is safe to say that the outfit will be adopted in the regular and National Guard services in the near future.

The Indian apparatus was described in **Motor Cycle Illustrated** in the May 11 issue.

How Does the Low Cost Automobile Affect Motorcycle Sales?

1916 Indian sidecar business is nearly double that of last year's corresponding period. . .

Moreover, competitors also report a satisfying increase in sidecar volume.

Parcel cars, likewise, show substantial gains—25% in the case of Indian. (This subject will be taken up separately later on.)

In the face of this expansive condition so prevalent throughout the trade the fact becomes fixed that the small price car has not stopped the growth of the motorcycle business.

Those who think so continually overlook the fact that the motorcycle has many individual merits of its own that no four wheeler can duplicate. These merits have won and kept a permanent and ever growing group of purchasers who *prefer* the motorcycle to a low grade automobile *because they realize that the motorcycle has genuine advantages and because it is so different that no one who reasons clearly ever considers the motorcycle as a substitute for the automobile.*

It is a thing by itself. And, therefore, it has its own devotees distinct and unshakable. Percentage of future prospects are going to be greater than ever before.

AND WITH GAS KEEPING UP TO TOP PRICE THE MOTORCYCLE DEALER NEVER HAD A MORE FAVORABLE SALES OPPORTUNITY THAN RIGHT NOW

First Hundred Mile Event of the Season Captured by Indian

Indian keeps on repeating with the same deadly regularity. With the racing season on, the telegraph wires are singing the same old song of Indian victories from all four corners of the U. S. A.

At Wilson, Kansas, May 18, "Speck" Warner, riding an Indian, made 100 miles in 2 hours, 10 minutes.

This is remarkably fast as the time was made on a half mile track. In fact, it is within a few minutes of the best performance ever made on a half mile course. Warner finished three and a half laps ahead of his nearest competitor.

ANOTHER TRIUMPH CLEANED UP IN THE TRUE DASHING INDIAN STYLE. WHAT ELSE NEED BE SAID?

"LITTLE FELLERS" PROVE ROAD STAMINA

(CONTINUED FROM PAGE 12)

from Newark to Quakertown and back today, and that there was not a point on the course where they were not ahead of their 20-mile-an-hour schedule. As a matter of fact, though the dust was deep and sort of "clingy," and the roads were not everywhere in the pink of condition, the running average more nearly approached 25 miles an hour than 20.

So much for Robertson and Waughop. Both finished with perfect scores and without trouble.

Jack Neis, who started out this morning on an Excelsior two-stroke lightweight, did not fare so well—and the trouble was neither Neis' nor yet due to any inherent fault on the part of the Excelsior. The machine on which Friend Jack was supposed to pin his faith had been badly used and pretty well racked in weeks of hard service prior to the start, and whoever was supposed to put it in the prime condition, which Jack had a right to expect, had "soldiered" on the job. When it came to a show-down at 7:30 this morning, although his confidence was not of the sort that could be termed unfaltering, Jack took a chance which landed him as far as Elizabeth, seven miles out of Newark; there he quit with a broken gas line.

Elliot B. Holton, on an Indian, with Mrs. Holton in the sidecar, gave Waughop's Cleveland the technical "once over,"

1, Waughop, on Cleveland, Speeding Hands Off; 2, The Whole Party Near Trenton; 3, Neis' Characteristic Attitude; 4, Ready for Start at Newark; 5, Hobart Giving Prepared Fuel to Robertson; 6, Fair Sidecarists on Run—Mmes. Goerke, Holton and Reed; 7, Filling at Trenton; 8, Observers Discussing Consumption Matters; 9, Robertson Near New Brunswick; 10, Final Touches at Start

Digitized by Google

and D. R. Hobart, of **Motor Cycle Illustrated,** did the Sherlock Holmes act in a technical way for Robertson on the Indian. Hobart rode in a Harley-Davidson sidecar piloted by Wilbur Walden, president of the New Jersey Motorcycle Club. E. F. Hallock, of the Motorcycle Manufacturers' Association, riding with W. H. Kerr in a Henderson with Rogers sidecar, was supposed to follow the antics of Jack Neis. But even before Elizabeth was reached he realized that Jack was in too capricious a mood to be followed. When Neis fell out at Elizabeth, Hallock kept right along to observe the observers and collect all the dust stirred up by the others that did not land on the neighboring landscape. A number of the members of the New Jersey Motorcycle Club, including Walter Goerke, the Newark Indian agent, and Mrs. Goerke accompanied the riders.

There were those in the party who had their doubts as to the staying qualities of the little fellows, but those doubts are now disseminated. The run demonstrated clearly that the lightweights, light as they are, and small as they are, have all the stamina that is required of any motor vehicle, and have, moreover, a sufficient speed to keep even the heavyweight machines "ahumping" to keep pace with them. And what is more, the consumption figures, for it was an economy test as well as a reliability trial, clearly demonstrated the low cost of this mode of traveling. Insofar as it was promoted to demonstrate just those two things, conservative as it was, the first annual lightweight run of the New Jersey Motorcycle Club was a success.

The only incident worthy of note on the trip occurred when Kerr, on the Henderson, stopped a minute to dispute the right of way with a farmer in his buggy on the way to church. The only thing that suffered in the mishap was the surrounding atmosphere, which was rent by the blue bolts of rural profanity.

The Excelsior, which was observed by E. F. Hallock, secretary of the M. M. A., was forced to retire at Elizabeth, due to gasline breakage. The pace was so hot in the first section, to New Brunswick, that Neis could not have caught up the field, even if he had been able to effect repairs.

The Indian Featherweight, observed by D. R. Hobart, technical editor of **Motor Cycle Illustrated,** came through without loss of marks. The technical examination at the finish showed that there were no parts missing or loose and that the machine could have participated in another contest with merely starting the motor.

The fuel for the Indian was carried in the observer's sidecar in a can, ready mixed with oil in the proportion of 1:12. The Featherweight used eleven quarts of the mixture, which works out at 71.36 miles to the gallon of *gasoline*. Robertson made but four gear changes during the entire day, these being from intermediate to high when starting from controls. On several other starts he left the high gear engaged.

The Cleveland, observed by Elliot B. Holton, New Jersey State F. A. M. Commissioner, also came through without loss of marks. The technical examination by both Messrs. Holton and Hallock showed that everything was in the same condition as when the run started. The fuel used was the same as that for the Indian, and the Cleveland used 10¼ quarts of the mixture. This works out at 77.17 miles per gallon of *gasoline*.

There was no doubt in the mind of the observers that an equal consumption could have been had with both the Indian and Cleveland, had a smaller jet been used in the AMAC carbureter on the Indian. The jet fitted was slightly large for such a run, and would have enabled a higher average—say of 33 miles per hour—to have been attained. As it was the average speed was slightly over 25 miles per hour, and the contestants had to wait outside of controls for some little time in order to check in as per schedule.

Following is the equipment: Indian—Dixie magneto, Goodyear tires, Splitdorf plug, Troxel saddle, Duckworth chains and AMAC carbureter. Cleveland—Bosch magneto, Federal tires, Bleumel spark plug, Troxel saddle, Brown & Barlow carbureter, Coventry chain.

The Excelsior was fitted with Dixie magneto, Firestone tires, Splitdorf plug, Troxel saddle, Schebler carbureter and Spartan belt.

EXCELSIORS AGAIN FOR CHICAGO POLICE

Windy City Speed Force Takes 150 of the 1917 Models of Which 50 Are Capable of 80 Miles an Hour—Selection After Trial

CHICAGO, May 23.—The City of Chicago has again placed the seal of approval upon the Excelsior Auto-cle.

In the latter part of 1908, Colonel Roy T. Steward, then Chief of Police the City of Chicago, after devoting siderable study to ways and means mprove and increase the efficiency of force, decided to mount some of his on motorcycles. After considera- of the various makes, Excelsiors e selected and were found so bene- l to the service that early in 1909 en more machines were added, Ex- ors again being selected in view of satisfactory service.

om time to time other additions have made until nearly two hundred lsiors were in use in the various ions of the city and park police de- nents. A short time ago, the City ncil made an appropriation to cover urchase of 150 additional machines, of them to be of high speed capacity hasing automobile speeders and a ed for regular service in the city and nearby suburbs.

requirements of the high speed ls were 80 miles per hour, and the ard models, 60 miles per hour, ng that even the riders of these nes were not supposed to loaf on b.

competition among the leading manrers for this order of 150 machines ery keen, but the Excelsior record of past performance was victorious and the city selected fifty Model 17-3 machines for the speeders' squad and a hundred Model 7-Cs for the balance of the order. Some of the machines have already been delivered.

Sergeant A. Smith is now in command of the entire motorcycle squad, of which he is justly proud, claiming that the motorcycle division of the Chicago police department is not only the largest but most efficient body of motorcycle cops in the world.

EVERY MOTORCYCLIST IS A POTENTIAL SOLDIER

Being Trained in the Use of a Highly Efficient Machine, He Is Really a Defender of His Country at All Times; Scope of Motorcycle's Military Activity Will Broaden Rapidly

By C. B. O'HARE
General Sales Manager, Aurora Automatic Machinery Co.

THE policy of the United States makes practically every male citizen a soldier at all times. The fact that we do not wear uniforms and are under no contract of enlistment does not relieve us from the inevitable prospect of serving our government in time of war.

In foreign countries soldiering is a business and a man chooses a life in the army the same as any other business or profession. In this country, history and absolute government policy shows that 70 per cent. of our troops in service are business men and professional men who have been erstwhile soldiers, ready to do their duty at the first call.

In view of this, therefore, it is a fact that our motorcycle clubs and our individual riders are, from the American standpoint, military men without uniforms, and subject at all times to the call to arms.

In actual military service, in which the writer is thoroughly experienced, it can be readily seen that the government would of necessity be compelled to organize companies or battalions of experienced motorcycle riders to perform duties that as yet we have never dreamed of.

There will be a time when every orderly connected with any unit of the service and every aide-de-camp will use a motorcycle; trumpeters who are attached to infantry and artillery units will use motorcycles, the quartermaster's department will use motorcycles, the company clerk and the "top" sergeant will use a motorcycle—and these are individual uses in connection with infantry and artillery service that at this time would be construed as luxuries.

Mr. O'Hare's article is particularly interesting because it combines first-hand experience in military affairs with a keen insight into the mechanical possibilities of the motorcycle as an adjunct to the defense organization of the nation. It points out some of the branches of military service in which the power two-wheeler can ultimately be used to advantage, and which are not thought of at present by most writers on military subjects It is therefore constructive as well as highly readable.

The contention that every motorcyclist is a potential soldier, of great value to his country, is a striking exposition of a truth that Uncle Sam's military experts are slowly but surely coming to recognize.—The Editor.

This field does not cover the actual fighting branch of the business. I believe that the motorcycle will become a part of the infantry, artillery, signal corps, engineering corps and naval equipment, and that you will find in a short time in the encampments of the militia throughout the country, along with the regular company equipment, a dozen or more army blue boxes containing motorcycles for use in the camps away back far from the scene of activities. I believe that the actual business end of war will see more motorcycles in use than in the service end on the firing lines, and this brings up the question of motorcycles as affecting preparedness.

The motorcycle is a unit of economy. It is primarily a means of construction in warfare rather than of destruction. It can be entered on the credit side of Uncle Sam's ledger rather than on the debit, as its use engenders conservation and economic development.

Our government never sends a raw recruit into actual service without first giving him, if necessary, at least a vague idea of the principles of warfare; and in order to inculcate these first principles the new recruit or the civilian soldier must familiarize himself with the routine of the camp. It is in this routine work of the camp that you will find the motorcycle playing a most important part in a short time.

Four Up on an Emblem Twin Fitted with a Dunham Two-Passenger Sidecar

SAC CITY MEET ON MAY 30

SAC CITY, Iowa.—Two events, a 10-mile free-for-all with a purse of $75 and a 15-mile race, for a purse of $100, will be run off in this city by the Northwest Motor Contest Co., of Cherokee, Iowa, on May 30. There will be automobile events in connection with these races also.

INNOVATIVE MAGNETO ON LATEST SCHICKEL

(Continued from page 19)

The motor is belted by means of a ⅞ inch V belt to the rear wheel, the ratio being 6½ to 1. This ratio, when the machine is traveling at 30 miles an hour, permits the motor to turn over at 2,340 revolutions a minute, at which speed it develops its maximum power.

The frame is of the open type, and the wheelbase is 52 inches. The rear wheel is slung on links provided with adjustments of the screw type which provide a ready means of adjusting the belt to just the proper tension.

The wheels are 28 inches in diameter and are fitted with steel rims of the clincher type with extra heavy spokes. An extra heavy knockout axle is fitted on the rear wheel so that all the driving strain is taken directly on the bearings which, of course, are made amply heavy to stand up under the service. Vitalic clincher tires are fitted and a Mesinger special saddle, mounted low, makes the machine all that is desired in the way of a comfortable mount. At an extra cost of $5, a spring fork is fitted.

The machine sells at $109, the advance in price from the $100 machine of last year being the result of the increased cost of materials. It scales at about 100 pounds, and it is claimed that it will exceed 100 miles on a gallon of gasoline. The frame is finished in black and the tank in regulation Schickel gray, in baked-on enamel rubbed to a perfect surface.

MILWAUKEE-MADISON RELAY WITH A MILITARY TINGE

Two-Man Teams of Milwaukee M. C. Riders Will Bear National Guard Message to Governor Over Ninety Mile Course—Stops Every Ten Miles

MILWAUKEE, Wis., May 23.—In line with the much discussed question of preparedness the Milwaukee M. C. is making plans in co-operation with state army officials, to produce absolutely the fastest ninety miles of cross country travel by motorcycle that has ever been witnessed. The local club boys propose to carry a message from one of the prominent militia men here to Governor Phillip at Madison, the state capitol, in nine ten-mile relays. The tentative date selected is Sunday, June 25, starting at 6 o'clock in the morning.

Capt. Guy D. Armitage, of the local machine gun company, who was instrumental in the testing out of the first machine gun sidecar chassis put out for Uncle Sam, has told the club men that he was with them in anything they could do to demonstrate the efficiency of the motorcycle over any other means of transportation in connection with modern warfare.

According to plans of President Charles Grier of the Milwaukee club and originator of the plan for fast relay, train time between Milwaukee and Madison will be shattered. Grier attributes the idea of the army relay to the talk made by Lieut. Ralph Hibbard before the Milwaukee club members several weeks ago.

The route will be marked accurately several days in advance so that there will be nothing to prevent a straight ride on the part of the motorcyclists. Officials in the various towns through which the speeding message will go have promised to co-operate in the matter of speed law violation and will allow the relay men to go through wide open.

Two men will make up each relay team and the start will be from the armory of the machine gun company, Eighth and State streets. Among the noted speed artists who will help carry the message are "Red" Parkhurst, "Curly" Fredericks, "Red" Hadfield, Arthur Herrington, formerly of Newark, N. J., and "Rudy" Fischer.

The route between Milwaukee and Madison takes in every conceivable kind of going, sand, clay, macadam and some concrete. The fastest train makes the distance of ninety miles in two hours and twenty minutes. It is expected that the message from Milwaukee can be rushed through in something less than two hours.

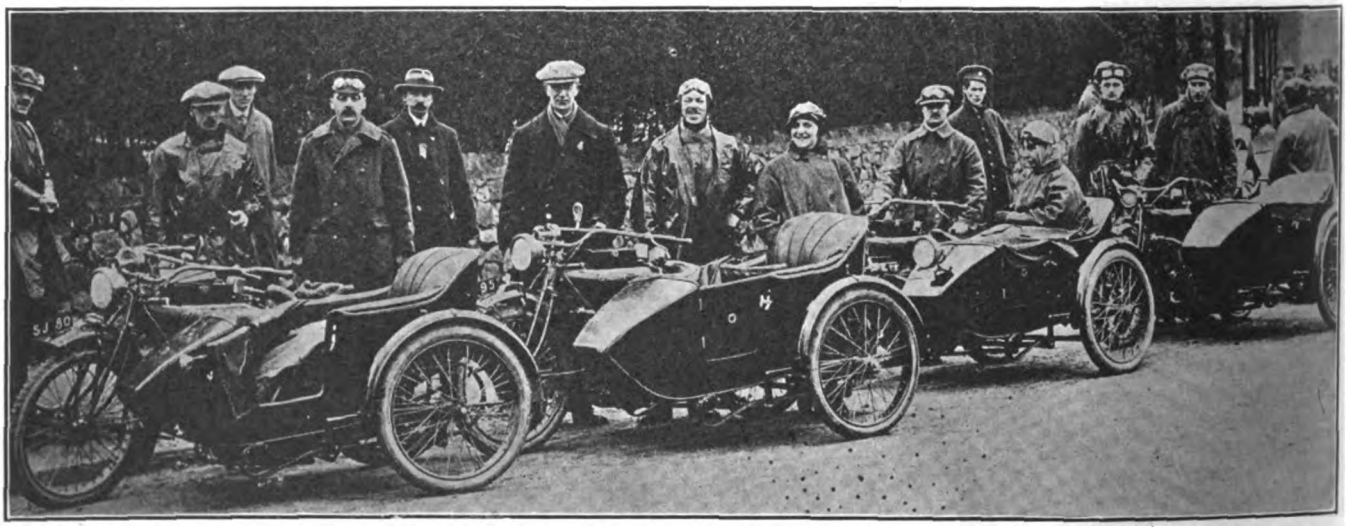
FRISCO RIDERS FRISK TO SACRAMENTO

Score of San Francisco Club Members Make 110-Mile Moonlight Trip to Lake in Yolo Celebration—Return Next Day

A RUN that will long be remembered by members of the San Francisco M. C. was that to Sacramento, on the night of May 13, when a perfect night, with a moon nearly at the full, and excellent roads all the way combined to make the trip one of the most enjoyable ever made by the club. There were about a score in the party, which took the route through the hills to Livemore and Tracy, down to Stockton and over the level floor of the Sacramento Valley, fragrant with new hay and blossoming wild flowers.

In Sacramento, the morning was spent resting from the night's trip and visiting with friends, and taking in the last of the three-day celebration of the Yolo Causeway opening. In the forenoon the party was joined by several who had been unable to make the night trip. At 2:30 p. m. the return trip was started over the new causeway. Reaching the north shore of the Bay, the party separated, the Oakland members proceeding by Martinez, while the San Francisco crowd went through Vallejo. The entire trip is estimated at 220 miles.

INDIAN TEAM AT START OF BIRMINGHAM, ENGLAND, TRIALS



Four Sidecar Combinations Which Made an Excellent Showing In Easter Monday Run For Army and Navy Entrants. Hendee Manager William H. Wells, in Cap and Overcoat, is Back of Handlebars on Second Machine

MOTORCYCLE competitions in England which were interrupted by the war were resumed at Birmingham on Easter Monday by an event which was open only to members of the Army and Navy, munitions workers and others engaged in some patriotic service. A notable feature of the 146-mile run under the auspices of the Birmingham M. C. was the good showing of American machines, four Powerplus Indians performing brilliantly and winning perfect scores. These four machines all pulled sidecars.

The hills were numerous and exceedingly difficult, one of them, the "Old Wyche," at Malvern having a 1 in 2 gradient and hardly more than a year ago was considered impossible to climb. E. Frasetti, however, with his Powerplus and sidecar climbed it at such speed, the fastest of the day, that he frightened the spectators and had to shut off at the top in order to get round an easy bend.

JOBBERS HEAR "MILLION BICYCLES" REPORT

At Buffalo Meeting the Future Course of the Boosting Campaign is Fully Outlined; Will Get Charlie Chaplin in Bicycle Moving Picture; Prominent Trade Men Present

BUFFALO, N. Y., May 23.—The directors of the Cycle Jobbers Association mixed pleasure with hard work at their gathering here today, which was attended by prominent members of the industry. A closed session of the jobbers was held in the morning at the Lafayette Hotel, after which all present heard talks on the work of the "Million Bicycles Committee" given by Messrs. Olin and Quine.

When the purely business matter of the meeting had been disposed of, the jobbers and their guests motored out to the estate of Oliver Cabana, at Elma, N. Y., had dinner there and inspected his big stock farm. Late in the afternoon they rode back to Buffalo and after supper at the Lafayette attended the performance at the Sheas Theater in a body.

Those at the Meeting

Among those at the meeting were: Oliver Cabana, Buffalo Specialty Co.; P. O. Jones, Majestic Mfg. Co., Worcester, Mass.; A. C. Rice, Eclipse Mfg. Co.; C. F. Olin, New Departure Mfg. Co.; M. C. Stokes and George K. Culp, United States Tire Co.; Harry Quine, Goodyear Tire & Rubber Co., Akron, O.; J. W. Grady, Worcester, Mass.; F. W. Grubb, Union Supply Co., Toledo, O.; Keyser Fry and J. F. Beck, Reading Cycle Co., Reading, Pa.; C. Teasdale, B. F. Goodrich Co.; J. McKenneth and William Emerson, Buffalo Metal Goods Co.; John W. Henry, Vim Cycle & Hardware Co., Buffalo, N. Y.; G. W. Grupp, correspondent of **Motor Cycle Illustrated.**

Following the short session of the directors, President Fry declared a general meeting in order that all might hear the report of Secretary Chas. F. Olin, of the "One Million Bicycles Committee." Mr. Olin addressed the cycle men in the large buyer's room of the hotel, where he opened a huge trunk that proved to be a veritable bandbox. From this trunk he extracted a wide variety of prizes, selling kinks and advertising displays that aroused the curiosity of his listeners and impressively held their attention.

Secretary Olin then launched a rapid-fire talk concerning the work which the committee had already accomplished, and the lines along which it was going to proceed.

"We have found," he began, "that the 'Million Bicycles' idea is meeting with unprecedented enthusiasm everywhere. Even cartoonists in the daily newspapers are using the idea and boosting it. That our campaign is beginning to realize the results for which we are all striving is evidenced by the brisk sales which dealers in nearly every section are experiencing. One noteworthy feature of the greater general interest, which is being manifested in bicycling, is the increased number of lady riders one finds on the roads.

"While going through the Berkshire on

C. F. OLIN
He Told the Jobbers of the Results of "Million Bicycles Committee's" Efforts

the train yesterday I counted a score of women riding bicycles. Reports have been received of the formation of ladies' clubs in several cities—notably in Richmond, Va., and in Toledo, O.

"And the work started by the 'One Million Bicycles Committee' will be given greater impulse by the plans now being licked into shape. For instance, we are going to put three live men on the road to travel among the dealers all over the United States. They will bring to the dealers information as to what the committee will do for them, and ask for their co-operation.

"These traveling boosters," continued Mr. Olin, "will see the editors of newspapers and endeavor to interest them in the 'One Million' movement. Another object of our men will be to organize the dealers in every town, for our experience has already shown that much good cannot be accomplished unless all the dealers in a particular community work hand-in-hand.

"But should it be impossible to unite the dealers of a town, we will try to place the proposition in the hands of the livest dealers. Where a cycle merchant shows himself to be indifferent to the work we are doing, we will pass him up. Such men will undoubteedly realize their short-sightedness in due time—when their brother dealers are cashing in on their boosting efforts—and swing into line sooner or later.

The Missionaries

"Our missionaries will assist the dealers in every way possible," continued Mr. Olin. "They will show dealers how to stage races and pave the way for proper co-operation with local newspapers. In this connection the artist of the committee, who is a doctor by profession, is getting up drawings of which electrotypes will be made for newspaper display. These pictures will show the family enjoying the wheel; the business man using his machine; the advantage of the bicycle as an adjunct to such sports as polo and golf; two-wheelers used by college girls, Y. M. C. A. boys, boy scouts, etc.

"It will be interesting to note," declared the secretary, "the publicity which is being given to the use of bicycles by boys. I have been told that the July issue of *Boys' Life* will have a two-page bicycle story. And the *Boy Scouts' Manual* will soon publish an entire chapter on bicycling.

"Now, it is our intention to give every live dealer an equal chance to realize on the results which will ensue from this and other publicity. To that end we are getting up a dealer's handbook, which will contain bright, snappy, selling ideas, and will show the dealer how to obtain advantages from the work being done by the 'One Million Bicycles Committee.'"

Mr. Olin then took from the magic trunk samples of display cards, which the committee is providing for window dressing purposes. There was one large poster showing a girl riding a machine, another

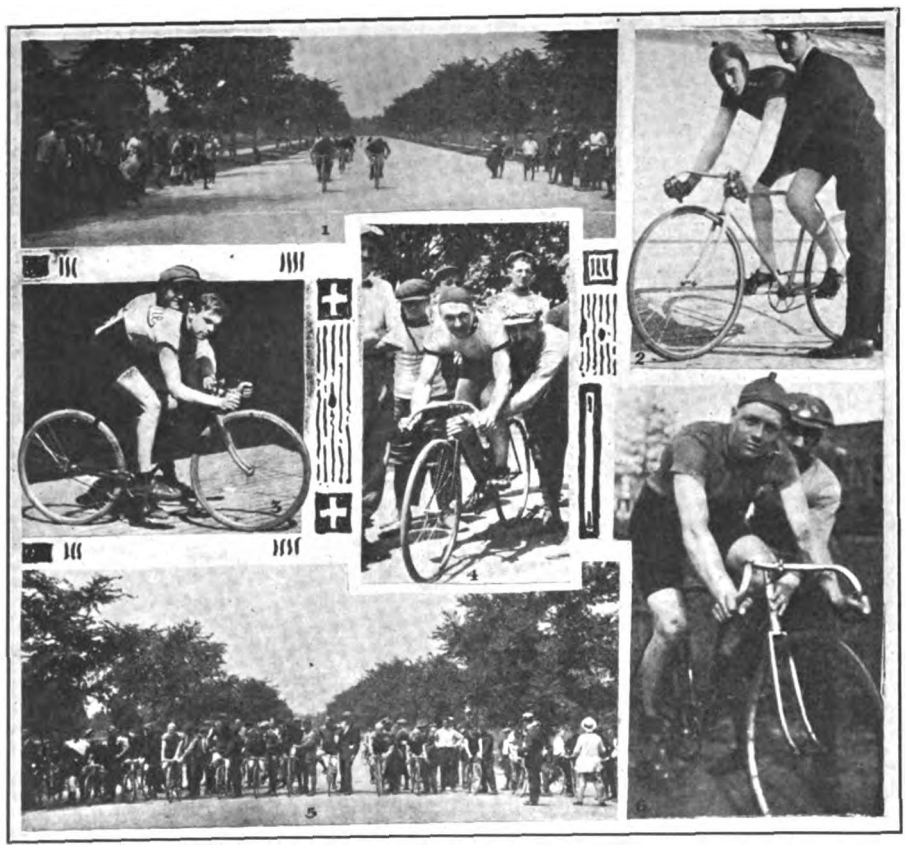
DECK IS CLEARED FOR ACME CLASSIC

Ten-Mile Handicap Affair, Scheduled for June 18, to Be Run on Accident Proof Pelham Parkway Course in the Bronx, N. Y.



1 and 5—Two Slants at the Pelham Parkway Course. 2—Anthony Desimone. 3—Paul Reinecke. 4—Fred Woisin. 6—Ed. Jenkins. All Scratch Men in the Acme Event Who Promise to Make Things Interesting

NEW YORK, N. Y., May 22.—The new feature on the horizon of bicycle sports—the Bronx County Classic, to be promoted by the Acme Wheelmen on June 18—will be signalized by an almost ideal, accident-proof course as well as a prize list long enough and sufficiently valuable to bring every veteran and embryo Kramer to Pelham Parkway.

The road over which the race is to be held is at least one hundred feet wide and is well macadamized throughout the entire length over which the riders will travel. Arrangements have been made with the police to keep the course free from all traffic while the event is in progress.

The race will be at a distance of ten miles, making it necessary for the contestants to ride from White Plains avenue to the railroad bridge three times. It was originally intended to hold the classic over the Grand Concourse and Boulevard, but the heavy traffic which crowds this fine thoroughfare on Sundays has made it advisable to select Pelham Parkway.

Four high-grade bicycles head the prize ilst, which at the present writing includes, among other things, a dozen pairs of tires, several rims, saddles, handlebars, coaster brakes and other accessories and specials, besides a club entry trophy and a team trophy. The committee in charge will also endeavor to hang up a cup, to be called the "Bronx County Trophy," which will go to the winner. He will keep it in his possession for one year and it will be competed for again at the second Bronx County Classic.

Entry blanks can be secured from E. O. Spillane, 248 E. 119th street.

CRESCENTS HOLD THEIR HALF CENTURY RUN

BALTIMORE, Md., May 22.—Seventeen cyclists took part in the annual half century pleasure run of the Crescent Bicycle Club last Sunday. This year thirty miles of the trip were laid out within the city limits, and the balance of the mileage was accounted for by a ride to Pikesville.

The riders got under way at 8:30, headed by Capt. L. M. Sanborn and Colorbearer W. V. Iglehart. But few punctures were experienced and there was only one spill, no riders being hurt. Those in the run were: L. M. Sanborn, W. V. Iglehart, W. Sherman, W. H. McAvoy, W. T. Wright, W. Wright, A. Wright, F. M. Sanborn, R. Bishop, W. Doersch, E. Nitz, L. Nickles, J. Stricker, H. G. Seward, J. M. Back.

U. S. I. WILL LOCATE IN TEMPORARY QUARTERS

NEW YORK, N. Y., May 23.—Because of its growing membership the Unione Sportiva Italiana has found it advisable not to renew its lease on present club headquarters, but to seek temporary rooms at 262 West 54th street until the fall, when the club will locate in a large and modernly equipped house situated in the heart of the city. The new telephone number is Circle 2616. The temporary quarters are quite large, enabling the U. S. I. to continue as host to the regular handicapping meetings of the Inter-Club League.

AMERICA'S QUAKER DIVISION ON HALF CENTURY RUN

PHILADELPHIA, Pa., May 23.—The Pennsylvania division of the Century Road Club of America held a half-century pleasure run on Sunday to Valley Forge Park and return through Norristown and down the Wissahickon Drive, Fairmont Park. Those participating were W. Yorke, W. M. Kirk, H. Franklin and W. F. Worthington.

BISON CITY TURNS OUT FOR PARADE

More Than 200 Riders Wheel to Humboldt Park Where Prizes Are Distributed; Another Parade Will Be Held May 28

BUFFALO, N. Y., May 23.—The parade of the Buffalo Dealers' Association was held here on Sunday afternoon and participated in by more than 200 riders. Machines of various vintages were represented in the line and lent added interest to the impressive procession of cyclists, bringing bursts of applause from the crowd of spectators along the course.

Not in years has the Bison City beheld so many cyclists wheeling together. And the spectators showed their appreciation time and again as the devotees of the "finest sport," stretching out in a procession eight blocks long, set out from the McKinley Monument and pedaled leisurely to Humboldt Park.

At the terminating point of the parade prizes were distributed by Messrs. Henry, Haberer and May. The winners were John Buchett and Joseph Williams, solo riders, Tom Tounsend and H. Chretien, who were mounted on tandems. Special prizes were awarded to A. M. Redanz and H. Schlatterer because of their very clever makeup.

Those in charge of the parade were Adolph May, chairman, John W. Henry, Charles Haberer, William F. Kendt, Morris Rosenthal, John Oliver, A. F. Schwegler, H. N. Rose, Lewis Mallenhoff, William Purcker, Samuel Ahlheim, William Beall, John Ross and Herman Crescent.

After the parade the dealers met in the store of Charles Leskies and thanked Adolph May, of the Goodrich company, for his splendid work in crowning the parade with success. The dealers decided to stage another parade on Sunday, May 28, and arranged final details for the twenty-five mile handicap on Decoration Day.

CHICAGO BICYCLE CLUBS FORM FEDERATION

Seventeen Clubs Representing More Than 200 Riders In Movement to Promote Sport Along Broader Lines; Paddy Harmon Is Chief Organizer

CHICAGO, Ill., May 23.—One of the most important happenings in cycling circles here—important because of what its far-reaching influence is expected to be in promoting the sport along lines heretofore unknown in the Windy City—was the formation on Sunday last of the Federation of Chicago Bicycle Clubs.

It will be the object of this new organization to unify the efforts of the various local clubs and through the resultant co-operation to run racemeets, century runs and social affairs on a broader scale than has been the case in the past. Like the Inter-Club League of New York City, the Federation in Chicago will do all handicapping in the future, thus ensuring to contesting cyclists a greater degree of fairness and accuracy.

At least seventeen clubs of this city were represented at the meeting on Sunday when the Federation of Chicago Bicycle Clubs was launched, and these clubs have a total membership of more than two hundred. The organizers of the new body believe that great impetus will be given the club movement in this city, and that the present season will see many riders join the ranks of attached cyclists.

Paddy Harmon, who managed the Riverview Velodrome during the first half of 1915, is the prime mover in forming the Federation and he is being supported by trade men and devotees of prominence.

The first official business of the Federation was to vote its hearty support of the twenty-five mile handicap road race which is being staged on Decoration Day under the auspices of the Chicago Cycle Dealers' Association. The course chosen for the race is the Lincoln Park Lagoon Track, which will have to be covered ten times for the required distance.

C. R. C. A. RACE DRAWS BIG FIELD

Mullin of U. S. I. Captures Ten-Mile Handicap at Floral Park; Joe Naphtal, a Contestant, Is Killed by Collision With Automobile

NEW YORK, N. Y., May 21.—With a handicap of three minutes and fifteen seconds, Elmer Mullin, of the Unione Sportiva Italiana, broke the tape in the ten-mile handicap road race of the Century Road Club Association at Floral Park, Long Island, last Sunday. Mullin romped away from the field after the five-mile turn, caught the two limit men ahead of him and then had clear sailing for the tape.

Sylvain Segal, of the promoting club, led the riders immediately behind the winner, and he was closely pursued by Giordano, U. S. I.; Braet, of the same club, and Spillane, of the Acme Wheelmen.

Limit Men Hold Lead

About one hundred and five riders, out of a total entry of one hundred and seventeen, faced the starter. After the limit men started the rest of the field was sent off at various intervals, and soon the long markers proceeded to fill up the gaps. The limit men, however, owing to the frequent spills on the sandy stretches of the course, were not reached until the eight-mile post was passed. At the five-mile turn many spills occurred which robbed contestants of their chance of victory.

But Mullin kept right ahead and succeeded in overhauling the limit men. Meanwhile the riders from the 3:30 and 3:15 mark endeavored to catch up, but were hindered by strong winds and the spills. About 400 yards from the finish Segal sprinted and getting into his stride flashed across the tape second.

A shadow was cast over the race almost at the start when Joseph Naphtal, one of the contestants representing the C. R. C. A., collided with an automobile and was instantly killed. Naphtal was a very daring rider, and those who witnessed the accident declared that he was a victim of his own daring. Naphtal was thirty-one years old and leaves a wife and child.

The summary of the race is as follows:

PLACE WINNERS

Name.	Club.	Hdcp.	Time.

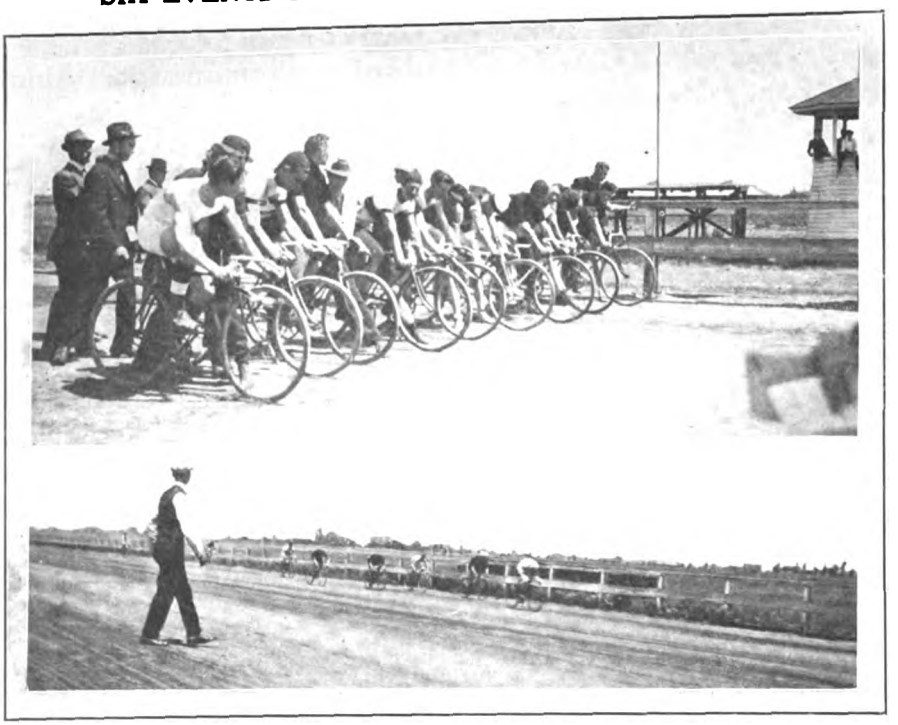
SIX EVENTS INCLUDED IN SACRAMENTO CARD



Start and Finish of the One Mile Scratch Race

SACRAMENTO, Cal., May 20.—More than 50 riders participated in the bicycle race meet here last Sunday, which featured the last day's program of the Causeway celebration. Six different clubs were represented. The summaries:

One-Mile Novice—First, H. Horner, Samson Club, Stockton; second, G. Johnson, Capital City Motorcycle Club, Sacramento; third, H. Hershey, Garden City Wheelmen, San Jose. Time, 2:45⅗.

Half-Mile Scratch—First, Ray Girard, Olympic Club, San Francisco; second, Fred Hoffman, Olympic Club, San Francisco; third, G. Simondi, Garden City Wheelmen. Time, 1:13.

One-Mile Scratch—First, W. Thompson, New Century Wheelmen, San Francisco; second, Fred Hoffman, Olympic Club, San Francisco; third, L. Drury, New Century Wheelmen, San Francisco. Time, 2:45⅘.

Five-Mile Handicap—First, E. Hepting (440 yards), C. C. M. C., Sacramento; second, W. Rhodes (440 yards), New Century, San Francisco; third, M. Alvison (330 yards), Samson Club, Stockton. Time, 11:54.

One-Mile Scratch (Consolation)—First, H. DeBue, New Century, San Francisco; second, M. Cassilis, Samson Club, Stockton; third, H. Henley, C. C. M. C. Time, 2:26⅕.

Team Race for Points, Two Miles—First, Samson Wheelmen, Stockton, 37½ points; second, New Century first team, San Francisco, 30½ points; third, Garden City Wheelmen, San Jose, 29 points; fourth, Capital City Motorcycle Club, Sacramento, 20 points; fifth, New Century's second team, San Francisco, 19 points; sixth, Racycle team, Stockton, 19 points.

BICYCLE RACES TO BE HELD AT SHEEPSHEAD BAY

NEW YORK, N. Y., May 22.—Final touches are now being added to the arrangements for the bicycle races which will be staged in connection with "American Liberty Day," at the Sheepshead Bay Speedway, June 4, by the United German-American Societies and the Austro-Hungarian American Societies. There will be a two and a six mile race, to the winners of which medals and watches of standard make will be offered. The entry fee is fifty cents for each event, entries closing with F. W. Jansen, 150 Nassau street, New York.

RICHMOND LADIES FORM A BICYCLE CLUB

RICHMOND, Va., May 22.—Following so closely upon the recent announcement of the formation of a bicycle club for ladies in Toledo, the news that the women here have also organized a cycling body is of more than ordinary interest. There are some twenty or thirty women in the local club and they take daily rides to points of interest about the city.

According to one of the dealers here, the short, wide skirts now a fashion among women is largely responsible for the revival of cycling with the Richmond ladies. Following are the ladies who have joined the club: Miss Maud Adams, Mrs. Wellford, the Misses Ingram, Miss Preston, Miss Margaret Miller, Miss Lucy Witt, Miss Munson, Miss Valentine, Mrs. S. G. Christian, Miss Janette Jones, Miss May Miller, Mrs. R. W. Carrington, Mrs. L. R. Weary, Mrs. Wheat, Mrs. Fred Campbell, Mrs. Pickett Lathrop, Mrs. Barbara Montgomery, Miss Kate Taylor.

MORE CALIFORNIA BIKE RACES

THE Anderson (Cal.) Wheelmen of Shasta county, put on a bicycle race May 13, the occasion being a big picnic of the people of that and neighboring towns. The main event was a 5-mile relay.

Stockton, Cal., will see its first bicycle race in 12 years May 27, when the California Association of Cycling Clubs will hold a meet at the Agricultural Track, in which members of many of the clubs will participate.

RACE BOOSTING HIS BUSINESS

KANSAS CITY, Mo., May 23.—The Scmeltzer Arms Co. reports a large volume of business in bicycles. Mr. Vetten, manager of the cycles department, is of the opinion that the recent race here has done much to stimulate the sale of bicycles in this city. Vetten is an 18-karat believer in attractive windows and is repeatedly after the public eye with neat and effective displays.

A CYCLEMOTOR RUN

LYNN, Mass., May 22.—A Cyclemotor run—the first ever held—will be staged by C. V. Stackpole, the local bicycle dealer, on Sunday, May 28. The trip will cover some one hundred miles, and will take ten Lynn Cyclemotor enthusiasts through the towns of Beverly, Manchester and Gloucester. J. N. Wilson, Cyclemotor agent in Salem, and F. A. Jones, a dealer of Beverly, will join the run with their contingent of riders.

AREA OF SMITH PLANT

IN A RECENT description of the new addition being built to the A. O. Smith Co. factory, Milwaukee, Wis., home of the Smith Motor Wheel, it was erroneously stated that the total floor space of the plant was 32,130 square feet. This is, in fact, the area of the new addition, the total floor space being 424,300 square feet.

THEIR BEST SEASON

DEDHAM, Mass., May 23.—Keough & Cartwright, proprietors of one of the oldest bicycle stores in New England, are having the best bicycle season in their history. They are handling only high-grade bicycles, and their lines include Pope, Pierce and Iver Johnson. They are also agents for Pope motorcycles and the Cyclemotor.

HOLD INITIAL BICYCLE RACE

SOUTH BEND, Ind., May 20.—The first bicycle race of the season was staged here on Saturday afternoon, May 6. The event was a ten-mile affair, the course starting in the heart of the city and winding out into the country. Those in charge were Messrs. Whitmore, Bernard and Grobhoski.

RACE IN "WHITE WAY" FETE

BELLE FONTAINE, O., May 20.—One of the features of the "White Way" celebration which was staged in this city on Wednesday, May 10, was an amateur bicycle road race for boys. This was entered on the program as the result of the suggestion made by several of the local dealers.

BICYCLE BOOM AT BROCKVILLE

BROCKVILLE, Ontario.—The bicycle business in this town has been so good that George W. Price, the local dealer, has found it necessary to open another store to be used exclusively for the display and sale of wheels and accessories.

CYCLEMOTOR FOR POLICE

JAMAICA PLAINS, Mass., May 23.—Chas. J. Yumont, local Cyclemotor dealer, has sold one of the motor attachments to the local police department. It will be used in patrol work around Jamaica Pond. Yumont reports a very brisk season.

SPEARS LOWERS "GOULLIE'S" COLORS

In Two Straight Heats of Match Race He Shows the Way to Former Outlaw Leader; Ohrt Is Defeated by Art Spencer, and Kramer Wins Ten Mile Race at Velodrome

NEWARK, N. J., May 22.—Frank Kramer demonstrated beyond a measure of a doubt that he can hold his own in a long bicycle race just as well as in a short sprint by winning the ten mile open for the professionals at the Newark Velodrome on Sunday afternoon. Kramer rode before 12,000 people, the largest crowd of the season, and his victory was the signal for a great outburst of applause. Kramer was up with the leaders throughout the entire ten miles. A lap and one-half from home he took the lead and then went all the way to the finish.

Australians Perform Poorly

His sprint carried him over the tape a length in front of Jake Magin, of Irvington, who finished in second place. Reggie McNamara, of Australia, was third, and Eddie Madden finished fourth. Big Alf Grenda could only get fifth place, while his "side kick," Alfred Goullet, was not in the money at all. Bob Spears, who was looked upon to figure up with the leaders, was put out of the grind due to a puncture, as was the case with Jackie Clark.

Bob Spears, who a few weeks ago took the measure of Kramer, in a match chance, treated Alf Goullet to the same dose of medicine Sunday. Spears beat "Goullie" in two straight heats of a two-thirds mile match. Goullet in the first heat lead until the last turn, when Spears with a great burst of speed rode around him and dashed to the tape a winner by a length. In the second heat the riders were on even terms as they entered on the last lap of the race, but by the time the back stretch was reached Spears had drawn away from Goullet. He led the blond rider home in this heat by two lengths.

Fought Out Three Heats

Hans Ohrt, the San Francisco boy, who was the amateur king last year and who is competing in the professional class this season, was beaten in two out of three heats by Arthur Spencer, of Toronto, who was also a competitor in the simon-pure division last season. Spencer showed lots of class and although given a high ride in the first heat he beat Ohrt to the tape by a foot. In the second heat Ohrt just managed to win by inches. Had the race been a yard more, Spencer would undoubtedly have been declared the winner. In the last heat Spencer opened up a big lead on the back stretch, but Ohrt finally got going and closed up the gap foot by foot, and at the finish Spencer only had the half the length of his bike to spare. Spencer rode the last eighth mile in 12 seconds, which was certainly traveling some.

William Spencer, of Toronto, proved the winner in the three mile open for amateurs, inches ahead of Thomas Fitzsimmons, of East Orange, who finished second, and Walter White, of Newark, who was third. Not two feet separated the riders at the finish. The summaries:

One-Mile Novice (Amateur)—Won by Arthur Wicht, Newark; Robert Vaeth, Newark, second. Time, 2:25⅗.

Half-Mile Handicap (Professional)—Won by Eddie Madden, Newark (50 yards); Martin Ryan, Newark (50 yards), second; Thomas Smith, Irvington (55 yards), third; Frank Corry, Australia (40 yards), fourth; William Hanley, San Francisco (35 yards), fifth. Time, 0.53⅗.

The Brassard Race, One Mile (Professional)—A. Jackie Clark, Newark, vs. Frank Cavanagh, Newark—Won by Cavanagh. Time, 2:41. Last eighth mile, 0.12⅗.

Half-Mile Handicap (Amateur)—Won by John D. Staehle, Newark (35 yards); Ben O. Sicky, Cleveland (70 yards), second; Charles Deeg, Newark (75 yards), third; Willie Simon, Plainfield (60 yards), fourth. Time, 0:54⅗.

Two-Thirds-Mile Match Race (Professional)—Alfred Goullet, Australia, vs. Robert E. Spears, Australia—Won by Spears. First heat won by Spears. Time, 2:04⅕. Last eighth mile, 0:12⅕. Second heat won by Spears. Time, 2:07⅗. Last eighth mile, 0:12⅕.

Two-Mile Invitation (Professional)—Won by Frank Corry, Australia; William Hanley, San Francisco, second; Worth L. Mitten, Davenport, Ia., third; George Cameron, New York, fourth. Time, 3:48⅗.

Two-Thirds-Mile Match Race (Professional)—Arthur Spencer, Toronto, vs. Hans Ohrt, San Francisco—Won by Spencer. First heat won by Spencer. Time, 1:50⅕. Last eighth mile, 0:12⅕. Second heat won by Ohrt. Time, 1:59. Last eighth mile, 0:12⅕. Third heat won by Spencer. Time, 1:57. Last eighth mile, 0:12.

Three-Mile Open (Amateur)—Won by William Spencer, Toronto; Thomas Fitzsimmons, East Orange, second; Walter White, Newark, third; Harry Horan, Newark, fourth. Time, 6:54.

Ten-Mile Open (Professional)—Won by Frank L. Kramer, East Orange; Jacob Magin, Irvington, second; Reginald McNamara, Australia, third; Edward Madden, Newark, fourth; Alfred Grenda, Australia, fifth. Time, 20:54⅕.

LOSES THREE BICYCLES BUT HE'S STILL GAME

EVANSTON, Ill., May 23.—After two bicycles had been stolen Professor F. W. Nichols, superintendent of school district 76, planned to make the third wheel he bought so unattractive that no one would covet it. He removed the saddle which came with the bicycle and substituted the oldest one he could find. He purposely allowed mud to collect on the wheel. But these precautions were not enough. One minute after he had left his bicycle in front of his home recently he heard a lad scream, "Stop, thief, that is Mr. Nichols' bicycle." A boy was seen riding the professor's wheel north on Hinman avenue. The police were notified, but the wheel has not been recovered.

Professor Nichols has not lost courage though. Another bicycle will arrive shortly. Distances between the four schools of the south end are such that the bicycle furnishes the best medium of travel for the superintendent.

BATTLING AWHEEL FOR A GLIMPSE OF GETTYSBURG

Fred M. Sanborn Tells of Tactics Followed on His Trip From Baltimore

THE roughest roads and steepest hills are no bar to the genuine, dyed-in-the-wool plugger when once the touring bee starts to buzz in his bonnet. I found that I was no exception to that rule when a few days ago the sights and scents of spring set the old fever stirring in my blood again. I slapped my coaster hub in, strapped my camera to my belt, and started out on a two-day trip to Gettysburg by way of York and New Oxford, Pa.

Leaving Baltimore at 1:20 in the afternoon, I struck out for the York Pike to the town of that name. The first twenty miles were fine, half of them being smooth asphalt, and the rest an even state road. But when I left the state road and hit the old pike—my, what a difference! Ruts and bumps, stones and thank-you-maams, and last but surely not least, hills—and steep ones, too.

Jolts and Jars

There was just thirty-three miles of jolts and jars, but luckily no spills. The hills were most formidable and had to be taken on low gear (57). When I reached the top of the steep incline leading into York, I stopped a few minutes to enjoy the splendid view and snap a picture. Then the journey was continued into the town where I surprised a relative of mine at supper and accepted his ready hospitality.

After a good night's rest I pulled out the next morning at 9:40 for Gettysburg. The road as far as Abbottstown, 18 miles from York, proved to be in good condition. Two more miles brought me to New Oxford. This part of Pennsylvania is a fertile farming section and prosperous looking homesteads greet the eye of the traveler on every side as he journeys along.

Two miles from Oxford I came to the state road that leads to Gettysburg and ten miles of easy going brought into sight the little town of battlefield fame.

A light luncheon was in order here and then I set out on a tour of the battlefield. Several days can be spent here in sight-seeing, for there is so much that merits the interest and attention of the traveler. I have been over the field several times, but a large part remains that I have not visited. I put in as much time as I could spare and then—southward, ho! for Baltimore.

Well Graded Roads

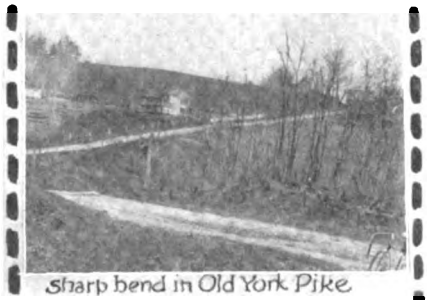
A word here regarding the roads on the Gettysburg battlefield might not be amiss. They are fine for the most part, and although some are very hilly, especially near Roundtop and Little Roundtop, they are well graded. Because of this there is really no better way of getting around the field than on a two-wheeler.

The ten-mile stretch from Gettysburg to Littletown, formerly one of the roughest roads in the state, was now well macadamized and enabled me to reach the latter town in the space of forty-five minutes with little effort.

General View of Battlefield

On top of hill near York

On Little Round Top



Sharp bend in Old York Pike

Monument to Pickett's Charge

Grades of Steepest and Roads of Worst Sort Tax Strategy of Seasoned Rider

Fifteen very hilly miles faces the rider on the stretch from Littletown to Westminster and when he reaches the last-mentioned town he feels that he has earned a rest. I measured the longest hill at Union Mills and found it to be just one mile in length—and it was a pretty stiff grade at that. The road, which is a toll pike, is in unusually poor condition.

And Then Home Again

Westminster to Reistertown, 13 miles, I found to be the roughest stretch of all, although mostly downgrade. But the remaining 17 miles to Baltimore were pretty good, especially after I reached Chattalanee Springs. On this trip I found that my Sturmey-Archer three-speed hub greatly facilitated riding, because of the many hills encountered, and the Palmer Armstrong tires covered the stones and bumps without a puncture.

EXPECT 250 RIDERS IN BUFFALO RACE

BUFFALO, N. Y., May 22.—Judging from present indications the twenty-five mile road race which will be staged on Memorial Day by the Buffalo Bicycle Dealers' Association will draw a field of 250 riders. Applications for entry blanks are pouring in every day at the office of Frank H. Denny, one of the local dealers.

Last Sunday a committee composed of John W. Henry, Chas. Heimerlie, John Oliver, Ed. J. Young and Chas. Haberer made an inspection trip over the course which the race will follow, and found all of the streets and roads in excellent condition. Every rider who contemplates entering the race will have to submit to a "third degree" by Mr. Denny, who will classify the riders according to their respective abilities. A complete list of the officials of the race follows:

Honorary referees: Mayor Louis P. Fuhrmann, Councilman John F. Malone, Sheriff Edward Stengel. Official referee: Frank H. Denny. Associate referees: W. G. Schack, Martin Cabana, W. H. Penseyres, Adolph Gothler, W. W. Whitelock. Starter: Edward J. Young. Assistant starters: John Stutt, Morris Rosenthal, Thomas Rick, Frank Trautman, Edward Beil, Charles Reidpath, Jack Rust, Frank Scott, Albert Schwegler, H. R. Hughes. Chief judge: W. J. Penseyres. Assistant judges: Edward J. Rose, Fred L. Hartmeyer, Adam Gunn, George Strauss, Adolph May, R. F. Titus, William Trombly, Frank Barton. Chief clerk of course: John Oliver. Assistant clerks of course: Joseph Bierback, Percy Pierce, Otto Brucker, Adolph Kellner, Edward J. Seeber, E. D. Brown, O. L. Neal. Timers: Julius Smith, William Clodsley, Henry Nachber, Frank Klipfel, Burt Snider, Chief scorer at finish: John Henry. Assistant scorer: Louis Debo.

SECOND CHICAGO CYCLE FIRE

CHICAGO, Ill., May 20.—The plant of the Chicago Cycle Company at No. 69 Lake street was damaged to the extent of $6,000 by fire this week. This was the second fire at the plant within six months.

FRANK KRAMER'S LIFE STORY

The First Authorized Story of the Great American Bicycle Champion's Brilliant Career—By Harry Mendel

Final Installment

Kramer made his fourth trip to Europe in 1914, when he was again pitted against the fleetest riders on the Continent. Returning to America, he met Walter Rutt, the German champion, in several races.

WHEN Frank Kramer retires from the cycling game and hangs up his wheel, he will look back on the year of 1914 as the most eventful of his long career. His victories in years to come will not make him forget his wonderful performances during that year or the honors bestowed upon him.

Kramer on returning from his most glorious and victorious trip to Europe was honored as no athlete in Newark was ever honored before. Frank was the guest of honor at a testimonial dinner at which a thousand of his friends had gathered. High praises and rare compliments were heaped upon the East Orange boy by prominent men, and Kramer, though used to the plaudits of thousands, sat through it all, blushing like a bashful school boy and plainly showing at the time that the kind remarks of his friends had reached his heart.

Only Two Defeats in Europe

Kramer's European trip was the most successful of the four campaigns the great cyclist has had on the tracks of Europe, while his work in America on his return home was just as good, for he won the national championship for the fourteenth consecutive time. While in Europe Kramer competed in sixteen races and met with but two defeats. In the ten match races in which he started he came through with flying colors. With the exception of three of these events he won them all in straight heats. Kramer started in two open scratch races at sprint distances and won them. In three races he went out of his class, and in one of these affairs he was defeated, two of them were one hundred kilometer team races and one a tandem paced race. He won the tandem paced event and was defeated in one of the long team races, more through team work than a lack of speed.

Kramer won in his first appearance at Paris, on Sunday, February 1. He defeated Emil Friol, of France, a former world's champion, in convincing style. Kramer led the way for the Frenchman in three heats of 1,000 meter match, a third heat being necessary owing to the disqualification of Kramer in the second heat. Kramer was Friol's master at all times, and the offense, that of boring, which brought about his disqualification in the second heat, was unnecessary and probably unintentional, for Kramer could have won without using any illegal tactics.

Probably to show the immense crowd that filled the Velodrome d'Hiver to its capacity that he could win without fouling, Kramer rode Friol off his feet in the deciding heat. As in former matches with Friol, Kramer outgeneraled the Frenchman at every angle and made him do as he pleased. Kramer was well received by the spectators, a great ovation following his victory.

On the following Sunday Kramer had one of the greatest days of his career on the tracks of Europe. He swept everything before him and treated the patrons of cycling to a rare exhibition of speed.

Julian Pouchois, the fastest sprinter in France, at that time was defeated by the wonderful American in a most decisive manner, Kramer taking the match in straight heats. Pouchois, in better form than ever and conceded to be faster than in 1908, when he won the grand prize of Paris, was thought to have at least a chance against the great Kramer, but the American toyed with his French opponent.

Established New World's Record

Following his victory over Pouchois in the match, Kramer started in the 500 meter handicap, which he won from scratch and established a new world's record of 34⅖ seconds. It was a wonderful and spectacular ride, Kramer circling the big field strung out before him with the speed of a locomotive.

On Sunday, February 15, at Paris, Kramer again defeated Friol in a match race at the Velodrome d'Hiver. Friol showed great form and it was an uphill fight for the East Orange rider. The first heat at 1,000 meters was won by the Frenchman; but Kramer came back and took the 1,500 and 2,000-meter heats in an impressive manner, much to the disappointment of the big audience, who were hoping for a French victory.

Kramer celebrated Washington's Birthday at Brussels, in Belgium, by scoring his fourth consecutive victory in match races in Europe, when he defeated Joe Van Bever, the national champion of his country. Although Van Bever had scored victories over Hourlier, Friol, Pouchois, Dupre and other leading riders during the year, he fell a victim to the speed of the marvelous Yankee, as Kramer won in straight heats, and there was never a doubt as to his superiority over the Belgian in either speed or track generalship. The crowd was disappointed over the defeat of Van Bever, who had been cleaning up all along the line, but they were quick to appreciate Kramer's riding by giving him a great ovation.

WALTER RUTT

Following this match with Van Bever, Kramer rode a match against Van Bever and Otto, the latter two mounted on a tandem. To the astonishment of the Belgians the Yankee raced away from the tandem in the final yards of the match and won rather easily.

Kramer returned to France the first Sunday in March and rode at Paris. He went out of his class and scored a signal victory by defeating Octave Lapize, the French distance rider, in a tandem paced race. The East Orange flier won a stiff battle, coming back after losing the first heat by captruing the next two very impressively. Lapize is the best man in Europe behind tandem with the exception of Emil Engle, and while Lapize was the big favorite, Kramer went out and won.

Takes "Prize Consul General"

The next Sunday Kramer won the "Prize Consul General," this race being an annual affair and one of the big features of the cycling season. The final brought Kramer, Friol and Dupre together. At the bell Friol forced Kramer to come out on Dupre, and the latter having his big gear working well unwound at this point. Going down the back stretch Dupre still led, but Kramer came around him and set sail for home. Kramer won out amidst a great demonstration. The battle for second position was an excellent one and the verdict went to Dupre by a narrow margin. After this race Kramer won a tandem race with Julian Pouchois as a team mate. They beat the best tandem teams in easy style.

Sunday, the 15th of March, Kramer and Cyril Vanhouwaert, the long distance champion of Belgium, riding as a team won the 100 kilometer team race. Brocco and Sargent were second, and Lapize and Miquel, another French pair, finished third.

Kramer in one of the toughest match races of his career defeated Leon Hourlier in two out of three heats on Wednesday, March 25. Hourlier, in magnificent form, put up one of his greatest races. Hourlier won the first heat by a small margin and Kramer won the next two in a similar way. Hourlier, who has since been killed fighting for France, was the most popular rider in his country, and the crowd went wild with glee when their idol won the first heat.

CHICAGO FANS WILL SEE CRACK SPEEDSTERS

Impressive Line-up of Factory Riders Will Appear in Three-Day Race Meet Which Will be Staged at Hawthorne Track, May 28-29-30; Amateurs Given Chance to Shine

CHICAGO, Ill., May 23.—That the three-day racemeet, which starts at the Hawthorne Race Track here on May 28, under the auspices of the North Side Motorcycle Club, will excite the interest of motorcycle fans the country over is promised by the entry of some of the best known professional speed merchants. Among the cracks who filed their blanks today are Lorenzo Boido, Excelsior; Don Marks, Charles Sudduth and Elmer Johnson, all of whom will be astride Thors; Bob Perry, Glenn Stokes and Joe Wolters, who will appear in the Excelsior ranks.

Last week both Ray Creviston and Bob Verrill, who will represent the Wigwam, announced their intention of entering the races. These Indian riders are now at the Hendee factory in Springfield, Mass., getting their machines into shape.

Two national F. A. M. championship races, one at five and the other at ten miles, will be the features of the three-day card. There will also be an event for lightweights, and the amateurs have not been slighted in the program.

MAY 28.

10-mile open (professional), 61.00 class—Prizes: First, $30; second, $20; third, $10.
5-mile open (professional), 30.50 class—Prizes: First, $30; second, $20; third, $10.
5-mile National F. A. M. championship race—Prizes: First, $20; second $10; third, $5; in addition to gold, silver and bronze F. A. M. official medals.
5-mile stock machines (private owners), 61.00 class—Prizes: Merchandise, value $40.
5-mile open (professional), 61.00 class—Prizes: First, $30; second, $20; third, $10.
15-mile open (professional), 61.00 class—Prizes: First, $40; second, $25; third, $10.
1-mile time trials, free-for-all—Flying start.

MAY 29.

10-mile open (professional), 61.00 class—Prizes: First, $30; second, $20; third, $10.
5-mile open (professional), 30.50 class—Prizes: First, $30; second, ———.

1-mile time trials, free-for-all—Flying start.

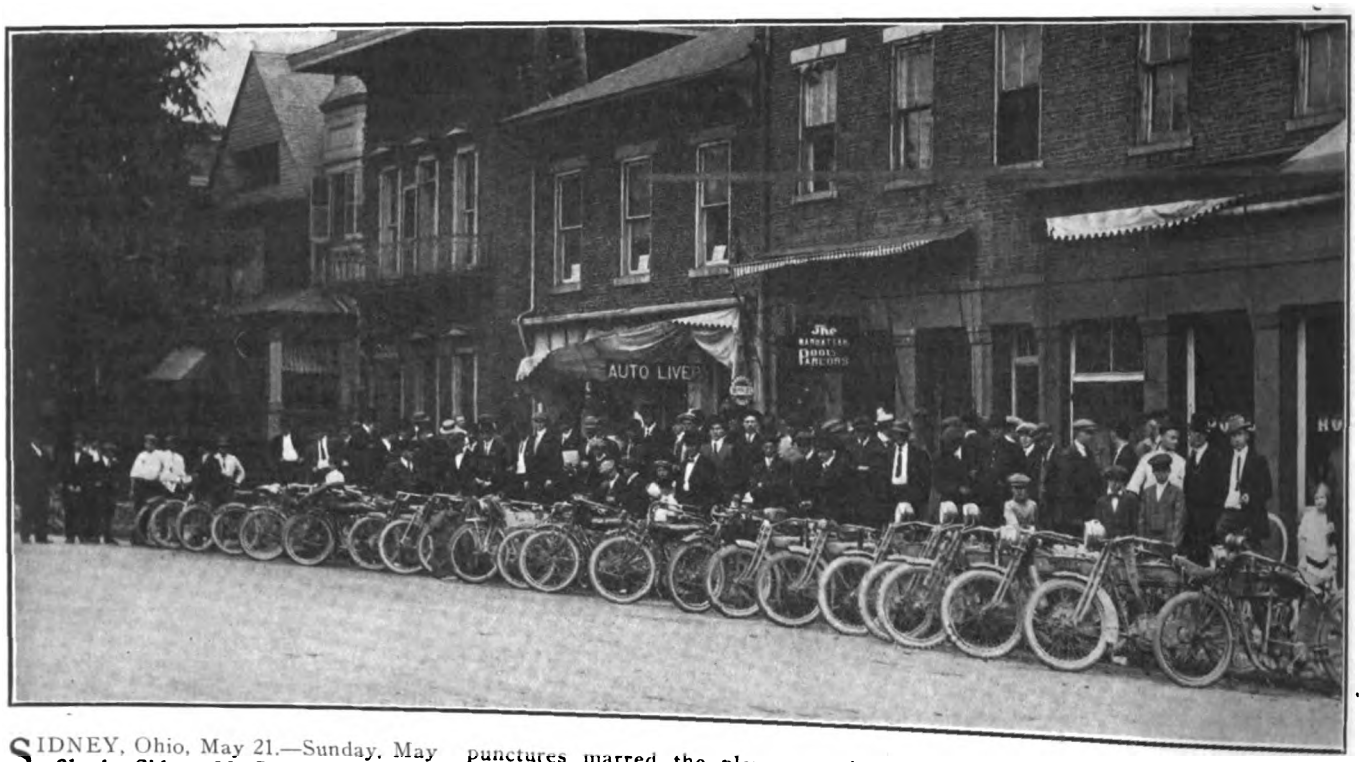
SOCIAL RUN TO FT. RECOVERY STAGED BY SIDNEY M. C.



SIDNEY, Ohio, May 21.—Sunday, May 21, the Sidney M. C. held one of its most successful runs ever made, going to Ft. Recovery and return. "Shorty" DeWeese in his Buick roadster piloted the twenty-two riders, of whom ten were of the feminine gender. The start was made from Paul Monroe's bicycle store, Mr. Monroe being president of the club, and was finished at dusk in a slight rain fall.

A chicken dinner was enjoyed at the Wayne-Neil Hotel at Ft. Recovery, during which Clarence Neil, the genial manager, amused the guests. Ft. Recovery is the battle ground of two Revolutionary War encounters.

No mechanical trouble was experienced by any of the riders and only a few punctures marred the pleasures of the 150-mile ride. The towns passed through were Hardin, Oran, Newport, Ft. Laramie, Minster, Marie Stein, St. Henry, Celina, St. Marys, Wapakoneta, Botkins and Anna.

The club will have a hill climb at Port Jefferson on Decoration Day and a club run with the Troy Motorcycle Club to Ft. Ancient on June 18.

CLEVELAND INCREASE FOR PRODUCTION DEMANDS

CLEVELAND, Ohio, May 23.—That the lightweight field looms large through Cleveland glasses was made apparent when the Cleveland Motorcycle Mfg. Co., maker of the lightweight of that name, increased its capitalization from $100,000 to $200,000, as announced in the last issue of **Motor Cycle Illustrated.**

Reflecting very clearly this spirit of optimism which prevails throughout the Cleveland organization after an identity with the trade of less than a twelve-month, is the statement of Secretary W. S. Quinlan in response to a query as to what the additional capital is to be used for.

"All of the increased capital is to be used to satisfy present demands for increased production," says Mr. Quinlan, which no doubt augments the production of the little machines in much greater quantities for next year than for the present season.

In the Dealer's Realm

YOUR SALESMAN—HIS OPPORTUNITIES AND YOURS

Rapid Growth of the Motorcycle Industry Has Created a Demand for Good Men and Modern Sales Methods—Why a Real Salesman Is Worth His Wage

By HUGH SHARP

"Pay a man what he is worth and he will work for his wages; give him more and he will work for you."

SOMEBODY or other of prominence in the world of business efficiency gave utterance to the above statement and while the name of the author is long since forgotten, the remark certainly is not. Perhaps it is its close application to the motorcycle dealer that brings it to mind at the present moment. Anyway, the question of salesmen in the retail motorcycle and allied sales field is a much mooted one.

It must be admitted that probably in no other business is the lack of perception so readily noticeable in a large percentage of the trademen as on the question of salesmen in the motorcycle field. And the factories are scarcely ahead of the dealers in this respect.

Salesmen Are Scarce

There is a dearth of salesmen in the motorcycle industry. This fact is constantly brought to the attention of the man who reads the motorcycle trade papers. Did you ever see another business marked by the excessive number of constant changes that characterizes the motorcycle trade?

The demand for competent men is almost crucial this year. Just the other day a man high up in the sales force of one of the prominent manufactories made known that he could use four A1, bangup travelers, men who could use their brains and judgment in the best interest of the factory, who could carry a deal through from start to finish and leave the new dealer thoroughly acquainted with every phase of the factory's sales policies and a definite understanding of what the dealer could expect from the various departments of the factory and what the factory, in turn, expected of him.

Why are so many big men from outside industries stepping into the motorcycle trade and sitting down to soft snaps, drawing salaries that would take your breath away if you ever were let in on the secret? Why are not these big jobs filled by men from the motorcycle industry? You can draw your own conclusions. They won't be very many. One will tell the whole story. The demand for executive ability in the motorcycle and allied trade is ahead of the supply.

The keen competition attendant upon the rapid growth of the motorcycle industry has left many of the old timers far behind. It is true that there are some who have revised their methods of keeping shop. They are constantly on the lookout for new ideas that can be incorporated into their business methods.

Losing Business

Many motorcycle dealers, acquainted with their own faults, have been able to offset the weakness by judicious hiring of help. But take any large city where there are ,say six dealers, and you will find three of them trying to run every part of their business by their lonesome, so to speak, and disdaining to hire men who could and would improve on their methods. Bonehead plays in the selling and service ends of the motorcycle business stick in the riders' crops for interminable lengths of time and lose valuable business to the dealer who commits or permits them.

"Once a repairman, always a repairman," is the false philosophy that eases the conscience of many a dealer who knows he is not making good insofar as branching out and creating new sales fields are concerned. He labors under the false impression that he can't learn to sell motorcycles under present day conditions. He sighs for the good old days when motorcycles sold like hot cakes. He is the first to acclaim that all the young fellows are buying cheap cars now. His efforts at placating his worried conscience are making a hit with nobody but himself.

The motorcycle industry never offered better opportunities than right now. And our old time dealer's competitors realize this fact. There are greater opportunities, but they must be treated by modern methods. Commercial prospects want facts, and the dealer who has taken the trouble to study the advantages of the motorcycle over every other kind of transportation for light delivery work is getting the business.

Helps For Dealers

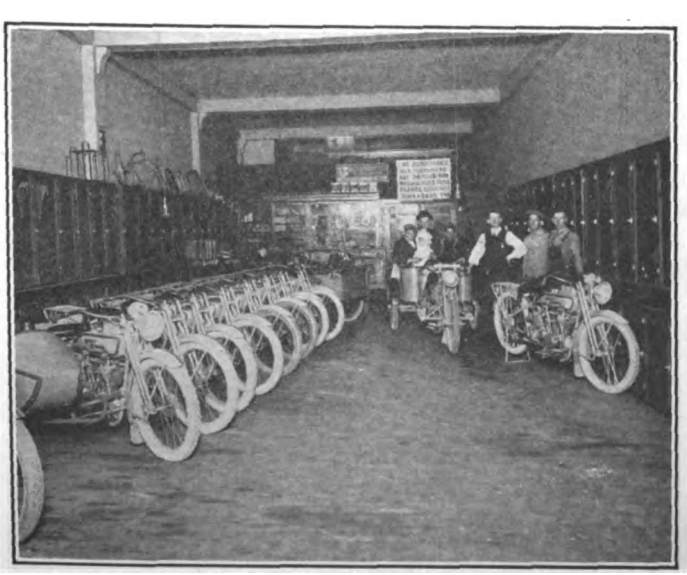
The art of being able to write a good strong business letter to a merchant whose delivery methods need motorcycle efficiency has helped many a dealer to land a sale. The Motorcycle Manufacturers' Association, through the office of its secretary, Mr. E. F. Hallock, 116 Broad street, New York City, has ready for distribution an excellent set of follow-up letters for various classes of prospects. The fact that Mr. Hallock is receiving requests for these from hundreds of dealers is evidence that some dealers appreciate the value of a well written letter.

A good salesman will earn his keep. Fact is, if he don't he should not be kept. Some of the best retail motorcycle salesmen are working on a strictly commission basis. In some instances it is as low as two per cent. The commission depends on the locality. The larger the city, the smaller the commission. In medium sized towns the average pay of the salesman is from $10 to $15 a week and two per cent. if he sells his quota of machines.

A salesman who persists in thinking that he cannot make it go on this basis, better give it up and try some other trade. Asked how he liked the straight five per cent. commission proposition, one salesman vouchsafed the other day that it was "pretty soft." He is a good salesman and the money he earns on this straight commission basis would startle many a less competent man.

Most of these salesmen are picked from the ranks of the riders. The clubs furnish the

MODEL HOME FOR SILENT GRAY FELLOW



Well-Ordered Headquarters for Harley-Davidson in Dallas, Tex.—Harley-Davidson Sales Co., at 2016 Commune Street

Digitized by Google

greater portion. Dealers after business are on the lookout for riders who are good mixers, but who at the same time mix a little brains with the operation. It is surprising, however, what a small percentage of the membership of a club will possess the qualifications necessary to make a good salesman.

The head of a factory service department asked the secretary of a club with more than 100 members if there was any one belonging to his organization who would make a good man to travel for the company as a service man. The duties of the job were principally educational work, just going from dealer to dealer and clearing up little mechanical troubles that bothered the dealer. The secretary thought a long time, but was compelled to answer in the negative. What the average rider does not know about mechanics would fill another Encyclopædia Britannica. All of which may be conceded as a tribute to the perfection of modern motorcycle design.

Energetic Men Lacking

The motorcycle field has too few men who are really willing to buckle down and learn things. William C. Redfield said, "We must get rid of the idea that strenuousness and efficiency are either similar or the same. First of all, efficiency is not strenuousness. The man who hustles may or may not be efficient; probably he is not."

It is not enough for dealers to surround themselves with a corps of hustlers. The man who makes every move count while he hustles and who draws a profitable business into his employer's store is in big demand. Once he is secured, however, it is up to the dealer to lend every encouragement by making the salary that goes with the job attractive. A dealer does not have much come back when an $8 a week man makes a mistake or falls down on his requirements. But he can get after the well paid man with impunity.

TWENTY NEW DEALERS ON THE MIAMI LIST

MIDDLETOWN, O.—The extensive list of Miami Power Bicycle agents has been added to with a greater number than usual during the week ending May 13. Instead of the dozen or fourteen which the factory is sure to get each six days, the list has been increased by twenty, the States of Wisconsin, Virginia, West Virginia, Kansas, Texas and California being represented.

The score of new Miami dealers are:

H. H. Schuetze, Manitowoc, Wis.; B. A. Anderson, Beloit, Wis.; A. Goedeke Cycle Co., Sheboygan, Wis.; O. M. Seibold, Oshkash, Wis.; B. E. Andre, Charleston, W. Va.; Pulaski Cycle Co., Pulaski, Va.; Boyd-Sweeney, Inc., Roanoke City, Va.; J. T. Morris, Portsmouth, Va.; Shumate, Price & Ford, Martinsville, Va.; Dahlstrom, Carlson & Sherling, Kingsburg, Cal.; Graffigna Bros., Lodi, Cal.; J. H. Brandstatt, Yuba City, Cal.; H. B. Cutler, Wichita, Kans.; Knoles Bicycle Shop, Lawrence, Kans.; Oglesbee Bros., Beaumont, Tex.; Guy M. Knudson, Clifton, Tex.; Chas. Ott, Dallas, Tex.; E. R. McComb, Fort Worth, Tex.; T. C. Riley, Newport, R. I.; G. Chapin, Berwick, Pa.

NEW FIRM OPENS STORE

LOS ANGELES.—Martin & Miles have established their second-hand motorcycle store at 931 South Main street, where Lester H. Miles, the active man in the firm, is being greeted by the friends he has made in the last seven years as head salesman of the Harley-Davidson retail store. His new location is next door to this store, one of the best locations in the city. Mr. Miles is now in the market for the agency for a good light weight.

THEY BOOSTED FOR BAKER

NEWARK, N. J.—Two Newarkers played an important part in the final dash of Baker's transcontinental record-breaking trip from coast to coast. Jack Neis, of the Splitdorf Electrical Co., rode on the running board of "Bake's" Cadillac from Trenton to Times Square while Walter Goerke, Indian dealer, rode in the pilot car that posted "Bake's" route across Jersey. Baker will be in Newark next week and make his headquarters at Goerke's store while here.

TIRE DEALERS INCORPORATE

CINCINNATI, Ohio, May 22.—The Corcoran Tire & Rubber Company has been incorporated with a capital of $5,000 to deal in automobile and motorcycle tires. The incorporators are Thomas J. Corcoran, Jacob A. Hollandor, Charles E. Weber, Phil W. Tozzer and T. M. Silber.

READING CLUB ACTIVITIES

READING, Pa.—The Reading M. C. had a most successful run to Philadelphia and return on May 14. Quite a number of the fair sex accompanied the members as sidecar and tandem passengers. The club will hold a sealed time run to Harrisburg on May 28, and on June 11 will entertain the Keystone M. C. of Harrisburg, the clubsters from the Pennsylvania capital riding across for the purpose.

Over 11,000 Miles

On Vitalic Tires!

What ordinary bicycle tire could come anywhere near that record? None! It took VITALICS to do it.

Out of over 60 tires used during a period of 25 years by Dr. F. S. Cate of Florence, Cal., the Vitalic was the only one to reach anywhere near this mileage. Among the 60 tires used were the *very best* of other makes, a number of them much higher priced than the Vitalic. But Vitalics ran *more than three times* the average mileage of the seven next best makes of tires used (based on an accurately kept mileage record sworn to before a notary).

It is this unmatched *milcage* which Vitalics are giving wherever used that proves beyond question their unequalled standard of construction; highest quality of rubber instead of the cheaper grade put in ordinary tires; two plies of heavy *motorcycle* fabric, frictioned with pure rubber, instead of common bicycle fabric; an extra heavy inner tube of pure white rubber.

Write for the testing section and examine these features of construction thoroughly.

VITALIC TIRES
TRADE MARK
For Bicycles

Dealers—

Think what you could do with a tire like that!

There isn't any room for doubt—Vitalics have proved their supremacy over all other bicycle tires wherever comparison has been made.

Thousands of dealers rely on the Vitalic to make their tire profit. Once introduced, it easily brings a better price than ordinary tires, and always sells over and over again to the same trade, because it never disappoints.

Write for attractive Display Material and Dealer Helps.

"BAREFOOT" RUBBER

There is only ONE Motorcycle Tire made of the genuine Black "Barefoot" Rubber —and that's the GOODRICH. It's the identical tread, mind you, that goes on the big Goodrich "Barefoot" Automobile Tire—the strongest tire ever turned out of the big Akron factories. "Barefoot" Rubber is a distinct advance in the compounder's art. It CLINGS (like your bare foot) to a surface—doesn't GRIND over it. It DOES NOT gain Traction at the expense of Mileage. It is harder to puncture—harder to wear out. And note this—NOT ALL BLACK TREADS ARE MADE OF "BAREFOOT" RUBBER. The Market is full of "Me-too-Black Treads." Look for the name "GOODRICH" molded on the sidewalls —THAT points out the genuine.

Its Record Is Written On The Roads

It is written in thousands of miles. And every day adds thousands more to this record. And every mile is an accurate mile. In fact, that is the only kind of mile the

CORBIN-BROWN SPEEDOMETER

"The Speedometer of Absolute Accuracy"

can record. There is not an inaccurate mile in its mechanism. Its manufacturers took care of that. They also saw to it that its durability should be on a par with its accuracy. And it is. If you need a speedometer, and every automobilist and motorcyclist does, you need the Corbin-Brown. There is a model particularly designed to meet your particular needs. Go to your dealer today. He will be glad to show you the Corbin-Brown Speedometer. Catalog on request.

Dealers

Have you your season's supply of Corbin-Browns? If not, get in touch with your jobber at once. You will need every one you can get.

Mention of MOTOR CYCLE ILLUSTRATED is always appreciated by advertisers.

BUFFALO, N. Y.

H. L. PETERS, manufacturer of the Bison brackets reports that their orders are way ahead of their production. "And judging from indications," said Otto H. Peters, "our stocks will have become exhausted in a very short time. We are having a great deal of difficulty in getting our new supply of stock.

"It seems as if all the supply houses and parts manufacturers are having a great deal of difficulty in getting raw stock. Possibly the thing which is bothering us most in our output of brackets is plating. This is due to the fact that we do not do our own plating. And as every plater in this city is overwhelmed with work it is almost impossible to get any work through."

NEW YORK

FELIX LEWIN, managing Henderson sales in New York, has just sold his 127th machine of 1916 model. "The big majority were two-speed models" says Lewin, "and sidecars went with about 66 per cent. of the sales.

"A good percentage of sales were made without taking used mounts in trade. In used machines, a number of 1916 models of various makes have been taken in and all disposed of."

TROY, O.

LANE MOTORCYCLE COMPANY, representing the Dayton Motor Bicycle in this city, sold three of the first shipment of four of the little four-strokers on the day after they were put on display.

UNION CITY, TENN.

T. ED. PARKS, representing the Henderson in this city, has just returned from a long motorcycle tour of the Northern States. He left here in April and rode leisurely to Detroit, stopping for a day or two in each of the principal cities. He entered Detroit on May 1 and spent considerable time at the Henderson factory. After the visit he rode back to Union City.

Parks took the trip to see for himself how the two-speed Henderson would act in the famous Kentucky red clay and wet dirt. His only troubles were one puncture and a fouled sparkplug.

PINE GROVE, PA.

GEORGE A. STUMP, the well-known cycle dealer, has taken the agency for the Dayton line of motorcycles. "What is needed in this section is a powerful machine, with two or three speed box," says Stump, "so I picked the Dayton and am looking forward to a big season with it."

DETROIT, MICH.

ARTHUR BOLYEA, manager of the Auto Cycle Supplies Co., of this city, has sold every machine he has so far obtained from the factory, and is asking for more. "The Davis folks have allowed me and other dealers a limited number of the Motor Bicycles, up to the present," says Bolyea, "and so I am anxiously waiting for the time when I shall get all that I want."

MT. VERNON, O.

CARLTON BREECE, the well-known cycle dealer in this city, has taken the agency for the Dayton Motor Bicycle.

Model L-16 Special **Price $235.00**

Putting the *Special* into the Pope Big Twin

Pope Model L-16 was made Special by the use of *special* cylinder heads, with larger intake passages, larger rocker arm yoke stems and heavier construction where required by these changes. It was fitted with a *special* one-inch carburetor in place of the regular three-quarter-inch.

What was the result? A *special* power development—two horsepower in excess of that of the regular model. A *special* speed—between 5 and 10 per cent. increase. A *special* efficiency—an increase of 13 per cent.

This means that the L-16 Special has more power, more speed, and goes farther on a gallon of gasoline.

It means that it is easier than ever to drift up hills on the famous hill-climbing Pope.

And it means that the owner of an L-16 Special need never be passed on the road by anything on wheels.

On this special model with its special features we have a special proposition to dealers that is better than any we have ever offered before. Write for it.

HOW NEW JERSEY M. C. PRIZES LINE UP

Regular Medal Awards and Special Trophies Are Numerous and Keen Competition Is Assured for May 29-30 Run

NEWARK, N. J., May 12.—Plans for the ninth annual endurance contest of the New Jersey M. C., to be held May 29-30, are about complete. The marking of the last section of the course will be done this week, and the map of the course will be ready for all riders who enter the contest, upon payment of their entry fee.

After using eleven secret check stations in the 1915 run, the committee has seen the folly of its ways, and has put in only two secret checks on this year's course. These will be used only in case of tie scores for special awards, such as the solid gold medals, cups and other trophies, as well as for the numerous accessory prizes that are to be won by consistent riding.

Silver medals will be awarded to competitors who score over 975 points, while bronze medals will be awarded to all other riders who check at all the points designated. Survivors of the New Jersey club runs are always rewarded for plucky work, regardless of the number of points they have lost.

Special Awards

The special awards will be as follows: The Dealers' Trophy, for the factory team of three riders with the highest consistent score. This trophy has been won for two consecutive years by the Indian team, captained by J. Howard O'Brien, and has to be won only once more to lift it from the club to Springfield.

The Herrington Cup is a perpetual challenge trophy and was won last year by the Harley-Davidson dealers' team, composed of W. A. Ford, of White Plains, N. Y.; Elmer Havenstrite, of Paterson, N. J., and August Zimmermann, of Washington, D. C. These men have signified their intention to hold the trophy another season.

The Indian Maid Cup, for the best professional sidecar score, was won by Orrin Steele, of Paterson, N. J., last year, and he feels confident that he can repeat this year.

The C. W. Bush Co. trophy will be awarded for the best amateur sidecar score, and as Joseph B. Werner, of Passaic, N. J., won in this class last year, he is primed for the same classy riding this month.

Keen Rivalry for Holt Cup

The Holt Cup, for teams of three riders representing an F. A. M. club, was won by the Passaic M. C. last year, but the promise of keen rivalry between the Indian M. C., of New Brunswick, the Paterson M. C. and the Crotona M. C. will not make it easy for the Passaic boys to repeat.

The Harley-Davidson Cup is to be awarded to the strongest team of three sidecar drivers this time.

The newcomer in American motorcycle ranks—the two-stroke—has not been overlooked, and they will compete over a special course for prizes of their own. The Cleveland Trophy will be awarded to the lightweight rider with the highest consistent score, while the Smith-Fraser Trophy will be limited to amateur lightweight riders only.

As C. W. Waughop, Harry Raoul, of New York City, and Leslie W. Wintsch will enter on Clevelands, and several entries on Featherweights are promised by John Steele, Walter Goerke and the New York Sporting Goods Co., there will be some keen rivalry between the two-cycle motors on their first endurance try-out.

There is one award that is limited to N. J. M. C. riders only, and that is the Goerke Plaque. This will be hung in the club and the highest novice score each year will be engraved on it with the winner's name.

Among the accessory prizes are tires from the Firestone, Empire, Fisk, Swinehart, Goodyear and United States tire companies, an Exide storage battery from the Exide Service Station, and other articles too numerous to mention.

WOODWELL TAKES FEDERALS IN PITTSBURGH

PITTSBURGH, Pa., May 23.—Joseph Woodwell & Co. have arranged with the Federal Rubber Manufacturing Company, of Cudahy, Wis., to act as distributor of Federal tires in that territory. The Woodwell company will take care of all adjustments, thereby doing away with any possible delay. Harry Webb, manager of the automobile department of Joseph Woodwell & Co., is very enthusiastic over the prospects for record-breaking business for Federal tires.

"NORMA"

BALL BEARINGS

(PATENTED)

One manufacturer may err in judgment, but a large number of manufacturers are not likely to make the same mistake. When the majority of the makers of a machine of a certain class agree in their approval of a certain feature of their several constructions, that particular feature is quite likely to be as near right as such a device can be made.

The manufacturers of probably 85 per cent of the high grade ignition apparatus, lighting generators and starting motors made in America today have agreed upon "NORMA" Bearings as the best bearings for their product.

Are You "NORMA"-Wise?

J. McLEOD SEABROOK, manager of the motorcycle department of the local branch of Howard A. French & Co., reports the sale of a Powerplus twin to the Washington Gas Company, for the use of its service department.

HAVERFORD CYCLE CO., handling the Excelsior, has received two of the Series 17 short coupled machines and will enter them in the 100-mile event at Laurel, Md., in the May 30 meet of the National Capital M. C.

F. L. LEISHAAR, Indian agent, is awaiting the May 30 races at Laurel with impatience. He has a speedy eight-valve for the big race on that occasion and has had this overhauled at the Indian factory.

SAN FRANCISCO, CAL.

APPEAL MANUFACTURING & JOBBING COMPANY, local branch, has just received a carload of new models and has commenced to deliver them as fast as they are uncrated. "They were very much welcome," say the Appeal people, "and we are ordering another load for delivery in two weeks. The present allotment is thinning rapidly."

Z. BARTON, manager for the Thor on the Pacific Coast, is making a week's visit to the San Joaquin Valley trade. He reports a marked improvement in business in the southern end of the State.

A. FREED, of the Pacific Motorcycle Supply Co., is back in harness again after a trip through the country. Things are going finely, according to Freed.

EDWIN F. MERRY, distributing the Excelsior, is on the job again in this city, after a fortnight's visit to Los Angeles.

CHICAGO, ILL.

R. C. CRIST, distributing the Excelsior in this city and surrounding territory, has sold the village of Wilmette, Ill., two Model 7-C Excelsiors with full equipment. They will be used in police service.

LOS ANGELES, CAL.

H. P. WEICHMANN, handling the Shaw motor attachment near Eighth and Spring streets, under the name of the Shaw Motorbike Agency, has moved to 819 South Spring street, across the way. He reports a lively business with this power attachment in the rural districts.

TOLEDO, O.

GEORGE LEIGHTON, proprietor of the Leighton Cyclery, handling the Dayton Motor Bicycle, has sold seven of the front-drive models to date. "This is all that I could get," says Leighton, "otherwise I could have doubled the number." Leighton has just returned from a visit to the Davis Sewing Machine Company's factory in Dayton, and has made arrangements for a number of shipments of the Motor Bicycles.

DETROIT, MICH.

WILLIAM E. METZGER COMPANY has just placed six Powerplus three-speed models with the Detroit police for boulevard patrol.

TOURING IN CALIFORNIA WITH THE EXCELSIOR

The BOSCH MAGNETO Will Keep the Mighty Model 17-3 Excelsior in the Lead

THE new Model 17-3 Excelsior is to be backed by Bosch Magneto Ignition, an ignition system that can be depended upon today, tomorrow or years from tomorrow, an ignition system that costs a little more than the ordinary kinds, but is worth it.

Way back in 1911, the Excelsior adopted Bosch Magnetos. During that year, during the five years to follow, the Excelsior has continued to use Bosch Magnetos and will use them again on the latest 1917 Model. Seven years for Bosch Magnetos—that is proof as to the worth of Bosch Magnetos.

The makers of the Excelsior knew the ability of other magnetos, because they have tried them, but they determined on Bosch Magnetos for their latest and successful Model 17-3 even in the face of additional costs, because they knew that Bosch Magnetos would satisfy Excelsior dealers and Excelsior riders best.

SEATTLEITES, 125 OF THEM, RUN TO TACOMA

Seattle M. C. Takes a Sunday Run to Lakeside Inn, One of Tacoma's Suburban Stopping Places—Some Chicken Dinner!

SEATTLE, Wash.—One hundred and twenty-five members of the Seattle M. C. and their friends motored to Lakeside Inn, twenty-five miles south of Tacoma on the Mount Tacoma boulevard last Sunday, and although the trip was filled with amusing and exciting incidents, it was without mishaps and was thoroughly enjoyed. The trip was the longest attempted by the club thus far this season.

Ninety machines left the O. W. R. & N. depot at Seattle shortly after 9 o'clock and proceeded to Tacoma along the Pacific Hgihway. The party arrived at Tacoma shortly after 10 o'clock. The machines then made their way in fast time to Lakeside Inn, 25 miles out of Tacoma, over the new cement road leading from the city.

Arriving at the inn at 11:30 o'clock the party engaged in various sports until noon when a famous chicken dinner was served. Fred Mercer was the star performer on an Indian, making intricate turns and runs for the amusement of the party.

The Seattle branch of the Firestone Tire & Rubber Company sent a service car along, and this was voted the most popular machine at all times, as glass and tacks were numerous.

The first excitement of the run was experienced by Ted White when, accompanied by Miss Bridgeman in a sidecar, he lost the road and took a short run up a steep hill on one side of the main highway. The machine refused to hurdle a log and overturned, but both White and Miss Bridgeman emerged from the overturned car unscathed.

Glenn Dies tried to wake up Tacoma on the return trip by "showing signs of speed," but he found they were already very much awake when a burly policeman took exception to the exhibition, and Dies went back to Tacoma on Tuesday and added a nice little gold deposit to the city treasury.

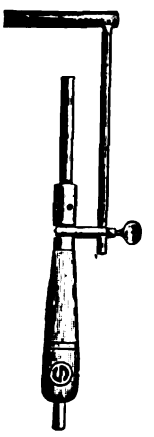
The remainder of the return trip was made without incident and the party arrived home tired but thoroughly elated over the success of the venture. A social run will be staged by the club on May 21 to Granite Falls, and a large number of the club will go to Portland May 29 and 30 to witness the races.

NEW CLUB AT ILION, N. Y.

ILION, N. Y.—A motorcycle club has been organized in this city through the efforts of F. R. Wright, head of the motorcycle department of Stone & Luke, Indian agents. This club has all its members in the F. A. M., and when a name has been decided upon, will ask for a charter.

HANDY SOLDERING IRON IS LATEST FROM STEVENS

AMONG the most recent of useful devices which have been put out by Stevens & Company, of 375 Broadway, New York, is the Handy gas-soldering iron illustrated herewith. This instrument requires neither bellows nor pump, as it burns at atmospheric pressure. It can be used with house gas or with the acetylene from a generator or Prest-O-Lite tank.



The iron incorporates a copper and is adjustable to give uniform pressure for soft soldering, so that there will be no fear of burning off the tin. The flame may be concentrated to a degree sufficient to fuse heavy brass wire. The pointed flame is particularly well adapted for soldering or welding aluminum. The Handy gas-soldering iron lists at 75 cents, complete.

The firm also is furnishing a special grade of aluminum solder that is easily handled. This solder is useful for repairing crankcases, gear-boxes and other aluminum parts. Sample bars of this solder will be mailed to anyone interested on receipt of 25 cents.

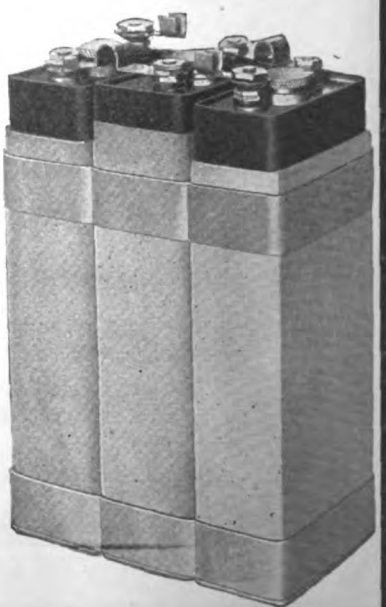
Alkaline Storage Batteries

for

Lighting and Ignition

of

Motorcycles



You don't need to be a battery expert to handle an Edison Battery. You can't injure it by improper charging, short-circuiting or standing idle indefinitely, either charged or discharged. It will last many seasons without any unusual care or attention.

Encased in an unbreakable, unspillable steel jar—plates and poles of steel, submerged in a non-acid, non-corrosive solution; neither the roughness of the road nor the vibration of your engine can lessen efficiency. No repairs, expense or fuss. The entire yearly maintenance consists only in occasionally filling with distilled water and one renewal of the alkaline solution.

FRANK KRAMER'S LIFE STORY

(CONTINUED FROM PAGE 42)

Hourlier was carried from the track on the shoulders of his countrymen after winning.

After Kramer won the second heat he was enthusiastically greeted, and when the riders appeared for the third heat there was an impressive silence. Kramer forced Hourlier to the front at the start but two laps from the finish shot by the French rider. Hourlier immediately jumped and got as far as Kramer's elbows when the East Orange rider picked up enough speed to stall him off. For almost two laps the riders rode neck and neck, with Hourlier on the outside. Kramer was the stronger and maintained his lead to the finish, winning by a few inches.

At Geneva, Switzerland, the last Sunday in March, Kramer defeated Cesar Moretti, the crack Italian sprinter, in two straight heats at the Zurenburghe track. Kramer rode both heats from in front and won by a small advantage in each heat. The track was flat and very rough and the cement surface was broken in many places. Both riders wanted to ride from in front; they compromised and Kramer took the lead.

Kramer was defeated on Wednesday, April 1, at Paris in a 100 kilometer team race. Frank rode with Maurice Thys, the winner of the Tour de France, and they were compelled to bow to defeat as a result of a big combination of French, German and Belgian riders. Miquel and Lapize won the event.

In a five cornered match race the next day, at Brussels, Kramer scored a notable victory over Joe Van Bever, the sprint champion of Belgium; Leon Hourlier, the sprint champion of France; Johnny Stol, the best of short distance men in Holland, and Jules Sargent, of France.

In a blaze of glory Kramer ended his European campaign on Sunday, April 12, by winning the Easter Prize at the Parc des Prince track. Kramer scored a clean-cut victory over Bill Bailey, of England, and Emil Friol, of France. The Easter Prize is one of the classics of France and is an annual feature at the opening of the big Parisian outdoor track. It was Kramer's farewell appearance and he received a tremendous ovation. Although pressed hard by the phenomenal Bailey there was never a time when the Yankee did not have the race well in hand and his ability to win was never in doubt.

Defeats Rutt

Kramer's most notable victory on his return to America was the defeat of Walter Rutt, of Germany, and the world's champion, in two successive match races. On Sunday, May 3, he beat Rutt in two straight heats before 16,000 persons at the Newark Velodrome. The next Sunday the same number of people turned out and saw Rutt get beaten once more. Kramer won the first heat, the second was declared a dead heat, while Kramer then came back and copped the third. On each occasion Rutt tried to win, riding from in front, but Kramer was too strong for him and rode around the German.

Kramer beat Goullet and Spears in the $1,000 Grand Prize of Newark, winning two out of three heats. In the second heat he rode the last eighth mile in 11⅗ seconds. At Brighton Beach on the Fourth of July Kramer vanquished Walter Rutt and Jackie Clark in a three-cornered match affair. Kramer won two heats while Rutt got one. Before 14,000 persons on July 26 Kramer led Goullet and Rutt to the finish mark in the Criterion Stakes.

The biggest crowd of the season turned out in Newark, on Sunday, August 30, when Kramer defeated Bill Bailey, of England, in a special match race. Sixteen thousand five hundred fans packed the Velodrome to see this match. Kramer won in two heats.

On Sunday, September 6, Kramer beat Moretti and Goullet in the final of "World's Cycling Derby," which was substituted for the world's championships, which were not run in 1914. Kramer had to ride the last eighth mile in 11⅗ seconds to win.

Goullet beat Kramer in a match race on Sunday, September 20, but two weeks after this Kramer turned the tables on the blond haired Australian and won two out of three heats in a very impressive manner.

The year of 1915 in cycling is still fresh in the minds of the cycling fans and Kramer's victories in detail will not be reviewed. Suffice is it to say that the old master won the national championship for the fifteenth year in succession, after a hard struggle with Alfred Goullet, of Australia.

The Permanent Kind

HENDERSON dealers hold their customers. The purchasers become more and more pleased with their four-cylinder machines after each month of satisfying service, and their loyalty to the dealer is cemented more firmly. This is an important factor in the consistent expansion of the business of Henderson dealers.

HENDERSON MOTORCYCLE CO.
DETROIT

"I HAVE ridden my 1916 Henderson 1400 miles this spring, in which time I used only 17 gallons of gasoline —an average of 83 miles per gallon. Considering the awful hills that have had to be climbed in riding about this part of the country, I feel that this is an excellent record."—W. A. White, Huntingdon, Pa.

Questions and Answers

90-DEGREE TWIN BETTER

TO settle a bet, let me know which is the best balanced model of twin, the old M.M. or a 45-degree two-cylinder motor.

GEOFFRY MILLER.

Chicago, Ill.

The 90-degree motor, such as was used on the M.M. machines, is decidedly better balanced as to running than any motor of less angular degree between the cylinders. When it comes to speed, the motor with the lesser angle is generally superior to the 90-degree model.

USE IRON CEMENT

PLEASE tell me how to permanently fix in place the locking ring for the rear sprocket on my machine. This ring has been driven on hard with hammer and chisel, but tends to shake loose and things happen as a result. The ring screws in place.

HARRY A. ESCHENBACHER.

New York.

The ring is probably too loose a fit on the hub, due to worn threads on the ring or on the hub. If you do not want to get a new ring, which would probably be the best procedure, use an iron cement to keep the ring in place. After letting the cement set, there should be no further trouble, untll you come to remove the ring for any purpose. Then there will be difficulty in getting it off.

RESET THE MAGNETO

MY 1913 twin knocks when pulling with a full-advanced spark, but the knock disappears when a slight retard is made. It has recently been overhauled and runs beautifully, with the exception of the knock. I ask whether the knock can be corrected by setting back the train a tooth.

THOMAS S. MATHERS.

Brooklyn, N. Y.

We suggest that you try setting the train back a tooth. Then notice if you get the same speed as before, with throttle fairly well open. If not—and if you desire speed—return to the original setting and do not fully advance the spark. We feel that the difference of one tooth will correct the trouble.

A GERMAN MOTORCYCLE

WE would like to know where the N. S. U. motorcycle is made and where spare parts for same can be had.

MULLER PLUMBING CO.

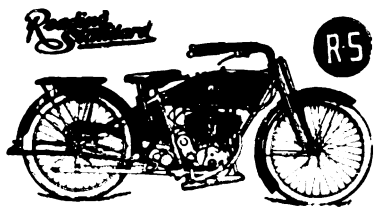
New Orleans, La.

The N. S. U. was formerly made by the Neckarsulmer Fahrradwerke, of Neckarsulm, Germany. Production ceased with the opening of the European war. There is no American agency, nor has there been since 1913. Parts may be had, we think, from the Metropolitan Motorcycle Repairing Co., 542 West 127th street, New York, a former N. S. U. shop.

BARTON SELLS ARMY THOR

SAN FRANCISCO, Cal.—Z. Barton, manager of the Coast office of the Thor, recently shipped one of these machines to the 12th Infantry at Nogales, Ariz., for use in the border service. He has just received a letter from one of the officers, stating that after a very severe trial, over river-bed sand, rocks and mountain roads, and on urgent military business necessitating speed, the performance of the machine was all that could be expected.

RIDE AN R-S FOR REAL SATISFACTION



12 H. P. 3 speed
Model 16B $265

6 H. P. 3 speed
Model 16K $230

Large folding foot boards, foot and hand operated clutch, foot operated brake, double oiling system, the R-S shock absorbing seat post, adjustable to weight of rider; these are but a few of the "trimmings" which carry out to the smallest detail the Policy of Service plus Comfort.

Then, too, its powerful and silent long stroke motor with imported ball bearings, mechanical intake valves and integral cams and gears serves to give the R-S buyer *more* value, *more* service, *more* satisfaction.

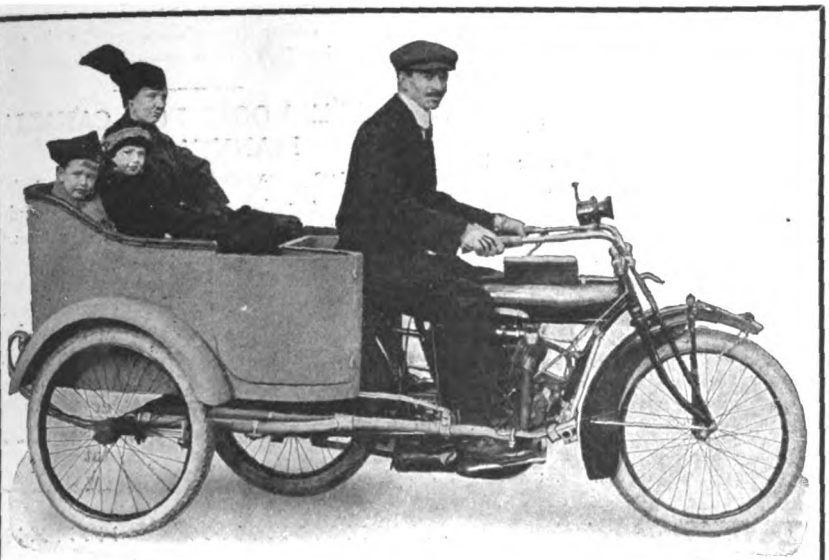
CYGNET REAR CAR

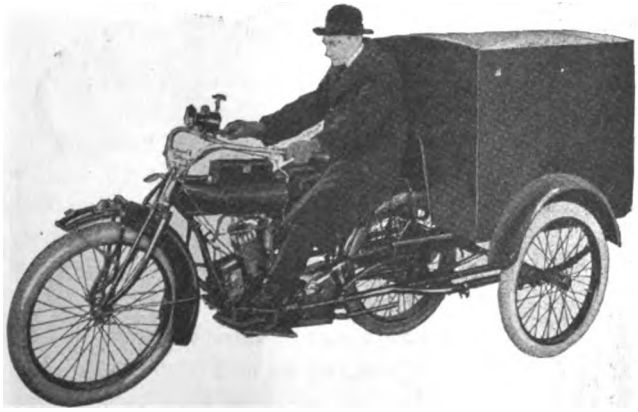
"brings many new buyers to motorcycle"



PASSENGER CAR

Two to three passenger; best auto design and finish; spring seat and back upholstered; semi-elliptic springs; crown fenders; color to match any make of motorcycle.

Fits any standard motorcycle—"On or off in 30 Seconds"



DELIVERY VAN

Two types—rear door, as shown, and open top type. 500 lbs. capacity. Speedy, novel. "The key to many a merchant's delivery problem."

—**why** do these words appear time and again in letters of CYGNET dealers to us?

—**because** with its roomy, comfortable design the CYGNET at once appeals to the man who would share the joy of motoring with family or friends.

—**because** he can ride his cycle **solo** during the day on business and convert it into a two- or three-passenger auto to take the "folks" out with him.

—**because** he secures auto capacity, comfort and safety at one-quarter the expense of even a small auto.

The CYGNET fills a real want—are you prepared to cash in on **that want in your community?** If the experience of nearly one thousand dealers means a thing, you can bank on increasing your motorcycle sales 15% to 50%.

MACKAY HEADS TORONTO BICYCLE ASS'N

Organization, at Second Annual Meeting, Decides to Adopt Independent Policy with Regard to Race Permits—Other Officers Elected

TORONTO, Ont.—At the second annual meeting of the Toronto Bicycle Riders' Association, held at the Classic Athletic Club, 728 Queen street, East Toronto, on Wednesday night, May 17, the officers and members unanimously decided to adopt an independent policy with regard to the holding of races, meets and tours during the coming season. The association will issue racing permits to the competing cyclists and it is expected that practically all races during the season will be conducted under the auspices of the association.

Officers were elected as follows: honorary president, J. W. Gibson; president, G. L. MacKay; first vice-president, A. A. Briggs; second vice-president, A. E. Humphrey; third vice-president, Frank Johnson; treasurer, Harry Martin; Secretary, W. M. Gladish; executive, W. Marr, Military Athletic Association; Herb MacDonald, H. M. Bicycle Club; Ed Patrick, Classic Bicycle Club, and Job Spencer.

Announcement was made that the first bicycle run of the season would be staged about June 11 and souvenir prizes will be given every cyclist who finishes the twenty mile ride. This will not be a race. It is also expected that the Dunlap Bicycle team road handicap race will be held at or near the Niagara Military Camp on July 1. In this event the cyclists in training here with the Canadian overseas force will be allowed a fifteen minute handicap in a twenty mile race providing they use their regulation bicycles.

TORONTO'S EYES FOCUSSED ON NEWARK VELODROME

TORONTO, Ontario, May 22.—The bicycle fans of Toronto are taking great interest in the races at the Newark Velodrome because of the great showing which both Art and Bill Spencer, the local cycle experts, have been making at the New Jersey bicycling burg. After Art Spencer scored a victory over Joe Fogler in his first professional match race Mayor Church of Toronto wrote a letter of congratulation to the former Canadian amateur champion. Toronto's Mayor has asked the Spencer brothers to keep him posted on their successes at the Velodrome. If they happen to come back to Toronto this summer they will undoubtedly enjoy a civic reception.

MORE ROOM FOR CANADIAN MANUFACTURER

TORONTO, Ont.—The Canada Cycle & Motor Company, Limited, has acquired a twenty-one acre site near Weston, Ontario, a suburb of Toronto, for the erection of a new plant. The construction of the large factory will be started in the near future.

Mr. H. D. Scully, formerly a prominent officer of the Canadian Manufacturers' Association, has been appointed secretary of the Canada Cycle & Motor Company.

MOTOR WHEEL AS CANADIAN RAILROAD EQUIPMENT

Canadian Distributor Sells 100 of the Smith Attachments to Be Used In Connection With Handcars and Inspection Tricycles—Their Efficacy Demonstrated

MONTRAL, Que.—Fred St. Onge, representing A. E. Bregent & Company, Canadian distributors of the Smith Motor Wheel has just closed a very unique contract with the Canadian Fairbanks-Morse Company, Limited, which calls for the sale of one hundred Smith motor attachments. Not only is this one of the largest Smith Wheel orders ever contracted, but the use to which the "boosters" are to be put is novel in the extreme. They are to be used to provide propulsion for railway velocipedes on Canadian railroads. St. Onge has already left Montreal for a business trip across the continent to Vancouver, B. C., in the interests of the Fairbanks-Morse people and the Bregent company and, during this tour, he will demonstrate the Smith Motor Wheel as attached to handcars and railway tricycles.

St. Onge has already made a number of interesting tests in Eastern Canada in the presence of prominent officials of the Grand Trunk and Canadian Pacific Railway companies. On a recent Sunday he guided a tricycle, propelled by a Smith Booster, on the rails from St. Jerome, Quebec, to Mile End Station, Montreal, covering the distance of twenty-eight miles in one hour and thirty minutes. The total weight of the vehicle and passengers was 775 pounds and only slightly more than a quart of gasoline was used for the trip, according to the official report. A few weeks before, at North Bay, Ontario, with the temperature ten degrees below zero, St. Onge and two railway officials went 23.4 miles in one hour and nine minutes on ice-covered rails. The total weight on this occasion was 720 pounds. He has also made demonstrations at Toronto and Hamilton, Ontario.

In his flying trip across the Dominion, St. Onge is making stops at only Winnipeg, Calgary and Vancouver and at each of these places he is showing how the Smith wheel can be used with railway tricycles. The Smith power wheel is attached to the rear of the three-wheeled railway truck with the rubber tire resting on a rail. It attains good speed on straightaway stretches and no difficulty has been found in rounding the sharpest curves.

NEW LIGHT ON EXPORT SITUATION

WASHINGTON, May 23.—A report on the latest changes and developments in foreign tariffs has just been issued by the Bureau of Foreign and Domestic Commerce, Department of Commerce. In addition to the usual notices of recent changes, actual and proposed, in import and export duties, customs regulations, and internal taxes of foreign countries, this publication contains the more important embargo and contraband provisions, an important summary of the regulations affecting commercial travelers in Central America, and articles on a number of other subjects more or less intimately connected with foreign tariffs. The report is designated "Foreign Tariff Notes No. 19," and may be had free of any charge upon application to the Bureau of Foreign and Domestic Commerce or to any of its district offices.

PLEASANTON HAS MOTORCYCLE "STUNT" MEET

SAN FRANCISCO, Cal.—The "Round-Up" May 14 at Pleasanton, was well attended. The entertainment was on the wild-west order, consisting largely of "buccaroo" stunts, one of which was an exhibition in which a bull was teased and evaded by Bill Watson, a Santa Clara motorcycle cop, on his customary mount. The big motorcycle event was a 100-mile race by professional riders, Oberg (Indian) being first, Zettle of San Jose (Excelsior) second, while Burns of San Francisco (Cyclone) went out at six miles. A 5-mile match race was also run, in which Burns finished first and Oberg second.

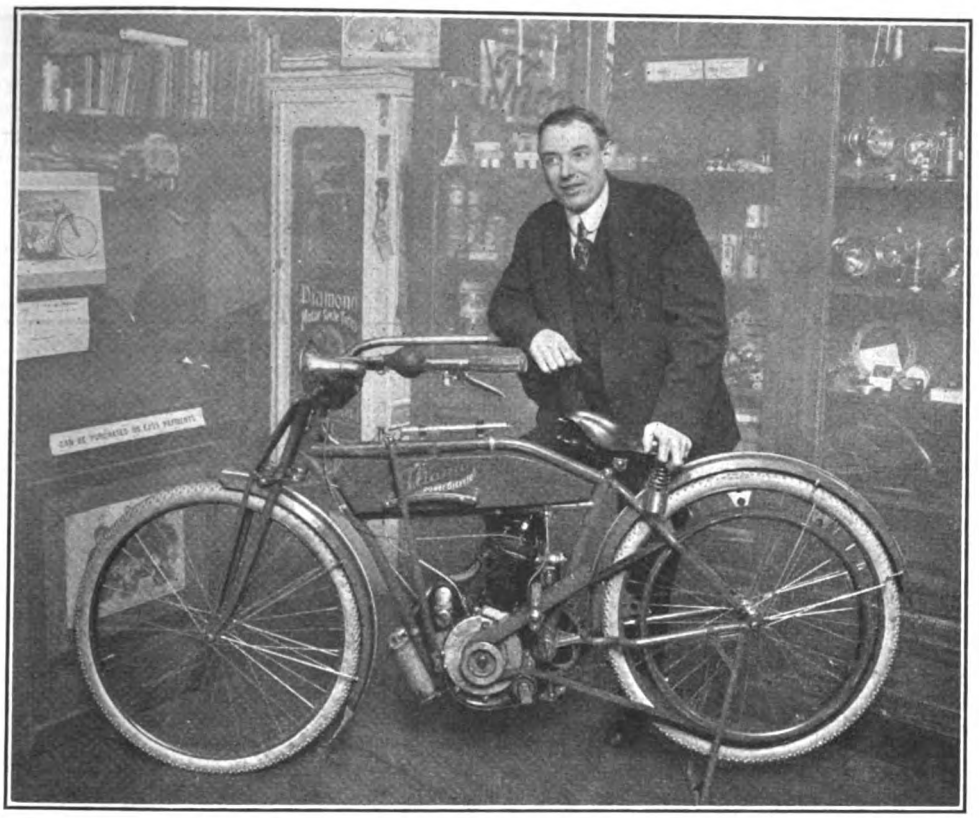
THE BEST DRIVE SPARTAN FOR LIGHTWEIGHTS



"I have nothing but highest praise"

Gliesman

DURING the season of 1915, doing demonstration work with this machine, I covered 3500 miles; the same Spartan Belt was used and at the end of the season was in a condition which led me to believe that it would give again as much mileage.

It was subjected to a great deal of stress, particularly while touring the state of Virginia, which, aside from being mountainous, and having very sandy roads, is bridgeless; in other words, creeks of varying depths had to be ridden through. In spite of this constant exposure to water and sand the belt retained its wonderful efficiency.

I have nothing but the highest praise for

Tips for Exporters

WHY AMERICAN TRADE DOES NOT ADVANCE

SEVERAL ways in which misunderstanding with consequent lack of reorders of American goods have arisen between French houses and American manufacturers or exporters are mentioned in a recent letter from La Rochelle, France, wholesaler to the local consulate. Among these are the system of credits, quotations not being made for French ports, use of American system in place of metric or decimal units of weight, capacity or volume.

The letter says: "I have already made several important purchases in America, and have encountered enormous difficulties in the fact that Americans exact that funds be deposited and the credit confirmed before they themselves confirm the sales and close definitely with the purchaser.

Quote for French Ports

"In the catalogues we have received, the prices quoted are those for goods delivered at New York. It is impossible to treat now under these conditions for goods the possible date of delivery of which is unknown. If Americans desire to do business in France for the trade in small hardware and small tools, they must be prepared to quote prices c. i. f. French ports. It would be even preferable that they do as Europeans have, and quote prices covering transportation and customs charges. It is incontestable that the exporting country should arrange for the payment of freights, since this is paid in advance at the port of shipment, as well as the insurance and other such expenses, and debit the sum thus advanced to the purchaser.

Metric System Quotations

"Another serious reproach that may be made against American products is that they are sold upon the old system of weights and measures, while Europeans have adopted the metric system. The English have been forced to adopt the metric system for their export trade, and have only kept the old system for their internal commerce.

"Catalogues written in terms of 1/4, 1/8, 1/16, 1/24, or 1/32 inch are not readily assimilated by our French importers, as we only know the centimeters, millimeters, and meters. We more readily understand the English system of weights, but the measures of length are not easily comprehensible to us."

The Rochelle consulate has heard similar statements from other concerns, and states that the reasons given fairly illustrate why further advance in American trade has not been made in that region. The local merchant expects the exporter to meet him at least halfway in the concessions necessary to establish a foreign trade. He also expects that the exporter will grant him such terms that his capital, which in this district is comparatively small, will not be immobilized for months, as it will be if he is obliged to place it to the credit of the seller months in advance of the receipt of the goods.

CENTRAL AMERICAN BUSINESS

AMERICAN manufacturers already sell about fifty per cent. of the goods imported by Central America, but a much larger percentage of the business should be done by Americans as a result of present opportunities. American capital is being freely invested in various Central American industries, and American manufacturers are benefiting thereby.

NIGHT LETTER

GEORGE W. E. ATKINS, VICE-PRESIDENT NEWCOMB CARLTON, PRESIDENT BELVIDERE BROOKS, VICE-PRESIDENT

RECEIVER'S No.	TIME FILED	CHECK

SEND the following Night Letter, subject to the terms on back hereof, which are hereby agreed to

New Haven, Conn., May 20-1916.

Miami Cycle & Mfg. Co.,
Middletown, O.

Express ten Miami Power Bicycles to me at once. Sold fifteen machines in four days. Consider this the greatest selling proposition I ever had in my store. I want to clinch agency for 1917 as I expect to sell at least one hundred within next six weeks. Check follows.

Paid. S. Schwartz.

What Mr. Schwartz has done you can do. This is his second order within 10 days for 10 machines by express.

THE MIAMI POWER BICYCLE

is making good everywhere

THE MIAMI CYCLE & MFG. CO. **Middletown, Ohio**

Names—Names—Names!

By the hundred, or the thousand, as many as you want—Mr. Dealer and Mr. Manufacturer—Names and addresses of the motorcyclists and automobilists who are registered at the New York State Capitol. The motorcycle registration law just went into effect, and here is a splendid opportunity to get business by circularizing the riders of any part of, or the entire State of New York.

We Furnish These Names at Lowest Prices

We copy official automobile and motorcycle records in the Capitol here and can compile a list of the auto or motorcycle owners for your section of the State, at lowest rates, sending you supplements, giving the additional registrations. We can compile a list of owners of any particular motorcycle you may wish a list of.

Dealers are making good money, and creating a lot of new business, by using our lists. Now is the time to write riders in your territory for repair work and new accessories. Get our list now. Beat your competitor to it.

CAPITOL AUTO LIST COMPANY

Room 233, Capitol, Albany, N. Y.

Capitol Auto List Company,

Room 233, Capitol, Albany, N. Y.

We want ..... names and addresses of motorcycle riders. Quote prices.

WORCESTER RUN IDEAS ARE WORTH COPYING

THE Worcester M. C. boys have started two new ideas in their '16 endurance run, that other clubs could watch with interest and profit. The first one is the timing section stunt to eliminate the secret check—nobody's friend. The idea is not new, it having been originated in England several years ago, and it evidently worked with success, too.

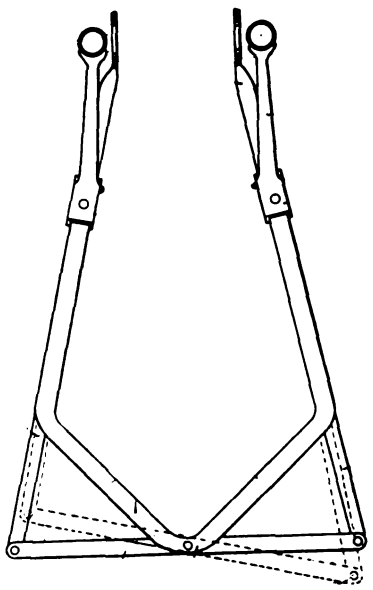
It works thus: you are riding along when a checker stops you and takes your time and signature, informing you that for the next 30 miles you are on a section that your riding will be watched to see if you are holding consistently to your schedule. Anywhere in that 30 miles another checker is stationed and when you come upon him he takes your time and the committee works out your elapsed time between stations to compare it with the correct riding time.

Their other innovation is to let some of the out-of-town riders start from their home town, covering the course as those from Worcester do, but starting, in one case, several hours before the rest of the field does and riding to the starting line, going off with the main bunch, and dropping out at their own town as the run passes through it. In the other instance the riders from another town wait for the run to pass through their town and when the run is over at Worcester they continue on to their starting point.

The idea is good, for it saves many riders extra mileage both before and after the run.

AUTOMATIC CYCLE STAND

A STAND which will automatically adjust itself to the surface of the ground when in operative position is the subject of Patent No. 1,175,694, granted to Thomas J. Bowyer, of Duluth, Minn. The main frame



of the stand is generally triangular in form, with a pivot at the apex. On this pivot moves the tread of the apparatus, this tread being a bar attached at its ends to movable pieces which enter cylindrical portions of the main frame. These movable pieces are notched to correspond with the interior surfaces of the cylindrical portions of the main frame. When the stand is lowered, the tread rocks to accommodate itself to the surface of the road, and the stand moves in such a fashion as soon as the weight of the cycle is put upon it, latches engage with the notches before mentioned and prevent the tread from moving, thus retaining the motorcycle upright.

WHEEL STEERING DEVICE

CHESTER GILES, of Moweaqua, Ill., has been granted a patent on a wheel steering device for motorcycles or bicycles to replace the regular handlebars. The steering wheel is fitted to the top tube of the cycle so that the rider can maintain an upright and comfortable position. The lower end of the steering shaft is connected by links to a T-piece attached to the steering head of the cycle. Controls are arranged on the wheel. The patent is No. 1,175,744.

NEW SPRING SEAT

RALPH W. CUTTS, Shabona, Ill., has patented a spring seat. It is supported by spaced posts, to the lower ends of which spiral springs are attached, the upper ends of the springs being secured to a cross plate that in turn is attached to a flat spring, the forward end of which is secured to the forward end of the seat. The patent is 1,181,507.

JOBBERS HEAR "MILLION BICYCLES" REPORT

(Continued from page 35)

with a boy astride a bicycle, and the third bore a life-size picture of a boy standing amid beautiful scenery. In the last display card an open space is cut, right next to the boy, where a bicycle can be placed, thus giving an atmosphere of realism to the display. All three posters are intended, said Mr. Olin, to be included in the same window decoration, the first two being for the sides and the last one for the center of the window. With this outfit a sign will be provided with the words: "Everybody's Doing It Now!" Some 3,000 of these display sets are being gotten up for dealers.

"At the Atlantic City convention," continued Mr. Olin, "we will stage an exhibit of the various kinds of material which are now in preparation. And in addition to that we will show the trade men a real bicycle moving picture, which will be entitled the 'Magic Wheel,' and is to be exhibited later throughout the entire United States.

"The story of this reel centers about a poor boy who bought a second-hand bicycle, and later was enabled to buy a new one, astride which he won the heart of a banker's daughter. There will be plenty of thrills in the picture; in one scene the hero is shown escaping the clutches of fierce bandits. We are now trying to have Charlie Chaplin take part in the film, which will be of thirty minutes' duration."

After the secretary had concluded his remarks, Harry Quine, chairman of the committee, spoke on the subject of suitable prizes for races. He declared that bicycles as awards could hardly be expected to attract much attention, since most contestants already owned machines. Quine then showed a collection of watches, stick pins and other useful articles which would better serve to attract the right riders.

FUTURE HAS A ROSY HUE FOR FENTRESS-NEWTON

DETROIT, Mich.—If the sale of F-N tandem attachments can be taken as a criterion, there will be easily 100,000 motorcycles sold during the present season, according to F. P. Fentress, of the Fentress-Newton Co., 253 Lafayette Boulevard. The sale of the F-N tandem, according to Mr. Fentress, has reached phenomenal proportions, especially in the Rocky Mountain and Prairie states. The company has just booked especially large orders from Colorado Springs, Salt Lake City and Oklahoma City.

PETER A. FRASSE & CO., INC., 419 CANAL ST., N. Y.

High Power and the Benton

Any spark plug can give good service on low power-low compression motors. But it takes an exceptional plug—

"The Case Hardened Plug"

to deliver the spark consistently and accurately for months in the high-power, high compression motors of today, that generate sufficient power to run most light cars. The wonderful case-hardened construction of the BENTON gives it the right "pep" for these big motors.

Try one on your "bus."

REMY

Motorcycle Lighting Ignition System

When it comes to lighting up the dark places, the automobile has nothing on the motorcycle that is equipped with the REMY System.

Electric light—that's REMY light, modern light—steady and sure.

Electricity has worked wonders. It is doing two-thirds of the "heavy" work all over the world. Nowhere has it been utilized to greater advantage than in the REMY Automobile and Motorcycle Systems.

With a REMY Motorcycle Lighting Ignition System you get 24 hours of daylight every day in the year.

And, REMY Ignition insures perfect motor performance—smooth, even running at low speed. A quick, snappy pick-up. Hot, instantaneous spark at all speeds. REMY Ignition means all this and more.

Thousands of riders of 1916 Harley-Davidson Motorcycles enthusiastically endorse the REMY System after more than a year of strenuous tests in all climates and under all road conditions.

Don't overlook your first opportunity to inspect a REMY System equipped Harley-Davidson. Service Stations in all motor centers.

STUDY THE RECORDS

of the Motorcycle and the Manufacturer

The EXCELSIOR AUTOCYCLE was the FIRST and remains the ONLY motorcycle to attain a speed of 100 miles per hour and still retains that World's Record despite thousands of dollars spent and effort made, by competitors, to equal it.

The EXCELSIOR AUTOCYCLE holds World's Records for practically all the recognized distances 1 to 300 miles.

Of SIX new World's Records established in 1915, FIVE were made on EXCELSIORS.

Every race held in 1915 in which a new World's Record was established, was won by an EXCELSIOR.

The EXCELSIOR AUTOCYCLE also holds the ONLY Official World's Record for ECONOMY.

THE COMPANY BEHIND THE MACHINE

Every motorcycle buyer as well as every dealer should be interested in the financial standing and reputation of the manufacturer of his motorcycle.

The rating of the EXCELSIOR Company by the commercial agencies tells the story of their financial standing and the Company's reputation for squareness and fairdealing with both dealer and owner is equally well established.

THESE ARE POINTS THAT COUNT. THINK THEM OVER.

STREAKS

Use these Letters and Get More Business

You can easily discern which lines move most rapidly by taking an inventory.

Do you know that you can "take stock" of your salesmanship also?

You can *weed out* the unprofitable methods and adopt methods that have proven their practicability in producing more business.

The Goodyear Letter Service has demonstrated its ability to get business because Goodyear Dealers in all lines have of their own accord sent out over one million of these letters.

Close acquaintance with customers or prospective buyers enables you to get their business when they are in the market—business not only in bicycles, Blue Streak Tires and sundries, but in other lines you carry as well.

You could personally call on ten or twelve people a day and make many sales, but *you can't spare the time to do it.*

The Goodyear Letter Service will make these calls for you—and just as effectively as a personal call, if you will tell us your conditions.

We prepare a series of letters for you at a penny apiece plus postage. These letters increase your sales of standard lines, speed up slow moving goods, collect money, create good-will, land new orders, bring in new customers, combat local and mail order competition, turn over stocks quickly, win confidence, develop re-orders and build up a steady, profitable trade.

This Letter Service is *FREE* if it does not repay its cost to you in increased business.

This is a plan that is producing business at a trifling cost for hundreds of dealers.

We want you to see samples of these letters Goodyear Dealers are sending out. Write us today for complete Goodyear Letter Service Offer. A postal places it on your desk.

Harley-Davidson De

Perfect Score at Billings-

One—Two—Three—Five—that's the order of finish of Harley-Davidson in the big Billings, Mont., road run of 250 miles—the roughest kind of riding. Bob Koch, Martin Curtis and Fred Olsen each made a perfect score of 1000. Pat Curtis, who was fifth, had a score of 998. There's consistency for you.

One—Two—Three—for Harley-Davidson in the two-day 450-mile Endurance Run from Omaha, Nebraska to Kansas City and return. The winner, Otto Ramer, won the Omaha World-Herald Trophy. Note, again Harley-Davidson consistency:

The winner, Ramer, rode a Harley-Davidson

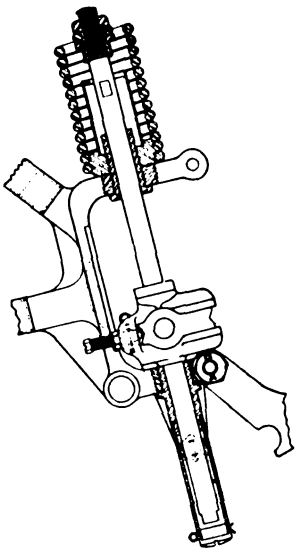
"I wouldn't ride a motorcycle without the Pope Springs"



So writes a Pope booster from Pennsylvania. He says further, "I had ridden nearly all makes before I got a Pope. I find it a lot easier to ride, and, for one thing, it doesn't sway. It is the only motorcycle on which a tandem rider gets the benefit of the spring frame.

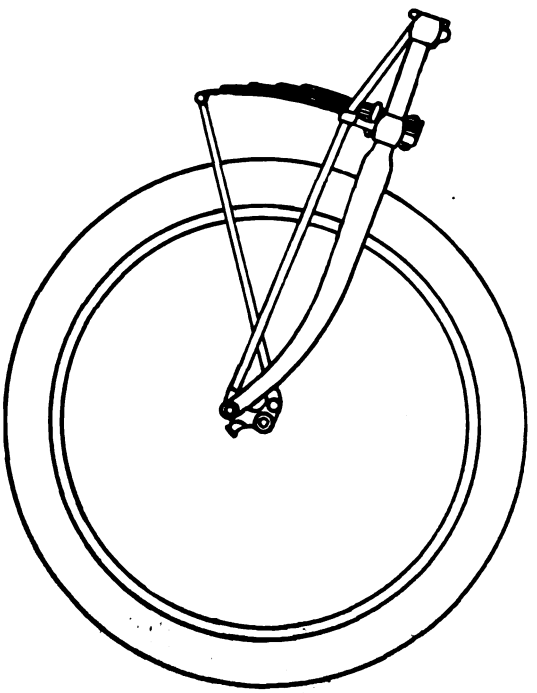
This letter sums up a few of the advantages that have made the Pope Spring fork and rear suspension so immensely popular.

Standard on all Pope models except the Lightweight, this construction—which protects both motor and rider from jars and vibration—has unusual value on the

Pope Big Single

It makes it an ideal mount for the man who demands road comfort as well as gasolene and oil capacity for long tours combined with the extreme simplicity of the single cylinder motor.

The Pope Big Single, Model M-16, has the famous Pope overhead valve motor which delivers 8 to 10 horsepower. It is comparatively light in weight—tips the scales at 250 pounds.



At the moderate list price of $200.00 many dealers are finding Model M-16 the easiest selling and most profitable machine in their stores. If you haven't one on your floor write for our special offer to you.

HARLEY-DAVIDSONS WIN THREE NEW JERSEY CUPS

Silent Gray Riders Get Dealers', Indian Maid and Bush Trophies in 400 Mile Jersey Endurance Run—Lightweight Machines Perform Well

NEWARK, N. J., May 31.—Official results of the New Jersey M. C. 400-mile endurance run held May 29-30 give the Dealers Trophy, for the team of three pro. riders having the highest aggregate score, to the Harley-Davidson team, scoring 5,980 points. The Indian Maid Cup, for the professional sidecar driver with highest score, goes to Gene Coughlin, Harley-Davidson combination, scoring 1,992 points. The Carl W. Bush Trophy, for the amateur sidecarist making the highest score is awarded to Joseph Werner, Harley-Davidson. The Smith-Fraser Trophy, awarded to the lightweight rider with highest score in his class, goes to Ramsey, with 1,993 points, riding a Cleveland. Ramsey won the gold cuff buttons donated by the Cleveland Motorcycle Co., for the best amateur score.

The Herrington Cup stays in the hands of the winners in 1915, as there was not the required number of contestants. The Holt Cup goes to the Indian M. C. of New Brunswick, N. J., with 3,980 points. The pro. solo cup and gold medal for the best pro. score goes to Arthur Dunham, Indian team, with 1,995 points. W. J. Ruhle, of the Harley-Davidson team was tied with Dunham for this cup, but on absolute time, Dunham was off two minutes and Ruhle off five minutes. Hence the award to Dunham.

E. J. Mills, Indian solo, won the amateur high score gold medal with 1,996 points. He also gets the Splitdorf gold sparkplugs. Waughop, Cleveland pro., with 1,984 points, gets a gold medal in the lightweight class and a pair of Cleveland cuff buttons. Wintsch, Cleveland amateur, 1,970 points, gets a pair of Cleveland cuff buttons and a tire. Bley, Indian featherweight, is awarded a pair of gold cuff buttons.

Team scores were as follows: Harley-Davidson, 5,980; Indian, 5,972; Reading Standard, out. Club scores were: Indian M. C. of New Brunswick, 3,980; Passaic M. C., 3,940. Neither club finished three riders. Scores were figured throughout totaling regular and consistency points together.

Forty-five contestants assembled between the hours of 7 and 8 a.m. on Monday evening for the big 400-mile grind. Of these, 9 were lightweights who were sent over a shorter course than the solo and sidecar contestants. The showing made by the little two-strokers was excellent and five finished very close to schedule. Four of these were Clevelands and the fifth an Indian, ridden by Bley.

Ten sidecar combinations, 4 Indians and 6 Harley-Davidsons, came through the gruelling 20-hour test with fine scores. Three failed to check in at the finish on time. Out of 25 solo riders, 17 completed the course. Of the eight solo teams which started, the Indian and the Harley-Davidson factory trios came through with good scores. The Indian team was made up of Ivan Jacobs, Arthur Dunham and J. Howard O'Brien, while the Harley-Davidson men were Art. Herrington, W. J. Ruhle and Hap. Scherer. An Indian sidecar team, made up of Orrie Steele, Wallace Stuart and Jack Neis, finished, only Stuart and Steele on time.

The performances of C. W. Waughop and Gustav Bley in the lightweight class were more or less remarkable. Just prior to the start of the contest, Waughop wrecked the machine on which he intended to compete and was forced to uncrate a brand new machine at the store of the Newark Cleveland

Hot Shot from the

CREVISTON AND STOKES EMULATE SHOOTING STARS AT HAWTHORNE

Former, Astride Indian, First Home in Four Events on First Day's Card—Latter, with Bob Perry, His Excelsior Teammate, Takes Feature Numbers on Second Day of Chicago Meet

CHICAGO, Ill., May 30.—The victor's laurels were divided among Ray Creviston, Indian, Glenn Stokes, Excelsior, and Bob Perry, Excelsior, in the two day meet which was staged at the Hawthorne Track under the auspices of the North Side Motorcycle Club on May 28 and 30. A card of races was scheduled for May 29, but old Jup Pluv was on the job again and passed out rain checks.

In every event in which he entered in the twin class, Crevvy made a whooping clean-up in the first day's races, sweeping before him the ten-mile open, the five-mile F. A. M. championship, and the five-mile open. But Decoration Day was Stokes's day, the Excelsior speed merchant tucking away two events, the national F. A. M. championship at ten miles and the five-mile opens for twins.

Perry's Fine Work

Bob Perry, too, made a very creditable showing on his "good ole 'X'." That hero of many a thrilling race-meet romped home with the ten-mile and five-mile open on Memorial Day, and was the runner-up in the ten-mile championship affair.

There were about 10,000 fans on hand to witness the meet on May 28, among whom were 1,200 riders who had come with their machines to get in the picture which was taken at Grant Park prior to the races. When the photographer had clicked the kodak, the dealers who had gotten this huge crowd together—Jesse Edwards, of the Edwards-Crist Co.; R. C. Crist, of the R. C. Crist Co.; F. D. Freeman, of the Aurora Automatic Machinery Co, and C. H. Lang, of the C. H. Lang Co.—gave out tickets for the races to each rider and guest, after which they all rode in an imposing procession to the scene of the races. It is interesting to note in passing that about 25 per cent. of the motorcycles were equipped with sidecars. The parade was lead by four Chicago motorcycle police officers mounted on Excelsiors.

Two Preliminary Heats Run

Two heats were run off to decide the contestants in the ten-mile open for professionals, each heat being at a distance of two miles, the three riders in the fastest heat and the first two in the other qualifying for the final. The initial heat was captured by Glenn Stokes, Verrill, Indian, being second, and Boido, Excelsior, third. The time was 1:45 2/5. Creviston loomed up strongly in the second heat, putting Bob Perry in second position and Joe Wolters, Excelsior, third. The time for the second heat being 1:44 3/5—faster than the first—the line up for the ten-mile open was: Stokes, Verrill, Creviston, Perry and Wolters.

Wolters Takes Race for Singles

In the ten-mile final, despite the fact that he was not in the best of health, Creviston shot out on his machine and, after ripping around the track at a whirlwind clip, dashed home the winner, leading Stokes and Perry. Then came the five-mile for singles which was safely bagged by Wolters, riding a "one-lunger" from the "X" factory which had a number of novel features. Crevvy jumped into second place, with Don Marks, Thor, hot on his track. Marks made a very fine performance: he lead the first two miles and seemed to be gaining each lap, when he slowed up for a few seconds only to see his contestants shoot past him.

Intense exictement prevailed in the five-mile F. A. M. national championship race. Creviston took the turns wide open and was forced to the limit by Glenn Stokes. The first two miles were a nip and tuck battle between these two stars, but Crevvy finally managed to breeze in about 100 feet to the good. Boido accounted for third position.

Perry had his usual hard luck. His mount was all primed up for the meet, but when it arrived at the track a piston was broken. Being too late to repair the damage, it was necessary for Bob to mount a stock machine.

Summaries of May 28 races:

Ten-mile open, professional (61:00 class).—Won by Ray Creviston, Indian; Glenn Stokes, Excel-

WEISHAAR AND WARNER SPLIT HONORS

Harley-Davidson and Indian Track-Burners Pull Down Most of the Money at Burlington, Ia.; Nine Well-Contested Events on Card

(By Telegraph to Motor Cycle Illustrated)

BURLINGTON, Iowa, May 30.—Before a crowd of 3,000 people at the Tri-State Fair grounds Speck Warner and Ray Weishaar, Indian and Harley-Davidson speedsters, respectively, carried off most of the bacon in today's meet. The weather was ideal, the track in fine shape and no accidents occurred to mar the day's sport.

The summaries:

Five-mile open, eight starters—Speck Warner, Indian, first; Ed. Wilcox, Indian, second; Ed. Fillmore, Indian, Third. Time, 5:35. Ray Weishaar went out in the second lap with tire trouble.

Fifteen-mile open—Weishaar, Harley-Davidson, first; Warner, Indian, second; Wilcox, Indian, third. Time, 17:13 2/5. Luther, who mounted an Excelsior, went out in the fourth lap when his crankcase flooded with oil.

One-mile time trials—Weishaar, Harley-Davidson, first, 67 4/5 seconds; Warner, Indian, second; Fillmore, Indian, third; Wilcox, Indian, fourth; Johnson, Harley-Davidson, fifth.

Ten-mile open—Weishaar, Harley-Davidson, first; Warner, Indian, second; Luther, Excelsior, third. Time, 11:34 2/5. Bane and Wilcox went out with spark plug trouble.

Australian pursuit race, six entries—Wilcox and Warner were the only ones left after fifteen laps, so they rode a 2-mile match race. Warner copped the coin; time, 2:25 2/5.

Three-mile amateur race, cut from five miles—Leo Masters, Indian, first; Gus Kurtz, Harley-Davidson, second; time, 4:10 2/5.

Tri-State Championship at 25 miles, eight entries—Warner, Indian, first; Fillmore, Indian, second; Luther, Excelsior, third. Time, 29:52. Weishaar was leading in the 38th lap when he was retired by tire trouble. Wilcox, Indian, went out in the fifth lap when his machine caught fire.

Consolation race, for those who failed to win in the preceding events—Korn, Indian, first; Johnson, Harley-Davidson, second. Time, 2:20.

Raymond Ray was in charge of the Harley-Davidson pits and Warner handled the Indian camp.

Holiday Speed Camps

Track Meets, Endurance Runs and Hill-climbs

WIGWAM SPEED-BOYS CORNER DIXIE M. C. EVENTS

(By Telegraph to Motor Cycle Illustrated)

ROANOKE, Va., May 30.—Following were the results of the race meet staged here today under the auspices of the Dixie Motorcycle Club:

Five-mile open, won by Herbert Webb, Indian; B. E. Johnson, Excelsior, second; J. W. Hollins, third. Time, 6:26 4/5.

Ten-mile open, won by Webb, Indian; Johnson, Excelsior, second; H. I. McDonald, third. Time, 12:57 3/5.

Three-mile open, won by McDonald, Indian; Johnson, Excelsior, second. Time, 3:51 4/5.

Twenty-mile open, won by McDonald, Indian; Hollins, Indian, second; Stevens, Indian, third. Time, 26:46 1/5.

One-mile time trial, won by McDonald; time, 1:15 3/5.

McDonald, Hollins, Stevens and Webb had their Indians Bosch-equipped and fitted with United States tires. Johnson's Excelsior carried Goodyear tires and Bosch ignition.

FOUR ARE PERFECT IN POUGHKEEPSIE RUN

POUGHKEEPSIE, N. Y., May 29.—At least four competitors received perfect scores in the first annual endurance run of the Poughkeepsie M. C., which finished last night in this city. These four are Ben Willig, Fred Horlacher, Bob Horlacher and Woodbury Gindele on Harley-Davidsons and Joe Erts on an Indian. The Horlachers rode tandem.

Over twenty started for the first leg to Oneonta via Albany and Kingston, at midnight on Saturday. The first check was at Albany and the contestants then went to Canajoharie and across to Oneonta. Good roads and fine weather marked the last part of the run, but the outward trip was made in heavy rain. The four perfect score men caught the last boat from Highlands to Poughkeepsie, and it is figured that the rest of the field stayed overnight on the left bank of the river, with the exception of several who went down to Newburgh and crossed there. No serious spills marred the endurance run.

22 CLEAN SCORES IN BAY STATE RUN; BAD ROADS COST POINTS

Kendall Sanders, with Harley-Davidson Combination, Makes Best Individual Showing, Losing Only Four Marks; Indian Sidecar Team Wins Diamond Medals with Record of 995; Tire Trouble Retired Many

(By Telegraph to Motor Cycle Illustrated)

BOSTON, May 31.—Kendall E. Sanders, driving a Harley-Davidson sidecar combination, with Leon A. Laflamme as passenger, finished the Bay State M. C. 1000-mile endurance run to Buffalo and return, with the highest consistent individual score, his final mark being 996. This is considered a remarkable performance, in view of all the obstacles encountered.

Indian Team Gets Medal

To the Indian sidecar team go the diamond medals for the most consistent team score in that division. The winning combinations were piloted by H. H. Noyes, Harvey Bernard, John U. Constant and A. F. Drake. The Indian camp did not enter the sidecar passengers, so they were not considered as contestants. The score of the Indian sidecar team was 995.

There were twenty-two perfect scores in all, including Laflamme, Sanders' sidecar passenger in the winning Harley-Davidson outfit, who was entered as a contestant.

Perfect Score Winners

Perfect scores were made by the following: Excelsior team from Boston, made up of Henry Andrews, Jack Sheehan, H. A. Hall and Jack Erickson; Boston solo Henderson team, made up of H. F. Smith, C. A. Waterman, A. O. Lemon, H. C. Wing. Individual perfect scores were recorded by A. E. Nolan and Arthur Carl, who rode Excelsiors; C. Grout, C. E. DeLong, J. J. Berlo and J. Canane, mounting Indians, and T. H. Chew, Thor.

How Other Finishers Stand

The scores of the remaining finishers were as follows: Don Pope, Indian, 961; Glen C. Crandall, Thor, 968; H. A. Mosher, Thor, 932; J. A. McKenzie, Thor; Jes Campbell, Harley-Davidson, 978; F. W. Stierhoff, sidecar passenger, 978; E. A. Robertson, Harley-Davidson, 967; J. E. Forest, passenger, 967; John Lane, Harley-Davidson, 978; Frank Roche, Lane's passenger, 978; Milo Kibbe, Henderson, 776; J. M. MacDougald, Henderson, 982; E. F. Longby, Indian, 976; Neal H. Rand, Indian, with Cygnet Rear Car, 961; Claude F. Chase, Harley-Davidson, with Cygnet Rear Car, 940; H. E. McKay and Philip Rockwell, passenger, 940.

Everybody Was Satisfied

No protests were entered and the big program was put through without a serious hitch, in spite of the great mileage and the bad condition of the roads. Owing to the fast schedule and the poor road surfaces there was much tire trouble but no serious accidents.

NO OFFICIAL SCORES READY ON PORTLAND RUN

(By Telegraph to Motor Cycle Illustrated)

PORTLAND, Ore., May 31.—At a late hour on Wednesday night no official scores were available on the three hundred and fifty mile endurance run held between this city and Roseburg, May 26-27. It was stated on good authority, however, that the Harley-Davidson-Goodyear team, consisting of Otto Walker, Ted Gilbert, Henry Klein and H. S. Hardsfield, was the only one to make a perfect score. This, of course, is unofficial and, therefore, subject to revision. The complete scores will be published in next week's issue.

SPRAGUE MAKES A CLEAN-UP AT COSHOCTON MEET

(By Telegraph to Motor Cycle Illustrated)

COSHOCTON, Ohio, May 30.—About 1,500 people witnessed today's speed program under the auspices of the Coshocton M. C. Three days of rain had left the track heavy, and a number of riders withdrew. The meet was not sanctioned by the F. A. M. Clifford Sprague, with a Harley-Davidson, won first place in the three events. Summaries:

Five-mile open—Sprague, Harley-Davidson, first; John Sherban, HarleyDavidson, second; Cy Huff, Harley-Davidson, third. Time, 6:07¼.

Ten-mile open — Sprague, first; Ray Buker, Indian, second; Sherban, Harley-Davidson, third. Time, 12:30.

Twenty-five miles—Sprague, first; Buker, second; Sherban, third. Time, 29 minutes.

PROVIDENCE RACES POSTPONED

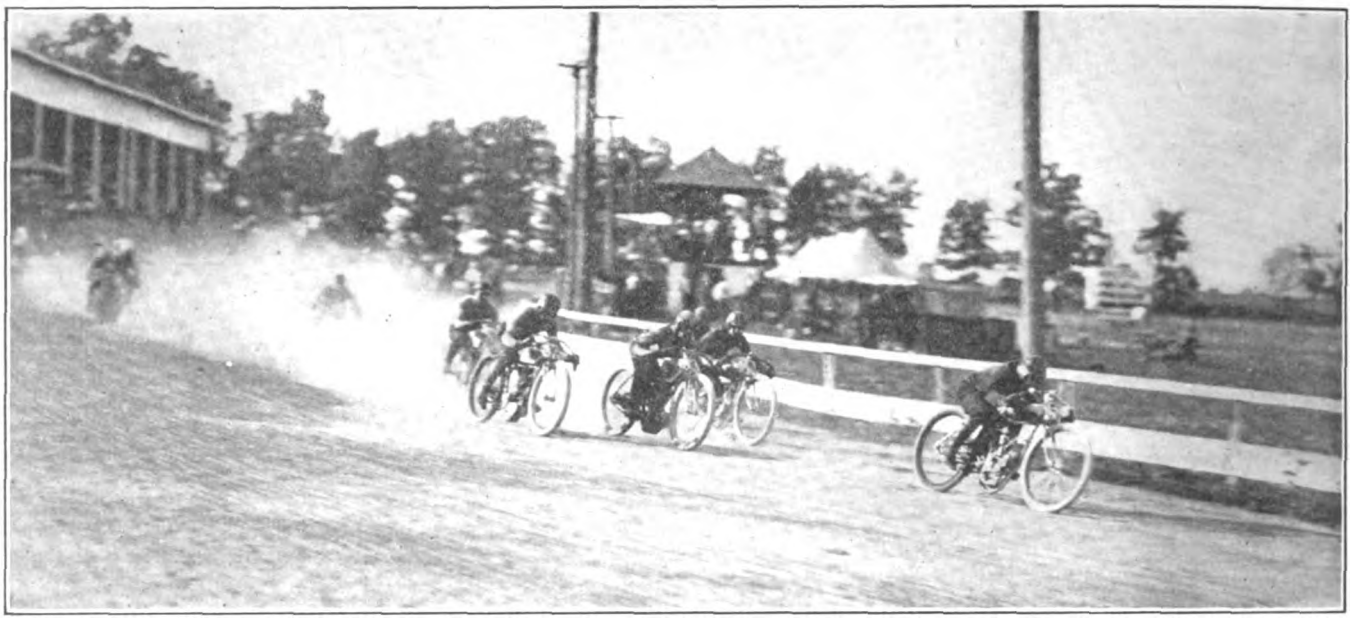
(By Telegraph to Motor Cycle Illustrated)

PROVIDENCE, R. I., May 30.—The lightweight races, which were scheduled to be held here today were postponed to June 10, owing to the fact that rain had left the track in poor condition.

Digitized by Google

"SHORTY" MATTHEWS CLEANS UP AT TOLEDO

Indian Rider Captures All Events in Which He Enters; Snappy Card of Races Staged by Inter-State Racing Association on Half-Mile Dirt Track



Shorty Matthews on His Indian Winning the Final Heat of the Five Mile Race

TOLEDO, O., May 28.—Shorty Matthews carried away the biggest share of the day's trophies, in the Interstate Racing Association meet here today, winning every event he went into.

The first five-mile heat was a duel between Taylor and Grelle for the first couple of miles, Taylor showing more stuff on the straights but Grelle getting past him on the turns. Jones picked up speed slowly at the getaway and was back in the ruck in the early stages, but refused to stay there after his motor hit its pace. Taylor slowly pulled away from Grelle and then Jones stormed up and also pulled past, but wasn't able to get up to Taylor before the finish line was crossed. The time of this heat was the fastest of the day, 5:41 for the five miles.

Hard Fight for Lead

Shorty Matthews, Nixon and Coffee shot away in a bunch at the start of the second heat, and stuck close, Nixon fighting hard with Matthews for the lead. But on the second lap Nixon took a big skid that almost put him down on the turn into the back stretch, and had lost 20 yards before he got straightened out. Schaefer prodded the spurs into his Excelsior with a vim in the last couple of miles and unwound a streak of speed that carried him past Coffee for third place at the finish. The time was 5:46.

The consolation heat, which carried the privilege of riding in the final heat as well as a certain amount of additional coin for the winner, was a nip-and-tuck struggle between Grelle and Coffee for the first mile, Grelle again showing better riding on the turns. Grelle made his advantage good, however, and Schaefer and Fletcher later maneuvred to get past Coffee, taking second and third.

Nixon and Matthews fought it out tooth and nail once more in the final heat. Jones coming up from the extreme back row to grab off third place at the finish.

Then Jones and Shorty hooked up for a three-mile match race, and Jones slow-starting jinx got him again. Matthews got going 100 yards ahead of the Merkel rider, and while Jones rode like a whirlwind after hitting his stride he was unable to regain all the lost distance in the short space of three miles.

In a two-mile novelty race between Clover Friedman with a Harley-Davidson and sidecar, and a Saxon racing automobile, Friedman became overconfident and fooled around just a trifle too long. He passed and repassed the car a half dozen times, allowing it to catch up with him again repeatedly, but made the mistake of letting it come up alongside on the final stretch to the tape. They crossed the line exactly side by side, but the longer wheelbase of the car put its nose over the tape first by inches, so that the judges gave the win to the four-wheeler. Just as an indication of relative speed abilities, however, is the fact that the sidecar record for the track is 2:58 for two miles, while this special Saxon racer took 3:23 for the distance.

At the start of the 25-mile free-for-all, Bob Mungen on an Indian ran into Jones and his Merkel, putting both out of the running. Jones' hand was hurt a little and his face scratched, but no serious damage was done. Matthews moved into the lead, with Grelle sticking close behind and Nixon occupying third place. Shorty kept up the pace all the way, and the relative positions of these three remained that way throughout the race. Summaries:

First heat, five miles—Taylor, Indian; Jones, Merkel; Grelle, Excelsior. Time, 5:41.
Second heat, five miles—Matthews, Indian; Nixon, Indian; Schaefer, Excelsior. Time, 5:46.
Consolation heat, five miles—Grelle, Excelsior; Schaefer, Excelsior; Fletcher, Harley-Davidson. Time, 5:57.
Final heat, five miles—Matthews, Indian; Nixon, Indian; Jones, Merkel. Time, 5:50.
Three miles, match race—Matthews, Indian; Jones, Merkel. Time, 3:34.
Twenty-five miles, free-for-all—Matthews, Indian; Grelle, Excelsior; Nixon, Indian. Time, 29:08⅗.

JANKE SETS THE PACE AT CEDARBURG RACES

With Four-Valve Harley-Davidson He Chalks Up Four Wins in Well-Attended Program; Eckes' Excelsior Lightweight a Victor

(By telegraph to Motor Cycle Illustrated)

CEDARBURG, Wis., May 29.—Irving Janke, mounting a 4-valve Harley-Davidson, carried off chief honors in the first of a series of intercity race meets being promoted by the Milwaukee M. C. The program drew a big crowd.

The meet opened with a 5-mile professional event: Irving Janke Harley-Davidson, first; Carl Eschereich, Cyclone, second; Lewis Hadfield, Harley-Davidson, third. Time, 7:22.

The three riders above named finished in the same order in the 10-mile event; time, 15:10.

The one and a half mile race for lightweights piloted by professionals was won by Arthur Eckes, Excelsior, with William Knuth, Indian Featherweight, second. Time, 4:11.

Janke won the mile time trial in 1:25, with Eschereich's Cyclone second in 1:29 and Hadfield's Harley-Davidson third in 1:33.

The pursuit race was won by Janke in two and a half miles. Attendance, 2,500.

Cleans Up on Decoration Day

Decoration Day Glenn Stokes and erry divided honors between them, getting the first five-mile open and n-mile championship races, while Bob ed up the second five-mile and ten- events, the latter having been origin- y scheduled for fifteen, but being cut wn because of the late hour.

Put Out of Running

In the first five-mile open, Creviston spilled, carrying down Boido and damaging his own machine so badly that he was put out of the running. The race was restarted, and Boido, though shaken up a bit as a result of the spill, romped into third place. Neither Creviston nor Boido were seriously injured, for both of them appeared in later races.

FOUR FINISH LOS ANGELES THREE-DAYS

Bennett and Smith, Excelsiors, and Ludlow and Fletcher, Indians, Complete 987 Mile Endurance Run of Los Angeles M. C.

(By Telegraph to Motor Cycle Illustrated)

LOS ANGELES, Cal., May 30.—Four of the ten starters in the three-day Los Angeles M. C. endurance run, which started May 28, finished here today. These are Wells Bennett and Ray Smith, 17 Excelsiors, and Freddy Ludlow and J. A. Fletcher on Powerplus Indians. It is unofficially reported that Bennett, Smith and Ludlow received perfect scores for the 987-mile mountain and desert grind.

The field at the start consisted of Bennett, Smith, Fletcher, Ludlow, Paul Derkum, Indian; Jimmy Leonette, Excelsior; Hap. Gustafson, Harley-Davidson; O. E. Hackett, Reading Standard; Ed. Peterson, Harley-Davidson, and Ralph Sullivan, Thor. Leonette was penalized at San Luis Obispo for a broken spring and withdrew, while Peterson broke a handlebar binding clamp across the head of his forks. The rear wheel of Hackett's machine collapsed, and he and Peterson were out. Fletcher lost his way in the desert mountains, but came into Bakersfield within the time limits. Sullivan fell too far behind to continue.

Bennett, Derkum, Ludlow, Gustafson, Smith and Fletcher started on the second day. Derkum went lame and spilled at Palmdale, but his machine was all right. Gustafson broke handlebar binding clamp in Mojave-Barstow desert stretch. This left Bennett and Smith on Excelsiors, and Ludlow, Indian, possibly perfect, with Fletcher penalized for lateness on first day. All four finished on time the third day.

Bennett had U. S. Chain Tread tires, Bosch magneto, Duckworth chains, Mesinger saddle, Schebler carbureter on his Excelsior. Smith had Firestone tires, Bosch magneto, Duckworth chains, Mesinger saddle and Schebler carbureter.

Ludlow used U. S. Chain Tread tires, Dixie magneto, Duckworth chains, Mesinger saddle and Schebler carbureter.

F. A. M. CONVENTION DUE THE LAST WEEK IN JULY

(By Telegraph to Motor Cycle Illustrated)

PROVIDENCE, R. I., May 30.—President Coffman, of the F. A. M., has suggested to the Providence boosters that the national convention to be held here be staged the last week in July, and B. A. Swenson, who is in general charge of the plans at present, has replied that such an arrangement will meet with approval in Providence.

The object of holding the convention during the last week in July is to give western members a better chance to attend.

CHIPPEWA CLUB'S FIRST TOUR

CHIPPEWA FALLS, Wis., May 31.—In a special meeting of the Chippewa Motorcycle Club, President Walter Schwaner announced that the club had received an invitation to hold its first tour to the cottage of Gustav Rasmus at Bloomer, Wis., and the invitation was unanimously accepted for a date in June.

RAMER, HARLEY-DAVIDSON, WINS OMAHA RUN

OMAHA, Neb., May 29.—Otto Ramer, riding a 1916 three-speed Harley-Davidson, won the two-day endurance run of the Omaha M. C. to Kansas City and return, a distance of 450 miles. Charles Howes, on a 1915 model of the same make, was second, and Carl Pederson on a 1914 Harley-Davidson came third. Fourth place went to Herman Fisher, Indian, while Edward Palm, Excelsior, came fourth. There were no perfect scores in the run.

Seventeen started on the long grind on Saturday, and most of them reached Kansas City in good season. Heavy rains yesterday cut the scores of all contestants, and eliminated most of the field. Ramer is also awarded the *World-Herald* Trophy.

LAUREL RACE IS POSTPONED TO JULY 4

Washington Dealers and National Capital Club Are Obliged to Hold Over Events Slated for May 30 as Track Is in Bad Condition

WASHINGTON, D. C., May 29.—The meet which was slated for tomorrow at the Laurel, Md., track has had to be postponed until July 4. Keen disappointment is felt in racing circles as well as among local dealers and the National Capital M. C. who were back of the project. The condition of the track is responsible for the change of date.

The club had planned to make the race meet a notable one in the history of motorcycle racing in Washington, D. C., having carded a 100-mile race in addition to a number of shorter events. The committee of the club which has the affair in charge had made arrangements to have the entire track resurfaced and to have the track banked at the turns. Heavy rains, however, so interfered with the progress of the work during the past week that it was necessary to postpone the event. Entries had been received from such riders as Parkhurst and Bryer, Harley-Davidson; Wolter and Klebes, Excelsior; and Verrill and Dedge, Indian, who have signified their intention of competing at the meet on July 4.

RAIN HALTS ELLIS'S SEVEN STATE RUN

J. P. Opens Up in Force 15 Minutes After State Commissioner's Start and Ellis Cries Quits—Will Make Second Attempt

YONKERS, N. Y., May 28.—It took George Ellis, New York State F. A. M. commissioner just about 15 minutes last night to decide to postpone his seven-state "lonesome" endurance run, which he had previously announced would carry him over a course of better than 800 miles, and which he expected to complete in 33 hours. Shortly after Ellis started from Columbus Circle at 8 o'clock Saturday night rain began to fall in sheets, so to speak.

Ellis got away in fine style on a Thor machine fitted with Red Head plugs, U. S. tires, Coventry chain a Pan Dandy saddle and Weed backrest. His route was to have been from New York to Troy, thence to Bennington, Vt.; Greenfield, Conn.; Concord, N. H.; Portsmouth in the same state, and then to Portland, Me. His return from Portland was to have carried him through Portsmouth to Boston, thence by way of Providence, R. I., and Hartford, Conn., back to his starting point.

Ellis states that he will essay the trip again, and hopes for more favorable weather conditions. His present plans call for another attempt either on June 10 or the 17th, and he will follow the same route. His trip is to be made in solitude simply to prove his own hardihood, and Ellis has been training for the ordeal for the past two months.

TEUBNER IS PRESIDENT OF MIAMI RACING CO.

DAYTON, O.—At a special meeting of the board of directors of the Miami Racing Company, the resignation of E. D. Hensley as general manager was accepted and W. J. Teubner was elected.

The following additions have been made to the schedule of race meets: Dayton, June 17, July 4, July 15, August 12 and September 16. All will be held by the Dayton, M. C.

CONCERT SINGER TELLS WHY HE BOUGHT THOR

ONE of the latest prominent recruits to the ranks of Thor enthusiasts is Edward Convey, one of the best known concert tenors of the West, who has purchased a 16-A, 15 h.p. Thor motorcycle. In referring to his purchase Mr. Convey stated that he had found motorcycle riding an excellent and highly stimulating pastime, and that it aided him materially in sustaining the constant strain of concert work.

"The moderate exercise and the exhilarating effects of motorcycle riding are unquestionably of great benefit to public speakers and singers, and to professional men generally," said Mr. Convey. "The fact that every part of one's system is responsive to the ecstatic effects of such exercise is the one great reason why all artists who depend on real vocal fitness for a living should use a powered two-wheeler."

Mr. Convey has ridden motorcycles for the past eight years and his selection of a Thor to meet his exacting needs is naturally a source of gratification to the manufacturers.

U. S. TIRE CO. WINS TIRE CORE PATENT APPEAL

NEW YORK, May 29.—The suit of the De Laski & Thropp Circular Woven Tire Co. and the John E. Thropp's Son Co. against the United States Tire Co. over tire core patents, has just been disposed of by the United States Circuit Court of Appeals in New York City, the decision of the lower court in favor of the United States Tire Co. being upheld. The lower court had held the patent invalid through having been anticipated by the B. F. Goodrich Co., and it is this decision that has just been confirmed by the Court of Appeals.

The patent relates to tire cores, used in wrapping and vulcanizing tires, of the type that is most generally used in tire making, and therefore would have a vital importance to the tire industry if upheld. Courts in various parts of the country have held it invalid, however. The present decision is characterized by Ernest Hopkinson, of the United States Tire Co.'s counsel, as being exceptionally clear. The Thropp interests endeavored to prove that while their patent was dated in February, 1905, the inventor had used the idea in January, 1904, before the anticipating use by the Goodrich company. The judge held, however, that while the inventor may have used substantially the mechanism of the invention at that time, it was in a "closed cure," with the molds about the tire and excluding the steam from actual contact with the rubber.

STEADY MARKET FOR STEEL, SAYS ANDERSON

CHICAGO, Ill.—Superintendent A. Anderson, of the Aurora Automatic Machinery Company, stated during a recent interview with a representative of **Motor Cycle Illustrated,** that every indication pointed to a steady steel and tubing market for the coming season.

This is a most welcome prophecy and is of great importance to motorcycle manufacturers. Mr. Anderson is the designer of the 16 model Thors and is one of the best known engineers in the industry.

Give the Van-User what he needs

Sales are often closed through adapting the motorcycle outfit to the merchant's special requirements.

Three original Utility designs illustrated and described.

By D. R. Hobart—M. E.

Special body arrangement for a grocer's van. Baskets 1, 2 and 3 are removed from the top; the others through front and rear doors.

WHILE the commercial van of the present day is soundly constructed in both chassis and body and gives excellent service under adverse operating conditions, it is open to criticism on one important point. This is, that there is only one type of body regularly supplied by the makers for *all* customers. This type is a box, of varying depth, with a hinged top cover and plain sides.

The fact that there is but one kind of commercial body furnished has prevented merchants in certain lines from adopting the sidevan outfit. They, themselves, may not have admitted it when sought out by dealers, or they may have used it as a powerful argument to the dealer when solicited, yet the fact remains, that to only a limited number of businesses is the standard box body adapted. And it is to the use of merchants who are in the greatest number all over the country that the box body is least suited.

The Case of Butcher and Grocer

This will be evident when one looks at the goods ready for delivery at any butcher or grocery store. Baskets with the goods piled in are used and these go in his wagon floor in one layer, further baskets being accommodated on a shelf half way up the tilt of the vehicle. No goods are piled on each other for fear of damage. And yet the side van manufacturer endeavors to sell these men a body in which the baskets would have to be piled three to four deep, and with access only to the top layer. Imagine the condition of the vegetables and staple groceries on the bottom row.

There must be over 700,000 of these tradesmen in the United States, and how many are using the stock van? Practically none. The few that do have either had special bodies made up at their own expense, or are putting up with the unsatisfactory box sold them by the motorcycle dealer. The chances of increasing the use of side vans by grocers and butchers are slim unless something in the form of a body more adaptable to their use can be offered. Here's a suggestion in that direction.

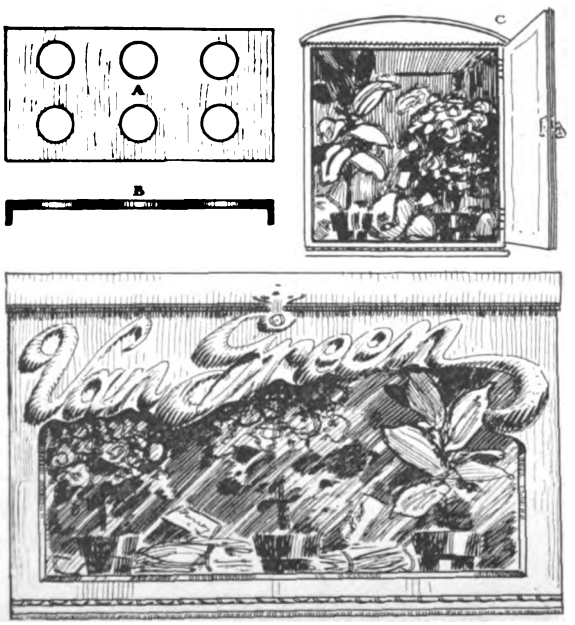
Nine-Basket Body

The body shown in the illustration has a capacity for nine baskets of regulation size. These are arranged in three tiers in a rectangular body, suitably reinforced to carry the loads. There is a top cover to give access to the top tier of baskets—1, 2 and 3—and end doors to reach the other layers. The floor on which baskets 4, 5 and 6 rest normally is removable, sliding from front to rear for the purpose.

The depth from floor to floor in each tier is at least 12 inches. This gives overhead room for baskets which are fairly well packed. The illustration shows that baskets 4, 5 and 6 go in the center compartment, while 7, 8 and 9 fit in the bottom compartment. The front and rear doors open to the middle and lower compartments only.

The object of this arrangement is to give the best possible access to all baskets without sacrificing the strength of the body, and at the same time render the contents proof against crushing or injury. The baskets can be loaded in hap-hazard, as only the end ones, 6 and 9, need be removed to get at 5 and 8, a work of a few seconds only at the most. Probably a good way would be for the driver to exchange his empty baskets for those in spaces for 5 and 8, as fast as they are delivered.

With over 12 inches of headroom, boxes can be inserted in the compartments in place of baskets, or large packages can be loaded. Note that the floor of the middle compartment is made removable; this is for the butcher or grocer who collects his goods from the abattoir or wholesaler before using the van for delivery. Taking out the floor, there will be at least 24 inches of space, and in this can be put a short side of beef, sacks of flour, etc.



Special Florist's Van: A shows a top view of the flower pot rack; B a section of the same. The two remaining sketches show the end and side arrangements.

Sold at Regular Price

The cost of this van over the stock box now offered will be that of end-doors, sliding floor and stronger sides. Considering the rather advanced price of van bodies, it seems reasonable to expect that the manufacturer could supply such a body at the same figure as that now charged for the stock article.

As things stand today, the side van maker apparently has but one stock and one special body, the latter for R. F. D. work. The R. F. D. bodies are certainly finely adapted to the service, but there are relatively few such men as compared with the huge commercial fields of which the surface has not even been scratched. The user has, perforce, to think out a body for his needs—if he can think of such a thing—and he has to pay

Digitized by Google

well for it—usually to some party other than the van maker. This situation must resolve itself into the production of special bodies by the van maker, or little progress will be made in the future.

For the Florist

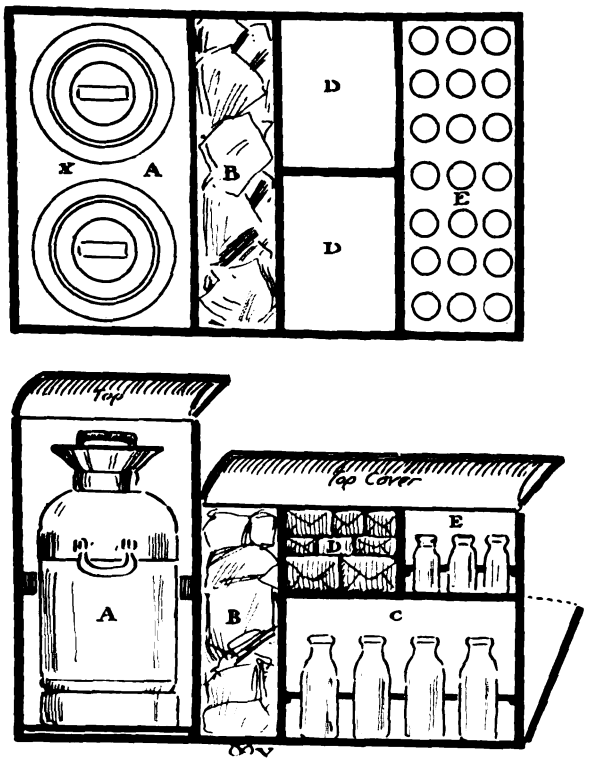
When the agent offers the smooth-sided cubical body to the florist, the chances are that the latter is not attracted very strongly. The lettering on the body is an advertisement, but why not show the public what the florist's goods are en route? Look at the second figure for a suggestion. Here is a rectangular body with glass side in a fancy panel carrying the name of the florist, and enabling the man in the street to see what is inside. Within the body is a pot rack, which can be removed if desired. There is the usual top door and a front door, opening on vertical hinges. The body is zinc-lined on the bottom and up on sides, back and door to about six inches.

While the pot rack is primarily designed to accommodate potted plants, it can be used as a shelf for carrying bouquets, floral pieces and the like. In the illustration are several plants in the rack, with bouquets laid between. The plants are designed to be taken out through the top cover.

Bouquet Rack

The front door gives access to the bouquets and other goods in the forward part of the body. A bouquet rack, for small flowers, can be made from perforated zinc sheet or from wide-mesh galvanized wire and inserted in the forward part of the body, where it can be readily reached through the door. This rack can be made up by the agent and is to be removable.

So much for the florist. Take the case of the man who has dairy products for delivery. In the drawing is given a diagram for a side van to carry two 10-gallon cans of milk, 16 quart bottles of milk, 12 bottles of cream and butter and cheese. For keeping the goods cool, an ice-compartment is provided. The cans and bottles are in racks. The ice-compartment has a tap at the bottom to draw off water. All spaces are zinc-lined.



Original design for milkman's van. The compartment A holds two large milk cans; X shows position of ladle. B is the ice compartment, D indicates butter and cheese boxes, C is a chamber for bottled milk and E is a smaller compartment for bottles of cream.

Interior Arrangements

The can compartment has its own top cover, while a second cover is hinged over the ice, cream and butter spaces. In the illustration, A is the can compartment, B the space for ice, C the milk bottle space, with door opening forward, D and D1 the butter and cheese spaces and E the compartment for bottled cream. The height of C should be sufficient to let the driver take out a bottle from the inner row without interfering with the floor of D and E above.

The dipper for the loose milk in the cans is slung between the two cans. The side of the van bears the usual inscription of the owner's business, etc. This body would of course be built to order and sold to the user at an advanced cost as compared with the stock article.

The three designs shown will give ideas as to the possibilities of the side van for different purposes. The basket design should really be a standard arrangement for those delivering goods in baskets, etc. The other two need not be rigidly adhered to, but can be constructed according to the demands.

(To be continued.)

GOODYEAR STARTS COMMERCIAL CAMPAIGN

Recognizes the Merchant as Largest Future Buyer of Motorcycles and Gives Commercial Sales Bulletin Service to Dealers

AKRON, Ohio, May 29.—Feeling that its success, insofar as the sale of motorcycle tires is concerned, is largely interwoven with the success of the motorcycle dealer, and feeling also that the largest future field for the motorcycle is the commercial field, the Goodyear Tire & Rubber Co. has started a campaign to aid motorcycle dealers in the sale of power-driven two-wheelers to be used for business purposes.

In entering upon this campaign the Goodyear company has not overlooked the fact that it requires merchandising of a higher order to retail commercial motorcycle outfits than is required to dispose of the simple pleasure vehicles, and it is in order to educate the motorcycle dealer in the ways of salesmanship bearing directly on commercial sales that the campaign has been inaugurated.

The first step, according to Shelby A. Faler, who is the manager of the motorcycle tire department of the Goodyear company, will be to instill the utmost faith in the dealer himself in the commercial motorcycle outfit. In other words they will bend every effort to "sell" the dealer, and in this way arouse his enthusiasm and best efforts. The Goodyear way of selling the motorcycle dealer a commercial motorcycle outfit will be figurative rather than material. It comprises sending to the dealer each week a cleverly worded and impressively gotten out bulletin bearing on the commercial motorcycle situation, telling the dealer just why the commercial outfit should be used by any merchant in preference to any other vehicle.

By thus supplying the dealer each week with new sales ammunition, there is not a doubt in the world but what this latest Goodyear campaign will go a long way toward increasing the number of vehicles which are sold for purely commercial uses. Every dealer should be on the Goodyear list, and it is suggested that those who are not certain that they are included among those who receive these helpful suggestions write the goodyear Tire & Rubber Co. at once so as to be sure they will obtain these bulletins from the very beginning.

READING STANDARD WINS SUIT

READING, Pa., May 29.—The Reading Standard Company, maker of Reading Standard motorcycles, has been adjudged the decision in a suit brought by Phillip Clum & Atkinson, in the Court of Common A. Clum and George Atkinson, trading as Pleas in this city. The suit involved a stock transaction to the amount of $5,500. The defendant company got its judgment because of insufficientcy of statement by the plaintiff.

READING RUN WELL ATTENDED

READING, Pa., May 29.—The first of the season's runs of the Reading M. C. took place yesterday, with thirty machines participating. The affair was a sealed time run to Harrisburg and return. Practically all the entrants finished without mishap. The results will be announced at the next meeting of the club.

STORK VISITS QUINLANS

CLEVELAND, O.—W. S. Quinlan, secretary of the Cleveland Motorcycle Company, is receiving congratulations on the recent arrival of a baby girl, weighing 8¾ pounds. Mrs. Quinlan is doing splendidly and newly-arrived Miss Quinlan is a source of admiration to all who see her.

GIVES WRITTEN GUARANTEE

DAYTON, O., May 31. The Davis Sewing Machine Company, maker of the Dayton line of bicycles and motorcycles, is now issuing to all of its bicycle dealers engraved certificates of guarantee which are to accompany every retail sale of a Dayton bicycle. The guarantee covers five years and promises the replacement or repair of any defective part made by the Davis Co.

BOSCH PRIZES FOR SNAPPY WINDOW DISPLAYS

To Encourage Attractive Presentation of Bosch Service Policy Distributors Are Given Cash Awards; Three Prize-Taking Windows Show Skillful Arrangement

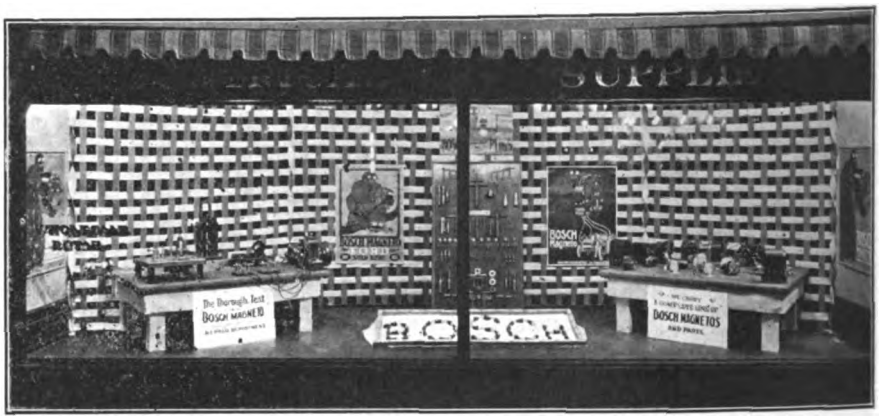
Ballou & Wright's Window in Portland, Ore., Which Won First Prize of $25

NEW YORK, May 31.—With a view of encouraging Bosch distributors to put across the service idea in as attractive a manner as possible the Bosch Magneto Co., of New York, has just awarded prizes in a window dressing contest. The photographs on this page show the window displays which captured the three cash prizes. First money went to Frank E. Eddy, who dressed the window for Ballou & Wright at their store in Portland, Ore.; second prize was awarded to H. M. Mayer, who arranged the window display of the Inter-Mountain Electric Co., of Salt Lake City, Utah, and third prize went to A. G. Scott, of the Nagel Electric Co., of Toledo, Ohio. The prizes were $25, $15, and $10.

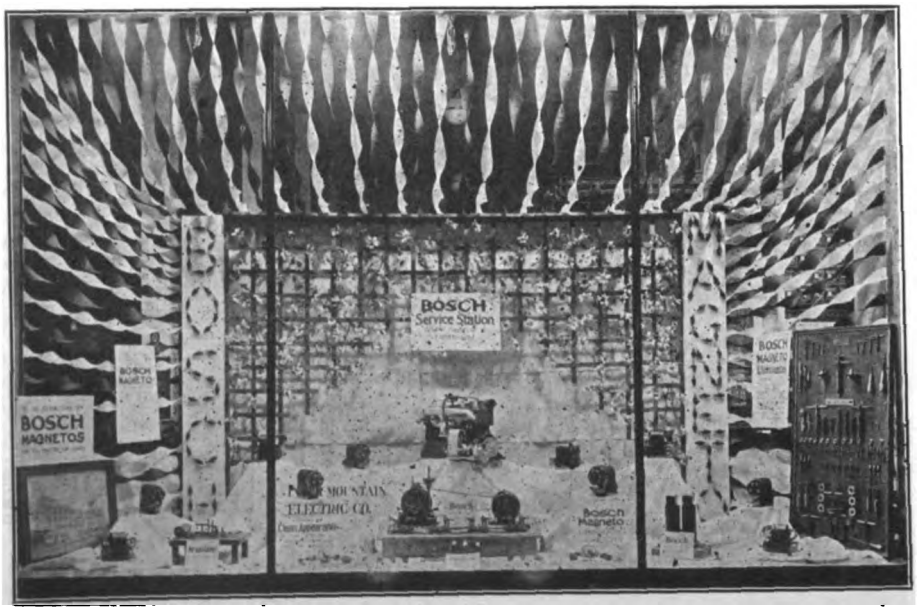
In order to give the distributors all the assistance possible the Bosch company provided them with complete sets of Bosch service apparatus to aid in dressing the windows and to help emphasize the fact that every Bosch distributor is required also to be a service expert. That the results were highly satisfactory will be noted in the prize-winning photographs.

It is noteworthy that the main idea—Bosch Service—was brought out strikingly in each of the prize windows, in spite of the fact that a great many small, and, to the layman, somewhat uninteresting mechanical parts, had to be used in each display. Dealers in general can take a valuable tip from the conservative but helpful use of signcards in the windows.

The Bosch awards were based on the following percentage system: Clearness of picture, 20 points; cleverness of window dressing, 10; advertising value of the window, 25; arrangement, 10; making best advantage of opportunity, 5; attention-compelling value, 20; presentation of service idea, 10.



Third Prize Was Awarded This Window in Toledo, O., to Nagel Electric Company



Arrangement of Inter-Mountain Electric Co., Salt Lake City, Utah. Second Prize

INCORPORATIONS

CLEVELAND, Ohio.—The Westgard Tire and Rubber Company has been incorporated with a capital of $10,000 to deal in automobile and motorcycle tires. The incorporators are: Joseph I. Eagleson, George S. Myers, J. F. Potts, E. L. Kratzer, B. E. Hoffman.

CLEVELAND, Ohio.—The Wright Tire and Rubber Company has been incorporated with a capital of $100,000 to deal in automobile and motorcycle tires. The incorporators are: Richard Ryan, Robert Wright, C. R. Wagner, C. F. Hiller and A. C. Foose.

CINCINNATI, Ohio.—The Buckeye Tire Company has been incorporated with a capital of $5,000 to deal in automobile and motorcycle tires. The incorporators are: R. S. Graves, R. R. Woolley, C. W. Shields, John Bleska, Stanley W. Lewis.

COLUMBUS, Ohio, May 22.—The Ohio Puncture Plugger Sales Company has been incorporated with a capital of $25,000 to manufacture tire repair articles for automobile and motorcycle tires.

THOR COMBINATION ASCENDS ENSIGN PEAK

Driven by Salt Lake City Agent, Big Twin with Sidecar Climbs Path Up Steep Hill in 4½ Minutes—First Passenger Rig to Go Up

SALT LAKE CITY, Utah.—J. Louis Anderson, representative for the Thor in this city, has successfully climbed to the flagpole on Ensign Peak in 4½ minutes with his Thor sidecar. He carried as passenger Charles T. White. This is the first ascent of a passenger and driver in any motor vehicle.

There is no road on the peak, only a narrow footpath most of the way, and near the top the path is close to the edge, where an 800-foot drop would make things lively for the rider. Peak has ascended on a solo Thor once or twice and his feat at that time was considered exceptional because of the rocky path and the finishing gradient of 40 per cent.

The ascent itself included a number of leaps of both sidecar and machine over rocks. In order to prove that the ascent could be done, Anderson had motion picture operators at various points. Over 75 people witnessed the climb, and all agreed that it was a most strenuous affair and proved the ability of the Thor to stand heavy punishment and get there.

Anderson's machine was fitted with Diamond chains and United States tires. He used a Rogers sidecar.

THINGS ARE HUMMING AT HAGERSTOWN PLANT

HAGERSTOWN, Md.—That the forces of the Hagerstown Shoe & Legging Co. are on the job early is proven by the situation at the factory when a representative of **Motor Cycle Illustrated** called one day last week at 7:30 A. M. He found things humming as if they had been going for hours in the production of the firm's extensive lines.

To the remark that the company seemed very busy, President Harvey Heyser replied: "Yes, we are; if we were not busy this time of year we could hardly expect much of a season. The demand, however, is particularly heavy for even this time of the year."

Mr. Robert Campbell will shortly start on his trip to the Pacific Coast.

DAVIS FORCES ON OVERTIME TO FILL ORDERS

DAYTON, Ohio.—Things are moving these days at the factory of the Davis Sewing Machine Company, on Davis avenue. The cycle and other departments are working overtime to keep up with orders, and according to Manager Horace M. Huffman, of the cycle department, are doing as well as could be expected. "Such delays as have occurred have invariably been due to the failure of other manufacturers supplying parts or accessories to live up to their promises," says Mr. Huffman.

Speaking about the Dayton Motor Bicycle, Mr. Huffman said that prospects were very rosy and repeat orders coming in finely. In spite of the fact that there is not a big stock on hand in the factory, these orders are being filled promptly.

VACUUM ACQUIRES SITE NEAR QUAKERTOWN

PHILADELPHIA, May 29.—An echo of the unprecedented conditions existing in the oil market at the present moment comes from Lincoln Park, N. J., across the Delaware from Philadelphia, where the Vacuum Oil Co. of New York has purchased a 600-acre site on which will be built an oil refining plant which it is estimated will cost in the neighborhood of $3,000,000. Work will be started on the erection in the very near future.

CHAMPION PLUGS IN LONG NON-STOP CAR TEST

CHAMPION sparkplugs were used in the recent all-high gear run of the King eight-cylinder automobile from Los Angeles to San Francisco and return, a distance of 987 miles, over the Coast route. The Champion plugs were standard equipment in all King cars and were not touched throughout the long trip.

President R. A. Stranahan, of the Champion Spark Plug Company, at Toledo, O., stated that the company took considerable pride in the fact that the record made by the King car was not the first instance in which Champion plugs played an important part in an automobile reliability trial. "However," says Mr. Stranahan, "the plug is only accomplishing that for which it is intended.

TO SPEND $2,000,000 ON BRASS PLANT

American Brass Company, Which Caters to Motorcycle Industry, Will Rebuild and Extend Its Headquarters in Kenosha

KENOSHA, Wis., May 31.—The American Brass Company, which furnishes a large portion of the lamps and fittings for the motorcycle industry, contemplates the expenditure of $2,000,000 for the immediate rebuilding and extension of its plant in this city, according to formal announcement which comes from the home office at Waterbury, Conn. Work already has commenced and it is expected to see completion inside of two years.

It is said that the remodeling and extending of the local plant as planned will double the capacity and give Kenosha the biggest brass working plant in the United States. Since the middle of 1915 the Kenosha plant has been operated with a day and night shift and even with the plant working at full capacity all that time it has been impossible to take care of orders.

The new Kenosha plant is being designed with the idea of making it the sole Western distributing station for the entire American Brass Company trade.

REDLINGER AND HALLBOURG STAR POPE SALESMEN

WESTFIELD, Mass., May 29.—The last of the season's prizes offered by the Westfield Mfg. Co. for increased sales were won by Joseph Redlinger and T. B. Hallbourg, respectively. Mississippi, Louisiana and Texas comprise the territory that enabled Redlinger to grab off the first prize of $100 in gold. The second prize of $50 in gold came to Hallbourgh as a result of his efforts in South Carolina and Georgia.

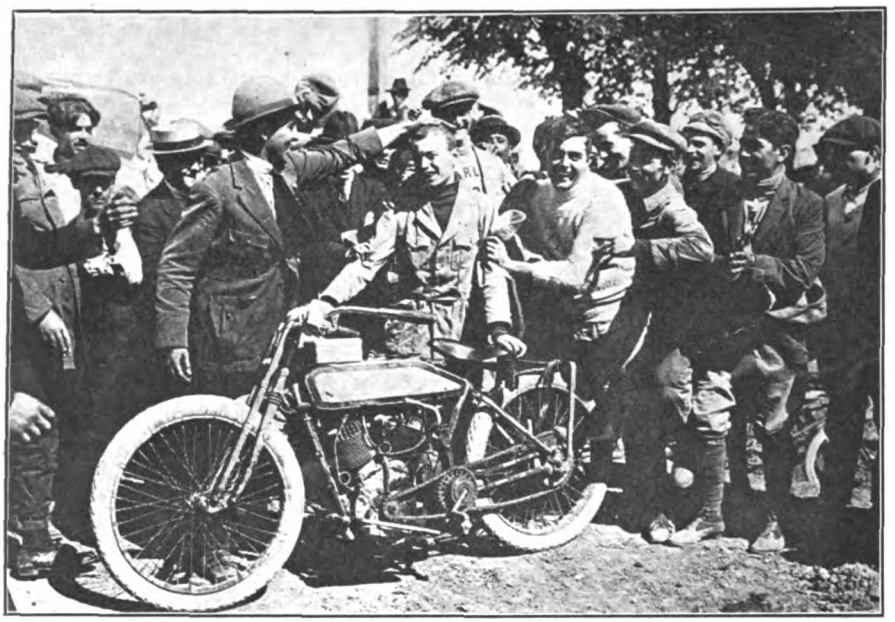
Harley-Davidson Rider Takes National M. C. Trophy for Second Successive Year; Santiago, with Indian, in Second Place



Bernasconi with His Harley-Davidson Being Congratulated at Finish of Race

BUENOS AIRES, Argentina.—Arnoldo Bernasconi, mounting a Harley-Davidson motorcycle, captured the 350 kilometer (220-mile) road race of the Club Motociclista Nacional, and maintained a speed of 39.15 miles per hour throughout the event. This means that the Harley-Davidson has carried off the gold and silver trophy of the National Motorcycle Club for the second year in succession.

Second place went to Carlos Santiago, of the National Motorcycle Club, with an Indian; third place to Juan Hourdebaigt, of the same club, also with an Indian; fourth place to Roque Siconolfi, of the National Motorcycle Club, with a Harley-Davidson; fifth place to Angel Traverso, with a Harley-Davidson; sixth place, Clifford B. Hillman, with Indian; seventh place, Ventura Avado, with Peugeot.

Bernasconi's Harley-Davidson covered the 220-mile course in 5 hours 33 minutes 30 seconds, while Santiago's Indian finished in 5 hours 39 minutes. Hourdebaigt's Indian, finishing third, was clocked at 5 hours 57 minutes; Siconolfi's Harley-Davidson, in fourth position, went through in 5 hours 57½ minutes; Traverso's Harley-Davidson, fifth over the line, was timed at 6 hours 9 minutes. Hillman brought his Indian through for sixth honors in 6 hours 19½ minutes, and Avado's time with the Peugeot was 7 hours 31 minutes.

A big crowd lined the course, and when the race was over Bernasconi was carried away on the shoulders of admirers. The excellent sportsmanship of the promoters and riders is shown by the fact that following the event a dinner was served in a restaurant near the track, at which the winners and the officials of the promoting club were congratulated upon the successful outcome of the program.

First news of Bernasconi's second consecutive victory in the national contest was sent to the United States by Dartiguelongue & Cia, Harley-Davidson dealers in Buenos Aires. *Motociclismo*, the local motorcycle journal, carried a photo of Bernasconi on the front cover and an extensive report on the race in the editorial pages.

SPLITDORF MEETS DIVIDEND ARREARS; FUTURE BRIGHT

NEWARK, N. J., May 29.—As concrete evidence of the enviable business conditions obtaining in the magneto market, comes the announcement that the Splitdorf Electrical Co. has made final payment of the arrears in dividends on its 7 per cent cumulative first preferred stock which has been accumulating for the past four years and which amounts to 28 per cent. Business and net earnings of the Splitdorf company have been exceptionally large since January, 1915, and the present earnings are at the rate of about $1,000,000 net for the year.

The Torrington Co., of Torrington, Conn., owner of about one-half interest in the Splitdorf Electrical Co., has ordered the distribution of the company's holdings of both common and preferred Splitdorf stock to the common stock holders of the Torrington Co. This stock amounts to 9,800 of preferred and 14,000 common.

JACOBY TAKES STEP HIGHER ON OVERLAND LADDER

TOLEDO, O., May 29.—Kelly R. Jacoby, well known in motorcycle circles since he was for years head and shoulders of the Miami Cycle & Mfg. Co., of Middletown, Ohio, and who recently connected with the Willys-Overland Co. as district manager for the Toledo zone, has been appointed director of service for the Overland concern. Mr. Jacoby succeeds Herbert J. Fitch.

ROGERS GIVES DIRECTIONS FOR ALIGNING SIDECARS

COMMENTING upon a recent item in this magazine concerning the aligning of sidecars, the Rogers Manufacturing Company, of 337 West Madison street, Chicago, Ill., calls attention to the fact that with Roger sidecars the motorcycle should be leaned out 2 degrees, in order to get comfortable riding and to counteract the pull of the sidecar wheel.

The firm has also found it necessary to have the sidecar wheel pointing in slightly, about half an inch, to correct for play in the bearings. The method of aligning Rogers sidecars, as given in the firm's instruction card, is the result of very careful experiment over a period of years. Those who have Rogers sidecars should obtain a copy of this instruction card from the Chicago headquarters or from Irving Beck, 1493 Fifth avenue, New York.

REMY STARTS INVESTIGATING PLANT IN DETROIT

DETROIT, May 29.—By way of increasing its facilities for developing electrical things in general, and ignition and starting devices in particular, the Remy Electric Co., of Anderson, Ind., has established a completely-equipped laboratory in this city. The plant comprises an experimental machine shop, a chemical laboratory and complete testing laboratories.

GOODYEAR INCREASE IS APPROVED; BIG MELON CUT

AKRON, O., May 29.—Stockholders of the Goodyear Tire & Rubber Co. have approved of the plan to increase the capital stock from $35,000,000 to $50,000,000. The increase carries with it a luscious melon in the shape of a dividend of 100 per cent. on the common stock; $17,500,000 of the new preferred stock will be sold.

CLEVELAND AGAIN TAKES BOSCH MAGNETOS

CLEVELAND, Ohio, May 29.—Indicating, as nothing short of figures can indicate, the possibilities of the lightweight field is the fact that the Cleveland Motorcycle Mfg. Co., maker of the Cleveland lightweight, has again contracted for Bosch magnetos for its entire 1917 output, and that the contract calls for the delivery of more than twice as many of the Bosch devices as were taken during 1916. In signing the contract, W. S. Quinlan, secretary of the Cleveland concern, threw this neat little bouquet at the Bosch folk:

"We have just contracted for our entire requirements of Bosch magnetos for the coming year, and this is the very best possible recommendation that we could give, indicating that we are willing to pay what appears to be a high price in order that we may be assured of the very highest type of ignition.

"Our Service Department advises that they have experienced absolutely no trouble with the Bosch magneto, and our Purchasing Department states that they are receiving satisfactory deliveries, and as representative of the Sales Department the writer appreciates the value of Bosch equipment on the Cleveland."

INDIAN FEATHERWEIGHT IS SCORING IN ENGLAND

A WRITER in *Motorcycling*, of London, issue of May 9, begins an article about a recent hill-climb with a featherweight as follows:

"After recent road experiences of the latest Powerplus Indian it was with considerable pleasure that we availed ourselves of an opportunity of riding one of the very few two-stroke Indian motorcycles that reached this country before the ban on imported machines came into operation. In the first illustrated description of this machine which appeared in *Motorcycling* we dubbed it the "Papoose," but after experiencing the capabilities of this remarkable two-stroke motorcycle we feel more inclined to call it the Powerplus Junior."

SOUTHERN BUSINESS IS SPEEDING UP

Holland-Baden-Ramsey Traveler on His Latest Business Trip Finds Money Plentiful and the Trade in a Strong Buying Mood

BALTIMORE, Md., May 29.—"I had splendid returns on my trip through the South," said Thomas J. Bantz, of the Holland-Baden-Ramsey Co., in speaking of his recent extensive business tour in conversation with a staff representative of **Motor Cycle Illustrated.** "I never before saw such a quick and satisfactory change as has come over the cycle business in the southern States. I covered the territory about six months ago and did hardly anything but preach good times and optimism, but on my latest trip I found the conditions improved 100 per cent. The buying demand was strong and the general feeling excellent.

"Not only are orders numerous but they average of a respectable size and it is significant also that our southern customers all want quick deliveries. That proves that they are really turning over the stock. Yes, sir, the South has begun to feel the tonic effect of the country's prosperity wave; crops are good and money is far from being as tight as it was. When the southern tradesmen have money they know how to spend it, and it is no exaggeration to say that they seem to be pretty well supplied with ready cash at this moment. I found the jobbers and dealers in fine spirits and all along the line I was given a royal welcome as the representative of the young firm of Holland-Baden-Ramsey."

Mr. Bantz has recently connected with the Holland-Baden-Ramsey Co., having had prior to that an experience of 16 years with the Henry Keidel Co., of Baltimore. His new affiliation brings him in touch again with many old-time friends.

COPS FORCED TO DISGUISE TO CATCH SPEEDERS

MILWAUKEE, Wis., May 31.—The members of the sheriff's force are getting to be so well known that speeding is only being regulated in the immediate vicinity of one of these officials and his motorcycle. The fact that the cops do not carry license numbers and all ride Harley-Davidsons makes them easy to pick out in the host of motorcycle riders on the country roads. But the deputy sheriffs have found a way to get around this by using all sorts of disguises. Half a dozen fast automobile drivers haled into court one morning testified to the effectiveness of the disguise worn by one deputy who carried a newsboy's bag over his shoulder. Still another cop garnered into the county treasury a goodly portion of motorist kale by donning overalls and a rube hat.

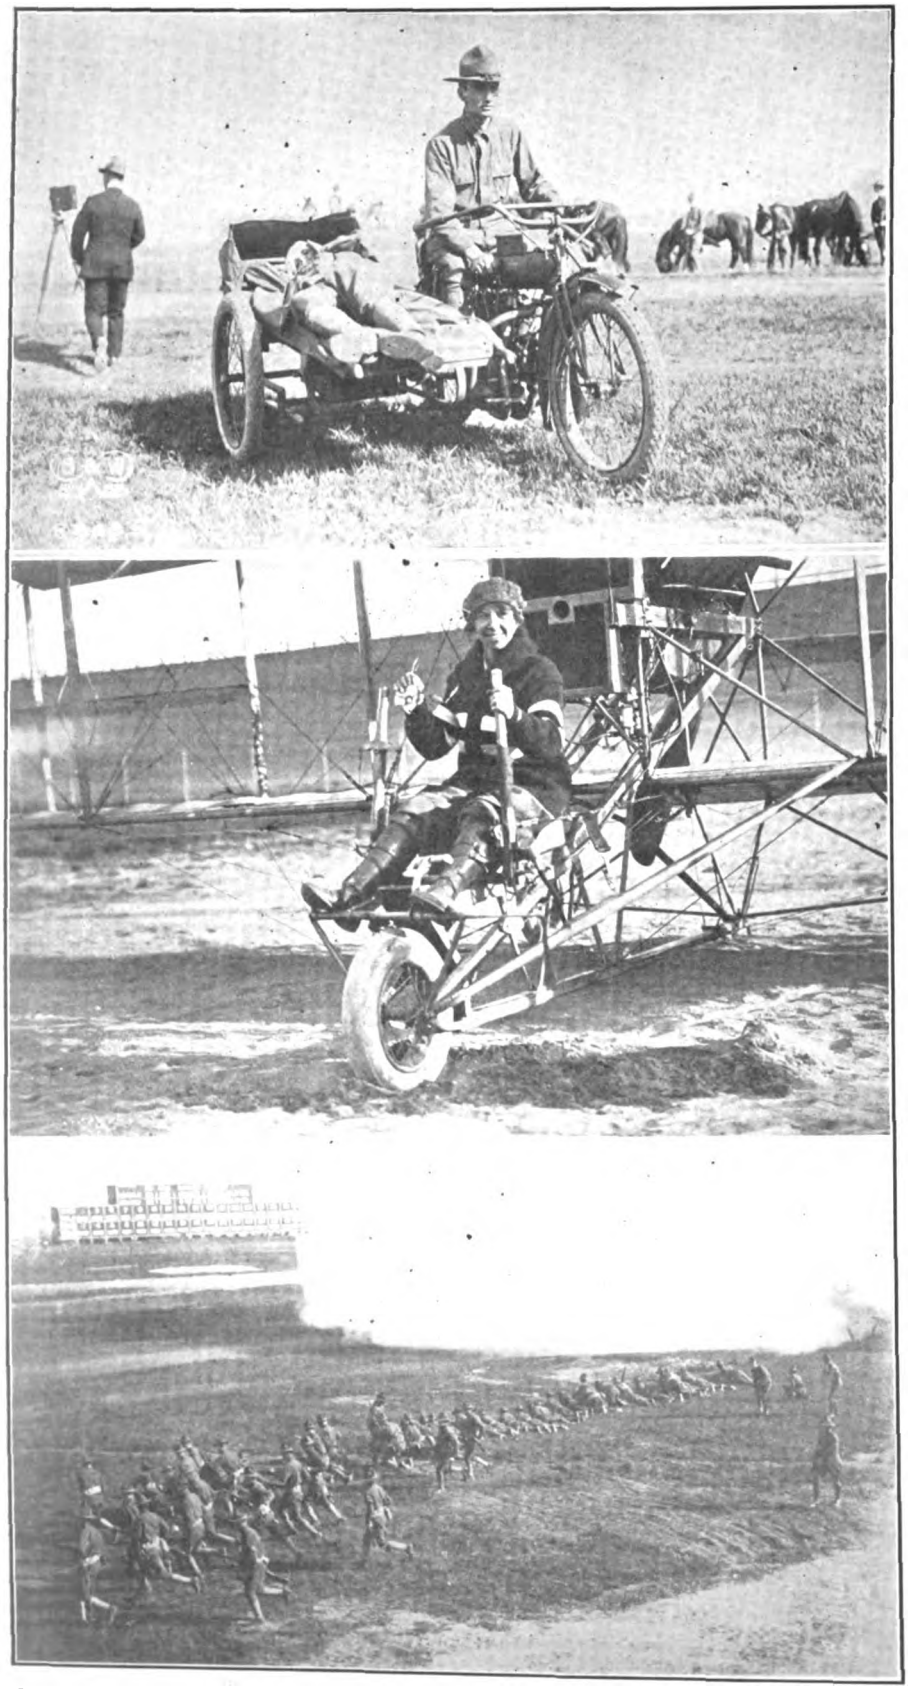
WHEELED AND WINGED ASPECTS OF MILITARY PREPAREDNESS

Three Glimpses of the Sheepshead Bay Tournament



In the upper picture is shown the Indian sidecar ambulance which was used by the National Guard Hospital Corps at the celebration. Below is Miss Ruth Law, an aviatrice, who gave exhibition flights during the tournament. At bottom are infantry of the New York Guard advancing by rushes, with field artillery in support.

"THOR MOTORCYCLE DEALER" MAKES ITS BOW

FROM the Aurora Automatic Machinery Company has come an interesting four-page newspaper, in miniature size, entitled the *Thor Motorcycle Dealer*. It is the first issue of the Thor house organ and its contents are bright and snappy. News of Thor dealers and Thor doings from various parts are chronicled in its pages, and an excellent article on Co-operation appears from the pen of Sales Manager C. B. O'Hare. The latter is the editor-in-chief of the new publication.

AN INDIAN RIOT BUS FOR ASHEVILLE POLICE

ANOTHER police riot 'bus has just been ordered of the Hendee Manufacturing Company through J. M. Hearn Company, Indian dealers at Asheville, N. C. This type of vehicle will carry two policemen on the bench-type seat, which is built on the sidecar, besides the driver. It will go into early service in the Asheville department.

The Jersey City Police Department has ordered six Indian Powerplus machines through Agent Geo. W. Rankin.

FISK SETTLES STRIKE; ALL HANDS BACK TO WORK

CHICOPEE FALLS, Mass., May 29.—The proposition of the Fisk Rubber Co. to grant an eight-hour day to its machinists and tire workers and to pay time and one-half for overtime and double time for Sundays and holidays has been accepted by the strikers and they have gone back to work. Some 2,600 men were involved in the strike which has just been settled.

PIONEER GERMAN RIDER IS KILLED IN ACTION

BERLIN, Germany.—Herr Doctor Ludwig Opel, one of the pioneer motorcyclists in this country, has been killed at Verdun during the early part of the recent German offensive. Dr. Opel was a pupil of Gottlieb Daimler and commenced building machines in 1901. He was a noted competition rider as well as a designer. During the last few years he headed a company building the Opel automobile.

BLUE LAWS AND BLUE COATS BOTHER SPRINGFIELD

SPRINGFIELD, Mass., May 29.—You can't go for a ride on Sunday in Springfield any more unless you lay in your supplies of gasoline, oil, tires and so forth on Saturday night. This condition arises out of the fact that the legislature at the session just past enacted no law permitting the sale of such things on Sunday and the local police have taken it into their heads to enforce the Sunday blue law in connection with garages and supply stores.

After the conviction of a garage man some months ago the legislature took up the matter and it seemed as if a favorable law would be the result, but just as it reached the enactment stage, the bill was killed.

GAS PRICES START ON DOWNWARD PATH

NEW YORK, May 29.—The price of gasoline in and around the Metropolitan District is on the decline, that is, if conditions obtaining for the past week can be taken as a criterion. Whereas for the past three months the price has been 27 cents a gallon throughout the greater city and surrounding territory, this week it dropped off to 26 cents outside of the city limits and in a few places inside that limit, and those in the know are inclined to believe that the drop-off indicates that the crest of the wave in prices has been reached and passed.

The opening up of new oil lands, improved processes for refining and the scramble of inventors for gasoline substitutes are given as the reasons for the cut.

"CANNONBALL" BAKER STOPS IN AT DETROIT

DETROIT, Mich., May 29.—The doughty old warhorse "cannonball" Baker arrived in Detroit last Thursday fresh from his latest victory over Father Time, and by the way looking as chipper as ever. His Detroit visit was necessitated by business with the Cadillac Automobile Co.

Baker spent the evening with Tom Martin talking over the big Michigan Reliability Trial scheduled for July 2, 3, 4, and assured him of being present at the word go. E. G. had some very interesting stories on his latest transcontinental trip, and his experiences in Australia are both instructive and laughable to say the least.

THE "GOODRICH" FOR MAY

AKRON, O., May 29.—Two features of especial interest to cyclists in the current number of the "Goodrich," the house organ of the B. F. Goodrich Co., are the front cover showing a pretty young motorcyclist of the fair sex holding an earnest conversation with a bashful-looking "hick" constable, and two pages which are devoted to pictures and text concerning road records made by bicyclists on Palmer Armstrong tires. There are many other notable features which make the issue snappy and helpful.

ANOTHER COUPLE TRAVEL COASTWARD

Make Steady Progress With Sidecar Combination Over Bad Roads

Mr. and Mrs. Weaks with Harley-Davidson Combination Traversing a Wisconsin Highway

MILWAUKEE, Wis.—Mr. and Mrs. J. H. Weaks, who are traveling by motorcycle and sidecar from Rochester, N. Y., to Oakland, Cal., where Mr. Weaks has accepted a position, are loud in praise of the manner in which their Harley-Davidson outfit has stood up to the task.

"Wisconsin is a beautiful state," said Mrs. Weaks, "but the roads are a drawback. Never have I seen a worse road than that between Chicago and Milwaukee. Between South Chicago and Chicago the roads were bad, but when we struck the Lake Shore road near Racine we looked back upon the South Chicago roads as having been boulevards.

"From Milwaukee westward we will probably have more bad roads, but we do not expect to find any worse than the road south of South Milwaukee."

Mr. and Mrs. Weaks left the main route at Chicago in order to stop off at Milwaukee for a trip through the Harley-Davidson factory. Continuing westward they will strike Lake Geneva, Rockford and Davenport, and then get back to the main route at Cheyenne, Wyo.

Mrs. Weaks is keeping a diary on the trip, and her notes show that only sixteen gallons of gasoline and less than one gallon of oil were required for the trip from Rochester to Milwaukee.

ROAD COMMISSION BRANCH NOW IN MILWAUKEE

MILWAUKEE, Wis., May 31.—The newly organized Division No. 2 of the State Highway Commission which has opened offices in the Stevenson building, this city, will have J. E. Gillespie in charge as division superintendent and a staff of four men. Mr. Gillespie comes from Grand Rapids where he has been in charge of the Highway Commission's central Wisconsin division for three years.

With the establishment of Division No. 2 motorcyclists of the city are rejoicing because it means that the notoriously bad Blue Mound road which leads out of the city to the best summer resort sections will be permanently paved with an extension of the concrete road now extending only about seven miles.

WITH INDIAN TWO-STROKE AT PICTURESQUE BEAR LAKE

NEW TAGS FOR BUCKEYE STATE

COLUMBUS, Ohio, May 22.—It has been decided that motorcycle tags for the year 1917 in Ohio will contain green letters and figures on a white background. That decision has been reached by the secretary of State, who has asked for bids for 25,000 or more sets of motorcycle tags and 1,000 or more for motorcycle dealers.

SIDECAR FOR EAU CLAIRE POLICE

EAU CLAIRE, Wis., May 31.—The local police department has been furnished with a sidecar and motorcycle. The outfit will be used principally for special calls that necessitate the presence of more than a single officer and also for carrying prisoners to the jail and for transferring prisoners from the jail to the court house and back.

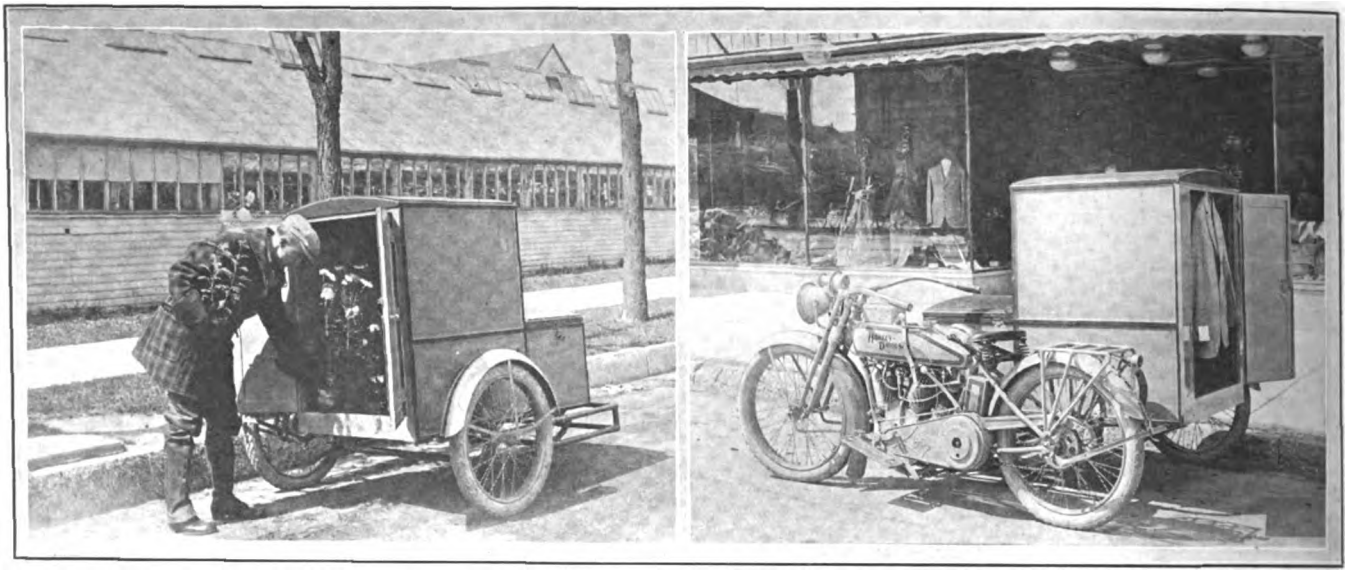
SPECIAL HARLEY VAN MEETS TAILORS' NEEDS

Latest Design from Chief Engineer of Silent Gray Is Also Adapted for Use of Florists



Left, Use of Rear Compartment for Potted Plants When Van Is in Service of Florist; Right, When Used by Tailor

MILWAUKEE, Wis., May 26.—The Harley-Davidson Motor Company is bringing out a sidevan which exactly meets the requirements of tailors, dyers and dry cleaners, and at the same time can be well adapted for delivery by florists. The sidevan, which is shown above, was designed by Chief Engineer William S. Harley. It consists of a double body, the rearward part being tall and having a rear door, while the forward part is of the usual box form with top cover.

The large rear compartment is the chief feature of the van. It has a capacity of 30 suits on coat hangers. The front compartment is for clothing or other merchandise. In florist service, potted plants are placed in the rear compartment. The chassis is very similar to that designed by Engineer Harley for the motorcycle machine gun car.

The company reports orders for a number of these vans from various dealers and feels, therefore, that it is opening up a field for sales which will be worth while. The new model chassis and body sells for $125.

PORTER BAGS TIGER; WILL REORGANIZE

Effects of Autobike Company Pass Into Hands of Well-Known Chicago Manufacturers—Big Plans Afoot

CHICAGO, May 30.—Charles C. Porter has taken over the affairs of the Autobike Co., maker of the Tiger lightweight, and removed the effects from 2231 Prairie avenue, where the old Autobike Co. held forth, to suite 900, 20 East Jackson boulevard. The company is now in the process of reorganization and it is understood that its management will be vested in folks well up in manufacturing as well as financial circles, and that with the provision of ample capital to float the business on a large scale, the manufacture of the Tiger lightweight will continue without interruption.

The Tiger motorcycle came into being early last fall. Aside from its low price of $112.50, its outstanding feature is the Frederickson motor with which it is powered. The motor is of the two-cycle type, but is distinguished by a more or less radical port arrangement by means of which it is claimed more nearly perfect scavenging is obtained, not only resulting in an increase in power and efficiency over the orthodox two-cycle motor of the same dimensions, but also in cooler operation.

The plans of the old Autobike Co. called for the production of 10,000 of the little machines during the present year, their first season in the business, and it was on the basis of this production that the price was fixed. Those behind the venture, however, had failed to reckon fully with the present condition of the materials market and operations were temporarily suspended.

AUTOMOBILE MEN AGAINST INSTALLMENT SALES

NEW YORK, May 29.—Motorcycle dealers will be interested in the decision of the National Automobile Chamber of Commerce that widespread advertising of the time-payment policy as applied to the sale of motor cars is inadvisable. It is argued that wholesale advertising of the installment proposition has a tendency to affect the buying public unfavorably, and that it also reacts objectionably upon the factory.

All of which has a bearing upon the competition of the small motor car with the motorcycle. Handlers of small, low-priced automobiles have, by offering indiscriminate installment inducements, been able in the past to cut into business that would otherwise naturally fall to motorcycle dealers, and with country-wide restrictions placed upon motor car dealers it will follow that motorcycle men will be enabled to meet the competition of the small motor car on a satisfactory basis.

The action of the National Automobile Chamber of Commerce does not imply, of course, that automobile installment sales will be stopped, but simply that they will be discouraged as strongly as possible.

USES INDIAN FOR FISHING IN SIERRAS

TURLOCK, Cal.—J. E. Farris, handling the Indian in this city, is an ardent follower of Izaak Walton, and uses his machine to take him to and from the pools and rivers where the fish are to be had for the catching. His regular run is from Turlock to Strawberry, 100 miles up in the mountains.

MILWAUKEE METROPOLITANIZING

MILWAUKEE, Wis., May 31.—Following the system used in Indianapolis and other large cities, an ordinance has been introduced making it necessary for automobiles and motorcycle and sidecar outfits to park on the forty-five degree angle in the downtown districts. The new law also restricts certain streets in the congested part of town from the parking privilege entirely from 7 o'clock in the morning until 7 o'clock at night.

MOTOR INDUSTRY CLUB

CHICAGO.—The Chicago Motor Industry Club has just been organized, with Harry N. Fowler as temporary president and George R. Veeder as temporary secretary. Though organized primarily for automobile men, the organization probably will also admit men in the motorcycle industry to membership.

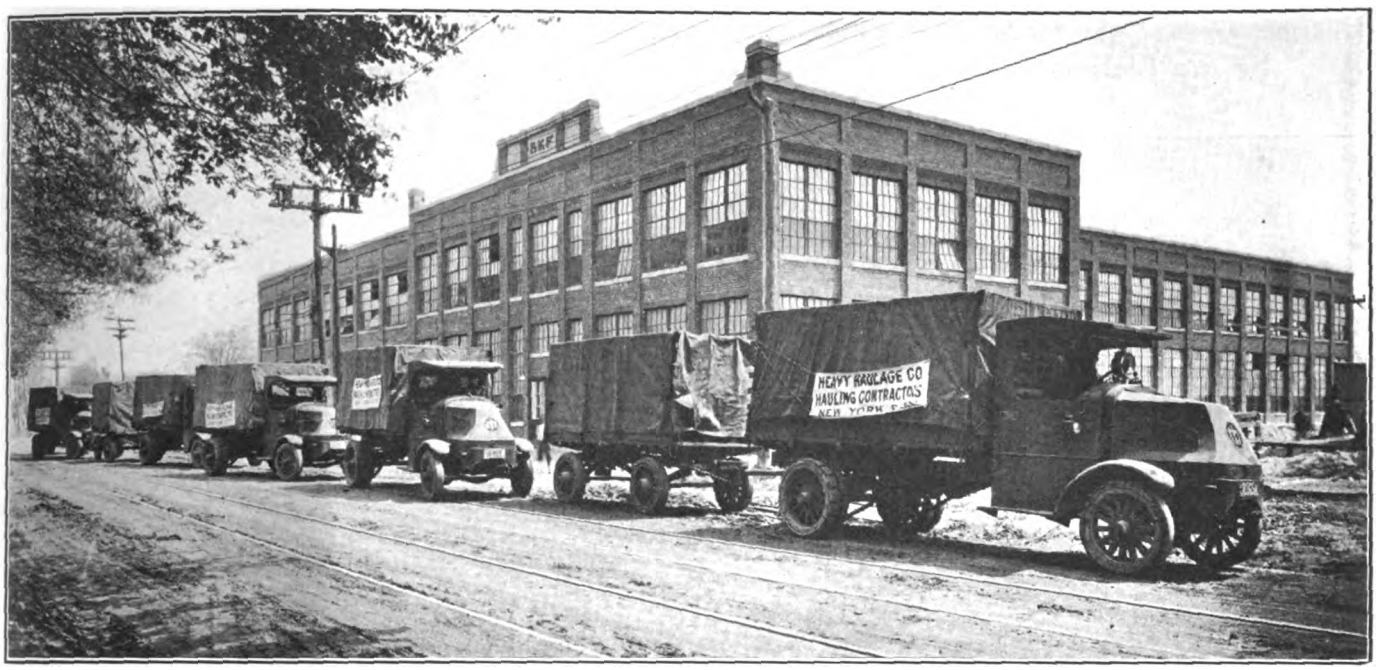
S. K. F. EFFICIENCY SHOWN IN TRUCK TRIP TO HARTFORD

Forty Tons of Ball Bearings Were Hurried Through to Meet Orders



Automobile Trucks and Trailers Which Brought Monster Load of Ball Bearings from New York, Leaving Factory After Unloading

HARTFORD, Conn.—The accompanying photograph, taken in front of the new American factory of the S. K. F. Ball Bearing Company, at Hartford, Conn., shows a fleet of Mack automobile trucks with trailers, arriving from New York with a shipment of forty tons of S. K. F. Swedish crucible steel ball bearings.

The S. K. F. Ball Bearing Company just at this time is passing through the transitional period incident to changing from a purely sales organization, representing the Aktiebolaget Svenska Kullagerfabriken, of Sweden, to a manufacturing organization with a factory at Hartford.

This company has always prided itself on its faithfulness in fulfilling shipping promises and in the case of this last consignment, it was only a matter of hours by which it lived up to its reputation. These bearings, which were needed to fill rush orders from manufacturers of automobiles, textile machinery, machine tools, milling machinery, and various other types of high speed machinery, arrived from Sweden late last week. Due to war conditions and hold-ups in Customs, further delays, due to the embargo on the railroad, the S. K. F. Ball Bearing Company chartered eight powerful Mack automobile trucks, similar to those being used by the Army in Mexico, and brought three hundred cases of these bearings to Hartford.

The installation of machinery at the new Hartford plant is now nearing completion and manufacturing operations will commence within the next month.

25 INDIANS FOR SPRINGFIELD SOLDIERS

Second Regiment Is Raising $5,000 to Buy Motorcycles Which Hendee Mfg. Co. Will Supply at Cost; Four Machine-Gun Outfits

SPRINGFIELD, Mass.—The machine gun company of the Second regiment has started a campaign among the citizens for the purpose of raising $5,000 with which to completely motorize its organization, the Hendee Mfg. Co. having made a special offer to supply the 25 motorcycles needed at cost, and in addition to head the list of subscribers with a donation of $100. Officials of the Hendee company state that they have made the offer because of their conviction that the motorcycle must play a big part in national preparedness, and because they are anxious to have the Springfield regiment set a good example for other military units throughout the country.

Of the 25 motorcycle outfits, four are to be of the machine gun sidecar type, and 18 are to be tandem-equipped. One machine will carry two riders with repair equipment, and two officers will have solo mounts.

HUSTLING EMBLEM HEADQUARTERS AT PITTSBURGH, PA.

Store of T. J. Everwine at 7139 Frankstown Avenue with Group of Patrons Who Swear by Angola-Made Models in Smoky City

MOTORCYCLE SQUAD FOR GUARD IN DETROIT

DETROIT, Mich.—This city may soon have a detachment of motorcycle scouts, from the interest shown by officers in the Michigan National Guard recently. Tom Martin, of "Jack Pines" fame, has been in daily conference with Major Waldo of the Guard, and things are pointing strongly toward the formation of a squadron attached to the 31st Infantry.

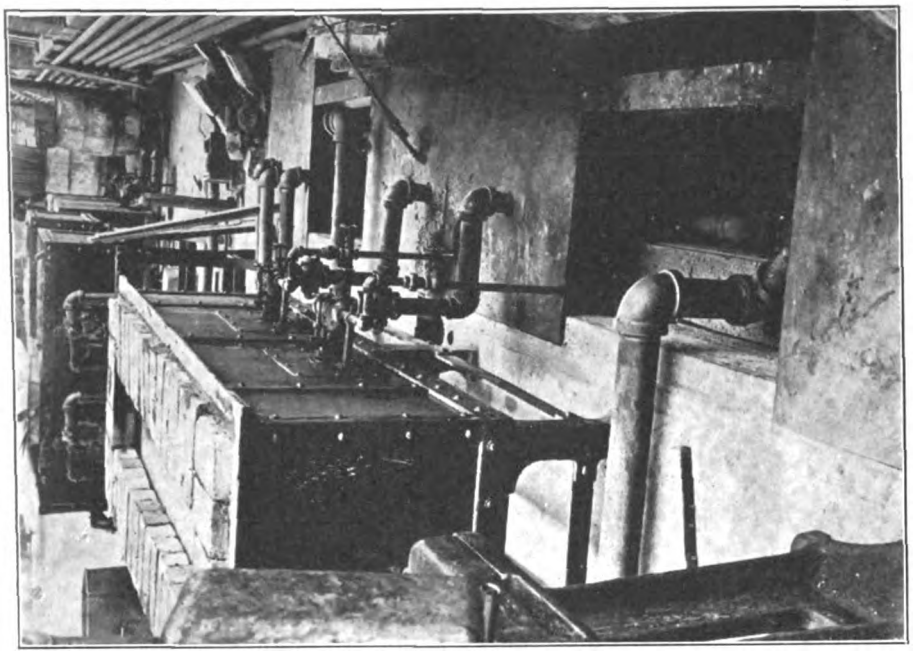
HOW INDIANS ARE SUBJECTED TO THE "FIRE TEST"

Old-Time Ordeal for Hardening Young Redskins Is Recalled to Visitor at Hendee Factory by the Elaborate System of Heat-Treating Parts for the Indian Motorcycle

By E. F. HALLOCK



One of the Furnaces at the Hendeeville Plant, Seen From Above

WORD artists who are wont to enthuse us with tales of Indians of days gone by—Indians of the human variety—emphasize almost with one accord the rites which were indulged in at that period of the male youngster's life when he was emerging from childhood to enter the realm of manhood; the rites which served to sort the weaklings or less courageous striplings from the hardy and daring, which served to pass the latter onto a full enjoyment of an Indian brave's prerogatives, and doomed the balance either to death or to an ignominious life among the women folk of the tribe. The ceremony, smacking strongly of barbarity, included torture of every conceivable nature, subjecting the youth at once to extreme physical tests through which only those bodies in the pink of condition could endure, and to the extreme in mental anguish, which the brave suffered in silence or even in glee while those more susceptible cried out in their agony.

Effective "Fire Tests"

And of the many and varied rigorous tests which were inflicted on these hardy youngsters by their elders, none was more rigorous, none better calculated to break down their youthful stoicism than the "fire tests," which took the form of branding with heated irons, mild roasting over a brisk fire, prodding with pointed firebrands, etc., all ingeniously devised to harden the youngster physically and mentally, and adapt him for Indian warfare.

And the visitor to the plant of the Hendee Mfg. Co., at Springfield, Mass., if he visits a certain room of abnormally high temperature, located in the basement of the building, will learn that even as in those "good old" days toughness and ability to withstand hard usage were bestowed upon the Indian by virtue of this "heat treatment," those identical and much-to-be-desired qualities are found in the modern Indian—the Indian motorcycle—and likewise result from "heat treatment."

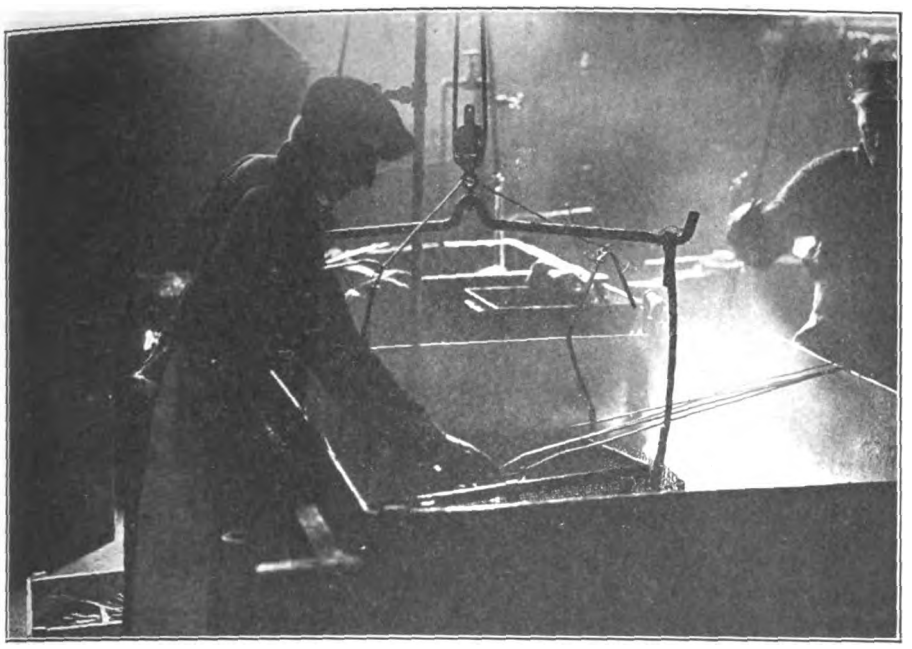
Ever since steel has been recognized as superior to the baser iron for certain classes of heavy duty work entailing either great strain or continued wear, it has also been recognized that the application of heat to the metal, followed by subsequent quenching, tends to make it harder and better fitted for the work in hand. It has taken, however, quite some time even for those best versed in steel, its handling and uses, to learn that simple heating, in a more or less indiscriminate manner, followed by quenching, is not productive of the best results. Just the proper amount of heat must be applied under proper conditions and for exactly the right period; and this heat treatment must be followed up by quenching of the sort that has proven the best in practice in order to obtain the best results. The hit-or-miss method of heat treatment is comparable to the old hand method of turning out machine parts; there is too much variation in the quality of the parts turned out. On the other hand the systematic method of heat treatment, with the heat controlled within very narrow limits and the time controlled practically to the instant, results in parts which are uniform in texture and wearing qualities, even as parts turned out on automatic screw machines or with the aid of jigs are uniform as to size.

An Adept in Steel

The stout, jolly, little foreman, who has charge of the heat treatment room at Springfield is an adept not only at heat treatment of steels, but also at making plain its whys and wherefores to the uninitiated visitor. If Friend Visitor really is seeking information, the foreman will lead him over to where several workmen are busily engaged at packing steel parts, such as three-speed gears, timing gears and sprockets into square malleable iron boxes, filling the voids with a black substance

Pair of Furnaces For Case-Hardening—Boxes at Left Hold Parts to Be Treated

Digitized by Google



Oil Baths in Which Parts Are Dipped "Drawn" to Proper Temper

which looks for all the world like railroad cinder. It won't escape the notice of the observer that this packing operation is very carefully carried out. No portion of the metal to be treated, for instance, is permitted to contact with the box, nor is one part permitted to touch another. The black cindery compound, the foreman informs us, consists in part of bone-ash; or, in other words, charred bones, and it is used to supply the requisite quantity of pure carbon, which is needed to toughen the steel. There are other substances included in the compound, however—cyanide of potassium for one—but for exact composition is in the nature of a trade secret, and on such subjects the modern Indians are scarcely more likely to talk than the Indian of yesteryear.

When the iron box has been completely filled with parts and the bone-ash compound, a heavy metal cover is put on it, the joint being sealed with fire clay. This, the foreman tells us, is to exclude the air and prevent burning, not only of the charcoal mass, but also of the steel itself, which goes a great way toward eliminating the formation of scale on the surface of the steel.

Packed in Trays

The parts to be treated arrive at this packing table in metal trays accompanied by a ticket giving the number of parts, the grade of steel used in them, and the treatment they are to undergo, and this ticket follows the parts throughout the heat-treating department. Ten of these boxes packed and sealed, and containing identical parts or parts which are to undergo identical treatment, are placed in one of the 22 oil-burning furnaces which line the walls of the room. These furnaces are lined with refractory brick, and are provided with two large oil burners so arranged that the supply of crude oil can be adjusted to a nicety and the heat controlled within very narrow limits.

When the furnace has been charged with the iron boxes and the door closed, the burners are ignited and set full blast to bring the contents up to heat. The proper heat varies not alone with the size of the parts, but also with the character of the metal, and according to the use the part is to be put to. Likewise the length of time at which this maximum temperature is maintained varies. For larger parts, such as a three-speed gear, the temperature reaches 1,750 degrees Fahrenheit, and the parts are kept at this high heat for four or five hours, and sometimes longer, depending upon the metal.

Keeping Temperature Constant

It is essential, if uniformity in the finished product is desired, that the temperature be maintained constant throughout the whole of the period after the furnace has reached the "up-to-heat" point. It is readily understandable, however, that a thermometer cannot be used for measuring temperature as high as this. While there are furnace men who by looking through the peep hole, which is a little mica covered hole in the door of the furnace, can approximate the temperature by the color of the brick, such a method is open to criticism, and in the Indian plant at least is considered as but one degree removed from absolute guesswork.

The Hendee system of insuring the proper temperature at all times during the treatment includes the use of a very sensitive instrument called a pyrometer. This instrument comprises a sensitive millivoltmeter graduated in degrees Fahrenheit, instead of in volts, which is connected in circuit with a constant potential battery, and with a pyrometer unit enclosed in a tube which enters the furnace. This pyrometer unit comprises two pieces of special alloy wire twisted together at the end, and sheathed in a tube of heat-resisting material. The wires are of different alloys, and have the property of changing their resistance abnormally with every change of temperature to which they are subjected. When they are in a furnace, for instance, which is "up-to-heat," supposing the heat to be 1,750 degrees, their resistance is just such as to cause the millivoltmeter to swing to the 1,750 degree point, and any change either upward or downward in the heat of the furnace affects the meter and tells the operator that more or less heat is required, as the case may be.

There is a pyrometer unit in each of the 22 furnaces, and these are all connected to a single switchboard installed in an elevated room, which looks for all the world like a railroad signal station. By means of suitably arranged switches, any one of the 22 units can be connected to the meter. An operator guards over the meter board the entire day, and takes readings from each of the furnaces in operation every ten minutes, entering the readings on a chart, which accompanies the parts to the testing room after the heat treatment is completed.

Controlled by Switches

A bank of switches is placed at the rear of the table in front of the operator. These switches are of the double-throw variety, and serve to control red and white lights which are placed in front of each furnace. When the switch is pulled down the white light at the proper furnace is illuminated, warning the furnace operator that the heat is too low and should be increased. When the switch is thrown up, on the other hand, a red light appears and thus warns the operator to cut down on the burner until the furnace again is brought to the proper temperature.

The pyrometer operator throws the switch lighting either one of the lamps when the thermometer varies 25 degrees either way from the "up-to-heat" point, and the furnace man, taking his cue from the signal light, examines his furnace through the peep hole, and regulates the proper burner to bring the temperature back to normal. The permissible fluctuation of 25 degrees in the enormous total of 1.750 is mere bagatelle, and has no effect whatever upon the finished product.

Like Human Skin

In the hardening process the steel can be compared to the human skin. When subjected to heat the pores of the skin open, and likewise the pores of the steel open, and, figuratively speaking, the metal "drinks" in carbon from the bone-ash mass with which it is surrounded. The longer the heat is maintained, and the higher, the deeper the carbon soaks in. The carbon renders the steel very hard and likewise very brittle. Obviously, it would not be wholly the part of wisdom to continue the process until the whole mass is impregnated with carbon, for that would render it extremely brittle and unsuitable for the work met with in motorcycle practice. As a matter of fact, the process is continued just until the outer shell of the steel assumes a good hard wearing surface, the inside remaining comparatively soft and very tough.

When the furnace has run for the alloted time at the proper heat, the pyrometer operator signals the furnace man by continually flashing the signal lamps, and then the burners are extinguished and the mass is allowed to cool off to the proper temperature for quenching, which, with big work, is about 1,350 degrees. The glow-

Indian Side Car Team Takes Highest Honors in the First 1000 Mile Endurance Run Ever Held

Only Side Car Team to Make Perfect Scores in Boston-Buffalo Event

Five Other Indians Also Score Perfect Truly Sensational Victory for Red Machines

THINK of four side car outfits with drivers and passengers covering 1000 miles and showing ABSOLUTELY PERFECT and having a consistency score of 995—only 5 points penalty incurred by secret checks and due in no way whatever to mechanical difficulties!

Think of 5 solo machines also coming through with score likewise ABSOLUTELY PERFECT!

Digitized by Google

There has been no previous performance which in any way approached this 1000 mile demonstration of long distance superiority and efficiency.

Indian has thus won a triumph that was sought after by every make in the country. And Indian wrested its victory from a picked field, a field keen to seize the honors which must necessarily go to the winner of the first 1000 mile cross-country dash ever held in the United States.

The successful side cars were driven by H. F. Drake, John Constant, Harvey Bernard and Hal Noyes—solo machines by C. Crout, C. E. DeLong, J. J. Berlo, E. F. Longley and J. J. Canane. The result is a splendid tribute to the stamina of both men and machines and is likewise a memorable credit to the Cradle Spring Frame which contributed to long sustained riding without undue exhaustion. Everyone at the checking stations noted that Indian riders were the freshest in condition all along the route.

THE INDIAN IS ALWAYS READY TO SUBMIT PROOF—THE PROOF OF ACTUAL TRIALS. THE 1000 MILE BOSTON-BUFFALO TEST PROCLAIMS INDIAN AS ABSOLUTELY PERFECT!

dealer and get it in shape in 30 minutes. That he came through the run at all with such scant preparation is one of the wonders of the run. Hardly less remarkable was the performance of Gustav Bley, who had never competed in an endurance before. Many hardened and seasoned riders on heavyweight machines failed to survive the difficult contest, which seemed easy for Bley.

The Medal Winners

Medal awards on results are as follows: Gold medals, Mills, Indian; Dunham, Indian. Silver medals, solo class, Ruhle, Scherer, Herrington, Zimmerman, Ehlers, Woods, all Harley-Davidsons; Kunath, Jacobs, Stone, Webber, Walker, Harkins, O'Brien, all Indians. In sidecar class, silver medals, Coughlin, Werner, Havenstrite, Schlagenheft, Lee, Case, all Harley-Davidsons; Steele, Stuart, Goerke, Gempp, all Indians. Ramsey, Waughop, Wintsch, all on Clevelands, Bley on Indian featherweight, and Bergfels on Cleveland, are all awarded silver medals. The only bronze medal won was by Doyle, amateur, Harley-Davidson.

Following the departure of the nine lightweights there was a lull till eight o'clock when the first sidecar, a Harley-Davidson driven by Gene Coughlin with D. R. Hobart, of **Motor Cycle Illustrated,** as passenger, was sent off on the long 400-mile trip. At one minute intervals the remaining combinations were despatched and the solo riders then followed. It was after 9 p. m. when the officials at the club saw entrant No. 56 vanish down Broad street en route to Keyport, the first check marked on the route card.

No Checker at Keyport

The route was generally good to Perth Amboy, with some broken roads and dust and from then on it was only fair. At Keyport, the sidecars arrived in a group to find no traces of a checker. The drivers scouted the town for the control, and finally, after wasting some twenty minutes started off toward Bradley Beach, the second check.

The riders were accompanied by all the lightweights and over a dozen solo contestants who had caught up with them at Keyport. The race officials have ruled out this check.

The run to Bradley Beach was made through sand for the most part, particularly in the Coast section. Then followed more dust and sand to Seaside Park and Tom's River.

All of the contestants were on the move and there were no troubles of any kind in the first one hundred miles. At Pemberton there were some laggards who lost the road or whose carbureters had choked with dust from traveling the heavy roads along the Atlantic shore.

Livingston Avenue Section

Good roads were found practically all the way to Trenton, but the Livingston avenue section, over two miles long, near New Brunswick, started the casualties. The first part of this avenue is deep red dirt, which after the night's rain became gummy and impeded the progress of both sidecars and solo machines. Several combinations got mired in this stretch and had to be lifted out bodily, as the wheels went in to the hubs. A secret check was located at the middle of this stretch. Following the mud came powdery sand, and in this Art. Herrington, Harley-Davidson solo, went down with the machine on his leg. He sprained it badly but rode the rest of the course to the finish. Spills among solo riders were many in this section, to the apparent amusement of the checking officials.

The day section, Newark to Phillipsburg and back via Neshanic, started well, with rough stretches near Franklin Furnace. In fact, it was mining-town road for the greater part after leaving Rockaway, the first day check, 25 miles out. More poor roads dug out of mountain sides followed to Blairstown, the noon control. At Walpack the solo riders had their second check, stopping at noon in Phillipsburg.

The strain on the contestants began to manifest itself about eleven a. m. and many adopted the plan of riding at top speed to within two or three miles of the check and then resting alongside the road until time was about right to ride in. After Phillipsburg, came the *piéce de resistance* of the run—Forge Hill.

Forge Hill Troubles

This hill was built in the days of buggies and never touched since. It has two stretches, one of steep red mud, ordinary dirt and loose rocks. The second has a steeper surface of red mud and more and larger stones.

The two sections were so steep that solo machines had difficulty in getting up, and the sidecar group, with one exception, had to dismount passengers and get their assistance in pushing at intervals to get up at all. Two belated solo contestants stalled on the hill spoiled the ascent of all combinations that were put to the climb. With a clear road, Walter Goerke, with Mrs. Goerke as passenger, made the ascent with his passenger in the car.

There was a check at the "landing" between the two sections, and then came the second climb. All the passengers walked this hill and most of them pushed to get traction. Fair roads, mostly broken macadam and dirt, followed to Frenchtown and Flemington.

Neshanic Checker Missing

The soloists had long passed the combinations and had apparently checked somewhere near Neshanic, but on the arrival of the three-wheelers, at that place, there were no signs of a checker or yellow flag. The checking place was given as the railroad station, but there was nobody home. Contestants thereupon got the station agent to certify their times of arrival and proceeded onward. Over a mile out of Neshanic appeared the yellow flag, well hidden by a turn in the road, but no sidecar driver signed with him. This check was later ruled out.

The run in the late afternoon and evening to Newark was made over rough dirt roads with occasional stretches of fine surface. All but two of the starters appeared within the time limits.

PROMISING PROGRAM FOR EMPIRE STATE MEET

Donovan Sanctions 100-Mile "Pro" Event and Awards Two-Mile National "Pro" Championship to Speedway M. C. for Sheepshead Bay, July 4th—Other Details

SHEEPSHEAD BAY, N. Y., May 29.—The failure of Chairman John L. Donovan, of the F. A. M. competition committee to grant a sanction for the 200-mile professional speedway race, which was planned to be run in connection with the N. Y. state F. A. M. convention at the Sheepshead Speedway on July the 4th, has not resulted in a postponement of the state session nor in the curtailment of the program. In place of the 200-mile event, which was to be the feature of the day's card, a 100-mile number has been supplemented and Chairman Donovan has given the Speedway M. C., which is standing sponsor for the affair, sanction to stage along with it the two-mile F. A. M. professional national championship, which events should go a long way toward pulling the crowd "Sheepsheadbayward" on Independence Day.

When it came to passing judgment on the sanction for the Sheepshead Bay meet as originally planned, Chairman Donovan found himself tied hand and foot by an agreement entered into three years ago with the promoters of the Dodge City speedway event. This agreement called for the granting of no other sanction for a speedway event of over 100 miles anywhere this side of the coast for July 4, thereby insuring the filling of the Dodge City run in years to come. In view of the fact that the promoters had gone ahead with the Dodge City plans this year, Donovan felt that his agreement with the Kansas folk could not be broken to grant the Sheepshead Bay sanction even though the scene of the contest was to be more than 1,000 miles away from the Kansas classic.

State Amateur Championship

Aside from the 100-mile professional and the two-mile National Professional Championship, the tentative program for the race meet at the seaside speedway for July 4 calls for the running of the state amateur championships at one, two, five, ten and 25-mile distances and a ten-mile professional contest. There will also be a special match race between an automobile, an aeroplane, and a motorcycle, while other novelty contests of a similar nature are promised.

The convention will be held at the track during the morning of July 4, and the race meet will occupy the afternoon. Dancing and other forms of entertainment will be indulged in during the evening. Grandstand seats, which carry with them parking privileges, may be obtained at 50 cents apiece from J. W. Barnard, care New York Sporting Goods Co., 15 Warren street, New York, or from the Sheepshead Bay Speedway Co., 1604 Broadway, New York. Boxes for six people are listed at $5, while those who prefer the "bleachers" can get in at a quarter a piece.

Arrangements are now being consummated to start tours from up-state cities, and from nearby cities in other states with Sheepshead Bay as their objective, and it is confidently expected that the attendance will be up in five figures.

The track will be open for practice on the morning of July 3, and the elimination trials will be staged on the afternoon of that day. Factory teams representing several different makes of motorcycles have been promised by their respective manufacturers.

RAIN BLANKS ALTOONA PROGRAM

(By Telegraph to Motor Cycle Illustrated)

ALTOONA, Pa., May 30.—Speed fans of Altoona and vicinity were keenly disappointed today when the races were postponed on account of rain. The new date for the program is June 3.

HARE HEADS MARYSVILLE M. C.

ROBERT HARE has been elected president of the Marysville, Cal., M. C., succeedinf A. Irving, resigned. The race committee consists of L. Morrison, D. Esterbrook, F. Rich, T. Day, C. McGinnis and B. Aldeman. If the expected sanction of the A. E. of M. is forthcoming, the annual race will be held July 3, and the club is assured of a strong line-up of speedsters.

NO THIRD TERM FOR PRESIDENT COFFMAN

F. A. M. Head Feels That Business Will Interfere with Official Duties and Will Therefore Decline Renomination

TOLEDO, Ohio, May 29.—Just who the F. A. M. conventioners, who assemble at Providence some time either late in July or early in August, will choose to head the national riders' organization for the coming year is a matter for conjecture. But the conjecture will not include the present incumbent, A. B. Coffman. Coffman, who has held the post for the past two years, and who has made an able and efficient leader, has eliminated himself from the coming contest.

In thus declining again to be a candidate for the F. A. M. presidency, he pleads a super-abundance of daily work as the underlying reason for his action. He feels that under conditions as they exist today he cannot do the F. A. M. office full justice and at the same time attend to his own business, and to the business of the M. M. A. Mr. Coffman says that he has enjoyed every minute of his two years' tenure office, that he likes the work and would much prefer to continue along with it if conditions favored that course, but under the circumstances he would feel it necessary for him to decline re-nomination if it were offered him.

PROVIDENCE WEEK-ENDERS ON 400-MILE RUN

Motorcycle Squad, Made Up of Both Sexes, Covers Picturesque Route on Two-Day Outing; B. A. Swenson Acts as Pilot

PROVIDENCE, R. I., May 28.—Some 21 motorcyclists from this city and other towns nearby participated in a week-end run promoted by the Providence Motorcycle Club which started yesterday morning with the party headed for North Adams, Mass., and finished here again tonight. B. A. Swenson, local Indian dealer, acted as the pilot and picked out 400 miles of good going.

The route took the party from Providence to Putnam, Conn., thence through Willimantic and Hartford to Springfield, where the Indian factory was visited. From Springfield the party went by way of Westfield and Pittsfield to North Adams, where they put up for the night. The trip back was slightly altered. It included Greenfield, Springfield, Worcester and Woonsocket, thence back to Providence.

Nothing outside of a balky motor or two occurred to mar the pleasure of the run and the balk was quickly taken out of the machines by the very efficient pilots. The run included about all the beauty spots there are in that section of the country, which is noted for its mountain trails. The trail of the Mohawk, which arises to 2,200 feet above the sea level, was, perhaps, the most picturesque part of the tour.

These in the Run

Among those in the run were: Mr. and Mrs. B. A. Swenson and son, Eddie, Mr. and Mrs. Wineooth, Mrs. J. H. Bailey, Byron Davidson, B. E. Mathewson, Mr. and Mrs. James Leath, P. T. Phetteplace, Earl H. Procter, A. J. LaCouture, William Ide, L. G. Moore, Peter Jaswell and George H. Page.

HUBBARD IS ENTHUSIASTIC

Charles H. Hubbard, of the Henderson Motorcycle Sales Corporation, of Los Angeles, is back from an extended trip in the East during which he visited the Henderson factory. Mr. Hubbard is enthusiastic over business conditions in the East and the activity at the Henderson factory.

APPLETON CLUB REVIVED

APPLETON, Wis., May 26.—There is a movement on foot in the local motorcycle trade and rider circles to revive the old Appleton Motorcycle Club which, before last summeer, was one of the strongest motorcycle organizations in the country.

LOW SADDLE POSITION ON NEW MICHAELSON

Geared Foot-Starter and Ample Footboards Other Features on Model C Twin Made by Pan-American Motor Co. of Minneapolis

MINNEAPOLIS, Minn., May 26.—The Pan-American Motor Company, of 408-410 Sixth avenue, South, this city, which recently took over the manufacture of the Michaelson motorcycle, is announcing the Model C machine for 1916. This Michaelson model has a power plant which is substantially the same as that on former twin models. There are, however, a number of desirable changes on the Model C as compared with the Michaelson twin which preceded it.

The frame has been lowered to give a saddle position of reduced height from the ground. Pedal cranks have been discarded and a geared foot-starter fitted. This gives ample leverage for starting the motor without danger of back-kicking. Good-sized footboards with ample hangers are also provided.

The weight of the machine has been materially reduced. This has been made possible by the use of drop-forgings in place of casting on former models. Considerable dead weight has been removed from the flywheels, giving the motor less vibration and an increase in speed.

The main bearings in the Michaelson motor and gear-set are very large as compared with those of former models, annular ball-bearings being fitted at these points. The same system of carburetion, lubrication and ignition as was tried out and proven satisfactory on previous Michaelson models has been retained.

All working parts are carefully proportioned to withstand the severe strain and yet be as light as possible. Extra heavy drive chains are fitted. The motor on the Model C is rated by the manufacturers at 10-13 horsepower.

HELP CELEBRATE HOMECOMING WITH MOTOR PARADE

RACINE, Wis., May 31.—The Racine Motorcycle Club will take a prominent part in the big homecoming celebration being arranged by the citizens of Racine and has induced the committee to hang up a purse of $100 to be distributed among the owners of the best decorated motorcycles in the parade.

The Racine club will hold its first race meet on the half-mile track here July 2. This year's races will be strictly F. A. M. sanctioned events. The first tour of the season was to Cedarburg to take in the races arranged by the Milwaukee club in conjunction with the Cedarburg Driving Association.

BEST HE EVER SAW

"Enclosed you will find my check for which please send me Motor Cycle Illustrated for one year, beginning March 2, 1916. Your paper is the best of its kind that I have ever seen."

JNO. E. WICKLES,
Bicycles & Supplies.
724 E. 26th St., Erie, Pa.

BUSINESS OPENINGS FOR MANUFACTURERS AND JOBBERS

WEYERHAUSER, Wis.—The Vorce-Beers Hardware Company has purchased the stock of F. L. Vorce. Catalogs are requested on bicycles, automobile accessories, lubricating oils, small tools and enamels.

KNOXVILLE, Iowa.—Hamilton & Hamilton have just opened a store in this city for general hardware. They desire catalogs on bicycles, oils and small tools.

STONEWALL, Okla.—G. W. Garrett & Son have bought out the business of E. M. Bellew. Catalogs on mechanics' tools, lubricating oils and varnishes are requested.

ECKELSON, N. D.—Catalogs on bicycles, automobile accessories, oils and small tools are desired by Anton Fried & Son, formerly Fried & Schwartz.

MINOT, N. D.—The Minot Hardware Company has just started in business. Catalogs on bicycles, small tools and oils are desired.

BARBOURSVILLE, Ky.—J. F. Rosnick & Company have bought out the business of Vermilion & Son. The new owners request catalogs on bicycles, lubricating oils, small tools and colors.

SACO, Mont.—The Saco Hardware, Furniture & Lumber Company has organized to deal in automobile accessories, small tools, enamels and varnishes and lubricating oils. Catalogs on these goods are requested.

MILROY, Minn.—E. A. Fraser & Son have gone into a new building and are stocking automobile accessories, small tools and lubricating oils.

ALL LIGHTS SHOULD BE LIT PROMPTLY AT SUNSET

THAT riders should take care to have lights lit promptly at sunset and not wait for dark is called forcibly to mind by the experience of Oscar A. Bleck, of Michigan City, Ind. The laws in practically all States call for lights between sunset and sunrise, and a strict enforcement of the regulations will probably bring many a rider who overlooks this point into the hands of the constable.

Bleck's letter is as follows:

"I was riding along one night and about 7.29 was arrested by an officer, because I did not have my light lit at the time. I was taken to the station and they held my machine for bonds.

"I had previously looked at the almanac and found that the sun had set at 7:11. We arrived at the station at 7:40 and the law allows 30 minutes grace after sun set. I was one minute to the good and consequently they had to release me."

"ALL THE BICYCLE NEWS EVERY WEEK"

KRAMER WINS SEASON'S FIRST TITLE RACE

Veteran Champion Disposes of Big Alf. Grenda on Decoration Day in Quarter-Mile National Championship Race; McNamara Beats Oscar Egg in Five-Mile Tandem Paced Event

NEWARK, N. J., May 30.—Frank Kramer celebrated Decoration Day by winning the first national championship race of the season at the Newark Velodrome. The distance was a quarter of a mile. Kramer beat Alf. Grenda for first place, while in the race to decide third and fourth honors, Bob Spears was a winner over Alfred Goullet.

To get to the finals Kramer had to win his heat, defeat Marcel Dupuy and then Bob Spears. In the final against Grenda he trailed the tall Tasmanian until the last turn, when he raced around him and beat Grenda down the home stretch by three-quarters of a length.

In the five-mile tandem paced race, Reggie McNamara, of Australia, defeated Oscar Egg, the Swiss cyclist. Egg rode a hard race, and with poor pace to contend with, was all in at the finish, falling from his bike fifteen yards from the tape.

John D. Staehle won the miss-and-out race for the amateurs, while Ben O'Sicky, of Cleveland, was first in half-mile handicap. The summaries:

Half Mile Novice (Amateur).—Won by S. P. Sadler, Newark; Norval Nicol, East Orange, second. Time, 1:18⅘.

Half Mile Handicap (Amateur).—Won by Ben O'Sicky, Cleveland (55 yards); Nicholas Horvath, Newark (70 yards), second; E. J. Carroll, Oakland, Cal. (45 yards), third; W. Heller, Newark (50 yards), fourth. Time, 0:55⅕.

Two Mile Invitation (Professional).—Won by Jacob Magin, Newark; Joseph A. Fogler, Brooklyn, second; E. F. Root, Boston, third; Martin Ryan, Newark, fourth. Time, 3:55⅕.

Quarter Mile National Championship (Professional).—Won by Frank L. Kramer, East Orange; Alfred Grenda, Australia, second; Robert E. Spears, Australia, third; Alfred Goullet, Australia, fourth. Time, 0:31⅗.

Two Mile Handicap Repechage (Professional).—Won by E. F Root, Boston (130 yards); Harry Kaiser, Bronx (120 yards), second; Edward Madden, Newark (110 yards), third; Martin Ryan, Newark (150 yards), fourth; Percey Lawrence, San Francisco (155 yards), fifth. Time, 3:50.

Miss and Out (Amateur).—Won by John D. Staehle, Newark; Walter White, Newark, second; Christian Dotterweich, Newark, third; Jerry Nunziata, Vinone Sportiva Italiana, fourth. Time, 4:26⅘. Distance, 2 miles.

Five Mile Tandem Paced Match Race (Professional).—Oscar Egg, Switzerland, vs. Reginald McNamara, Australia. Won by McNamara. Time, 9:35⅕.

Alfred Goullet

MOSSUTI DIES FROM INJURIES RECEIVED IN RACE

UNION HILL, N. J.—Joseph Mossuti, whose knee cap was broken in a collision with an auto during the recent 25-mile road race of the Century Road Club of America, died today at the North Hudson Hospital as the result of blood poisoning, which set in at the injured knee. Mossuti's end was hastened by a sudden attack of scarlet fever.

The members of the America's New Jersey division attended the funeral in a body. Floral tributes were received from many riders in the Metropolitan district.

HANDSOME FRASSE BOOK IS JUST OFF THE PRESS

AS handsome from the typographical and illustrative viewpoints as it is interesting in text matter, a booklet which has just been put out by Peter A. Frasse & Co., Inc., in commemoration of its one hundredth year in business, is one of the most attractive pieces of trade literature that has reached the office of **Motor Cycle Illustrated** to date. The book goes back to the start of the Frasse business in 1816 and then works up through the various stages of the firm's development to its position of unquestioned success today.

Photographs of the company's founder and the early officials, of the various branches and finally of the present officers and the full administrative staff add greatly to the attractiveness of the book, which is printed in photo-brown on special paper throughout.

The book, which is indicative from cover to cover of the solidity and strong organization of the Frasse company, is the product of C. W. Oliver, of the advertising department.

AMERICA'S HANDICAP POSTPONED

NEW YORK, N. Y., May 31.—Out of respect to the memory of Joseph Mossuti, the cyclist who was mortally injured in the recent C. R. C. of A. race in Union Hill, N. J., the 25-mile handicap road race of the America's New York Division, which was to have been held at Floral Park June 4, has been indefinitely postponed. Announcement will be made later whether the race is to be run at all.

F. A. M. AND N. C. A. RESUME WORKING AGREEMENT

NEW YORK, May 29.—The old agreement between the F. A. M. and the N. C. A. by which the motorcycle organization recognized the sanctions and suspensions of the bicycle body and vice versa has been re-established. The agreement was originally entered into during the tenure of office of R. G. Betts shortly after the foundation of the F. A. M. and endured until the two organizations fell out over the sanctioning of paced races during the presidency of G. H. Hamilton.

R. F. Kelsey, of the N. C. A., and J. L. Donovan, chairman of the F. A. M. Competition Committee have agreed that paced bicycle races should be controlled by the bicycle body, thus removing the last obstacle to a renewal of the working agreement. By the terms of the new arrangement, Donovan will "keep his eye" on cycling events in the Middle West.

ACME RACE HOLDS INTEREST

NEW YORK, N. Y., May 31.—Though a damper seems to have been put on racing here, as a result of Mossuti's death, interest in the Acme Wheelmen's ten mile "Bronx County Classic" continues unabated. Pelham Parkway, the course of this event, will be closed to all traffic during the race.

NEW POSTERS ISSUED BY TIRE COMPANY

Printed in Three Colors and Measuring 24" x 36", These Posters Have Been Gotten Up Especially for Dealers by the U. S. Tire Company

WILL HANDLE CYCLEMOTOR THROUGHOUT KANSAS

ROCHESTER, N. Y., May 31.—When the Cyclemotor first appeared in the American market about a year ago, the Ellis Bicycle Company, Wichita, Kan., secured the selling rights for its own city only and immediately started pushing this bicycle motor attachment. Their success was much better than expected, with the result that they recently applied and received the state distributorship for the Cyclemotor.

In Chicago the Edwards-Crist Mfg. Co. has unqualifiedly endorsed the Cyclemotor and is now distributing the Rochester bicycle booster in Cook County.

Wishing to subject the Cyclemotor to a severe test chief engineer, E. L. Evans, of the Cyclemotor Corporation, used the attachment on a trip to Buffalo, last saturday, a distance of about 79 miles. Clear sailing was experienced all the way, an average of fifteen miles an hour being obtained over the entire distance.

JAVA DEALERS SIGN UP FOR MOTOR WHEEL

MILWAUKEE, Wis., May 31.—The latest foreign agent for the Smith Motor Wheel to be appointed recently is the firm of W. H. Berkhemer & Son, of Batavia, Java. Both Berkhemer senior and son are now traveling in the United States contracting for the exclusive handling of motorcycles, bicycles and accessories on the big tropical island. The first motor wheel order, according to factory reports, calls for forty attachments, which are to be shipped via the same boat as the Java agents will take in New York when they leave for home, about June 10.

Among the commercial sales of the motor wheel last week was one to the Milwaukee Electric Company, and another to the Western Union Telegraph Company. The latter concern is trying out the Smith attachment for use in connection with message deliveries.

Motor wheel enthusiasts are constantly developing new and unusual phrases to voice their praise of the bicycle booster. The latest one comes from B. R. Almstead, of Montclair, N. J., who calls his "red buzzer" the "concentrated essence of push."

CYCLEMOTOR DEMONSTRATION DAY

BOSTON, Mass., May 30.—A Cyclemotor demonstration day was observed in this city by the S. J. Beckwith Company, 170 Washington street. All day a Cyclemotor-equipped bicycle was run up and down the street which passes the store and attracted considerable attention, resulting in the sale of five attachments and the securinng of a good list of live prospects. The demonstration was announced in most of the local newspapers the day before. The Beckwith store has been in existence for only three months and reports a brisk demand for the standard lines of bicycles carried, which include the Pierce, Reading-Standard and Emblem.

CHICAGO VELODROME WILL REOPEN IN JUNE

CHICAGO, Ill., May 31.—That the Riverview Velodrome will reopen this season on June 17 as an exclusive amateur track was announced last week by Paddy Harmon and Paul Cooper, the two promoters who lost a lot of money at Riverview last year because of the rainy season.

There will be meets on Saturday and Sunday evening, and possibly a matinee on Sunday. The amateurs have been divided into three classes, according to their ability which will be judged by the Board of Control, consisting of members of the clubs represented in the recently formed Federation of Chicago Bicycle Clubs. Prizes will be awarded at each meet.

JOHNSONS' BIKE STORE IS EXCEPTIONALLY FINE

STOCKTON, Cal.—This city has some exceptionally fine bicycle stores for a place of its size, and Johnsons', the new one opened this spring, easily takes first rank in attractiveness and convenience. The proprietors are Yolland Johnson, formerly associated with Branche's sporting goods house of Stockton, and his father, Col. Johnson. The store on East Weber avenue has been one of the busiest places in town for the last month or two. A handsome window display is made of bicycles and accessories, and the service department in the rear provides many conveniences for visiting riders.

MICHIGAN CLUB HOLDS FIRST RACEMEET

GRAND RAPIDS, Mich., May 30.—Several local riders failing to put in an appearance, though having filed their entries, the first racemeet of the Western Michigan Cycling Club, held last Saturday, at the Comstock Park Track, was run off with less éclat than anticipated. At the beginning of the meet much interest centered about the two Toledo boys, Travis and Sierlate, who had travelled all the way to Grand Rapids to compete in these races. But their performances were disappointing for neither was placed in any event. The summaries:

One Mile Novice Race.—W. Dellberg, first; C. Taylor, second; L. McMaster, third. Time, 2 min. 43⅗ sec. (All local entries.)

One Mile Handicap Cycle Race.—Meissner (scratch), Grand Rapids Y. M. C. A., first; Travis, Toledo, second; Sierlate, Toledo, third; McMaster, Grand Rapids, fourth; W. Dellberg, Grand Rapids, fifth. Time, 2 min. 36⅗ sec.

Miss and Out Cycle Race.—Meissner, Grand Rapids Y. M. C. A., first; W. Dellberg, Grand Rapids, second; Travis, Toledo, third; Kuhns, Grand Rapids, fourth; Taylor, Grand Rapids, fifth. Time, 11:59. (Distance 3 miles.)

Five Mile Handicap Race.—C. Taylor, Grand Rapids, first; Kuhns, Grand Rapids, second; Boyd, Grand Rapids, third; Eichenberg, Grand Rapids, fourth; Payne, Grand Rapids, fifth; Travis, Toledo, sixth. Time, 15:22.

EXERCISES ON TRAINER; GETS ELECTRICITY

TORONTO, Canada, May 29.—A French inventor, according to a story which a Canadian soldier-cyclist has just brought back from "Paree," was not satisfied with merely taking exercise that would develop his muscles, but wanted to increase his bank account at the same time. So he got hold of a home trainer bicycle outfit and connected the rollers with a dynamo.

Now, whenever he hops into the saddle for his day's exercise, he generates not only strength, but also electricity. The electricity he stores away in storage batteries and uses it for the purpose of illuminating his home. A dynamometer attached to the dynamo shows the clever Frenchman how much "juice" he manufactures each day, and it also shows him how much he exercises.

SPENCER AGAIN TRIMS HANS OHRT

Canadian Rider Scores Another Victory Over the California Boy, While Kramer Continues to Show Splendid Form at Newark Velodrome

NEWARK, N. J., May 29.—Frank Kramer, whose riding has been the feature at every meet run off at the Newark Velodrome this season, continued his string of triumphs on Sunday by defeating Bob Spears, the elongated Australian, in a special match race at two-thirds of a mile, and followed this performance by winning the five-mile invitation for the professionals.

Earlier in the season Spears took two out of three heats from the champion in a match race, and it was sweet revenge for Kramer to turn the tables on Sunday afternoon. "Big Steve" won in two straight heats, and each time he rode from in front. Kramer was two lengths ahead, going into the last lap in the first heat. On the back stretch Spears closed the gap to a length, and he fought Kramer around to the tape, but at the finish his front wheel was at the hub of Kramer's back one.

Alfred Goullet, who was the king of the outlaw cyclists, won his first race of the season when he took first place in the two-thirds mile handicap for the professionals. Goullet rode from scratch and had to show all that was in him to grab off first honors. Eddie Root, who had 50 yards, finished second, and Gordon Walker, with the same allowance, was third. Fourth place went to Frank Corry and Alf. Grenda got fifth money.

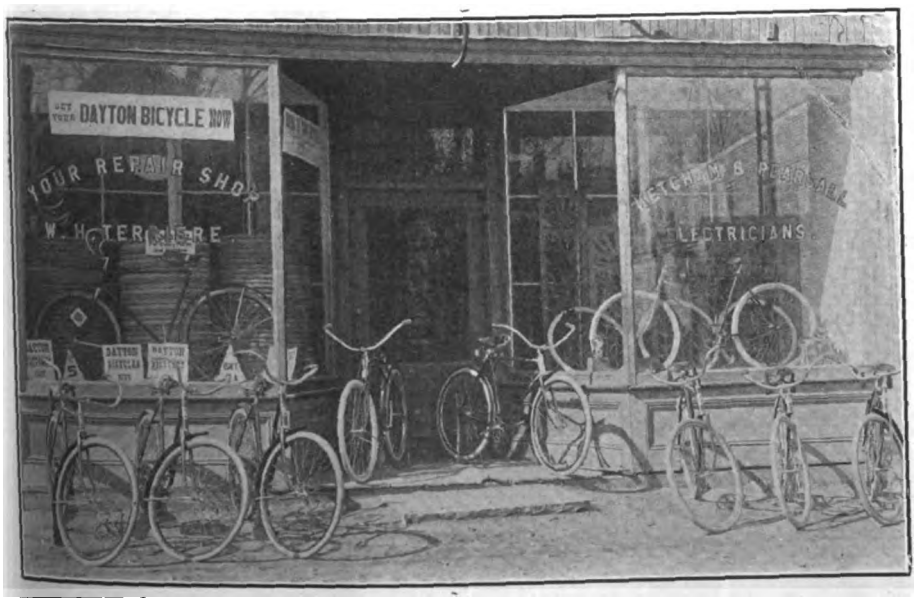
Beat Ohrt in Straight Heats

Arthur Spencer, the Toronto boy, demonstrated clearly that he was the master of Hans Ohrt, the California rider, in a match race. Spencer beat Ohrt in two straight heats at two-thirds of a mile, while a week ago he trimmed Ohrt in two out of three heats. Spencer rode from in front each time and Ohrt did not have enough speed to get around him. The first, which was rerun, resulted in a victory for Ohrt, but it was not allowed, as Ohrt had switched Spencer all over the track on the entire last lap.

Gus Lang, of Irvington, uncorked a pretty sprint in winning the two-mile open for the amateurs. He came out of the middle to the field on the back stretch and immediately rode to the front, passing Walter White and then William Spencer. White was there with a final kick and beat Spencer out for second place. Summary:

One mile novice (amateur)—Won by Leonard Ward, Newark; William Schneider, Newark, second. Time 2:34.

WHERE DAYTONS ARE SOLD IN BROOKLYN, N. Y.



The Busy Establishment of W. H. Terriere, a Progressive Dealer

Digitized by Google

Two-thirds mile handicap (professional)—Won by Alfred Goullet, Australia (scratch); Eddie Root, Boston (50 yards), second; Gordon Walker, Australia (50 yards), third; Frank Corry, Australia (40 yards), fourth; Alfred Grenda, Australia (scratch), fifth. Time 1:22⅕.

The Brassard Race, at one mile (professional)—Frank Cavanagh, Newark, vs. Marcel Dupuy, France. Won by Cavanagh. Time 2:54. Last eighth mile 0:12⅕.

One-third mile handicap (amateur)—Won by William Eager, Newark (55 yards); William Schneider, Newark (55 yards), second; H. F. Abbott, South Orange, (45 yards), third; Archie Farnow, Salt Lake City (50 yards), fourth. Time 0:36.

Two-thirds mile match race (professional)—Frank L. Kramer, East Orange, vs. Robert E. Spears, Australia. Won by Kramer. First heat won by Kramer. Time, 2:02. Last eighth mile, 0:12⅕. Second heat won by Kramer. Time, 2:04⅕. Last eighth mile, 0:12.

Two-thirds-mile match race (professional)—Arthur Spencer, Toronto, vs. Hans Ohrt, San Francisco.—Won by Spencer. First heat won by Spencer. Time, 2:05. Last eighth mile, :12⅗. Second heat won by Spencer. Time, 2:07⅗. Last eighth mile, :12⅕.

Two-mile invitation, handicap (professional)—Won by William Hanley, San Francisco (50 yards); Gordon Walker, Australia (70 yards), second; Worth L. Mitten, Davenport, Ia. (120 yards), third; John Bedell, Lynbrook, L. I. (100 yards), fourth. Time, 3:45⅕.

Two-mile open (amateur)—Won by Gus J. Lang, Irvington; Walter White, Newark, second; William Spencer, Toronto, third; Thomas Fitzsimmons, East Orange, fourth. Time, 4:29⅕.

Five-mile invitation (professional)—Won by Frank L. Kramer, East Orange; John Bedell, Lynbrook, L. I., second; Reginald McNamara, Australia, third; Menus Bedell, Lynbrook, L. I., fourth; Eddie Root, Boston, fifth. Time, 10:02⅕.

BISON CITY RACE A MUD LARK

Forty-three Cyclists Ride in Steady Downpour of Rain; Big Crowd Turns Out to See Twenty-Mile Handicap

BUFFALO, N. Y., May 30.—Though the rain came pouring down like cats and dogs, forty-three of the one hundred and fifty on the entry list faced the starter today in the twenty-mile bicycle handicap road race staged by the Buffalo Cycle Dealers' Association. Sheriff Ed. Stengel fired the gun at 9:50 in the morning, sending off the first bunch of riders.

Thousands of people witnessed the event which was the most interesting and best organized seen in the Bison City in many years. The course ran through the heart of the city, which accounted in large measure for the presence of the large crowd.

It was a tough ride for the contestants, who had to plough through mud and dash over puddles of water. There were spills upon spills, and not less than six riders were forced out of the running.

The dealers had provided a substantial lunch for the contestants at the finish. Most of the riders, however, instead of making a bee-line for the sandwiches, jumped into the wading pond at Humboldt Park to wash off the mud before enjoying the hospitality of the local merchants.

R. J. Howard, with a seven-minute handicap, accounted for the mud lark, his time being 58:03. The best time was made by Eddie Levy, who completed the 20 miles in 55:09.

Officials patrolled the course in automobiles. The summaries:

Place.	Name of Rider.	Hdcp.	Time.
1	R. J. Howard	7:00	58:03
2	H. G. Hann	7:00	1.00:00
3	William McNamara	3:00	56:01
4	R. Knibes	6:00	59:02
5	Ralph Amsden	5:30	58:33
6	Thos. Vozga	5:30	58:34
7	Frank Kolb	5:00	58:55
8	L. F. Schreck	4:00	58:16

30	John Wolf	4:30	1.07:08
31	J. H. Dekdebrunen	4:00	1.07:33
32	Elmer Bundt	Scratch	1.03:38
33	John Tanner	2:30	1.06:09

THE sudden death of Joseph Mossuti, C. R. C. of A., which resulted from an automobile collision in a recent race staged by his club, sadly emphasizes the great importance of running races on courses that are absolutely free from traffic of all kinds.

The first warning was sounded when Joseph Naphtal, C. R. C. A., was instantly killed by an automobile while competing in a race on Long Island the Sunday before last.

Races should be held on clear courses or not held at all. The responsibility rests squarely on the shoulders of the promoting club officials to see that chances for accidents are reduced as far as is humanly possible.

"Safety-First" is the right slogan to adopt for bicycle races. This applies to riders as well as promoters.

A TIMELY BICYCLE AD

Go a-Fishing on your Bicycle

BICYCLES TO RENT

The brooks are bubbling through the meadows and rushing down the hillsides and the lakes have thrown off their icy covering and gleam and glint in the Spring sunshine.

In the cool shadows the fish are lurking, big fellows, hungry after the Winter's fast.

Why not go a-fishing? Not to the fished-out places where everyone can go, but further into the country where the fishing is really good.

Seek out those places on the BICYCLE. It will GO ANYWHERE and bring you back more quickly and easily than any other means of transportation.

And all the time you will be in the "great out-doors," breathing pure air and enjoying the thrill of spinning over highways and byways.

There is only one Bicycle that will give perfect enjoyment—only one that is absolutely free from care and trouble—that's the "Speedwell."

You can buy it on terms that will make it easy for you to pay while you ride. SEE US BEFORE BUYING.

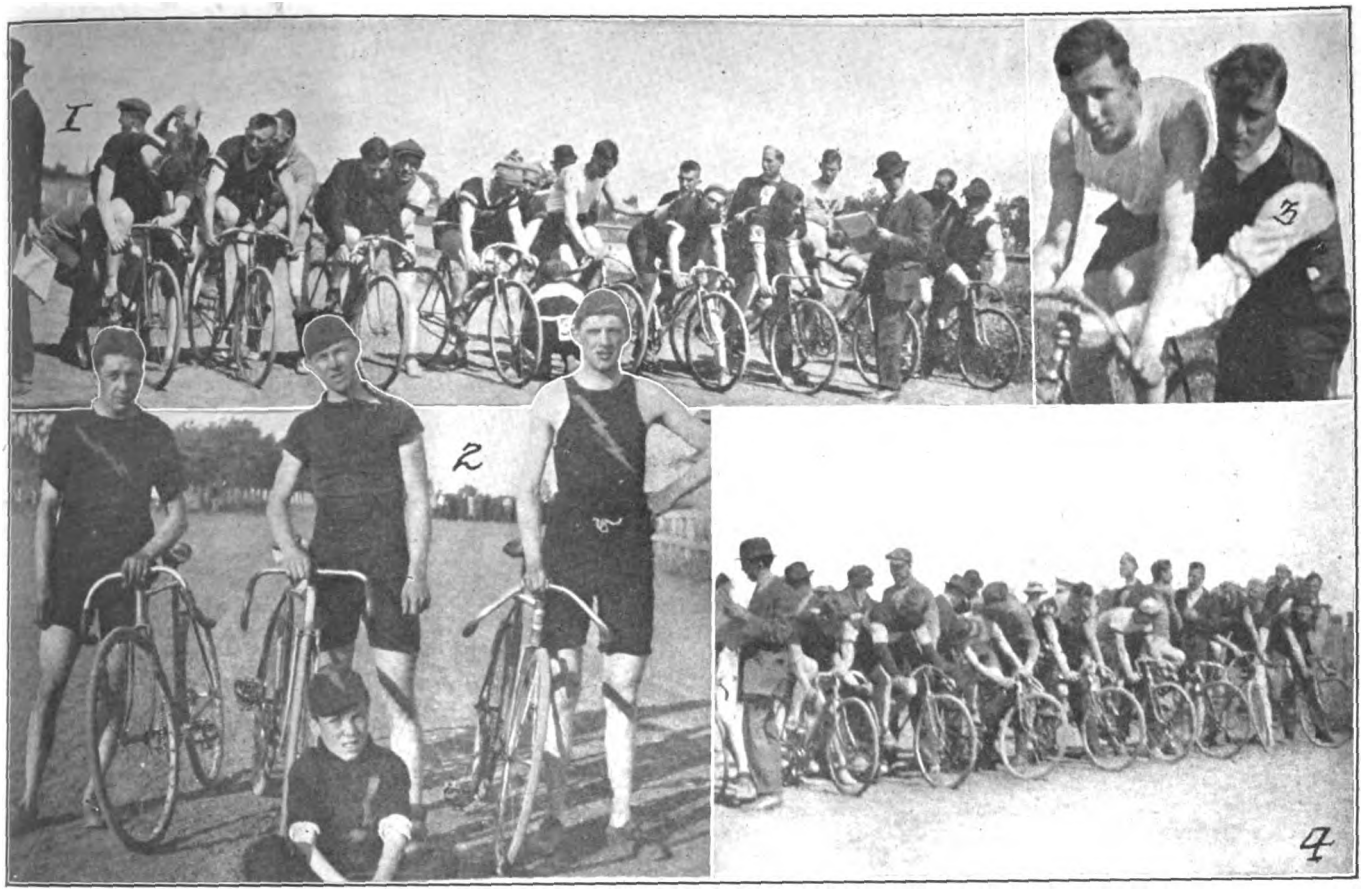
SNAPPY CARD OF RACES HOLDS STOCKTON'S INTEREST



1, Start of One Mile State Championship; 2, Winning Team in Australian Pursuit Race, Entered by New Century Wheelmen; 3, Geo. S. Simondi Winner of State Championship Race at One Mile; 4, Start of One Mile Consolation

STOCKTON, Cal., May 28.—The New Century Wheelmen of San Francisco practically cleaned up the track at the race meet held here last Sunday under the auspices of the California Associated Cycling Clubs. The first event was a two-mile tandem which was tucked safely away by Harry Spence and Les. Drury of the N. C. W.

Much interest centered about the next event on the program, which was the final of the one-mile state championship. So large was the field for this race that it was necessary to run off three heats. Geo. Simondi, of the Garden City Wheelmen, showed the way to the tape, being closely followed by F. Hoffman. For his victory in this event Simondi was presented with a large silver cup by the mayor of Stockton.

More than 90 riders faced the starter in the three-mile handicap. Clarence Mettled, of the New Century Wheelmen, accounted for the bicycle which was hung up as first prize. The time prize was annexed by W. Hammitt, also of the N. S. W. W. Thompson, of the New Centuries, accounted for the consolation race.

The feature event on the program was the Australian pursuit race, limited to 10 miles. The N. C. W. again was victorious, the members of the winning team being H. DeBrie, A. Sangalli and M. Castillo. The clubs figuring in the pursuit race were: Garden City Wheelmen, New Century Wheelmen, Samson Wheelmen, Racycle Club, Merced Wheelmen and Sacramento Wheelmen. Summaries:

Two-mile tandem race—Won by Harry Spence and Les. Drury, N. C. W.; second, W. Hammitt and A. Sangalli, N. C. W.; third, W. Thompson and R. Welch. Time, 4:40.

One-mile State championship—Won by Geo. Simondi, Garden City Wheelmen; second, F. Hoffman, Olympic Club; third, B. Girard, Olympic Club. Time, 2:54.

Three-mile handicap—Won by C. Mettler, N. C. W.; second, M. Cassials, Samson Wheelmen; third, L. Drury, New Century Wheelmen. Time, 7:32⅗.

Four-mile team relay—Won by junior division of the Samson Wheelmen. Time, 10:07⅘.

Australian pursuit race—Won by New Century Wheelmen; second, Garden City Wheelmen; third, Samson Wheelmen. Time for ten miles, 23:50.

One-mile consolation race—Won by W. Thompson, N. C. W.; second, A. Horner, Samson Wheelmen; third, R. Welch, N. C. W. Time, 2:35.

RHODE ISLAND WHEELMEN WILL HOLD REUNION

PROVIDENCE, R. I., May 30.—The members of the Rhode Island Wheelmen, an organization made up of old-time bicycle riders, are arranging for an outing and reunion on July 8. It has not yet been decided where the affair will be held, but it will be a sufficient distance from the city to make one of the features of the day a pleasant ride. Henry A. Carpenter is chairman of the outing, while William H. Gardner is acting as secretary and treasurer.

IGLEHART IS CRESCENT VICTOR

BALTIMORE, Md., May 30.—Walter V. Iglehart was the winner Sunday of the first club championship race of the season held by the Crescent Bicycle Club, Fred. M. Sanborn finishing second, Mm. H. McAvoy third, Wm. T. Wright fourth, and John E. Nitz, Jr., fifth, the first five men only receiving points in the championship competition. The time was 14 min. 55 sec.

ACME STAGE CORK AND BRASSARD RACES

BRONX, N. Y., May 29.—With a handicap of forty-five seconds, Frank Small won the third weekly cork race of the Acme Wheelmen which was held last Sunday over the Pelham Parkway. Fifteen men started, the limit handicap being 1:30: Summaries: 1, F. Small, 45 sec.; 2, J. Schaeffer, 30 sec.; 3, Spillane, 45 sec.; 4, G. Schaab, 30 sec.; 5, F. Mesner, 1:00.

The weekly Brassard race was also staged last Sunday, Frank Mesner winning in the "A" class over A. Miller, previous holder of the armlet. In Class "B" J. Markey vanquished H. Moorehead.

IRVINGTON-MILLBURN RACE CALLED OFF

NEWARK, N. J., May 30.—The Irvington-Millburn twenty-five mile road race which was to have been held today over the historic course, which has witnessed many thrilling events in the past, has been called off because of the refuusal of the South Orange Township Committee to grant a permit.

This committee's dilatory announcement of its refusal has made it impossible for the promoters, the Cycle Racing Association, to select another course for Decoration Day. All prizes and entrance fees have been returned.

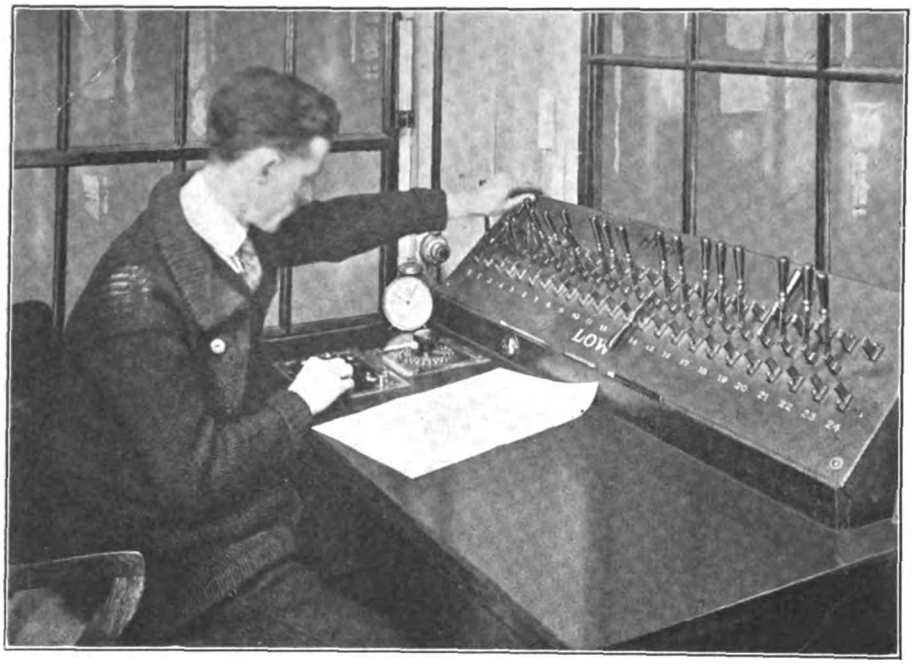
HOW INDIANS ARE SUBJECTED TO "FIRE TEST"

(Continued from page 27)



Operator at Table Controlling Heat in Furnaces by Switches

ing, red-hot boxes then are pulled out with a special hook, the covers are knocked off, and the contents are dropped into a sieve through which the carbonizing mass is sifted off into a barrel. The still glowing parts are then dumped into an oil bath, which, like the furnace, must be maintained at just the proper temperature to produce the most desirable results. There are a full dozen of these quenching tanks in the Hendee heat-treating room, and they are all piped up to a cooling coil in the pump room, and the oil is caused to circulate through all the tanks and through the coil, maintaining an even temperature of between 60 and 80 degreees.

A most striking feature of the quenching process to the visitor is the fact that, although box after box of glowing metal parts is dumped headlong into the oil tank, the oil never catches fire. The reason is, of course, that special oil of high flash test is used which is extremely hard to ignite.

Object of Quenching

The quenching process quite naturally cools the outside shell of the parts much more readily than the inside, and the contraction of the outside shell causes a strain in the metal which would quickly result in breakage were it not relieved. In the Indian parts the strain is relieved by mildly heating the parts in a hot oil bath. In this oil bath the parts are gradually brought up to a temperature of between 250 and 500 degrees, according to the nature of the part, and are gradually cooled off; this method of annealing blends the inside soft section of the steel with the outside hard shell, the process eliminating the last trace of strain.

Every batch of hardened parts that leaves the department passes through the testroom, where a certain number of samples are taken and subjected to a rigid test, which indicates immediately their exact state of hardness. If any one of the part does not measure up exactly to the Indian standard, and others in the same batch are found to be faulty, the whole assortment is sent back to the hardening room for retreatment. The testing is done by an ingenious little instrument called a scleroscope. This instrument comprises a steel ball contained in a glass tube, which also contains a scale. The ball is so arranged that it can be drawn to the top of the tube by means of a suction device. From this elevation it is dropped on the piece of steel to be tested, and the rebound or bounce is taken note of on the scale. The harder the steel is the higher it will bounce, so that it is fairly easy for a man accustomed to working the instrument to determine the exact state of hardness of the part under consideration.

Other Furnaces Used

Besides the carbonizing and heat treating furnaces already described, there are several other furnaces in the heat-treating room. There are a couple, for instance, which are used for annealing. In these the parts are heated very slowly, and allowed to cool again very slowly, so that they are softened all the way through. Still others are provided with crucibles in which lead is melted and covered with a film of borax in order to prevent it from oxidizing. In these pools valve stems and other small parts are dipped and brought to the temperature of the lead and then quenched, which hardens them to just the proper degree.

And so to the Indian of today is imparted through the medium of heat the same "stick-to-it-iveness" that the fire orgies of the American aborigines developed in their young bucks. The heat treatment is just one of the details in the manufacture of the Indian that keeps it constantly on the trail.

PUZZLED OVER MASSACHUSETTS ROAD LAW

Rhode Island Motorcyclists Seek Official Assurance That They Can Ride in the Bay State Without Registration; Law is Indefinite

PROVIDENCE, R. I., May 5.—George R. Wellington, clerk of the Rhode Island Automobile Department, is investigating a curious provision of the Massachusetts motor registration law which appears technically to prevent the use of the Bay State highways by Rhode Island motorists.

The Bay State laws says: "A motor vehicle owned by a non-resident, who has complied with the laws relative to motor vehicles and the operation thereof of the State or county in which he resides, may be operated on the highways of the State—without registration— provided that said State or county grants similar privileges to residents of this commonwealth—and the commission shall from time to time determine what States or counties do or do not grant similar privileges and its determination shall be final."

Mr. Wellington has never been informed whether Rhode Island has been recognized by the Massacusetts Highway Commission as one of the States entitled to the privileges provided for in this law.

This is an interesting and somewhat amusing question for Rhode Island motorcycle owners to consider, as residents of this State have come to understand that they are at liberty to use the Massachusetts highways at will under the Rhode Island registration, so long as they do not "sojourn" in Massachusetts for more than 10 nights in the calendar year, or are not regularly engaged in business in that State. Such is the provision of the Rhode Island law in relation to non-residents.

The word "sojourn" has been interpreted by the Rhode Island motorcyclist to mean "to spend the night." This allows non-residents of this State to use the Rhode Island highways continuously, without registering at the State House, provided they do not remain in the State more than 10 nights in a year and are not regularly engaged in business here.

Mr. Wellington has written a letter to the Highway Commission of Massachusetts, asking for an interpretation of the law as it has not been definitely settled that the Rhode Island laws and Massachusetts laws are in such form as to work out harmoniously. Motorcyclists here are considerably in doubt about the law and have urged the State board to action.

CANADIAN RACE RIDERS SCARCE

LONDON, Ont.—T. J. Maher, a local promoter, has issued a call for motorcycle racing men to engage in a barnstorming campaign throughout western Ontario. He wants to sign up about six racers whom he will use in special races at dirt tracks in small towns around the Province. He is finding difficulty in getting the men.

Doings on the Pacific Coast

PLAN MOTORCYCLE DAY AT SAN DIEGO

Exposition Management and Los Angeles M. C. Pull Together For Big Program; Many Novel Stunts Are Promised

SAN DIEGO, Cal.—Plans are being definitely made by the San Diego Exposition management, in co-operation with the Los Angeles Motorcycle Club, to have Motorcycle Day at the Exposition distinguished by the largest attendance and the most spectacular processions and contests of any day scheduled for the entire year. The date for the program has not yet been officially decided upon.

Mr. Peach, San Diego Exposition excursion manager, has not only offered all the facilities of the Exposition, but has guaranteed to everyone participating in the excursion special rates to the Exposition and to all concessions. Furthermore, the Exposition talent is co-operating with the committee of the Los Angeles Motorcycle Club having the excursion in charge to provide a most interesting program of exposition entertainment features and special stunts by the riders.

The excursion will be pulled off as a moonlight event, the first squadron starting Saturday afternoon while the second will start on Saturday evening, proceeding over the beautiful boulevard for what will be about a five-hour run by moonlight.

The committee of the Los Angeles Motorcycle Club having the matter in charge consists of: John O'Conner, editor of *Pacific Motorcyclist;* Lester Miles, Doc Hannah, Paul J. C. Derkum and George Rubsch. A tremendous advertising campaign will place the event prominently before every rider in Southern California, using bill-boards, posters, etc., all to be paid for by the Exposition and the actual work of handling the proposition to be in the hands of the Motorcycle Club.

FIFTY-FIVE IN FIRST RUN OF THE FRESNO CLUB

FRESNO.—Merced was the destination and 55 was the number of riders in the first run of the year made by the Fresno Harley-Davidson Motorcycle Club. They started out from Ben Bresee's store early in the morning and picked up a good bunch of riders at Merced after which the combined party went to one of the scenic locations in which this district abounds and had a picnic and lunch. Club runs for pretty nearly every Sunday during the summer months are being planned.

HERTWICK OF FRESNO BUYS OUT PARTNER

SAN FRANCISCO, Cal.—L. H. Weilheimer, of Hertwick & Weilheimer, of Fresno, Indian agents for that county, was in San Francisco this week visiting A. Freed, of the Pacific Motorcycle Supply Company, Indian distributors. Mr. Weilheimer announces the dissolution of partnership of his firm, he having taken over Mr. Hertwick's interest. The deal will take effect June 1. He is preparing to move into a store which is now being fitted up for the purpose. The store is 22 by 150 ft., of which a space 12 by 20 ft. at the front will be used as an entrance lobby, with display windows 4½ ft. deep on each side. Behind that will be a main store 65 ft. deep, and further to the rear will be 40 ft. for a shop, which will be equipped to meet all requirements. The extreme rear of the store will be a large service room, which will be one of the strong features. It will be equipped with locked spaces for checking motorcycles, and facilities will be provided for customers to rest, wash and dress, so that visitors coming to town will be able to clean up to go to an evening entertainment without leaving the shop. Besides a good stock of Indian motorcycles and bicycles a complete stock of parts will be kept.

SOUTH AFRICAN CO. PRAISES A. B. C. GENERATOR

LOS ANGELES, Cal.—The A. B. C. Generator Company, of 318 West Eleventh street, has received its third order for A. B. C. models from Williams, Hunt & Co., of Johannesburg, South Africa. The letter accompanying the order says: "It is with very much pleasure that we are able to enclose herewith our third indent for A. B. C. Generator Sets, and trust that you will arrange for early shipment.

"We wish to state that your generators are giving the utmost satisfaction, and we can assure you that as soon as we have been able to bring the qualities properly before the motorcycle public, we shall be able to do quite a large business with you."

HEROLD SELLS OUT

SANTA ANA.—A. F. Herold, of Santa Ana, has sold out his interest in the Indian Service Station and is going to sell automobiles in Redlands. The purchaser of Mr. Herold's interest is A. H. Small, who will combine the Henderson and Indian agencies, moving from his store on Third street to Herold's former location at Sixth and Main. He is keeping open the store for 18-hour service, from 6 a. m. to 12 p. m.

BREEZY BITS FROM FRISCO'S TRADE CIRCLES

SAN FRANCISCO, Cal.—Z. Barton, manager of the Thor branch in San Francisco, is back from a visit to the San Joaquin valley trade, and reports everybody busy in that district. The local branch, which is the distributing center for the entire Pacific slope, is having a very lively business in parts as well as machines.

Edwin F. Merry, Excelsior distributor, has just received his second car of the new Series 17 machines, all of which were taken in advance by the various agents, and which are greatly needed.

E. J. Angwin, of the Motorcycle Sales Company, has left for a 10 days' vacation in Los Angeles, accompanied by two friends on a Reading-Standard tandem and sidecar outfit. They expected to reach Los Angeles in a day and a half.

W. M. Phelps, Pope motorcycle distributor, expects to receive shortly his first shipment of new three-speed model machines. In the meantime he is rather handicapped for lack of stock, but is doing considerable business in parts, of which he carries a large supply.

Chas. H. Johnson, traveling representative of the Hendee Manufacturing Company, returned a few days ago from a tour of southern California and the valley towns. He had intended to take in Arizona, but found too much to occupy his attention in California for this trip.

Among the recent trade visitors in San Francisco were: Fred Lundblade, of Knudsen & Lundblade, Eureka; Messrs. Griffin and Meginness, of Hollister; and Mr. Van Naden, of Eureka, Cal.

D. J. Lake, a dealer of Watsonville, Cal., has retired from the business.

A. Baiocchi, formerly of Santa Rosa, Cal., has opened a new cyclery at Healdsburg.

NO MOTORCYCLE RACE AT ASCOT THIS YEAR

LOS ANGELES, Cal.—The Los Angeles Motorcycle Club has definitely given up the idea of holding a speed meet at the Ascot track. Since it received its complete new paving under the supervision of Paul Derkum the management of the track has put up its price and the club has refused to consider a $500 fee for the use of the track for one day.

WILL MAKE RUN TO BOLINAS

THE San Francisco M. C. staged an interesting run on May 28 to Bolinas, on the coast of Marin county, north of San Francisco, which is reached by a picturesque road through redwood-covered hills. At Bolinas the party witnessed a demonstration of the largest wireless telegraph station in the world.

O'HARE'S NEW "DEALER INTEREST" POLICY

Thor Sales Manager Puts a Novel Punch in the Co-operative Idea and Dealers Are Already Manifesting Their Approval of His System

CHICAGO, May 28.—Sales Manager C. B. O'Hare, of the Thor organization, has been a mighty busy executive since taking up his duties recently with the Aurora folks, and by way of proving that he knows just what he is after he has already given several new twists to the dealer policy of the company. In view of the fact that Mr. O'Hare is approaching the country-wide problem of co-operation with the dealer in a somewhat new way, a representative of **Motor Cycle Illustrated** called upon him a few days ago to discuss the matter.

It quickly became evident that on the one hand there is concerted energy in the direction of "dealer help." This, in the sales manager's own words, is the offensive campaign; on the other hand, a flank attack is being made to completely suppress all the negative energies that militate against dealer progress.

Mr. O'Hare has a great big idea that must be carried out in a big way; yet his plans are so logical and the work, starting as it has in such a subtle way, has already had its effect on the trade.

Dealers Are Alert

A canvass of the dealers in the East has developed the fact that they are alert to the modernisms of the new Thor sales executive, and the evidences of the responsiveness of the dealers which your representative saw in black and white, were almost unbelievable.

Mr. O'Hare described the viewpoint on which he is basing his sales policy in this unique way: "There are three walls in my office in which there are windows. The fourth is solid. To my right, figuratively, I look out of the window which I have chosen to call the window of the Casino Cycle & Supply Co. Directly in front I can see out the window of the Thor Motorcycle Co., at Boston, and to my left my viewpoint is that of Harry Neff, looking out on Federal street, Pittsburgh. In my mind's eye the fourth wall is the stock room, and I try to live in the realm of the dealer, seeing conditions through the dealer's windows, watching the Thor riders pass the door, hearing their remarks from the curbstone. In that way I 'get in' on the parlance of the man who actually buys and rides a motorcycle. With this thought in mind I have instituted what will be known as the 'Rider Interest' policy.

No Waste Energy

"The dealer's appreciation of this new life will be readily appreciated when the factory sales department assumes its share of the responsibility and burden attendant upon the handling of a multitude of people," continued Mr. O'Hare. "The dealer representing the Thor factory is bound to devote the excess energy which he spent in continuously selling a *sold* prospect. In any business where it is necessary to maintain a service department, it also becomes necessary to make the commodity which is marketed 'stay put.' It makes no difference what the quality is, you have the human side to contend with and diplomacy in handling this end of the business enters into the success of the institution, more perhaps than any other feature."

In the "Rider Interest" policy adopted by Mr. O'Hare there is embodied all that goes to make up dealer co-operation, and in connection with the dealer co-operation plan there has been added to the Sales Division at the factory a separate department which is known as the "Dealer's Department." This branch of the Sales Division will do nothing but handle the correspondence of the dealer that involves promotional work; ideas, suggestions, publicity, business systems, and anything else of a purely promotional nature affecting the dealer. The Advertising Department is controlled solely by the sales head, and its operations are linked closely to the sales development as seen from the sales executive's viewpoint.

Thus with the various controls affecting each department within convenient reach of the sales manager the possibilities for the development of the entire organization are greatly increased. The rider must eventually know the far-reaching tendencies of this great influence, and the good effect on the dealer becomes the natural sequence. The plan has been worked out with the object of creating in the buyer's mind the fact that a motorcycle or part thereof, is manufactured solely for the purpose of giving to the eventual rider the utmost satisfaction and good service. The dealer becomes the logical heir to added profits, a greater "good-will" and a greater and better reputation.

As the originator of the "Rider Interest" policy, Mr. O'Hare has put a new thought into the field, which the rider is bound to appreciate and the dealer in turn, instead of acting as a pacifier, at once becomes an ambassador to the national consumer. His position under this policy is elevated, his relation to the rider becomes more pleasant, and the entire field views the situation in a broader and cleaner sense.

FOUR TEAMS FINISH ROSEBURG RUN

Semi-Official Returns Give Perfect Score to One Harley-Davidson and One Indian Team—Nine Solo Riders Finish

(By Telegraph to Motor Cycle Illustrated)

PORTLAND, Ore, May 31.—The first and second Harley-Davidson teams, and the Indian teams of Ballou & Wright and Lystul checked in good season at the finish of the run to Roseburg and return yesterday. In addition to the teams, the following individual riders came in with what will probably be perfect scores when the official returns are in: J. Groat, Indian; A. J. Erickson, Harley-Davidson; Martin Peterson, Flying Merkel; A. C. Fleener, Indian; J. P. Schantin, Flying Merkel; George T. Kunz, Harley-Davidson. Ernest Long, Indian, checked in late, as did Dustin Farnham, Flying Merkel. H. Hall, Indian, went out on last lap with tire trouble.

The teams were: Harley-Davidson I—Leo Gilbert, Otto Walker, Henry Klein and H. Hadfield; Ballou & Wright, Indian—H. B. Dugar, E. C. Christensen, B. Rice and W. H. Macdonald; Harley-Davidson II—Clyde Fiske, M. C. Webster, C. G. Danielson and Edwin McKeen; Lystul Powerplus—J. Johansen, H. H. Kurtz, H. R. Eppstein and Ed. Berreth. Fisk was late at home control, while the Ballou & Wright team were all late in checking in. The others are figured semi-officially as being perfect.

Twenty-five riders, consisting of four teams, four riders each and nine individuals, left the Journal building Friday morning, May 26, on their way to Roseburg, 212 miles distant. The first Harley-Davidson team left at 6 a. m., was followed up in turn at five minute intervals by Ballou & Wright Indian team; second Harley-Davidson team and Lysuls Powerplus team and then by individual riders at one minute intervals. All riders checked perfect at Salem, Corvallis, Eugene and Drain, but last check at Roseburg put nine riders out of perfect class on account of checking in late. Twenty-five-mile schedule was easy going to divide, where very rough and a few muddy stretches were encountered for forty miles. The first team checked in on time at 3:29, Ballou-Wright Indian team late on account tire trouble, third and fourth teams perfect. Five individual riders late. Saturday was spent in amusement at last day of Roseburg annual strawberry carnival.

Return trip left Roseburg at 6 a. m., arrived at Portland at 3:29, one hour taken at Eugene for lunch and one hour at Salem on return trip. Two riders late and one out on return trip on account of tire trouble.

HERE'S A PROSPECT MAKER FROM THOR

CHICAGO, May 29.—The latest aid for Thor dealers gotten out by the Aurora Automatic Machinery Co. is a neat little leaflet, which in all its essentials is nothing more nor less than a condensed Thor catalogue. In it the Thor specifications are gone into in detail with special emphasis on those features of Thor construction which characterize it, and make it the sturdy mount it is and always has been. The leaflet, which is gotten up in two colors with an attractive front cover, visualizes the two leaders in the Thor line for 1916, model V6, the little twin, and model U12, the high-powered twin. The leaflet will be supplied in any quantities to Thor dealers upon application to Sales Manager C. B. O'Hare.

HARDING LOOKS FOR TORONTO SAUCER

TORONTO, Ont.—Jack Harding, the motordrome star, blew into town the other day expecting to take part in races on the local track this summer. He found, however, that the first and only "dishpan" in Canada had been demolished.

Blount Burtschaell, the Atlanta motordrome racer, who performed with credit on the local saucer for two seasons, has settled down in Toronto. He married a Toronto girl, and has gone into the electric contracting business here.

In the Dealer's Realm

THE BULLETIN BOARD AS AN EFFICIENT SALES AID

Placed in the Window, It Attracts Prospects for Both New and Used Machines and Accessories

By GEORGE M. JOHNSON

AT present there seems to be quite a spurt of interest in the proposition of getting more out of the show window of the motorcycle shop than has been done in the past. There is no doubt that many motorcycle dealers have failed to take the fullest possible advantage of this valuable advertising feature. The importance of cleanliness and novelty has already been emphasized, and rightly so, for nothing could more quickly kill the effectiveness of a window display than sameness and a collection of dirt.

Some dealers are probably wondering what new thing they can do to attract the eyes of passersby to their front window.

Well, Mister Dealer, have you a bulletin board in your window? You know what I mean, of course. An up-to-date bulletin board consists of a frame of some sort and a good supply of letters which can be hung or attached to the frame so as to spell out sentences and notices. They come in various styles and sizes, at prices that vary accordingly; I have seen a very satisfactory one that retailed at $6.00.

Rare in Motorcycle Stores

The live wire automobile display room usually has one in its front window, but to the best of my knowledge when you look for them in motorcycle shops they are likely to be about as scarce as bridge work in a hen's mouth. This is one of several things that seem to suggest that when it comes down to efficiency in salesmanship the average motorcycle dealer could profitably take a lesson or two from the average automobile agent.

The field of usefulness of the bulletin board is practically unlimited. It will serve to advertise bargains in second hand machines that the shop has for sale. Attention can be called to a stock of new and attractive accessories just received. A catchy sentence about the latest improvement in the factory's last model, a terse statement regarding a recent killing in a big road race or widely advertised endurance run, etc., could be employed to catch the eye—and the interest—of the passing pedestrian.

Where Board Is Superior

Using one of these bulletin boards is far better than putting up a notice written out or printed by hand. For one thing, the bulletin board notices are easily read; a single glance will take in all the information given. Another very important point is the neat and attractive appearance of the bulletin board as compared with any other method of posting notices.

The reader quite likely will reason somewhat like this: "Everything about this shop window looks all right; it's up-to-date, no old stuff in sight. This fellow must know his business. It stands to reason that he's handling a first class machine. Guess I'll step in and look around."

Drives Away Custom

And on the other hand, if the window display is shabby, with perhaps a crudely scrawled notice that you can buy a 1912 model motorcycle, only run 2,000 miles, for $65, the observer may observe to himself: "Hum! If the motorcycle this man sells runs the way his show window looks, none of it for mine. This dump is a back number. How do I know the motorcycle isn't a back number too?" and he is rarely willing to take a chance.

Shelton Sturges, Indian agent in New Haven, Conn., has developed a new hunch in connection with his bulletin board, one that is certainly worth passing on to other motorcycle dealers. He uses pictures in addition to the notices, For example, a short time ago he had a small framed cartoon showing a disconsolate rider seated in the midst of what evidently *had been* a perfectly healthy motorcycle only a few short seconds before. This picture, which hung in the middle of the bulletin board, by the way, was an advertisement clipped from a copy of **Motor Cycle Illustrated**; it was in a neat though inexpensive frame about five by six inches. The accompanying inscription was as follows:

FAIR BATAVIA ENTHUSIAST

Miss Jessie Heins, of That New York City, on Her Silent Gray. She Has Been Riding for Five Seasons

"We will take that wreck of yours in trade on a Powerplus Indian."

The impression such a display would make on a beholder could hardly be other than favorable. In the first place the cartoon was exceedingly ridiculous and laughable; of a sort to make a chap feel good-natured, merely by looking at it. Then, if he chanced to own an old motorcycle, just when he was in the right mood, the idea that he could get something for it towards a brand new machine—like the three-speed model directly behind the bulletin board—was pounded into his brain. And whether he owned a motorcycle or not, the message of the funny picture and the offer must make an impression.

The next week Sturges' bulletin board showed a cartoon of a motorcycle rider with a pleased grin on his face, gracefully soaring over a hedge, and the onlooker was told: "You can go anywhere on an Indian Featherweight."

Board Changed Regularly

"Of course the arrangement would have to be changed pretty often," Sturges explained to the writer. "I might put up a picture of some particular part of a machine that I wanted to call definite attention to—I could get that from a catalog—or anything at all that is connected with motorcycling, humorous or not. It strikes me that the picture is the really important thing. That demands attention—far more so than if the bulletin merely were used to pass out a lot of information that people might or might not care enough about to read. If they spot the picture, however, they're more likely to stop."

There would be a fine chance to use photographs as indicated above. That would be a good opportunity, for example, to drive home the fact that a person can ride a motorcycle and dress neatly at the same time. Put up a picture of a well-dressed rider mounted on one of your latest models, with a suitable text.

When Fish Are Biting

During the fishing season, especially when it is about to open, get a photo of one of your riders just starting on an angling trip, or a machine decorated with a fine catch of bass or trout. Then have the bulletin say something like this:

"Why don't YOU go fishing on an ————?" or,

"There's good fishing now for those who ride the ————; here's what one of our riders did," etc, etc.

The same would apply to hunting pictures in the fall. There are plenty of

Digitized by Google

riders who constantly use motorcycles as part of their sporting equipment. Doubtless some of them also make it a point to take pictures showing the motorcycle in action as a first aid to the hunter. My side-car outfit has often done duty in transporting a hunting dog. And on one occasion last fall I carried a heavy man and a good-sized dog on a trip up into the hills. The two passengers were a trifle crowded, but we got to our hunting grounds and got back all right. Our combination would have made a corking picture.

Get Good Photographs

If you don't happen to have any good negatives yourself, borrow some from riders who have. Get your prints, possibly even enlargements, made. The cost will be trifling, and it will give you some bully ammunition for your sales campaign.

Just one thing more. Every motorcycle dealer should, of course, be a motorcycle rider as well. He should take part in endurance and sociability runs whenever possible, and by all means should he know something about picture taking. Splendid opportunities for taking good pictures of motorcycling scenes will constantly be appearing, and the best of these photographs can later on be used for display and advertising purposes.

BRENNAN IN NEW QUARTERS

BROOKLYN, May 24.—Edward J. Brennan, who is head and shoulders of the Flxible Side Car Sales Co., the distributor of the sidecar for Brooklyn and Long Island, announces that he has moved his headquarters from 301 Schenck avenue to 1147 Bedford avenue in the heart of the automobile district. For the convenience of those riders who cannot call during regular business hours, the salesroom will be kept open during the evening and on Sundays throughout the summer.

MIAMI POWER BIKE LIST IS INCREASED BY 18

MIDDLETOWN, O., May 29.—Ohio, Indiana, Illinois and New York dealers, to the number of sixteen, have signed up to handle the Miami Power Bicycle with the active Miami travelers during the past week. The Buckeye dealers are Walter C. Warner, of Arcanum; Harry McNeer, of Portsmouth; T. S. Culp, of Canton; J. C. Moran, of Ashtabula; Spahr Brothers, of Canal Dover, and Palmison Motor & Cycle Company, of Sandusky.

From Indiana, M. W. Peart, of Anderson; J. M. Keller, of Frankfort; C. E. Klein, of Fort Wayne; C. B. Kirk, of Muncie, and the Broadway Hardware Company, of Gary, have signed up. In Matoon, Ill., Edward Crites has taken the Power Bicycle, while Bladstrom & Swanson in Rockford and W. M. Moll in Champaign have done likewise. Edward Moore in Cortland and C. L. Horton & Son in Afton are the latest from New York State.

F. A. Brumitt, of Boston, Mass., and F. B. Wilkins, of Middlesboro, Ky., complete the week's list.

BALTIMORE TRADE NOTES

HOWARD A. FRENCH & CO., local Indian Motorcycle and bicycle agents. They also handle the Iver Johnson, but the report that they cannot get enough Indian bicycles to supply the demand and have been compelled to substitute other makes, situation as regards filling orders is very little better on this make.

Robert L. French, 241 South Broadway, local agent for Racycle, Miami, and Flying Merkel bicycles, who has for some time been engaged in both the furniture and the bicycle business, has decided to close out his furniture business and will in the future devote his attention exclusively to bicycles and motorcycles. In common with other hustling local dealers Mr. French finds his greatest trouble is in getting his orders from the manufacturers filled.

SWENSON SHOWS 'EM HOW

PROVIDENCE, R. I.—B. A. Swenson not only tells city officials about all the varied capabilities of the motorcycle but gets out himself and shows them the goods. B. A., astride his Indian, chased a runaway horse the other day and finally stopped it in a spectacular manner. He has a badly cut hand as a result, but the motorcycle was undamaged and the capture itself was well handled.

THORS FOR EL PASO POLICE

EL PASO, Texas.—The Smith Machine Company, of 313 South Kansas street, has placed several Thor twins of 12 horsepower with the El Paso police department for the use of traffic officers.

Stewart SERVICE

Compare The Service Offered

The market is flooded with motorcycle accessories.

The smallest, fly-by-night motorcycle accessory manufacturer talks quality, value, durability even louder than the largest, most firmly established manufacturer.

How are you to determine which accessories offer the best value for your money?

You can judge the quality and value of motorcycle speedometors and warning signals by comparing the service offered and rendered by competing manufacturers.

No business ever starts with a widely distributed chain of service stations.

They are built up slowly at a big investment only after years of successful making and selling.

They are a guarantee of a manufacturer's permanence in the business and of the true quality of his products.

Stewart service stations are well established in every principal city in this country to serve users of Stewart Products.

And this year, due to the dealer and rider stampede for Stewart motorcycle accessories, our volume has been doubled and we can offer Stewart quality, class, accuracy and service at prices heretofore impossible.

Stewart Motorcycle Speedometer $10.

Stewart Motorcycle Warning Signal $3.50.

NOTES OF THE CYCLE TRADE IN LOUISVILLE, KY.

LOUISVILLE, Ky.—J. Bacon & Sons, operating a large department store and selling bicycles on the easy payment plan, are celebrating the firm's seventy-first birthday, with special sales in all departments. Advantage of the opportunity thus offered is being taken of by prospective cyclists in and around this city.

AMONG the visitors to this city during the past few days have been E. H. Strickland, of the Continental Tire Co., of Erie, Pa.; L. J. Hughes, of the National Bicycle Co., of Bay City, Mich., and a representative of the Cleveland motorcycle who is out after live dealers in Kentucky and Tennessee.

WITH a large stock of bicycles and supplies purchased before prices were advanced by the manufacturers, the A. L. Ray Company, of this city, is doing an excellent retail and jobbing business now. President Ray reports a 40 per cent. increase in April and May over the corresponding periods in 1915. Morris Ray is busy working in Kentucky, Illinois and Indiana at this time and is getting excellent results.

R. L. DAVIS, representing the Reading Standard and Pope motorcycle lines, is selling sidecars more than ever this season. He says that the demand for the attachments is way over double of last year.

BREGENT STIRS UP SOME LIVELY TRADE

MONTREAL, Que.—The A. E. Bregent Company, Montreal, distributor of Smith Motor Wheels and Pope bicycles, has sold three bicycles to Sir Herbert Holt, the prominent Canadian citizen, for use by members of his family.

Bregent is selling Smith Motor Wheels at retail in Montreal at the rate of twenty-five per week. The books of the company also show that the firm has retailed 545 bicycles in Montreal during the month of April alone, and more than this number has been sold during May.

The messengers of the C. P. R. Telegraph Company in Montreal have been equipped with Pope Viking bicycles by the Bregent Company, the sale being made through Fred St. Onge.

BOSTON HITS AT GARAGE LAW EVADERS

BOSTON, Mass., May 29.—Fire Prevention Commissioner John O'Keefe has started a campaign hitting at garage builders who evade the fire prevention laws by erecting garages in unit form, each unit with a capacity for two cars. Garage builders have been able in the past to lease the premises and store gasoline without obtaining a license or building permit. Commissioner O'Keefe, however, has so altered the garage regulations as to make it necessary for these unit garages to be licensed under the same condition as the regular public garages.

NEW EXCELSIORS SPREADING IN SOUTHERN CALIFORNIA

LOS ANGELES, Cal.—The Girton-Hoffer Co., Excelsior distributors, are having quite a contest for the new machines between Los Angeles riders and those in out-of-town territory. They are making strenuous efforts to keep up with the demand of the out-of-town dealers who keep close watch of the shipments and are on hand when a carload arrives to ride out the machine and usually bring another fellow along to ride one out.

Yesterday Buck and Buck, of Santa Ana, took two of the 1917 models and Frank Low & Son, of Santa Barbara, about an equal distance in the opposite direction, also have formed a habit of buying in pairs as shown in their latest order.

MONTREAL GETS A NEW DEALER

MONTREAL, Que.—The Automobile Owners' Accessory Company, Limited, has been incorporated under a Dominion charter with a capital stock of $50,000 to manufacture and trade in motorcycles, motorcycle parts, bicycle parts and other goods.

POWERPLUS FOR CRANSTON COPS

PROVIDENCE, R. I.—The Police Department of the city of Cranston has just bought a Powerplus Indian from B. A. Swenson of this city, for police service.

THIS MUCH IS CERTAIN

Electric Lamps and an "Exide" Battery furnish the most efficient and reliable light for motor cycle use

"Exide" Battery, Type 3-ZA-5 with cable type terminals

You no doubt realize the numerous advantages of electric light for motor cycle use.

The reliability of an electric lighting system is of course dependent upon the storage battery which furnishes the current.

The "Exide" Battery, type Z, especially designed for this service, is a quality-product, manufactured and backed by the oldest and largest battery maker in the country.

The battery is contained in a one piece, three compartment vulcanite case, having heavy walls and substantially re-enforced.

It is fitted with a one piece cover, having a flange which fits around all sides of each compartment.

The "Exide" Battery is equipped with a flood proof filling plug which overcomes slopping and spilling, and also limits the amount of water that can be poured into a cell to the exact amount needed to replace that lost by evaporation. The result is a clean, dry, and attractive battery.

Motor cycle dealers and users should write us at once and secure the name of the "Exide" Distributor nearest them.

Prest-O-Lite For Motorcycles

The Utmost Practical Lighting Equipment

You need Prest-O-Lite to make your night riding pleasant and safe. Experienced riders everywhere have found that it meets every requirement for thoroughly satisfactory motorcycle lighting. More use it than all other systems combined.

The rich flood of penetrating rays is unaffected by road shocks or vibration. Prest-O-Lite is as sturdy as your motorcycle itself.

In operation, Prest-O-Lite is simple, has nothing that can fail you in emergencies and requires no attention at any time that you yourself cannot give.

Prest-O-Lite has demonstrated in the rider's hands that it is at once the most convenient and efficient system. Yet it costs but little to buy and but little to use.

The Full Value Equipment Combination Includes Prest-O-Lite

No matter what make of machine you buy, your dealer can fit you out with a complete equipment including Prest-O-Lite. A typical combination of equipment is Prest-O-Lite, a lamp and a mechanical horn. Ask your dealer about it. This combination gives you the greatest value for the least money.

Ask for details of motorcycle lighting.

DEALERS:

Make More Customer Friends. Tell your customers about Prest-O-Lite in your sales talks. Prest-O-Lite will prove your claims on the road. If you're not doing this now—investigate.

NEW BRITAIN, CONN.
BRANCHES: New York, Chicago, Philadelphia
Makers of Corbin-Brown Speedometers

KANSAS CITY, MO.

FRED P. AMES, agent for the Emblem in this city, is experiencing a big increase in business these days, the boom starting about two weeks ago. He points to the number of little twins of this make on the boulevards of Kansas City as excellent proofs of his statement.

NEWBY BROTHERS, handling the Henderson, Thor and Flying Merkel, are well pleased with their new location at Grand avenue & 24th street. The building has two large rooms, one being used as a sales floor and the other for the repair department. More people pass the Newby place than in the old location, and business has increased considerably.

CARL HANSON, Wigwam representative, looks to double his 1915 sales performance this season, the way things are going now. The past month with its fine weather has brought riders and prospects by the score. The Featherweight has been selling nicely, in particular to those who live in the suburbs.

BRONX, N. Y.

GENE COUGHLIN, local distributor of the Harley-Davidson, has sold 48 of the 1916 models to date and has practically no used machines on hand. His sidecar sales number is sixteen so far, all being new cars.

"The accessory business has also been fine," says Gene.

BOSTON, MASS.

M. CARPENTER, of the Hub Cycle Company, rode off with Miss Pauly of the same firm, on his Pope two-speed a few days ago and was quietly married. The newly-married pair are now spending their honeymoon in the Western part of Massachusetts and will return in a few days. Carpenter is a salesman for the Hub firm.

BROOKLYN, N. Y.

CENTRAL MOTORCYCLE & SUPPLY CO., 1047 Bedford avenue, is distributing the Reading Standard in Brooklyn. The following sub-agents have been appointed for that make: J. R. Nelson, of 112 Fourth place, and Wilbur Rankin, of Flatbush.

MANISTIQUE, MICH.

E. O. BRAULT, handling the Indian in this city, reports the sale of over a dozen machines so far, this being his first Spring business. "The Indian bicycle models are going well," says Brault, "and the shop is kept pretty busy, too."

ASHTABULA, O.

F. E. GILLETTE, proprietor of the Astabula Motorcycle Co., of this city, has signed up to represent the Reading Standard for 1916. The contract was obtained by Traveler Lou Guterman, of the Reading Standard forces.

POINT PLEASANT, N. J.

J. R. NELSON has taken the agency for the Reading Standard in the Asbury Park section of the State.

BELLEFONTAINE, O.

J. E. MATTOX has signed with Reading Standard Traveler Lou Guterman to represent that machine in this city during 1916.

SHEDDING "DUTCH LIGHT" ON OUR EXPORT SITUATION

Amsterdam Importer Says Our Policy and Terms Will Cost Us Our Trade When War Is Over—Conditions Which the Dutch Trade Must Contend With

THE American motorcycle export situation from the Dutch angle is interestingly set forth in a letter from J. A. Snitslaar Delaville, a Dutch motorcycle importer whose headquarters are in Amsterdam. The war, according to Mr. Delaville, has put a check on Holland importing any motorcycles except those of American manufacture. Whereas in former years British, Belgium, German and French two-wheelers were greatly in predominance, at the present time American machines are holding sway.

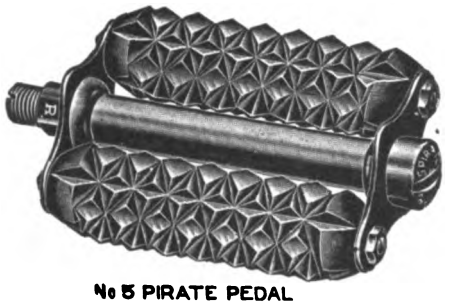
But Mr. Delaville is frank enough to say that, just as soon as the war has terminated, the Dutch motorcycle importer will again make connections in countries other than America for the very good reason that American manufacturers, with the exception of a very few, produce machines which appeal to the American rider and will not alter them to suit the whims and fancies of the foreigner; and Mr. Delaville is one of the many foreign importers who much prefers the C. I. F. Rotterdam or Amsterdam and C. O. D. or 60-day terms which are offered by our foreign competitors in the motorcycle field to the C. O. D. New York terms which the American manufacturer adheres to strictly.

In the line of suggestions as to just what the Dutch motorcycle buyer is looking for, the writer makes plain that the era of the heavy, high powered motor is about past in Holland, the greater demand being for five and seven-horsepower twins and singles fitted with two and three-speed gears and fully equipped, which machines are used mostly for sidecar and passenger work, and for light two-stroke machines, which are used mostly for solo riding. Both these light weight machines and the medium weight ones are, of course, to be fitted with 26-inch wheels, which are standard "across the pond," instead of the 28-inch wheels, which prevail in America.

Further along in his letter Mr. Delaville points out that the formalities and difficulties which beset the Dutch motorcycle importer at the present time are all but insurmountable. In the first place, before the importer even can place his order he must apply for a Netherland Overseas Trust import license and upon application must give banker's security for a substantial sum which goes as a guarantee that the motors are destined to be sold in Holland and that they will not be re-exported. When the motors arrive and are turned over to the dealers or importer's agents, the latter must also go through the same formality and even the private buyer must give the dealer a security guaranteeing that the motorcycle will not leave the country. These are handicaps on the Dutch trade which, of course, go a long way toward limiting it at the present moment.

FIND DAYTON MOTOR BIKES IN REGULAR SERVICE

SAN FRANCISCO, Cal.—W. H. Jackson, of W. E. & W. H. Jackson, distributors of the Dayton motorcycles, motor bicycles, etc., has just returned from a trip through the San Joaquin Valley with J. E. Peterson, the regular traveler in that territory. They went by auto and had a very enjoyable trip, calling on dealers in practically all the valley towns. One afternoon near Merced they overtook a rider on one of the Dayton motor bicycles, and on engaging him in conversation they found that he had been using the machine for several weeks in his work, which required a round trip every day between Merced and Chowchilla, 18 miles each way. The rider said the machine was giving a very satisfactory performance. At Stockton Mr. Jackson found another rider who makes the daily round trip of 26 miles between Stockton and Manteca on a motor bicycle.



No 5 PIRATE PEDAL

Two Pedals That Are Immensely Popular

Their design and construction assure strength and comfort. Especially is this true of the No. 5 PIRATE, whose deep corrugated rubber cushions are not only soft to the feet, but absorb shocks and keep the feet from slipping.

The No. 4 STANDARD is a new addition to our large and comprehensive line of Rat Trap Pedals. It is strongly made, well designed and gives a splendid foot hold.

The Standard Co. *Torrington Connecticut*

Manufacturers of

Diamond "E" Spokes and Nipples for bicycles, motorcycles, tricycles, velocipedes, invalid chairs, sulkies, carriages, cyclecars and automobiles. Pedals for bicycles, tricycles, velocipedes and motorcycles. Toe clips for bicycle pedals. Emergency axles for pedals. Screw machine products.

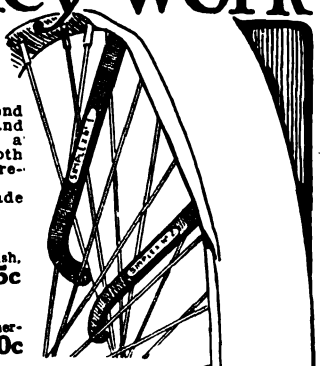
How They Work



It's a simple matter to remove the heaviest motorcycle tire with a set of **Simplex Tire Tools.**

Just insert the straight end under the bead, pry up and hook the curved end on a spoke. That's the trick. Both hands free to complete the removal of the casing.

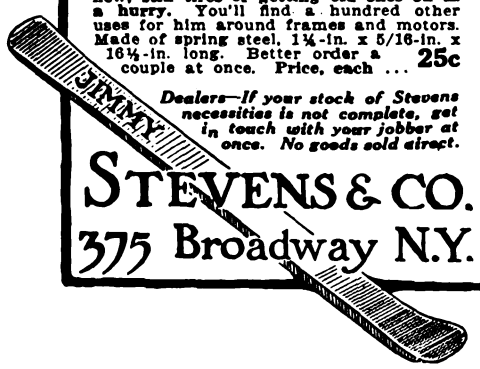
Simplex Tire Tools are made in two sizes:

No. 1 Set
Made of pressed steel, nickeled finish, suitable for tires 2x2½ inch. Price **25c**

No. 2 Set
Solid drop forgings, rust proof sherardized finish, will handle the heaviest tires. Price..... **50c**

A New Tool for the Shop

"Jimmy" is a big husky fellow, just right for the job where a little persuasion is needed. **Nothing better for putting on new, stiff tires or getting old ones off in a hurry.** You'll find a hundred other uses for him around frames and motors. Made of spring steel, 1¼-in. x 5/16-in. x 16½-in. long. Better order a couple at once. Price, each ... **25c**



Dealers—If your stock of Stevens necessities is not complete, get in touch with your jobber at once. No goods sold direct.

STEVENS & CO.
375 Broadway N.Y.

The Judge of Real Chain Value

will instantly see in "The Coventry" Chain certain refinements, certain features that are contained in no other chain made. And that rider will give these SPECIAL features in

"The Coventry" Chain

"THE MOTOR'S TRUE MATE"

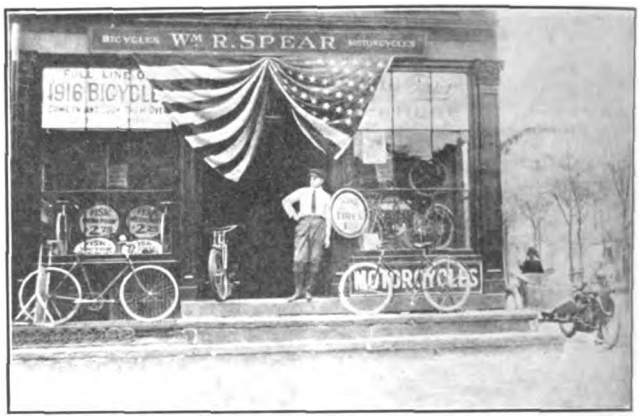
the consideration they justly deserve. For instance, there is the special heat treatment of the Sheffield steel that gives that marvelous durability to "The Coventry." Add to this the doubly strong roller, with shoulders at the end of the enlarged rivets to permit of easy repairing, and you have some of the main reasons for "The Coventry's" deserved popularity.

Write for our booklet, "The Motor's True Mate"

HERBERT F. L. FUNKE CO., Inc.
112 Broad Street **New York**

NEWARK, N. J.

WILLIAM R. SPEAR, who handles the Thor locally and also represents Thor interests throughout New Jersey, is among the real live wires in the East. His 1916 season is the banner year of his entire motorcycle career and to notify folks of this fact, Spear has draped the Stars and Stripes over his door.



Newark Headquarters of W. R. Spear on Washington Street. Spear Is Standing in the Doorway

"The big demand is for the 16-U" says Spear, "and sidecars go with most of the sales. We sell the Rogers car as stock equipment with the Thor. There has been considerable demand for the 6 horsepower twin, too."

Spear has taken hold with the same vigor which permeates Thor dealers all over the country and as popularized the Thor in sections where it has heretofore only been seen in small numbers.

BRIDGEPORT, CONN.

JAMES KASZAS, of 344 Pine street, has signed for the agency for the Reading Standard for Bridgeport in 1916. Traveler Lou Guterman got the contract on his last visit to this city.

ALBANY, ORE.

BALTIMORE GUN & CYCLE WORKS, handling the Indian, has just sold a Powerplus three-speed to Edgar Derry, buyer for the Craft Meat Co. Derry is now using the machine to locate stock and then follow them on horseback. He says that he saves one half the time necessary than when he used the horse only.

Proprietor M. P. Baltimore has also sold two Featherweights, one to a minister, the Reverend Mr. G. W. Roherbaugh, for making his parochial calls.

STEUBENVILLE, O.

R. M. PIERCE & CO. have signed up with Lou Guterman, Reading Standard traveler, to represent the Reading-made twin during 1916 in this city.

ROCKFORD, ILL.

JOE BICK, proprietor of the Thor garage on Wyman street has moved to 114 North Madison street. He has added the Indian bicycle to his line. Bick has been agent for the Thor for the past four years and has an excellent patronage. His new location will be known as the Indian Bicycle Shop.

CANTON, O.

AMOS W. DAUBERMAN has taken the agency for the Reading Standard for this city and vicinity. He signed up with Traveler Lou Guterman recently.

The SMITH MOTOR is fully protected by patents and is NOT furnished with any motorcycle or power bicycle, but only in the Smith Motor Wheel.

The Smith Motor Wheel is a money-maker for live dealers. We may have an opening for you. Write for particulars.

The Auto's Little Brother

Smith Motor Wheel
DETACHABLE

Makes Friends and Dollars For Live Dealers-

ONE of our dealers has referred to the Smith Motor Wheel as "Little Brother to the Automobile." We rather like the name because it carries the feeling of natural friendliness toward the *Smith* which is so quickly discovered wherever its spunky little motor is heard.

But the Smith Motor Wheel is not merely for the man or woman who does not own an automobile. It is a universal favorite among all classes of persons—old and young, wealthy, well-to-do and just so-so. *Everyone* is a prospect.

In fact one of our hustling dealers has just reported the sale of a *Smith* to a man who owned three pleasure cars. On the same day he sold a machine to a messenger boy. And this example of wide range of popularity is not an unusual thing.

The Smith Motor Wheel is a real *friend winner*. And for the same reason it is the best *dollar winner* the dealer has ever found.

Sales are easily made. Five minutes for attaching the Smith to any bicycle and the rider is ready to coast up hill or down. A short demonstration ride is all that is needed to close a sale. And there are never bothersome trade-in's—just clean cash profits.

The sale of bicycles, tires and accessories takes on new life as well when a dealer's store is Motor Wheel Headquarters.

INCREASED EFFICIENCY IN NEW A. B. C. MODEL

Los Angeles-Made Generator Is Over Three Pounds Less in Weight Than Former Machine and Has Variable Output

REDUCTION in weight coupled with increased efficiency are two important improvements which have been effected in the new model of the A. B. C. generator, the product of the A. B. C. Generator Company, of 318 West Eleventh street, Los Angeles, Cal. This generator is for supplying current for motorcycle lighting independent of the source of ignition.

By means of the facility to make the laminations of the magnetic field any length desired, the electrical engineer, E. E. Taubert, of the firm has produced a machine with a variable output. This is a feature which makes the generator applicable to practically any purpose in motorcycle or automobile lighting.

Weight Is Reduced

The new generator weighs 4 pounds as compared with the 7½ pounds of the earlier model. This amounts to a reduction of 50 per cent. in weight. The dimensions have been reduced to 3¼ inches over-all diameter as against the former diameter of 4⅜ inches. The length is the same as on the previous model to provide for the necessary pulley connection when the machine is fitted to the motorcycle.

There is a universal connection for the generator to the motorcycle in the form of a bracket, which can be clamped to the frame of the machine. The bracket enables the generator to be turned thereon so as to get the correct angle for drive on any motorcycle.

The construction of the new A. B. C. generator has been simplified and with the weight reduction has come a lowering of the weight of the armature. The field is made up of steel laminations. The generator is claimed by the makers to be the most efficient small generator ever produced.

Made in Two Styles

The A. B. C. generator is furnished in two types. These are, the direct lighting type, and the battery-charging type. The two machines are similar, save for a cut-out on the battery-charging generator. Both types have the A. B. C. governor, made of brass throughout to eliminate rusting. All exposed parts are of either aluminum or brass and the outside is smooth. The direction of rotation can be reversed by reversing the wires outside without further external change. The generator can thus be mounted on either side of the motorcycle.

The A. B. C. generator is to be marketed in the light automobile field in the near future. The price of the redesigned generator is $25 for the direct lighting type and $30 for the battery-charging type.

PETITION LANE TO OPEN YOSEMITE VALLEY

A MOVEMENT has been started by the Los Angeles M. C. to throw open the gates of the Yosemite Valley to motorcyclists on the same terms as granted to automobilists. The moving spirits in the movement ask motorcyclists everywhere to clip out the following petition, sign it and send it to Hon. Franklin K. Lane, Secretary of the Department of the Interior, Washington, D. C.:

"Whereas automobiles are permitted by the department of the Interior to enter the Yosemite National Park under rules and regulations prescribed by that authority, be it resolved that we, the undersigned riders of motorcycles, respectfully request that we be granted the same privilege subject to such rules and regulations as may be prescribed by the proper authorities."

ANOTHER CLUB FORMED

BAKERFIELD, Cal., May 29.—A few weeks ago George L. Snider, a local dealer, got the boy riders in his town together and staged a tour for them, with a view of so crystallizing interest in cycling as to attract the attention of his townspeople. The tour was a big success, and the boys realized that more sport could be got out of riding when a bunch of them shared the sport. Snider saw his chance and organized the "East Bakersfield Boys' Bicycle Club." This club is bringing new riders into the ranks every week, and Snider is reaping the profits.

Questions and Answers

CAUSES OF POUNDING

THERE is a pounding in my 1914 twin which I cannot locate. I at first thought that the noise was in the big end bearings or the wrist pins, but on taking the motor down I found that they fit perfectly. Please locate the trouble for me.

"SUBSCRIBER."

Chicago, Ill.

The pound may be due to a bent crankshaft or crank pin caused by some big backfire, or it may be due to soot in the combustion chamber. In the former case, it would be better to get a new pin or shaft, but first try the following: weaker mixture, less advance of spark and cleaning out of the cylinders. Be sure that oil is getting to all the bearings, too.

COOKING OUTFIT

I DESIRE to get a durable and compact cooking outfit which may be used for camping or cottage use. Please advise me.

CARYL SPILLER.

Louisville, Ky.

We suggest one of the Gold Medal outfits, which can be had for 2, 4 or 6 persons. These outfits include a fire-jack, complete cooking utensils and tableware for the number of persons in each case. They list from $10 to $12. Get your local sporting goods dealer to get you a catalog of this and other cooking outfits from one of the big Chicago or St. Louis houses. For a two-man proposition, the Preston mess kit, such as is used in the U. S. Army is fine, but this is not exactly suitable for cottage use. You can carry any Gold Medal outfit by sidecar.

WRITE THOR FACTORY

I HAVE a 1915 two-speed Thor and would like you to send me a good diagram of the two-speed set with explanations of how it operates and how to adjust it.

New York. GEORGE FALKE.

Space does not permit of our putting in a diagram of a two-speed gear in these columns, so we advise your obtaining an instruction book from the Thor agent or from the Aurora Automatic Machinery Company, of 1307 Michigan avenue, Chicago, Ill. State in your letter just what you desire.

NOT ON THE MARKET

I HAVE a 1911 Dixie Flyer and am anxious to get parts for same, also address of nearest dealer.

AUGUST SIEWERT.

Wheeler, Ind.

We have no record of such a machine. Certainly, it is not made today. It is probable that it is one of the numerous M. M. models, sold under several names during 1911-1913, and if so, the parts might be had from the Sterling Motor Co., Brockton, Mass. See if the machine looks like a M. M.

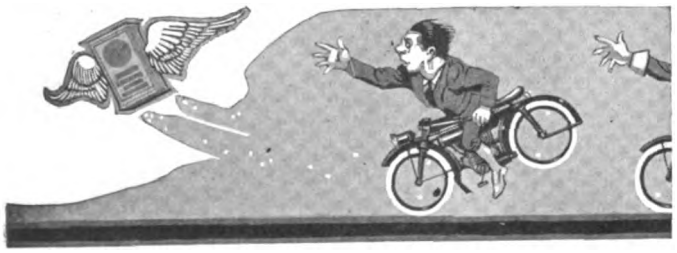
ROUTE TO LIBERTY, N. Y.

PLEASE give me the best route from Park Ridge, N. J., to Liberty, N. Y.

CHARLES LATTERMAN.

Park Ridge, N. J.

The route is Park Ridge, Pearl River, Nanuet, Monsey, Suffern, Ramapo, Sloatsburg, Tuxedo, Southfield, Arden, Harriman, Monroe, Chester, Goshen, Denton, Middletown, Fair Oaks, Bloomingburg, Mamakating, Wurtsboro, Rock Hill, Monticello, Bushville, Liberty.



THE EFFICIENCY OF ANY MOTORCYCLE

Is greatly improved by using quality lubricants—oils that readily lubricate *without* injury to the engine or any of its frictional parts.

HARRIS
TRADE MARK REG. U.S. PAT. OFF.
OILS AND GREASES

actually increase mileage and speed at less cost per mile. Try HARRIS OILS—it costs but little to test the remarkable QUALITY of these lubricants.

"A Little Goes a Long Way And Every Drop Counts"

A. W. HARRIS OIL CO.
326 S. Water St., Providence, R. I.
Branch: 143 No. Wabash Ave., Chicago, Ill.

A Line You Can Handle Without Extra Expense

THE extremely low "handling" cost of the Cyclemotor is an item which greatly pleases dealers. The outfit requires no shop work for attaching and the motor is so simple in its construction that it needs no further attention from the dealer or later expense for "service" in tuning up and adjusting.

The margin of profit is very liberal and it will pay good dealers to investigate. A few choice territories are still open.

Cyclemotor Corporation

CALIFORNIA DEALERS FORM ANTI-THEFT BODY

Los Angeles Jobbers Back Association to Recover Stolen Cycles and Prevent Their Being Taken—Plans of the Organization

LOS ANGELES, Cal., May 29.—An organization known as the California Cycle Dealers' Anti-Theft Association has been formed and backed by the leading jobbers and accessory concerns in this State. Its object is to recover stolen bicycles and motorcycles, and to prevent their wholesale theft.

A committee composed of Julius Smith, Los Angeles manager for E. F. Merry; E. Lebell, manager for the Pacific Motor Supply Company, and R. M. Thompson, manager for F. M. Jones, had been appointed by Los Angeles jobbers to take up the matter of forming an association, and to report upon its merits. The committee gave the matter due consideration and reported favorably thereon, after which the jobbers voiced their unanimous approval by subscribing ample funds for the secretary to proceed with the work of preparing posters, membership cards, report blanks and other necessary printed matter.

Backers of Movement

The following have already endorsed the association: E. F. Merry, Appeal Mfg. & Jobbing Co.; F. M. Jones, C. L. Smith, Pacific Motor Supply Co.; C. Will Risden, Wm. H. Hoegee Co., B. F. Goodrich Co., and Buffalo Specialty Co. It is expected that all the agressive bicycle, motorcycle and accessory manufacturers will become members of the association and subscribe small amounts, as the organization will benefit them as well as the dealers and jobbers.

J. D. Milne, who has been appointed secretary of the association, is now engaged in completing the details which have already been started and approved by the local jobbers. On finishing these, he will make a tour of Southern California to interview dealers on the subject.

With regard to the aims of the association, Secretary Milne says:

Aims of Association

"It is important for the dealers to realize that this organization is their organization and that it is a strictly co-operative affair. In no sense of the word is the work being carried on for profit to those who are taking care of the dealers' interests. But, at the same time, the association must be self-supporting.

"Each dealer-member will be taxed six dollars per annum for membership, which is a comparatively small amount when it is considered that the saving effected by the return of one bicycle or motorcycle will more than cover his association fee. Through the poster that will be given each dealer-member for store display, we expect to stimulate a new confidence in the minds of prospects that will be the means of creating fresh new activity in the sale of new machines. The tremendous thefts of machines at the present time make people hesitate before purchasing new products. They want the second-hand material, because its theft will entail smaller loss.

"Thus it will be seen that the idea is purely a co-operative one. It is up to the dealers to render their support and show a spirit of loyalty and co-operation which will make the California Cycle Dealers' Anti-Theft Association a rousing success."

INDIA AGENT WANTS ACCESSORY CATALOGUES

A LETTER from the Provincial Cycle & Motor Company, of Meerut, India, requests large manufacturers of bicycle and motorcycle accessories in the United States to send catalogues and wholesale quotations. The Provincial Cycle & Motor Company is agent for a number of English and American cars, also the English Triumph, Douglas and Invicta, and the Indian motorcycle. They handle a full line of automobile and cycle accessories.

GOGGINS SIGNS FOR THOR IN GRAND RAPIDS

GRAND RAPIDS, Wis.—Hugh W. Goggins has taken the agency for the Thor line in this city and vicinity. He placed his initial order with the Thor factory on May 29 and is now busy with his demonstrator going after prospects.

"149"

The Peer of Motorcycle Chains

Accurate Every part is micrometer gauged for accuracy and pitch and each chain is carefully inspected and tested before leaving the factory.

Strong The breaking strength is several times what is needed for actual service. This provides a good factor of safety.

Durable No. 149 will give steady, day after day service when operated under anything like normal service conditions.

Diamond Chain & Mfg. Co.
Indianapolis, Indiana

The Wind Blew It Over!

This has happened to *you!* You know it has. And it's all because you have an old-fashioned stand that does not really support the motorcycle. The slightest grade and bang!—your stand tips and the machine falls. Result—anything from a bent hanger to a smashed frame.

The MILLS ADJUSTABLE STAND

fills the demand for an adjustable motorcycle holder that permits starting the motorcycle on any grade—allows the machine to stand upright no matter how steep the incline, and affords a substantial base that holds the motorcycle firmly. No more tipping over. Can be attached to any motorcycle in a minute. Looks better and costs but little more than the ordinary inefficient stand.

Your dealer can get it for you if you insist on it.

DEALERS, WRITE FOR SPECIAL PROPOSITION.

IMPORTS DROP AS JAPAN'S CYCLE PRODUCTION GROWS

Kobe Bicycle Dealer, in Interesting Letter, Gives Some Facts and Figures

THAT the first bicycles to be imported into Japan were of American manufacture, although they reached the Orient through European channels; that now, however, 98 per cent. of the imported bicycles are of British manufacture, the remaining 2 per cent. being American, and that the importation of bicycles into that live little country is falling off rapidly, as their local manufacture increases, are points in an interesting story anent Japan's "cycledom" which comes from Kobe, Japan, in a letter from Mr. N. Eomoto, manager of the R. Yokoyama Bicycle Co., of that city.

Among other things Mr. Eomoto points out that the local manufacture of tires, especially tires of a cheap grade, coupled with the prohibitive import duty which has been imposed upon goods of this sort, has all but wiped the imported tires from the Japanese market. Mr. Eomoto's letter in his own quaint style, and with all of his amusing vagaries, follows:

"As you might be aware well, industries of this line in this country have made a considerable development during recent years, producing every descriptions of cycle goods, most of which being in use in home with entire satisfactions.

"Of all the species of cycle goods, tyre-making is one of the most developed in Japan. Since the Dunlop Rubber Company (F. E.) Ltd. have established their works in this city many Japanese rubber works have established. There are now about 30 rubber works, large and small, in Tokyo, Osaka and this city. It is estimated that these works have been making approximately 150,000 pairs of covers and tubes per month. Great majority of these covers and tubes, of course, are cheap grade, the prices being Yen 3.50 ($1.75) to Yen 15.00 ($7.50) per pair with tubes. As you may be aware, import duty of tyre is Yen 114.00 ($57) per kin (103⅓ lbs.). This is almost prohibitive. For this reason importation of tyre and tube have practically cut off, because buyers are always calling for cheap grade.

Tire Manufacture Booming

Not only the importation is cut off by the prohibitive duty but also a quite good quantities of cheap tyres have gone to England and her colonies, since outbreak of the great war. Thus tyre industries in this country have intensely stimulated. But the exportation of tyres into England will be all up now, as British Government have issue a law prohibiting importation of cycle goods into the United Kingdom, although we have not receive as yet full informations of this matter.

"Regarding bicycles, which have been built with absolutely home-made parts and accessories are very popular in Japan. Needless to say, the first importation of bicycle into this country was from your country, as great majority of European goods came from America. As to types of bicycles in this country now, 98 per cent. is English pattern, while American is only 2 per cent. The current prices of complete bicycles are Yen 22.00 ($11) to Yen 55.00 ($27.50) per machine. Most of the riders being a class of 'not-well-off' they are, as in tyres, always calling for cheap grade machine. As you also might aware well, import duty of complete bicycle is Yen 16.00 ($8) per machine, no matter what the price may be, while the duty of frame and not complete bicycle is 40 per cent. ad valorem. From this fact you will naturally think that importation of bicycle will soon be over in Japan. As the matter of fact, the importation of bicycles have been very small. According to an official return, importation of bicycles during the month of March this year were only 75, the total amount being Yen 4,219.00 ($2,109.50), and frame were only 84, amount being Yen 1,020.00 ($510). These of course nearly all come from England.

"On the other hand, exportations of bicycles and parts during the month of March this year was Yen 168,287.00 ($84,143.50). This figure is not of course a large one. But if you compare with the amount of importations referred above you will find that importation of cycles into Japan is only 32 per cent. [The figures are Mr. Eomoto's and are not quite clear to us.—Ed.]

The Four Perfect Scorers in the Portland-Roseburg Run

Newark, N. J.

In the big 400-mile Endurance Run of the New Jersey M. C. the Harley-Davidson team won the dealers' team cup, scoring 5,980 points out of a possible 6,000. In the professional sidecar division, Gene Coughlin, riding a Harley-Davidson sidecar combination, won highest honors. The C. W. Bush Trophy for the highest amateur sidecar score went to Joseph Werner, riding a Harley-Davidson with sidecar.

Portland, Ore.

In the 350-mile endurance run held between Portland and Roseburg on May 26th and 27th, the Harley-Davidson team was the only perfect scorer. Otto Walker, Ted Gilbert, Henry Klein and H. S. Hadfield, who made up the Harley-Davidson team, ploughed their way to victory through roads such as only Oregon can produce—a combination of clay, sand, silt, rocks and mud. Against a representative field, Harley-Davidson made the only perfect score.

Digitized by Google

y Returns Show A Clean ley-Davidson

d-ability—that's the HARLEY-DAVIDSON record n every part of the country tell the same story of ad and track—an old story by now, yet new in that *with every season.* For instance:

Boston, Mass.

Never before was Harley-Davidson consistency so strikingly demonstrated as in the 1,000-mile endurance run of the Bay State Motorcycle Club from Boston to Buffalo and return. Maintaining the fast schedule with clock-like regularity over every sort of road surface, Kendall E. Sanders, driving a Harley-Davidson sidecar combination with Leon LaFlamme as passenger, finished the first 1,000-mile run in motorcycle history with the *highest consistent score,* his final mark being 996.

Then, too, there are the Billings, Mont., and the Omaha Harley-Davidson triumphs recorded in a former advertisement. On the whole, when the sun set May 30th, it was, in the words of a popular song, "The end of a perfect day" for Harley-Davidson.

Los Angeles 987 Mile Run

In other words, the United States Tires were the only one group that consistently withstood the hellish bombardment of ruts, rocks, mud and intense heat. None of these tire-killers could make a dent on United States Tires.

Aren't you forced to admit, in the face of this evidence, that United States' are the best? Then ride and sell the consistent tires—United States Tires.

UNITED STATES TIRES

Performance Proves

EVERY day adds further evidence of the dominant might of four-cylinder power. Just as Henderson riders in all parts of the world are every day proving the matchless ability of their machines for satisfying, efficient service.

Philadelphia, May 9—Carl Irrgang on stock Henderson won 2½-mile road race in four straight heats, defeating rivals using special speed models.

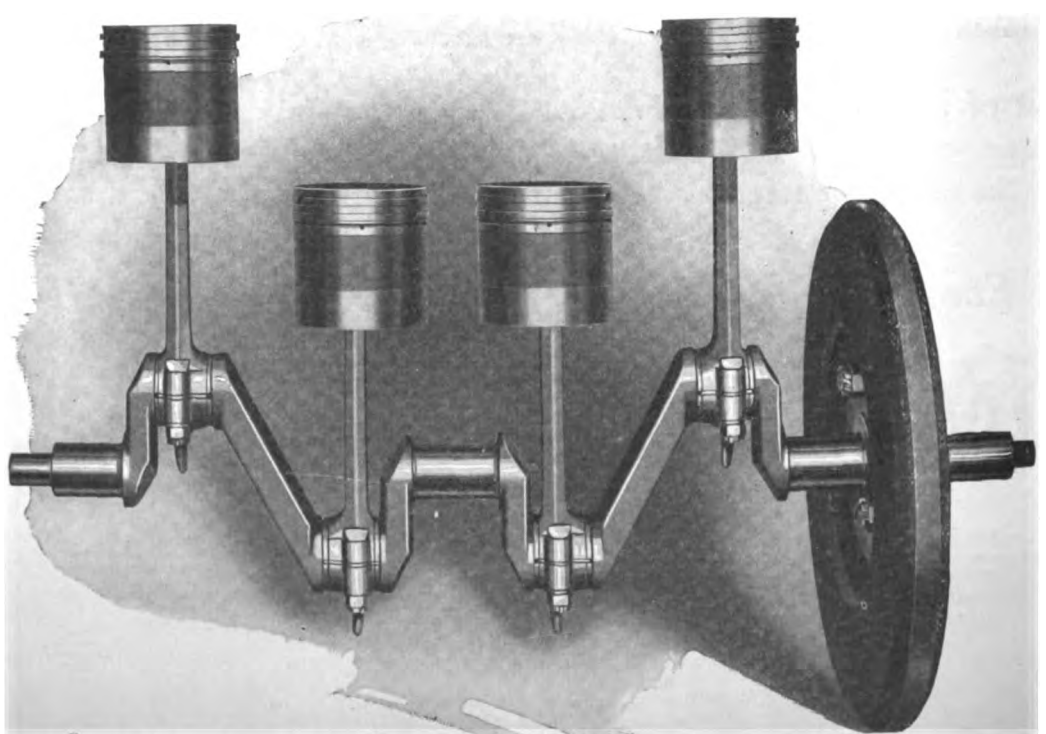
Rochester, N. Y., May 9—M. M. Mitchell on stock Henderson won match road race of six miles in 4:12, an average of more than 80 miles per hour.

New York, May 14.—In Crotona M. C. endurance run, only 21 riders out of 64 starters finished. Six Hendersons started and five finished—the sixth put out by blowouts. Average score of all five Henderson riders at finish, 997—two perfect scores.

Cheyenne, Wyo., May 29—Ten-mile stock race won by four-cylinder Henderson from field of 15 entries. Same machine also won slow race, showing wonderful flexibility and range of speed.

Boston, May 30—Henderson team won perfect score in 1000-mile three-day endurance run.

HENDERSON MOTORCYCLE CO., Detroit



One-piece drop-forged crankshaft, with pistons and connecting rods. One example of Henderson simplicity and strength. Generous bearing surfaces and husky proportions.

GOODYEAR
MOTORCYCLE TIRES

Motorcycles which must render hard and heroic service, need tires which will bear the brunt.

Motorcycles which race or travel at high speed, motorcycles which make long runs, want all the tire strength they can get.

Call Blue Streaks a form of over-insurance if you like—call them a superlative form of protection to meet exceptional cases and conditions.

Whatever you call them, depend on it, they will do what they are intended to do.

By present indications, the racing records captured by Blue Streaks last season seem likely to be duplicated.

Reports from all the big race meets show Blue Streaks invariably the winners.

They are simply demonstrating for another year that they are the most practical and popular tire among motorcyclists and therefore the easiest and most profitable tire to sell.

"BAREFOOT" RUBBER

There is only ONE Motorcycle Tire made of the genuine Black "Barefoot" Rubber —and that's the GOODRICH. It's the identical tread, mind you, that goes on the big Goodrich "Barefoot" Automobile Tire—the strongest tire ever turned out of the big Akron factories. "Barefoot" Rubber is a distinct advance in the compounder's art. It CLINGS (like your bare foot) to a surface—doesn't GRIND over it. It DOES NOT gain Traction at the expense of Mileage. It is harder to puncture—harder to wear out. And note this—NOT ALL BLACK TREADS ARE MADE OF "BAREFOOT" RUBBER. The Market is full of "Me-too-Black Treads." Look for the name "GOODRICH" molded on the sidewalls —THAT points out the genuine.

Vol. II JUNE 8, 1916 No. 23

WHY THEY BLOCKED THE ROAD

It's a serious matter to block a State highway and have a pompous automobilist and a grouchy farmer roaring themselves to the verge of apoplexy, as the two gentlemen referred to are doing in the illustration which heads this page,—but if you have a piece of red-hot news that simply can't wait and you happen to meet some of the boys that you know will be interested in the information, what are you going to do about it? Why, stop, of course, and spread the glad tidings. Let the coupon-clipper and the old gid-dap person howl!

That's what the dealer-riders with the papers in their hands are doing in the illustration. Before they left home they received a letter reading somewhat as follows—

THE BIG BREEZY VACATION NUMBER OF MOTORCYCLE ILLUSTRATED

will be published June 22 and will bring to you the finest, freshest, out-dooriest lot of photos, sketches and sales arguments you have ever seen between the covers of a magazine.

IT WILL PUT JOY IN YOUR HEART, PEP IN YOUR SALES TALKS AND SHEKELS IN YOUR CASH-REGISTER.

And of course they just had to show that letter to the first bunch of reg'lar fellows they met on the road. Natural enough, eh?

Now that you've been let in on the cause of the excitement, get ready yourself to welcome the Vacation Number,—and tell your friends it's coming. You'll be overlooking a big bet if you miss it.

EXPORTS CONTINUE LARGE DESPITE BRITISH EMBARGO

Motorcycle Shipments for March 240 Per Cent More Valuable Than Those a Year Ago—Bicycle Trade Both Ways Also Shows Big Increase

WASHINGTON, June 5.—Great Britain's embargo on the importation of cycle goods notwithstanding, the American exports of both motorcycles and bicycles and materials for the month of March showed a remarkable increase over the exports of goods of the same class for March of 1915. Glancing first at the motorcycle figures we find that during March of 1916 the total number of motorcycles exported from United States was 1,908, valued at $363,623, as against 5,078 machines, valued at only $104,750, which were shipped from our shores during March of 1915. The increase amounts even better than 240 per cent., considering valuation, and 229 per cent. considering the number of machines exported. At the same time, the average price of the exported machines has increased remarkably, standing at only $181 for machines shipped out during March, 1915, as against an average of $190.90 for machines exported during the third month of the present year.

Even more impressive are the figures dealing with the nine months ending with the respective Marches. During the nine month period ending with the March just past, we shipped motorcycles to the value of $2,488,853 to foreign countries as against a valuation of $603,393 for those shipped during a like period ending with March of 1915. The increase amounts to 301 per cent. These values represent the shipment of 12,734 machines during the former period, as against 3,266 machines during the latter, which figures out for a percentage increase of 259, considering the number of machines shipped. The average value of the motorcycles shipped during the nine month period just terminated is $195.

Not quite so startling, but still large enough to be impressive, are the figures dealing with the increase of bicycles and parts shipments during the respective periods. During March of 1915, for instance, our total bicycle exports were valued at only $42,753, while during the third month of the present year the valuation reached $113,702, a percentage increase of 165. For the nine month period ending with March of 1915, the valuation of our exports is given at $301,007, while during a like period ending with March of 1916, we shipped bicycles and parts to the value of $604,282 to foreign buyers; this represents an increase of 109 per cent.

The boom which has hit our domestic bicycle business, part of which at least can be attributed to the co-operative efforts of the trade members, is clearly reflected in the figures dealing with our bicycle and parts imports for March. We imported during the third month of 1916 bicycles and parts to the value of $5,801, as against $3,542, the value of our imports for the month of March of 1915. While the fig-

CREVISTON CLOSE TO 100-MILE RECORD

Astride an Indian He Takes Interstate Sweepstakes at Columbus in 1:24:40 3-5—Stokes, Excelsior, Second and Meyers, Indian, Third

"Crevvy"

COLUMBUS, Ohio, June 4.—If Ray Creviston, who is one of the Indian "shooting stars," did not really shatter the 100-mile record at the Columbus Driving Park meet here today, he came pretty close to performing that enviable feat. The little pink-cheeked rider circled the course 100 times in just 1 hour 24 minutes and 40⅗ seconds, which is going some even if it is not a new record. Glen Stokes, of Chicago, who straddled an Excelsior, was second over the tape, while Fred Meyers, of Logansport, Ind., on an Indian, copped third money. Stokes was just a little over two minutes behind Creviston when the latter shot over the tape and held a fairly good lead on the third man.

Thirteen starters faced the gun, and among them were some whose names are known in motorcycle circles from one coast to the other. The line up included besides those who earned places Verrill, Wing, Taylor, Hilliard, Boido, Suddith, Sims, Davis, Woodland and Gold. Crevvy forged to the fore even so early as the first lap and was never headed, although Boido, also astride an Indian, challenged his position for the first 82 miles when a faulty spark plug put him out of the running. At that point Stokes assumed second place and had no trouble in holding it. Creviston covered the first 25 miles in 21 minutes 35 seconds, and Boido was in second place at the quarter, with Stokes third and Taylor and Davis strung out behind him in the order named. At the half Creviston had completed the distance in 43 minutes and 17 seconds, and Davis, a Columbus rider, was fighting hard to oust Stokes from second position. For 17 miles Davis and Stokes ran it nip and tuck for second money, but on the 67th lap Davis's luck went back on him and he was forced out.

Creviston completed the 75 miles in 64 minutes 41⅗ seconds. Boido held tightly on to second position until the 82d mile, when his oil ran out and he scorched his rear cylinder and retired to the pits. Taylor also went out at this point with a broken piston ring. It was at this point that Myers, who had made one stop for gas and oil, succeeded in passing the others and worming his way into second position.

Three qualifying heats and a 10-mile final preceded the running of the 100-mile sweepstakes. Stokes on the Excelsior took the first five-mile qualifying heat and Crevy came home first in the second. Hilliard, on an Excelsior, took the consolation heat. Taylor, on an Indian, was first across the tape in the 10-mile final with Stokes (Excelsior) second and Myers (Indian) third.

The summaries:

Five-mile qualifying heat—Stokes (Excelsior), won; Myers (Indian), second. Time, 4:29⅘. Verrill, Davis, Hilliard and Gold also started.

Five-mile qualifying heat—Taylor (Indian), won; Creviston, Indian, second. Time, 4:08⅘. Boido, Wing, Woodland, Suddith, Sims and Davis also started.

Five-mile consolation heat—Hilliard (Excelsior), won; Davis (Indian), second. Time, 4:17. Verrill, Wing, Boido, Suddith, Sims, Woodland and Gold also started.

Ten-mile final heat—Taylor (Indian), won; Stokes (Excelsior), second; Myers (Indian), third. Time, 8:20. Hilliard and Davis also started.

100-mile interstate championship sweepstakes—Creviston (Indian), won; Stokes (Excelsior), second; Myers (Indian), third. Time 1:24:40⅗. Verrill, Wing, Taylor, Hilliard, Boido, Suddith, Sims, Davis, Woodland and Gold also started.

WINNERS IN THE F. A. M. MEMBERSHIP CONTEST

First Four Prizes Are Awarded to the Boosters Bringing in Most Recruits From May 7 to June 3; Plenty of Prizes Waiting

WESTBORO, Mass., June 3.—The first official announcement of prize winners in the F. A. M. Membership Contest has been made by Secretary G. B. Gibson. The award for the week of May 7-13 goes to H. R. Hunter of Pomona, Cal., while that for the week of May 14-20 goes to A. M. Cocchiola, of 292 South Main street, Waterbury, Conn. Hunter recommended 15 applications, while Cocchiola recommended 12.

For the week of May 21-27, Howard G. Ramsey of Douglas street, Uxbridge, Mass., came first with 23, and for the week of May 28-June 3, Harry Muhl, of 610 West John street, Grand Island, Neb., was the recommender of most applications. Muhl sent in his name on nine applications in all. The four winners have been sent lists of the prizes donated by the different manufacturers and will be allowed their choice. On their informing Dr. Gibson of their selections, he will notify the donor and the prize will be sent.

NAVAS, OF CUBA, DROPS IN ON POPE

WESTFIELD, Mass., June 5.—One of the most interesting visitors who has dropped in on the plant of the Westfield Mfg. Co. in some time is P. Navas, of Havana, Cuba, who represents the firm of F. Navas & Co., located Trocerdareo, 28, that city. The firm, of course, is agent in Cuba for Pope-made bicycles and Pope motorcycles.

Mr. Navas came on business bent, but he had a tale of Cuban conditions to unfold which opened the eyes even of the well rushed Westfield plant managers. Bicycle sales have been so good in Havana, according to Mr. Navas, that he has sold every bicycle received almost as soon as the shipment came in. His chief desire in visiting the Pope plant was to put in an order for as many bicycles as the manufacturers could deliver to him in the near future, which, under present rush conditions, is not half the number he says he can sell.

MRS. JOHNSON PASSES AWAY

CHICAGO, Ill., June 2.—Esther, wife of Charles E. Johnson, assistant to John L. Donovan, Chairman of the Competition Committee of the F. A. M., died suddenly today after a brief illness. Brights disease is given as the immediate cause of Mrs. Johnson's death.

CREDITORS TO CONSIDER JOERNS OFFER, JUNE 12

ST. PAUL, Minn.—An order to show cause why the composition offer of 12½ per cent to the creditors of the bankrupt Joerns Motor Manufacturing Company of this city, should not be confirmed has been issued by Judge Wilbur Booth of the United States District Court, for the Third Division, District of Minnesota, and the creditors have been notified to appear in answer on June 12.

The order states that over 51 per cent. of the creditors have accepted the offer and that the Trustee in Bankruptcy has stated that there is sufficient money to pay all administrative expenses and preferred claims and 12½ per cent. on all other claims. The hearing will be held at the Federal Building in this city at 10 a. m.

PLAIN TALK TO R. F. D. MEN FROM INDIAN

SPRINGFIELD, Mass., June 5.—That it costs the Rural Free Delivery carrier who uses an Indian motorcycle on his route only $13.40 a month to operate the vehicle, as against $21.66 for the cheapest automobile he can operate and $28.47 for a horse and wagon, is just one of the interesting things which is brought out in a new R. F. D. leaflet gotten out by the advertising department of the Hendee Mfg. Co.

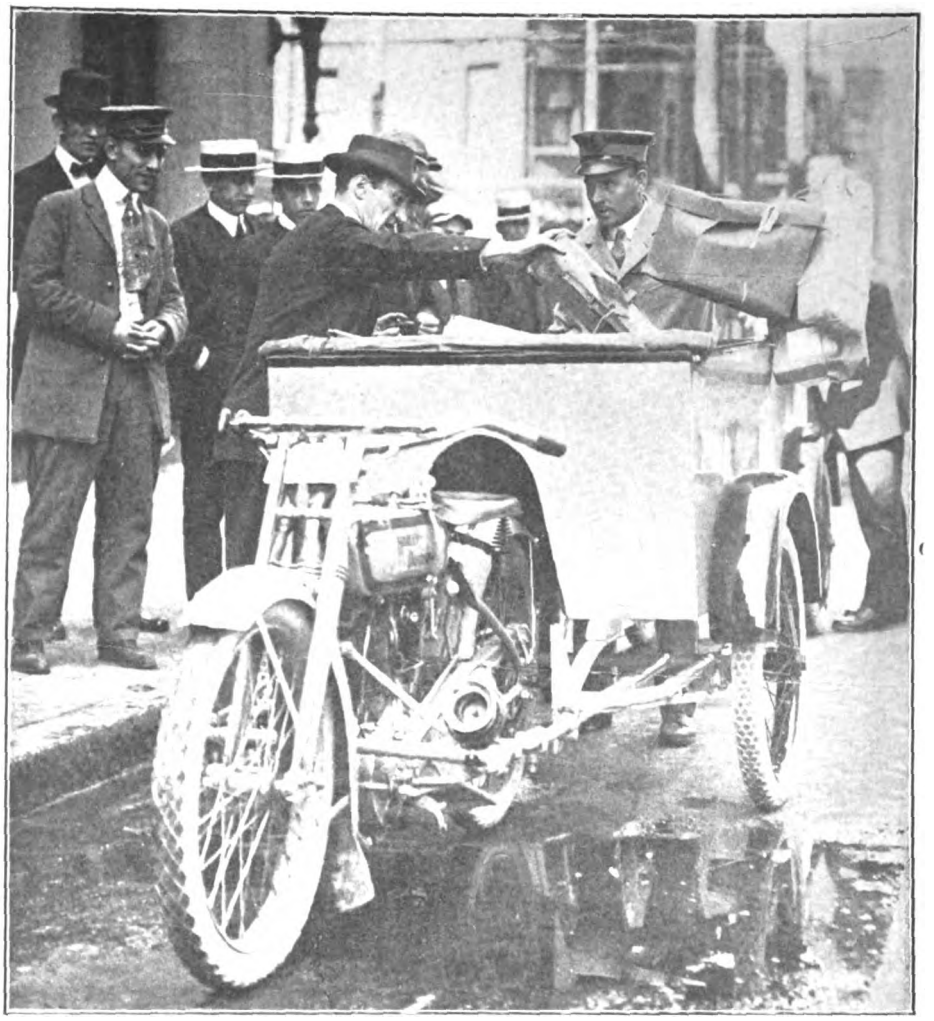
This obvious saving in dollars and cents is supplemented by an equally important argument bearing on the saving in time effected by the use of the Indian in service of this sort, the whole being presented in such a forceful manner as to be capable of convincing the most skeptical of carriers engaged in the R. F. D. service. The leaflet is well illustrated with half-tone engravings, the pictures showing not only the advantages of the sidevan over any other type of vehicle, but also the constructional features which are claimed to make the Indian the most logical of all outfits for this service. The Indian dealer who loses time in sending to the advertising department of the Hendee Mfg. Co. for a supply of these new leaflets and putting them in the hands of his R. F. D. prospects is passing up a big opportunity.

BRASTED PROVES HIMSELF A PLUGGER

NEW YORK, N. Y.—There were many brilliant feats performed in the recent spring endurance run of the Crotona M. C., but of the number perhaps none was more spectacular than that performed by William Brasted. Astride a Harley-Davidson, he rode in from Port Jervis, a distance of 100 miles to compete in the run carrying a tandem passenger, completed the circuit making a very creditable showing, and then atop of this 400 miles rode back again to Port Jervis. Brasted is such a retiring modest rider that even those connected with the Crotona M. C., which staged the run, were not aware of the fact that he performed this more or less remarkable feat until appraised of the fact by the Port Jervis M. C. of which Mr. Brasted is a worthy representative.

BOSTON P. O. ADOPTS MOTORCYCLE RIGS

Hub Authorities Order Harley-Davidsons with Cygnet Cars for Parcel Post Work From Agent Walker—Five in Service



One of the Harley-Davidson Cygnet Combinations Used by the Boston Post Office

BOSTON, Mass., June 5.—The United States Post Office Department has adopted the Harley-Davidson motorcycle with Cygnet Rear Car for parcel post delivery in this city. Harley-Davidson agent, W. J. Walker, landed the order and has delivered five complete outfits to date. These have been put into service and are attracting much attention along the routes in the main districts.

Prior to their adoption by the postal folks, the Harley-Davidson machine and Cygnet attachment were subjected to hard service tests. They proved their value to the satisfaction of the authorities, and the result was the order for immediate delivery. In comparison with the horse-drawn parcel post wagon, the motor apparatus effectively showed its superiority in speed, radius of action and reduced cost of operation, besides needing only one man to drive and make deliveries.

Agent Walker is highly elated with the adoption of the Silent Gray and the Cygnet for this purpose and is certain that the order will prove a fine opening for further orders in this and other neighboring cities for parcel post and collection service.

NORWEGIAN FIRM WANTS MOTORCYCLE AGENCY

NEW YORK, June 5.—Reflecting clearly the scarcity of foreign motorcycles as the result of the war, comes a call from Christiania, Norway, to the Exporters of Manufacturers' Product Inc., 11 Broadway, New York, for that firm to make arrangements for the Norwegian concern with one or other of the American motorcycle manufacturers. The Norwegian firm does not state the number of machines which can be handled in Norway in the course of a year, but the text makes plain that the number is or will be considerable in the immediate future.

The firm is not desirous of purchasing through agents in Copenhagen, Denmark, but wishes to act as direct representative of some American manufacturer. The Exporters of Manufacturers' Product Inc. state that they have several other calls from Scandinavian firms desirous of representing motorcycle manufacturers on the same terms, and the local exporting house is desirous of getting in touch with interested motorcycle makers.

HERE'S A CHALLENGING QUINTETTE

The Road Team of the Keystone M. C. of Harrisburg, Pa., Which Is Anxious to Meet the Team of Any Other Club in Motorcycle Competition

AUSTRALIAN AGENT VISITS DAYTON FACTORY

DAYTON, O.—W. A. L. Crowle, of Adelaide, Australia, was a visitor to the factory of the Davis Sewing Machine Company last week. Mr. Crowle is in this country for the purpose of getting distributing rights for Australia for the Dayton line of cycles.

The Adelaide man made a thorough inspection of the motorcycle and bicycle departments of the Davis Company, and warmly commended the firm on its plant. In regard to Dayton products, he seems particularly pleased with the twin-cylinder Dayton motorcycle, and stated that the machine was finely suited for the wild and rugged Australian country.

COCHRAN SPREADER MAKES SPRING OILING EASY

IN order to facilitate lubrication between the leaves of a spring so that the latter may have greater elasticity, the Cochran Pipe Wrench Company, of 7800 Woodlawn avenue, Chicago, Ill., has brought out the Cochran spring spreader and oiler. This device is a steel wedge with a groove along one surface through which the oil flows. The wedge is inserted between the leaves and the oil is then allowed to enter the groove, whereupon it flows to the inner surface of the spring leaves.

SLIDES AND PHOTO CONTEST ANNOUNCED BY POPE

WESTFIELD, Mass., June 6.—"Pope Extra," the house organ of the Westfield Mfg. Co., has just made its appearance with a three-page announcement of the free picture slides, intended to be shown at the "movies," which form part of the dealer services of the Westfield company. There are sixteen slides in all, two showing motorcycle pictures and the balance boosting bicycles. On each slide there is space for the dealer's name and address, which will be lettered in free of charge. Announcement is also made in the "Pope Extra" of the bicycle and motorcycle photo contest; two handsome silver loving cups are being offered for the best motorcycle and bicycle photos, showing Pope machines, which not only reveal artistic merit, but also possess advertising value.

DEALERS AND RIDERS TO AID IN MILITARY WORK

SAN FRANCISCO, Cal.—Many local riders will play their part in the movement for military training among business men in this city. C. C. Hopkins, of Hopkins & Alzina, represented the motorcycle dealers at a meeting of automobile and military men in the Palace Hotel on May 31, at which plans for training 1,500 citizen soldiers at the Presidio at Monterey, Cal., on July 9.

The troops will be transported by automobiles and trucks offered by the dealers and owners, and a hundred motorcycle riders will be assigned to patrol duty along the road, carrying messages and looking out for trouble, etc. Several rolls are being circulated, and many have already signed up for the event, which will give them an opportunity to show their patriotism and at the same time demonstrate the mobility and capacity of the motorcycle in patrol and other military work.

MIAMI MAKES GOOD TIME ON NATIONAL PARK TRIP

TACOMA, Wash.—Elmer J. Bergstrom, on a Miami Power Bicycle, in company with Frank Gates on a motorcycle, made the trip to Mount Tacoma and the National Park last week in two hours and twenty minutes. Despite the bad condition of the roads, the Miami came through without a scratch and proved its dependability on tours. It demonstrated that it will stand abuse and will go anywhere.

TO ADD STOREHOUSE AT ECLIPSE PLANT

ELMIRA, N. Y.—The Eclipse Machine Company is breaking ground for a new building to be used as a general storehouse. The present storehouse will, on the completion of the new structure, become converted to manufacturing by the installation of machinery. This installation is being carried on now.

The new building will measure 200 by 60 feet, giving a floor area of 12,000 square feet. It will be of the latest concrete construction, with "saw tooth" roof. The big increase in demand for Eclipse goods has made the erection of this building necessary.

FRISCO RIDERS ENJOY RUN TO BOLINAS

SAN FRANCISCO, Cal.—Members of the San Francisco M. C. held a run to Bolinas on May 28, starting from Sausalito early in the morning. This run is considered the best so far this season and has many interesting features. Bolinas is 43 miles out, over good roads, through Corte Madera, Larkspur, Lagunitas, Tocaloma and Olema.

THE SORT OF SALESROOM THAT DOES A MACHINE JUSTICE

The New Annex of the G. H. Westing Co., Indianapolis, Ind., Where Indians in All Models Are Displayed to Full Advantage in the Spotless Showroom in Front While Office Details and Service Work Are Attended to at the Rear

The party arrived before noon at Bolinas and proceeded to the giant radio station, three miles farther on. There they were conducted through the plant by the superintendent. A basket lunch was then eaten on the beach nearby.

On the return trip the party divided, two going over the coast road, through Willow Camp, and several over the Ridge Road. All came to Sausalito in time for the 5 p. m. boat to this city. The next run, on June 11, will be to Princeton, in San Mateo County. It will be a "feed run," the club setting up the luncheon.

BUREAU FOR AMERICANS TOURING CANADA

MONTREAL, Que.—Motorcycle tourists of the United States who decide to invade Quebec this Summer in order to visit the quaint French-Canadian districts are advised to make use of the highway information bureau at the Windsor Hotel, Montreal, which is maintained by local dealers and touring enthusiasts. This hotel is also the Montreal headquarters of the American Automobile Association. Mr. T. C. Kirby is in charge of the bureau where maps and literature of various kinds are to be had.

PREPARING FOR AMERICAN INVASION

HAMILTON, Ont.—The several highways between this city and Niagara Falls are being "blazed" in anticipation of visits from a large number of New York State motorcyclists and automobilists as a result of the license reciprocity agreement recently arranged between New York and Ontario. Very few American riders have yet been seen in Ontario.

SPLITDORF EMPLOYEES SHARE IN PROFITS

Newark Ignition Concern Inaugurates Monthly Dividend Plan That Will Net Its Workers $150,000 a Year

NEWARK, N. J., June 5.—The Splitdorf Electrical Company posted a notice in its works at noon Thursday, announcing a ten per cent. monthly bonus to all employes to take effect at once. Over 1,600 employees will be affected by the increase, which will amount to about $150,000 a year.

The increase was given voluntarily on the part of the company, according to General Manager C. W. Curtiss, and was not solicited by any of the employees. Both piece-workers and day-workers will receive the bonus.

In discussing the increase Mr. Curtiss said:

"We are granting the wage increase in the form of a bonus, because we think that is the best plan. Every man or boy in the production end of the plant will receive the increase. For instance, if a man is employed at an hourly rate and his weekly wage is $20 per week, at the end of the month he will receive $8 extra. If he is a piece-worker the bonus will be figured on the total amount of wages he receives for the entire month.

"The increase dates from May 1. The first bonus, which will be paid on Friday, will be based on the amounts that the men were paid on May 5, May 12 and May 19. The June bonus will be paid on June 30, and will be May 26 and June 2, 9, 16 and 23, which is for five weeks. Thereafter it will be for four weeks in each month."

Mr. Curtiss said this is the first of a series of improvements in the working conditions of the employees, many of which will not go into effect until the completion of the new building of the company, on August 1, when many of the departments will be rearranged.

At the present time two shifts are working at the Splitdorf plant, an open shop.

SPEEDOMETER INVENTOR IS DEAD AT NEW YORK

NEW YORK, June 2.—John K. Stewart, inventor of the Stewart speedometer and head of the Stewart-Warner Speedometer Corporation, died suddenly last night at his home in this city. He leaves a wife and two children.

In addition to heading the speedometer firm, Mr. Stewart was president of the Chicago Flexible Shaft Company and several other Chicago concerns. He had a Chicago residence as well as one in this city, and spent his summers in the latter.

CLARKSON COMING TO U. S. A.

WELLINGTON, New Zealand.—J. B. Clarkson, of the firm of J. B. Clarkson & Co., Ltd., is now on his way to the United States. His plans are to reach Chicago on June 9, Detroit on the 12th and New York on June 15. His headquarters in the latter city will be with R. Cameron & Company.

Mr. Clarkson holds the rights for the Excelsior throughout New Zealand and has the agency for a number of automobiles.

SNAPPY CARD AT HILLSGROVE TRACK

Postponement of Holiday Races at Providence May Draw Record Crowd; Five Events Will Be Staged, Four Being Professional

PROVIDENCE, R. I., June 6.—Far from putting a damper on the enthusiasm of the motorcycle fans in this section, the postponement of the Decoration Races at Hillsgrove until next Saturday promises to bring out a bigger crowd than ever, for many of the riders who had their "books filled" for the holiday will be able to attend the races at the end of the week.

The races which will be held at Hillsgrove and the riders who will participate are as follows:

Five mile professional: J. O. Grafford, local Harley-Davidson agent; B. A. Swenson, Gus Sundin and Teddy Carroll.

Ten mile amateur: H. M. Peckham, Fred Shogren, G. E. Peck and H. Allen.

Five mile professional for single cylinder: Alex. Houle, Jr., Fall River; A. J. Sandreau, Fall River, Teddy Carroll, Springfield; A. B. Carlson, F. Duckworth, New Bedford.

Five mile professional sidecar: B. A. Swenson, Zip Godin, Springfield, I. O. Clifford and Gust Sundin.

Ten mile professional for single cylinder: Alex. Houle, Jr., Fall River; W. Sandreau, Fall River; Teddy Carroll, Springfield; A. B. Carlson, and F. Duckworth, Fall River.

The officials are, referee, E. L. Buffington; judges, A. L. Joslyn, Edward A. Lutz, and A. E. Barber; timers, Harry H. Smith, W. L. W. Hillman and William M. Strong; starter, Ed. A. Swenson; clerk of course, John G. Edwards; scorers, John Kay, C. A. Joslyn, George W. Lane.

BRASS CITY M. C. MAPS JUNE RUN PROGRAM

WATERBURY, Conn., June 5.—At its meeting last week the Brass City M. C. of this city mapped out a series of runs which will keep its members busy for all the Sundays in June. The schedule is as follows:

June 11—Bridgeport and adjacent shore resorts; June 18—Springfield, Mass., with dinner in Forest Park; June 25—Hartford, Conn. to witness the display of roses in Elizabeth Park.

Five new members were added to the roster and each of the newcomers joined the F. A. M. so that the club still is a 100 per cent. F. A. M. body; its total membership is now 30.

FOUR CLEVELANDS ENTERED FOR WORCESTER RUN

NEWARK, N. J., June 5.—Four Cleveland two-strokes have been entered from this city in the forthcoming Worcester M. C. endurance run of June 10. They will start in the lightweight division, under the leadership of C. W. Waughop, of the H. F. L. Funke Co., Eastern distributor.

Three of the riders are members of the New Jersey M. C. of this city. They are C. W. Waughop, Elliot B. Holton and Claude S. Ramsey. The fourth is "Peanuts" Spurgeon of Cedar Rapids, Iowa. All four machines will be fitted with Bosch magnetos, Coventry chains and Federal 26x2¼-inch tires.

The Cleveland Motorcycle Manufacturing Company, of Cleveland, O., has donated four pairs of Cleveland cuff buttons to be awarded to the lightweight riders making the four highest perfect and consistent scores in the Worcester run.

RACING BODY TO HOLD MEET AT MADISON

MADISON, Wis.—The first race meet of the Madison Motorcycle Racing Association will be held on Sunday, June 18, at the Dane County Fair Grounds track, which is a mile dirt oval. Three events, one of which is for lightweights, are carded. The meet is for the benefit of G Company, Wisconsin National Guard.

The major event will be a 100-mile race for non-ported stock twins. The first prize will be $125, the second $75, the third $35 and the fourth $20. This will be followed by a 15-mile race for similar machines with prizes of $25, $15 and $10. The lightweight race will be for two-strokes only at 5 miles, and will have five merchandise prize awards. So far, two Cleveland and an Excelsior entries have been received for this event.

Those interested should address W. J. Schultz, secretary, at 113 State street.

HONORS WELL DIVIDED AT BELMONT MEET

NARBERTH, Pa.—Honors were fairly well divided in the race meet which was staged in the one-mile track at Belmont on Decoration Day with A. Banks, astride an Indian taking the honors in the "pro" races and Miller on a Henderson with sidecar starring in the three-wheeler events. The meet is the first in a series to be promoted by the Tri-State Racing Association. The summaries:

Three-mile flying start race—Theodore Craddock, Indian, 3:18; Louis Thompson, Indian, 3:24.
Three-mile bucket-seat—M. Bagdon, Excelsior, 4:31; M. Marcus, Dayton, 4:39.
Five-mile amateur—E. Bristman, Indian, 4:59; Eddie Ely, Excelsior, 5:02; Victor Squostron, Excelsior, 5:05.
Five-mile professional—A. Banks, Indian, 4:38⅗; E. Craddock, Excelsior, 4:55; E. Pancoast, Dayton, 5:01.
Five-mile single professional—E. Layfield, Indian, 10:04; T. Kay, Harley, 10:40; Victor Squostron, Excelsior, 10:45.
Three-mile sidecar—M. Miller, Henderson, 4:03.
Three-mile special event—Frank Craddock, Henderson, 2:46⅖.
Ten-mile professional—Banks, Indian, 9:10; Pancoast, Dayton, 9:15; Craddock, Excelsior, 9:50.
Five-mile sidecar—Miller, Henderson, 6:32; Bagdon, Excelsior, 6:35; Brown, Pope, 6:42.
Fifteen-mile amateur—Disonac, Indian, 14⅘; T. Kay, Harley, 15.

ASHEVILLE-ATLANTA RECORD MADE BY RORISON

ATLANTA, Ga.—H. C. Rorison, a student at the University of Georgia, broke all records for both automobiles and motorcycles between Asheville, N. C., and Atlanta, Ga., on Monday, May 15, by covering the distance in eight hours and five minutes, riding a seven-horsepower, three-speed Indian motorcycle. He also beat the time of the fastest train. The previous record of nine hours nineteen minutes was also held by Rorison and was made with an Indian. It had been attacked unsuccessfully several times until he lowered it himself. The automobile record is nine hours fifteen minutes. The road is 280 miles.

The run was under the auspices of the F. A. M. and is therefore official. Rorison made only four stops, and these were for gas and oil.

EVERETT MEET CALLED OFF

EVERETT, Wash., May 31.—The race meet which was to be held yesterday on the three-furlong track has been indefinitely postponed. It was impossible to get the track in condition for safe racing in time for the date scheduled.

INJUNCTION PREVENTS LIBERTY DAY RACES

Sunday Observance Committee's Action Eliminates Motorcycle Events From Sheepshead Bay Program on June 4

SHEEPSHEAD BAY, N. Y., June 5.—The invocation of a Blue Law dated 1738 by the Sunday Observance Committee and the serving of a last-minute injunction by the local sheriff on the promoters of the "American Liberty Day" celebration at the Speedway yesterday, resulted in the calling off of the two motorcycle races scheduled as major parts of the program. The injunction not only barred motorcycles, but also automobiles, aeroplanes and fireworks. It was only by diligent work on the part of the promoters that a grudging permit was obtained to hold the athletic events.

Over 500 riders came to the Speedway for the events and much dissatisfaction was expressed at the Puritanical attitude of the Committee. The Harley-Davidson factory had sent over Leslie Parkhurst and William Brier with fast twins for the events, and the Hendee forces had Teddy Carroll and J. U. Constant with speedy mounts ready to compete. The cream of local riders with their machines were at the grounds, but short of practice on Saturday, not a mount was allowed on the track thereafter. In spite of an offer by A. E. Thompson of the Speedway Corporation, of $1,000 to any charity, the machines were barred for the day.

Among those who came to the Speedway yesterday were Jes Campbell, Harley-Davidson representative, of Boston, Mass., with Mrs. Campbell; E. A. Robertson, of the Splitdorf engineering forces, with Mrs. Robertson, of Newark, N. J.; M. E. Toepel, of the Splitdorf Electrical Co.; Walter Goerke, Indian man from Newark, N. J., with Mrs. Goerke; Charles Speaks, of the Firestone Tire & Rubber Co., of Akron, O., with Mrs. Speaks; F. A. M. Commissioner George Ellis and Mrs. Ellis from Yonkers, N. Y.; Frank Hart, of the Goodyear tire forces at Albany, N. Y.; Hap. Scherer, W. J. Ruhle, Art. Herrington and Walter Koch, of the sales force of the Harley-Davidson Motor Co.

ONTARIO DROPS BARS TO RIDERS FROM 10 STATES

Canadian Province Will Recognize Motor Vehicle Licenses and Permit Tourists to Remain for 21 Days Except Those from Rhode Island, Who Are Limited to Ten

TORONTO, Ont.—Through the passing of orders-in-Council this week the open-door policy has been extended to motorcycle tourists of ten States of the American Republic by the Government of Ontario. As a start in the reciprocal arrangement for the recognition of motor licenses of visiting tourists, the Ontario authorities raised the bars to the riders of New York State. The necessary action to extend the free entry privilege to many other States has been made, however, with the result that motorcyclists of Maine, Vermont, Connecticut, Pennsylvania, Maryland, Ohio, Wisconsin, Minnesota and Rhode Island are at liberty to ride on Ontario highways without securing a license for the purpose. The privilege to all riders of these States is limited to a period of twenty-one days with the exception that Rhode Islanders can only remain in Ontario for ten days. The motor statutes of Rhode Island permit visits from tourists of only ten days duration, which is the reason that residents of the Violet State can stay in Ontario for only the same length of time.

Although the Canadian officials at Windsor and other border points adjacent along the Michigan boundary line are recognizing Michigan licenses, no official announcement has yet been made that the license reciprocity arrangement has yet been made between Ontario and Michigan. Further, the motorcyclists of Illinois are not yet permitted to enjoy a free sojourn in this Province.

No American rider has made his appearance on the streets of Toronto since the declaration of traffic peace between Ontario and New York State three weeks ago. One or two automobilists have reached Toronto, however. One of these wayfarers declared that he had covered 309 miles in ten hours in New York State but that it had taken him ten hours to cover the 45 miles between Hamilton and Toronto because of the poor condition of the intercity roads and the fact that many detours are necessary because of the construction of the model permanent boulevard of concrete between the two Ontario cities. It is expected that the model highway will be finished late this year and next season American visitors will find a delightful stretch of road along the North shore of Lake Ontario.

Because of the poor to bad roads between Hamilton and Toronto, local motorcyclists have been advised to follow this route: Toronto to Erindale by the Dundas road, thence South to Clarkson; West to Oakville over a part of the model highway, then North again to the Lower Middle Road and straight West to Hamilton. This is a very circuitous route but is the best to be had at the present time.

NORMA TO ERECT FACTORY AT ELMHURST

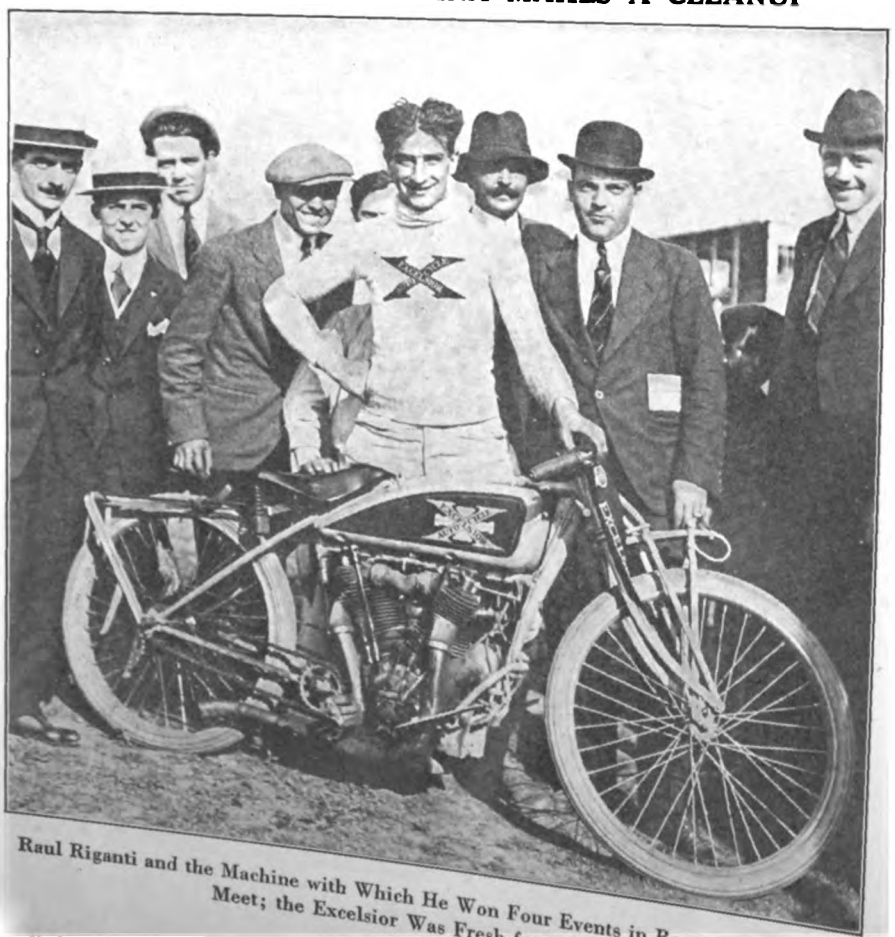
Well-Known Ball-Bearing Firm Acquires Ground for Four-Story Structure Near Important Shipping Center

NEW YORK, June 3.—The Norma Company of America, maker of Norma ball-bearings, at 1790 Broadway, this city, has purchased a ten-acre factory site at Elmhurst, N. Y., on the outskirts of Long Island City. The property fronts on Queens Boulevard and has a depth of about 1,000 feet, abutting in the rear on the main line of the Long Island R. R.

The plans now under way call for a four-story building to be erected on the new site. This structure will be of reinforced concrete and will measure 70x350 feet on the ground. Every modern improvement will be embodied with a view of obtaining the maximum of production efficiency. The location was determined upon, not only for the magnificent shipping facilities afforded, but also for its ready access to labor markets and home section of Long Island City.

Norma bearings are widely in use in magnetos, generators and motors in the various vehicles trades, and since the advent of the firm in the field some five years ago, a steadily-increasing demand has been noticed for these products. The call for Norma ball-bearings has, in fact, been such that the erection of the new factory in Elmhurst has become a vital necessity. The Norma bearings were originally made abroad and imported by the firm.

FIRST "X" IN ARGENTINA MAKES A CLEANUP



Raul Riganti and the Machine with Which He Won Four Events in Recent Buenos Aires Meet; the Excelsior Was Fresh from the Crate

SIDELIGHTS ON TORONTO CYCLE TRADE

TORONTO, Ont.—Addison L. Foster, formerly superintendent of the Splitdorf Electrical Co., Newark, N. J., is now manager of the Canadian branch of the Splitdorf company and he is starting out to establish a serviceable relationship with Canadian motorcyclists and others who use Splitdorf magnetos and magdynamos. The branch is located at 469 Yonge street, Toronto.

The H. M. Kipp Co., Indian agent, 447 Yonge street, Toronto, has ordered a second carload of the Indian lightweight model from the Hendee headquarters at Springfield, Mass., and it is announced that no more of this model can be imported because of the congestion of orders at the factory. The featherweight is selling well in Toronto.

CONFER ON EXTENDING THE FIRESTONE SCOPE

MEMPHIS, Tenn.—R. J. Firestone, general manager of the Firestone Tire & Rubber Co., of Akron, O., and a number of Firestone officials, recently met at Memphis for a conference with a view of extending operations in the South. Mr. Firestone made a tour of the Central West and South, visiting Memphis, Kansas City, Oklahoma City, Dallas, and New Orleans. The men meeting at Memphis were N. B. Burwell, Southern District sales manager; E. W. Besaw, Western District sales manager; J. E. Mayl, manager of the Memphis office; and G. P. Pope and S. D. Waters, of the "638" Tire & Vulcanizing Co., distributors of Firestone tires in Memphis. Mr. Firestone stated that the company was operating three shifts in the factory, working full twenty-four hours, and turning out 10,000 complete tires daily.

STEADY PAYROLL INCREASE AT DAYTON PLANT

DAYTON, O., June 1.—"Our payroll last week was in excess of $70,000," said an official of the Davis Sewing Machine Company in an interview with a **Motor Cycle Illustrated** correspondent. "If that doesn't speak volumes for the activity of our bicycle and Motor Bicycle business, I don't know what does.

"Our payroll for the month of January broke every previous monthly record in the 50 years of history of our company, and every month since then there has been a nice increase over the January figure. For June, it is sure to go way over the $200,000 mark. There have been various percentages of increase in the daily wages of all our employees this year, but these record-breaking figures are largely due to the enormous demand made on us by our selling organization."

PROVING THE REMY'S SPEED PROCLIVITIES

ANDERSON, Ind., June 5.—Among some manufacturers and riders has arisen the question as to whether, in point of continued high speed performance, the battery distributer ignition system is equal to the magneto and whether the dynamo which is used in conjunction with the former system is capable of standing up under conditions encountered on the race track.

That in this respect the battery system is in every way the equal of the magneto, according to the Remy Electric Co., maker of the Remy ignition and lighting system which is standard on Harley-Davidson motorcycles is proven by the fact that the winner of the five-mile stock event at the Decoration Day meet of the Portland (Ore.) M. C. was astride a Harley-Davidson with Remy equipment. His time was 4:44⅕, and he forged to the front past other contenders whose machines were magneto equipped.

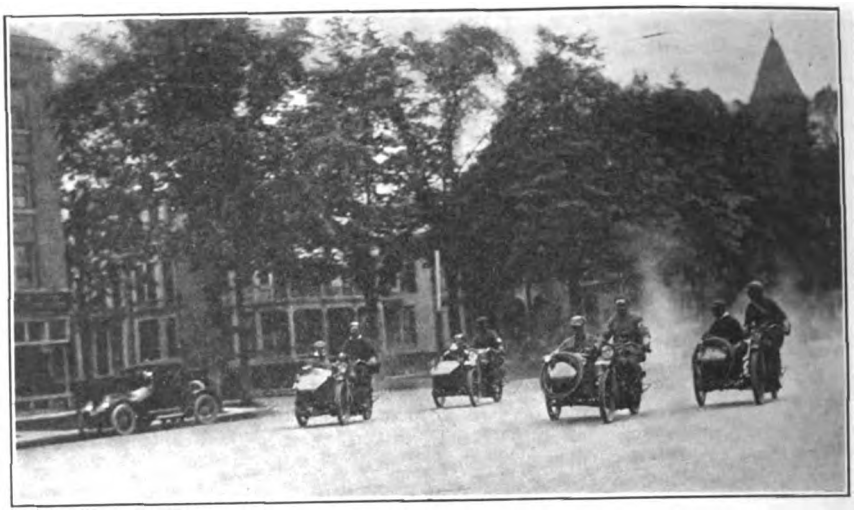
HERE'S THE LAST WORD ON THAT BAY STATE RUN

Number of Perfect Scores Remarkable for Grind of Its Nature—Some Performances That Are Worthy of Special Notice—A Word Concerning Non-Finishers

BOSTON, Mass., June 5.—Although perhaps the last word was said in the last issue of the **Motor Cycle Illustrated** concerning those who finished in the 1,000-mile Bay State endurance run, there is a whole lot to be said concerning those who were less fortunate, which is another way of saying less hardy.

To dig out at 3 o'clock in the morning and cover 333 miles or thereabouts on schedule time, to sleep in a strange bed and then do the same thing over again for two more days is something akin to hardship if it is not for a fact hardship itself, and the boys who managed to do it and still check back in Boston after their run to Buffalo with their 1,000 point scores unscathed and their consistency scores but slightly impaired, certainly displayed a degree of hardiness that was unexpected. And when a team of four riders managed to finish with perfect regular scores and each rider with a consistency score of 995 as did the Indian team comprising H. F. Drake, John U. Constant, Harvey Barnard and Hal. H. Noyes, the thing is even more remarkable. These four diamond medal winners were only one point on consistency behind K. E. Saunders, a Harley-Davidson rider, who made the highest individual score, which is going some all considered. Saunders rode with the Harley-Davidson team, the highest individual score made by a rider not a team member being made by J. J. Berlo astride an Indian, who made a perfect regular score and consistency score of 998 points.



Indian Sidecars Leaving Springfield En Route for Buffalo on Outward Trip

There is only one survivor whose name did not appear in **Motor Cycle Illustrated's** story of the run. He was J. Baird astride an Excelsior, who made a regular score of 985 and a consistency score of 979.

Rear Cars Perform Well

In a run which brought home only 22 of 69 starters with perfect scores, the fact that two rear cars carrying three passengers each were able to come through at all speaks well for that type of vehicle. In this connection it should be pointed out that the Harley-Davidson machine fitted with Cygnet rear car and manned by C. F. Chase, H. E. McKay and R. Rothwell, checked in with a regular score of 981 and a consistency score of 940, while the Indian with similar equipment and manned by Neal H. Rand, Alexis Waldo and Ephraim Hanley, made a regular score of 974 and a remarkable consistency score of 961.

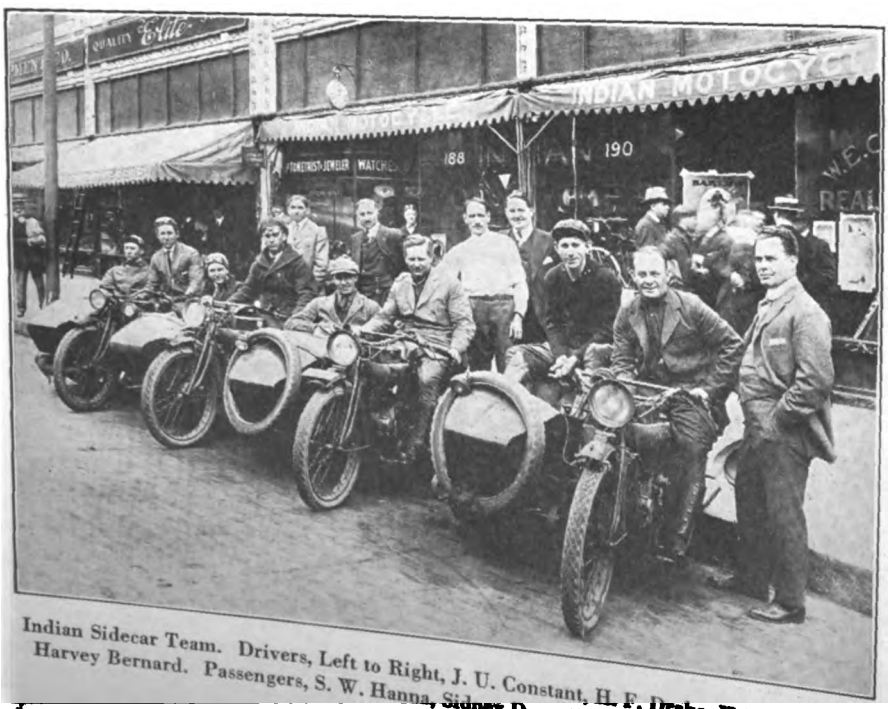
Of those who tried and failed none is more deserving of honorable mention than Clyde Spurgeon, who straddled a Cleveland lightweight and made the out trip and fell out at Batavia on the way home. Melvin N. Cater and Harry E. Ohlson on an Excelsior sidecar combination also put up a brave fight, reaching Rochester on the return trip before ill luck or something akin to that put them out of the running. The other contenders who made 900 miles or over of the trip which is enough to earn them survivors medals, but who failed to check in at the finish are: N. Bernheir, Harley-Davidson, out at Pittsfield on return; Harry L. Bernard, Henderson, out at Batavia on return; Leo Gero and G. Bachler, Indian sidecar, out at Batavia on return.

STRONG TEAM WORK BY WINNING INDIAN SQUAD

BOSTON, Mass.—Sidecar passengers are often regarded as mere fixtures in a long endurance run, but Captain Hal Noyes of the diamond-medal-winning Indian sidecar team in the 1000-mile Boston-Buffalo contest gives special credit to the passengers in his squad and asserts that they contributed materially to the team's victory.

Coes, Hanna, Dean and Armstrong are all experienced motorcycle men and gave valuable aid in keeping to the running time by holding the watch on the drivers.

In making tire changes the wisdom of having old riders aboard was apparent, as they knew just what to do. On the return trip, between Pittsfield and Westfield, when Noyes and Coes knew they would have to make a rear wheel tire change, Coes leaned out of the sidecar while the motorcycle kept up its terrific pace and hauled the spare tire out from beneath the sidecar body and got it ready. When the machine was stopped for the tire change only eight minutes by the watch were required.



Indian Sidecar Team. Drivers, Left to Right, J. U. Constant, H. F. Drake, Hal Noyes and Harvey Bernard. Passengers, S. W. Hanna, Sidney Dean, Russell Coes, Earl Armstrong

GOODRICH MAN A BAY STATE WINNER

BOSTON, June 5.—One of the many surprises of the Bay State 1,000-mile endurance to Buffalo and back was the performance of Joseph J. Berlo of Roxbury, Mass., who although participating for the first time in a run of this sort came home with the highest score among the contenders not entered on teams. Berlo is a member of the sales promotion and advertising department of the B. F. Goodrich Co., Boston branch, and rode an Indian machine in the contest, shod, of course, with the new Black Safety Tread Goodrich tires. Berlo attributes his success, or the greater part of it, to the use of the new Goodrich shoes which carried him over the none-too-good roads without the slightest trouble and without any perceptible wear on the tire treads.

SHEEPSHEAD RACES POSTPONE QUAKER RUN

PHILADELPHIA, June 5.—Because a great number of expected participants in the secret time run of the Motorcycle Club of Philadelphia, to Reading and return, which was to have been staged on Sunday, June the 4th, signified their intention of riding to Sheepshead Bay, N. Y., to attend the motorcycle races there, the event has been postponed to take place on Sunday, June the 18th.

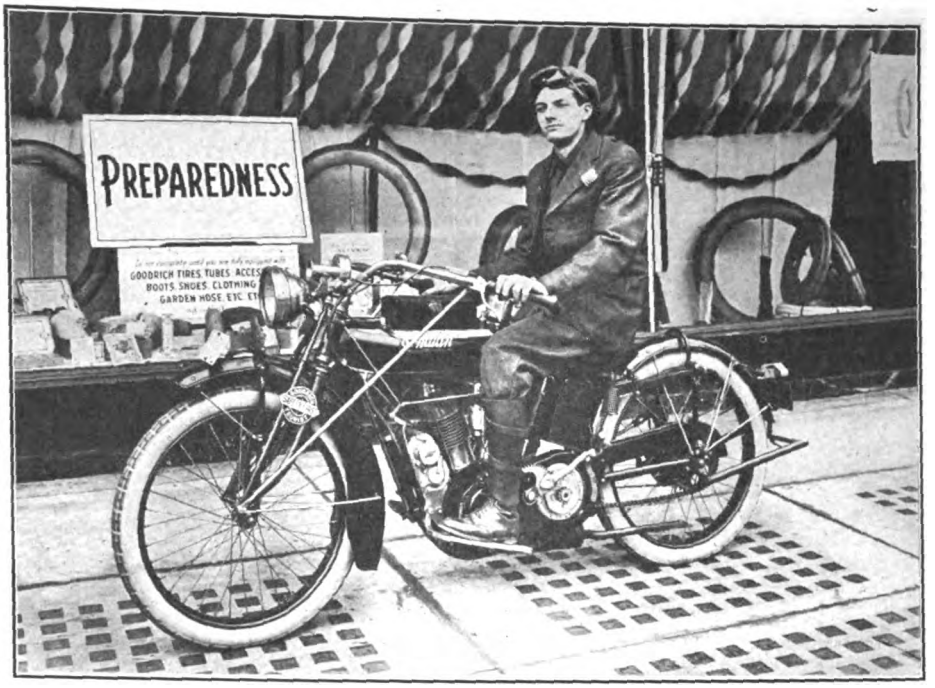
The run will start at 8 o'clock in the morning from the clubhouse at 33rd street and Columbia avenue, and it is expected that more than 100 entries will be received. The price list is a long and valuable one, consisting of tires, speedometers, horns, lamps and other motorcycle fitments. Further information can be had by addressing the committee, c/o Motorcycle Club of Philadelphia, 1703 North Thirty-third street, Philadelphia, Pa.

EAGLE GETS ALL THAT'S LEFT OF STERLING

BROCKTON, Mass., June 5.—Manufacturing rights, tools, stock and other effects of the Sterling Motor Co. have passed into the hands of the Eagle Motorcycle Co., with factories in Brockton, Indianapolis, and Boston, and which will continue the manufacture and sale of Eagle motorcycles. The plant of the Sterling Motor Co., which was one of the first engaged in the manufacture of motorcycles in the United States, recently passed into the hands of an ordnance manufacturer.

RAIN HALTS ALTOONA MEET —ANOTHER COMING

ALTOONA, June 3.—Rain, which caused the postponement of the Altoona Motorcycle Racing Association Memorial Day meet until this afternoon, again interfered with the running of that event and it has been called off. However, the promotors are now planning an even larger meet to be staged on the Altoona Driving Park track on July 4th. As the track is only a one-half-mile circuit, only events for 30, 50 open-ported machines and 50 cubic inch stock machines can be staged. A large attendance is expected.



J. J. Berlo, Individual Winner in the Bay State Run

ATTRACTIVE BADGE FOR THE CYCLE PARTS MEN

BELOW is illustrated the attractive badge that will be worn by the trade boosters at the coming annual convention of the Cycle Parts Industries in Atlantic City. The pendant hangs on a neat red, white and blue ribbon and the bar across the top is designed to carry a card bearing the wearer's name.

CIRCUS PERFORMER VISITS WESTFIELD COMPANY

WESTFIELD, Mass., June 5.—Part of a circus dropped in on the plant of the Westfield Mfg. Co. last week. The part that dropped in consisted of Robert Reed, dare-devil and trick motordrome rider, who is with the Otis L. Adams Greater Exposition shows which were exhibiting at Northampton in this state. Reed, together with Earl Charles and J. P. Halley, travels around with the show and performs a great number of startling and impressive feats in a portable motordrome which has a diameter of only 30 ft. at the bottom and 45 ft. at the top, the angle of the sides being 78 degrees. Both of the riders straddle Pope single-speed twins while doing their act, and Reed was enthusiastic in making plain to the Pope manufacturers that he had covered between 95,000 and 100,000 miles on the motordrome circuit with his machine with scarcely no trouble.

SPLITDORF IS CONVALESCING

NEWARK, N. J.—Charles F. Splitdorf, vice-president and sales-manager of the Splitdorf Electrical Company, of this city, is recovering from a sudden illness which he experienced while on a trip through the West a short time ago. Mr. Splitdorf's illness brought his trip to a sudden termination and he was removed to a place where he has rest and quiet.

TORONTO M. C. PICNIC

TORONTO, Ont.—Members of the Toronto M. C. held the first motorcycle picnic of the season when they jaunted out to Bond Lake on Sunday, June 4, for an outing. A dozen riders took in the trip and as many more lady friends occupied seats in the sidecars.

ADJUSTMENT OF HAND HORN IS SIMPLE

User Can Correct All Changes in Tone in a Short Time and Need Not Send Instrument To Factory for This Purpose—Operation Is Equally Satisfactory

By E. A. AUFIERO
The E. A. Laboratories, Inc., Brooklyn, N. Y.

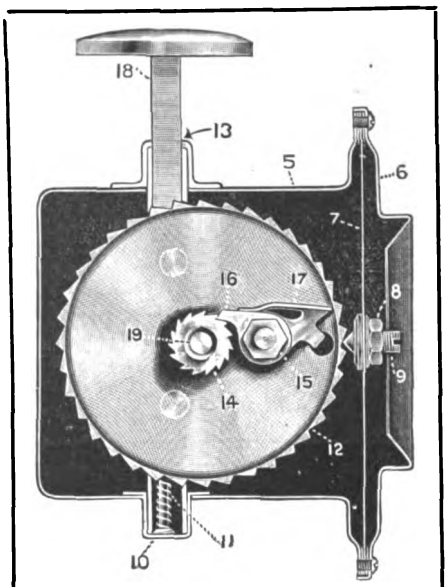
IN looking over the motorcycle field in the matter of signalling devices, one is impressed with the fact that the bulb horn is rapidly growing to be a thing of the past and that the mechanical horn is easily the leader in point of use. The reliability of the signal whose diaphragm is vibrated by mechanical means is far superior to that of the beating reed, both in volume of sound and quickness of action; hence the hand horn increases in use by leaps and bounds.

With the varied types of horn now in service there seems to be an idea that on the least loss of tone or difficulty in operation of the mechanism the horn should be sent to the maker for adjustment or should be turned over to a mechanic for repair. As a matter of fact, there is no necessity for this. With a well-constructed instrument the owner of the horn can make all the necessary adjustments in short order and thereby avoid trouble and expense. The operation in all cases is very simple and the tools necessary are a small screwdriver and a pair of pliers.

Adjusting for Tone

Take the case of the hand horn. To adjust this for tone, loosen the small nut in the center of the diaphragm with the pliers or wrench and with a screwdriver in the slotted end of the screw projecting from the diaphragm turn this to right or left until the desired tone is obtained. This screw, which carries the anvil on its inner end, should have a small engagement with the rotating toothed wheel or rotor, so that the plunger will work without pressure. On getting the tone, the nut should be set up to keep the anvil secure.

The hand horn is assembled with the bracket in the upright position. To place it on the machine, first remove the bracket,



Section of Hand Horn Showing Operating Mechanism

clamp it to the frame and then reattach the horn to the bracket. To fit the horn in a position where it is not directly above the bracket, loosen the nuts holding the bracket to the flanged part of the case, put the bracket on and attach in the position desired.

The horn may be taken apart by removing the eight screws that hold the mouthpiece to the case of the instrument. Referring to the figure, 5 is the case and 6 the mouthpiece. The rotor shaft 19 can be taken out by taking off the two bearing screws with their nuts. These support the shaft from the outside of the case. The plunger 18 can then be drawn out through its opening at the top and the spring 11 will come out. The ratchet device 16, 17 and 14 come away with the rotor.

In reassembling place spring 11 guided by pin 10 (in the short projection at the lowest point of the case), then press plunger 18 down until shaft 19 and rotor 12 are again secured with the two bearings screws. The latter must not be set pressing against the ends of shaft 19, otherwise the saft will not revolve.

Two Drops a Week

Oil should be put through the plunger guide 13 in the quantity of two drops every week. This is all that is needed to keep the horn in fine working condition under ordinary usage.

A few words on the action of the mechanism will be of interest to users. When plunger 18 is depressed, the teeth engaged with those on shaft 19 revolve the rotor 12 so that the edges of the teeth on the rotor strike the anvil 9 and vibrate the diaphragm 7. On releasing the plunger, the spring 11 pushes it upwards.

On shaft 19 is a ratchet wheel 14, engaging with the rotor 12 through a pawl 16. When the plunger rises, ratchet 14 revolves with shaft 19 and simply clicks pawl 16 without moving rotor 12. On the downward stroke, the pawl is driven by the teeth on the ratchet and thus rotates the rotor 12 to give the sound. This arrangement allows of quick operation of the mechanism and assures a steady volume of sound. If the rotor revolves faster than the shaft 19, the pawl clicks on or over-runs the ratchet and the operation of the horn is not interferred with.

MAY F. A. M. FIGURES SHOW SUBSTANTIAL GAINS

WESTBORO, Mass.—F. A. M. membership statistics for the month of May, 1916, show that 353 affiliated and 102 unaffiliated members have been gained to the Federation strength. During that period there were 320 renewals. Massachusetts led with 62 affiliated members gained, but fell behind New York in total numbers. There were also 12 unaffiliated and 36 renewals in Massachusetts, giving a total of 110, while New York's total was 127, divided into 68 renewals, 42 affiliated and 17 unaffiliated. Alaska had one renewal.

Live Wire Sales Force of R. C. Crist Co. Awaiting Prospects at Michigan Avenue Establishment of Big Chicago Excelsior Agency

HARLEY-DAVIDSON CLUB TO HOLD MEET ON JUNE 10

PITTSBURGH, Pa.—The first annual meet of the Harley-Davidson M. C. of this city will be held at Schenley Oval on Saturday, June 10, with a card of eight events. The affair will be open to riders of Western Pennsylvania only.

The program includes the usual five-mile amateur preliminary and a race for amateurs on lightweights. There will also be a five-mile event for sidecars and a two-mile race for Smith Motor Wheels. The 15, 10 and five-mile pro. events scheduled are for 50 cubic inch stock or 30½ cubic inch racing machines.

SIDECAR RUN FOR WOUNDED

Toronto, Ont.—Walter Andrews, the Toronto distributor for Harley-Davidson motorcycles, has arranged an outing for the wounded and sick soldiers who have been sent home to Toronto from the firing line. The convalescents, about fifty in number, will be taken in sidecars or on the rear seats of Harley-Davidson motorcycles on a Sunday to be selected.

HINDS SETS A NEW PICTON-BLUFF RECORD

Christchurch Powerplus Rider Covers 648 Miles of New Zealand Roads in 31¼ Hours—Mud, Fog and Heavy Rain Were Encountered and Over 100 Creeks Were Forded

E. F. C. Hinds with Powerplus Outfit at Invercargill, Near End of Run—D. Barr Is the Passenger. Note Lighting Equipment Combining Electricity and Acetylene

CHRISTCHURCH, New Zealand.—Ernest F. C. Hinds, driving a Powerplus combination with rigid frame, set a new record recently between Picton and Bluff. The distance, 648 miles, was traversed in 31¼ hours. The performance was conducted by the Pioneer Motor and Sports Club of New Zealand, and official observer riding in the wicker sidecar alongside of Mr. Hinds at all times.

The start was made from Picton on a Wednesday, with C. H. Mason in the sidecar as observer. Rain had made the roads greasy but a fair average speed was maintained past Blenheim and through Porters Pass into Ward. Just outside of Ward the tank ran dry, due to an assistant neglecting to fill it at Picton, and nearly an hour was lost getting to the refilling station. Leaving Ward, Hinds and Mason were warned not to continue, as all creeks were in flood and going was difficult. However, the pair pressed on and took all but five of the creeks without assistance, the fifth needing a push by the driver and passenger to get through.

Red Clay to Kaikoura

The section Ward-Kaikoura was mostly red clay and progress had to be made on low gear, picking a way first on one side and then on the other of the road. After the Clarence river was passed the surfaces to Kaikoura were fairly good. In the latter place both men took refreshment and refilled the tanks, then started toward Conway, 26 miles out, over heavy shingle, broken stone and mountain roads. In this section the high gear could not be used. From Conway to Cheviot it was all low gear work, although the roads were practically level all the way.

The arrival in Cheviot was made in a pouring rain and pitch darkness. After leaving, the travelers traversed the notorious Greta Cutting with its four flooded creeks, all but one of which were taken under motor power. Owing to the water getting over the motor and the sidecar on the second creek, the combination had to be got through by hand. It was a case of battling with a south-wester from then on till Christchurch, 238 miles out of Picton. The time was 10¾ hours.

Heavy Rain From Christchurch

At Christchurch, P. R. Harman, secretary of the Pioneer Club, relieved Mason as observer, and a start was made once more at 10:45 p.m. toward Geraldine. The Indian crowd had built a temporary bridge over a bad water-race and a couple of riders sped ahead to show the way. They unfortunately lost the road and on getting back were miles behind Hinds and his rig, who were getting pretty well hammered over vile roads amid a torrent of rain which soon changed to a heavy fog. This meant slow going and the fording of many streams, as the bridges could not be seen in time.

Hinds with Mason and Harman, Official Observers at Pioneer Club Headquarters

Good roads followed the passage from Geraldine to Oamaru, but no speed could be made until the fog cleared near Timaru, and then it was "all out" to where the control should have been. The pair had to wait nearly two hours in the early morning to get fuel for the run to Dunedin. Finally, all stocked up, they rode the pot-holey and rough 80-mile stretch in 2½ hours. At Dunedin, Hinds and the Powerplus had come 484 miles in 22½ hours.

More Mud and Slush

D. Barr now relieved Harman as passenger and Hinds drove off toward Balclutha, over good roads. The wicker body of the car got loose in this stretch and a temporary repair had to be made. After Balclutha a detour was necessary, and when the main road was resumed the passage was one of slush and deep mud. It took 90 minutes to go eight miles on the Pakerau stretch, and the rig was bogged three times. Gore was reached in due season and speed was made from there to Edendale and One Tree Point, but the stretch to Invercargill was one of the roughest of the trip. Hinds was so shaken and bruised that he steered part of this stretch with knees and elbows.

From Invercargill to within eight miles of the Bluff going was fairly good, but the rest of the trip was rocks and boulders. The Bluff was reached just 31 hours 15 minutes out of Picton. Hinds was all in. He had traversed 36 miles of heavy shingle, 27 miles of broken stone, 13 miles of bog and slush, and ridden 10 hours in heavy rain. Fog was encountered for five hours, all told. The Powerplus rig was put through 103 flooded water-races and creeks on the trip and came through finely.

IT'S BAUTZ,—NOT BANTZ

In the June 1st issue appeared an article referring to the excellent business conditions found throughout the South by Thomas J. Bautz, of the Holland-Baden-Ramsey Co., of Baltimore, Md., in which Mr. Bautz's name was spelled with an **n** instead of a **u**. This correction is being made promptly so that Mr. Bautz's many friends on the trade circuits will not hail him as Bantz the next time he breezes over the route. He's still Tommy Bautz,—at your service.

ENFORCING CUT-OUT LAW

LOUISVILLE, Ky.—Local authorities are now enforcing the law with regard to cut-outs. The police have been going after automobilists and motorcyclists with a vim. F. Flingman, a local rider, was recently fined $10 for having his cut-out open.

—AND INDIAN SUPREMACY STILL GOES MARCHING ON!

Three More Victories on Track, Road and Hill!

Right on the heels of the Indian triumphs at Chicago, Toledo, Harrisburg, Dayton and in the Boston-Buffalo 1000 Mile Run comes another trio of achievements to keep Indian enthusiasts up on their toes.

At Columbus, Ohio—

Ray Creviston did the sensational when he breezed his Indian 100 miles in 84 minutes and 40 seconds. A picked group of speedsters on racing models of all prominent makes contended with Creviston for the prize, but his machine was so fast he was never headed all the way. At the same meet Lee Taylor on an Indian won the 5 mile elimination event and the 10 mile final.

For assurance of prompt attention to your wants mention MOTOR CYCLE ILLUSTRATED.

Digitized by Google

At Fresno, California—

George Woods, riding a 1916 Powerplus Indian, won the spectacular Toll House Hill Climb, establishing an official record of 14 minutes and 24 seconds for a course that rose 3,100 feet in 7½ miles.

Woods had plenty of rivalry in the accomplishment of this feat but none of the other makes entered had the stuff to match his Powerplus.

At Indianapolis—

George Vonstaden, Indian mounted, took first honors in the Consolidated Club Road Race, doing the distance of 59½ miles in 1 hour, 14 minutes and 34 seconds. Classy field—but none up to Indian.

No racing season has opened up with such a preponderance of Indian clean-ups as 1916. Indian superiority has shown itself at the first shot of the gun. To the thousands of men who are going to buy machines in the next month Indian offers more PROVED VALUE than can be laid before them anywhere in the world outside of an Indian store.

Catching the Public Eye

IMPORTANCE OF THE SHOW WINDOW'S BACKGROUND

ONE OF THE SECRETS OF MAKING UP A STRIKING AND INEXPENSIVE LAYOUT.

By G. A. SMITH
Manager of Window Advertising for U. S. Rubber Co.

G. A. Smith

THE student of stagecraft finds that his third important lesson concerns the unfailing value of a suitable background. It is no less important for the window dresser to understand how a proper background contributes to the "punch" in a window display.

Motion picture producers spend thousands of dollars to take companies of actors to some particular place where they can profit by the tropical scene, the picturesque mountain trail or a street in a crowded city with just the right atmosphere. The background has a lot to do with putting in the "punch," with getting the story across to the audience. Just so with the window background; it supplements the window display proper and gives it character.

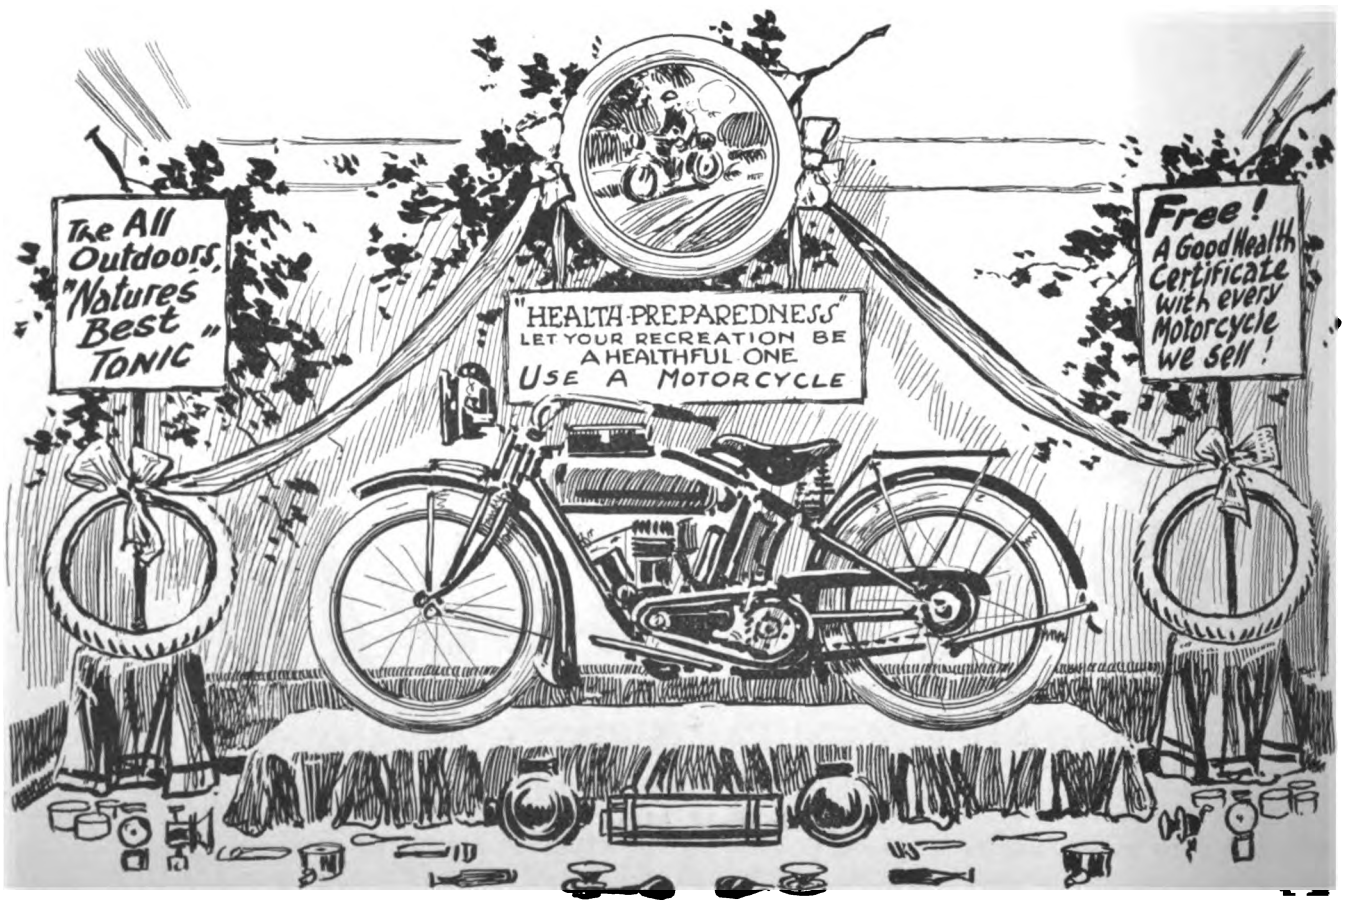
When you want to make people cry over the sufferings of a starving family, you must provide an attic as a background, and if there can be a bare pallet on the floor and snow drifting in through a broken window, so much the better for the effect. You certainly could not wring tears from anyone over the woes of that family if you showed them surrounded by Empire furniture and with a grand piano in the foreground. The background would be obviously faulty, and the same thing can be said of many windows in which motorcycles and bicycles are shown.

Three-fourths of the success of every window display depends upon the skill with which the background is worked out, and this applies especially to the cycle lines. It is necessary to show the prospective buyer something more than the machine itself—he must have brought to his mind some form of the delightful service he is going to derive from the cycle he purchases. In order to do that the general scheme for the window must be carefully planned.

I feel that I can safely say that very few cycle dealers are getting one-tenth of the value that they should obtain from their show windows. The average cycle dealer is not familiar with the basic principles of window decorating, and he hardly has the time to work out pleasing effects. But I am going to co-operate with him so that he can get the desired results with a very small expenditure of time and money.

In large department stores the management looks upon the decorative background as one of the most effectual aids in displaying merchandise and in inducing passers-by to enter and make purchases.

Too many dealers, I fear, fail to consider window display advertising from the



An Attractive and Inexpensive Window Described in the Accompanying Article

Digitized by Google

A NEW SERVICE FEATURE

Mr. G. A. Smith who begins herewith a series of window display articles and designs for motorcycle and bicycle dealers has for the past three years been connected with the Economist School of New York as an instructor, and has just left that line of work to become manager of the Window Advertising Department of the United States Rubber Co. In that capacity Mr. Smith will have charge of all the company's display work in Manhattan. Mr. Smith will also design window displays for the company's many branch stores throughout the country.

In addition to the lines of work above referred to, Mr. Smith has had actual experience with the display advertising departments of several big general merchandising houses and on the staffs of trade journals. The first-hand knowledge thus obtained, combined with long and scientific study of the possibilities of window display work, makes him one of the most capable men in his line.

In adding Mr. Smith to its already strong Service System, Motor Cycle Illustrated has taken another big step towards the fulfillment of its editorial ideal—"All the News plus Service."

human nature angle. They shy at the expense, and seem to feel that a window display is hardly worth what it costs. On the contrary, a good display is worth ten times what it costs.

It is well to keep in mind that the expense of a window display can always be kept in proportion to the importance of the occasion and the size and general character of the store. Many practical and appropriate backgrounds can be produced at very low cost if the dealer is familiar with the materials to be used.

No matter what kind of a permanent background your window may have, there are times when a temporary background is essential in order to put across a "punch." Temporary backgrounds cover a wide range of ideas and devices. Under this heading come scenic paintings, artificial foliage, platforms, pedestals, etc., etc.

Let it not be understood that I advocate the continual use of decorative settings; that is not the case. But I regard them as necessary at certain times. The approach of a new season, a special sales drive of some kind, a holiday or a reduction in price on some special line of goods may give a fine opportunity for a striking background.

Deciding Upon a Background

The necessary qualifications for the man who is to produce appropriate backgrounds are a good knowledge of the store's policies and clientele and a clear idea of proportion, harmony, form and color. The extent to which color harmony can be carried in displaying motorcycles and bicycles is not as great as with some other lines of merchandise, but care should be taken to see that there are no jarring notes in the cycle dealer's window.

Care must be taken to see that the background is in proportion to the size of the window. A background arrangement for a shallow window, for example, might be unsuited to a deeper window. The height of the ceiling also has an important bearing on the vertical proportion of the background.

The window design shown in the accompanying illustration is simple throughout and inexpensive. Ordinary lumber, such as can be taken from packing cases, will serve, but each piece of woodwork must be covered with felt, plush, velour or cotton flannel in order to provide a pleasing effect. The material can be stretched neatly over the boards and tacked at the back.

The center platform is shown raised from the floor by means of six-inch supports. This makes an excellent base on which to place a motorcycle. The two other stands are placed in the corners of the window and serve as supports for the two motorcycle tires. Just above each tire is tied a broad ribbon, which is then carried up to another motorcycle tire hung or otherwise fastened in the center of the layout at the back. Inside this latter tire there should be a pleasant motorcycle view of some kind. Any sign painter can turn out such a picture at small cost.

Suspended under the center tire there should be a fairly large window card bearing an appropriate catchline. The lines shown in the sketch, "Health-Preparedness—Let Your Recreation be a Healthful One—Use a Motorcycle," are good ones, especially at this season.

One of the cards at the side can bear the inscription, "The All-Outdoors—Nature's Best Tonic," and the one at the other side can be made to read, "Free! A Good Health Certificate with Every Motorcycle We Sell."

Sprays of seasonable foliage are arranged at the corners of the window in such a way as to give a suggestion of the outdoors and at the same time to set off the signs, and more foliage can be used to good effect behind the tire in the center.

Sundries, such as inner tubes, lamps, horns, tools, etc., can be used sparingly on the floor of the window. Care must be taken to see that the window does not look crowded, also that there is nothing in front of the motorcycle to obstruct a view of it, or to seriously draw attention away from it.

I am now preparing other simple, inexpensive and striking window designs for **Motor Cycle Illustrated's** dealer friends, and they will appear in every other issue from now on. The next designs to appear will show two strong vacation windows—one for the motorcycle and the other for the bicycle. They will be among the many attractive features of the Vacation Number, which appears June 22.

THE "VIBRATION" BUGABOO

Experienced Rider Proves That Motorcyclist Receives Only About Half as Many Jars as a Pedestrian; Timely Pointer for Dealers

By D. B. PANGBURN

THE chief objection of the uniniated to the motorcycle seems to be embodied in the commonest question they ask, "Doesn't it shake you all to pieces?" And it is very hard to convince an unbeliever that the shaking he (or she) would get wouldn't break soft-shelled eggs, if you can't get him to take a ride on the tandem and see it for himself.

For a long time I figured on how to prove to such people that I was telling them the truth. Finally I hit upon using a pedometer, and with it I discovered some very interesting facts, as set forth below. The pedometer is, of course, designed to measure the distance a person walks. To this end it contains a delicately balanced weight, on an arm, which is so nicely adjusted that at each step the shock of the heel striking the ground causes the weight to move. Thus the instrument really counts the number of heel strokes, or steps, and the mechanism reduces this to miles. This sensitiveness to the slightest jarring particularly adapts the pedometer to the measuring of motorcycle vibration.

My method was to walk over a given distance, wearing the pedometer, and then ride my machine over the same road. In this way I obtained a direct comparison between the number of heel shocks (i.e., steps) and the number of shocks of the same or greater intensity suffered by the motorcycle rider. The results were surprising.

I found that when riding over well paved streets the number of shocks were only from one-quarter to one-third as great as in walking the same distance. On poorly paved streets and indifferent dirt roads the number rose to from one-third to one-half as many as in walking, while the very roughest kind of riding found in ordinary travel showed hardly as many jolts as indicated when walking over the same roads.

I also extended my tests to the sidecar, and found that the passenger, on the average, is shaken up about one third, or less, as much as if using shank's mares.

Comparison with automobiles gave an interesting commentary on the excellency of motorcycle spring suspension. In trying my shock registering device on one of the best American cars (Pierce-Arrow), I found that given the same streets and the same speed the auto showed almost two-thirds as much jarring per mile as the solo machine, while the flivver equalled the motorcycle.

These facts, the results of repeated trials, show conclusively that the modern motorcycle not only doesn't "shake you all to pieces," but, taken on the average, it shakes you a good deal less than pounding the pave.

Cleveland

The CLEVELAND LIGHT MOTORCYCLE gained highest honors in the Lightweight Division in the racking 400-mile Endurance Run of the New Jersey M. C. held on May 29th and 30th.

Ramsey, Amateur, came through this terrific test which was featured by every variety of bad roads, with steep, tortuous mud-covered hills that baffled many heavyweight riders, with the wonderful score of 1,993 points. He won the Smith-Fraser trophy, for best amateur lightweight performance.

Waughop, professional, upheld CLEVELAND supremacy in that division by coming through with a score of 1,984, winning the gold medal for best professional score in the lightweight section.

Wins Highest Honors in Lightweight Division

An incident, significant of CLEVELAND adaptability, occurred at the start of the run. Waughop, through no fault of his own, suffered a collision with a street-car and wrecked the machine on which he intended to compete. He immediately uncrated a brand new machine at the store of the Newark Cleveland dealer and with only 30 minutes preparation succeeded in getting this untried CLEVELAND "tuned" to the right pitch for the gruelling grind to come. And, as usual, CLEVELAND made good.

THE CLEVELAND LIGHT MOTORCYCLE IS MAKING HISTORY—IN BOTH SALES AND SERVICE. THERE ARE STILL SOME GOOD AGENCY LOCATIONS OPEN—BUT TO GET THEM QUICK ACTION IS NECESSARY.

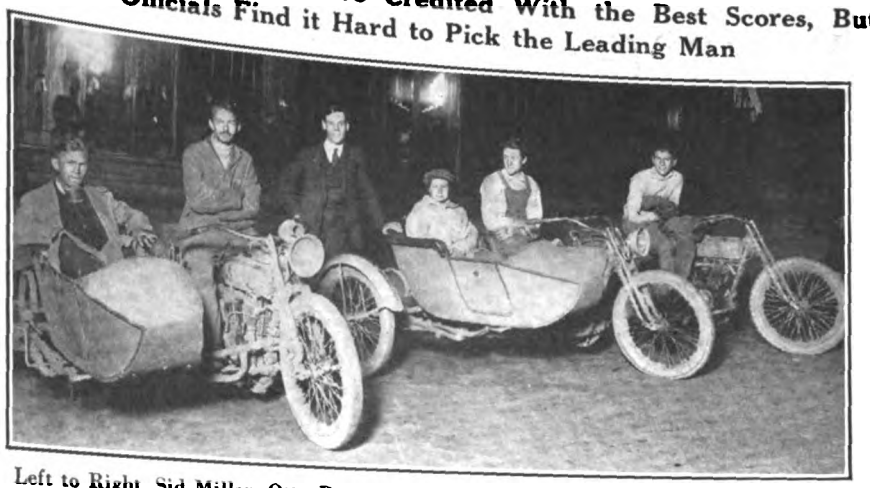
AFTERMATH CHANGES OMAHA RUN RESULTS

Harley-Davidson Riders Are Credited With the Best Scores, But Officials Find it Hard to Pick the Leading Man



Left to Right, Sid Miller, Otto Ramer (in Saddle), Mr. and Mrs. Charles Howes and Carl Pederson. Ramer Finally Was Declared the Winner. Victor Roos Stands with His Hand on Howes' Sidecar

OMAHA, Neb., June 5.—Riders in the 472-mile, two-day endurance run held Sunday and Monday, May 28 and 29, for the *World-Herald* trophy under auspices of the Omaha M. C., had a hard time negotiating the heavy roads in Kansas south of Leavenworth, as was told in the last issue of **Motor Cycle Illustrated,** but they encountered even greater difficulties at the completion of the run in determining the winner of the event.

Three Harley-Davidson riders, Otto Ramer, Charles Howes and Carl Pederson, cleaned up the run for the "Silent Gray Fellows," but so muddled had the checking sheets become that at the end of the contest, judges, referee and riders were decidedly up in the air as to which of the trio came through the gruelling contest with the highest score.

Ramer was finally declared the winner by the narrow margin of three points after he had been penalized 100 points for deviating from the scheduled route. Through laxity on the part of field judges, several other riders were led astray from the course, both here and at Kansas City. Howes finished second, and by the weird figuring of the judges, Pederson, who checked third at the final control nearly an hour ahead of the next rider, was dropped to sixth place. All three of the Harley-Davidsons were Firestone equipped.

Seven Indian, seven Harley-Davidson and four Excelsior riders lined up for the start at 6 o'clock Sunday morning, and on the trip south, sticking to the roads on the west bank of the Missouri, they encountered excellent conditions. At the night control in Kansas City, all of the fellows checked in with scores intact, with the exception of Arch Sorenson, an Excelsior driver, who was delayed twenty-eight minutes.

Sunday evening a typical Kansas storm broke, and long before daylight, the highways to the north were impassable to all save a lot of rugged-hearted motorcyclists out to win a perfectly good silver loving cup. Discouraged over the outlook, a quintette of the riders faced about and returned to Kansas City, where they expressed their mounts and themselves back home.

North from Leavenworth, however, fairly dry roads were found and the tourists started out to burn up the straightaways in a wild effort to make up for previous delays.

Ramer with his Harley-Davidson sidecar outfit, pulled into the second night control at 6:54, forty-five minutes late. Charley Howes, accompanied by his plucky little wife in a side-car, drove the second Harley-Davidson into the control at 7:45 o'clock, and twenty minutes later "Pete," riding solo on a '14, two-speed Harley-Davidson drifted in,

Herman "Skinny" Fisher, of Indian fame, was the fourth arrival, being closely followed by Eddie Palm on a 1917 three-speed Excelsior and Harry Stryker on a three-speed, 1915 Indian. Louis Vleck, another "Big X" rider, was the last to check in. The balance of the field straggled in sometime before morning.

Both of the winning Harley-Davidsons were equipped with Remy ignition and lighting sets, Schebler carburetors and Renold chains. Fisher's Indian carried Goodyear "Blue Streaks" and Splitdorf magdynamo.

Riders who competed in the reliability contest were: Indian, Herman Fisher, W. C. Oviat, Joe Mangona, C. W. Haberstraub, Birdie Lutz, Harry Stryker and Carl Adolphson; Excelsiors, Louis Vleck, Ed. Palm, William Dristy and Tom Fryer; Harley-Davidson, Otto Ramer, Charles Howes, J. C. Van Avery, James Fisher, Carl Pederson, Joe Gentili and A. C. Henderson.

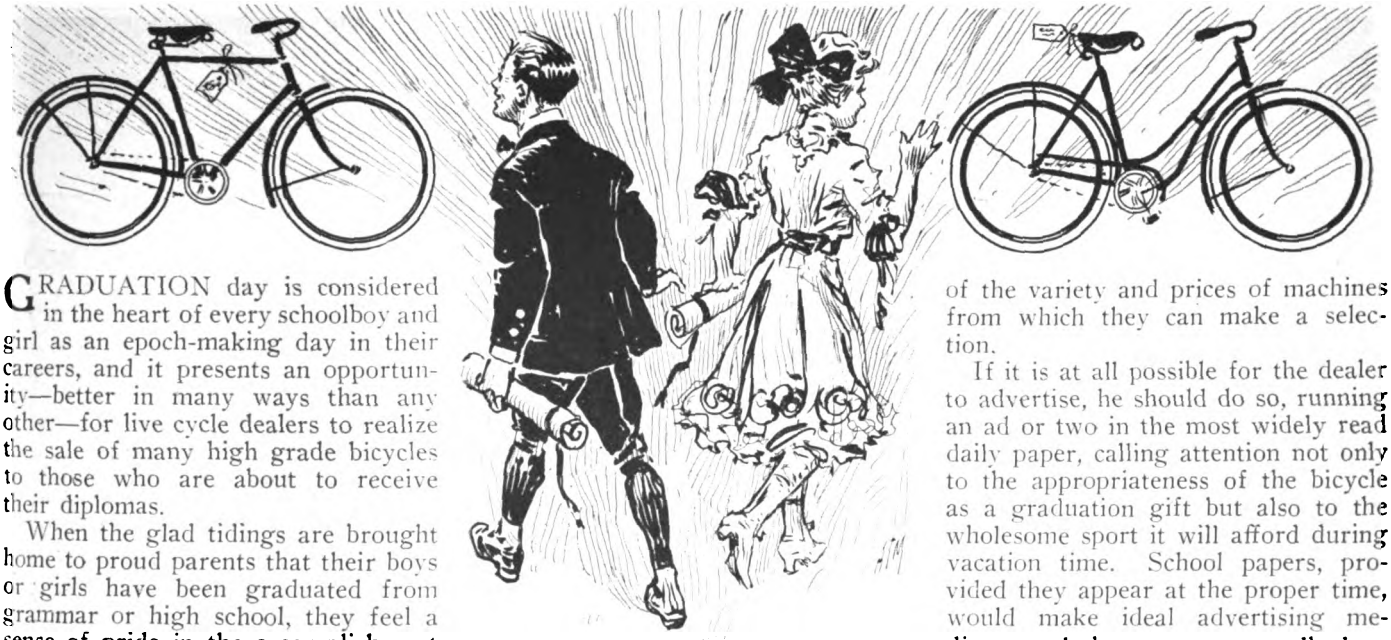
THE BICYCLE AS A GRADUATION PRESENT

The Month of June Offers a Lively Market for the Sale of Better Bicycles to Graduates—Selling Campaign and Circular Letters Suggested to Dealers

By FRANK HARDY



GRADUATION day is considered in the heart of every schoolboy and girl as an epoch-making day in their careers, and it presents an opportunity—better in many ways than any other—for live cycle dealers to realize the sale of many high grade bicycles to those who are about to receive their diplomas.

When the glad tidings are brought home to proud parents that their boys or girls have been graduated from grammar or high school, they feel a sense of pride in the accomplishment of their youngsters which is almost as keen as that felt by the happy children themselves.

Time to "Loosen Up"

Graduation day thus marks the time when daddy knows that he is expected to "loosen up and come across" with a gift which will be suitable for the occasion. He naturally scouts around for a present of real value—one which will be appreciated by its recipient.

And right here is the dealer's chance. From many angles the two-wheeler is the ideal graduation gift—it fulfills well the requirements of such a present. It will bring joy to every youngster, and exhilarating exercise, pleasant recreation, and lasting health. These facts must be forcibly brought home to each parent, and the success with which the dealer meets will depend largely on the manner in which he tackles his opportunity.

He must first secure a list of prospects, and then circularize them by sending a series of letters, the factory catalog and literature. Two ways suggest themselves to the writer of obtaining the names of prospects. The dealer may go direct to the schools and ask the principal or head teacher for a list of the graduates, or else approach one of the graduating pupils—preferably a bicycle rider—and ask him or her to get the names and addresses of graduates, offering as compensation a bicycle accessory.

Campaign Must Be Short

Since most graduations occur the later part of June and the announcement of those who are graduated is generally made but a week or two prior to commencement day, the dealer's campaign must of necessity be short. It would be advisable for him to send out about two circular letters, enclosing the general factory literature in the first and a catalog in the second. The first will be intended to arouse the interest of the parents and the second will give some idea of the variety and prices of machines from which they can make a selection.

If it is at all possible for the dealer to advertise, he should do so, running an ad or two in the most widely read daily paper, calling attention not only to the appropriateness of the bicycle as a graduation gift but also to the wholesome sport it will afford during vacation time. School papers, provided they appear at the proper time, would make ideal advertising mediums and the rates are usually low.

Two Letters Suggested

The circular letters should not be sent to the graduates, but to the parents. Thus if the graduate's name is Jones the letter and enclosed literature should be mailed to Mr. and Mrs. Jones. Below are suggested two circular letters:

FIRST LETTER

Dear Sir and Madam:

We know the just pride of parents when they hear the good news that their children have been graduated.

You undoubtedly feel that you ought to express your appreciation in some concrete way.

There are many presents which would be appropriate—but certainly none will prove to be a better and sounder investment than a good bicycle.

Perhaps you have ridden a wheel years ago. Then you know the splendid returns in health and

News of the Bicycle Trade

DEALERS ARE NOW WAKING UP

More Bicycle Merchants Are Advertising Than at Any Previous Time, Says Sales Manager Brown; Pierce Business Continues Brisk

BUFFALO, N. Y., June 6.—Commenting on the large volume of business which the Pierce Cycle Company is swinging this year, Fred L. Brown, the sales manager, declared that dealers the country over were never as wideawake as at the present time.

"They have been asleep at the switch for many years," said Mr. Brown, "but the 'One Million Bicycles Campaign' has aroused them to the realization that increased sales can result only from the application of modern methods. More dealers are advertising in newspapers and other mediums than during any time in my experience in the bicycle field.

"Indeed, every mail is bringing in requests from dealers asking for electrotypes, advertising and selling suggestions. Many of our dealers are going out and hustling—following up leads until they've either landed a sale or know that the supposed prospect is a false alarm. They are naturally producing greater results.

"What is making our business unprecedentedly brisk just now," continued Mr. Brown, "is the increase in the price of our machines which went into effect on May 1. Dealers have had their last chance to submit orders at the old figures and in a large number of cases they have estimated their wants for nearly the entire season and placed orders accordingly."

ST. LOUIS DEALERS WILL PROMOTE RACES

ST. LOUIS, Mo., June 6.—The Cycle Trades Association of this city met at the Marquette Hotel here last week and decided to revive interest in cycle racing. Activity in rousing interest in cycling did not stop with the passing of resolutions, but the dealers here immediately drew up plans for staging a twenty mile bicycle road race on June 17 at Fairground Park.

All those who contemplate entering the race must first register with O. F. Hassemer, 3655 Potomac street, who represents the N. C. A. in this district. Entry blanks can be had from these dealers:

E. S. Brown Cycle Company, 1000 North Grand avenue.

Fisk Rubber Company, 2208 Locust street.

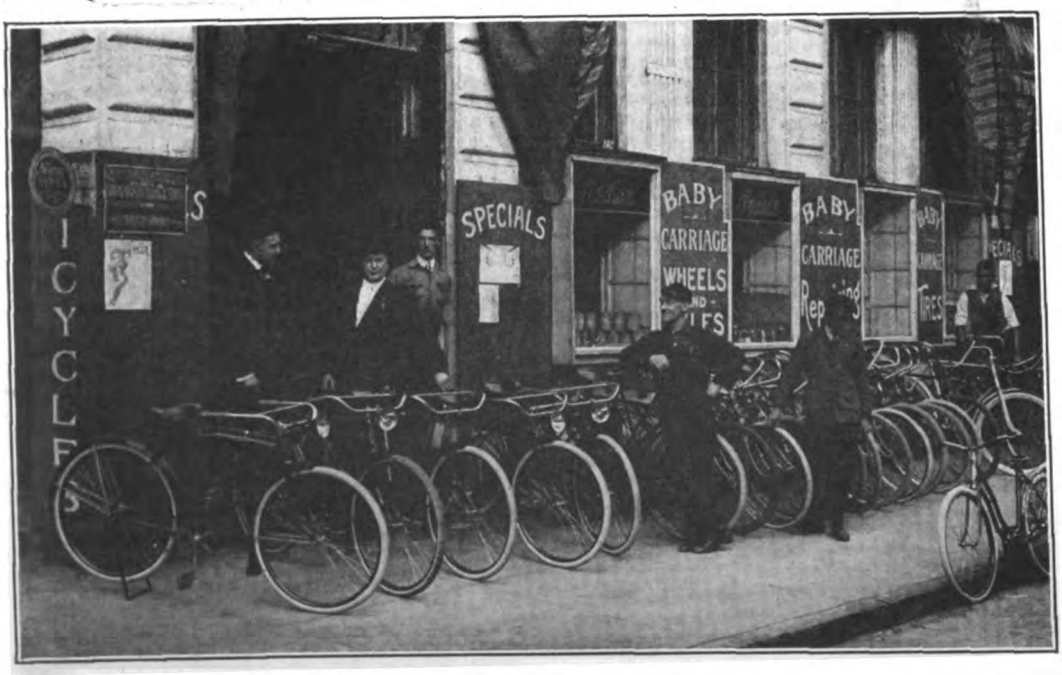
B. F. Goodrich Rubber Company, 3001 Locust street.

C. B. Jansky, 616 Vandeventer avenue.

R. J. Leacock Sporting Goods Company, 810 Pine street.

United States Tire Company, 3149 Locust street.

BRINGING THE SALESROOM OUT TO THE PROSPECT



George W. Thomas of Savannah, Ga., Made a Full Display of the New Indian Bicycle Line on the Sidewalk in Front of His Store When His First Shipment Arrived

SALES ARE 3 TO 1 FOR BETTER GRADE OF BICYCLES

MICHIGAN CITY, Ind., June 6.—The Excelsior Cycle Company is experiencing one of the best years in its history. Just now they are turning out from 150 to 200 bicycles daily. It is interesting to note that the sales are largely in favor of high grade bicycles. Three of the better bicycles are sold for every machine of an inferior grade.

BICYCLE CONDITIONS FINE

COLUMBUS, O.—The demand for bicycles is holding up exceedingly well in this city and all over Central Ohio. There are about a dozen agencies, all doing a nice business. A good demand is also being experienced for the Smith Motor Wheel and the Dayton motorbicycle.

KAISER'S AIR RAIDS BOOST LAMP SALES

LONDON, Eng., May 25.—With Zeppelin raids liable to swoop down upon poor London almost any night, all the lights in the city are being turned out to prevent the enemy airships from sighting the metropolis. Going about the town in total darkness to attend parties and dances did not appeal very much to the London dandies and they found that the threatened raids of the Kaiser's airmen "butted in" on their social obligations.

However, this condition did not last long. London has quite a number of bicycle riders, and one of them hit upon the bright idea of attaching an ordinary bicycle lamp to a cane and in that way penetrating the nightly darkness of "good ole Lunnon." Now, reports have it, the dudes are no longer allowing the Kaiser to interfere with their pleasures.

SCASION VISITS DAYTON PLANT

DAYTON, O.—Alexander Scasion, of the Progressive Cycle & Auto Supply Co., of New York, was a recent visitor to the plant of the Davis Sewing Machine Company in this city. Scasion has taken the agency for the Yale in the metropolis and on Long Island and expects a big business in that line during the next few months. Many other dealers have visited or written in to the Davis Co., after reading the announcement of the purchase of the Yale bicycle rights.

TAUNTON DEALERS STAGE TEN-MILE RACE

TAUNTON, Mass., June 1.—Ned Chandler of Boston, tucked away the silver cup, offered by Mayor Flood and the bicycle which were the time and place prizes in the ten mile road race which was staged here recently under the auspices of the local dealers. His time was 28:12, which was 1:03 better than that of Fred Maricona, of Providence.

Those to finish in their order were Ned Chandler of Boston, Ferruce Marchiano of Providence, R. D. Greenbaum of Revere, E. B. Fox of Revere, Fred Maricano of Providence, Manuel Sousa of Taunton, William Prouty of Mattapan, R. M. Toney of Revere, Tom Panacy of Brockton, O. Colonna of Providence, Matthew Bryson of Boston, Fred Handy of Taunton, Roy Gilman of Taunton, William Coe of Taunton, Charles Coe of Taunton, Fred Perreault of Boston, Notarahtonio of Providence, Charles Young of Brockton, Milton Egger of Brockton, James Duggan of Taunton, and Blevins of Taunton.

THREE ORIOLE CITY CLUBS ON WEEKLY RUNS

BALTIMORE, Md., June 6.—The regular run of the Crescent Bicycle Club was held last Sunday to Belair, the riders leaving Mt. Royal and North avenues at 9.30 a. m., and arriving in Belair at 11.45 a. m. Walter Doersch, Ernest Nitz and Fred M. Sanborn decided that they had not gone far enough and continued on to Conowingo, on the Susquehanna River, sixteen miles north of Belair, reaching there at 1 p. m. They arrived home at 5 p. m., having covered 85 miles.

The regular Sunday run of the Triangle Wheelmen was held to Havre De Grace. The run was in charge of Captain Horace Seward.

The Fulton Cycle Club held their run on Sunday last to Overlea, on the Belair Road. No mishaps occurred to any of the cyclists and the run was a very pleasant one.

10,000 SEE BICYCLE RACE IN WINDY CITY

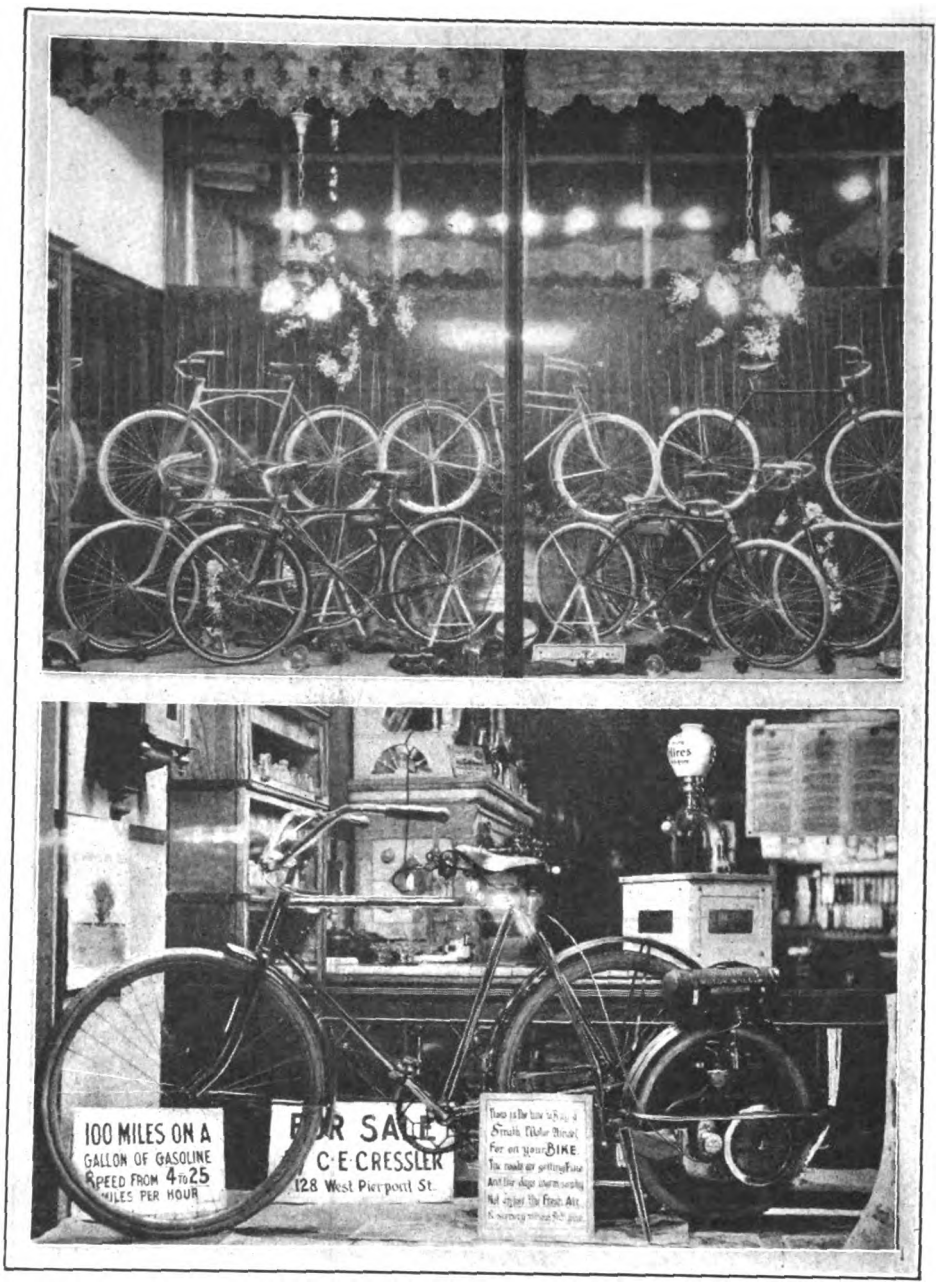
CHICAGO, Ill.—A crowd of more than ten thousand people saw Earle Stasch, unattached, win the twenty-mile handicap race of the Cycle Dealers' Association on the Lincoln Park Course. A. Vanderpelt, of the Belgian-American Cycling Club, was second, while Philip Klaes, a clubmate, sailed across the tape third. The first prize went to Wm. Kill, of the Chicago Cycling Club, his time being 47:45.

EAGLE CYCLE CLUB ELECTS ITS OFFICERS

BALTIMORE, Md., June 6.—The Eagle Cycle Club was the fourth bicycle organization which went on a social run here last Sunday. The objective of the ride was Chattalanee Springs in the Green Springs Valley. Those who participated in the affair were: C. Byrd, W. Anderson, F. Mirando, J. Wilen, Edwin Durr, M. Zlar, Henry Lasner, H. Nechamkin, A. Weinstein, N. Silverstein, Harry Laspe, J. Barnett, R. Jones, S. Nusbaum, A. Yanoff, C. Lee, L. Jackson, A. Harrison and H. Goodman.

At a recent meeting new officers were elected by the Eagles: President, S. Nusbaum; vice-president, N. Silverstein; recording secretary, A. Weinstein; financial secretary, J. Wilen; sergeant-at-arms, H. Nechampkin; field captain, C. Byrd, and color bearer, W. Anderson.

TURNING THE PUBLIC EYE "WHEELWARD"



Above Is the Attractive Display of Emblem Bicycles Which Is Proving a Real Live Magnet for Walbridge & Co. of Buffalo, N. Y., While Below Is a Display of a Motor Wheel Outfit Made in a Kingston, N. Y., Druggist's Show Window by C. E. Cressler, Which Redounded to the Benefit of Both Merchants

PLANNING CAMPING TRIP

MARYSVILLE, Cal.—The Marysville Bicycle Club is laying plans for a three weeks' camping trip to the Grass Valley district. All participants will carry their camping outfits on their wheels.

Long trips are becoming quite popular among California bicycle clubs. Extended tours are being planned for the summer months.

GOULLET WILL GET BACK TO FORM, FANS BELIEVE

NEWARK, N. J., June 6.—There will be but six national championship races at the Velodrome this year to decide the professional championship, held for fifteen consecutive seasons by Frank L. Kramer. Already two of these races have been run, placing Kramer far in the lead.

Alfred Goullet, the blond-haired Australian, who was the runner-up of Kramer in last year's championship races, is in rather poor form this season. Goullet, as the leader of the outlaw movement, put up a hard fight against the promoters, which sapped up much of his energy. It is believed, however, that Goullet will get back into form shortly and offer a lively battle to Kramer for the national honors. He is now at the bottom of the champ series pile.

On Road and Track

C. A. C. C. WILL ADMIT UNATTACHED RIDERS

At the Annual Convention of the California Organization Plans Are Made to Extend Its Scope; Bright Prospects for Bicycle Sport This Year; Greeninger Is Elected President

SAN FRANCISCO, Cal., June 1.—Enthusiasm over the immediate outlook of the bicycle sport in the Golden State was the keynote of nearly every address delivered at the annual convention of the California Associated Cycling Clubs, which was held here at the club house of the New Century Wheelmen last Saturday evening. The convention was well attended.

"Not at any time in the past five years," said President R. A. Greeninger, "has the C. A. C. C. been in such flourishing condition and faced such bright prospects. There are at the present time six Bay City clubs in our oganization, and I know that there are many out of town clubs desiring affiliation with our body."

To extend the scope of the C. A. C. C. the delegates voted to admit unattached riders to membership, the fee to be one dollar per annum.

Prominent among the clubs that entered actively into the convention proceedings was the Capital City Motorcycle and Bicycle Club, of Sacramento. The bicycle division of that club was but recently established, and has during the short period of its existence become one of the most important factors in boosting cycling on the Pacific Coast. Among the other clubs represented at the convention were the Garden City Wheelmen, New Century Wheelmen, Olympic Club, Acme Wheelmen and Samson Wheelmen.

New Officers Chosen

R. A. Greeninger, of the N. C. W., was elected president for the ensuing year, while J. Woodson, of the Capital City Club, was chosen vice-president, John Bird, Garden City Wheelmen, second vice-president, Geo. F. Drury, N. C. W., secretary-treasurer. Frank Klotzs, of the Samson Wheelmen, was appointed chairman of a special racing and records committee which will supervise events in the Sacramento and San Joaquin valleys, while Harry Spence, N. C. W., will take care of all publicity matters. The chairman of the general racing and records committee is still to be chosen.

The delegates at the convention were as follows: W. Hammitt, P. Morgan, R. A. Greeninger, H. Spence, A. Sangalli, L. Drury, J. Coughlan, W. Rhodes, N. Eisentraut, J. Bird, G. Simondi, F. Klotzs, J. Skow, R. Girard, F. F. Faster. Mr. Woodson, of the Capital City Club was unable to attend; but a letter from him was read in which many wise and helpful suggestions were made for advancing the work of the C. A. C. C.

After the business end of the convention had been disposed of, the delegates were the guests of the New Century Wheelmen at an informal banquet.

60,000 SPECTATORS SEE BICYCLE RACES AT SHEEPSHEAD BAY

Start of the Two-Mile Handicap Bicycle Race at the Speedway, and Tom Bello, Winner of Race

NEW YORK, N. Y., June 6.—Before a crowd of 60,000—sixty thousand, that's right—the largest assemblage that has ever witnessed a sporting meet in New York, two bicycle road races were staged in connection with other games at the Sheepshead Bay Speedway, last Sunday, under the auspices of the American Liberty Day Celebration Committee.

Tom Bello, of the Unione Sportiva Italiana, triumphed in the two-mile metropolitan championship race, turning the trick in 4:39 3/5. Anthony Attardi, a clubmate, accounted for second position. In the six mile bicycle race the Unione Sportiva Italiana again rode to victory; this time the colors of the Italian club were flashed across the tape by Nelson Johnson. The summaries:

Two-mile bicycle race, amateur, Metropolitan Association championship—Won by Tom Bello, Unione Sportiva Italiana; second, Anthony Attardi, Unione Sportiva Italiana; third, W. Waeldner, Seventy-first Regiment A. A.; fourth, Nelson Johnson, Unione Sportiva Italiana. Time, 4:39 3/5.

Six-mile bicycle race, amateur, handicap—Won by Nelson Johnson, Unione Sportiva Italiana (160 yards); second, Thomas A. Kennedy, Empire City Wheelmen (140 yards); third, Fred Woisin, Acme Wheelmen (90 yards). Time, 14:00 1/5.

GOLD WATCHES FOR ACME RACE

NEW YORK, N. Y., June 6.—Two gold watches with chains and knives are the latest prizes which have been received by the Acme Wheelmen for their ten-mile handicap road race to be held over the Pelham Parkway on the morning of Sunday, June 18. The prize list is still growing every day, the awards including several fifty dollar bicycles and a host of valuable accessories. Present indications are that the race will attract a large field of the best eastern riders.

WILL SPENCER SPLITS HONORS WITH KRAMER

Canadian Amateur in Lengthy Pursuit Race Beats out Eddie Carroll; Frank Kramer Wins Second Title Race of Season by Defeating Reggie McNamara

NEWARK, N. J., June 5, William Spencer, the Toronto amateur, started the honors, as well as the plaudits of the fans, with Frank Kramer at the Velodrome here on Sunday afternoon. Kramer won the second national championship race of the season, while Spencer finished first in one of the longest Australian pursuit races ever contested in Newark.

Kramer's victory in the championship race gives him ten points while Bob Spears, his nearest competitor, has but four. Kramer defeated Reggie McNamara in the final to decide first and second place. Kramer rode from in front and had the race well in hand at all times. Taking the first turn, McNamara drew up alongside of Kramer and stuck with him all around the back stretch and to a point entering the home stretch. Here Kramer gradually pulled ahead and McNamara was a length in the rear at the finish.

Humbled Spears and Ryan

In the grand semi-final, Kramer vanquished Bob Spears while in the semi-final the champion beat out "Grassy" Ryan. Spears tried to beat Kramer to the first turn on the last lap, but Kramer won by a length. Ryan was no match for the East Orange rider.

The pursuit race, in which Spencer beat out Eddie Carroll, of Oakland, California, went thirteen miles, five and one-half laps; the time was 31 minutes 58 seconds. At three miles all of the other riders had been eliminated and the race narrowed down to a fight between Spencer and Carroll. It lasted for almost eleven miles before Spencer was the winner.

Frank Cavanagh won the Brassard race at one mile from Iver Lawson. It was Lawson's first appearance at the Velodrome this season and Cavanagh, who as a rule is deficient in headwork, outgeneralled Lawson on Sunday. While the Swede was preparing to jump into the lead, Cavanagh shot off the bank into first place and was never headed.

McNamara Cops Handicap

Reggie McNamara, riding from scratch was first in the two-mile repechage handicap race for the professionals. He qualified by honor and won from scratch after riding a hard race. McNamara caught the field and then after setting the pace won in a fast finish. Jake Magin who had fifty yards finished second and John Bedell with 180 yards was third. Freddy Hill who was given an allowance of 130 yards finished fourth, while Alfred Grenda, riding from scratch, got fifth money.

Tommy Smith and Tommy Grimm who had a handicap of 160 yards easily won the one-mile tandem handicap race for the professionals from Iver Lawson and Willie Hanley who got second money. Marcel Dupuy and Charles Piercey finished third.

The one-third mile handicap race for the amateurs went to Marcel Burger, of the Olympic Club, of San Francisco. Burger started from the fifty-five yard mark and beat out A. J. O'Sicky, of Cleveland, Ohio, who had a like allowance. George Taylor, of Irvington, won his novice by defeating Paul Penn of the West Orange Cycle Association.

The Summaries

One-Third-Mile Novice (Amateur).—Won by George Taylor, Irvington; Paul Penn, West Orange Cycle Association, second. Time 0:44⅕.

One-Third-Mile Handicap (Amateur).—Won by Marcel Burger, Olympic Club, San Francisco (55 yards); A. J. O'Sicky, Cleveland (55 yards), second; William Eager, Bay View Wheelmen (30 yards), third; A. L. Kopp, Irvington (30 yards), fourth. Time 0:37⅘.

The Brassard Race, One Mile (Professional).—Frank Cavanagh, Newark, vs. Iver Lawson, Salt Lake City. Won by Cavanagh. Time 2:48⅖. Last eighth mile 0:12⅗.

Two-Mile Invitation, Handicap (Professional).—Won by John Bedell, Lynbrook, L. I. (75 yards); Percy Lawrence, San Francisco (80 yards), second; Harry Kaiser, Bronx (20 yards), third; Fred Hill, Boston (70 yards), fourth. Time 4:00.

One-Third-Mile National Championship (Professional).—Won by Frank L. Kramer, East Orange; Reggie McNamara, Australia, second; Robert E. Spears, Australia, third; Oscar Egg, Switzerland, fourth. Time 0:50⅕.

Present standing of the riders: Kramer, 10; Spears, 4; Grenda, 3; McNamara, 3; Goullet, 1; Egg, 1.

Australian Pursuit Race (Amateur).—Won by Arthur Spencer, Toronto; Eddie J. Carroll, Oakland, Cal., second; John L. Staehle, Bay View Wheelmen, third; Gus. J. Lang, Irvington, fourth; Thomas Fitzsimmons, East Orange, fifth. Time 31:58. Distance 13 miles 5½ laps.

Two-Mile Repechage, Handicap (Professional).—Won by Reggie McNamara, Australia (scratch); Jacob Magin, Newark (50 yards), second; John Bedell, Lynbrook, L. I. (180 yards), third; Fred Hill, Boston (130 yards), fourth; Alfred Grenda, Australia (scratch) fifth. Time 3:51⅗.

One-Mile Tandem Handicap (Professional).—Won by Thomas Smith, Irvington, and Thomas Grimm, Irvington (160 yards); Iver Lawson, Salt Lake City, and William Hanley, San Francisco (85 yards), second; Marcel Dupuy, France, and Charles Piercy, Australia (75 yards), third; Eddie Root, Boston, and Joe Fogler, Brooklyn (50 yards), fourth; Alfred Grenda, Australia, and Alfred Goullet, Australia (scratch) fifth. Time 1:40⅗.

FIRST BICYCLE CORK RACE

BROOKLYN, N. Y., June 6.—The Brooklyn Wheelmen held their first bicycle cork race of the season last Sunday over the Rockaway Road, Ozone Park, L. I. The race was a five-mile handicap affair; Ray Caldwell, starting from scratch, hit the tape first. Ten riders faced the starters and sailed over the line in a blanket finish.

DELIVERS LAWN MOWERS ON TANDEM BICYCLE

WESTFIELD, Mass., June 6.—The accompanying photograph shows H. P. Perry and his Cleveland tandem, loaded with lawn mowers. Perry uses this wheel every business day in the year in calling for and delivering lawn mowers for the Westfield Grinding Company of this city. With the carrier which he has rigged up he has no difficulty in handling two and sometimes three mowers.

The Cleveland bicycle he uses was made for a superintendent of the Westfield factory over twenty years ago. Perry bought it a few years later and has ridden it continually for pleasure and business, carrying barrels of flour and other bulky articles with apparently no difficulty. During all these years this tandem has given him consistently good service.

A ONE-DAY VISIT TO NEW ORLEANS

How the Bicycle Proved to Be a Boon Companion to a Tourist Whose Stay in the Quaint Old Creole City Was Brief But Interesting—Many Sights Crowded Into a Day Awheel.

By JOHN E. HOGG

Andrew Jackson Monument on the Site of the Battle of New Orleans. Henry Clay Appeared at Its Dedication

LATE one afternoon, a few weeks ago, I walked down the gangplank at New Orleans from the S. S. *Comus,* after a six days' tumble down the Atlantic Coast from New York, through the Straits of Florida and the Gulf of Mexico. Next morning I was awheel, bright and early. I did not find it necessary to rent a bicycle, my friend, Mr. George M. Beckett, the Indian motorcycle and bicycle dealer, having thoughtfully taken care of me.

I secured a map of the city, and after picking out the points of interest that I desired to visit, Mr. Beckett marked my route on the map with a red pencil, so that all I had to do was to follow this, thus sparing myself the annoyance of having to stop and ask questions as to how to get about.

Through the Business Section

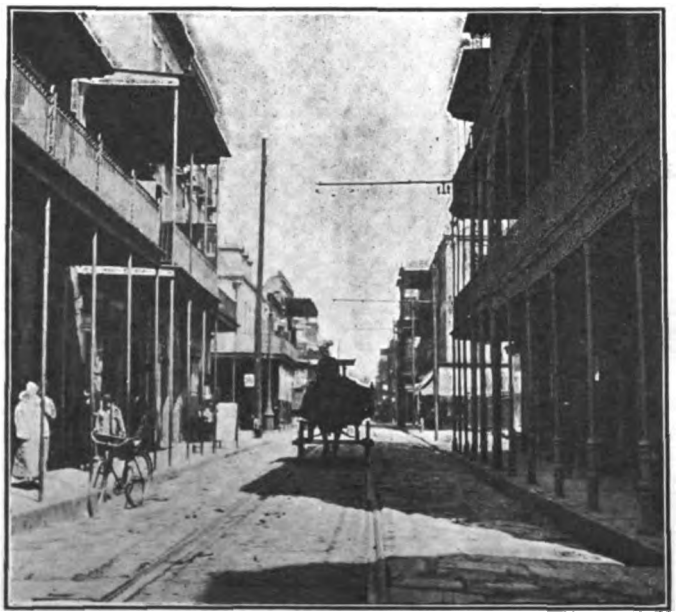
My first point of interest being the steamboat docks along the levee, my route led uptown, through the congested business district of the city and down Canal street to the river. Canal street is a fine broad thoroughfare, thoroughly businesslike and as up to date as the main street of any big Eastern city. There are four car lines on the street, and these run along in a nicely parked space in the middle, with the two sides well paved with asphalt for the use of other vehicles.

Aided by the wind at my back I soon traversed the length of Canal street, and was greatly amused to find myself pedaling vigorously uphill toward the river. The river was at high tide and up almost to the brink of the levee, which is from 35 to 65 feet above the level of the city. It was a novel experience to go aboard a steamboat and observe that the surface of the water was on a level with the roofs of many houses in the city. All along the river front there were countless numbers of ships loading cargoes for ports all over the seas, while along the docks were thousands of bales of cotton, barrels of sugar, and every manner of merchandise waiting to be loaded into the ships. All of the heavy work is done by negro huskies, who sing as they go about it.

In the Latin Quarter

Leaving the docks I pedaled down Bienville street, and over a lot of rough cobblestone pavement to the Latin quarter of the city, where in a moment I felt as if I had been transported to France. The air was filled with the nasal twank of French conversation, and as one looks about and sees shop fronts of typical French architecture and signs all written in French, the feeling is much the same as when one traverses the Bois de Boulogne of Paris. The entire French quarter is novel and interesting, and I was greatly amused when upon hearing someone call out, "Carbon. Carbon." I looked about to see a peddler with a little spring wagon, retailing coal, five cents' worth at a time.

A few more blocks of Pavé (French for cobblestone pavement) brought me to the old St. Louis Cathedral, a most interesting structure, both from the standpoints of history and architecture, as well as one of the oldest buildings in New Orleans.



La Rue Chalmette, New Orleans. This Is a Typical French Street in the Latin Quarters. Note Rough Cobble Pavements

St. Louis Cathedral Which Was Built in 1794. It Was Named After the Saint of the French King at That Time

The Ancient State House

Within a few rods of the old cathedral are Jackson Square, the site of the battle of New Orleans, and the old Cabildo, the ancient state house of the Spanish days, later acquired by the French and in which was transacted the Louisiana Purchase. At all of these places the tourist can spend a great deal of time, as there is so much of interest to be seen. This is where the bicycle tourist has a big advantage. He can linger to his heart's content, and depart as he pleases.

The clock in the cathedral tower of the photograph reproduced herewith will testify to the fact that it was getting very near to lunch time when I departed from the neighborhood, and feeling hungry for some French cookery, I rode back into the French quarter and to Monsieur Alphonse Cozabonne's restaurant, where a delightful meal, including everything from soup to nuts, and also a bottle of wine, is served for the modest sum of forty cents. Everything about the place is decidedly French, including the conversation, menu and music.

A Babel of Tongues

After lunch I visited the Old French Market, one of the quaintest and most interesting places in New Orleans. Here one would have to be a wonderful linguist if he were to converse with all the people about

Digitized by Google

the place. Every race and nationality under the sun is represented in the market, and the babel of conversation that one hears is simply bewildering.

At the United States Mint

From the market I rode on through the French and Italian quarters of the city to the United States mint, and after securing a pass was admitted to the big money factory. It was interesting indeed to see huge bars of gold and silver rolled out into sheets, like so much tin, and then stamped out into coins in huge machines that turned them out just as if they were so many iron washers.

The engraving and printing department where the bills are made was also very interesting. There were bills of all denominations in the various stages of making, from the raw paper to the huge sheets of bills, ready for the trimming machine that gives them the final touch. It was in the finishing room that the guide allowed me to undergo the sensation of having two million dollars in my hands at once. The money was in two bundles—a thousand thousand-dollar bills in each. Those in charge wouldn't turn their backs long enough, though, for me to make a sneak.

Riding Against the Wind

Leaving the mint my route led out Canal street to the Maitairie Cemetery. It was a pull of about five miles, and there was a headwind that was so strong that I could scarcely make any progress against it. I pedaled for several blocks, then decided that it was too much like work, so hooked to a passing motor truck and was towed right to the cemetery gate.

The cemetery is a beautiful place, wonderfully parked, and looks almost like some strange sort of city, with its tombs all built above ground.

To Lake Ponchartrain

After touring pretty well over the cemetery, I left by the opposite gate, and about a mile's riding brought me to the city park, which is reputed to be one of the most beautiful parks in the United States. There are some wonderful floral effects, and with the trees hanging heavy with the Southern moss everything appears very tropical. At the north side of the park I found a gravel and shell road leading down to Lake Ponchartrain.

Here Is a Glimpse of the Old French Market in New Orleans, Built in 1723, Around Which the City Grew. The Market Occupies Four Blocks

I had no idea where the road went when I started, but just followed it out of idle curiosity through a dense cypress swamp until I brought up on the shore of the lake. I espied a bath house a short distance down the shore, and had a swim in mind, but upon sampling the temperature of the water with my hand, decided to defer my bath until I returned to my hotel. The water was like ice.

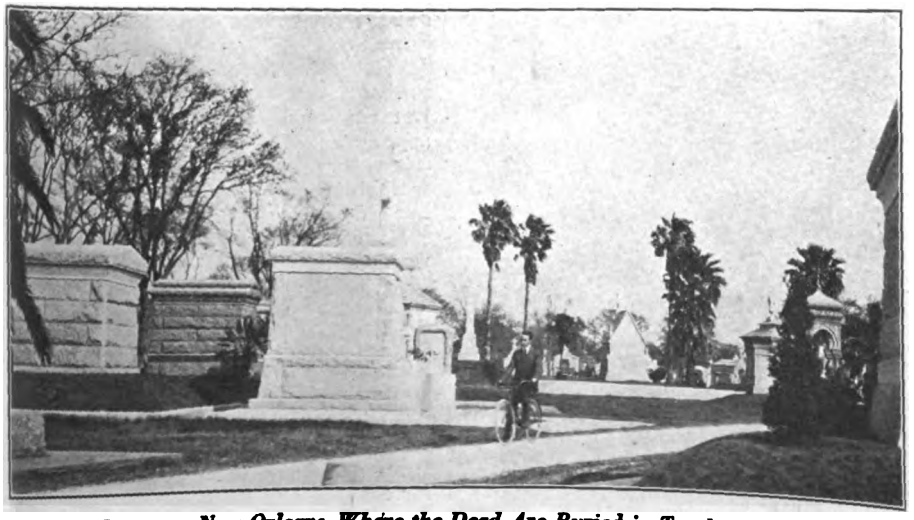
Delightful Return Trip

Even as I stood upon the shore of the lake, watching and listening to the ripples gently lapping the bank, the sun, which had grown big and red, dropped below the cypress-fringed horizon, leaving a gorgeous pink and golden glow over the sky.

I was soon back on Canal street, and with the stiff breeze on my back found that I progressed with wonderful ease, in fact I was able to coast a great deal of the way. The trip back to Mr. Beckett's store was only a pleasant jaunt.

After a bath and a change of garments I met some friends with whom I had a supper appointment. We adjourned to Fabacher's—one of New Orlean's famous restaurants—and before we had finished eating I was positively ashamed of myself, and my friends declared that I could eat more for a small person than anyone they had ever seen.

I doubt very much if anyone ever toured New Orleans by any of the conventional modes of travel and saw as much of it in one day, or returned with as pleasant an appetite. If you would tour a city for the sake of seeing it, and getting the maximum enjoyment out of it, I believe that some one has yet to invent a better means of doing it than by bicycle.



Matairie Cemetery, New Orleans, Where the Dead Are Buried in Tombs Above Ground. This Is Because the Cemetery Is Situated Below the Level of the Mississippi River and the Ground Is Saturated with Water

BICYCLE GIRL STIRS UP TORONTO INTEREST

TORONTO, Ont.—The lady cyclist has come back. "The woman on a wheel" rode into Toronto last Sunday and before she had arrived in the downtown section of the city she had created a sensation. Judging by her appearance, the lady had just dropped off from a trip from Palm Beach, Florida. She was attired in a pure white linen dress and shading her pretty facial features was a Panama hat of smart design. Her bicycle was a shining new model and she pedaled with ease along all the principal thoroughfares. Her male escort also bore that Palm Beach appearance and he looked as cool and happy as the lady. But the rider in the pure white dress caught the eye of everybody.

Everybody Was Interested

People in crowded street cars followed them with their eyes until the pair had passed from view. Motorists turned around to watch their airy progress. Pedestrians halted to watch the cyclists go by. To many it was a remarkable spectacle.

The presence of the two riders on the streets of Toronto was due to an arrangement of a prominent local bicycle producer who adopted the idea merely to get more people talking about bicycles. He put across the stunt without attempting any self-advertising and, judging by the manner in which everyone watched the cool couple in their city ramble, the performance served its purpose. It was a clever boost for the bicycle.

SPECIAL DEALERS' SERVICE IS POPULAR

Sales Helps Offered by Goodyear Are Being Used Extensively by Bicycle and Motorcycle Dealers —Description of Tire Company's Cooperation Plan Which Is Already Showing Results

AKRON O., June 6.—The special service of the Goodyear Tire & Rubber Company is being used this season by a surprisingly large number of motorcycle and bicycle dealers. New features have been added, but the most popular has been the circular letter service, the demand for which has literally swamped the Goodyear multigraph department, one of the largest in the country.

Letter Service

The circular letters are written by men who have given careful thought to the problem of increasing sales. An attractive letterhead is made up from the data secured from the dealer, or he may furnish his own stationery if desired.

After the letters are prepared they are sent, with suitable enclosures, to the dealer, addressed and stamped, ready for signature. The only part the dealer is asked to perform is that of signing and mailing the letters. The popularity of this service is attested by the fact that more than 1,000,000 of these letters have been ordered.

Helpful Road Signs

Many dealers have found that there are few ways of catching the tourist trade better than by road signs, posted at intervals along the routes which motorists use. The tourist is quite likely to seek out the service station dealer whose road signs have assisted him in finding his way along unknown paths. Then they serve a double purpose—they are both advertisements and mileposts and the mile post feature doubles their advertising value. 200,000 of these signs distributed over all sections of the country are now pointing the way to Goodyear service stations.

Motorcycle Gloves

Motorcyclists' gloves constitute a new feature among Goodyear selling helps. The gloves are made of durable material and are especially useful to riders when working around their machines. On the large cuff of each glove is printed the dealer's name and address, so that the rider is reminded of his friend, the dealer, whenever he is tinkering with or riding his mount.

Several plans are being used in distributing these gloves. A favorite one is to give a pair with each large purchase. As good-will producers many dealers have found the gloves second only to the letter service.

Newspaper Advertising

A new plan has been adopted for furnishing the dealer with newspaper advertisements. Instead of supplying an electrotype of the whole ad, as before, Goodyear is furnishing a cut of the tire and writing up special copy for him. This method has been found more satisfactory, and it costs no more than the former method. The new way gives a personal touch which the dealer appreciates.

Another efficient help is the "Blue Streak Bicycle Cap." Many dealers are using them as premiums, giving a cap with such purchases as bicycle tires. This method of distribution has been found better than giving them out promiscuously. When given with a purchase they are more desired by the boys, and thus swells a dealer's sales.

The color of the cap is white with the Blue Streak bicycle tire tread design in blue across the top. The dealer's name and address appears on the front of the cap in large letters.

THE BICYCLE AS A GRADUATION PRESENT

(Continued from page 31)

wholesome fun which the bicycle affords. You still vividly recall those happy trips through the country—the sport you had jaunting along beautiful roads, the ruddy glow of health which came to your cheeks, the fine physical condition that cycling developed—and the keen appetite which simply insisted upon being satisfied.

There are many pertinent arguments we might offer to show that the bicycle is a really worth-while present for graduation—and perhaps the best argument is that no gift could bring greater and more lasting joy to its recipient.

Make your graduation gift an investment in health and pleasure—BUY A BICYCLE.

Yours very truly,

THE JAMESTOWN CYCLERY.

P. S. Drop in to see our fine display of 1916 models.

SECOND LETTER

Dear Sir and Madam:

There will be one million bicycles sold in 1916. That's the allotment which the manufacturers are assigning to meet the big demand this season.

The great popularity of the bicycle undoubtedly makes the two-wheeler an ideal graduation gift. Everybody seems to be riding this year—and a present of a good wheel to your son or daughter would be doubly appreciated, first because many of their friends are now riding, and second because of the great sport they will enjoy.

We have a wide variety of machines from which you can make a selection—there is sure to be a bicycle in stock which will fit any purse.

The 1916 models, incorporating all of the latest and best improvements, are now on display at our store. We guarantee every wheel bought from us, and will see that absolute satisfaction is given all of our customers. If there is any adjustment to be made later, we will gladly do so free of charge. We know that our prices are right—that our line of machines cannot be matched anywhere.

Before buying a graduation present for your son or daughter, step around to our store and inspect the models now on display.

We are enclosing a catalogue which describes a few of he models in our stock. But you cannot judge the quality or the appearance of the machine from the catalogue—a personal visit to our store alone will give you some idea of the splendid line of bicycles we are offering.

Make your graduation gift something worth-while—BUY A BICYCLE.

Very truly yours,

THE JAMESTOWN CYCLERY.

The Morrow Makes the Motor Wheel More Effective

Freer coasting—more positive braking—a safety and surety which you never knew before—these are the advantages derived from the presence of the MORROW in the rear hub of your wheel.

To get the most out of your motorwheel's power, to get the smoothest kind of coasting—to glide down the steepest hill with absolute—sure—control at your instant command—you need the MORROW.

The standard for more than a decade, the MORROW is on most of the wheels in this country. There may be some without it—therefore, insist when you buy your motorwheel that it is equipped with the "safety-first" brake—the MORROW.

Morrow literature is interesting. Why not let us tell you all there is to know about the MORROW? Write today for full literature.

The Magnet That Draws Big Bicycle Business

The dealer who stocks ROLLFAST tires sells them. What's more, the man he sells them to creates a ROLLFAST epidemic in his section. The reasons for this business-making popularity of the ROLLFAST dealer are plain.

First, the man who gets ROLLFAST tires obtains the exclusive selling agency. The sole-selling privilege for a quality tire such as the ROLLFAST *means something*. It's a guarantee of tire-selling success. The exclusive selling right for your town enables you to sell these tires at the price they were made to sell for—YOU DO NOT HAVE TO CUT PRICES.

Just get a line on these friend-making tires from your jobber. Any of the big men listed here will be glad to consider your application for the ROLLFAST agency. BUT WRITE TODAY.

In the Dealer's Realm

A GOOD REPAIR SHOP IS A REAL ASSET

It Helps to Keep a Rider Satisfied with His Mount and to Assist the Dealer in Making Further Sales; Poor Shop Service Hurts Both Dealer and Machine He Handles

By SUBURBANITE

WHILE in the shop of a local agent for one of the leading makes of motorcycles one day, the conversation turned to the subject of repairs. A rider who was with me at the time had been having quite a bit of trouble with his machine and it was then standing idle in the garage, owing to his inability to locate a decent repair shop. As a result of his own unsuccessful tinkering and the fruitless search for a good shop he was gradually getting disgusted with motorcycles in general and his own in particular.

So, when he remarked during the course of the conversation to the dealer: "Why don't you have a good repair shop here, so that the fellows who ride Blanks will know they can get a fair deal and have their work attended to promptly?" he was more or less amazed to receive the answer: "It wouldn't pay. The two fellows I have do well enough on any little odd jobs that I have to take and anything else I don't care to bother with. If anyone wants their machines thoroughly overhauled, they can ship them to the factory."

The Poor Repairmen

Now from personal experience, I happen to know what these "repairmen" can do in the way of odd jobs. They go about repair jobs oddly and when they get through the results are remarkably poor. As a consequence, riders who have had one such experience grow cold toward this dealer and his business methods and cease to boost for the machine he handles. Some other dealer who is more to be relied on when it comes to getting a little service gets their confidence and their trade when it comes time to change machines for a new model.

Then our dealer, with his "odd job" repairmen wonders why we all suddenly swerved to another make of machine, when we had always been so enthusiastic over the good points of the mount he handles. The real reason for the switch never seems to enter his mind, or if it does, he takes no steps to remedy such a condition of affairs. In other words, he seems to be too narrow-minded to look ahead and think of us as future sales prospects, but hammers away at getting entirely new business and neglecting that at his very door. His attitude is: 'This way out, please. I have quite finished with you. Next!"

I am not saying this from experience with a few local dealers only. On the contrary, I have found this to be very much the case when riding through no less than twenty different States and meeting all sorts of dealers and riders. Judging from a comparison of notes on the subject, it seems to me to be a mighty poor case of business sagacity for a dealer to neglect the shop end of his business. Too many dealers either totally overlook the repair department as one of the best adjuncts of their business, or else conduct it in such a slack and careless way with inexperienced repairmen, that it is worse than useless. In the latter case, it does not pay and must necessarily have a bad effect on the sales department. And how few dealers look at it from this standpoint!

Live Dealer Has Good Shop

Invariably I have found that the most successful dealers and the ones that make the rider a booster for the particular models which they sell are the ones who are far-sighted enough to see the business possibilities of a thoroughly equipped and well-managed shop. They keep the rider boosting for the greatest possible length of time, too. There are plenty of odds and ends that the rider whose time is more or less taken up by business would rather hand over to the repairman than spend his limited time on. This is, of course, if he were sure of getting the work done properly. Take my own case.

When I feel that my motor should be taken apart for a thorough cleaning, the idea of doing it myself does not appeal to me in the least. It means that I will spend a precious Saturday afternoon and Sunday in the garage instead of on the road, and when one goes to business, riding days are all too scarce to be wasted. For me to take a motor down alone is rather heavy work, but I have to tear right in and do it myself or take the risk of having someone whose mother evidently raised him to be a butcher make a mess of it.

If my local dealer would keep a decent repair shop, my mount could be left with him on Monday evening and would be all ready for me by the next Saturday afternoon. Then there will be another motorcycle booster on the road Sunday, enjoying the combination of good roads, fresh air and a smooth-running motor, instead of one sitting in a garage and getting grouchier each minute; wondering where the rest of the crowd is and what they are doing. My case is, unfortunately, only one of countless others. Here's a chance to get business now and next season, but the dealer isn't seeing it.

We have all met the rider who possesses little or no mechanical ability and who must of necessity depend on a repair

SCHWARTZ'S POWER BIKE WEEK PROVES BIG SUCCESS

Line Up of Miami Four-Strokes at Schwartz's Store on Opening Day

NEW HAVEN, Conn.—S. Schwartz, who took on the agency for the Miami Power Bicycle a short time ago, started right in to boom the little four-stroker by holding a Power Bike Week when the first lot arrived. He took page advertisements in the Sunday papers, and half pages up to Wednesday after the shipment had arrived. The balance of the week was taken with quarter pages in the dailies.

The 'Safe, Silent, Clean" end was the center of the entire campaign. There were no mentions of dimensions in any of the ads; the ease of control, the commercial and pleasure sides were the ones that were emphasized. The campaign brought in its full quota of results.

Most of the sales were to men of over 30 years. The actual number of sales was 15 machines in two days, but more would have been made had the weather not been so stormy on the other days of the week. As a result of the Power Bike Week, Schwartz is cleaned out of Miamis and has ordered 25 more to be rushed to him.

Schwartz is thinking of putting on a special salesman to take charge of the Power Bike end, as his bicycle business is growing larger each week. He looks for the sale of 100 Miami Power Bikes within the next month, and is planning to form a Miami Power Bicycle Club. C. A. Van Doren and C. F. Pineau, of the Miami Cycle & Mfg. Co., forces were on hand.

GOOD SALESMANSHIP WINS OUT, SAYS FRISCO DEALER

SAN FRANCISCO, Cal.—Commenting upon the report from a good many retailers that business at present is hardly up to the expectations of a month or so ago, a prominent San Francisco dealer says: "The days of easy money in the motorcycle business are gone. The time was a few years ago when motorcycles sold themselves; people would come in unsolicited, and if you didn't have what they wanted they would take the next best thing offered, and plank down the money.

A good many dealers fell into bad habits then, and do not yet realize the change that has come about. They sit in a chair and complain because business does not come in. As things are now, it takes some salesmanship to make the machines go, and the stores that are getting ahead are those where a man can't go in without having somebody meet him right at the front of the store to learn his wants; where all hands are steadily and enthusiastically boosting the game along and keeping their eyes peeled for prospective buyers."

FOR PARCEL POST SERVICE

BOSTON, Mass., June 1.—It was learned today that the Harley-Davidson Company, here, of which Jess Campbell is branch manager, has received an order for three machines, one equipped with a Cygnet rear car from the local postal authorities. The machines are to be used in the distribution of parcel post matter, which for some time had been a problem to the local post-office people.

Over 11,000 Miles

On Vitalic Tires!

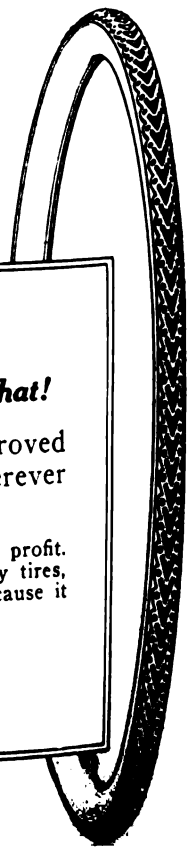
What ordinary bicycle tire could come anywhere near that record? None! It took VITALICS to do it.

Out of over 60 tires used during a period of 25 years by Dr. F. S. Cate of Florence, Cal., the Vitalic was the only one to reach anywhere near this mileage. Among the 60 tires used were the *very best* of other makes, a number of them much higher priced than the Vitalic. But Vitalics ran *more than three times* the average mileage of the seven next best makes of tires used (based on an accurately kept mileage record sworn to before a notary).

It is this unmatched *mileage* which Vitalics are giving wherever used that proves beyond question their unequalled standard of construction; highest quality of rubber instead of the cheaper grade put in ordinary tires; two plies of heavy *motorcycle* fabric, frictioned with pure rubber, instead of common bicycle fabric; an extra heavy inner tube of pure white rubber.

Write for the testing section and examine these features of construction thoroughly.

VITALIC TIRES
TRADE MARK
For Bicycles



Dealers—

Think what you could do with a tire like that!

There isn't any room for doubt—Vitalics have proved their supremacy over all other bicycle tires wherever comparison has been made.

Thousands of dealers rely on the Vitalic to make their tire profit. Once introduced, it easily brings a better price than ordinary tires, and always sells over and over again to the same trade, because it never disappoints.

There is just one thing more expensive than driving without a speedometer and that is driving with an inaccurate one. False information is worse than no information at all.

You pay for accuracy.

Get it!

Specify the

CORBIN-BROWN SPEEDOMETER

"The Speedometer of Absolute Accuracy"

Motorcyclists of experience for years have used the Corbin-Brown when making their big drives, their record runs; in fact, whenever they have real man-sized work to do. They realize the importance of having not only an accurate speedometer, but a durable one—one which will stand up under the hardest strain. Such a speedometer is the Corbin-Brown.

Specify it! At all dealers.

Catalog on request.

The Corbin Screw Corporation
THE AMERICAN HARDWARE CORPORATION, Successors
NEW BRITAIN, CONN.
BRANCHES: New York Chicago Philadelphia
Makers of Corbin Duplex Coaster Brakes for Bicycles

NEWARK, N. J.

WALTER GOERKE, the Indian Man, has a contented look, for business has increased 40 per cent over last year's total sales so far. Every third machine sold is a sidecar combination, which proves the popularity of the third-wheel attachment.

Less than 10 per cent of Walter's sales are of rigid frame models and a big majority of the mounts are Prest-O equipped, as deliveries on the electric machines are slow. Second hand sales to date have been money-makers for the Goerke establishment.

CARL W. BUSH COMPANY, handling the Silent Gray, has received its fourth carload of Harley-Davidsons and sidecars this Spring, with another to follow one June 15. This shipment contains 34 machines and 12 sidecars, and puts the firm well on the way to the 200 mark.

Lincoln Holland, sales manager of the company, in commenting on the recent winning of the New Jersey M. C., run by the Harley-Davidson team and in the sidecar class, says: "The winning of the contest was the best argument that there has been no let-up in the Silent Gray march toward perfection and should effectually set at rest the talk that this year's machine is not as good as that of 1915. In fact, the sidecar demonstration of power and stability in the run will be our best talking point during the remainder of the season."

M. I. BUNKIN, manager of the Haverford Cycle Company's branch, is just getting around again after a week's stay indoors, due to a near-collision with an automobile. In the affair, Bunkin upset his Excelsior combination to avoid the four-wheeler which was going at 40 miles per hour.

Bunkin has 20 of the Series 17 Excelsiors being uncrated, with 7 more due this week, and sidecars are being unpacked almost as fast. Smith Motor Wheel sales are hovering around the 50 mark.

DAYTON SALES COMPANY has been putting Dayton Power Bikes out on the road and now has 10 of the front-drive mounts around town. The firm expects to dispose of 25 before the season closes.

COLUMBUS, O.

O. C. BELT, of the Belt Motor Company, Indian agent, in Central Ohio, has just returned from a visit to the Hendee factory at Springfield, Mass. He reports a better trade in motorcycles than last year with nice prospects for the future.

FRANKLIN RUBBER COMPANY, located at 265 North Fourth street, has taken the Central Ohio agency for the Excelsior. The territory consists of three counties, and steps have been taken already to establish a number of sub-agencies.

RUSSELLVILLE, KY.

MACK RICHARDSON has opened a shop here to represent the Indian line of motorcycles and bicycles. The shop is brand new and is finely equipped throughout.

KANSAS CITY, MO.

ORVILLE NEWBY, of Newby Brothers, Henderson agents, has been at St. Joseph, Mo. for the past two weeks with his demonstrator. He reports good results from St. Joe. with the four-cylinder mount.

Another big WIN for

CYGNET REAR CAR

Sensational Score for both CYGNETS in 1000 Mile Boston-Buffalo Run

2 stock CYGNET REAR CARS flashed away from Boston at the crack of the starting gun. 3 days later **both** swung across the finish line with practically perfect scores. 1029 miles in flood and sunshine, over boulevard or "mucky" country road, up mountain and down hill is a test that tells. Though others failed, the sturdy CYGNETS were "there" every time in the front rank at every checking point. Their well-nigh faultless performance was the sensation of the run.

Notice especially that each Cygnet carried two passengers—these men and the cycle operator testify enthusiastically to the comfort, safety, speed and easy riding of the outfit. No machines or riders came through with half so much ease as the Cygnet men.

Cycle Dealers and Riders, the truly remarkable performance of the CYGNETS means much to you—that here at last is **auto capacity, comfort and safety at the low motorcycle cost.** Of course the CYGNET fits any standard motorcycle—is attached or detached in 30 seconds. And it has a score more of big features that you'll surely want to know about. You'll read our free CATALOG with great interest—write today—NOW.

ELISCO

Light Gauge, Cold Rolled

Steel Tubing

Unequalled for Mechanical Accuracy and Finish

Made under the "Elisco" process by automatic machines which combine six operations in one, and ensure a degree of uniformity and finish hitherto unobtainable.

We are still able to make reasonably prompt delivery of 18 and 20 gauge tubing in most sizes from 7/16 inch to 2 inch outside diameter.

Let us submit samples and quote prices.

The Elyria Iron & Steel Co.

East 131st Street Cleveland, Ohio

Chicago Office, 1243 Peoples Gas Building
Atlanta, Georgia, Office, Candler Building

TACOMA, WASH.

MOTORCYCLE SERVICE COMPANY has opened a store at 608 South Ninth street, with Ray Pentecost and "Sparkplug" Reichert in charge. Both boys are well known on the Row and in their new departure guarantee the best work on all machines. Parts for all makes of motorcycles are carried and the new concern utilizes a small automobile as a service car.

F. M. BAILEY, distributing the Smith Motor Wheel in this city, reports a number of sales in the South Tacoma district, as well as one to the Dempsey Lumber Company. Another shipment of the little boosters is on the way from the Milwaukee factory.

FRED AMBLADE has taken the agency for the Excelsior in Tacoma and now displays an electric "Big X" sign at his store. Mike Herman, an expert repairman, is in charge of Amblade's shop.

CHARLESTOWN, W. VA.

B. E. ANDRE, who handles the Dayton line of motorcycles in this city, has just returned from a trip to Dayton, O., where he visited the Davis Sewing Machine Company's factory. He reports things humming at that plant and expects a consignment of machines soon.

WASHINGTON, D. C.

F. L. LEISHAAR, handling the Indian in this city, is "painting the town red" with Indians this year. During the season to date he has sold 76 Indians of all models, thereby equalling his sales for the entire 1915 season. His sales were chiefly of the three-speed twin model, and in addition he sold about 25 Indian sidecars and about 15 Hendersons. Leishaar's record was established in the face of competition from another agency for the Hendee product. He predicts that his sales will reach at least an even hundred Indians.

RICHMOND, IND.

EARL J. WRIGHT, who represents the Dayton line of motorcycles, bicycles and the Motor Bicycle, has just returned from a visit to the Davis Sewing Machine Company's factory in Dayton, O. He put in a liberal order while visiting the Dayton plant.

CHICAGO, ILL.

CHICAGO CYCLE SUPPLY CO., of 22 West Lake street, has just taken the distributing agency for Yale bicycles in the Middle West. The negotiations covering this agency were completed with the Davis Sewing Machine Co., of Dayton, O., marketing the Yale cycle. The Davis firm is putting a new and complete line of Yales on the market.

The Chicago Cycle Supply Co. is the first of the big Middle Western and Western jobbers to contract for the Yale. Distribution will be made through Illinois, Indiana, Michigan, Missouri, Oklahoma, Kansas, Nebraska, Iowa and Southern Wisconsin.

CHICO, CAL.

G. C. FISH, of this city, has just closed a contract with the Motorcycle Sales Company, Northern California distributor for the Reading Standard, to handle the agency for Chico for that make. Fish is one of the best-known and most popular riders in this section.

AT THE GOLF CLUB WITH THE CLEVELAND

QUINLAN SAYS

WE have just contracted for Bosch Magnetos for our entire requirements for the coming year, and this is the very best possible recommendation that we could give, indicating that we are willing to pay what appears to be a high price, in order that we may be assured of the very highest type of ignition.

Our Service Department advises that they have experienced absolutely no trouble with the Bosch Magneto, and our Purchasing Department states that they are receiving satisfactory deliveries, and as representative of the Sales Department, the writer appreciates the value of Bosch equipment on the CLEVELAND.

Be Satisfied — The motorcycle you sell CAN be Bosch-Equipt, too. Insist if you must. — Specify Bosch

Correspondence invited.

Questions and Answers

DOUGLAS DETAILS

PLEASE give me some details about the Douglas motorcycle of which readers of the motorcycle magazines are hearing so much these days. What are the dimensions and the power? I presume there are none made in this country.

Chicago, Ill. HARRY JOSEPHS.

The Douglas motorcycle, made in Bristol, England, has a two-cylinder opposed motor, with a bore of 2.37 inches and a stroke of 2.36 inches. It is rated at 2¾ horsepower. The piston displacement is about 25 cubic inches. There is an outside, pressed-steel flywheel and the valves are arranged side-by-side. The motor will turn up to 4,500 revolutions per minute. There is none made in this country, although a motor of similar design may be offered to the riding public in this country for 1917.

PARTS FOR IMPERIAL

I DESIRE to get parts for an Imperial motorcycle. I have written to several companies, but none of them seems to know where the machine was made.

Britt, Iowa. J. F. LORENZ.

The only Imperial motorcycle we know of is made in England, by the New Imperial Cycles, Ltd., Birmingham. There is no agency for this machine in the United States nor do we know where you could get parts. You do not describe the machine at all, so we are at a loss to know if it is the English Imperial, or some privately-built jobbing motor-cycle with that name. Look on the motor for any initials and let us know what you find.

CURING UNEVEN RUNNING

MY 1913 twin has been overhauled and has good speed when run with throttle well open, but when run at low speeds it operates unevenly. When I retard the spark it runs smoothly, however. Kindly advise me of the remedy, and if it is hurtful to run on retarded spark.

EDWARD DAVIES.

Jamaica, N. Y.

The spark is probably set too far forward for running at slow speed. First try to run on a weaker mixture, with spark well advanced, but throttle closed, and see if there is not an improvement in the running. If this does not do the trick, look for leaks along the inlet piping. Then choose whether you would rather have high speed, with poor running at low speed, or good running at low speed and a machine that will not be so fast. If you decide on the latter, put back the magneto timing one tooth. Running on retarded spark is not very good for the motor.

CYCLONE PARTS

I HAVE a Cyclone motorcycle which is in need of repair parts and would be glad to have you inform me if the makers are still doing business or not.

Waitsfield, Vt. ALLAN E. FARR.

As far as we know, the Joerns-Thiem firm are out of business. There was some talk of reorganizing a short time ago, but nothing has come of it. We suggest that you write the company, or communicate with the Bell telephone interests, some manager, in fact, in St. Paul, Minn. We do not know where you can get parts other than the company.

It's Easy to Sell the

Miami PowerBicycle

And Profitable Too

Factory men are getting big wages now and the low first cost, economical upkeep and simple construction of the MIAMI appeals to them.

Four Times the Ordinary Spark-Power

Indian Motocycle — WILL RISDEN LOS ANGELES — INDIAN MOTOCYCLES — Indian Motocycle

SO. CAL. DISTRIBUTOR

ACCESSORIES—SUPPLIES—REPAIRS WHOLESALE AND RETAIL

Los Angeles, California.
May fourth,
Nineteen hundred sixteen

Mr. Wm. N. Davidson,
Walker Ave. & Davidson Way,
Oakland, California.

Dear Sir:

Some time in November, you sent us a set of Bethlehem Spark Plugs to put in the 1916 POWERPLUS INDIAN. It gives me pleasure to state that these plugs were put in the first POWERPLUS INDIAN received by us. The machine was used to cover the territory and show to agents, and nearly every one in our territory got their first POWERPLUS ride on this machine. We have since run this machine over eight thousand miles, and to date it has not been necessary to examine - much less, clean - either one of the BETHLEHEM Spark Plugs.

Considering the fact that this machine was placed in hard service the moment it was received, and copiously supplied with oil at all times, to compensate for our not having time to break it in slowly, we think that the performance of these plugs is the most remarkable that ever came to our notice, and it is a genuine pleasure to say the word where we hope it may do some good.

Very truly yours,

C. WILL RISDEN

J. C. Butler Jr.
Motorcycle Sales Manager.

BETHLEHEM FIVE POINT SPARK PLUG

No. 3 MOTORCYCLE PEDAL

No. 3 STANDARD MOTORCYCLE PEDALS

Our products comprise:

Diamond "E" trade mark brand Spokes and Nipples for Bicycles, Motorcycles, Tricycles, Velocipedes, Invalid Chairs, Sulkies, Carriages, Cyclecars and Automobiles. Pedals for Bicycles, Tricycles, Velocipedes and Motorcycles. Toe Clips for Bicycle Pedals. Emergency Axles for Pedals. Screw Machine Products.

When you buy a motorcycle, make sure that it is equipped with STANDARD PEDALS.

Most manufacturers have reasoned out that "STANDARD" EQUIPMENT means increased value on the machine.

STANDARD PEDALS are big, roomy, soft and minimize the shocks. Deeply corrugated to insure positive foot grip. Insist upon STANDARD EQUIPMENT.

The Standard Company

TORRINGTON, CONN.

We are boosters for "One Million Bicycles in 1916"

BITS OF TRADE NEWS FROM BUSY SAN FRANCISCO

SAN FRANCISCO, Cal.—Plans have been completed for a "People Fair," to be held June 4 to 12 at the Municipal Auditorium, along lines similar to the old-time mechanic's fairs prior to 1906. Four dealers in motorcycles will exhibit: John H. Baumgardner with the Indian; Maggini & Perkins with the Harley-Davidson; Motorcycle Sales Co. with the Henderson, and Fred H. Bente with the Excelsior.

The Excelsior exhibit will include a big-valve twin, a regular model, a lightweight and a Superior sidecar outfit. The Motorcycle Sales Co. is preparing literature for distribution at the exhibition, describing Roy Artley's run from Los Angeles to San Diego on a Henderson in better than the best time made by an automobile to date.

A. FREED, of the Pacific Motor Supply Co., has taken another order for Indians, this time from the Pacific Telephone and Telegraph Co. The order is for six Powerplus with spring frame, to be used by foremen and trouble-shooters.

JOHN H. BAUMGARDNER, representing the Indian, has just returned from a two-weeks' vacation trip through northern California.

A. V. TOBEY has retired from the management of the Midway Cyclery, at Sunnyvale, being succeeded by Martin Maas.

A GOOD REPAIR SHOP IS A REAL ASSET

(Continued from page 41)

shop. Many of this class do depend on the shop and soon drop out of sight. You hear, after a while, that this one had sold his machine and tells everyone he meets that motorcycling is a mighty poor sport. Then you hear the same thing about others. If they had been able to get satisfactory repair service when some trivial trouble had happened to their mounts, they would still be enthusiasts and consider riding the best sport ever.

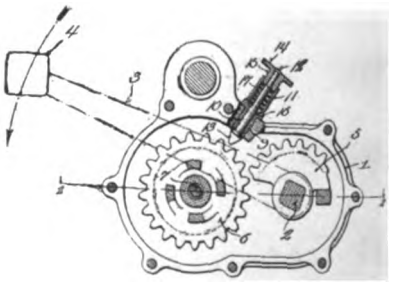
So, wake up, Mr. Dealer and look at things from the right angle. Let us riders feel that we can place some dependence on you. You will find us correspondingly grateful and your business will profit accordingly.

HARLEY MOTOR STARTER

AMONG the many patents granted to William S. Harley, chief engineer of the Harley-Davidson Motor Company, of Milwaukee, Wis., is a recent one, No. 1,184,345. This patent refers to the mechanism on the Harley-Davidson motor starter for bringing the gears in the starter to such relative positions that their teeth will properly intermesh.

In the figure 5 is the segment attached to the crank or arm 3 to which the foot of the rider is applied. The gear 6 is mounted on the main shaft of the gearset. At an angle to the gear 6 is fitted a spring plunger 13 with wedge face and button top 14. A spring 17 keeps the plunger in the upward position when not operated by the rider.

Should the segment 5 not mesh with gear 6 when the rider applies his foot to arm 3, the rider presses on 14. This pushes the wedge 13 downward and engages it with a tooth or in a tooth-space on gear 6 and



so moves this gear as to enable the teeth on segment 5 to intermesh accurately with those on 6.

The patent was issued on May 23, 1916 and is assigned to the Harley-Davidson Motor Company. The application was made by Mr. Harley on August 24, 1915.

NOVEL AWARD AT CANTON MEET

CANTON, O.—The Canton M. C. gave a race meeting at the county fair grounds a short time ago, and among the events was one for the prettiest girl. This was won by Ruth Wottle, of Canton.

HOW AGENT KIRK SHOWS THOR'S PULLING POWERS

Kirk with Thor Combination and Surrey Drawn Through Skiatook Streets

SKIATOOK, Okla.—D. F. Kirk, who represents the Thor in this city and vicinity, has been active in boosting the Giant Twin and other models of Aurora built motorcycles on every occasion. His latest stunt is drawing an old and heavy surrey containing six children.

"The surrey is pretty stout," says Kirk, "and I have had the machine up to a pretty good clip, too. But if I open her too wide, I am afraid that the old carriage will not stand the strain. I have often hauled six grown people and a sidecar passenger with the Giant Twin.

EXPORTS CONTINUE LARGE DESPITE BRITISH EMBARGO

(Continued from page 9)

ures themselves are small, the jump that has taken place in the 12 month interval amounts to 60 per cent., which in itself is significant. On the other hand, a drop of 50 per cent. has taken place in our cycle imports during the nine month period ending with March of this year, contrasted with a similar period ending with March of last year. For the former period the imports amounted in value to $25,964, as against $68,952, the figures for the latter period.

Hawaii took only $2,985 worth of motorcycles, bicycles, and parts during March of this year, as against $6,323 worth during March of last year. However, during the nine month period ending with March of this year our Pacific Ocean territory took $64,948 worth of the same goods, as against only $47,461 worth for the period ending with March a year ago. Porto Rico, on the other hand, took only $967 worth of cycle goods during March of 1915, as against $2,135 worth during March of the present year, while during the nine month period ending with 1915 she took $20,664 worth, as against $19,629 worth of American cycle goods imported during the nine month period ending with March just past. No such contradictory figures are given for our cycle trade with Philippine Islands. Our Oriental possessions took cycle goods to the value of $500 during March of 1915, but increased it to $2,331 during the third month of the present year. During the nine month period ending with March a year ago they took $22,364 worth as against $37,573, the value of our cycle trade with them during March of this year.

MEMPHIS TIRE TO GIVE REAL SERVICE TO MOTORISTS

MEMPHIS, Tenn.—The Memphis Tire & Vulcanizing Co., at Marshall and Union streets, has undertaken to supply real service to automobilists motorcyclists, etc. The concern has placed telephone stations, 100 in number, on all of the leading roads and streets, parkways, country club routes, etc., at places where other 'phones are not acessible in case of trouble.

In the N. J. Run

Duckworth supremacy and popularity were clearly shown in this grinding endurance run of 400 miles, every trophy and medal winner being DUCKWORTH equipped!

At Los Angeles

987 miles of rough going, DUCKWORTH superiority again manifested itself—the three winners had DUCKWORTH CHAINS on their mounts.

Boston-Buffalo

The first 1000 mile endurance run ever held brought out the sterling DUCKWORTH quality in no uncertain way—for the perfect score was made with a DUCKWORTH-equipped sidecar combination.

From coast-to-coast the story is the same—

"DUCKWORTH FOR YOUR MONEY'S WORTH!"

PLANS UNFOLDED FOR NEW BRUNSWICK RUN

Starters Will Go Around 56 Mile Course Until All But One Is Eliminated in Each of Three Divisions

NEW BRUNSWICK, N. J.—June 5.—The Indian M. C. will put on one of the most trying tests for man and motorcycle starting 3.00 p. m. July 1, and running until all the competitors have been eliminated except one in each class. It is a type of contest original with these boys who ran off their first one last year successfully with a record of 38 hours and 851 miles for the two leading men. This year they have made conditions, both in regard the schedule and the course, possible so the event may run over 1000 miles to bring out the winner.

This year the course is as follows: New Brunswick, Old Bridge, Helmetta, Jamesburg, Dayton and back to New Brunswick and then out on the upper loop through Bound Brook, Somerville, Millstone, to New Brunswick. It is approximately 56 miles and has to be covered in two and a quarter hours by solo and sidecar and two and three-quarter hours by lightweight.

No contestant will be allowed to race round the course and loaf in New Brunswick; the leeway allowed will be 5 minutes on the early side of the scheduled time at the check. No allowance for a contestant coming in late; he is eliminated.

Sidecar drivers must not be relieved at the bars under penalty of disqualification and checks at the ends of the loops will be maintained to keep the riders on the course at all times.

All contestants start with a zero score and begin accumulating points at the rate of one per mile ridden, the man with the most mileage, naturally having the greatest number of points wins in his class.

Silver cups are being donated, H. Clark Saunders, Indian agent, the City Commissioners and the Board of Trade having offered one each already. The committee in charge is soliciting a large prize list from the accessory manufacturers and in addition gold, silver and bronze medals will be awarded to the contestants who will have been eliminated just before the contest ends. In other words the runners-up will be rewarded for their efforts.

The contest is sanctioned by the F. A. M., so that if any records are made in either class the winners will be credited with the record on the federation's book. At present no sidecar or lightweight 24-hour record has been attempted and this affords a rider a chance to be the first to take a crack at old Father Time.

Requests for entry-blanks should be addressed to Harold DeHart, Indian M. C., 93 Carroll Place, New Brunswick, N. J.

BULLETINS TO AROUSE INTEREST

HAMILTON, Ont.—The officers of the Hamilton M. C. have arranged to place bulletin boards in the windows of most of the local dealers on which are fastened club notes, photographs and printed items of interest to Hamilton riders.

McCOLL OPENS SECOND BRANCH

PARKHILL, Ont.—Ken. D. McColl, of Parkhill, formerly a popular racing man of London, Ont., has opened his third motorcycle, bicycle and sporting goods store in Western Ontario, the latest being at Thedford. His main store is at Parkhill and another branch is located at Forest. He handles the Excelsior and recently he added the Smith Motor Wheel.

TO EXHIBIT CYCLE CORPS TACTICS

TORONTO, Ont.—The cycle corps of the 109th Regiment, Toronto, commanded by Staff Sergeant G. L. MacKay, formerly Dominion Racing Board Chairman of the Canadian Wheelmen's Association, is drilling the members of the section in fancy and trick movements in preparation for exhibitions at patriotic demonstrations, fall fairs and other events. The members of the cycle corps consist of practically every racing rider left in Toronto. Sergeant MacKay is already booking dates for engagements with the idea of arranging exhibition tours throughout different Ontario sections.

PASSES CAR, PAYS $5 FINE

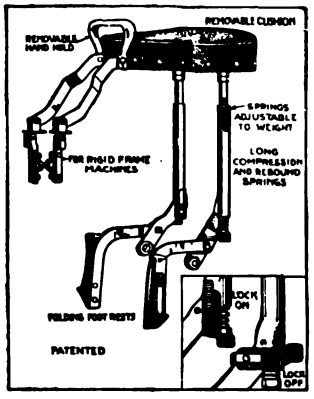
PETERBORO, Ont.—Because Detective Newhall of the Peterboro police department was on a local street car which was outdistanced by a motorcycle ridden by Harry W. Ristow, the latter was fined $5 by Magistrate Dumble in the local court.

BUSINESS BUILDERS

The Stoll Combination Tandem No. 2

with SPRING FOOTREST ATTACHMENT

leaves nothing to be desired in the way of COMFORT and SERVICE



Stoll Combination Tandem No. 2
Price $11.00

IT IS A BIG SELLER

More than 1000 owners of 1915 and 1916 Stoll No. 2 tandems are already enjoying the added pleasures thru the use of this attachment. It is simple, neat, practical, and

Relieves the Feet of All Jars

Moving Footrest Attachment No. A Only
Price $3.85

Do you realize that these features which are so necessary to insure the greatest of Comfort and Satisfaction, are found only in Stoll No. 2 tandems?

Neat locking device prevents rattle and wear.
Quick-detachable cushion—snaps on or off like a glove. Makes an ideal luggage carrier. No straps to lose.
Long, flexible enclosed springs, working in oil, provide smooth and easy riding.
Springs can be instantly adjusted for different weights.
All joints are pivoted; insures easy riding and freedom from shocks whether you sit at the front or back of the tandem. Not rigid in front like most tandems.

Bear these features in mind when you buy your tandem. Get the greatest value for your money. The surest way is to insist upon having a STOLL tandem. Your dealer has it or can get it for you.

Manufactured by

THE STOLL MANUFACTURING COMPANY Denver, Colo.

(The largest motorcycle tandem factory in existence.)

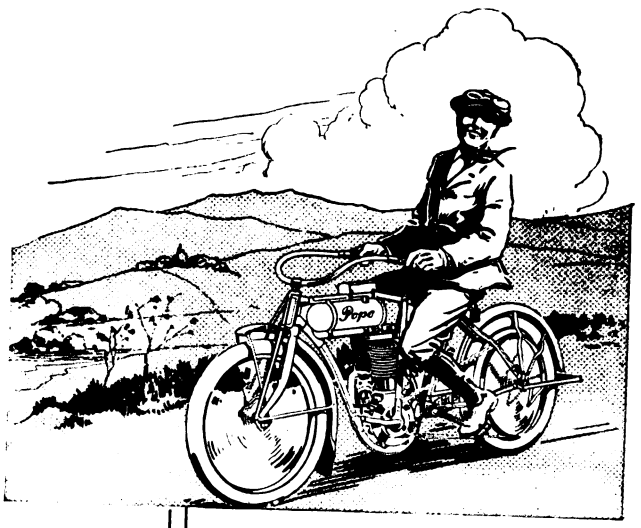
For a Real Man's Vacation



there's nothing that can beat a Pope Lightweight. Ready at all times to take him to his favorite trout stream, the tennis courts or the golf club, it furnishes the cheapest method known for traveling around speedily.

During the six years of its popularity, the Pope Lightweight has achieved a reputation for not only getting there, but getting back. Built along motorcycle, rather than bicycle, lines it is strong and wonderfully powerful for its size.

All the red-blooded men in your community will be answering the powerful call of the outdoors in a few weeks. They will take kindly to the Lightweight which costs so little at first and which carries them wherever and whenever they want to go with such a slight demand upon their vacation roll.

Get a stock of Pope Lightweights on your floor and tell their attractive story to the vacation prospect. Enlarge upon their simplicity, ease of operation and splendid construction—with Schebler carburetor, Spartan V-Belt, Eclipse clutch and United States motorcycle tires. You'll find that they sell like high hats to Fourth of July orators—with a good profit in every sale.

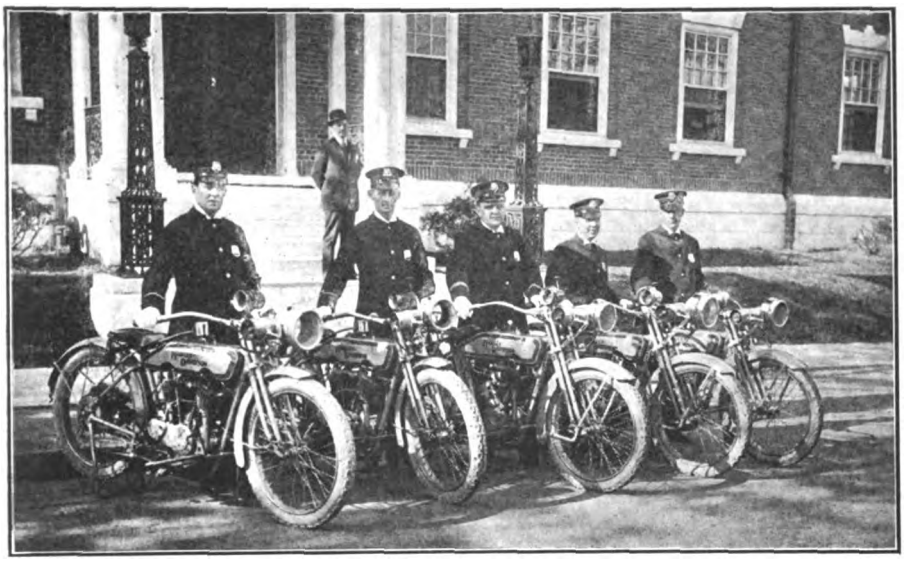
MT. VERNON POLICE USE HARLEY-DAVIDSONS



Mt. Vernon Cops with New Mounts Obtained From Colen

MT. VERNON, N. Y.—J. I. Colen, Harley-Davidson dealer in this city, has sold six three-speed 1916 twins to the Mt. Vernon police force, five of which appear with their riders in the illustration herewith. In addition to the police machines, Colen has sold eight others to the Westchester Lighting Company.

Colen, who was formerly in the surgical department of the Johns Hopkins University, has built up a thriving business in this city, in both motorcycles and bicycles. His repair shop is very busy these days. He uses the slogan "We Fix Everything" on all his stationary and lives up to the motto at all times.

BALL PLAYER'S LONG TRIP

WASHBURN, Wis., May 31.—The chance of becoming a member of the Washburn baseball club is the lure which prompted Ace Willey, a former resident of the city, to desert the sunny clime of California and make a trip from San Francisco to Washburn with his Harley-Davidson motorcycle.

BIDS FOR 1917 PLATES

FRANKFORT, Ky.—Bids will be received from June 15 to June 20 by James P. Lewis, Secretary of State for Kentucky, for furnishing 30,000 license plates to used on motorcycles and automobiles during 1917.

USE MOTORCYCLES NOW

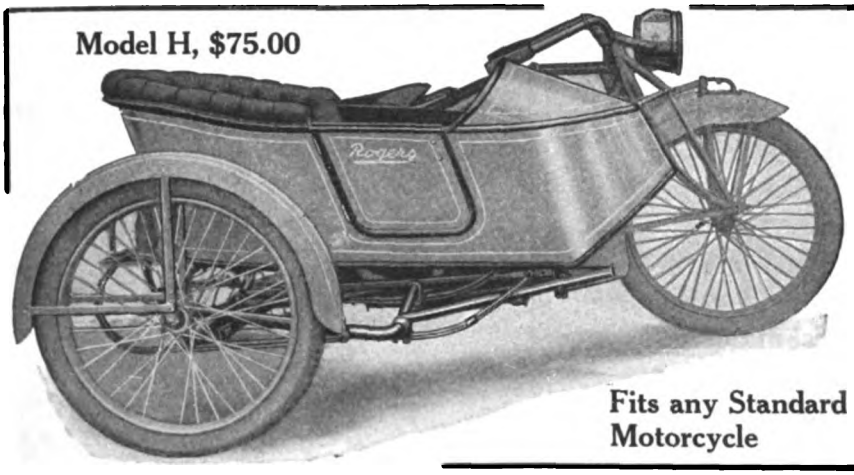
SPOKANE, Wash.—On account of the poor trolley service between this city and Parkwater, a considerable number of residents of the latter suburb have purchased motorcycles and power bicycles. The tendency is well liked by local dealers.

HENDERSONITES RIDE TO OLYMPIA

TACOMA, Wash.—Six members of the Henderson M. C. of this city, rode to Olympia one day last week under the guidance of Agent Fuller. Nisqually Falls was visited en route. The 100 mile trip over good roads was made in fast time.

TAKES ON CLEVELAND

TACOMA, Wash.—The Fuller Cycle & Supply Company has taken the agency for Cleveland bicycles for Tacoma. The firm also handles Dayton products.



ARE YOU PREPARED

We hope that war is a long way off, but **VACATION TIME** is near.

If your motorcycle is not equipped with a

Rogers Sidecar

you will lose half the pleasure of your vacation.

SIX PERFECT IN POUGHKEEPSIE RUN

Revised Scores Show That Four Solo Riders and Two Sidecar Pilots Came Through with Clean Slates—Ten Fall Out

POUGHKEEPSIE, N. Y., June 5.—The revised score sheets in the 20-hour endurance run of the Poughkeepsie M. C. show that, as was reported in the last issue of **Motor Cycle Illustrated**, four solo riders completed the grind on May 28 with perfect scores and, in addition, two sidecar pilots managed to scrape through without penalty. The perfect score men were: F. Horlacher, B. Willig, R. Horlacher, on Harley-Davidsons, and J. Erts, on an Indian, in the solo class, and W. A. Gindele and H. Cork, on Harley-Davidsons, in the sidecar division.

The route lay from Poughkeepsie to Albany, then to Canajoharie, which point most of the riders reached on time. From there on, however, steep, slippery grades for which the Catskill region is noted, made all the worse by continued thunder showers, put a full ten of the 33 starters out of the running. Oneonta was the third checking stop, and from there the route lay back to Poughkeepsie again. The full scores are as follows:

Solo Division—F. Horlacher, Harley-Davidson, 1,000; B. Willig, Harley-Davidson, 1,000; R. Horlacher, Harley-Davidson, 1,000; J. Erts, Indian, 1,000; G. Strongman, Harley-Davidson, 973; W. Merritt, Harley-Davidson, 970; H. Gindele, Indian, 500; C. Bodley, Indian, 500; F. Bennett, Indian, 500; C. Pegg, Harley-Davidson, 500; H. Eastmead, Harley-Davidson, 500; J. Hildwein, Harley-Davidson, 500; C. Baker, Harley-Davidson, 488; T. Henkes, Indian, 449; C. Schroder, Dayton, 350; A. Kaiser, Indian, 349; J. Bishop, Indian, 349.

Sidecar Division—W. A. Gindele, Harley-Davidson, 1,000; H. Corke, Harley-Davidson, 1,000; E. Taylor, Harley-Davidson, 880; R. Whalen, Indian, 500; S. Sherow, Indian, 500; Wm. McDowell, Harley-Davidson, 449.

DIXIE HIGHWAY MEN MEET TO POST ROUTE IN OHIO

HAMILTON, O.—The Hamilton members of the Butler County Dixie Highway Association met recently to place more than 200 metal direction and danger signs over the route in the southern part of the county. Middletown members of the association covered the northern part at the same time.

BAREFOOT BOOKLET BARES BLACK TREAD BENEFITS

AKRON, Ohio, June 5.—The benefits accruing to the vehicle owner through the use of the new Goodrich Barefoot safety tread tire, and the reasons for the use of the black rubber in the tread from which it takes its name, are most interestingly set forth in a little booklet which has just been gotten out by the B. F. Goodrich Co. Among other things it is pointed out in the booklet that the new black tread on the tire is made of an exclusive, secret and unusual rubber compound which is lighter in weight than the orthodox tread rubber and which is free from "sand papery" ingredients. It is claimed that the black tread clings closely to the road and does not grind over it, this happy result being brought about by the stretch of the tread which acts as a sort of a lubricant between the inner fabric structure and the road.

The little booklet, which is a distinct aid to dealers carrying the Goodrich line, is gotten out in two colors and can be had by Goodrich dealers in quantities for the asking.

INNER TUBE RESILIENCY IS DESIRABLE QUALITY

IN a recent letter to the trade the Goodyear Tire & Rubber Company of Akron, O., states that the ability in an inner tube to stretch freely under strain and return to its normal condition when the strain is removed is a most desirable feature. "A few years ago," says the letter, "some manufacturers took pride in announcing that their tubes were so strong that they would not stretch. But all this is now changed, and tube makers emphasize the stretching qualities of their tubes.

"First of all, a tube should be made of the best rubber, with only enough mineral matter to make curing possible. Pure rubber without mineral matter will not cure at all. Air, being a gas, will very slowly permeate almost any kind of a solid. However, in its permeation of rubber, the lowest degree can be accomplished, using the purest rubber obtainable.

"Rubber in tubes must neither harden nor crack, but it must recover from its stretch in a casing even after longe use. Nothing is more annoying than to have a tube stretch in an old casing so that it cannot be used in a new casing."

The Value of Being Right

ONE of the chief assets in handling the Cyclemotor is **knowing** that it is **built right** and is going to **work right.** There are no mechanical faults to "explain" or remedy, and no later imperfections to adjust. It gives perfect satisfaction **from the start.**

The dependable and efficient method of transmitting power to the rear wheel is an example of Cyclemotor ingenuity and achievement. Through this unique arrangement is obtained an effective, noiseless, clean transmission requiring no attention or upkeep expenses and consuming no running power.

Combined with the famous high speed, two-stroke, 15 pound motor it makes the simplest and most practical motor attachment for good dealers to handle.

Write for detailed particulars today and be the exclusive representative for your town.

ALWAYS MAKES GOOD

An X Clean Up Some Going at Detroit

The Bunch was There, TWENTY of them.

Half of them on 8 valves.

The big 100 mile event in which were 20 starters, representing the best men and machines the several factories could produce, including 8 valve motors and other special construction, was won by

BOB PERRY on a GOOD OLD X

with strictly stock design motor.

In this race special prizes were offered for the leader at 25 and 50 miles, GLEN STOKES on the X getting both of them.

At 55 miles, STOKES dropped out for fuel, and PERRY took the lead, which he steadily increased till the finish,

WINNING BY 5 MILES

In the short distance races, the results were:

5 Miles Won by STOKES, EXCELSIOR
5 Miles Won by PERRY, EXCELSIOR
10 Miles Won by STOKES, EXCELSIOR

giving the GOOD OLD X a clean-up on the events of the day.

BEAR IN MIND we build nothing but strictly stock design motors and it is a point worthy of your careful consideration that two of our leading competitors are now racing 8 valve motors exclusively, thereby tacitly admitting the unassailable supremacy of the

EXCELSIOR STOCK MACHINE

the kind delivered to every buyer of an EXCELSIOR AUTOCYCLE.

Win All Five of 'Em at Pittsburgh

"Clean sweep" is "old stuff," but is necessary over and over again where riders are mounted on Harley-Davidson. The latest victory where the Harley-Davidson took everything was on the half-mile track at Pittsburgh.

There were five races and Harley-Davidson took all five. Beginning with the five-mile amateur won by L. Crist, the Harley-Davidson ran true to form with L. Keys winning the five mile, ten mile and fifteen mile events for professionals. For good measure Crist rounded out the fifteen-mile by making it Harley-Davidson second as well as first.

"Rich" Bacon did the same thing in the ten-mile event and then Bacon showed the crowd that the side-car motors were there too, H. Glacken winning second to Bacon's first, both on Harley-Davidsons. This completed the Harley-Davidson day at Pittsburgh. Five events—the Harley-Davidson won all five and in three of 'em won not only first, but second honors as well.

BLUE STREAKS

Everybody—Clean Up!

Grime and grit are all right on the race track, but they were never intended for pleasure riding.

It is perfectly true, as every motorcycle dealer knows from actual experience, that a very appreciable number of motorcycle sales are lost because some riders, some motorcycles, some shops and some salesmen don't "look" as though the sport of motorcycling is all the fun claimed for it.

It's the happy smile—not the grimy face—that makes men want a motorcycle.

And it's the clean, bright, silent motorcycle—not the greasy, snorting demon—that will attract a larger and larger number of pleasure riders.

We think you will agree with us that motorcycling is for the many and not the few—that if motorcycling were made cleaner for the rider it would be a more popular sport. And popularity means increased motorcycle sales for dealers.

The Goodyear Dealer Helps are offered for the purpose of assisting motorcycle dealers in presenting the motorcycle to possible purchasers in the best possible light.

We want you to sell Blue Streak Tires. We show our faith in the profit and prestige Blue Streaks can bring your store by offering you ways and means of increasing your motorcycle sales as well.

These Helps we gladly send you—most of them free or at a trivial cost. Posters, Window Cards, Window Displays, Good-Will Gloves, Motion Picture Slides, Newspaper Advertisements, Goodyear Letter Service and the beautifully enameled Goodyear Blue Streak Service Station Sign.

Whether you are a Goodyear Dealer or not, makes no difference. We want you to see samples of these Selling Helps. Write us today.

ADVERTISING MEN ORGANIZE AT MILWAUKEE AND LAUNCH MONSTER PUBLICITY CAMPAIGN

Motorcycle and Accessories Manufacturers Will Nationally Boost Power Two-Wheeler; Association Formed and Executive Committee Elected to Start Rousing Campaign Immediately; Trade Men Are Enthusiastic Over Outlook; Bicycle Makers Will Be Invited to Join

"BIGGEST THING EVER PUT OVER IN MOTORCYCLE INDUSTRY," SAYS QUINE

By J. H. DONEHUE

MILWAUKEE, Wis., June 13.—Advertising representatives of nineteen manufacturers of motorcycles and allied products closed a meeting of epochal significance at the Wisconsin Hotel late this afternoon, by launching a motorcycle and accessory trade association, the purpose of which is effectively to nationalize interest in the power two-wheeler.

Resolutions providing for a boosting organization, which will be country wide in scope, went through with a snap, and a representative of each company participating in the sessions affixed his "John Hancock" to the history-making document and thus pledged himself and his firm to active co-operation.

The affairs of the new organization will be administered by an executive committee of five members to be elected annually by the organization. The committeemen selected to fire the opening gun in this big campaign for what promises to be a new era in American motorcycledom are: Dan R. Walls, Splitdorf Electrical Co.; H. S. Quine, Goodyear Tire & Rubber Co.; J. Leo Sauer, **Motor Cycle Illustrated** and *Bicycling World;* M. C. Stokes, U. S. Tire Co., and Frank J. Weschler, Hendee Mfg. Co.

This committee, which will get into action at once, was elected to serve until the Cycle Parts Convention in Atlantic City, when the new association will stage another rousing meeting. One of the important features of the Atantic City session will be an invitation to bicycle manufacturers to merge their boosting efforts with those of the organization formed today.

Enthusiasm Wallops Mercury

Enthusiasm and the mercury were climbing neck and neck when the advertising men and several manufacturers gathered for this morning's session at 10.30. But before luncheon recess was called at noon coats were off; the air was thick with cigar smoke and ideas. Mercury had been forced out of the contest, and enthusiasm went on climbing.

W. V. C. Jackson, of the A. O. Smith Company opened the morning meeting as the temporary chairman and called upon Arthur Davidson, of the Harley-Davidson Motor Co., to state the purpose of the conference. Mr. Davidson explained that the need for co-operative motorcycle boosting has long been recognized throughout the industry, and that various manufacturers and their advertising staffs had decided upon concerted and immediate action to give the motorcycle its proper place in the American transportation field.

After summing up along these lines, Mr. Davidson nominated Harry S. Quine for permanent chairman of the meeting, and Mr. Quine was seated amid applause. It became evident at once that the chairman was hot on the trail of results. He stated that an industry whose backers spent about eight million dollars annually on advertising and whose products aggregated about two billion dollars in yearly value should move ahead faster than the motorcycle trade has been progressing.

Big Opportunities Go Begging

Mr. Quine argued that many motorcycle opportunities remain neglected, and that only half-hearted efforts have been made to educate the public He spoke enthusiastically of the great future in store for the motorcycle in the commercial field. Mr. Quine concluded by asking the trademen to check their animosities at the door, if they had any, and to tackle the biggest movement the American motorcycle industry has ever known in a spirit of friendship and true co-operation.

Hearty Support Assured

The chairman then called upon Lacey Crolius, Harley-Davidson Motor Co., who told of the constructive publicity work he had done among sporting magazines. E. M. Jackson, Hendee Mfg. Co., said that his firm was constantly studying the problem of national publicity and would give its hearty support to any constructive movement.

T. W. Henderson, Henderson Motorcycle Company, pledged his co-operation and declared that opportunities existed on all sides for motorcycle educational work. He argued that larger advertising expenditures would make friends of newspapers and sporting magazines, but he was assured by Lacey Crolius that no subscriptions or increased advertising appropriations are contemplated in the present movement. The chief aim is to secure better results from the money now being spent.

The meeting then adjourned for luncheon. The trade men, however, first went to the

Digitized by Google

roof of the hotel where a group photograph was taken. At the luncheon the speaker was Frank Bruce, president of the Milwaukee Advertisers' Club. He spoke for organization and scored open mufflers and untidy riders. He said that the motorcycle industry has fundamentals for a great future and should be on a higher plane. Mr. Bruce submitted for action by the manufacturers' association a resolution decrying speed mania and lack of precaution in riding machines.

In the afternoon session, R. W. Ashcroft, of the United States Tire Company, was the first speaker. Mr. Ashcroft said that his firm is now spending more money for motorcycle advertising than ever before, and would most heartily support the new movement. The aim shoud be to present the pleasure features of the motorcycle very strongly he said, and to strive for a higher plane.

Firestone Men Concur

Lewin G. Fairbanks and Charles E. Speaks, of the Firestone forces, both promised co-operation from their company, and pointed out methods by which the motorcycle can be given greater publicity along constructive lines. They stated that the Firestone policy is to boost the motorcycle at every opportunity, and that this good work will be kept up.

W. H. Parsons, of *Motorcycling & Bicycling* read a paper on the methods of obtaining motorcycle publicity. Dan R. Walls, of the Splitdorf Electrical Company, spoke enthusiastically in favor of the movement. "Upon your success largely depends our success," said Mr. Walls, "and so you may count upon our active and consistent support." He said that he was deeply interested in the campaign and predicted big things for it

Fred Hart, of the Excelsior Motor Mfg. & Supply Company, declared that his firm has recognized the importance of broader publicity work and accordingly would join in the movement. There had been too much competitive boosting of individual motorcycles, he thought, and not enough co-operative publicity.

G. V. McMahan, representing the Remy Electric Company said that his firm was in full accord with the present plans. He gave many valuable suggestions during his speech, and these will be taken up by the Executive Committee later. E. R. Perrin, representing the Cyclemotor Corporation, voiced his approval of the campaign and believed that the country was ripe for just such action.

Offers Valuable Suggestions

Active co-operation in the plan was promised by R. F. Rogers, of the Rogers Mfg. Company. In his talk, Mr. Rogers discussed the great field which is now open to motorcycle and sidecar sales. He offered a number of valuable suggestions for the campaign. Another live booster was heard from when Walter W. Shoemaker, of the Graton & Knight Mfg. Company, commended the trade men present for their activity and stated that he would assist in every way possible.

Messrs. Alexander and Quinlan, of the Cleveland Motorcycle Company, lent their aid in getting things started, but were then called away and did not return in time to address the meeting.

M. C. Stokes, of the United States Tire Company, had a volume of snappy publicity ideas to offer. He is convinced that the motorcycle is about to enter upon a new epoch in which its influence will be doubled. George T. Briggs, of Wheeler & Schebler, continued the good work by pledging the firm's co-operation. He spoke at length of the great possibilities for educational work by traveling men. "When I left the factory, I was instructed to state that our company would back the campaign to the limit," was what C. L. Corey said anent the attitude of the Champion Spark Plug Company.

Thor co-operation was emphasized by C. B. O'Hare in an address which embodied many helpful pointers. W. F. Dunlap put the Klau-Von Peterson-Dunlap Company on record in favor of the new association and its aims. Frank G. Effinger, of the A. O. Smith Company, was loaded to the muzzle with publicity suggestions. He said that his company strongly favored

MOTORCYCLE MAKERS ENDORSE BOOSTERS' PLANS

Resolutions Are Drawn Up at Meeting of M. M. A. in Milwaukee Thanking Parts and Accessory Men for Splendid Cooperation; Will Stage Commercial Motorcycle Week in Brooklyn, N. Y.

MILWAUKEE, Wis., June 14.—If ever the Motorcycle Manufacturers' Association had a more enthusiastic meeting than the session held at the Hotel Wisconsin this morning, there are none connected with the manufacturers' organization who can recall it.

Appreciate Generous Support

The spirit which has characterized the entire cycle trade gathering here crystallized into a flame of unbounded enthusiasm at the M. M. A. session, when those members not present at yesterday's trade meeting, which culminated in the formation of the Motorcycle and Allied Trades Association, realized how large was the movement and how generous was the co-operation which the parts and accessories folks extended to the motorcycle makers in a huge and impressive effort to exploit the motorcycle to its fullest possibilities.

In recognition of this co-operation, the M. M. A. moved for the appointment of a committee to draw up suitable resolutions expressing its gratitude to those trade men outside of the two-wheeler manufacturing circles, who had so freely and unselfishly banded together to further motorcycle interests. The chair appointed W. V. C. Jackson, A. O. Smith Co., a committee of one to draw up resolutions and present them at the joint session of the trade bodies this afternoon.

Following the reading of a report by Secretary Hallock on the dealers' situation in Brooklyn, the members moved to follow out the secretary's suggestion regarding the staging of a "Commercial Motorcyle Week" in that city—a seven-day period by which the commercial two-wheeler is to be exploited to full advantage. The idea, as tentatively outlined, includes, among other things, the staging of a motorcycle parade, featuring the utility side of the power two-wheeler, a publicity campaign including newspaper and other advertising, and window displays embodying the same idea, and the thorough combining of territory by motorcycle and tire factory travelers with a view of locating and landing commercial prospects, and spreading among merchants generally the story of the motorcycle's real utility.

On the motion of Mr. Weschler, the chair appointed E. M. Jackson, of the Hendee Company, to be chairman of a committee, with C. B. O'Hare, of the Thor, and W. S. Quinlan, of the Cleveland, as associates, to arrange details of the plan in co-operation with Secretary Hallock and R. F. Rogers, of the Rogers Mfg. Co.

The rest of the meeting included considerable discussion on general trade conditions, the difficulties confronting the manufacturers in the way of increasing costs of both labor and materials and the best ways of offsetting them and on the situation with regard to spurious parts.

Following are companies on charter list of motorcycle and allied trades association with representatives who signed resolution pledging support to the National campaign:

T. W. Henderson, Henderson Motorcycle Co.; M. C. Stokes, United States Tire Co.; W. D. Callender, *Motorcycling & Bicycling;* D. R. Walls, Splitdorf Electrical Co.; G. T. Briggs, Wheeler & Schebler; R. F. Rogers, Rogers Mfg. Co.; E. M. Jackson, Hendee Mfg. Co.; H. S. Quine, Goodyear Tire & Rubber Co.; Charles E. Speaks, Firestone Tire & Rubber Co.; Walter Shoemaker, Graton & Knight Mfg. Co.; J. H. Donohue, **Motor Cycle Illustrated.** C. B. O'Hare, Aurora Automatic Machinery Co.; H. L. Corey, Champion Spark Plug Co.; Arthur Davidson, Harley-Davidson Motor Co.; W. V. C. Jackson, A. O. Smith Co.; Frederic B. Hart, Excelsior Motor Mfg. & Supply Co.; W. S. Quinlan, Cleveland Motor Cycle Co.; B. A. Quayle, The Standard Welding Co.; W. G. Schack, Emblem Mfg. Co.; F. Milton, The Electric Storage Battery Co.; E. R. Perrin, Cyclemotor Corporation; H. M. Huffman, Davis Sewing Machine Co.; L. D. Harden, Westfield Mfg Co.; A. B. Coffman, Toledo, Ohio.

FIRST COMPLETE REPORT OF M. M. A. MEETING

Practical Ideas for a Broadside Publicity Campaign Characterize Latest Session.

(This story was received as the forms were going to press, and is printed in telegraphic form.)

MILWAUKEE, June 14, 11.30 P. M.—Tuesday's record-breaking pace was maintained when advertising representatives of motorcycles and allied products opened third session of big conference at Wisconsin Hotel this morning. The resolution drawn up and offered by Bruce at Tuesday luncheon was adopted today by M. M. A. The organization of the Motorcycle and Allied Trades Association having been perfected yesterday afternoon attendants at this morning's meeting got down to brass tacks in two hours and proposed more practical plans for advancing motorcycle interests along publicity lines than had been offered in all previous history of the industry in this country.

Outstanding feature of session was resolution providing for National Motorcycle Gypsy Tour week to be staged at advantageous time early in season of 1917. The idea originated with Lacy Crolius, of Harley-Davidson Motor Co., and was amplified somewhat by other members of new association. Intention is to have tours held all over the country at same time, several cities in each state being chosen as central points from which trips will radiate. Object is to impress general public with all around attractiveness of Motorcycle.

This resolution provided for submitting ideas to M. M. A., which body will act upon it at next meeting. Suggestion had hearty approval of all advertising men.

Another plan which made strong appeal called for holding big motorcycle parade during F. A. M. convention at Providence, with view of attracting attention to commercial outfits as well as pleasure machines. This was proposed by Chairman H. S. Quine. Sales-managers of the various companies will handle arrangements for parade. M. C. Stokes, of United States Tire Co., opened still another interesting discussion when he suggested that motorcycle side car combinations have great possibilities in some sections of country for livery service. He argued that they have some advantages over present jitney cars. Frank Rodger, of Harley-Davidson Motor Co., backed him up by reporting that several western dealers are already applying the idea with success. Mr. Rodger was instructed to supply the association with data along this line.

Morning meeting opened with fine talk on methods of organizing dealers by T. R. Thomas, of Goodyear, who has been covering country on dealers education campaign. Top feature of Thomas talk was that no dealers are so hostile that they cannot be brought together if proper tactics are followed. He emphasized need of better salesmanship by dealers. E. J. Mueller, of Harley-Davidson Motor Co., talked on commercial possibilities, few dealers use special literature sent them. Solution of problem is to have factory salesmen visit cities and give demonstration week. Birmingham, Ala., has 150 commercial motorcycles owing to constructive methods of leading dealers there.

Cameron, of Goodyear, suggested that companies offer bonus to salesmen for each commercial outfit sold by dealer in their territory. This would be temporary proposition and dealers would follow up work themselves when properly interested.

Following Mr. Cameron's interesting talk, Lacy Crolius sprung his big idea involving the National Motorcycle tour week. He argued that riders on the various tours in Wisconsin alone could pass through 600 towns in two days' outing. Suggests prizes for riders making best appearance and small trophy for every F. A. M. member participating. Latter idea aims to stimulate F. A. M. membership campaign. Believes that organized touring is better than racing or endurance runs for boosting motorcycle.

M. C. Stokes suggested that tire men and other allied workers be supplied with data about motorcycles and vans so they can help sales. Said U. S. Tire Co. was ready to assist in every way possible. Executive committee of Motorcycle and Allied Trades Association will arrange to supply such information to all allied lines.

Lacy Crolius made a plea for standardization in the sales arguments used by manufacturers and dealers so that buyers will not receive contradictory statements from different salesmen.

Chas. E. Speaks, of Firestone, made a strong plea for co-operation with dealer. Said factory travelers should work with dealers and assist in working out effective sales system. Commercial possibilities of motorcycle are practically unlimited in his opinion. Dealer needs factory backing to give confidence. Could put motorcycle van on business map in 60 days if all work along proper lines.

O. W. Adams, of Cyclemotor, discussed value of dealers holding to prices, and argued that many dealers are embarrassed by trying to give free service that should be paid for. Greatest need is for better business methods in cycle lines.

Lacy Crolius followed this with suggestion that manufacturer give dealer a card telling him what service to allow, and so protect himself. Also suggested card to be given by dealer to buyer of motorcycle, stating what work would be done free so as to provide friendly understanding.

E. R. Perrin, of Cyclemotor, made plea for systematic method of giving information concerning all types of American motorcycles to prospective buyers so that a proper selection could be made.

Frank Effinger, of A. O. Smith Co., gave breezy talk on newspaper publicity, and summed up by stating that motorcycle industry and dealers must supply real news in order to keep in public eye.

Frank Rodger came through with another pointer, which provided for having factory travelers assist dealers in getting on friendly terms with local newspapers. He also emphasized importance of club spirit, and argued that club riders should wear their colors or insignia in all runs and contests. Crolius broadened the already broad spirit of the meeting by remarking that best results would be obtained if manufacturers refrain from putting names of their machines too much to the front in general newspaper publicity, and strive for boosting motors in general.

At this stage motion was made for reconsideration of name of new organization, and it was changed from Motorcycle and Accessory Trade Association to Motorcycle and Allied Trades Association. That closed the morning session. After another photo had been taken on roof in drizzle of rain the advertising men and members of M. M. A. had dinner together, and were addressed by Mayor Daniel W. Hoan, of Milwaukee. Mr. Quine introduced Wm. Harley, of Harley-Davidson Motor Co., who in turn presented Mayor Hoan as an old school friend.

Mayor Hoan gave warm welcome to trade men, and said Milwaukee is proud of A. O. Smith Co. and Harley-Davidson Motor Co., its cycle representatives; said motorcycle is doing great things in transportation field, and that industry is to be congratulated on character of men in it and progress it is making.

Chairman Quine of executive committee of Motorcycle and Allied Trades Association got the afternoon business meeting under way by asking for quick action on the matters in hand, and general co-operation for future.

Appointed Lacy Crolius as chairman of publicity committee, with power to select two or more fellow workers, with recommendation that L. G. Fairbanks, of Firestone, will be one of appointees. Appointed C. E. Speaks, of Firestone, as chairman of dealers' promotion committee, with power to name two or more assistants.

Announced clearing house for information, which will be handled by Secretary Hallock, with all companies assisting through their salesmen in gathering valuable data.

Crolius, Harley-Davidson; Jackson, of Hendee, and Mathis of Excelsior, were named to prepare data for dealers concerning free service schedule, and also cards for buyers stating what may be expected in way of work by dealer without charge.

Chairman Quine announced that all members of new association will be supplied with special letterheads.

W. V. C. Jackson, of A. O. Smith, then offered resolution in behalf of M. M. A., giving full endorsement as follows to the plans of Motorcycle and Allied Trades Association: Whereas, the "Motorcycle Manufacturers' Association," being duly informed of the organization of the "Motorcycle and Allied Trades Association," and fully recognizing and appreciating the wonderful spirit of co-operation displayed by the representatives of the allied trades in formulating and carrying out plans for the welfare of the motorcycle; therefore be it resolved that the "Motorcycle Manu-

WORCESTER RUN SHOOTS BROADSIDES INTO SCORES

58 Entrants Start in 24-Hour Grind to Canadian Border and Return; 3 Indian Solo Riders, 3 Harley-Davidson Sidecar Teams and 2 Cleveland Men Are Sole Survivors

1, Elmer Havenstrite and Hap. Scherer, Harley-Davidson Sidecar, at Start; 2, Part of Indian Factory Sidecar Team Ready for the Grind; 3, "Cannonball" Baker, with Indian, Figured as High Solo Score; 4, Shelton Sturgis and R. L. Veazey, Indians

WORCESTER, Mass., June 12.—Those who participated in the Worcester M. C. 24-hour run through Massachusetts, Vermont and New Hampshire experienced all the varieties of roads for which these three States are notorious. There were 477 miles to be traversed between the hours of 6 p. m. on Saturday, June 10, and 6 p. m. yesterday, and the roads were rain-soaked and deep in mud or oozy clay, following nine days of downpour.

There was considerable sand during the night section, and many a rider who shot through at all hazards in the darkness thought hard on seeing what he had traversed by daylight. Out of 58 starters, three solo twins, three sidecar combinations and two lightweights are known to have finished. It was a test of riders rather than of machines.

Solo and Sidecar Survivors

The three solo riders who finished are Erwin G. Baker, Shelton Sturgis and R. L. Veazey, all on Indians. Kendall Sanders, with George L. Clift as passenger, in a Harley-Davidson sidecar, also finished within schedule time. Baker's score is figured at 985 at the present writing, while Sturgis is credited with 960. Sanders-Clift score is figured at 993, which, if verified, will give him highest score in the run. The Harley-Davidson combination, of Hap. Scherer and Elmer Havenstrite, as well as that of W. H. Tannebring and R. H. Frost, also finished, the latter pair being late and probably not among the scorers. The Scherer-Havenstrite score is calculated at 971. There were no perfect scores.

Two Lightweights Finish

C. W. Waughop and "Peanuts" Spurgeon, on Clevelands, were the lightweight riders to complete the course. They covered a 360-mile course, one that was shorter than that for the big machines.

The course was from Worcester through Harvard, Ayer, Groton and Pepperell to Manchester, N. H., 63 miles, for the first check. This stretch was mud and sand, and there was plenty of water in spots. The next jump was to Bristol via Concord and Franklin over good roads to within ten miles of the check when the first steep hill was encountered. On this hill the sidecars had difficulty, as traction was poor. Several of the three-wheeler outfits gave up here. Beyond the check and toward Plymouth the worst section of the run was met with. Clay and niggerhead boulders had to be surmounted. Profile House and the Old Man of the Mountains were passed early in the morning in a fog. Franconia, 165 miles out, was the next check. Here the lightweight course went cross-country to Well's River, meeting the return course of the big fellows.

Thirteen Check at Border

As successive checks were passed, going toward Derby Line, on the Canadian border, the check sheets showed fewer and fewer names. Beyond St. Johnsbury the

PERRY SAILS TO VICTORY IN DETROIT CENTURY

Stokes, a Fellow Excelsiorite, Tucks Away Second Honors in Feature Event; Impressive Array of Star Speedsters; Preliminary Heats Inject Pep Into Meet

1—"Red" Parkhurst Crowding Stokes in the One Hundred Mile Race. 2—Glimpse of the Five Mile Heat. 3—The Bunch Stringing Out in Century Grind. 4—Going Into Action in State Champ Race. Center—Bob Perry, Excelsior

DETROIT, Mich., June 11.—An imposing string of first-flight riders with the fastest machines in the racing stables of the various factories was on hand for the meet of the Interstate Racing Association at the mile track here today. There were "Red" Parkhurst and Bill Brier with their new eight-valve Harley-Davidsons, Bob Perry, Glen Stokes, Joe Wolter, Lorenzo Boido (yes, he of Phoenix, Ariz.), and Hilliard on Excelsiors—Hilliard on the fast big-valve that McNiel used to ride. And in the Indian camp were Ray Creviston, Lee Taylor, "Krazy Horse" Verrill, Fritz Meyers, Jim Davis (who cracked the 100-mile dirt-track record a couple of times last summer) and Vern Walker.

Naturally, the landscape was full of speed as soon as this aggregation was turned loose, and the grandstand was kept busy watching the excitement in every minute of the program.

Preliminary Sprints Run Off

A few short sprints were run off first to warm up the interest of the crowd for the big race. The first heat, of five miles, was a close and spirited argument all the way, Hilliard on the Excelsior and Verrill on his Indian fighting at close quarters for the first couple of miles. Hilliard gradually pulled away from his rival, but was in turn passed when Glen Stokes stormed up from the rear and went into first place in the fourth mile. Parkhurst, on the Harley-Davidson, worked past Verrill and so registered for third position at the finish. The time, from a rolling start, was 4:09 4/5 for the five miles.

In the second heat Brier moved up to the front on the first lap and liked the view so well that he stayed there the rest of the race. Boido took his "Ex" through for second place, and Joe Wolter followed for third. Their time, with standing start, was 4:22.

The consolation heat showed an entry list of decided class for an event of this character, as several of the top-notch riders had lost out in the qualifying heats through various forms of bad luck. For instance, it is a little unusual to see Bob Perry, Verrill, and Ray Creviston in line for such a race, but there they were. Bob Perry tore loose right from the start and tucked away a big lead without delay, winning by a safe margin in 4:25, with Vern Walker, Indian, second, and Millen, Indian, third.

Stokes Wins Ten-Mile Heat

The ten-mile final heat developed into a dramatic battle between Stokes and Parkhurst. Stokes had the lead, but "Red" hung right in his smoke and fought like a terrier to get past. At the tape it was Stokes, Parkhurst and Brier, with the time 8:15 for the ten miles.

The five-mile race for Michigan riders only was full of interest all the way, with the fortunes of the riders shifting so frequently that the spectators were kept on edge. Millen, on an Indian, led off at the getaway, but Kemp, with a Henderson, came up in the second mile and went past. Walker, on an eight-valve Indian, also came up from the rear and, riding in Kemp's pace, went past Millen at the same time. And the rest of the race was a beautiful scrap between Walker and Kemp. For mile after mile they fought it out on even terms, Walker trying to get by, but unable to make up the few feet needed. On the fourth mile he snatched a chance to squeeze by when Kemp slid a trifle wide at one spot on the turn, and held his advantage to the tape. Millen registered third. The time was 4:31 1/5.

Imposing Lineup in Century

Then the whole flock started in the big event, the 100-mile sweepstakes race in which a handsome silver cup went to the winner, in addition to the substantial cash prizes and sweepstakes prizes for the leaders at intermediate distances.

Ray Creviston shot into the lead on the first mile, but Leslie Red Parkhurst went past him on the second mile, and a little later Stokes came up and crowded him back into third. Stokes was traveling with the speed of a bunch of bad news, and in the sixth mile he passed Parkhurst for the lead, with Crevvy, Boido and Brier bunched in third place. Boido began to skip on one barrel in the eighth mile and halted at the pits to look into the matter, restarting after short delay.

Creviston went out of the race for keeps at 13 miles, which might tend to verify the theory of the unluckiness of the number. Stokes, Parkhurst and Brier continued to head the procession, keeping that order past the 25-mile mark, at which point the first intermediate-distance prizes were awarded. The pace continued fast and the competition close, all the leaders having their hands full to hold their places.

A few riders dropped out because of minor difficulties, watching the others from the sidelines. Joe Wolter hung up at the

Digitized by Google

pits a moment in the 42d mile, but got going again in a couple of minutes. Boido halted again in the 48th.

Stokes still led at 50 miles, with Parkhurst second and Brier third. Soon after that things began to happen.

Parkhurst Takes Lead

In the 54th mile Stokes drew up to the pits to take on gas, and Parkhurst took the lead. Bob Perry, in the meantime, had been industriously pushing the miles behind him and had passed Brier for second place. So at 55 miles it was Parkhurst, Perry and Brier.

But at 57 miles both Parkhurst and Brier drew into the pits for adjustments, and Stokes also pulled in for a second time—these three riders going to the side line practically together. And how it changed the situation! Bob Perry had the lead by a nice safe margin, and Hilliard was next best. Verrill had put the time to good use by moving up into third place, and for some distance the race continued in these positions. Stokes was the first of the retired list to get into action again, and he set about industriously putting himself where he would count most. At 75 miles the order was Perry, Hilliard and Verrill, with the time for that distance 63:24, and Stokes coming up in the rear with haste evident at all points in his make-up. Perry had a lead of about five miles at this point and was taking no unnecessary chance of losing it.

At 90 miles Hilliard had cracked a trifle under the strain and had been passed by both Verrill and Stokes, who were then riding in that order. Stokes forged past Verrill for second position in the 93d, and might have caught Perry eventually if the race had been long enough, as he seemed to be gaining slowly on the leader. But Perry still had a mere trifle of a little more than four miles to the good when the checkered flag waved to him, and gathered in the bacon amid the congratulations of the many friends he has made among the riders by his good sportsmanship and clean riding. His time was 86:27⅗.

BIG CROWD SEES PITTSBURGH RACES

Eight Events Staged by Harley-Davidson M. C. at Schenley Oval Show Close Finishes—Excelsior Wins Lightweight Race—Motor Wheels Have Contest

PITTSBURGH, Pa., June 12.—Lawrence Keys astride a Gray Fellow, captured the 15-mile feature event of the Harley-Davidson M. C., at Schenley Oval, on June 10, in a whirlwind finish. The big crowd present gave him a fine ovation. He came up from fourth place at the fifth mile and overhauled L. G. Crist, Reading Standard, in the last lap, both machines going great guns. Keys covered the distance in 18:31⅕. Crist was second and Black, Harley-Davidson, third. The showing made by Crist was fine, this being his first pro. race.

Crist Takes Amateur

The Harley-Davidson M. C. which promoted the affair, had a five-mile amateur as the preliminary. This went to L. G. Crist, then on a Harley-Davidson, in 6:13⅘. Glacken, on a machine of the same make, took the lead at the start of this event, but was soon passed by Simon, Indian, who held first place for a few laps, when Crist came up and was never headed. Simon came second and Glacken third.

The five-mile pro. simmered down to a contest between Keys and Schmidt, Indian. Keys won by a good margin in 6:11 2/5. Bacon, Harley-Davidson, was a poor third. Bacon, Harley-Davidson, copped the sidecar race for five miles in 7:25⅗, with Glacken, second, and Petrovitch, Indian, third. There were only three starters in the three-mile lightweight event, the winner proving to be Kopp, Excelsior, with Fitsroy, Cleveland, second, and Stubler, Indian, third. Time, 5:27.

The Smith Motor Wheel race for two miles was won by Hewett in 5:28 1/5. O'Brien was second and James third. In the 10-mile pro. race, Keys and Schmidt fought it out, after passing McCall on an Emblem in the second mile. Schmidt had plug trouble and retired. Keys went on, followed closely by Bacon, the finish being Keys, Bacon, McCall. Time, 12:20⅗.

Three "Red Buzzers" Clash

Crist turned pro. for the 15-mile feature and had things his own way until overhauled by Keys in the last lap. The stands and fences of the Oval were packed with interested spectators. The track itself was in fine condition, the morning's rain having laid the dust on the half-mile course.

MORRISON AND GRELL STAR AT ELWOOD

ELWOOD, Ind., June 12.—Morrison, on his Indian, captured the five and 10-mile races at the meet here yesterday, his times being 6:24 and 13:50. Grell, on an Excelsior, took the 50-mile race in 1:00:40. Grell also came second in both the five and 10-mile events.

Ellis, Indian, took second money in the 50-mile race and came third in the 10-mile. Johnston was third in the five mile.

RECORD MAY SALES FOR BIG EX.

CHICAGO, Ill.—Sales Manager Fred B. Mathis, of the Excelsior Motor Mfg. & Supply Co., reports that Excelsior sales in May, 1916, have exceeded those of the same month in any previous year of the company's existence.

NATIONAL CONVENTION PROGRAM DETAILS

B. A. Swenson Plans Two-Day Endurance Run Over Mohawk Trail and Arranges Schedule of Races, Meetings and Tours for the Big Week in Providence

PROVIDENCE, R. I., June 10.—The first official correspondence received by B. A. Swenson relative to the F. A. M. National Convention dates arrived today in a letter from President A. B. Coffman. The letter sets the seal on the holding of the convention during the last week in July, by a majority vote of the directors of the Federation. The dates are now July 25, 26, 27, 28 and 29.

Two-Day Endurance Run

One of the features of the convention this year will be the holding of a genuine endurance run to Providence, starting on Monday, July 24, in the early morning from Albany, N. Y., and finishing at the convention on Tuesday afternoon. The course, which is slightly over 500 miles, is from Albany to Pittsfield through the Berkshires, then to North Adams, Greenfield and Bernardston, Mass., and along the Mohawk Trail to Brattleboro and Bellows Falls, Vt. The scenery is magnificent throughout. Proceeding northward to Claremont, the tour will continue eastward past Lake Sunapee to Franklin and then toward the north through Bristol and Plymouth.

At only one point in this part of the course is there a hill of any magnitude, and this is near Plymouth. The grade here is 5 miles long with sharp turns, but is easily negotiated. Following the ascent is a 7-mile coast to Woodstock. The run will then be continued to the Profile and Franconia, Bethlehem and through Bretton Woods in the White Mountain section. Crawford Notch will be descended, but before the descent is made, all brakes will be examined by officials of the run. From Crawford House the rest of the first day's run will be to either Fryeburg or Bridgton, Me., night stop. Distance, about 323½ miles.

From Portland to Providence

The second day's run, July 25, will be past Lake Sebago to Portland, then down the coast through Saco, Kennebunk, Portsmouth, Newburyport, Ipswich, Salem, Boston, Wrentham and Providence. Distance is 211½ miles. At the finish of this run, the delegates and riders will register at convention headquarters. The run will be gone over from start to finish by B. A. Swenson and D. R. Hobart, of **Motor Cycle Illustrated,** as a pathfinding party in ample time to furnish complete road directions, etc., to all participants. Awards will be given for completing the endurance run.

Following the suggestion of President Coffman, Mr. Swenson will have the delegates register on July 25 and the morning of July 26. A business session will be held Thursday morning, followed by a race meet at the Speedway in the afternoon, part of the program of the convention races being run off on that date, July 27. A ladies' committee has already been appointed to take care of members of the fair sex who attend the annual affair, and a program is being worked out for them. This includes a trip to Rocky Point by boat, starting at 9:30 on Friday morning, and a clambake, dance, etc., at that popular resort during the afternoon and evening. The trip will be participated in by all visitors.

Saturday's Features

Saturday will have a business session in the morning and the rest of the races in the afternoon. A smoker is on the cards for that night, and it is possible that some stag entertainment will also be held on the Thursday night of the convention week. In the races, Mr. Swenson is desirous of having trophy awards instead of merchandise prizes and has taken steps to that end.

Competition Chairman John L. Donovan has assigned the one and 25-mile professional championships, and the one, five, two, 10, 25 and 50-mile national amateur championship races for the program here. These and other details require much preparation, but Mr. Swenson believes that before the 20th of the month the work of arranging all details will be completed. Headquarters, for the present, will be in the Swenson Tepee, 522 Broad street, where all correspondence relative to races, tours, etc., should be addressed.

Plans are also under way to conduct a series of tours to meet in Newark, N. J., from Pennsylvania and New Jersey riders, as well as from the South, and joining at that city to continue along the Shore Route to Providence. Mr. Swenson has also written the Buffalo M. C. to make arrangements to collect all Middle Western riders and ride through Syracuse to Albany and across to Providence through the Berkshires. These tours will arrive at the convention on Monday or Tuesday in ample time for riders to register.

REDUCED RATE OBTAINED ON SIDECAR SHIPMENTS

Harley-Davidson Co. Gets Decision From Western Committee That Cars Can Be Billed at "Knocked Down" Rate, Which Is Two Times First Class—Effective on June 7

MILWAUKEE, Wis., June 8.—The contentions of the Harley-Davidson traffic department that sidecars are entitled to be classed as "knocked down" have been granted by the Western Classification Committee of the I. C. C. Heretofore the ruling has been that they must be billed as "set up," taking the rate of 2½ times first class. Under the new ruling, effective on June 7, sidecars from that date can be billed at the "knock down" rate of two times first class.

The fight on behalf of the dealers has continued over a considerable period and involved considerable correspondence on the part of the Harley-Davidson folks, but it required an actual demonstration to convince the Western Classification Committee that dealers were entitled to the lower rate. The method of crating with the sidecar wheel off and mudguard detached requires 59 2/3 cubic feet, while if the car is crated "set up" the crate measures 93⅞ cubic feet, all told.

The first intimation that the committee would concede the lower classification was given in a letter received by the Harley-Davidson folks from W. E. Prendergast of the committee, notifying the motorcycle manufacturers that he had found the measurements of sidecars as just given, and adding that if the sidecars were crated with wheels and mudguards detached and placed inside the crate, the space was reduced at least 30 per cent., and the shipper was entitled, in his opinion, to the "knocked down" rating. In a later letter to the Harley-Davidson traffic department, Mr. Prendergast stated that if the conditions named in his first letter were complied with, that would be all the authority needed to bill the shipments as "knocked down."

It is not known whether dealers will be authorized to file claims for the difference on shipments prior to June 7 at present. Under the old classification it was cheaper to ship by express to many points than by freight by reason of the old rate on sidecars. With the new rate a considerable saving will be effected for the dealers.

TEN PERFECT IN HARRISBURG ENDURANCE

HARRISBURG, Pa., June 12.—Of 18 starters in the annual spring endurance run of the Keystone M. C., 14 managed to complete the 272 mile course to Altoona and return and check in at the finish. Ten of the finishers came home with perfect scores, despite the fact that every one of the contenders with the exception of C. Early made at least two falls on the mountainous course made exceedingly slippery by continued rain. M. Caley was knocked unconscious when he skidded into a telegraph pole and was taken to the Lewistown hospital but managed to come to his senses in time to mount his machine and check in at the next control two minutes ahead of time.

The scores are as follows: R. D. Caley, Harley-Davidson, 1,000; D. Peters, Excelsior, 1,000; E. Kohle, Pope, 1,000; C. Sollers, Harley-Davidson, 1,000; W. Holtz, Indian 1,000; C. Early, Harley-Davidson, 1,000; Ray Heagy, Harley-Davidson, 1,000; R. L. King, Harley-Davidson, 1,000; F. Senseman, 1,000; V. Harlacher, Thor, 978; G. Doneley, Indian, 975; C. Baskette, Harley-Davidson, 975; C. Uhler, Thor, 970.

WEBSTER NOW ASS'T SALES MANAGER OF MIAMI

MIDDLETOWN, O., June 12.—W. G. Ash, sales manager of the Miami Cycle & Mfg. Co., announced last week the promotion of Ralph D. Webster, formerly a factory traveler, to the assistant sales managership. This change will relieve Mr. Ash of the detail work of the sales department and enable him to devote more time to visiting the trade.

VAN CLEEFS ADD ANOTHER WAREHOUSE FOR STOCK

CHICAGO, Ill.—Van Cleef Brothers, makers of Dutch Brand cements and other products, have rented another warehouse near the present location. This new acquisition is now stocked full with all sorts of Van Cleef products for immediate shipment.

The firm is not having any trouble with material, as there is ample stock on hand to take care of all orders for another year or more, notwithstanding the greatly-increased demand for Dutch Brand goods.

FIRESTONE ACCESSORIES FOR U. S. ARMY

AKRON, O.—The Firestone Tire & Rubber Company has received an order from the Quartermaster's Department, U. S. Army, for a goodly supply of accessories in order to be ready for all emergencies in the Pershing expedition after Villa in Mexico.

In speaking of this order, H. A. Grubb, Texas manager for the Firestone interests, says: "It is, indeed, pleasing to have our accessories given recognition by the government, in addition to the generous praise given our tires which are used on the Army trucks with the expedition."

READING JUNE 4 INJUNCTION

Referee T. Mahoney Perusing Document Handed Him by Sheepshead Bay, N. Y., Sheriff Prohibiting Motorcycle Races On American Liberty Day

BLAIR SEVERS CONNECTIONS WITH S. K. F. CO.

HARTFORD, Conn., June 12.—F. R. Blair, formerly secretary, treasurer and sales manager of the S. K. F. Ball Bearing Company, this city, has tendered his resignation and become president of the F. R. Blair & Company, 50 Church street, New York. It is understood that the Blair company will devote itself to developing motor efficiency devices.

WILSON NOW WITH EDWARDS-CRIST FORCES

CHICAGO, Ill.—C. E. Wilson, formerly with the Excelsior General Supplies Co., of this city, is now traveling for the Edwards-Crist Manufacturing Company. He is connected with the jobbing end of the concern, under the able guidance of H. N. Kirk, manager of this department.

Wilson will cover Illinois, Wisconsin, Michigan, Indiana, Iowa, Nebraska, Missouri and Kansas as his new territory.

WITHERBEE IGNITER MOVES TO NEW QUARTERS

SPRINGFIELD, Mass.—The Witherbee Igniter Company, maker of Witherbee storage batteries, has moved to a new building on Liberty street at the corner of Chestnut street. In the new location, the firm will not only have the additional manufacturing space necessitated by the expansion of its business, but will be ideally located for its particular manufacturing requirements.

The new building is a handsome structure in what is practically the heart of the city. It is of reinforced concrete construction with saw-tooth roof.

DINES REMY HEADS

DETROIT, Mich.—Department heads of the Remy Electric Company were entertained by Walter Johnson, the European representative for the firm, at a dinner given on May 26, at the Detroit Athletic Club. Johnson has been in the United States for ten weeks, and will go back to Europe shortly.

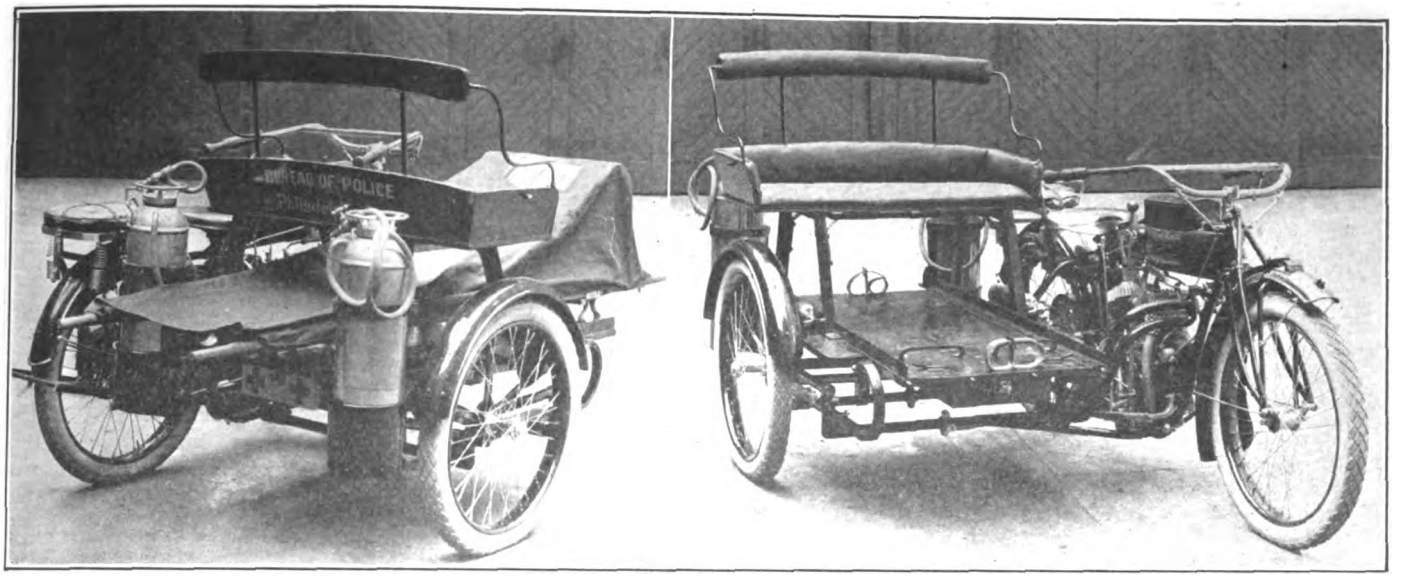
QUAKER CITY POLICE GET NOVEL INDIAN OUTFIT



Left, Rear View of Bus with Stretcher in Position for Carrying Injured Man; Right, Stretcher Removed Showing Floor and Carriers

PHILADELPHIA, Pa.—The Bureau of Police of this city has purchased a most useful combination police rig from the Hendee Mfg. Co., of Springfield Mass. This rig, which consists of a Powerplus three-speed with spring frame and a special sidecar body, can be used as an emergency patrol wagon, an ambulance or a fire wagon at will. The rig was made up at the Indian works to the order of the Bureau and well tried out by the Hendee designers and testing staff.

The sidecar chassis is of special construction for the heaviest kind of service and is built along Indian sidecar lines. The width is sufficient to accommodate two patrolmen on a single seat having a lazy-back. This seat is on a frame of sufficient height to allow of placing a stretcher on the floor below, the floor having ample length to take a stretcher with patient in it. A regulation stretcher, with cover, is carried, rolled on this platform.

At each corner of the rear of the car is carried a big chemical fire extinguisher in a special boot. An apron is fitted to the seat, with snap-fasteners to the floor at front and sides. The motorcycle has a tandem attachment of F. N. make to carry a fourth patrolman when desired.

GOODYEAR TO BUILD $1,500,000 FACTORY IN CANADA

Work Will Be Started Immediately on Exclusive Pneumatic Tire Plant in New Toronto; Present Factory to Be Used Only for Mechanical Goods and Solid Tires

TORONTO, Ontario, June 12.—Formal announcement has been made by C. H. Carlisle, general manager of the Goodyear Tire & Rubber Company of Canada, Limited, to the Canadian representative of **Motor Cycle Illustrated,** regarding the decision of the company to erect a huge new factory building at New Toronto, a suburb of this city, to cost $1,500,000. The site for the plant covers an area of twenty-seven acres and the factory, which will have four floors and a basement, will be used exclusively for the manufacture of pneumatic tires for the Canadian and foreign trade.

Ready by Next February

The work of construction will be started immediately. The contract for the steel work has already been let and other arrangements are being made so that it is expected that the structure will be ready for occupation by February 1, 1917. The main building will be 560 feet long and 100 feet wide and, in addition, there will be a structure for the accommodation of the power plant and also a special building in which rubber cements will be made.

The site is adjacent to the Lake Shore Road, seven and one-half miles from the geographical centre of Toronto, and the new model cement boulevard from Toronto to Hamilton will skirt it. A railway siding is to be extended to the new factory, but, in addition, the Goodyear company is planning to make use of the new roadway for the delivery of tires to Toronto and Hamilton by motor lorries. This will make the company independent of local railway lines.

To Use Old Plant

The Goodyear company has had a factory in Canada since 1910 when the plant of the Durham Rubber Company, at Bowmanville, Ontario, was acquired. This factory, which has had many additions during the past six years, will continue to be used, but only mechanical goods and solid tires will be made in this building. Some 800 workmen are employed and it is estimated that 600 men will be engaged in the manufacture of pneumatic tires at the New Toronto works when the latter are opened next February. With so many skilled laborers enlisting for service in the Canadian army, there is a scarcity of rubber workers, however, and Mr. Carlisle expressed a fear that his company might have a fine new plant but not sufficient labor to keep all wheels moving.

The amount mentioned as the cost of the new structure, $1,500,000, includes not only the outlay for the building which will be of brick and steel construction, but also for the tire-making equipment, the latest designs of which will be installed in the plant.

For the present, the headquarters' staff of the Canadian company will remain at the present head office of the company at Simcoe and Richmond streets, Toronto. There is a possibility that some of the executive officials, at least, will be transferred to New Toronto in due time.

The Goodyear company has branches in Canada at Toronto, Vancouver, Edmonton, Calgary, Regina, Winnipeg, Hamilton, Ottawa, Montreal and St. John, ten in all.

VAN CLEEF IS FINISHING RECORD TRIP

FELIX VAN CLEEF, of the firm of Van Cleef Brothers, makers of Dutch Brand products, at Chicago, Ill., has finished visiting New England territory and is now in New York. This will be the last of the present trip, and Mr. Van Cleef states that he has never experienced a business tour in which the amount transacted during the present one has been anywhere near equal. Large orders have been received by Mr. Van Cleef, and others of goodly size have been sent in direct to the factory.

ASHEVILLE HAS RIOT BUS

ASHEVILLE, N. C.—The local police department has ordered from the Hendee Manufacturing Company a police riot bus drawn by an Indian motorcycle. The rig carries two patrolmen on the wide seat on the sidecar, and a third on the tandem.

LIVE WIRES? WELL, JUST LOOK 'EM OVER

This Is the Corps of Trade Enthusiasts That Is Working with General Committeemen Surre and Morehouse to Make the Cycle Parts Convention Program a Record Breaker

BELOW is given a full line-up of the trade hustlers who compose the various committees in charge of the Cycle Parts convention program, and General Committeemen Surre and Morehouse report that every man on the list is "doing his bit" to make the coming season a record buster. In most cases the present committeemen are taking care of convention details with which they have already had experience at Atlantic City and the work is, therefore, considerably facilitated. The list follows:

ROAD RACE

Max M. Sladkin, Haverford Cycle Co., chairman.,
C. F. Olin, New Departure Mfg. Co.
M. C. Schweinert, A. Schrader's Son, Inc.
W. V. C. Jackson, care of A. O. Smith & Co.,
H. S. Quine, care of Goodyear Tire & Rubber Co.

CABARET COMMITTEE

F. T. Chase, Frank Mossberg Company, chairman,
Chas. Hertzler, The Bearings Company of America,
H. A. Wattenscheidt, A. R. Mosler & Co.,
H. M. Tisne, A. Schrader's Son, Inc.,

BASEBALL COMMITTEE

H. H. Hamilton, Federal Rubber Mfg. Co., chairman,
H. M. Hoffman, care of Davis Sewing Machine Co.,
Louis Schwab, Stevens & Company,
J. W. Grady, J. W. Grady & Co.,
A. B. Coffman, American Wood Rim Company,
E. F. Knapp, care of The Standard Company,
J. W. Ash, care of Miami Cycle & Mfg. Co.,

BOWLING COMMITTEE

E. Horace Hawthorne, care of Hawthorne Mfg. Co., Chairman,
M. C. Stokes, U. S. Tire Company,
H. Mesinger, c/o H. & F. Mesinger Company,
Milton Brown, Fisk Rubber Company,
A. B. Dick, c/o Louis Rastetter & Sons,
M. J. Cabana, Buffalo Specialty Co.

GOLF COMMITTEE

DeWitt Page, New Departure Mfg. Co., Chairman,
W. E. Diehl, Corbin Screw Corporation.
W. S. Quinlan, National Screw & Tack Co.,
W. E. Holland, c/o Holland, Baden, Ramsey Co.,
C. L. Elyea, Elyea-Austell Company.

GRANDSTAND COMMITTEE

W. E. Owens,
W. H. Grover.

PRESS COMMITTEE

J. Leo Sauer, **Motor Cycle Illustrated** *and Bicycling World.*

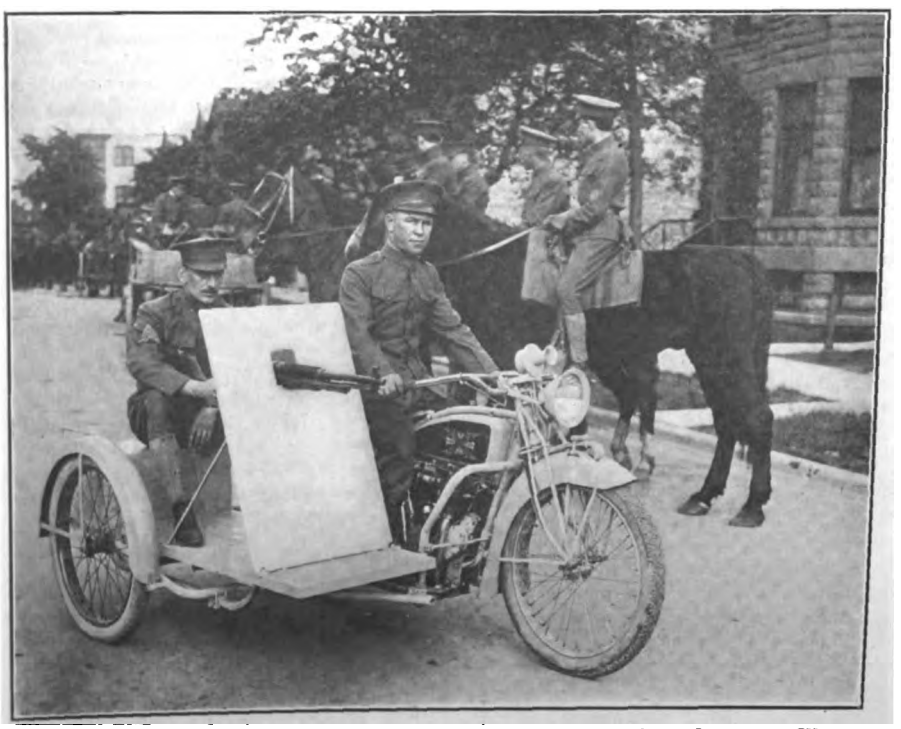
CLASSY CARD FOR N. Y. CONVENTION MEET

One Hundred Mile Feature Has Big Prize List and Other Seven Events Include Five State Amateur Championships

SHEEPSHEAD BAY, N. Y., June 9.—The official entry blank for the New York State F. A. M. meet in connection with the State convention on July 4, has been issued, and a classy card of events is scheduled. There will be eight races of which one is a two-mile National pro. championship, and the other a 100-mile pro. feature. In the two-mile event, medals to the value of $75 are offered, with cash prizes of $20, $15, $10 and $5. In the long race, first prize is $400, second prize $250, third $200, fourth $175, fifth $150, sixth $125, and seventh $100. This prize list is exceptionally large, and should draw the pick of the speedsters in the United States.

The opening event, slated for 2 p. m., is a one-mile New York State amateur champ. race. This will be followed by a two-mile amateur N. Y. champ., the two-mile National pro. race, a 25-mile State amateur champ. event, and a five-mile of the same class. The sixth race will be for pro. riders on stock mounts, the distance being 10 miles, this being followed by a 10-mile State amateur championship event. and then the 100 mile feature. Added features will be a race between an aeroplane, motorcycle and automobile, and a parachute leap from an aeroplane. Application for entrance should be made to Secretary Irving Barnard, Speedway M. C., 15 Warren street, New York.

FEATURE OF CHICAGO'S PREPAREDNESS PARADE



Excelsior with Rogers Sidecar Carrying Machine Gun Used by First Regiment, Illinois National Guard. The Gun Is a Standard United States Army Piece

BIG HAVERFORD DISTRIBUTION

CHICAGO, Ill.—The Haverford Cycle Co., distributing the Excelsior in Philadelphia, Buffalo, Detroit and other cities, is now turning over more than 100 Excelsiors per week, and is continually calling for increased shipments. Most of the machines are shipped by express in carload lots.

WOULDN'T YOU LIKE TO BE WITH THEM?

CERTAINLY you would; any red-blooded sportsman would. Well, the big Vacation Number of **Motor Cycle Illustrated**—due June 22—will tell you how to get just as much fun and healthful recreation out of life as these fellows are getting. It will tell you in snappy, chatty articles and show you in bright original photos and sketches how to make every minute count in your vacation,—and throughout the whole summer, for that matter.

If you are a cycle dealer, both you and your business need this attractive, helpful number; if you are a rider, you can't do justice to all your summer opportunities without it. As for those who are not riders, no one could do them a more friendly turn than to place in their hands a copy of this special number. It will make cyclists of them—sure as shootin'.

There's a big tip for the dealer.

BUSINESS OPENINGS FOR MANUFACTURERS AND JOBBERS

ZANESVILLE, O.—The Bonifield Wolfe Hardware Company has bought out the stock of the Fillmore Hardware Company. Catalogs on bicycles, mechanics' tools, lubricating oils and varnishes are requested.

STATESBORO, Ga.—Frank H. Balfour and H. T. Melvin have bought the hardware store of George Rawls. Catalogs on bicycles, automobile accessories, lubricating oils and small tools are desired.

HAVRE, Mont.—Jestrab Brothers, newly organized, desire catalogs on automobile accessories, bicycles, small tools and lubricating oils.

SANTA ROSA, Cal.—Charles A. Smith has bought out W. L. Whitaker's hardware business. Smith requests catalogs on lubricating oils and automobile accessories.

NUNDA, S. D.—H. O. Lindstrom has started in business to deal in oils and small tools as well as bicycles. Catalogs are requested.

RYDER, N. D.—Ole Olness has started in business and requests catalogs on automobile accessories, small tools, lubricating oils and varnishes.

ROCKVILLE, Ind.—The Rockville Hardware Company is now run by Cleeman and Cole. Catalogs are requested on small tools and lubricating oils.

WINDSOR LOCKS, Conn.—The F. S. Bidwell Company has been incorporated with a capital stock of $75,000. Bicycles, small tools and oils are handled.

INDIANS WIN GOLD MEDALS IN DUBLIN TRIAL

SPRINGFIELD, Mass.—Recent advices to the Hendee Mfg. Co. from Dublin, Ireland, give the final awards in the Dublin & District Motor Cycle Club's Easter Monday trial, two Indians with sidecars receiving full marks and gold medals. These combinations were driven by E. Carton and C. B. Franklin, and were the only two machines to receive full honors. Franklin was also the winner of the Dunlop Challenge Cup.

S. Redmond, on a 1912 Indian road racer, also completed the course and earned a silver medal. The trial, the communication stated, was a very severe one, through the hills of County Wicklow, and totaling 145 miles. Out of 18 starters, only five finished, three of these being Indians.

NEW DROP FORGE COMPANY

MILWAUKEE, Wis.—The John Obenberger Forge Co. has been organized with a capital stock of $100,000 and is equipping a plant at West Allis. John Obenberger will head the new concern. He is one of the best-known drop forging men in the Middle West.

MICHIGAN PATHFINDERS ON THE JACK PINES TRAIL

Take Ten-Day Trip to Mark Course of Gruelling Run to Be Held July 2-3-4; Low-Gearing Traveling; Scouts Carry Complete Camping Equipment

By PAUL J. BAILEY

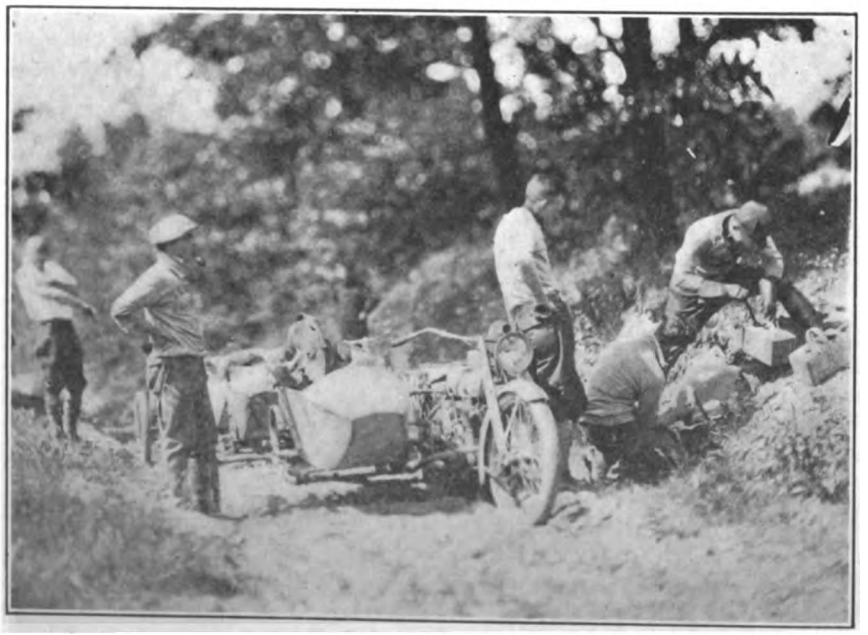
Sand Streak Between the Michigan Hills, a Foretaste of Road Surfaces to Come in the Peninsula

GRAND RAPIDS, Mich., June 10.—With the raindrops pattering a gentle accompaniment to the purr of the motors, the pathfinding crew of the Grand Rapids Motorcycle Club started on their journey Sunday morning, June 4, to lay out the course of the big national championship endurance run to be held on July 2-3-4.

All the machines carried sidecars, loaded to the guards with camping equipment, road signs, paint for marking the turns, etc. After the first few miles had been covered the rain slackened, and later in the morning the skies cleared and the sun shone out; making all hands rejoice in its brightness.

But by that time the warmth of the sun was no longer needed, for the riders had entered the rough stuff and were kept busy enough to maintain their circulation. The good road was left a short distance out of the city, when a left-hand turn led up a narrow little side road climbing a steep hill, cut by ruts and deep with sand.

And all the rest of the way followed suit. The course that is being laid out is being chosen as a "goat-getter." Its chief object is to be as bad as possible to prove that roads can't be bad enough to stop an up-to-date motorcycle. And the specimens of road that this pathfinding crew are picking out are well designed for endurance run purposes.



Pathfinders Painting Road Sign on One of Many Rocks By the Wayside

Low Gear for Miles

For miles at a time the machines traveled on low or second gears, for the sand was so deep that "high" was out of the question for the heavily-loaded sidecars. And when those same sand streaks led up steep hills—ah, then came the pull. Some idea of the nature of the roads can be gained from the fact that even the lowest-geared machine in the party, a big three-speed twin with a low gear of 12 to 1, had to have the sidecar passenger on foot pushing to get up several of the hills. Furthermore, this was shortly after a rain, while the sand was wet—and it is worse when dry.

Digitized by Google

The course is to be marked thoroughly, so as to avoid any riders going astray on the run, with a mark at every crossroad, turn or fork all the way. A cross indicates straight ahead, an "R" means a right-hand turn, and an "L" a turn to the left. The letters are in bright red paint with broad white outline.

Out for Ten Days

The pathfinders expect to be out on this journey about ten days, and are carrying full camping equipment so as to stay wherever they happen to be when night falls, as much of the time will be spent a long way from any hotel. Tom Martin is lugging a specimen of .44-caliber Colt heavy ordnance for the sake of preparedness in case he meets the same wildcat that looked him over while he was stopped to fix a puncture in the woods on the run last Summer. Other members of the party have items of equipment that meet their ideas of necessities for the trail.

"Hap" Scherer, who was one of the main spirits in laying plans for this big tour of the Jack Pines, intended to be a member of the pathfinding party, but at the last moment found himself slated to ride in an eastern endurance run on a conflicting date. This was the Worcester, Mass., 24-hour contest up to the Canadian border.

WILL REFUND CITY FEE TO BUFFALO RIDERS

BUFFALO, N. Y., June 12.—At the last meeting of the Buffalo Councilmen a special resolution was passed ordering the city treasurer to return the one dollar municipal motorcycle license fee. This resolution is the outcome of the persistent efforts of riders who demanded the refund of their fee, because of the new State registration and license law now in force. The city ordinance provided that if a motorcycle license should be required by the State, the city license ordinance would become null and void, but it did not provide for the return of the municipal fee.

The city treasurer will return the city fee paid by any rider upon application and presentation of his 1916 certificate and city license number plate. A number of riders have already made applications.

Resting at the Mouth of a Sandy Gulch, Where Low Gear Is Needed

WANTS $400,000 FOR SPEEDWAY

LEXINGTON, Ky., June 12.—J. T. McKee, one of the active promoters of the new Lexington Motor Speedway Co. here, has had the papers drawn up and started a campaign to secure subscriptions for the $400,000 worth of stock. The track is to be a two-mile circuit, of board construction, and will be used for automobile and motorcycle events.

WANTS SIDECARS FOR POLICE

YOUNGSTOWN, O.—Chief of Police Hertenstein is genuinely pleased with the success of the motorcycle squad of his force and advocates extensions in it to obtain greater efficiency. He wants two sidecars for use as emergency patrols, as a start.

WHY SHEEPSHEAD BAY WAS PICKED FOR CONVENTION

WHILE it is now generally known that the New York State Convention and races will be held at the Sheepshead Bay Speedway on July 4, there have been a number of inquiries received from time to time concerning Saratoga, N. Y., and pointing out the suitability of that city and its track for such a purpose. An exposition of the superiority of the Sheepshead Bay location, etc., will, therefore, be of interest.

The Speedway is a two-mile track, suitable for the highest speeds possible. It is one of the most excellent for racing in the United States. It is close to Coney Island, the metropolitan pleasure resort, to which visitors can ride in a few minutes and enjoy themselves between times. Access to the track is over good roads for the most part.

The Saratoga track, where former conventions have been held, is not available until the latter part of the Fall, owing to its being subsidized for horse racing during this Summer. It is by no means in the same class as the Speedway for racing either.

PROVIDENCE'S RACES ARE AGAIN POSTPONED

PROVIDENCE, R. I., June 10.—The races postponed from Decoration Day until to-day were postponed again this morning because of the rain and muddy condition of the track at Hillsgrove. The date for holding the races will be announced next week.

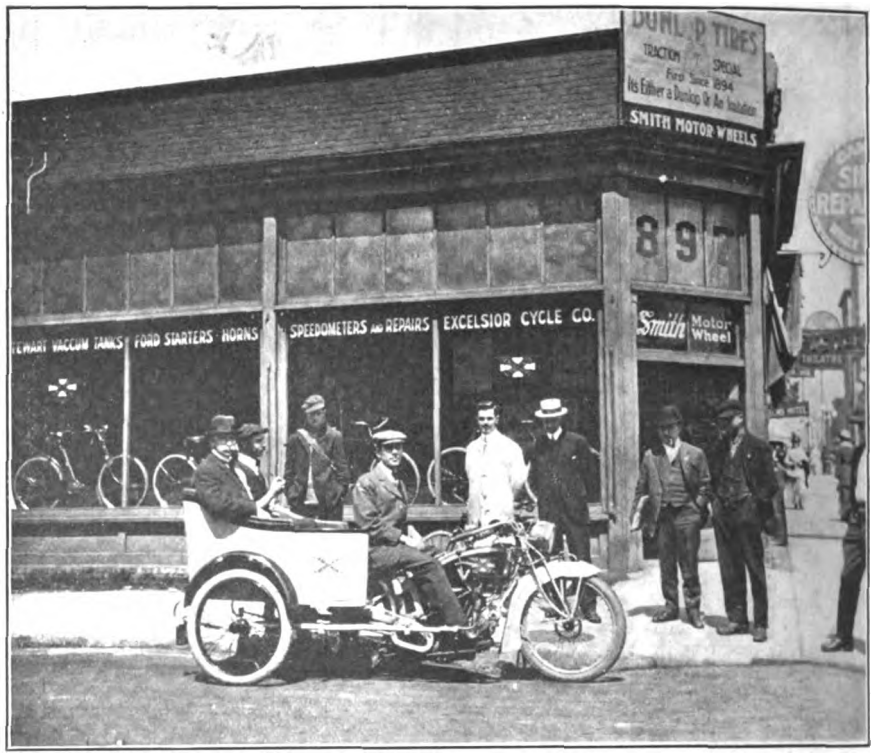
ENTERTAIN NEW MEMBERS

PROVIDENCE, R. I., June 13.—The regular weekly meeting of the Providence Motorcycle Club was held this evening. The thirty new members, who have joined since the membership campaign started, were tendered a reception. The ladies brought lunch baskets and these were auctioned off. A musical program was presented.

DAVISITES FOR PREPAREDNESS

DAYTON, O.—Employees of the Davis Sewing Machine Company took part in the Preparedness Parade in this city on June 3. There were over 1,000 Davis men in line. Over 15,000 men of this city participated in the affair.

DEMONSTRATING FIRST CYGNET IN VANCOUVER



Dealer W. E. Woodley with Excelsior Drawing Rear Car in Front of New Quarters of Excelsior Cycle Company. Rig Attracted Much Attention

WILL FINANCE SALES FOR EXCELSIOR DEALERS

Factory Makes Arrangements With Republic Finance and Investment Company to Handle Installment Accounts for Its Agents

CHICAGO, Ill., June 12.—Excelsior dealers, both large and small, will welcome the announcement from the Excelsior Motor Mfg. & Supply Co., that it has just finished negotiations with the Republic Finance and Investment Co., Indianapolis, Ind., whereby the latter firm will handle installment accounts for "X" dealers.

The plan to be followed involves the payment of one-half of the total price of the machine, the investment concern taking the buyer's papers for the balance and giving over to the dealer the full cost price of the motorcycle plus a portion of his profit. The Republic company enjoys a splendid reputation for fair and square dealings, and was first thoroughly investigated by the Excelsior factory before the present arrangement was entered into.

Details of this co-operative plan were very carefully arranged, and they ensure the most satisfactory terms to the purchaser of machines and place ready cash in the dealer's hands, thus enabling him to expand his business.

Quite a number of Excelsior dealers in the past have had installment accounts carried by the Republic Finance and Investment Co., but these have been mostly the larger dealers and distributors. In fact, papers have been carried in amounts as high as $350,000.

THEY TAKE CARE OF ROCHESTER, N. Y., TRAFFIC

One Shift of Officers on Harley-Davidsons Who Are on Duty Eight Hours a Day. Three Shifts Keep Machines Busy for 24 Hours

JAPANESE TRADESMEN STOP AT MILWAUKEE

MILWAUKEE, Wis.—I. F. Ishizawa, directing manager of the Japan Automobile Co., of Tokyo, and Isamu Hoshiko, of the same city, visited the Harley-Davidson Motor Company and the A. O. Smith plants on June 8 and 9. Mr. Ishizawa is a dealer in motorcycles and bicycles in Japan, being the Harley-Davidson distributor as well as representative of a number of automobiles.

While in this city the Japanese visitors made tentative arrangements with Sales Manager W. V. C. Jackson, of the A. O. Smith Company, to handle the Motor Wheel in their country. They were pleased with their visit to the Smith factory.

ODELL WINS CHICAGO HARE AND HOUNDS

CHICAGO, Ill., June 12.—O. L. Odell, of the Mystic A. C., was the winner of the hare and hound chase staged yesterday from the Riverview club house over an eight-mile course. P. Klaes, of Belgian-American C. C., came in second, followed by F. Van Riett, Sleipner A. C.; H. Borzecchi, Lesar Dewird, L. P. Matson, J. Lezin, A. J. Sacchini and M. Boxtall. Odell came home in 17:48, with Klaes in 18:50 and Van Riett in 18:52.

The run was a revival of the formerly-popular cycle event. The hare was given two minutes in the eight-mile course, the field being sent away in a "pack" when the 120 seconds were up. The course was south on Western avenue, to Fullerton, Cradford, and Diversey avenue; then back on Western and home. The chase was so successful that another will probably be held in the near future.

BENSON TRAVELING EAST

MILWAUKEE, Wis., June 12.—J. A. Benson, who has covered the State of California successfully boosting the Smith Motor Wheel, is now on a trip through Ohio in behalf of the "red speed demon." Benson will call on most of the present motor wheel dealers and will also travel new territory to sign up additional agents. Leaving the Buckeye State, the California hustler plans to blaze a trail eastward.

DIDIER MAKES NEW RECORD FOR REVERE TRACK

OSTON, Mass., June 8.—Leon Didier, the French rider, showed the way over the tape to Victor Linart, the famous Belgian cyclist, and George Wiley, of Syracuse, in the three-cornered motor-paced race at thirty miles, which was contested at the Revere track last night.

Incidentally, Didier established a new track record of 42 muintes 1⅕ seconds for the distance. The none too bright night played havoc with the crowd. However, the fans attending were treated to one of the best matches that has ever taken place at the Beach oval.

Up to within five miles of the finish Linart had the race well in hand, but a sprint started by Didier shook the Belgian from his pace and left the field practically clear for the Frenchman.

Wiley put up a game struggle to hold out the pace Didier started, but the Parisian rider literally flew and was not to be caught.

CRESCENTS PREPARING FOR HOLIDAY CLASSIC

BALTIMORE, Md., June 10.—The run of the Eagle Cycle Club was held Sunday to Annapolis, William G. Anderson being in charge. Those on the run were C. Byrd, F. Mirando, J. Wilen, Edwin Durr, M. Zlar, Henry Lasner, H. Nechampkin and A. Weinstein made the trip.

The regular run of the Crescent Bicycle Club was scheduled Sunday for Havre De Grace, but owing to the heavy rains in that vicinity only two riders showed up for the journey, Walter Iglehart and Walter Doersch. Fred Sanborn returned Sunday from a two-day trip to Philadelphia, where he was the guest of Wm. T. C. Yorke, of the Century Road Club of America.

The members of the Crescents are working hard to make a success of their ten-mile handicap road race which will be held on the 4th of July. A liberal prize list will be offered the competitors.

PRIZES WANTED FOR CYCLE PARTS RACES

Response Has Not Been Prompt to Committee's Request for Awards to Be Used in Bicycle Events at Atlantic City Convention

ERIE, Pa., June 12.—Though the big bicycle races which will be a feature of the Cycle Parts Convention in Atlantic City are still far down in the table of coming events, Messrs. Surre and Morehouse, of the arrangements committee, are anxious to secure a large prize list now in order to start an early campaign to arouse the interest of eastern riders.

The prizes received by the committee will be published frequently, and unless the list increases many of the cyclists who might otherwise compete in these events might not deem it worth their while to enter the Cycle Parts meet.

Manufacturers have not responded very promptly to the request for prizes. At this writing but seventeen firms have donated awards for the races. Though the committee expects that other manufacturers will come through in due time with prizes, it believes that the work of attracting favorable attention to the races will be greatly facilitated by the early receipt of awards.

The Atlantic City racemeet is not directly connected with the campaign of the "Million Bicycles" committee, and the prizes placed with that committee will not, so far as is known, be hung up at the Cycle Parts meet. The events to be staged at the famous seaside resort are a separate proposition, and those manufacturers who intend to support the Cycle Parts races should send their donations to the Haverford Cycle Company branch in Atlantic City.

Following is a list of the prizes which the committee received up to June 7th.

A. O. Smith Company, Smith Motor Wheel.

Eclipse Machine Co., coaster brakes.

Emblem Mfg. Co., 1 Emblem Bicycle.

Fisk Rubber Co., 1 pr. Bicycle tires.

Corbin Screw Div., 1 No. 10 2 speed coaster brake.

Racine Rub. Co., 2 pr. 28 x 1¼ Racine tires.

Troxel Mfg. Co., 6 saddles.

Frank Mossberg Co., Assortment of tools.

Badger Brass Mfg. Co., Solar Lamps.

Diamond Chain & Mfg. Co., 6 No. 71 Roller Chains.

Racine Rubber Co., 2 pr. Chicyco recer tires.

Persons Mfg. Co., 1 Track Racer Saddle.

Firestone Tire & Rub. Co., 2 pr. bicycle tires.

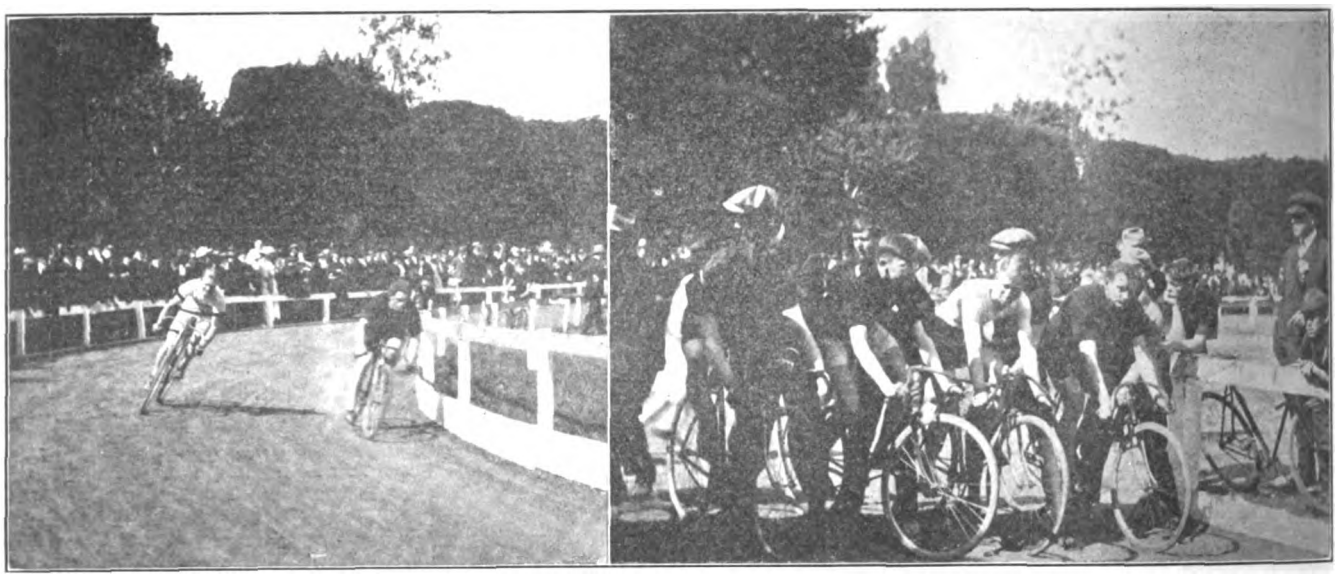
Chicago Handle Bar Co., 1 Shelby Bar.

Splitdorf Electrical Co., 1 silver cup.

American Wood Rim Co., 6 prs. rims.

W. H. Crosby Co., $10.00.

SAN FRANCISCANS ARE ARDENT FOLLOWERS OF CYCLE RACING



Left, W. Thompson Winning Second Heat, with J. Hyerdall Close; Right, Start of One Mile Final in Which Hyerdall Was Victorious

SAN FRANCISCO, Cal., June 10.—Jerry Hyerdoll, of the Olympic Club, captured the one-mile bicycle race held last Sunday as the feature of the annual athletic games of the Knights of the Red Branch at the Shellmound Park track. The circuit is a ten lap affair, and being somewhat sandy it was impossible to make fast time.

Summaries:

First heat.—F. Hoffman, Olympic Club, first; W. Hammitt, New Century, second; G. Drury, New Century, third. Time, 2:37.

Second heat.—W. Thompson, New Century, first; J. Hyerdoll, Olympic, second; W. Rhodes, New Century, third. Time, 2:41.

Final.—J. Hyerdoll, Olympic Club, first; F. Hoffman, Olympic Club, second; W. Hammitt, New Century, third. Time, 2:31.

NEW CENTURY WHEELMEN ELECT THEIR OFFICERS

SAN FRANCISCO, Cal., June 10.—At the meeting of the New Century Wheelmen, held last week, M. Newmark, one of San Francisco's best-known business men and a veteran in the cycling sport, was elected to honorary membership. Newmark first became identified with cycling about twenty-five years ago.

At the same meeting officers were elected for the ensuing year: President, R. A. Greeninger; 1st vice-president, John Coughlan; 2nd vice-president, George Drury; recording secretary, Harry Spence; financial secretary, Earl Castillo; treasurer, Les. Drury; captain, W. Hammitt; 1st lieutenant, G. Drury; 2nd lieutenant, W. Penoluma; sergeant-at-arms, A. Page.

NEW DESIGN PATENT FOR GREAT WESTERN

LA PORTE, Ind., June 12.—A patent has just been allowed to the Great Western Mfg. Co., this city, protecting its use of the new double-curved top bars of the motorbike made by this company. The patent is No. 49,125 and dated May 30, 1916.

"The Great Western Mfg. Company," said President E. J. Lonn, in making the above announcement, "is a great believer in individuality in the design of its machines. This makes the eighth design patent which has been issued to us, and we are, therefore, fully protected."

CYCLEMOTOR EXPORT BUSINESS GOING STRONG

ROCHESTER, N. Y., June 12.—Among the recent foreign agencies closed by the Cyclemotor Corporation is that of F. Navas, Havana, who visited the factory here last week. Navas was very much impressed with the way in which the Cyclemotor is manufactured and stated that he could undoubtedly dispose of several outfits before the present season is over.

The export business of the Cyclemotor Corporation is growing apace. Agencies have been established in Copenhagen, Denmark; Santo Domingo; Rio de Janeiro; Tokio, Yokohama and Nagaii, Japan; and Lima, Peru. A shipment of 256 Cyclemotors is now being prepared, the factory reports, for a representative in Holland, while a recent cable from Sweden contained instructions from the dealer there to double his order.

ENGLISH VETERANS MOUNT BICYCLES AGAIN

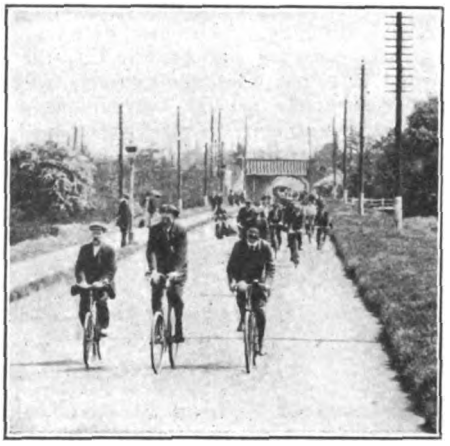
More Than 300 Old Time Cyclists Take Part in Great Rally Over Famous Ripley Road; Letter from Lord Northcliffe Read; Distinguished Riders Present

By H. W. BARTLEET
Special London Correspondent

Participants in Cyclists' Rally Halted at Esher in Front of Bear Hotel, Noon Control. Esher Is Eight Miles From Ripley

LONDON, Eng., June 1.—Most American cyclists have heard of the famous Ripley road, that 24 miles of highway which runs along the Thames valley from London to the little Surrey village of Ripley, on the main road to Portsmouth. Ripley was once aptly dubbed the Mecca of all good cyclists, and no London rider deems his cycling education complete till he has ridden to Ripley and lunched at the famous Anchor Hotel.

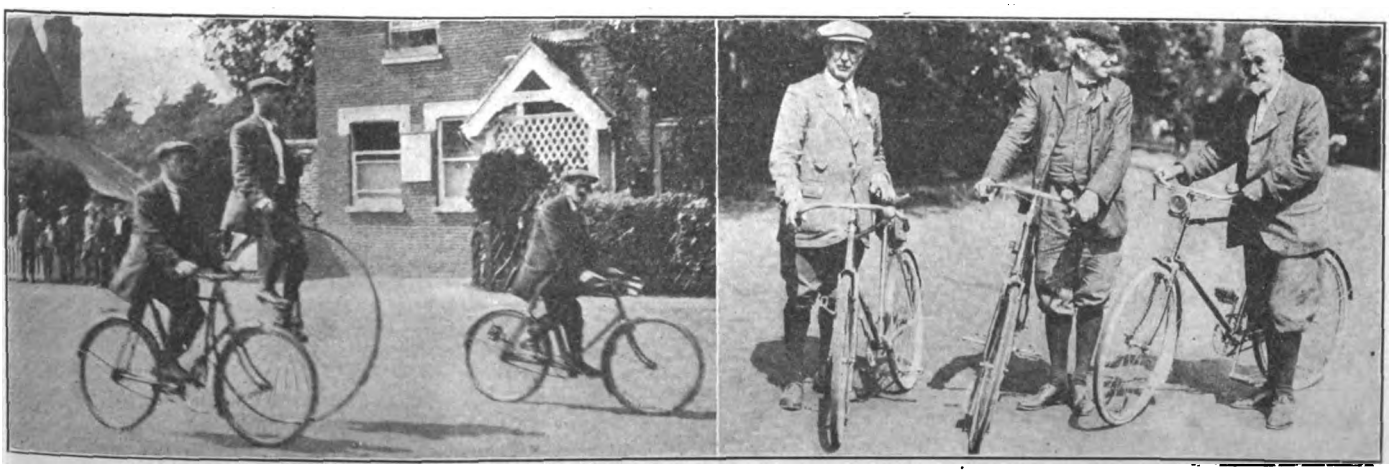
When therefore "Bill" Munday, an old-time racing man, suggested that a gathering of ancient cyclists should be arranged on the ever popular road, the idea was received with acclamation. W. F. Freeman, an organizer of C. T. C. tours, undertook the secretaryship, a circular was sent out, and the London papers took up the scheme, with the result that Sunday, May 21, saw nearly 300 cyclists, all over military age, and many in the sixties and seventies, assembling at the Bear Hotel, Esher, at noon.



On Road Across Ditton Marsh

Some came in motor cars, a few rode ancient high wheels, but the majority used modern safeties. It was a "go-as-you-please" affair; the men rode the eight miles to Ripley, where a cold lunch was served, and back to Ditton for tea. George Lacy Hillier presided at the lunch, having on his right hand Rowley B. Turner, and on his left Shirley Fussell. These are three of the best known men in English cycling history.

Hillier was the champion path rider of 1881, afterwards editor of *Bicycling News*, and a trenchant cycling politician and writer. It was Turner who, in 1868,



Left, Ordinary and Some Primitive Safeties on the Road; Right, F. W. Nicholls, F. T. Bidlake and J. Wery, Veterans Who Rode Through

Digitized by Google

brought a wooden-wheeled, iron-tired boneshaker from Paris to Coventry, and persuaded the then European Sewing Machine Co. (now the Swift Co.) to make him 400 bicycles to sell in France. This was the very beginning of the British cycle industry.

Fussell is a leader in the Pickwick B. C., the pioneer cycling club of the world. When, some few years ago, another claimant to the title of oldest club arose, it was Shirley Fussell who detected the weakness of the claim, and proved beyond cavil the priority of the Pickwick.

Letters From Prominent Men

At the luncheon, Hillier read letters from several absent old-timers, including Fred. Wood, the great professional rider from Leicester, whose name will be remembered by many Americans; Lord Northcliffe, a one-time cyclist and cycling journalist, and A. M. Bolton, who crossed the Pyrenees on a high bicycle and related his adventures in a book.

M. D. Rucker, who will be recalled as the managing director of the great Humber Company, and the associate of E. T. Hooley, in some of that bold financier's ventures, arrived on an ancient spring-framed bicycle. The secretaries of both the Cyclists Touring Club and the National Cyclists Union, Messrs. Burke and Noble, were present, as was Wat. Britten, the first man to ride from London to Bath and back in a day, back in 1878. Among the giants of the track I noticed E. M. Mayes, F. P. Wood, G. L. Morris, A. E. Walters (holder of the world's 12 and 24 hours records), B. W. Attlee, R. L. Ede (who spoiled Zimmy's sequence of championship wins in 1892 by taking the 25 miles event), Major C. E. Liles, 1 mile British champion in 1880; A. J. Watson, 1 and 5 miles champion in 1895; while speed on the highway was represented by E. Dance, twice holder of the record from London to Brighton and back, H. Green, holder of the Land's End to John O'Groats record; G. A. Olley, who, during a long career, held records at 1 mile and 1,000 miles—so versatile was he.

In that distinguished gathering were also E. Dangerfield, almost unbeatable at a hundred miles in his day; A. J. Wilson, founder of the North Road Club, Road Records Association, Cycle Trades Benevolent Fund, and now advertising expert to the Dunlop Co.; F. T. Bidlake, the greatest exponent of tricycle riding; M. A. Holbein, road record breaker on all types of machines and long distance swimmer; Pembroke Coleman, who was official timekeeper for nearly thirty years, and also "Boots" Green, who used to fire the pistol for championship races.

Needless to say many lapsed friendships were renewed at the Great Rally and conversation centered on feats awheel in "the good old days."

QUINE THROWS LIGHT ON PRIZE DISTRIBUTION

Chairman of "Million Bicycles" Committee Fully Describes Purpose of Committee in Asking to Handle Donations for Races; Seeks to Prevent Confusion and Duplication

AKRON, O., June 10.—Reiterating the object of the "Million Bicycles Committee" in asking for prizes, as an effort to encourage bicycle road racing along broad lines, Harry S. Quine, chairman of the committee, in a general letter mailed to the manufacturers last week, calls attention to the effective distribution of prizes which is made possible by regarding his committee as a clearing house for such donations.

It appears that in this connection there is some misunderstanding regarding the true status of the committee. And in his letter Mr. Quine states that, as was announced a few months ago, the committee's sole object in asking to be considered as a clearing house is to secure an equitable distribution of prizes—to see that some races are not overstocked through the manufacturers' generosity, while others suffer for lack of prizes because of failure to make proper solicitation.

Many Give Support

Many manufacturers have responded to the offer of the "Million Bicycles "committee, while quite a few have not yet given their support. In some cases confusion has arisen, which has hampered the committees' efforts—for instance, in checking up certain prospective race meets, the committee has found that not a few manufacturers had already promised prizes direct, though they had authorized the committee to donate certain prizes for them. This made it hard to prevent duplication and also emphasized the importance of placing the work of prize distribution entirely with the committee.

In his general letter, Chairman Quine lauds the efforts of Mr. Persons, of the Persons Mfg. Co., who on his own initiative volunteered his services to "Million Bicycles" committee in canvassing prizes. Mr. Persons has for many years, being an ardent booster, solicited prizes for races in New England; and when he heard of the plan proposed by the committee he immediately offered his support, requesting the committee to govern and account for every prize received through his solicitation. Those members of the trade, therefore, who pledged prizes to Mr. Persons, have really given their support to the "Million Bicycles" committee.

Prize Arrangement

The prize distribution arrangement with the "Million Bicycles" committee is effective, says Mr. Quine in his letter, only until the trades convention at Atlantic City this summer. At that meeting provisions will be made for the general distribution of prizes next season if the plan is endorsed by the manufacturers. In the meantime Mr. Quine hopes that manufacturers will either give prizes through his committee, or in such cases where they act direct to notify the committee to that effect, in order to prevent confusion and duplication.

In concluding his letter, Chairman Quine points out the advisability, in the case of bicycle makers and various parts manufacturers, of offering as prizes other articles than their products, especially at this time when materials are so scarce. He continues:

"Secretary Olin, of this committee, has obtained a most attractive array of jewelry, as substitutes in such cases. Guaranteed watches, cuff links, clocks, stick pins, diamond rings at unheard of prices are included in the showing. They are just the kind of prizes that amateurs will prize and treasure all their lives—and the watches, for instance, can be inscribed with your name as donor, at small additional cost. They cost you less than some of the prizes you are accustomed to give. You will find it very interesting to get in touch with Secretary Olin at once, on these things."

JOBBERS AND DEALERS WILL CO-OPERATE

Tradesmen of Golden State Meet in Los Angeles and Discuss Plans for Bettering General Trade Conditions

LOS ANGELES, Cal., June 10.—Plans for co-operation between dealer and jobber, and the establishment of more frank relations, looking to the advancement and betterment of the bicycle business, were the chief objects that came up for consideration at the meeting of bicycle and accessory jobbers of California in this city on June 5. Practically every jobber in the Golden State attended the informal convention, which was voted a success, both from a social as well as a business standpoint.

An effort will be made by the jobbers to keep all of their dealers posted on the latest trade developments and to assist them in making thoroughly businesslike decisions in connection with the more or less complex problems which have arisen because of advancing prices and uncertain deliveries. The jobbers were one in declaring that it was as much to their interest as to the dealers' that the latter be at all times fully informed of conditions affecting the trade.

One of the points made clear at the meeting was the advisability of having every cycle merchant price his merchandise now, at the figure he will have to ask when he replenishes his supply. The prices of bicycles have in the majority of cases advanced, and dealers who still have on hand a stock of machines bought under old list prices should charge according to the new retail figures, rather than maintain their old prices.

The credit situation in the state will be greatly improved, if the inter-dealer and jobber co-operation in eliminating the dead beats, which was earnestly discussed at the meeting here, proves successful.

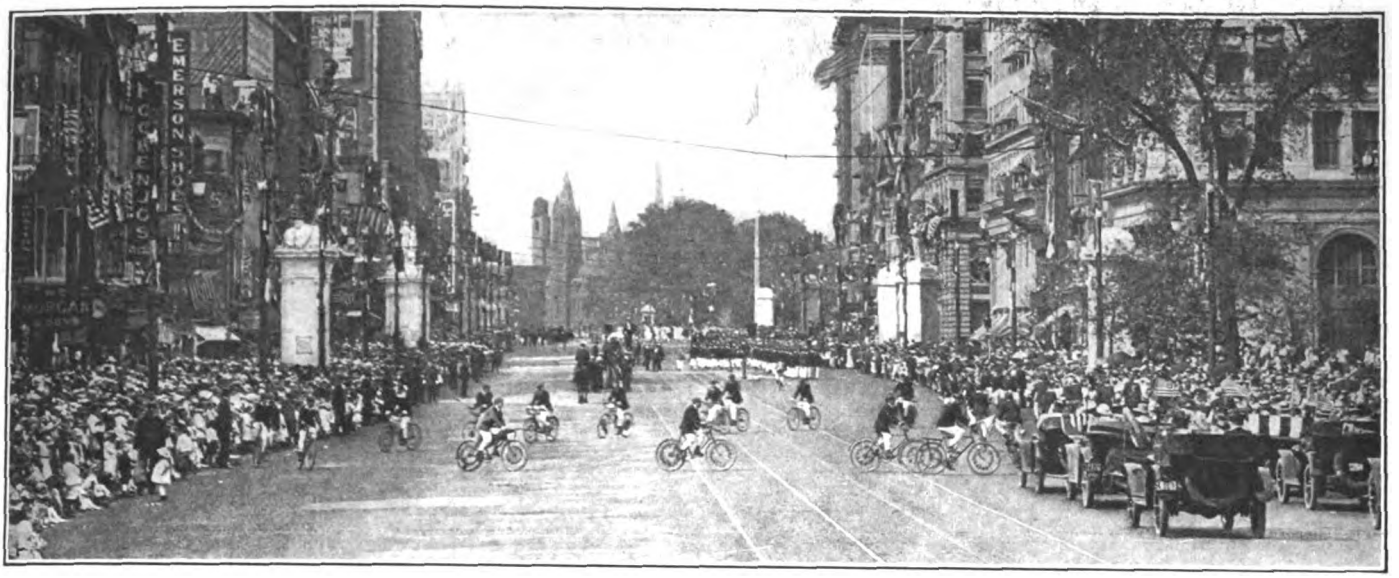
DECORATED BICYCLES FEATURE PARADE OF NEWARK (N. J.) SCHOOL CHILDREN



Several Hundred Bicycle Riders from the South Side High School Participated in This Parade Which Was Held Last Week in Connection with Newark's 250th Anniversary Celebration; Fancy Evolutions Drew Plenty of Applause

PIERCE COMPANY RUNNING SHORT ON PARTS

BUFFALO, N. Y., June 12.—So acute has the parts situation become for the Pierce Cycle Company that Sales Manager Fred L. Brown is preparing a general statement to dealers, in which he will give a complete list of the parts which the factory now finds it impossible to supply.

Brown has been making many trips lately to manufacturers in an effort to secure parts for Pierce bicycles, and in almost every instance he found that the parts makers were literally swamped with orders. The shortage of material is tying their hands: also in ordering coaster brakes, for example, Brown requested the manufacturers to ship them without ball bearings.

RODE TO WESTFIELD, MASS.

This Trio of Toledo Boys Averaged 100 Miles a Day in Cycling on Columbias to the Westfield Plant

IT PAID ADAMS TO BE ACCOMMODATING

ROCHESTER, N. Y., June 12.—The fact that O. W. Adams, traveler for the Cyclemotor, was able to strip his machine of the motor attachment in rapid-fire fashion, at Mason City recently, had much to do with his signing up an agency there. A road race was about to start when Adams reached the city, and one of the contestants, finding that his bicycle was out of commission, asked the manager of the Seeley Cycle Store to lend him a machine.

But all of Seeley's bikes had been sold, except for a number of second-hands. Adams saw his chance to be accommodating, and rapidly went to work taking down the Cyclemotor on his mount. The ease and speed with which he did it surprised both Seeley and the riders present. Seeley freely expressed his admiration for a motor attachment which could be taken down so readily and placed an initial order for two Cyclemotors.

AUTO DEALER ESTABLISHES BICYCLE DEPARTMENT

MILWAUKEE, Wis., June 12.—Automobile dealers are coming back to the bicycle. If you don't believe it just write to the A. O. Smith Co., maker of the motor wheel. They have placed several agencies with the four-wheeler men for the "little red buzzer," and have made the discovery that not a few of the auto dealers are also taking on bicycles.

The latest recruit is H. C. Wollaeger, Wisconsin distributor of the Studebaker. This live wire has just signed for the Smith motor wheeel, and also handles a standard line of bicycles and commercial bicycle vans. A distinct cycle department has been established by Wollaeger having its own sales force.

OVER 200 IN WILKESBARRE BICYCLE PARADE

WILKESBARRE, Pa.—One of the largest bicycle events in years in this section was the municipal cycle parade held on June 3. More than 200 riders took part, covering a three-mile course which was lined three deep with spectators. It took two hours for the procession to pass.

The grand prize offered by the city for the entire parade was awarded to James Purcell, of 66 Wyoming street. Purcell also

ST. ONGE HAS NOVEL SIDE-CAR OUTFIT

MONTREAL, Quebec, June 12.—A bicycle feature which has been attracting great notice in Montreal in recent weeks has been the cycle-sidecar outfit, propelled by Smith Motor Wheel, which Fred. St. Onge has been using to demonstrate the "Milwaukee Booster." The picture shows St. Onge and a motor wheel prospect riding along one of Montreal's streets, St. Onge being on the saddle with camera slung over his shoulder. It is a Pope bicycle and Houghton sidecar, the latter being a product of Marion, Ohio.

The picture shows St. Onge with his sidecar leaving this city on a tour through the Province. He can attain a speed of over 16 miles per hour with passenger up.

St. Onge has just returned from a business trip to the Pacific Coast. He is the live-wire salesman for the A. E. Bregent Company, Montreal, Pope and Smith distributors.

Who

Read the Real Facts About the Bost

Latest reports confirm Indian superiority in the two big Eastern endurance runs held at Memorial Day time.

In the case of the endurance type of contest where so many different classes receive awards it is almost always easy for any make to get something out of it in an advertising way. Thus very often a good deal of confusion is created as to which machine gave the best and most consistent performance.

It is with this in mind that the Indian wishes to reiterate that it showed by a wide margin the best performance in the Boston-Buffalo endurance run and in the Newark endurance trials.

Another make advertises the highest consistent score of 996, made with a sidecar combination. This entry was the lone survivor to finish with high score out of an original team of four.

Yet the Indian put through FOUR sidecar outfits earning FOUR PERFECT SCORES and a consistent mark of 995—an amazing feat when you consider that FOUR sidecars were driven 1000 miles and that all four Indians together were penalized only one point more than the single sidecar combination, which had a score of 996.

Furthermore, five Indian solo machines finished with perfect scores and earned very high consistency ratings. And furthermore, 11 out of the 14 Indian starters finished. The first 1,000 mile endurance contest ever held in the United States was an out and out Indian victory and cannot be otherwise than so apparent to anyone who will analyze the scores.

In the Newark run Indian was credited with the highest score for amateur rider and highest score for professional rider—and awarded the only two gold medals of the event.

U. S. TIRE SALESMEN IN ANNUAL MEETING

From All Parts of Country Representatives Gather at Indianapolis to Study Sales and Manufacturing Methods

INDIANAPOLIS, Ind., June 10.—Salesmen of the United States Tire Company have been in active session in this city for the last three days, their headquarters being at the G. & J. plant. The occasion was the annual conference of salesmen from all parts of the country, and is the result of the big tire firm's policy to get the men together and obtain the benefit of their collective ideas. All the sessions were secret.

Those present at the conference included M. E. Stokes, motorcycle and bicycle tire department sales manager; J. J. Hause, assistant department sales manager; G. C. Gaillard, F. B. Goodloe and P. H. Nystrom, all of New York; F. R. Burton, Atlanta; J. A. Visconte, Boston; P. C. Anderson, Chicago; W. C. Price and E. W. Bailey, Cincinnati, and G. K. Culp, special sales representative.

Secretary-treasurer W. B. Harding; superintendent C. E. Stoutenburgh; Tom Jordan, assistant superintendent; H. J. Stombaugh, order department; and E. Riggi, chief accountant, were present from the G. & J. factory.

From Cleveland came P. H. Goodall; C. L. Crippen from Columbus; W. W. Napier from Kansas City, and C. A. Oldham and J. Ward from Indianapolis. E. B. Tozier, of Minneapolis; H. H. Colbath, of Philadelphia; P. N. Gregg, of St. Louis; H. A. Farr, of San Francisco, and E. H. Johansen, of Washington, were present.

Sales Manager Stokes stated that it was the policy of the United States Tire Company to familiarize its representatives with the general details of manufacturing and the requirements of the trade to the end that they would be prepared in every way to discuss these lines as specialists. He said that the conferences had done much to develop U. S. tire business in both the motorcycle and bicycle lines, and that they are looked forward to with great pleasure by all. The recent meeting was the most enthusiastic ever held, he stated. The meeting of the factory and sales organizations was a most important point of the conference.

"The United States Tire Company," said Mr. Stokes, "is enjoying the best season in its motorcycle and bicycle tire department in its history. The primary object of the conference in Indianapolis is to formulate plans for handling the business of the season of 1917."

W. B. Harding, secretary-treasurer of the G. & J. Tire Company, said regarding the conference: "We cannot speak too highly of the loyalty of our sales force as regards our line, and they, on the other hand, are equally as enthusiastic concerning the product of our factory. They are so convinced of the merits of our product that as private individuals none of them would have a moment's hesitation what a motorcycle or bicycle tire would be in the event of having to purchase for themselves.

"We have increased a well-established business by nearly 50 per cent." said Mr. Harding, "and this over the best year in the factory's history. Our product is apparently giving universal satisfaction. The prospects for the seasons of 1916 and 1917 are wonderful, and our policies for this season will be properly outlined at the present conference."

MOTORCYCLE COMPANY FORMED AT FT. BLISS

Effective Service Given by Power Two-Wheelers Leads to Organization of Permanent Company by Gen. Bell

EL PASO, Tex., June 12.—With the organization here of the Provisional Motorcycle Company, a feat which just has been consummated by General George Bell, Jr., a motorcycle company for the first time has become part and parcel of the United States army. Heretofore what use has been made of the power driven two-wheeler by the U. S. regular forces, especially in connection with the Mexican punitive expedition, has been purely spasmodic and in the nature of a trial.

The organization of the motorcycle company now stationed at Ft. Bliss but which will be used to patrol a goodly portion of the 1,700 mile border between U. S. and Mexico, comes as a result of the service the motorcycle has rendered the U. S. troops in this more or less indiscriminate usage. The company, which is under the command of Lieutenant Clyde L. Eastman, formerly in charge of the dispatch bearing motorcycle squad of the 20th Infantry, comprises some 30 Harley-Davidson machines most of them fitted with side cars of orthodox design, with the exception of the army drab finish.

A machine gun company comprising both Harley-Davidson and Indian machines is now in the course of organization under the active leadership of General Bell, and will no doubt be fully organized just as soon as the last shipment of special machine gun motorcycles reaches here from the Springfield Armory.

ROY ARTLEY AND HIS RECORD-CRACKING HENDERSON

He Shattered the Los Angeles-San Diego Record and Then Did It Again to Show That He Could Better His First Performance

HUGHES MEETS WITH HAZARDS ON LONG TRIP

LOS ANGELES, Cal., June 10.—Letters and telegrams received by F. A. Sutphen, secretary of Henderson Motor Cycle Sales Corporation in Los Angeles, from Hughie Hughes, the famous automobile driver who is crossing the continent on a Henderson, tell of strenuous times in the desert. He got caught by the washout at Needles and had to detour hundreds of miles to find the route into Colorado. A letter from Denver stated that he had met all kinds of difficulties, hazards and delays, but the 4-cylinder had kept plugging right along, and he had never taken his tools out from the day he started on the new machine.

GIVING THE VAN USER WHAT HE NEEDS

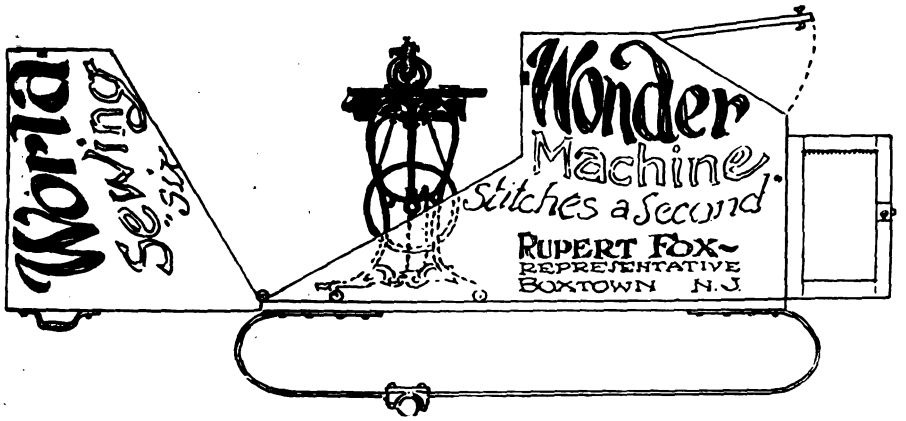
Two More Original Utility Designs Eminently Adaptable For the Newsdealer and the Sewing Machine Salesman and Replacing the Automobiles Generally Employed by Them—Applicable to Standard Chasses—Part 2

THESE VANS COMBINE SIMPLICITY IN DESIGN WITH RAPIDITY IN LOADING

By D. R. HOBART, *M.E.*

IN the previous installment, the van body adapted to grocers' and butchers' use and the special van for florists and men covering a milk route were shown. The next type of body to be considered is that for the newsdealer who has a route for delivering magazines and papers.

The writer knows of a number of newsmen whose custom is such that they have resorted to light automobiles to make their deliveries. In nearly all cases, these men are paying too dearly for the convenience of delivering their papers, but none of them would use the present form of sidevan with plain box body, as it is claimed by them to be unsuitable. If they could obtain a body similar to that shown in the sketch herewith, things would very probably be different.



Van Body with Hinged Cover for Sewing Machine Salesman, Showing Demonstration Arrangement. This Van Can Be Used by a Washing Machine Demonstrator as Well

Newsdealer's Van

There are two compartments in this van for newsdealers. The back one is 20 inches long and 26 inches wide, inside dimensions. It is about 36 inches in height over all. It is divided into eight pigeon holes, measuring 20 x 12½ x 8¼ inches. In these are inserted newspapers, endwise, just as they come from the press or news company. For convenience, a label is placed on the partition above each pigeon hole giving the name of the papers within.

The front compartment has nine pigeon holes or spaces. The upper three, A, B and C, are 10 inches high and 8 or 8¼ inches wide. These are for magazines packed vertically. The depth of 15 inches will allow of two rows in each of the spaces. The lower spaces, six in number, are for the larger sized magazines, inserted endwise and laying flat. The rear compartment door opens to the left, while the front compartment door opens in the same direction—toward the motorcycle. There is no door on the top.

The newsdealer loads the publications into the compartments, closes the doors and starts on his round. If the Jones family take the *Evening Blade, Popular Fiction* and the *Family World*, he stops at their house, gets the former from its space in the back compartment, and the others from the front spaces. He carries a list with him for the purpose. This system ensures his delivering the publications with the minimum loss of time, and is the one used by most of the big newsmen.

When the user wishes to deliver nothing but newspapers, he loads the back as usual, then folds the papers for the A, B and C spaces. For the lower front spaces, he slides the papers in endwise. With either an all-newspaper or a mixed load, there is little time lost in loading or unloading. A slightly different arrangement of this van could be used by the newspaper publisher in distributing the various editions.

The length outside of this van body is 30 inches, which seems somewhat short, but then packed with publications the body will weigh just about enough to give the motor plenty to do to carry the load at speed.

For Sewing Machine Salesmen

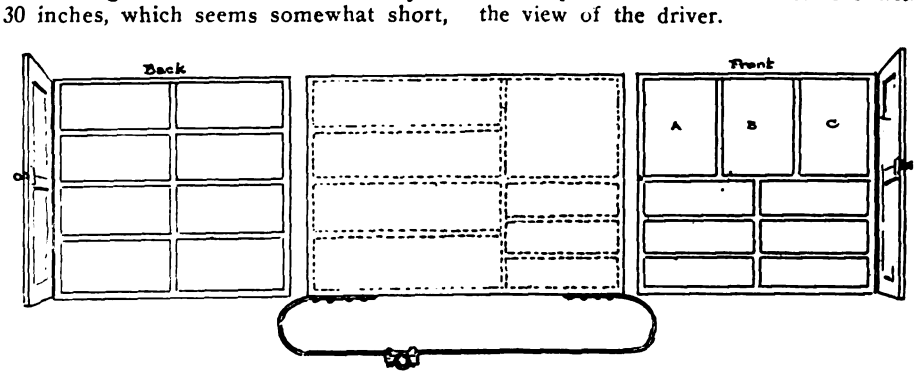
The second design shown is for the traveler who sells sewing machines. This body is made with a divided front compartment and a diagonal rear compartment with combined rear door and top cover. In this rear section is fitted the sewing machine, the feet being clamped to the floor. The machine is placed directly over the axle of the sidevan.

The door and top cover is hinged to the rear of the floor and opens to the rear, exposing the machine. A handle is provided to manoeuvre the door and suitable locks are fitted to keep it closed. Folding braces (not shown) are provided to retain the door in its lower position. Normally, the van is driven with the door closed to protect the machine, but when a demonstration is to be given the door is swung back and the salesman can stand on it and demonstrate. A folding seat can be rigged up if desired, but this is not provided for in the design.

Front Compartments

The upper front compartment is for circulars, etc., and has drawers for needles and the usual smallware that is desired by sewing machine users. The lower compartment with front door is for the salesman's personal luggage when on tour. Such a body could be used by a washing machine traveler or a phonograph man, as well as for the purpose mentioned.

The designs shown are all adaptable to the standard sidecar chassis and, with the exception of the milkman's van, are not expensive, nor do they require the services of a regular coach-builder to make up. None of them interfere with the view of the driver.



Newsdealer's Special Van Body with Newspaper Compartments in the Rear and Lower Front. Lettered Spaces Are for Magazines Placed Upright

Another Triumph for Cleveland

Out of fifty-eight starters in the annual twenty-four hour Worcester Endurance Run, nine finished. Two of them were Cleveland Light Motorcycles, the only lightweights entered in the run.

Never, even in the experience of such veterans as "Cannonball" Baker, John U. Constant, and other stars were there encountered riding conditions to equal those found in

Mention MOTOR CYCLE ILLUSTRATED—It helps you, the advertiser and us.

Digitized by Google

hopeless by the majority of heavyweight riders because of the constantly shifting mass of mud and boulders with which they were strewn—such were the obstacles that ended the riding efforts of forty-nine out of fifty-eight of the starters—and the Cleveland Light Motorcycle came through it all.

For lightweight machines, the course was cut short to three hundred and sixty miles, but the two Cleveland riders who finished the terrible run, Waughop and Spurgeon, declared they would much rather have followed the heavyweight schedule as the short cut was worse, infinitely worse in its thirty miles of rocky, muddy, twisting hills than the heavyweight road.

When riding schedule and road conditions are so bad that nearly nine-tenths of the riders, all veteran road pluggers, are forced to quit and the Cleveland light motorcycle finishes—what's the answer?

The Final Test

When all is said and done—claims made—orders in—performances forecast—there is still one final test for any new motorcycle model. This is the test of the open road.

No matter how handsome it is, how clever may be its construction, a new model is not admitted to the exclusive ranks of motorcycle leaders until it has made good beyond question in the "rough and tumble" test of road service.

Pope Three Speed Model T-16

the latest Pope product, arrival of which has been awaited with such interest by everyone who knows motorcycles, has made good in this sternest of all tests—the test of the open road.

Through the rough places and the smooth, the overhead valve motor is consistently giving even more power than was expected. Almost without a sound, the motor is driving the sturdy "Champion of the Hills" under all sorts of conditions. Out on the road the three speed mechanism is working wonders. The combination control of clutch, brake and gear release, the famous rear spring suspension, the sector type starter direct on motor shaft —all these original Pope features are showing their worth in service.

Model T-16 has *proved* itself, and every day enthusiastic riders are finding fresh pleasures in their favorite sport.

How about it? Have you ordered a demonstrator to show the wideawake riders in your community? If not, get in your order today.

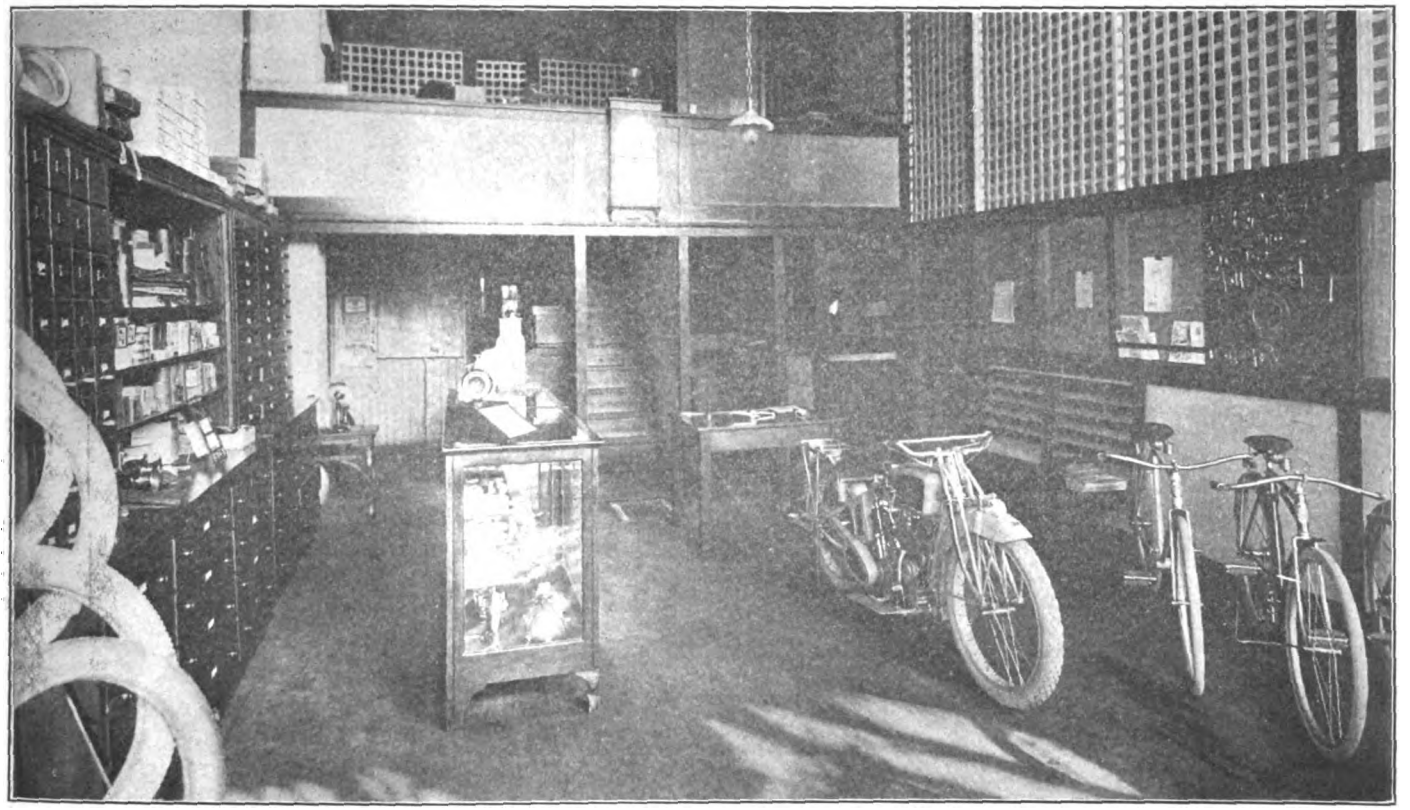
SAUFLEY STUCK TO ONE MAKE OF MOTORCYCLE

Kansas City Man Abandoned Automobile Agency and Concentrated on Power Two-Wheeler, Building Up a Fine Business—Developed Huge Mail-Order Trade

By R. FRANKLIN MUNDORFF

EIGHTH IN A SERIES OF SUCCESS STORIES ABOUT DEALERS



Main Sales Floor and Office of the Saufley Supply Company, Showing Neat Arrangement in All Details

SIX years' concentration on one make of motorcycle, coupled with liberal use of street car and other forms of advertising, developed the machine business of E. B. Saufley, heading the Saufley Supply Co., of Kansas City, Mo. In the last two seasons, the issuing of attractive catalogs describing first class goods which the cyclist needed and personal attention to the territory most desired for his goods, built up a thriving mail order business in parts and accessories for Saufley. From a small and unsuitable store in East Fifteenth street in 1909, Saufley has grown to occupy his own special building at 1519 McGee street in which both his retail and mail order businesses are efficiently conducted. He has handled the Excelsior motorcycle since 1909.

Enters Motor Car Field

E. B. Saufley had finished school and was looking for a position in the fall of 1908. He believed that he had salesman's ability and he knew that he had a leaning toward motors and motor vehicles. So he entered the motor car business, but did not stay in it long, for the motorcycle business was showing its possibilities in Kansas City. Saufley obtained the agency for the Excelsior in 1909, gave up the automobile representation and opened a motorcycle store at 1118 East Fifteenth street.

In Unsuitable Buildings

"I moved to 718 on the same street" says Saufley, in referring to his first season as a motorcycle man, "and later to 624 East Fifteenth street, where I remained until 1914. All this time I had been occupying buildings which more or less handicapped my business by reason of disadvantageous conditions. It was hard sledding for a while, but I soon began to learn by the experience method. I made a lot of mistakes, like all beginners. One mistake that I didn't make was to change the make of motorcycle I was handling.

"In 1914 a building especially designed for my business was erected at 1519 McGee street. I had conceived the idea of establishing a mail order business in parts, materials and accessories for motorcycles and bicycles and the business was launched under the style of the Saufley Sup-

You Know What You Want

Get it. Go out and get it.

You don't buy a bicycle on snap judgment. You find out first, then make your choice. Follow the same course when purchasing a coaster brake for that bicycle. Investigate! Look over the brake field. If you do you will decide, as the majority of bicyclists have before you, on the

CORBIN

DUPLEX COASTER BRAKE

Remember, the right brake is as important as the right bicycle. The Corbin Duplex is the right brake. Its grip is sure and powerful, its action smooth, instantaneous or gradual as the case requires. It possesses the maximum of brake surface. Its construction is such as to insure the greatest utility and durability. In every respect it is your brake, the brake you need and the brake you will specify if you investigate at your dealer's today. Do so. Catalog on request.

The Corbin Screw Corporation
THE AMERICAN HARDWARE CORPORATION, Successor
NEW BRITAIN, CONN.
BRANCHES: New York, Chicago, Philadelphia
Makers of Corbin-Brown Speedometers

ply Co. I placed a large stock of tools, parts and accessories and began to issue catalogs and to travel parts of Missouri, Kansas and Oklahoma. The business immediately began to prosper and in 1915 I annexed for the first time the agency for bicycles, taking the Excelsior and the Pierce lines as well as the Smith Motor Wheels and began the distribution of them through western Missouri, Kansas and Oklahoma.

"My first supply catalog was issued in 1911 and contained eight pages," continued the Excelsior dealer. "In 1912 it demanded sixteen pages and in 1913 thirty-two pages and in 1914-15 it contained sixty-four pages. My 1916 catalog is now in the hands of the printer and will contain about 128 pages because the bicycle business is demanding just as much space as the motorcycle business."

A Fine Sales Record

Saufley has made almost a remarkable record in selling Excelsior motorcycles in Kansas City. In Jackson county alone he has sold more than five hundred machines since starting in the business and in 1915 when he placed the agency for the Smith Motor Wheel he disposed of his total allotment, twenty-five wheels, within two months' time.

This is E. B. Saufley, Proprietor of the Thriving Saufley Supply Company, of Kansas City, Mo. Neatness and Thoroughness Are the Watchwords Throughout His Entire Establishment.

Saufley uses the Kansas City street cars continuously for advertising and occasionally employs the local publications. He considers his catalogs his greatest advertising means and the one that is least expensive, exclusive of his show windows. The dressing of the latter is taken particular care of.

The business has gradually increased during the last few years from a one-man concern to such an institution as requires two repairmen, a bookkeeper, stenographer, two shipping clerks, a house salesman and a traveler. To this is added Saufley himself as a potent sales-factor either indoors or on the road.

Building Arrangement

The Saufley building is a large one-story structure. It is the best arranged motorcycle building in this section of the country. A large display window with different trims each week marks the Saufley store from that of others. At the extreme right of the front of the building is the entrance for motorcycles. It is a sort of enclosed passage to the rear of the building for the machine shop and auxiliary salesroom for used mounts. Motorcycle

The SMITH MOTOR is fully protected by patents and is NOT furnished with any motorcycle or power bicycle, but only in the Smith Motor Wheel.

Easy Sales-Quick Profits and No Trade-Ins

-that's why dealers boost

Smith Motor Wheel
DETACHABLE

More than 15,000 Motor Wheelists are working for the Smith Motor Wheel dealer.

For every *Smith* which is sold and in use represents a definite advertising and selling influence upon which the dealer may cash in.

That is why sales are easy and that is why profits come quickly to the A. O. Smith representative.

Add to the advertising force of more than 15,000 Smith Motor Wheels now in use and giving satisfaction, the further advertising power of the big national magazine campaign of publicity and there is no wonder that the Smith is so popular a line with the live dealer.

A little newspaper advertising by the dealer links his store with the national advertising and enables him to cash in on the universal friendly feeling which is found everywhere toward the Smith Motor Wheel.

To be Motor Wheel Headquarters means much to the aggressive dealer. Five minutes for attaching a Smith to any bicycle, a few moments of demonstration and a sale is made—and it's a sale which will surely bring others as well.

And folks soon learn that it pays to come to the Motor Wheel Store for new bicycles, tires and accessories.

The Smith Motor Wheel is a money-maker for live dealers. We may have an opening for you. Write for particulars.

MOTOR WHEEL DIVISION

A. O. SMITH COMPANY, Milwaukee, Wis.

World's Largest Manufacturers of Automobile Parts

(Continued from page 38)

riders bringing their machines to the shop do not dirty the sales floor or disturb those in the sales room.

Retail business is transacted in the main sales room. Motorcycle and bicycle tires are displayed on a neat rack in one corner of this room. Well to the front are the Excelsior motorcycles, Pierce and Excelsior bicycles and Motor Wheels. The retail parts and accessories cabinet is near the rear of the room and along the north wall. The visitors' corner, designed specially for their comfort, is directly opposite this cabinet.

Shipping and Stockroom

In the balcony is Saufley's private office. Directly beneath this and to the right is the bookkeeper's office and to the left, the salesmen's desks for both the retail and wholesale departments. Directly in the rear of this is the shipping room and the stock room. Tiers and tiers of shelves, boxes and cabinets all arranged and numbered contain the tools, supplies and materials. In the rear of the shipping room is the repair shop.

Opposite the shipping room is the used machine department. Saufley has made it a practice in his establishment of never allowing a used machine to be displayed in the large salesroom with the new ones. Needless to say, his used machine business has not suffered because of this arrangement and his sales of new models have been constantly increasing.

Saufley says that not only is the bicycle business going to be extremely large this season as a result of the Million Bicycles propaganda, but that the motorcycle business gives every evidence of doubling that of last year.

PORTLAND, ORE.

GEORGE T. STRINE has taken on the representation for the Cleveland lightweight motorcycle. He signed up a few days ago with Traveller Murath, of the Western territory.

NEW YORK, N. Y.

GUS ROTHOLZ, representing the Reading Standard in this city, has sold 16 new machines to date as well as 12 used mounts. Over two-thirds of the new ones were disposed of with Rogers sidecars and six of the used models were sold complete with the third wheel attachments.

"There has been a run on sidecars" says Gus, "and also on lamps, particularly since the new law about sidecar lights has been put into force. Most of the calls are for acetylene lights, as my sales have been largely of machines fitted with Prest-O tanks. Just the same, I have had considerable demand for electrically-equipped models from various sources."

FELIX LEWIN, manager of the Henderson branch at 227 West 106th street, has to keep three demonstrators these days. "There have been several occasions when two machines were in use and a customer had to be demonstrated right away, so I have to have three ready now. We have no second-hand machines at all, the last one being sold a week ago."

MINNEAPOLIS, MINN.

NELS A. ROSENDAHL, handling the Dayton Motor Bicycle, has just mounted two of the crack Western Union messengers on front-drive lightweights. The boys, George Cook and George Kittock, have been enabled to double their capacity for delivering messages since purchasing the mounts, and Rosendahl is going out after other messengers.

Do You Know That The

Miami PowerBicycle

is just the ideal machine for light package delivery? The low first cost and economical upkeep of the MIAMI appeal to progressive merchants in many different lines.

Questions and Answers

AIR LEAKS MAY BE CAUSE

MY 1912 twin will run well either on slow speed or on high speed, but will miss and choke up and nearly stop when the throttle is first opened. The motor has just been cleaned out and fitted with new valves and rings. The compression is good and the magneto is in fine shape.

Chicago, Ill. R. W. F.

Look for leakages in the piping between the carbureter and the cylinders, by applying oil to all the joints when the motor is running and noting any bubbles. If the inlet valve springs have not been renewed recently put in new ones, for the old ones may have lost part of their temper by this time. Try changing the mixture after making sure of the gas-tightness of the joints in the inlet piping and that the inlet springs are not weak.

PARTS FOR MITCHELL

I HAVE a Mitchell motor in a loop frame machine and need new bearings and a timer. Please let me know where I can get these parts. ARTHUR SEDGWICK.

Detroit, Mich.

If you cannot get them from the Motorcycle Equipment Company of Hammondsport, N. Y., you had better have them made up. The Mitchell motorcycle has long been off the market and parts, we understand, are next to impossible to obtain. We advise you to get a more modern machine rather than continue with the one you now have.

NOT GOOD ON SOFT ROADS

HAVING had a set of steel-studded tires fitted to my machine by the advice of a tire man, I find that they are not good for preventing skids, and would like to know if it is the fault of the tires themselves or whether they are not suitable for motorcycle service.

Chicago, Ill. J. P. TREMAINE.

Steel-studded tires are not good skid preventers on soft roads, nor on dry hard roads. By soft roads we refer to dirt, broken macadam, etc. The salesman who got you to purchase the casings evidently was not aware of this. The metal studs often set up "dry skids," especially if the surface is at all irregular. There is no need to dispose of the casings, simply drive with greater caution than usual.

BUY LIGHT TWIN

PLEASE decide for me which is the better suited for my purposes, a single or a light twin, both of the same power, and made by the same factory.

C. A. STRODL.

West Hoboken, N. J.

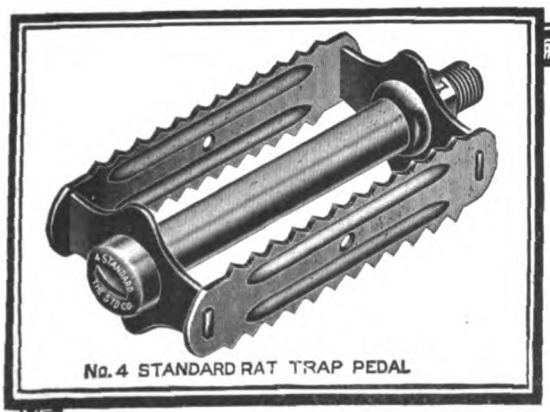
We suggest the light twin of the make referred to as being most satisfactory rather than the single, as being more even in running.

ONE DRY CELL WON'T DO

PLEASE tell me the name of an electric horn which can be installed on a Bosch-equipped machine, one that does not require more than one No. 6 dry cell to operate.

Harrisburg, Pa. E. L. SNYDER.

There are no electric horns which work directly from the magneto, and so the fact that the machine has the Bosch magneto fitted does not interfere with the putting on of an electric alarm. We know of no horn which will work satisfactorily with 1.2 volts from a dry cell.



No. 4 STANDARD RAT TRAP PEDAL

THESE STRONG SUBSTANTIAL MOTORCYCLE TYPE PEDALS

have that sturdy look that comes only from correct design and first class construction.

THE NO. 4 STANDARD is a new type of rat trap pedal added to our line this year, making it the most comprehensive line of rat trap pedals offered to the trade.

THE NO. 5 PIRATE has such big, soft, easy rubber cushions! It minimizes the jars and bumps. Try a pair and find out for yourself.

Our cycle parts and accessories appeal to the mechanical expert. They have been standard from the beginning, and mark the utmost in the industry.

Our products comprise: Diamond "E" trade mark brand, Spokes and Nipples for Bicycles, Motorcycles, Tricycles, Velocipedes, Invalid Chairs, Sulkies, Carriages, Cyclecars and Automobiles. Pedals for Bicycles, Tricycles, Velocipedes and Motorcycles. Toe Clips for Bicycle Pedals. Emergency Axles for Pedals.

THE STANDARD COMPANY, TORRINGTON, CONN.

Prest-O-Lite for Motorcycles

Perfect Light as Sturdy as Your Motorcycle

For lasting efficiency, get Prest-O-Lite. It throws brilliant rays that make your night riding pleasant and safe.

Road shocks and vibration do not affect its steadiness. The occasional spill or tip over, which your mount is built to withstand, does not damage your Prest-O-Lite and it will not fail you in emergencies.

Remember, good light is as vital as fuel. For that reason, more experienced riders use Prest-O-Lite than all other systems combined.

Complete Equipment Giving Perfect Service

Many dealers are offering "complete equipment combinations" including Prest-O-Lite that give you maximum value at lowest cost. A typical outfit is Prest-O-Lite, a lamp and a mechanical horn. You can get this on any make of motorcycle you buy. Ask your dealer.

Full Details of Motorcycle Lighting Sent Free on Request. Ask for it.

HOLLAND AGENT FOR FLYING MERKEL IS RIGHT ON THE JOB

AMSTERDAM, Holland.—Herr M. Adler, who represents the Flying Merkel in the Netherlands is extremely active these days, pushing the Middletown, U. S. A., made machines for both military and civilian service. Herr Adler has an excellent aide in Herr Henri Meyer, manager of a number of Dutch trade journals in the sporting goods line, and who participates in all endurance runs and military tests. As all runs are officially observed by army officers, a number of sales of Flying Merkels and Miami Power Bicycles have been made.

The picture shows Herr Meyer talking to a Dutch army officer at the start of one of the recent endurance tests from this city. Agent Adler is standing between the two. He has the rights to Miami products for the Dutch East Indies as well as for the Netherlands proper.

SPOKANE, WASH.

C. W. MILLER, manager of the Falls City Cycle Co., Inland Empire distributor for the Harley-Davidson and the Flying Merkel bicycle, reports renewed activity in motorcycle sales these days. Among those who have purchased Silent Grays recently are the Sullivan Machinery Company of this city and the Humbrid Lumber Co. of Sandpoint, Idaho.

INLAND MOTORCYCLE COMPANY, handling the Excelsior and the Dayton bicycle, is now agent for the Smith Motor Wheel and is also advertising Prest-O-Lite service.

WAUSAU, WIS.

V. G. RINGLE, who represents the Dayton line of cycle products, has just sent in an order to the Davis Sewing Machine Company, in Dayton, for the immediate shipment of 25 Dayton bicycles. "Anybody can cut prices," says Ringle, "but it takes brains to sell a high-price article." Ringle has been doing a nice business this season in Wausau in other Dayton products.

CINCINNATI, O.

JOE WANDSTRAT, of the Brendamour Sporting Goods Company's motorcycle department, has been transacting considerable business with the Covington, Ky., police department. He has just sold the department two Series 17 three-speed Excelsiors, one with a special ambulance equipment.

The ambulance car has a Sheets automatic drop stretcher on a regular sidecar chassis, the stretcher being the invention of Officer Sheets of the Covington police force. Wandstrat demonstrated this rig with a patient in the stretcher, Sheets on tandem and Wandstrat driving. The load rode easily and the worth of the apparatus was fully demonstrated.

TACOMA, WASH.

W. P. GLASGOW, Harley-Davidson agent in this section, has been entertaining Otto Walker, the Silent Gray speedster. Walker stayed in this city for a week and on June 4 made some fast time at the opening of the Tacoma Speedway.

PIERCE COUNTY'S participation in the general revival of business and prosperity is strikingly demonstrated by the big increase in the number of sales made by local motorcycle dealers. At the end of May the number of motorcycle licenses taken out in the county was in excess of the number for the same period in 1915.

RAY DAY, the popular representative of the Indian in this city, has recently persuaded J. S. Johnson to preside over the repair shop, which he is able to do most efficiently, having had many years of experience in the care and repair of all makes of machines. In addition Johnson will be able to find numerous buyers for the Powerplus and Indian Maid sidecars as well.

"Where Service Predominates" is the new slogan of the firm and appears conspicuously on a new supply of cards.

SPRINGFIELD, MASS.

A. F. ARNOLD, of 656 Main street, this city, has taken on the Reading Standard for the 1916 season. Arnold sold his first machine from Traveller Guterman's demonstrator, just after signing up with the factory man.

SAN FERNANDO, CAL.

WILLIS A. ROWE, representing the Cleveland in this city, took just two months to sell enough of the two-stroke lightweights to have one for every two hundred people in San Fernando. Rowe has just sold his tenth Cleveland, at the end of his 60th day as agent, and there are slightly less than 2,000 people in this city, hence the proportion.

LOS ANGELES, CAL.

C. WILL RISDEN, distributing the Indian in Southern California, states that for the five months to date in 1916 business is way ahead of the corresponding period last year and a considerable improvement over that of 1914. Risden, with practical co-operation, is doing more than ever in the way of supporting the out-of-town agents, and the latter are profiting by this encouragement.

NEW ROCHELLE, N. Y.

FRANK BRUNO has taken on the agency for the Reading Standard for the present season. He signed up with Lou Guterman, factory representative, a few days ago.

Doings on the Pacific Coast

INDIAN MAIDS CHARM THE COAST RIDERS

LOS ANGELES, Cal., June 12.—This is surely sidecar year in California. Tommy Butler, the genial manager of C. Will Risden's tepee here, had to deprive himself of his own sidecar recently, when an insistent customer, falling in love with an Indian Maid, said: "Now or Never." Tommy had sold every sidecar in stock.

Having another order for a car, Butler began to shoot dots and dashes over the telegraph wires on the coast. He found, much to his despair, that every Indian agent and distributor had been "cleaned out" of sidecars.

FOX AND HOUND RUN FOR MIAMI RIDERS

LOS ANGELES, Cal., June 10.—F. M. Hodge and T. E. Berry, Southern California Miami distributor and Los Angeles agent respectively, will lead a fox and hound run of Miami riders on Sunday, June 18. They are planning to wind up at some attractive amusement resort where there will be refreshments and dancing. Three prizes have been put up for the first who track the foxes to their lair.

Wigwam Dealer Tommy Butler, of Los Angeles, and His Featherweight

MURATH GETTING 'EM FAST IN FAR WEST

LOS ANGELES, Cal.—J. Barney Murath, who is traveling the Western States in the interests of the Cleveland lightweight, is placing agencies right and left in the Pacific Coast section these days. Barney is a newcomer in the motorcycle field, but before he signed up to disburse the little two-strokers he learned something about the gasoline motor in the automobile trade.

He had a thorough shop course in the Cleveland factory in the Sixth City. Then he went after 'em. They say Barney never fails to pick a man who can make good at selling the lightweight.

ARTLEY WILL RIDE POPE FOR LIGHTWEIGHT MARK

LOS ANGELES, Cal., June 10.—F. A. Sutphen, of the Henderson Motorcycle Sales Corporation, who recently sent Roy Artley on a Henderson on two record-breaking trips between this city and San Diego, has persuaded Artley to take a shot at the lightweight mark for the same route on a Pope machine. Much interest has been aroused, and it is expected that some keen competition will ensue.

"149"

The Peer of Motorcycle Chains

Accurate Every part is micrometer gauged for accuracy and pitch and each chain is carefully inspected and tested before leaving the factory.

Strong The breaking strength is several times what is needed for actual service. This provides a good factor of safety.

Durable No. 149 will give steady, day after day service when operated under anything like normal service conditions.

GOODRICH

"Barefoot" Rubber MOTORCYCLE TIRES

Safety Tread

The strongest-built, best-wearing Motorcycle Tire ever produced at the big Akron factories. It stands in the motorcycle world for the *same high quality service* as its bigger brother in automobile circles, the Goodrich "Barefoot" Automobile Tire.

And why!

It is different. It has those muscular, grip-in "toes" of the tough "Barefoot" rubber. That's why it *sticks to the road*—just like your bare foot to a slippery surface. It gives you better traction and will *outwear any other tread on the market.*

We've spent thousands of dollars, and years of experience to develop its great strength and slow-heat-generating body. That's why it means to you *More Miles, Safer Miles, Easier Miles.* And look at the *Price!*

$9.90 each for 28 x 3 in. C. C. Rim

$8.85 each for 28 x 2¾ in. C. C. size or 29 x 2¼ in.

ADVERTISING MEN ORGANIZE AT MILWAUKEE

(Continued from page 10)

the campaign, with emphasis upon co-operation for dealers. At this point, Chairman Quine crystallized the sentiments by asking if anyone present objected to the new association and its aims. The approval was unanimous.

Committee Appointed

A committee was then appointed to prepare resolutions providing for the new organization. This committee consisted of T. W. Henderson, M. C. Stokes, W. D. Callender, R. F. Rogers and George T. Briggs. After a recess, the resolution was presented to the assembly and a debate followed as to the name of the association. Messrs. Roger. Parsons, E. W. Jackson, Effinger, Hallock, Arthur Davidson, Jacobs, McMahan and Briggs led in the discussion. The name was finally changed to include the accessory men, being the Motorcycle & Accessory Trade Association. (At the last business session this name was changed to the Motorcycle and Allied Trades Association.)

Arthur Davidson read a telegram from C. F. Olin, of the New Departure Mfg. Company, expressing his regret at being unable to attend the meeting and pointing out that a broad-gauge policy campaign to back up the motorcycle dealers was certain of obtaining excellent results. Mr. Olin had been invited to attend the session by reason of his experience gained as chairman of the Million Bicycles Committee.

Quine's Closing Speech

The executive committee was then named and Chairman Quine closed the meeting as follows: "We have done a lot of talking today, but we have traveled far toward giving the motorcycle the prominence to which it is entitled. I can see fine things ahead. In this new association, we have the germ of one of the biggest things that has ever been put over in the American motorcycle industry"

Following the adjournment, dinner was served in the Badger Room. The trade men attended the theater in a body after dinner.

UNITED STATES TIRES IN LOS ANGELES RUN

UNITED STATES tires once more proved themselves equal to the most gruelling kind of endurance work in the three-day endurance run of the Los Angeles M. C. May 28-30. This run consisted of 987 miles of rocks, ruts and mud, coupled with high temperatures practically all day, and the chain tread tires on the Indians of Ludlow and Fletcher, and on the Excelsior of Bennett stood up magnificently under this severe service.

Ludlow and Bennett received perfect scores in this run, while Fletcher was penalized for lateness on the first day. Only one other rider completed the run.

FIRST COMPLETE REPORT OF M. M. A. MEETING

(Continued from page 11)

facturers' Association" hereby expresses its complete endorsement, and pledges its heartiest support, assistance and co-operation in making successful the efforts of the "Motorcycle and Allied Trades Association" to gain for the motorcycle its proper place in the industrial and economical world.

Jackson thanked Quine in behalf of trade men for valuable assistance given at meetings, and D. R. Wells, of Splitdorf, followed this up by call for expression of thanks to A. O. Smith Co. and Harley-Davidson Motor Co. for hospitality extended as hosts, which was given to accompaniment of cheers.

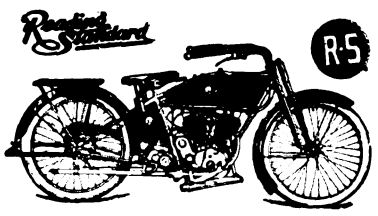
Following afternoon business session manufacturers and advertising men were taken for tour of city in automobiles Dinner at Milwaukee Athletic Club tonight closed the two-day program.

Milwaukee hospitality will long be talked of by trade men, and veterans in industry say these meetings were most remarkable ever held in spirit and scope of results.

INCORPORATES WITH $30,000

PROVIDENCE, R. I., June 10.—The Atlas Manufacturing Company, 7 Eddy street, has been granted a charter by Secretary of State J. Fred Parker, to deal in general machinery, motorcycles and bicycles

WHO AM I?



I am at your service. I am still, quiescent, until you wake me to life. Then my great heart starts to beat—strongly, regularly, but with all, quietly. I am ready; I am willing; I am capable, at a moment's notice, to carry you on the wings of the wind to your destination. I have in me the power to carry you over the steepest hills, through the deepest mud, through the most treacherous sand. Your every wish meets instant response in my great, strong frame. A touch of the throttle, and I loiter at a snail's pace—another, and I bound forward, annihilating space; eating up the miles without abating in the slightest my strong, even, quiet purr. Another touch and I become still—awaiting your further commands.

Catalog upon request.

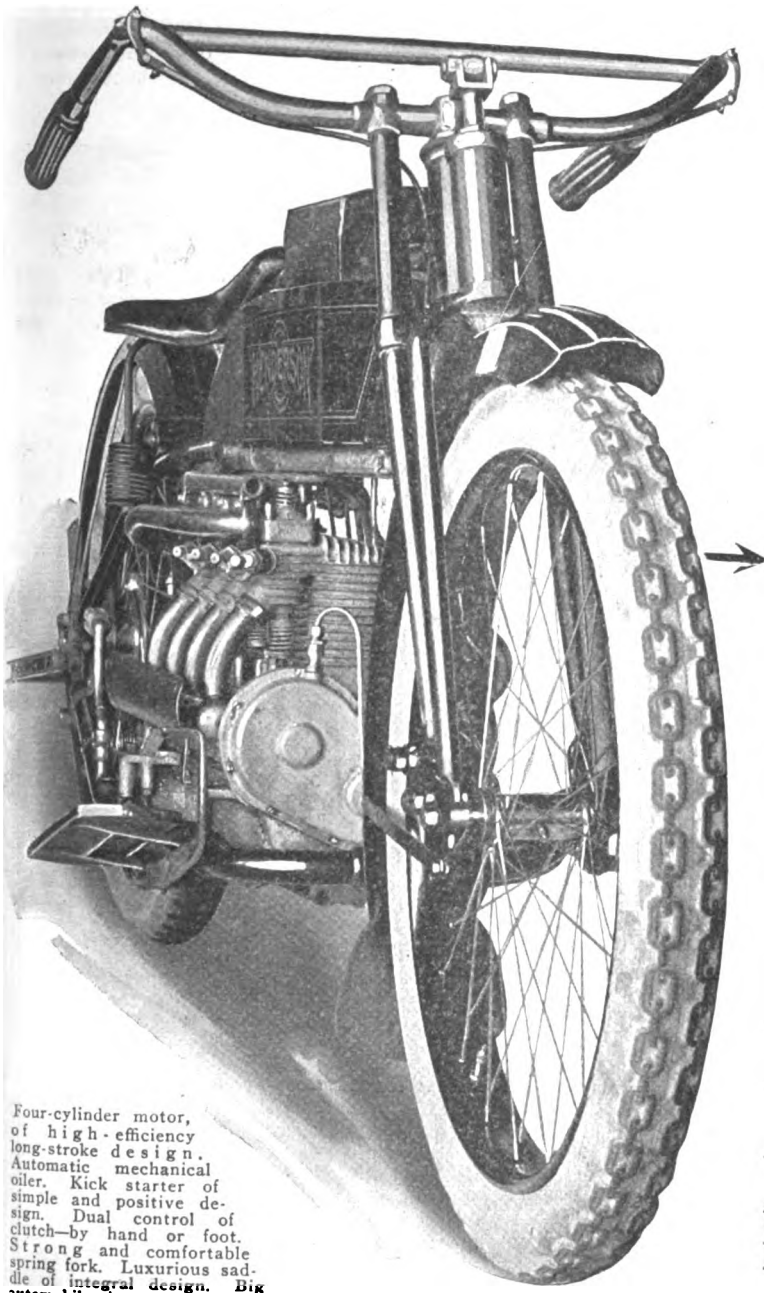
Its Fifth Year, and Still Too Good to Part With



Four-cylinder motor, of high-efficiency long-stroke design. Automatic mechanical oiler. Kick starter of simple and positive design. Dual control of clutch—by hand or foot. Strong and comfortable spring fork. Luxurious saddle of integral design. Big automobile-size non-skid tires. Wheelbase 58 inches.

"MY Henderson is one of the first 1912 models that you made, being fitted with the round tank, etc. But while I believe in having the best and do not need to hesitate in buying a motorcycle on account of the matter of price, yet I see no reason for getting a new model, as mine is still as good as the day I bought it. The cylinders are as tight as they ever were and there is not a worn part in the engine. I have four good automobiles in my garage, but in going back and forth from my place of business I use the motorcycle in preference practically all the time."—E. P. Du Pont, Montchanin, Del.

We have said that the *smoothness* of the four-cylinder motor lengthens the life of all parts of the machine by eliminating destructive vibration. We have said that the rugged strength of the Henderson makes it durable and dependable. We have said that the machine is built for long, faithful service and hard work.

And reports of actual performance prove the truth of every claim we have made.

Henderson Motorcycle Co.

Detroit

Digitized by Google

(Continued from page 12)

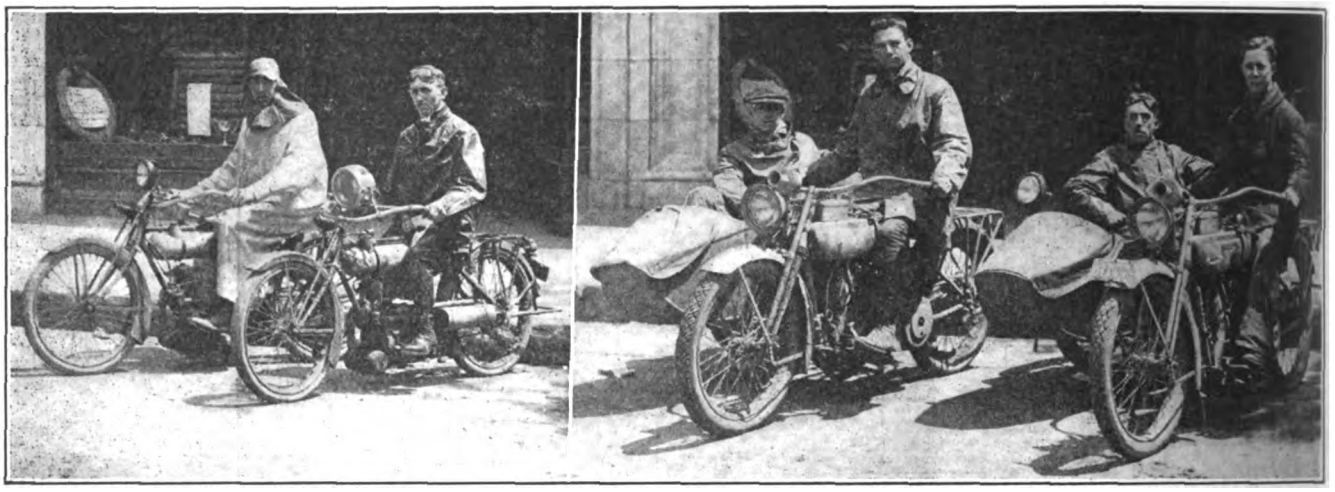
Indian factory sidecar team and that from Boston, using Harley-Davidsons, withdrew, as they were over 30 minutes late. The rules stated that a lateness of 30 minutes would eliminate any contestant. Three Indian solo riders and five Harley-Davidson sidecar drivers, with passengers, checked at Derby Line, 237 miles out. Baker, Sturgis and Veazey were the solo men, while Sanders and his passenger, Scherer and his passenger, Tannebring and partner, J. A. Fozie and John Rome, and Harold Smead and William Peltier were the sidecarists.

Back through St. Johnsbury to White River Junction went the course. Thirteen riders, drivers and passengers signed here. Across to New Hampshire and back at least six times the route continued, then down the Connecticut River to Bellows Falls, to Keene, N. H., to Fitchburg and then home. Thirteen signed at Keene. Foizie had a chain come loose in Clarmont, N. H., holding him up for 18 hours, as it wrecked the rear sprocket. Tannebring had ignition trouble in the downpour that was at its best after leaving Keene.

Russell R. Coes, Indian solo, was hit near Manchester, N. H., by an automobile and suffered a compound fracture of the leg. He was removed to the Manchester hospital and is now resting comfortably. B. A. Swenson, with Eddie Swenson, checked on time at Manchester and Bristol, but in making a tire repair left a tire iron in the rear shoe and had a terrific blowout. Swenson withdrew, as he could not have checked in at Franklin on time.

Gene Coughlin, Harley-Davidson sidecar, had hard personal luck. He got ptomaine poisoning, and in spite of pain struggled on to St. Johnsbury. He then drove to Keene, feeling somewhat relieved after resting, but was obliged to quit.

C. W. Waughop and "Peanuts" Spurgeon, Cleveland lightweights, covered their course and made every check designated, on a schedule that was but two miles per hour slower than that of the big fellows. Their scores were shattered, but they came on regardless.



Waughop and Spurgeon, Clevelands; Saunders and Clift, Scherer and Havenstrite, Harley-Davidson Teams

OFFICER MAKES ROUNDS OF ARSENALS ON INDIAN

BOSTON, Mass. — Lieutenant J. S. Hatcher, of the Ordnance Department, U. S. Army, left this city on June 7 for a 25-day tour of the United States armories and arsenals on his Indian motorcycle. His journey will take him to Watertown and Springfield, Mass., Watervliet, N. Y.; Sandy Hook, N. J.; Kittatiny, Pa.; the Naval Gun Factory at Washington, D. C.; Annapolis, Md., and the Army Remount station at Front Royal, Va.

Lieut. Hatcher, who is stationed at Boston, is an experienced motorcyclist, having ridden 15,000 miles or more, although he has not been on a machine since 1913.

CLOSE LAST LINK IN CHICAGO-MILWAUKEE ROUTE

KENOSHA, Wis.—At a special election held in the towns of Pleasant Prairie and Summer, in Kenosha County, bond issues amounting to $210,000 were voted for the completion of the Sheridan road.

According to Daniel O. Head, chairman of the Sheridan Road Improvement Association of Kenosha County, this means that the last link in the improving of the highway which connects Milwaukee and Chicago will be completed and thus eliminate the chief objectionable feature to touring between the two cities.

BARGE LINE FOR MOTORS

TACOMA, Wash.—A barge line has been started to convey motor vehicles up and down the Columbia river. The line will make several trips per week for the benefit of those who wish to take their machines to the ocean beach. The rates will be one-half of those formerly charged by the Astoria, Ore., steamers.

TEXANS OFF ON LONG TOUR TO NEW YORK

TEMPLE, Texas.—Mr. and Mrs. Albert Bayless, with a Silent Gray combination, and Russell Graves and Dold Bristow on Harley-Davidson solo mounts have just left this city for a tour in which New York is the objective. The party plans to camp in the open on the trip.

The route will be through Galveston, Houston, Beaumont, New Orleans, Montgomery, Birmingham, Atlanta, Chattanooga, Richmond, Washington and Philadelphia.

INTERESTING FOLDER TELLS OF DODGE CITY RACE

NO pains have been spared by the promoters to boost the international championship 300-mile race at Dodge City, Kan., on July 4. The latest publicity scheme is in the nature of a well gotten-up folder showing views of the 1915 event at the start, a section of the crowd in the bleachers, some real action pictures and the cowboy band which is a feature of each race. The present event will be the third run off at Dodge City, and the promoters state that there will be 50 of the world's most expert riders in competition on Independence Day.

NOW PAINTING LINCOLN HIGHWAY SIGNS

BUCYRUS, O.—Rupensberger Brothers, of this city, have received the contract for painting signposts for the Lincoln Highway, from the Atlantic to the Pacific. The posts will be painted red, white and blue between Jersey City and the West Coast, every sixth telephone pole being used. The Rupensbergers expect to finish by October 1.

HAMILTONITES ARE ACTIVE

HAMILTON, O.—The club rooms of the Butler County Cycle Club, which are always kept up to date, have been completely renovated. A new sanitary fountain and showers have been installed, as well as new window shades. The club's baseball team is now fitted with uniforms and is ready to take the field. The most recent social event was a dance, which was held on June 9 and at which the attendance was very large.

FEWER LICENSES SO FAR

TACOMA, Wash.—The number of motorcycle licenses so far taken out in 1916 in the state of Washington does not equal the record of 1915. However, there are between 40 and 50 applications coming in per week and these will soon change the standing.

OPEN TIRE SHOP

FOND Du LAC, Wis.—Arthur and Anton Zeman, of Milwaukee, have established a tire repair shop at Western avenue and Main street.

A *good* deed often means a *good* deal—Please mention MOTOR CYCLE ILLUSTRATED.

WILL CANADA SOLVE OUR TRADE WAR PROBLEM?

Entente Allies Recouperation Plans Include Preferential Tariffs That Will Hit at Neutrals as Well as Teutons—Canadian Drawback Affecting American Goods Reexported May Help Us

OTTAWA, Ont.—Indications are that the present Canadian tariff schedule affecting goods imported from the United States, and which is abnormally high, as a matter of course, on account of the war, will be continued in force for a long time after the war is ended; and it is even whispered in some quarsome goods. This state of affairs will result from the fact that the Entente Allies are said to be, and those in the know, firmly believe them to be, considering the inauguration of a trade war when the present struggle is terminated which will affect the commerce of their present enemies materially, and which, at the same time, will not work out to the advantage of neutral countries.

In the waging of this trade war it is expected that the Entente Allies will arrange a preferential tariff whereby a market state bordering on free trade will be enjoyed by the members of the Entente Alliance. If the expected arrangement is made a fact by the Allies, it will mean that it will be far cheaper to export goods from Canada to Russia, France, Italy, Great Britain, Belgium, Japan, Portugal and other foreign countries than it will be to make the same shipments from the United States to the same countries. The trade war is to be waged primarily so that the Allied countries can assist each other in the matter of internal recuperation, which will be sorely needed when the various countries have laid down their arms.

It is perhaps well for the American manufacturer to be advised now that the Canadian Customs Department permits a drawback of 99 per cent in duty on materials which are imported from the United States and subsequently exported from Canada to some foreign country in a finished state. Many American manufacturers are taking advantage of this knowledge to open branch factories in Canada, the leaders in the movement being the automobile manufacturers. Other motor men are following suit.

The establishment of a branch factory in Canada may appear to be an expensive proposition, but the initial outlay seems small when thought is given to the great foreign markets. Russian trade, for instance, is undeveloped; France will be so busy with reconstruction that importation of finished products will be heavy for many years; England will probably form a better motorcycle market in the future than in the past, and Italy will undoubtedly import a considerable quantity of goods also.

ELLIS TO START ON BUFFALO RUN ON JUNE 17

YONKERS, N. Y., June 9.—George Ellis, New York State F. A. M. Commissioner, will start on Saturday, June 17, at 8 p. m., on another "lonesome" run, this time to Buffalo and return, a distance of 860 miles. He will ride an Indian. The route will be Yonkers, Poughkeepsie, Albany, Utica, Syracuse, Geneva, Avon, Batavia and Buffalo, returning the same way. Ellis started on a Thor on the evening of May 27, to ride to Portland, Me., and return., but a heavy rain caused him to give up within 15 minutes after the start.

TRAINED ANIMAL MANAGER BUYS INDIAN RIG

ARTHUR F. HILL, manager of Villecita's Indian Leopards, has recently secured an Indian sidecar combination for the use of himself and his wife in traveling with the show. The troupe of leopards has played in every capital of the old world except Russia and Italy, and Hill is now about to start for South America and Cuba.

STARS OFF FOR DODGE CITY

LOS ANGELES, Cal., June 10.—Don Johns and Morty Graves are packing up prior to leaving for Dodge City, where they will cover the circuit on July 4 on Powerplus Indians.

Another Cleanup for the "X"

Winning Eight Out of Ten Places

At Madison, Wisconsin, June 18th, competing with eight valves and other specially designed racers,

BOB PERRY on the GOOD OLD "X"

Won the 100 Mile Open
Breaking the State Record

JOE WOLTERS, EXCELSIOR Second. HILLIARD, EXCELSIOR, Fourth.

EXCELSIOR stock design motors also got second and third in the 15-mile open, competing with a number of eight-valve specials.

In the LIGHTWEIGHT race, the Baby "X" showed itself a worthy member of a winning family by winning first and second in competition with higher-priced lightweights.

BEAR IN MIND we build nothing but strictly stock design motors and it is a point worthy of your careful consideration that two of our leading competitors are now racing 8-valve motors exclusively, thereby tacitly admitting the unassailable supremacy of the

EXCELSIOR STOCK MACHINE

the kind delivered to every buyer of an EXCELSIOR AUTO-CYCLE.

MORROW

Morrow

Puts More Riders on the Road

Why? Here's the reason—and a reason every dealer who sells bicycles will understand. The man who equips his machines with the MORROW Coaster Brake, the "old reliable" standby that has progressed in perfection with the bicycle itself—that man puts a tone of surety, of confidence and pride into his sales-talk that cannot help but impress, convince and SELL the prospect.

The MORROW makes a better salesman out of the bicycle dealer **because he has entire faith in the MORROW—its reputation—its quality—its perfect performance—and faith in one's goods is the prime requisite in successful selling.**

Further, the MORROW makes a better rider out of the bike buyer. The smooth, frictionless action of the MORROW-equipped bicycle makes him want to ride whenever he has a chance—it's *so safe and easy*.

Dealers—these are the two simple, sensible reasons—and the best ones, why you should equip your bicycles with the MORROW—"the brake that makes its way by the way it's made."

THE BEST DRIVE SPARTAN FOR LIGHTWEIGHTS

Belt Drive is the Right Drive for Lightweights

BELT drive provides all the positiveness of transmission that is required for Lightweight Motorcycles. However, that is not all, for belt drive not only gets all the power required to the rear wheel, but while doing so, that flexibility, that smoothness so much desired is always evident.

Because Lightweights are proving more and more popular, and can be made to sell at a reasonable price, many manufacturers are considering making Lightweight Motorcycles—and most manufacturers will make belt drive Lightweights, because they sell best and satisfy most.

There remains one important point, that is the kind of belt—belt transmission depends considerably on the belt; the belt must be right. When you select your Lightweight, insist that it come through with a long-lived, genuine

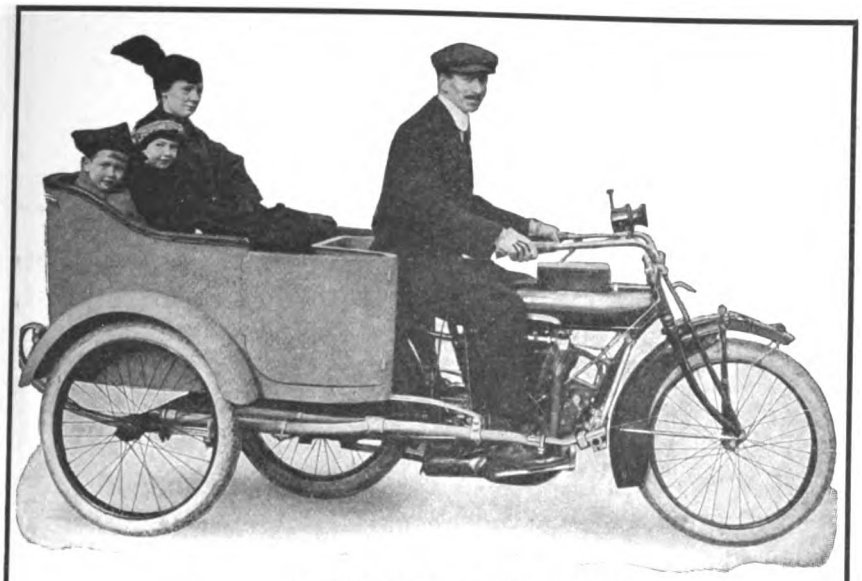
CYGNET REAR CAR

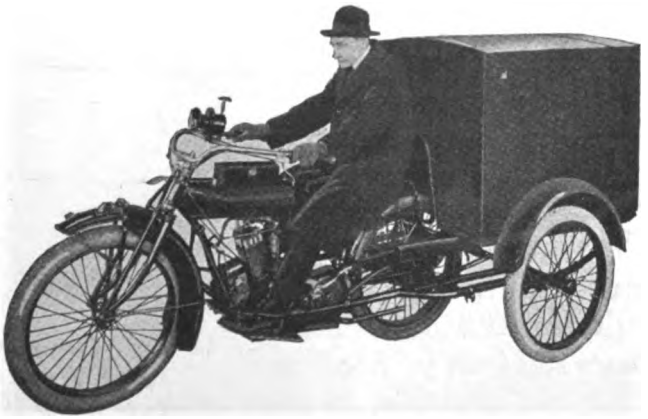
"brings many new buyers to motorcycle"



PASSENGER CAR

Two to three passenger; best auto design and finish; spring seat and back upholstered; semi-elliptic springs; crown fenders; color to match any make of motorcycle.

Fits any standard motorcycle-"On or off in 30 Seconds"



DELIVERY VAN

Two types—rear door, as shown, and open top type. 500 lbs. capacity. Speedy, novel. "The key to many a merchant's delivery problem."

—**why** do these words appear time and again in letters of CYGNET dealers to us?

—**because** with its roomy, comfortable design the CYGNET at once appeals to the man who would share the joy of motoring with family or friends.

—**because** he can ride his cycle **solo** during the day on business and convert it into a two- or three-passenger auto to take the "folks" out with him.

—**because** he secures auto capacity, comfort and safety at one-quarter the expense of even a small auto.

The CYGNET fills a real want—are you prepared to cash in on **that want in your community?** If the experience of nearly one thousand dealers means a thing, you can bank on increasing your motorcycle sales 15% to 50%.

Speed Like the Wind—
Added Power—
Increased Efficiency—

All to be had if you use the *best* lubricants for your motorcycle—the oils that dominate the field—that are recognized as superior by every unbiased motorcyclist, dealer and supply man—namely,

HARRIS

TRADE MARK REG. U.S. PAT. OFF.

OILS AND GREASES

Try *One* can. It doesn't cost much to prove the *Quality*. Isn't it worth while to get greater efficiency at less cost?

The High Quality, Satisfying Service, and Value is due, briefly, to the following reasons:

HARRIS OILS start with the finest Pennsylvania Premium Crude refined by careful processes—based on our thirty years' experience in the oil business. They give *real lubrication* because there are practically no soot-deposit forming ingredients —no injurious substances—no waste. These qualities make for a sweet, smooth-running motor—no flagrant smoking—economy—and highest engine efficiency.

HARRIS MOTORCYCLE OILS are put out in the following grades: Extra Heavy Motorcycle Cylinder Oil (especially designed for high speed, air-cooled motors), Heavy, Medium and Light.

"A Little Goes a Long Way and Every Drop Counts."

TOURING IN CALIFORNIA WITH THE EXCELSIOR

BOSCH

MAGNETO IGNITION COSTS MORE BUT BOSCH-EQUIPT MOTORCYCLES DON'T

THAT'S an important statement, Mr. Dealer and Mr. Owner. It means just this—that the extra care, the use of the best materials Bosch can buy, the employment of expert workmen only, make possible the production of an ignition system second to none in its service-giving qualities, and, quite naturally, a trifle higher in its selling price.

But the maker of a Bosch-Equipt Motorcycle is willing to absorb that extra cost and charge it up to "+SERVICE," that is, a little more efficiency and reliability than you expect, but only as much as you are entitled to.

There is no reason why your motorcycle should not be equipt with the best ignition system obtainable — it costs you no more and you are better served at a point which is most vital to your engine and to your comfort.

Be Satisfied

The motorcycle you buy or sell can be Bosch-Equipt—insist.

Exploring a' la Pope

One of the finest pleasures that summer affords is found in riding over strange highways and byways by motorcycle—in following trails that are alike impossible for either auto or wagon—and experiencing the joy of the outdoors far from the beaten routes of travel. Exploring of this sort demands a

Pope Motorcycle

—the motorcycle that "Not only gets you there, but gets you back." It calls for the mount, that, because of its efficient overhead valve motor, has the power to pull you steadily through the unexpected mud hole and sand stretch, or up the steepest hill—that is sturdy enough to stand the strain of the hardest kind of service—and that, because of its exclusive methods of springing, gives supreme comfort over bad roads and good.

Made in Models for Every Need

Three-Speed Twin

The utmost in motorcycles. For sidecar service and the hardest kind of solo work. Model T-16. Price, $275.00.

Three-Speed Single

All the exclusive features of Model T-16, combined with the simplicity of the single cylinder motor. Model TM-16. Price, $240.00.

Big Twin

For the man who wants plenty of speed and power, as well as comfort, at a moderate price; for solo or tandem riding. Model L-16. Price, $225.00.

Big Single

A strong, powerful and easy riding single cylinder machine, with gasoline and oil capacity for long tours. Model M-16. Price, $200.00.

Lightweight

A wonderfully satisfactory model for the man who wants a speedy, sturdy mount that provides the cheapest method of rapid transit known. Model H-16. Price only $150.00.

THE HARRY SVENSGAARD SALES CORP. DETROIT

Distinction

Distinctive in design—in service—in comfort and endurance — that's the PULLMAN Sidecar. To own a PULLMAN is to belong to the aristocracy of motorcycle riders.

The wonderfully smooth, flowing stream-lines of the genuine coach-built body give the PULLMAN the appearance and finish of a high-quality car. With its one-piece rust-proof steel cover, its heavy tufted upholstery throughout its entire length, the PULLMAN is the last word in automobile luxury.

Then consider these quality structural points:

Flexible triangular front frame connection and rear axle attachment.
Chassis of Seamless Cold Drawn steel tubing and nickel steel drop forgings.
Instantly adjustable extension axle and long vanadium steel springs.

The dealer who harnesses the wonderful sales-power of PULLMAN quality to his motorcycles opens a straight road to a big selling success this season. Don't fail to learn all there is to know about PULLMAN. Descriptive circular on request.

Harry Svensgaard Sales Corp.

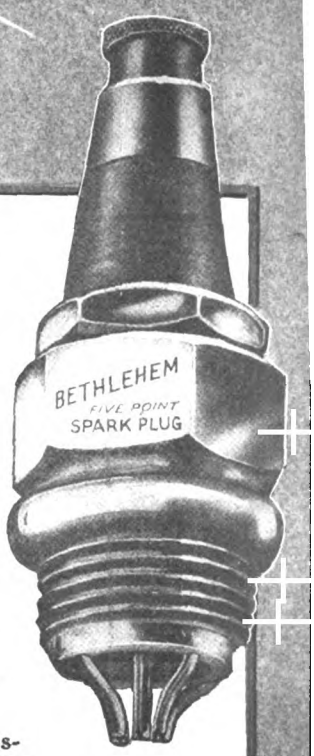
BETHLEHEM FIVE POINT SPARK PLUG



The wise men of to-day see in the BETHLEHEM FIVE POINT SPARK PLUG the ultimate in scientific spark plug building. They use the BETHLEHEM because it is SURE. They know that its hissing, blazing spark can never fail—for one of the five sparking points is constantly throwing fire, even though the others should fail.

They use it because the BETHLEHEM is *guaranteed for life.* If today, tomorrow or three years from now, a BETHLEHEM PLUG goes wrong, you get a new plug or your money back.

This broad guarantee is made possible only by the inimitable perfection of every part of the BETHLEHEM, from its multiple sparking points that give four times the ordinary sparking power—its non-corroding extra heavy nickel electrodes, to its heat-proof mica insulation.

Bethlehem Spark Plugs Cost $1.25

Look for the display case at your dealer's.

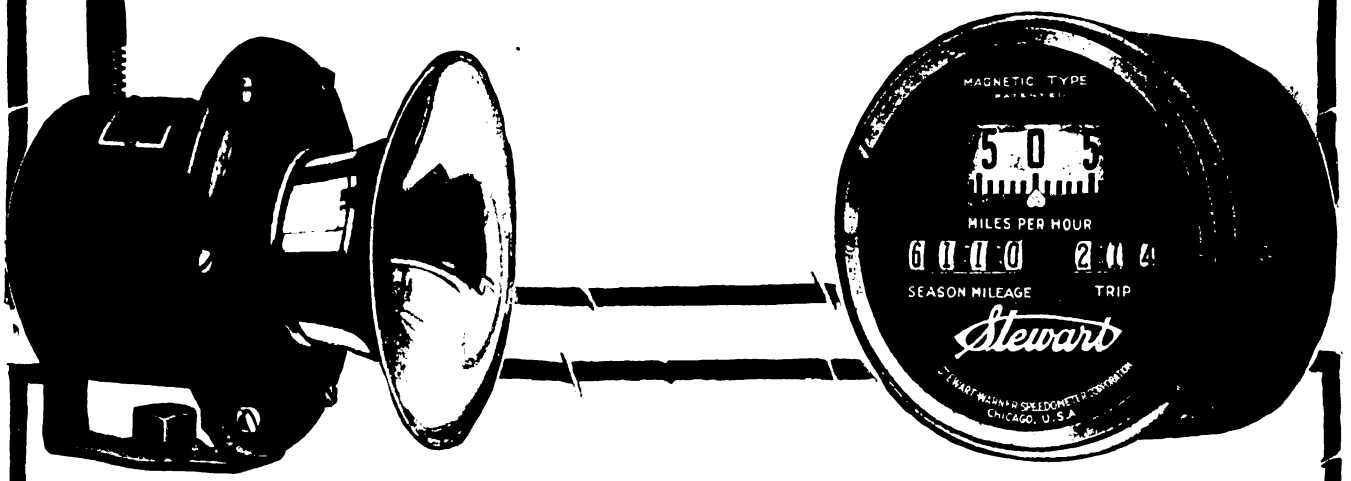
Stewart

Motorcycle
Warning Signal

Motorcycle
Speedometer



$3.50 **$10**

Dealers!
Keep Your Profits and Reputation

A few dealers here and there are still trying to force unknown, cheap accessories on motorcycle riders.

But what does it get them?

Stewart quality, reputation, service and advertising make most riders demand Stewart accessories. That means easy sales and many of them for Stewart dealers.

Stewart quality, durability, accuracy and appearance please Stewart users more every day. That means satisfied and permanent customers for Stewart dealers.

Stewart motorcycle accessories are backed by a nation-wide chain of service stations which insure prompt, efficient service to every user of Stewart Products.

That means that dealers can keep their legitimate profits on the sale of Stewart products.

Dealers selling cheap unreliable accessories often give away their reputation and profits in doctoring up weak, easily broken down warning signals and speedometers.

The Stewart (hand) Motorcycle Warning Signal now sells for $3.50.

Only $10 complete for the Stewart Motorcycle Speedometer.

Write us for details of dealer proposition.

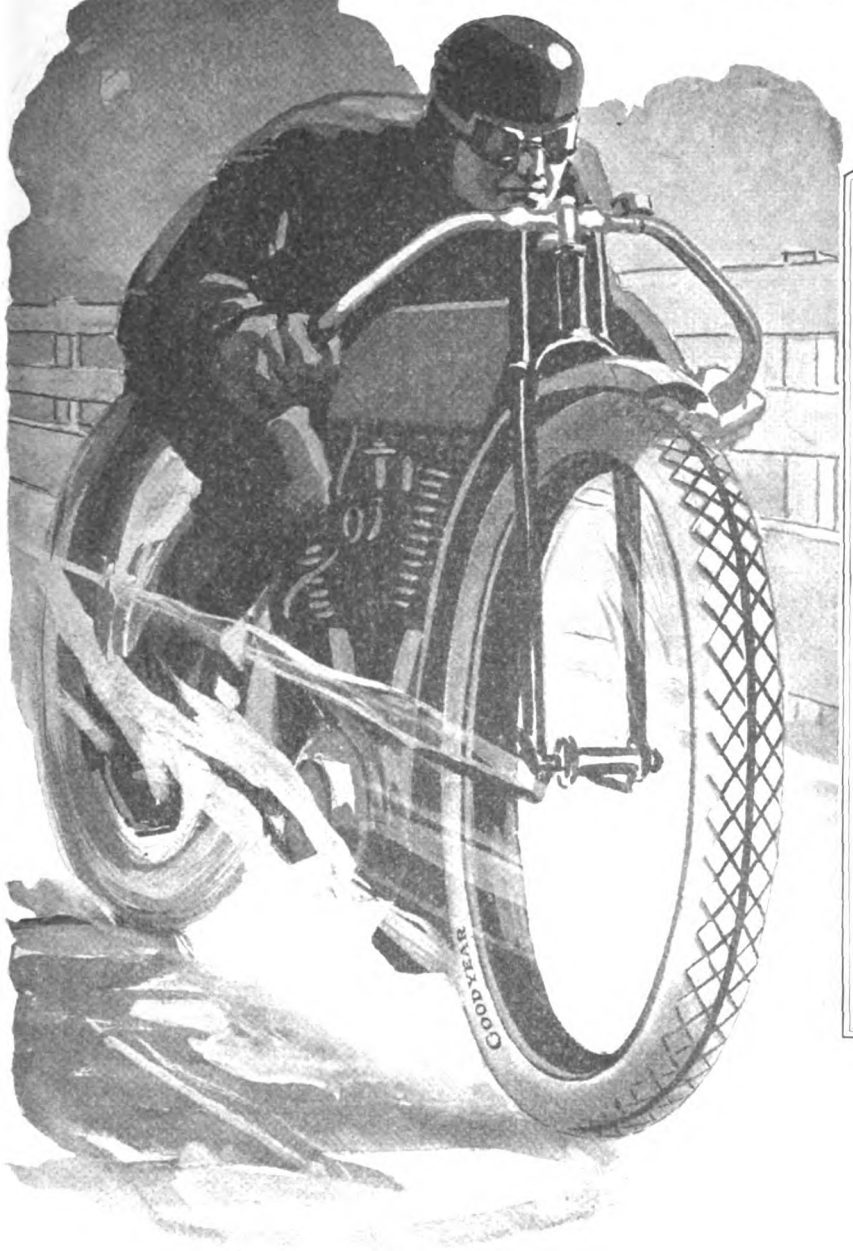
BLUE STREAKS



Dayton, Ohio

June 17. Matthews wins ten-mile open, Taylor second. In five-mile open, rain stopped races. A good crowd. We race in Toledo, tomorrow, Sunday. No tire trouble.
(Signed) LEE TAYLOR.

Toledo, Ohio

June 18, Taylor wins five-mile open, twenty-five mile free-for-all. Matthews wins five-mile heat and ten-mile final. Creviston wins five-mile consolidation. A clean sweep for Goodyear tires. No tire trouble.
(Signed) LEE TAYLOR.

Oakland, California

June 18. Five-mile stripped stock, Don Johns first, Dave Kennie second, Morty Graves third; time, 4 minutes 25 seconds. Ten-mile stripped stock, Dave Kennie first, Don Johns second, Morty Graves third; time, 9 minutes 17 seconds. Five-mile stripped stock, Graves first, Dave Kennie second. All on Blue Streaks. No tire trouble. Races at Stockton yesterday.
(Signed) DAVIE KENNIE.

Madison, Wis.

June 18. Goodyear tires win races at Madison, Wisconsin, on rough track. Fifteen-mile race, Gene Walker first, Perry second, Hillard third. All Goodyear equipped. Hundred-mile race, Wolters first, Perry second, Hillard fourth. All Goodyear equipped.
(Signed) BOB PERRY.

GOODYEAR
MOTORCYCLE
TIRES

Motorcycles which must render hard and heroic service, need tires which will bear the brunt.

Motorcycles which race or travel at high speed, motorcycles which make long runs, want all the tire strength they can get.

Call Blue Streaks a form of over-insurance if you like—call them a superlative form of protection to meet exceptional cases and conditions.

Whatever you call them, depend on it, they will do what they are intended to do.

By present indications, the racing records captured by Blue Streaks last season seem likely to be duplicated.

Reports from all the big race meets show Blue Streaks invariably the winners.

They are simply demonstrating for another year that they are the most practical and popular tire among motorcyclists and therefore the easiest and most profitable tire to sell.

Any Motorcycle Built around the R-S Motor Would Give Good Service—but—

When you take into consideration the added features of R-S superiority, there is small wonder that every R-S dealer is a successful one.

This famous R-S motor, with its side-by-side valves, its flexible, silent power that generates its full strength with marvelous quickness, has been endorsed by the Society of Mechanical Engineers as being ABSOLUTELY perfect in design, construction and finish.

Add to this no less than 60 refinements and improvements: Some of these are

Three speed sliding gear, double locking device, side-by-side valve motor —new step starter—new front fork—R-S Perfection Seat Post—long, comfortable foot-boards—very strong frame—large countershaft clutch—foot and hand operated—30″ saddle position, etc.

If the rider wants a surplus of power, a luxury of comfort and a true refinement of design and appearance, coupled with the knowledge that his mount has been developed by 12 years of consistent manufacturing success, his choice should be an R-S.

Dealers—your business success depends upon the selection of the proper machine. ARE YOU SATISFIED? Write us.

COMMITTEE MEN OF NEW TRADE ASS'N SUGGEST LINE OF ACTION FOR CAMPAIGN

In Special Statements to Motor Cycle Illustrated, Members of the Motorcycle and Allied Trades Association's Executive Committee Tell of Vital Subjects to Be Considered First; Rider Education and Means of Obtaining Publicity Will Be Discussed

INITIAL MEETING OF EXECUTIVES WILL PROBABLY BE CALLED NEXT WEEK

NEW YORK, N. Y., June 21—What will be the first steps which the Motorcycle and Allied Trades Association, formed last week at the epoch-making meeting in Milwaukee, will take to start with a bang the monster publicity campaign that will nationally boost the power two-wheeler on a scale heretofore unknown? That is the important question now uppermost in the mind of the trade.

With the object of sounding out the members of the executive committee of the new association as to their ideas on the line of action which should first command the attention of the association, **Motor Cycle Illustrated** has requested Messrs. Quine, Walls, Stokes, Weschler, and Sauer, the men who will ably direct the affairs of the new trade body, to give their individual opinions on this important matter.

Each of the committee men promptly responded to the request of **Motor Cycle Illustrated** and their statements will be found in full on these pages. Being the first indication of what the members of the executive committee officially consider subjects vital to the big boosting campaign, the statements merit the earnest attention of everybody in the trade, be he manufacturer or dealer.

Will Break All Records

That the publicity campaign when actually under way will crimp all previous performances goes without saying, for anyone who was present at the sessions of the advertising representatives, held in Milwaukee last week, can testify to the fact that never before was such enthusiasm and concentrated attention given at a trade meeting. The men who gathered from the motorcycle and accessory factories the country over came to consider a serious problem, and with their combined efforts and energies focussed on the object which brought the new association into being, no one can doubt that this constructive, educational movement will meet with an unprecedented success.

So the first shot fired in the new trade body's huge campaign—and that's what the statements printed here really amount to—is of more than passing importance. Much meat and hard facts will be found in the opinions given by the executive committee, and for that reason they should be read carefully by every member of the trade. When the committee meets within a week or so to set the wheels in motion, the suggestions incorporated in these statements will be the first to be considered. Other suggestions from manufacturers, dealers or riders will, of course, be welcome and should be sent in immediately to Secretary Ed. F. Hallock, Room 48, 116 Broad street, New York.

"START WITH COMMERCIAL FIELD!" QUINE

Chairman of Executive Committee Outlines Policy

By H. S. QUINE

TODAY the Motorcycle and Allied Trades Association is merely a name plus the apparent good will of all the industry. The name is of little importance. What we accomplish in real deeds by converting good will into action is of the utmost importance to the motorcycle's future.

And directly linked with the future of the motorcycle are the welfare and property of all who are allied with the industry.

The first thing of importance to be done therefore is for every member of the association to supply the executive committee and the special committees with all the information possible. Remember Mr. Motorcycle Manufacturer and Mr. Parts Maker that this is your association; that you helped form it, and that as a member you have more than a passive responsibility for its success. All of you doubtless know a lot of things that might be done and that should be done; all of you have in your minds, written there by experience

Digitized by Google

H. S. Quine

and observation, impressions of vital importance; suggestions, criticisms and plans. You should contribute most of them to the common welfare of the industry.

To my mind the first big specific movement for the industry and its associations to take should be in the direction of the development of the commercial importance of the motorcycle. There are thousands of practical things the motorcycle can do better, more quickly and more cheaply than any other known vehicle. After the great war has ended economy of operation will be a much more interesting subject to merchants and manufacturers in all lines of business than it has been in many years. The country's greatest thinkers are agreed that the United States must suffer by the war; that the devastated nations will turn all their efficiency and preparedness to commerce in order to recoup their losses.

America a Fat Market

And the one fat market for all of them is the United States. With our present tariff we shall not only lose more of our competitive foreign markets but we shall also have a hard time holding our own markets against German, French, British and even Russian aggression.

This means opportunity for the motorcycle. It costs less than the automobile first and last. It consumes little gasoline. It gets there and back again. Its small powerful engine performs almost miraculous feats. The watch word of this industry then should be preparedness. Manufacturers of motorcycles first should prepare themselves and their product. Parts makers should cooperate and both should prepare the dealers and help them capture and hold their markets. This may sound like a pretty theory now, but it soon will be a stern business fact.

Success Depends on Work

The work we have started can be done and it will be done if we carry into everyday humdrum the enthusiasm and the vision that was ours at Milwaukee. Success depends on work; on unselfishness; upon the casting out of spites and animosities; on a general comprehension that we must work for the whole industry as well as for ourselves. For pleasure use, the motorcycle of the future must certainly be modified in some respects. For commercial use all that is needed is to take the machine and demonstrate it to the man who should use it. Let us begin with a real showing at Providence.

From there the steps are easy. Get acquainted with the chairmen of the various committees; work with them. If we do this consistently a year or two from now we will doubt that the condition we face today ever existed.

WESCHLER ON ELIMINATING PREJUDICE

Suggests Liberal Publicity and Co-operative Advertising as Means

By FRANK J. WESCHLER

ONE of the prime essentials in connection with the big movement of the Motorcycle and Allied Trade Association is to secure more favorable comment on the motorcycle through the public press.

The average newspaper editor today as well as the general public is more or less prejudiced against the motorcycle because of the abuses of riders in operating their machines such as open mufflers, excessive speed, lack of attention as to proper dress and appearance and other evils we are so familiar with.

The Cardinal Question

The question that now presents itself is—What are the most effective means for combating these evils? In the opinon of the writer it can be done only through the most active cooperation of the manufacturer and allied trades—the dealer, the clubs, and the rider.

The Manufacturers' and Allied Trades' Association can accomplish a wonderful good toward this end by sending out liberally favorable publicity to the magazines and the daily press.

The spirit of reciprocity should also be shown by the manufacturers in setting aside a fair proportion of their advertising appropriation for these same newspapers and magazines. These amounts to be expended either directly or through a co-operative plan with their respective dealers.

Confidence in Plan

I am heartily convinced that the above plan will bring the desired results, and even if it fails it will at least have a tendency to put a damper on the unfavorable articles which now get so much prominence.

The dealer, through his close association with his customers and riders, can accomplish wonders toward eliminating the abuses above mentioned and thus give the press no occasion for publishing unfavorable comments. Of course, he must set the example himself.

Enlisting the Club's Aid

The clubs can assist to this end by constantly fostering the spirit of safe and sane riding, neat attire and careful conduct of the riders.

In case of the rider it is a well known fact that it is simply a small percentage responsible for these flagrant abuses which are so detrimental to the sport. Let us all appeal to them to assist us in this worthy undertaking and keep motorcycling on the high plane it is so justly deserving of.

The above is what I consider the first important step of this new association, and the time to start it is NOW.

F. J. Weschler

STOKES HAS QUICK ACTION SUGGESTION

Would Put Trade's Publicity Bureaus at Committee's Disposal

By M. C. STOKES

TO get right down to brass tacks, it strikes me that the first thing to be done along publicity lines is for each member of this association who maintains a publicity department to throw that department open to the committee immediately for the dissemination of good live motorcycle news.

If this plan were to be followed to its logical conclusion and the names of the various companies eliminated from the news matter or publicity matter which is sent out from their departments, it would put at the disposal of the committee at once a vast and efficient publicity organization which undoubtedly would go a great way toward enabling the motorcycle to obtain favorable recognition through the medium of the press.

In my opinion, with the Sheepshead Bay convention, the Providence F. A. M. meet and the Dodge City international race as feature events to be staged in the very near future, each and everyone of these classics could be made the subject of real live news stories, the sort of stories that not only will do us immeasurable good but will also be perfectly acceptable to news editors and sporting editors alike. If each of us will but pledge ourselves to do this one thing and do it right away, there is not a doubt in the world but what we will make a large and favorable dent with our motorcycle publicity before another 60 days have gone.

Martin C. Stokes

WALLS SPEAKS FOR NEATNESS AND CARE

Wants Rider Educated to Respect Public Opinion

By D. R. WALLS

IN my opinion the first thing to be done is to start a sort of punitive expedition against the rider who brings the sport into disrepute. Let us, for instance, contrast the neat rider with the slovenly kind and endeavor to show the latter the error of his ways. Let us pull hard to make the fellow who speeds along at 60 and over with cut-out open and an entire disregard for the other fellow's rights feel that other folks, including both pedestrians and automobilists, are, like him, out in pursuit of pleasure, and that by hogging things in this manner he is not only hurting himself but is interfering with the pleasures of others. We can bring these facts home to the thoughtless riders not only through newspaper publicity, but also through the trade papers, which, in my opinion, should go to great lengths to perform this helpful mission; we can, also, carry the story of neatness and carefulness home to the motorcycle rider through the medium of the dealer, and I candidly believe that any dealer who will not fall in line with this policy is a detriment rather than a benefit to the trade and should be eliminated.

Dan R. Walls

J. Leo Sauer

Dealer as an Aid

In this connection it might be well to coach the dealer to preach the doctrine of neatness and carefulness to his customers and some sort of a pledge binding the members to an observance of these cardinal principles of motorcycle prosperity might with good effect be included on the F. A. M. application blank. And, above all, let it be known through the medium of the press that the dirty and careless rider has been disowned by the trade and the decent element connected with the sport. Let the public at large feel that we are looking up and not down.

"KEEP RIDER SATISFIED" SAYS SAUER

He Is Prospect Maker and Business Builder

By J. LEO SAUER

THE thought that struck me most forcibly when I read the summarized minutes of the Milwaukee trade gathering, was that most of the speakers realized fully that the public at large looks with disfavor on motorcycles and motorcycling, and that this black eye which the vehicle has obtained owing to the abuses of careless and unthinking riders must be corrected or at least alleviated before very great strides can be made in the direction of increased business.

It occurs to me that we must go further than simply inducing the rider to clean up, close his cutout, and obey speed and traffic regulations. We must induce the rider to promulgate motorcycle enthusiasm. It is through him that we must get in touch with new prospects. He must make the new prospects, and in realization of this every effort must be made by the trade to keep a rider satisfied and to see that he gets the fullest possible enjoyment from his mount. I do not mean to suggest an

HOW THOSE PRESENT VIEWED THE "BIG IDEA"

The Speeches and Opinions of the Trade Men Who Helped to Form the Motorcycle and Allied Trades Association Crystallized Into Snappy Sentence Form

W. V. C. Jackson, A. O. Smith Co.—"We are after efficiency in advertising the same as we seek it in our own shop."

Arthur Davidson, Harley-Davidson Motor Co.—"Collectively we are big, indiviudally we are small. Let's work collectively."

C. F. Olin, New Departure Mfg. Co.—"Publicity secured in this way is invaluable."

H. S. Quine, Goodyear Tire & Rubber Co.—"We have the power to do just the things that the big idea itself promises that we can do."

F. J. Weschler, Hendee Mfg. Co.—"Much can be done in a publicity way by a timely display of tact."

E. M. Jackson, Hendee Mfg. Co.—"None of us are in this business temporarily. We all intend to stick and are building for the future."

T. W. Henderson, Henderson Motorcycle Co.—"I feel sure that this committee will do things that will merit their having the everlasting gratitude of motorcycle manufacturers."

R. W. Ashcroft, United States Tire Co.—"We should advertise the pleasure side of the motorcycle."

Louis G. Fairbanks, Firestone Tire & Rubber Co.—"I think that the greatest good will come through our personal contact with the people."

Daniel R. Walls, Splitdorf Electrical Co.—"We must eliminate the careless, slovenly rider."

Frederick B. Hart, Excelsior Motor Mfg. & Supply Co.—"We should quit getting individual publicity and work for motorcycle publicity."

H. G. McMahon, Remy Electric Co.—"The advantages derived from this organization will be far-reaching."

E. R. Perrin, Cyclemotor Corp.—"Our concern is glad to be included in such a movement."

George T. Briggs, Wheeler and Schebler.—"We should get the views of automobile editors and endeavor to cultivate them."

F. Dunlap, Klau-Vom Peterson-Dunlop Co.—"This movement is so big that it is going to take a lot of time to put it over."

C. B. O'Hare, Aurora Automatic Machinery Co.—"We should devote some effort to coaching the dealer to send local motorcycle news to his newspapers."

W. Walter Shoemaker, Graton & Knight.—"While not an advertising man I can appreciate fully what is being done here."

R. F. Rogers, Rogers Mfg. Co.—"We must bend our efforts to induce a better class of people to take up motorcycling."

Frank Effinger, A. O. Smith Co.—"We should establish a central clearing house for motorcycle information."

T. R. Thomas, Goodyear Tire & Rubber Co.—"It is quite easy to get motorcycle dealers to organize."

E. J. Mueller, Harley-Davidson Motor Co.—"We believe that the biggest feature field for the motorcycle is the commercial field."

W. Jack Cameron, Goodyear Tire & Rubber Co.—"Let the motorcycle manufacturer offer their travelers a bonus on each commercial van sold in their territory. That will promote commercial sales wonderfully."

Frank B. Roger, Harley-Davidson Motor Co.—"The club is an important factor in motorcycle sales. Let us stimulate club organizations."

M. C. Stokes, United States Tire Co.—"Everybody in the trade should be furnished with sales arguments on the motorcycle."

Charles E. Speaks, Firestone Tire & Rubber Co.—"We want to cater to the good, clean, live dealer."

O. W. Adams, Cyclemotor Corp.—"Too much free service is the straw that breaks many a dealer's back."

W. S. Quinlan, Cleveland Motorcycle Mfg. Co.—"We are with you on anything that will work for the good of the industry."

H. L. Corey, Champion Spark Plug Co.—"I have orders to sell out the factory if necessary to fall in line with this movement."

J. B. Snapp, Goodyear Tire & Rubber Co.—"Dealer education is, perhaps, the biggest and the first thing to be tackled."

S. Lacy Crolius, Harley-Davidson Motor Co.—"I think a national tour week having the full support of the trade would make for increased interest and a great deal of publicity."

Lawrence Ward, Firestone Tire & Rubber Co.—"We tire men, being close to the trade, can do much to further the movement. Command us."

J. J. Hegeman, Firestone Tire & Rubber Co.—"Our first thought must be to stir up enthusiasm in both rider and dealer; our next, to maintain it."

W. S. Hoyt, Erwin & Masie.—"A combination of effort of this sort cannot fail of doing big things in both the publicity and advertising lines."

W. G. Schack, Emblem Mfg. Co.—"This is a time when big things are required of us and I know that we all feel equal to the occasion."

Horace M. Huffman, Davis Sewing Machine Co.—"Co-operative effort proved itself this year in the bicycle trade. It is deserving of a thorough trial by the motorcycle industry."

A. B. Coffman, President of the F. A. M.—"The best possible way of reaching the rider and winning his aid is through the Federation of American Motorcyclists."

L. D. Harden, Westfield Mfg. Co.—"We trade men should learn more about the F. A. M. and take a keener interest in its affairs."

Burt A. Quayle, Standard Welding Co.—"We are ready to do our part. It's a big idea and should be carried through."

WOLTER TAKES 100-MILE AT MADISON

Excelsior Speedster Wins Feature Event at Dane County Fair Meet—Lightweight Race Goes to Kindschi, Excelsior

MADISON, Wis., June 18.—Joe Wolter, on his Excelsior, proved the victor in the 100-mile feature race at the Dane County Fair track this afternoon. He made a non-stop run of the century in 94:54. Bob Perry, Excelsior, was second, Carl Eschereich, Cyclone, third and A. E. Hilliard, Excelsior, fourth.

Perry, who has captured practically every hundred mile event on this track, led until his gasoline supply gave out at the 95th lap. His stop at the pits gave Wolter first position. Gene Walker, the Birmingham favorite, looked fine as a prospective winner in the early stages of the race, but his magneto went dead in the 57th mile. Eschereich threw his chain four times, but got third place in spite of these handicaps.

Walker took the ten mile pro. opening race, on his Indian, with Perry second and A. E. Hilliard third. Time 9:04. The five-mile lightweight event resulted in a win by R. A. Kindschi, Excelsior, with C. H. Christofferson, Excelsior, second and Vincent Marchica, Indian, third. The time was 7:42 3/5. The speeds made in all races were fine, as the track had been repaired and the turns widened. The attendance was large.

HARRIMAN RESIGNS AS HENDEE AD. MANAGER

R. L. HARRIMAN, advertising manager for the Hendee Manufacturing Company, manufacturer of Indian motorcycles, recently resigned his duties and will leave that firm on July 1. He has made no announcement of his future plans.

MATHEWS AND MARKS WIN AT DAYTON MEET

DAYTON, Ohio, June 17.—Rain stopped the meet of the Miami Racing Company in this city today, before the third event could be completed. This event, a ten-mile professional, was cut to nine miles on account of the downpour. Mathews, Indian, was in the lead most of the time, getting a good start and finally winning. Morrison, Indian, contested Mathews' position several times, but finished second. Streifthau, Indian, managed to worm his way into third place.

The five-mile professional event had ten starters. It was a fight all the way and at the finish the field was all in two hundred yards. Marks, Thor, won by remarkable riding of the turns, with Mathews second and Taylor, Indian, third. The opening event was a bicycle race for one mile. This went to Faler, on a Pierce. No times were taken for any of the three events which were run.

UNIONTOWN CLIMB IS SET FOR JULY 20

UNIONTOWN, Pa.—The third annual hill climb of the Uniontown Motoring Association will be staged on July 20. The course will be the same as in previous years: from Hopwood to the summit of Chestnut Ridge, a distance of three miles. A motorcycle event will be a feature of the climb.

The two wheeler climb will be open to non-stock machines ridden by professionals. The entry fee is $10. First prize will be $100, second $75, third $50 and fourth $25. Application should be made to the Association, 921 National Bank Building, Uniontown.

RACE AT GRAND RAPIDS

GRAND RAPIDS, Mich.—The Grand Rapids Auto Owners' Association will hold a race meet on July 8 at the Grand Rapids track at which a sanctioned 50-mile motorcycle race will be a feature. A purse of $175 has been offered for this race.

GRAVES AND JOHNS VICTORS AT STOCKTON

Indian Riders Win Three Events at California Meet on Soft Track—Kinney, Cyclone, Takes Ten Mile Race

STOCKTON, Cal., June 20.—Morty Graves captured two five-mile pro. events over a soft track in this city on Sunday. His times were 4:24 3/5 and 4:37 2/5 respectively. Johns copped out another five-mile pro. event in 4:20, while Kinney took the ten-mile event in 9:17. Johns and Graves rode their Indians, while Kinney straddled a Cyclone.

The first motorcycle race on the card was a five-mile amateur for stripped stock mounts. This was won by Mankle, Indian, in 5:45 1/5. Hunt, Pope, and Link, Indian, came second and third. The next event was Johns' victory, a five-mile pro. for stripped stocks. Kinney, Cyclone, came second, and Graves, Indian, third. Johns' time was 4:20.

In the five-mile amateur which succeeded, Travers, Indian, won, with Hunt next and Mankle, Indian, third. Time, 5:25 4/5.

In the ten-mile pro. Kinney, on the Cyclone, came to the front when Johns fouled a plug. The finish was Kinney-Johns, Graves dropping out in the third mile. Time, 9:17.

The sixth event, a five-mile pro., saw Graves victorious. Kinney came second and Burns, Indian, third. Time, 4:24 3/5. Johns then went out for the mile track record for Stockton, tying his former mark of 51 seconds. Graves then copped out the eighth event, a final five-mile, in 4:37 2/5, with Burns second.

A two-mile bicycle race, put on as a preliminary, resulted in Gerard, Olympic C. C., winning in 5:43 2/5. Alling, of Sampson, was second, and Thompson, of New Century Wheelmen, third.

COMMERICAL PARADE PLEASES PROVIDENCE

Idea of Displaying Utility Outfits During F. A. M. Meet Meets With Whole-Hearted Approval of Conventionites

PROVIDENCE, R. I., June 19—The idea of injecting a commercial feature into the mammoth motorcycle parade which is to be staged here in connection with the annual convention of the Federation of American Motorcyclists, July 25-29, is receiving the hearty support of those interested in the running of the 1916 national meet.

Plans are under way to have the various manufacturers in the trade lend their aid to making this commercial section one of the most interesting features of the parade, and several of the manufacturers, including the Splitdorf Electrical Co. of Newark, have promised to send suitable floats.

It is calculated that at least 40 or 50 commercial motorcycles of one sort or another can be landed for the affair and these equipped with suitable placards which will bring home to the observer the real story of the motorcycle's commercial worth, cannot fail to make an impression on the local business men, as well as out of town observers who will be drawn to Providence by the F. A. M. annual.

NEW YORK GUARD TAKES 10 INDIANS; ARMY ANOTHER

NEW YORK, June 19.—The New York Sporting Goods Company, Indian representatives at 15 Warren street, has just received an order for ten Indians with Cygnet Rear Cars from the headquarters of the First Armored Motor Battery, New York National Guard. These outfits will be used for machine gun and ambulance work, following the mobilization of the Guard for service on the Mexican border early this week.

The firm has also delivered to the Quartermaster's Department, Eastern District, U. S. A., at Governors Island, N. Y., a Powerplus with electrical equipment. This is the second Powerplus this month to be turned over to the same department. All of the machines were ordered equipped with United States tires.

CHAPPLE OUT WITH NEW YORK GUARD

NEW YORK, June 21.—Among the well-known motorcyclists who have gone with the National Guard forces for service at or across the Mexican border is the veteran trackman, Arthur Chapple. "Chap" has a commission in the First Armored Motor Battery, New York National Guard, and will have charge of the 50 motorcycle troopers who act as escort and despatch riders in that organization.

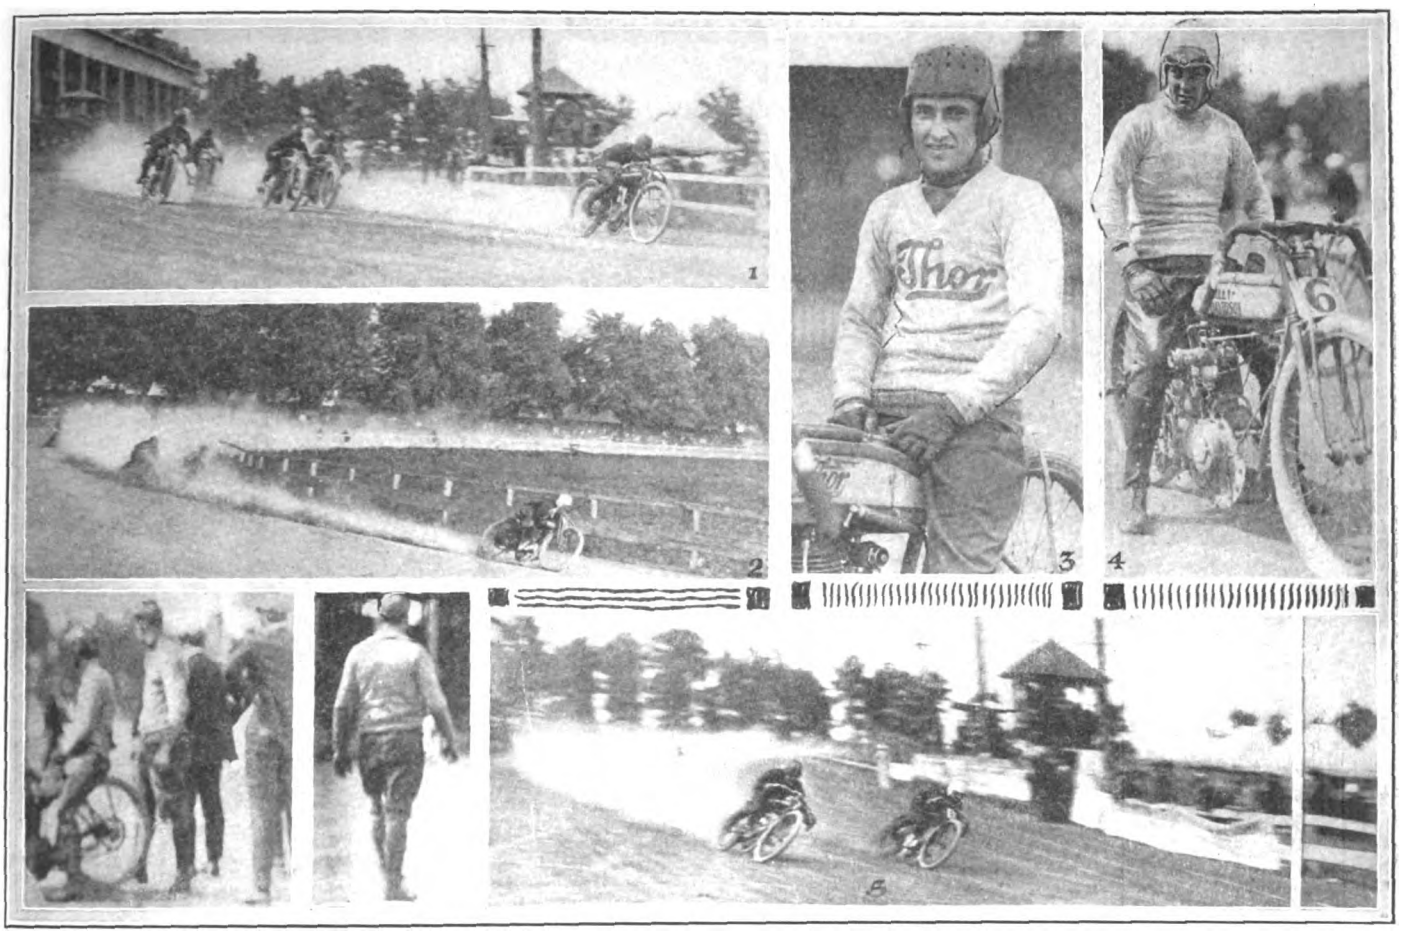
TAYLOR TAKES FEATURE EVENT AT TOLEDO

Wins 25-Mile Free-for-All in 28:46 on Indian—Verrill Noses Out Jones for Second Place—Creviston and Matthews Also Show Good Form in Long Race



1—On the Turn at Start of the 25-Mile Feature; 2—Weishaar Leading at Eight Miles; 3—Don Marks, Thor, Who Showed Well; 4—Maldwyn Jones on New Harley-Davidson; 5—Weishaar and Taylor Fighting It Out

TOLEDO, O., June 18.—A few entirely new combinations were in the entry list at the race meet of the Interstate Racing Association at the half-mile track here this afternoon, also a couple of familiar faces appearing above new machines. Maldwyn Jones made his bow with the new four-valve Harley-Davidson racer that he will use this season, and gave a good account of himself, considering that it was his first time on his new mount.

Frits Meyers also had a new machine, an Excelsior instead of the Indian he has used before. Ray Weishaar stepped up from the wilds of Kansas with a four-valve Harley-Davidson, and both he and Don Marks, with his blue Thor, did themselves proud.

In the first qualifying heat Taylor, Indian, was the winner, with Morrison on an Indian, second, and Meyers with his Excelsior third. The time was 5:40 2/5.

In the second heat, Matthews and Pineau, the Merkel rider, had a stiff argument for the lead at first. Matthews slowly drew away from the other, but Jones in turn came up and put in a bid for the lead. Then Weishaar also advanced and the real race became one between Jones and Weishaar for second place. Matthews' time for the five miles was 5:41.

The consolation race was peculiarly enough the fastest of the day. Ray Creviston was in it on account of various little things having kept him out of the qualifying heats, and he reeled off the five miles in the sizzling time of 5:36. Marks (Thor) rode a consistent race to second place, and Pineau (Merkel) came in for third money. Verrill (Indian) and Sudduth (Thor) fought a neck-and-neck battle all the way for fourth place, with nothing but glory for the winner of the position, as no prize money was attached.

Matthews Wins Final

In the ten-mile final heat, Matthews worked his Indian into the lead during the first half of the race, but Ray Weishaar stuck close enough all the way to be dangerous, running a good second. Morrison registered third. The time was 11:19.

The first part of the 25-mile free-for-all was a battle royal between Taylor with his Indian and Weishaar on the Harley-Davidson. Both seemed about matched for speed, and both rode like masters. Taylor led off at the start, but after seven or eight miles were reeled into history Weishaar unwound a streak of speed and went by the Indian rider like a flash.

The battle went on past the fifteen-mile mark, at which point the tide was a trifle in favor of Taylor, with Jones in third place. But at 17 miles something happened all at once to the bronchial tubes of Weishaar's motor—it gave a convulsive cough and expired. This left Taylor with undisputed possession of first place, while Jones fell heir to second. Pineau had certain difficulties of his own, so that Verrill swung back into third position again.

Thus at 20 miles the order was Taylor, Jones and Verrill. And the final mile or two saw a dramatic battle for second place that left the crowd shaky with excitement. Verrill had muttered mystic incantations into the fluttering ear of his mount, and thus coaxed from it a renewal of life that slowly moved him up toward the front again.

Then there followed an exhibition of the kind of riding that won him the name of "Krazy Horse." Forgetting that there was any such article as a cutout or spark retard on his motor he tied 'er wide open and jammed the machine around the turns with precipitancy that looked like death and destruction with the balance wheel loose. The machine wagged its tail like the hailing sign of a home-coming collie, slid and wobbled sidewise from one stretch to the next, and apparently defied all the laws of physics at one and the same time. But in some way known only to himself, Verrill kept it right side up, squeezed by Jones on the last lap, and got second place.

Taylor's time in winning the race was 28:46 for the 25 miles.

WHAT THE CAMPING CYCLIST NEEDS

A Veteran Sportsman Tells Just What to Take and How to Make the Most of Each Article of Equipment; Complete and Practical Information Based Upon Personal Experiences on a Motorcycle Camping Trip

PACKING CAPACITY OF MOTORCYCLE IS AMPLE FOR ALL REQUIREMENTS

By W. H. WALLACE*

A FEW years ago I read in *Recreation* a charming article entitled "Becoming a Canoeist at Forty-two," the title of which fired my imagination. I did not want to become a canoeist, but I did last year blossom out as an even more devil-may-care recreationist, by becoming a motorcyclist—not only that, but a camper to boot. At—well, I'll not tell my age till I have to.

It is true I had camped before, "full many a time and oft," but the motorcycle called for a much more refined camping outfit. However, with the aid of Mr. Cave's "Boy Scout's Hike Book" and a few suggestions from him, I soon was on the right track of acquiring just the outfit I needed. Being of a practical turn of mind, it was but natural that, like every other camper, I should want to work out some kinks of my own. But with seemingly everything planned for me, there was small chance, until I got into the midst of my preparations and found, with much joy, that the man who adjusts everything had not completely linked up motorcycling and camping. Then I cut loose, stepped on the throttle, so to speak, and did my best to go Hamilton Laing one better by getting together a better camping kit—inasmuch as against his two trips from New York to Manitoba and New York to San Francisco and Portland, my little hikes around New England and New York State lay deep in the shade.

The "packing" capacity of a motorcycle is ample for all the requirements of comfort and convenience of the average man. The following list of articles includes everything necessary, and for a two weeks' trip will weigh under fifty pounds. This equipment is the same as the one used by myself in covering more than 1,500 miles, and while it is not claimed to be ideal it served its purpose well and cost little.

Starting with a spring-frame Indian machine, I fitted to it the luggage carrier furnished by the manufacturer and which will safely carry 100 pounds. At Mr. Cave's suggestion I bought a pair of "panniers" and a "carry-all," the same rig recommended to Mr. Laing and which he reported so satisfactory, these being adapted to fasten to the luggage carrier by straps and having a combined capacity about equal to two suit cases. In order to prevent the panniers rubbing against the frame, cleats of wood faced with sole-leather were placed horizontally on the sides next to the frame, and it was also found necessary to place pieces of compo-board inside of the panniers next to the frame to prevent bulging and thus defeating the object of the cleats on the outside. These containers are made of waterproofed canvas and proved themselves quite ideal for the purpose.

The remaining equipment selected can

be divided into three classes, as indicated below:

FOOD STAPLES.—Flour (prepared, soup stock, egg powder, bacon (sliced), raisins, figs, cereal, sweet chocolate, butter, sugar, salt, pepper, coffee, tea.

TOILET AND MEDICAL.—Shaving outfit, tooth brush and paste, washing soap, wash rag, towel, tr. iodine, adhesive tape, antiseptic gauze, stearate of zinc.

GENERAL.—Tent, poncho, blankets, water bucket, wash basin, candle lantern, camp stove, rubber match box, fry pan, cooking pot, tin cup, tin plate, bread pan, knife and fork, tablespoon, dessert spoon, camp axe, trenching tool, canteen, sweater, change of underwear, cheesecloth, ball of cord.

There are several brands of prepared (self-raising) flour from which very palatable bread can be made by simply mixing to a stiff dough with water and baking *over* the fire in the fry pan—which should be well greased with butter—one side at a time, like you would bake a hot cake. For best results the dough should not be more than one-half inch thick, and the fire must not to be too hot. Soup stock can be had in several different varieties, of which pea is probably the most satisfactory. This is a mixture of desiccated peas and bacon and is one of the most important articles on the food list. The egg powder is simply desiccated eggs and is satisfactory as scrambled eggs or omelette.

The Invaluable Cereal

The cereal may be either Cream of Wheat, Hecker's Cream Farina or Wheatena, and as the matter of preparing it with the limited cooking outfit might puzzle some I will tell how it may be done with good results. Put three pints of water in the cooking pot and leave the pint measure in it *lying down*. When the water comes to a boil stand up the measure three-quarters full and after adding one-half teaspoon of salt, stir into it *slowly*—using a small stick for the purpose—three tablespoonfuls of Cream of Wheat or Hecker's Cream Farina, or four of Wheatena. Continue stirring until it becomes thick, when it is covered with the inverted bread pan and left to cook for twenty minutes or longer, being placed so that the water in the pot boils only moderately. If care is taken not to spill any of the cereal into the water in the pot what remains after cooking the cereal will be all right for the coffee, as "Washington's Coffee," the most convenient kind for camp use, is a perfectly soluble powder that requires only the addition of hot water.

Most people associate cereal with milk and sugar, but my favorite way of eating it is with butter, salt and pepper; which fits in nicely with camping ethics, as milk is more or less of a nuisance any way you take it, unless you can be satisfied with the powdered form. The cereal with bacon and coffee makes a good camp breakfast.

While on the subject of breakfast a few remarks in regard to starting a fire will be timely. The "one best bet" is a small wad of cotton waste saturated with gasoline. Make a bed of sticks on which to lay the waste—or other absorbent material—and after lighting place your best wood on top,

(Continued on page 65).

ANGLING FOR THE MOTORCYCLE SPORTSMAN

Some "Rock-bottom" Advice by a Faithful Disciple of Izaak Walton for Would-be Anglers—Just What You Want to Know About Rods and Bait—How to Carry Equipment and Combine Camping with Fishing

METHODS OF CATCHING THE ELUSIVE TROUT AND BASS

By NORBERT HAVEN

TO me the word vacation has always meant—and probably always will mean—fishing. And during the eight years of my riding experience the fishing has invariably been more or less closely associated with the motorcycle. I know a good number of motorcyclists who fish but I know of more who do not—doubtless because they don't realize how good a thing they are missing. To the person who has "been there" this little article may not prove of practical value; he doesn't need the information and suggestions. It is especially aimed at the chap who thinks in a vague sort of way that he might like to "take a whirl at the fishing game."

The Angler Is a Specialist

To begin with, let me say that the confirmed angling fan is very much of a specialist. He employs a special rod, outfit and method for the different kinds of fish. He is the true expert angler and can even give the farmer's boy pointers on taking trout from the brook on his own father's land. As an indication of the extent of specialization I might add that of the four common fishing methods—bait fishing, bait casting, fly casting and trolling—each calls for its own particular outfit.

The three commonest game fish in the United States are trout, bass and pickerel; and there are few places not within reach of waters inhabited by one or more of these fish. In addition, such common varieties as croppies, perch, bullheads, etc., are very widely distributed, not to mention the opportunities afforded by salt water. The owner of a motorcycle can always get good fishing, no matter where he lives; he may have to go a good distance for it, but that is where the motorcycle fits in.

What Will It Be?

In preparing for a vacation trip that is to include some angling one should consider in advance what kind of fish he is most likely to find. To carry a bait casting outfit into a region of mountain streams alive with trout would be as foolish as to go quail hunting armed with an elephant gun. The best all-around rod for trout fishing is a fairly light fly rod—about six ounces in weight, depending somewhat on the length, which, in turn, should be determined by the character of the water. For small streams, perhaps more or less choked with brush, the rod should be 8 or 8½ feet long—add a foot if the fishing is to be done on a large open stream. This rod will do for both fly and bait fishing, being far better for use with such light baits as grasshoppers, worms, small minnows, and the like, than the stiff bait rods. With a fly rod one can bait fish to his heart's content; but casting a fly with a bait rod is impossible.

The line should be of enameled silk, and hooks of rather small size, tied to snell. The reel may be either single action click or a multiplier. If without experience in fly fishing, get expert advice as to the patterns of flies to select and how to go at it; there is no space in this article for any instruction on that highest type of all angling—fly casting.

The Lair of the Bass and Trout

If the proposed motorcycle trip is to a region of lakes and ponds, or along a large river the chances are that bass and pickerel will be more in evidence than trout. This is especially true of south and central United States, away from the highlands. Trout require cold or cool water, and, therefore, are largely confined to northern or mountainous sections.

The commonest method of catching bass and, to a less extent, pickerel today is bait casting, a comparatively new angling

NEARING THE PLACE WHERE FINNY PREY ABOUNDS

method and one fully as specialized as fly casting. There are probably ten bait casters in the United States to every fly caster, though many anglers who live in regions where both trout and bass are common are adept at each. The bait casting rod is short and stiff with large guides. Four-foot rods are common, but my personal preference is for a rod six feet in length, as that gives more pleasure in playing a hooked fish The line *must be* of soft, unenameled braided silk, and the reel must be a "quad," that is, a quadruple multiplier. No other type of line or reel can be used satisfactorily.

The bait caster reels his bait—an artificial minnow usually of wood, plugs, they are called, a spoon, frog, or what not—up to the end of his rod, and then throws it away as though hurling a potato off a pointed stick, controlling the reel by a light pressure of his thumb on the spool. Then the bait is reeled in rapidly its swift motion through the water attracting the fish into striking. This is a very "killing" method, and large catches are often made, but no little skill is required to do it well.

Assortment of Bait Necessary

An assortment of baits of varying size, pattern and color should be made; fish will sometimes bite one, sometimes another. For pickerel a bright nickel spoon is required about two inches long and weighted with lead so that it can be cast, is the best bet. The bait casting outfit is ideal for a motorcycle rider to take with him because of its slight bulk. The rod joints may be so short as to stow away in the pocket of an outing coat, while the reel and baits will take up but little space.

The above is true even more of trolling when done with a hand line, but for the time expended, trolling from a boat gives about the least satisfaction of any form of angling. Besides, often there is no boat to be had.

Bait fishing for bass offers splendid possibilities, but the question of live bait is often a problem. Some suggestions as to how I have solved this difficulty in the past may be worth while. Bass bait includes such creatures as *minnows, helgramites,* small frogs, newts, grubs, worms, hoppers, crickets, etc. One cannot carry a pail of live minnows on a motorcycle trip but he can easily carry a pail, and sporting goods stores now offer *folding* bait pails, apparently made for the particular benefit of the motorcycle clan.

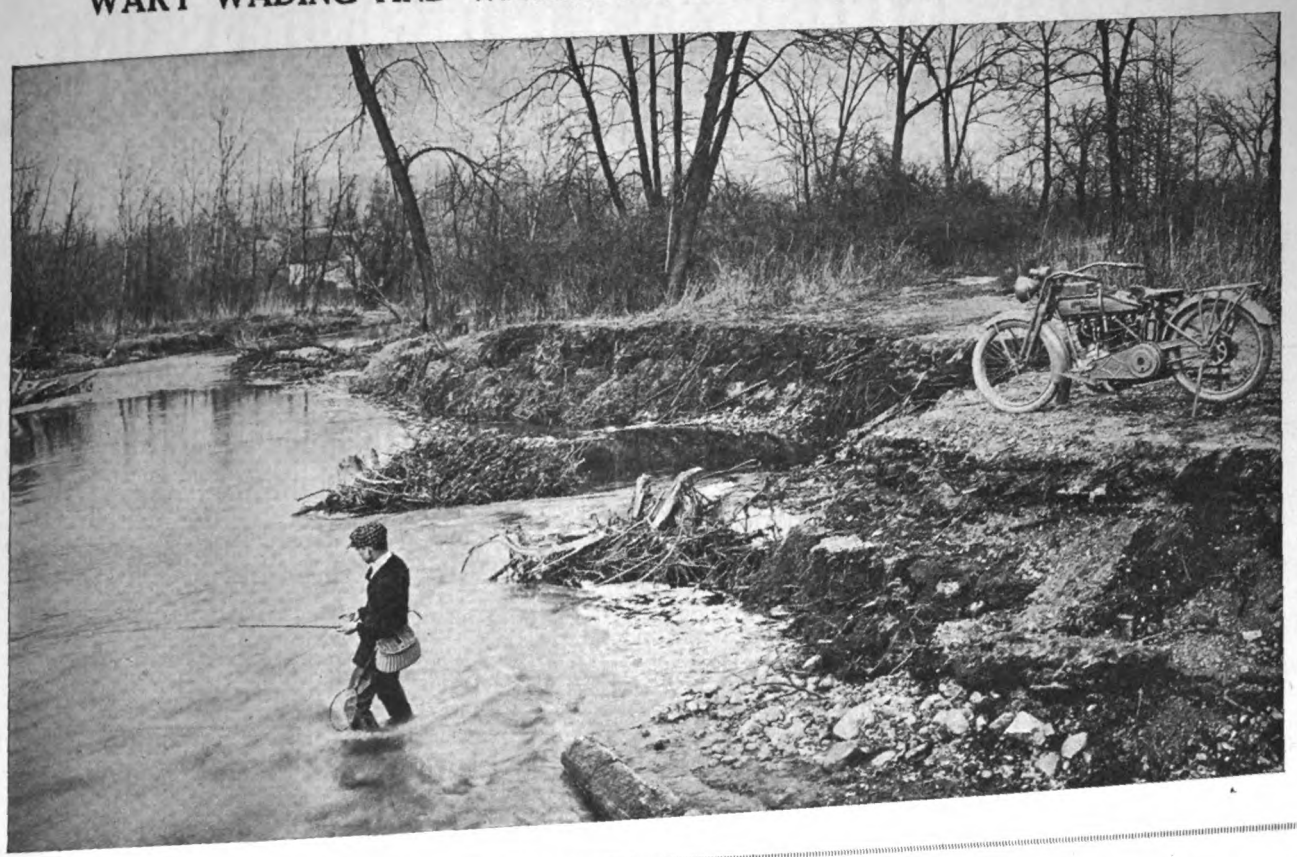
A Home-Made Net

My custom is to make a small net of stout mosquito bar, with a top opening about the size of a barrel hoop. On the fishing grounds I cut a green willow sprout and bend it into a loop, fastening by a few turns of cord or wire. That makes the top of my net. I usually have no difficulty in locating a small stream flowing into the lake or river with plenty of small minnows in it, and some of them are easily caught by setting the net in a narrow spot and driving the minnows into it by wading and splashing down the stream.

The same net can be used for catching helgramites, probably the best all-around bass bait. They live under flat rocks in the swift, shollow part of a stream. Hold the net behind the rock with one hand, and turn the stone with the other; the flow of water will sweep the bait down into your net. Newts can be found under stones in most cool, moist places along small streams.

Digitized by Google

WARY WADING AND WATCHFUL WAITING—AND THEN THE RISE



Small frogs are usually plentiful in swampy places along the lake or stream, and are easily caught in the same handy net mentioned above. When Mister Frog jumps, make a swift swing at him, and, if you are quick enough, you can nail him in the air. If he is swimming under water, the net makes his escape almost impossible. Carry one or two empty tobacco tins for the various insects, which will be found in abundance in any open field. The crickets will be under boards, flat stones, etc. In bait fishing for bass one can use a trout outfit, though a slightly heavier rod is more desirable. I might add that bass will take artificial flies very readily, especially in running water.

How to Carry the Rod

Unless the motorcycle is hooked to a sidecar, carrying a fishing outfit may not be the easiest thing. A jointed rod, unless the joints are very short, is best lashed across the handlebars. Have it in the original wooden form and use only a *few turns of light cord*. The reason for this is that if you spill in sand or mud, when the 300 pounds of motorcycle smashes down the string will break, not the rod. If it is firmly lashed both rod and case will probably break, and the fishing part of the trip will meet a sudden and tragic end.

I saw advertised the other day a tackle box that appealed greatly to me. It was large enough to hold quite an assortment of lines, baits, hooks, etc., and yet small enough to fit a coat pocket. It is just the sort of thing a motorcycle fisherman ought to own.

A motorcycle rider, or better still, two or three kindred spirits, can get a lot of fun out of a camping-fishing excursion. If the fishing grounds are too far away to be reached and fished in a single day, make it a two or three days' trip and camp out. There are on the market several types of small shelter tents that require no poles, or such poles as one can easily cut in the woods. The weight is only 3 to 4 pounds; they are not bulky, and are moisture, insect and snake proof. One of these tents, rolled in a blanket, could not take up much space on the luggage carrier or in the sidecar, while the possibilities it offers for a healthful and enjoyable trip are unlimited.

Toting the Fish Home

Every fisherman needs some sort of a creel or basket in which to tote the victims of his luck or skill. I prefer the creel of French willow, the only objection being its bulk. On the trip out I pack my grub in the basket; on the return my fish—sometimes. Tackle stores offer folding creels, convenient because of the little room they take up; folded, one will go in your coat pocket.

In warm weather fish require care if they are to be kept in good condition. Every two hours or less when trouting I take time to slit and draw the fish caught, washing them and packing them carefully in the creel with damp moss or ferns. No true Waltonian cares to take home a catch of soft, soggy fish, fit only for use as fertilizer in the garden.

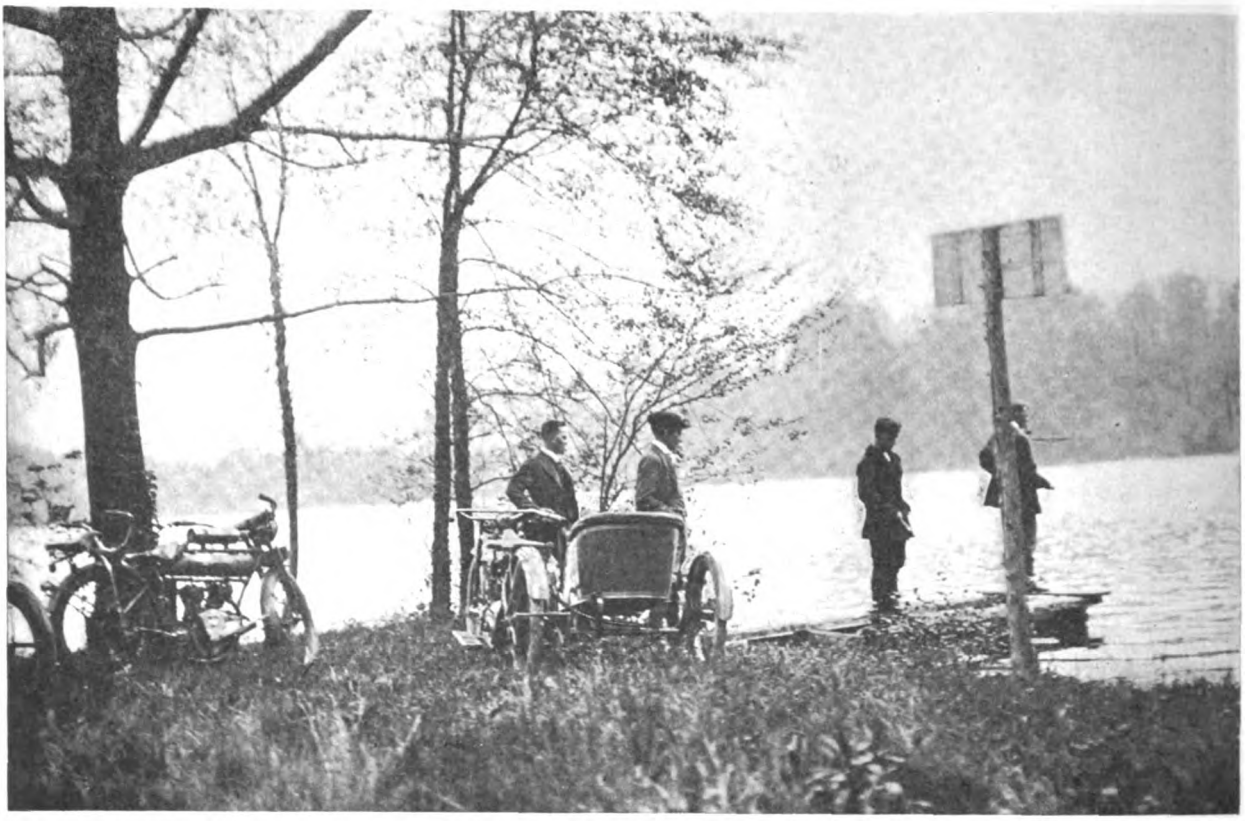
HOW THE CYCLIST CAN FIND GOOD FISHING

Naming Some Localities in the Middle and New England States Where Finny Game Can Be Had and Giving Directions How to Locate Good Grounds

TOPOGRAPHICAL MAPS ARE INVALUABLE AIDS TO THE ANGLER

By JOHNSON MEIGS



Izaak Walton's Followers Are Many in the Big Clan of Riders

I LIVE in a town of a hundred and fifty thousand inhabitants in the southern part of New England. One could hardly expect that there could be first class fishing close to a city of that size, and there isn't. But each season I have pretty fair success, especially as regards trout, the best as well as least common of our game fish. Connecticut game laws limit a day's catch to thirty, which law is generally regarded by fishermen as a joke, since half that number is a good catch; yet on a number of occasions I have stopped fishing early in the afternoon because my creel contained the limit of the speckled laddies. And what I have done, any angler in the East can do—by aid of a motorcycle.

There is still plenty of good trout fishing in New England, and in general the further north you go the better it gets. In Connecticut the best fishing is found in the northeast and northwest sections; the north central district is lowland and too thickly settled. I have had good success on several streams that flow into the Housatonic in the northwest of the state, and some of the best streams—by reputation—I have not yet fished.

Similar conditions prevail in New York and on up into the Berkshires in Massachusetts, though I must admit that my trips over to the Empire State side have not been so successful as when I stuck to Connecticut. In the same region are a large number of lakes and ponds which afford good opportunities for bass, pickerel, perch, etc. The Housatonic itself affords excellent bass fishing, and along its steep-sided, winding valley are any number of beautiful locations for a camp. Already many little summer cottages are being built here and there.

For the Wily Trout

For trout fishing, motorcyclists of New York City and vicinity would find that it paid them better to run up into the Catskills, where there are still many good streams, or better yet, into the Adirondacks where are the best trout waters, both streams and ponds, left in the state. The trout season ends in Connecticut on July first, the day the bass fishing opens, while in most parts of New York one can fish for trout until September first. For the best trout fishing in New England go into the northern parts of New Hampshire, Vermont or Maine, and remember this: the further you get from settled communities and especially large towns the more and bigger trout you will find. Practically any stream which answers these conditions will afford good sport.

Pennsylvania Has Trout and Bass

Pennsylvania also contains many trout streams that are decidedly worth fishing, the larger streams usually being well supplied with gamey black bass as well. The Delaware River is famous for its bass fishing, particularly in the region of the Water Gap. I have often fished the Delaware further up in New York state, but in hot weather the bass all seem to be affected with a parasitic worm which is found imbedded in the flesh. Many of the smaller tributaries of the Delaware contain trout, and the headwaters of the river itself give up some huge trout to anglers who know enough to get them.

In general, to get bass, pickerel, etc., one does not have to go so far from centers of population as when after trout. In addition to the places already mentioned, for the vicinity of New York City the highlands of northern New Jersey, with their numerous beautiful lakes and ponds, probably offer the best chances.

Before selecting any particular location

TAKE YOUR CAMERA WITH YOU ON THE TRIP

You Can Get the Finest Kind of Souvenirs With It to Look Back to in Days to Come—A Wide Range of Choice in Apparatus Can Be Had at Moderate Cost

By GOSLIN

"GOT your camera with you, Curly?" asked Weff as we swung away from the house. "Well, I should say yes," I responded, patting the leather case hanging under my right arm, "this little old box has been with me on every long trip I've taken for the past year. Its predecessors have traveled the same way ever since I straddled a motorcycle back in 1911.

"And the result is I have a great collection of motorcycle pictures in the album. Not that one of them would cop a blue ribbon at a camera club exhibit; far from that be such. Some are out of focus, others are dark or hazy, and maybe four out of five are good, clear prints, but every last one of them can conjure up memories of golden days of pleasure and good companionship. They tell of days that are gone and that cannot be brought back, except in the memory, do these good, bad and indifferent pictures, and what they show is recalled just as clearly as if it happened yesterday."

Recalling Old Memories

Well hidden, the same as with every man jack of us, I have a streak of sentiment and as each year starts with a few less of the old guard riding, that battered old album becomes more dear to me. For what have we but memories when the bunch has scattered to the four winds and our riding days are over? Only memories and a few pictures of those days of fun and good fellowship with that old happy-go-lucky crowd.

Isn't this argument enough why your camera, your motorcycle and yourself should be inseparable companions each time you ride?

Here's a typical picture of the 1914 bunch, taken up in Stockholm, N. J., along the brook. Right after I snapped that one someone pushed Allen and he shoved the next man and before the thing ended everyone of the fourteen of us had been in and out of the water enough to be soaking wet. Those white blotches in the picture are the result of my carrying a vest pocket Kodak in the hip pocket; then sitting down in the brook, all of which proves that a camera is not waterproof.

Snapping the View

That's the way you can record the day's doings when out with the crowd, but there are some of us who like to travel alone and enjoy the scenery. Most everybody has a liking for beautiful views, and what is better than a camera to help you enjoy the place you admire?

You don't have to be a camera fiend—one of those bugs who totes a 20 pound outfit eleven miles up and down hill and then rushes home to develop the plate—to have pleasure out of a camera. Just have the apparatus along with you and if that vista on the canal bank or the ruins of the old water-mill or the picture of the valley with its toy-like farms and houses all around strikes your fancy, aim the lens at the scene and press the button. Later on you will have a whole lot of fun going over your summer pictures when the winter winds are howling and the machine is laid up.

Snapshots vs. Postcards

Then, too, how about when you go off on that tour this summer? It's all very well to say that you can get post cards from each town you visit, but where is the personal touch that you get out of photographing the same stuff yourself? It's just as you saw it with your own eyes, snapped from an angle that appeals to you. Buying pictures made by someone else leaves out the intimate part that you get only when you snap the scene yourself.

How will you tell the fellows back home of the wonderful bit of road engineering you saw, unless you can show them photographs which explain better than words? And that sand or mud stretch that you conquered; that piece of rough riding that made you proud of your ability as a rider—how will you convince the bunch that it was the toughest ever encountered, if you can't show them a print with the machine bogged down almost to the rear hub?

Why a tour without a camera, huh, who ever heard of such a thing?

PRACTICAL POINTERS FOR THE SIDECAR OWNER

Veteran Rider Gives Hints on Lining-Up Third-Wheel Attachment and Recommends Use of Movable Searchlight for Night Traveling—Articles To Be Carried in Sidecar Locker

By GEORGE M. JOHNSON

CONSIDERING the notable increase in the number of sidecars which the present season promises to see on the road, a few suggestions regarding the use and operation of the combination might not be out of place. Much has already been said regarding proper lining up of the car; little more need be added. Probably the commonest mistake is to have the motorcycle exactly vertical when the outfit is standing on a level surface. It should lean *away* from the car, so that as the outfit is driven on a crowned road, with the car a trifle lower than the motorcycle, the latter will then be vertical. This adjustment of the two makes for easier driving and puts far less strain on the motorcycle frame.

There is no doubt that from the standpoint of pure mechanics, the attachment of the car at the side is a bad principle. The pull and strain on the motorcycle is tremendous, especially with a heavy load and on poor roads. The fact that the motorcycles stand up under such treatment speaks well for the staunchness of their construction. But to spare the motorcycle as much as possible the driver should use reasonable care. He should, above all, take all turns at highly reduced speed.

Curves and Rough Roads

The solo motorcycle, of course, tends to tilt on a curve, and the greater the speed the more the tipping; this is why curves on racing ovals are banked. With a sidecar attached, the tendency to tip is still there, but owing to the rigid connection between machine and car both former and latter remain vertical, and all the force is expended in strain on the motorcycle and tires. The importance of rounding turns at slow speed is thus easily apparent. The same is true of travel on rough and uneven roads, where the motorcycle is now higher, now lower, than the sidecar. The driver should go slowly, striving to take the bumps so as to minimize the strain on his outfit.

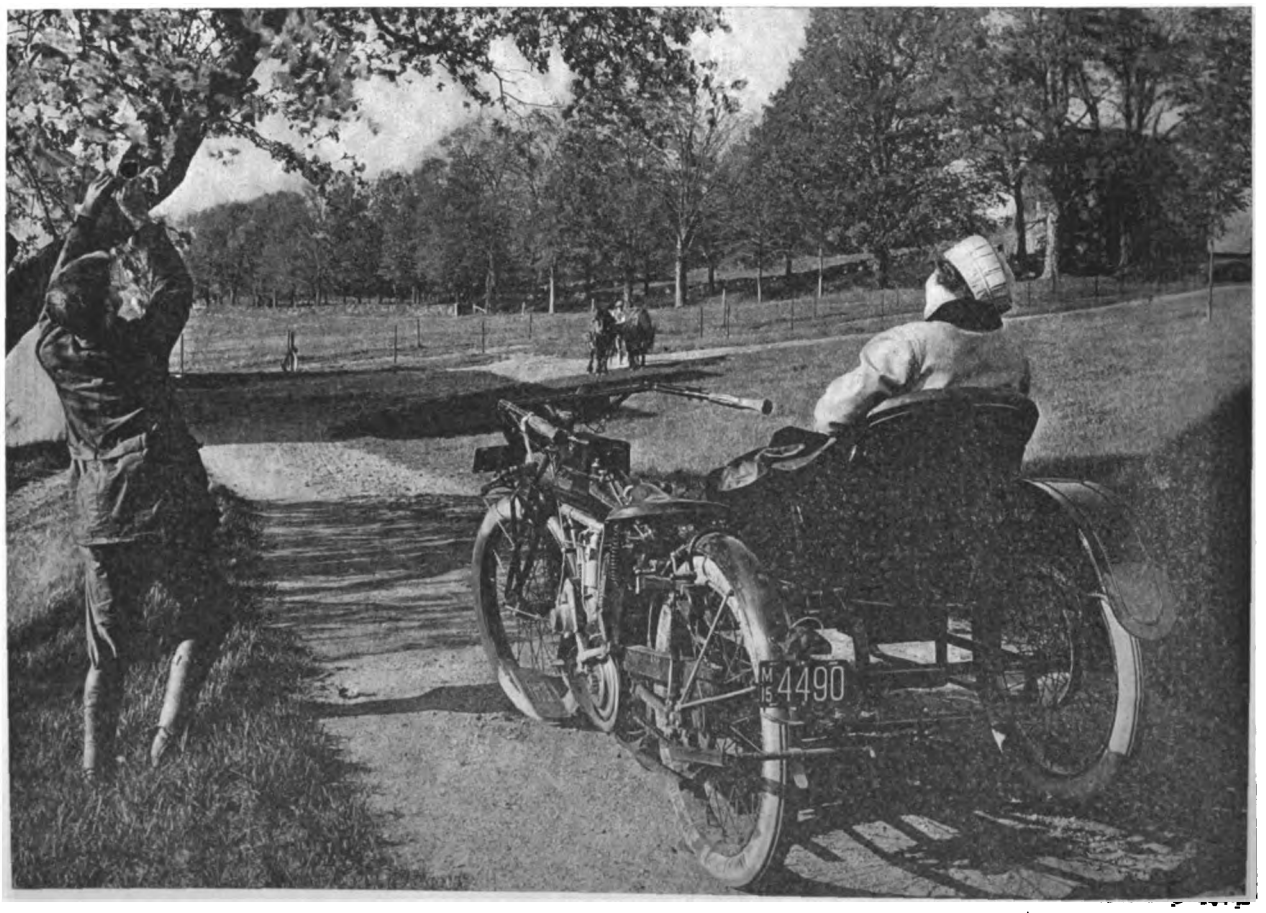
It is sometimes desirable for convenience or safety to have a headlight mounted on the sidecar, in addition to the one on the motorcycle itself. The most satisfactory arrangement is an electric searchlight, with a handle that can be turned by the passenger, who can derive a good deal of pleasure from flashing the light on various objects along the road as the outfit speeds along. With this sort of equipment the reading of signposts at crossroads is the easiest thing in the world. The juice for the lamp is probably best provided by dry cells or a storage battery under the sidecar seat—by the way, one should never buy a car that doesn't have a roomy recess under the seat; it will come in handy in a dozen ways.

Light on Sidecar

If a gas light is used, connection with the tank on the motorcycle may be made by copper tubing which can be clamped or wired to one of the sidecar connections. It will be found, however, that if much night riding is done, a motorcycle size Presto will not last long feeding two husky headlights and a tail lamp. Furthermore, having the source of sidecar light on the motorcycle is not convenient if the driver, as is the case with many, has the habit of disconnecting the car from time to time so as to use the motorcycle as a solo mount.

Mention was made of the recess under the sidecar seat. This can be used to carry a number of convenient articles which

HONEYMOONING A LA SIDECAR—MILADY SAYS IT "CAN'T BE BEAT!"



Digitized by Google

THE ROVER'S APPETITE IS KEEN AFTER A DAY WITH ROD AND GUN

otherwise would have to be left behind. For example, one can carry a spare driving chain, so that a snapped chain need mean only the slight delay of fitting the extra one. It is not necessary to buy a new chain for this; use an old one, which will be plenty good enough for the emergency. The extra chain is particularly handy in case of trouble after dark, but be sure that is of exactly the right length before packing it away in the kit.

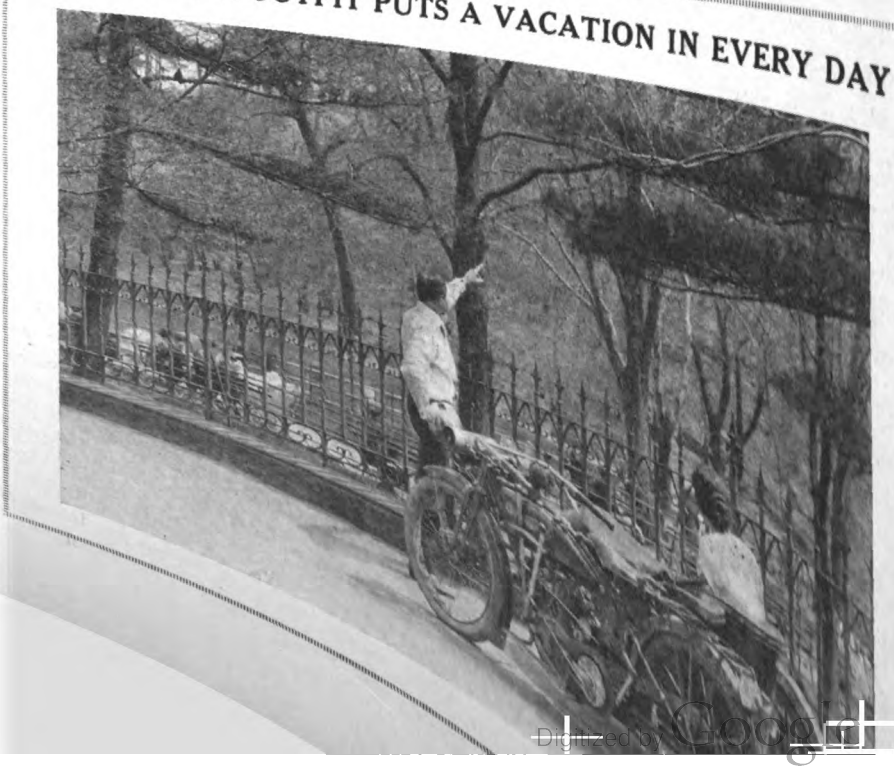
For Tubes and Parts

The same carryall can be used to hold a good supply of tire materials. A spare butt-end tube—very carefully wrapped to prevent chafing—might be included. One or two good inner blowout patches—the kind with a flap that fits between casing bead and rim or wheel—and possibly also an outer blowout patch with lacing would be worth packing away. For a long time I have made it a point to carry a foot or two of old inner tube, which may some time save my life in a case of exceptionally bad tire trouble.

There are a number of little kinks and nicknacks that a motorcyclist would like to have along, except for limited space available in the always crowded toolbox. All these can be carried in the convenient sidecar "chest." Among them might be mentioned the following: a roll or two of tire tape, a coil of soft iron wire and ditto copper wire, a can of rubber cement —replacing the useless tube always supplied with repair outfits, one or two extra spark plugs, goggles—protected by being kept in a stout box, a pair of canvas gloves to be worn when doing dirty repair work or adjustment on the road. These last cost the trifling sum of ten cents. One should always have them on hand, for if you fix up a chain with good gauntlets on, they will be ruined, and if you do it bare handed when you put the gauntlets on again their inside will be so dirty that whenever you wear them in the future your hands will be generously smeared with black.

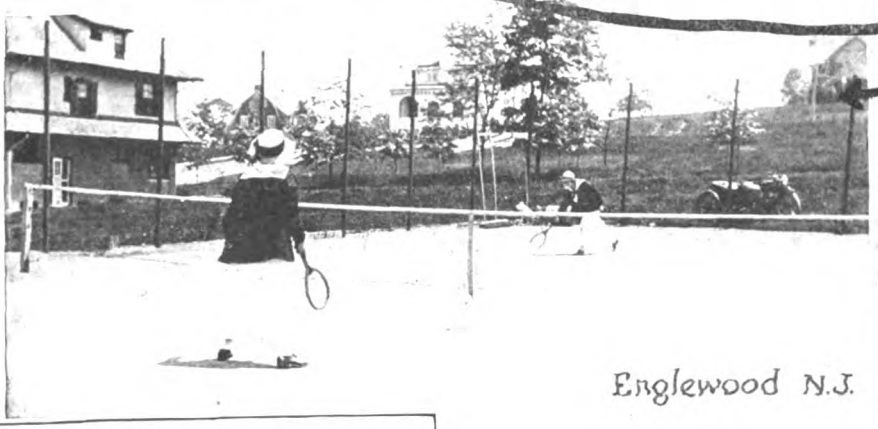
Needless to say, all stuff carried under the sidecar seat should be well packed to prevent damage to fragile articles. If the outfit stands out in a driving rain, water will surely soak down into the recess, wetting the contents. In such a case, everything should be taken out and thoroughly dried before being replaced. Stuff packed under the seat will remain wet for weeks if this is not done, and much of it may be utterly ruined.

THE SIDECAR OUTFIT PUTS A VACATION IN EVERY DAY



Digitized by Google

45 MINUTES



Englewood N.J.

FORTY-FIVE minutes from Broadway! Sounds like a popular song, or perhaps since it is out of date, an unpopular one; smacks, also, of the suburban railway time-table. To be sure, there is not much of the vacation atmosphere about it. Yet what a vacation, what a varied week or two weeks can be spent not over forty-five minutes from Gotham's White Light district, or for the matter of that, not over forty-five minutes from Chicago's loop district, St. Louis's Olive street, or Hickville Corners "Post Office" on Main street. That is, of course, provided the forty-five minutes are spent in the saddle of a motorcycle.

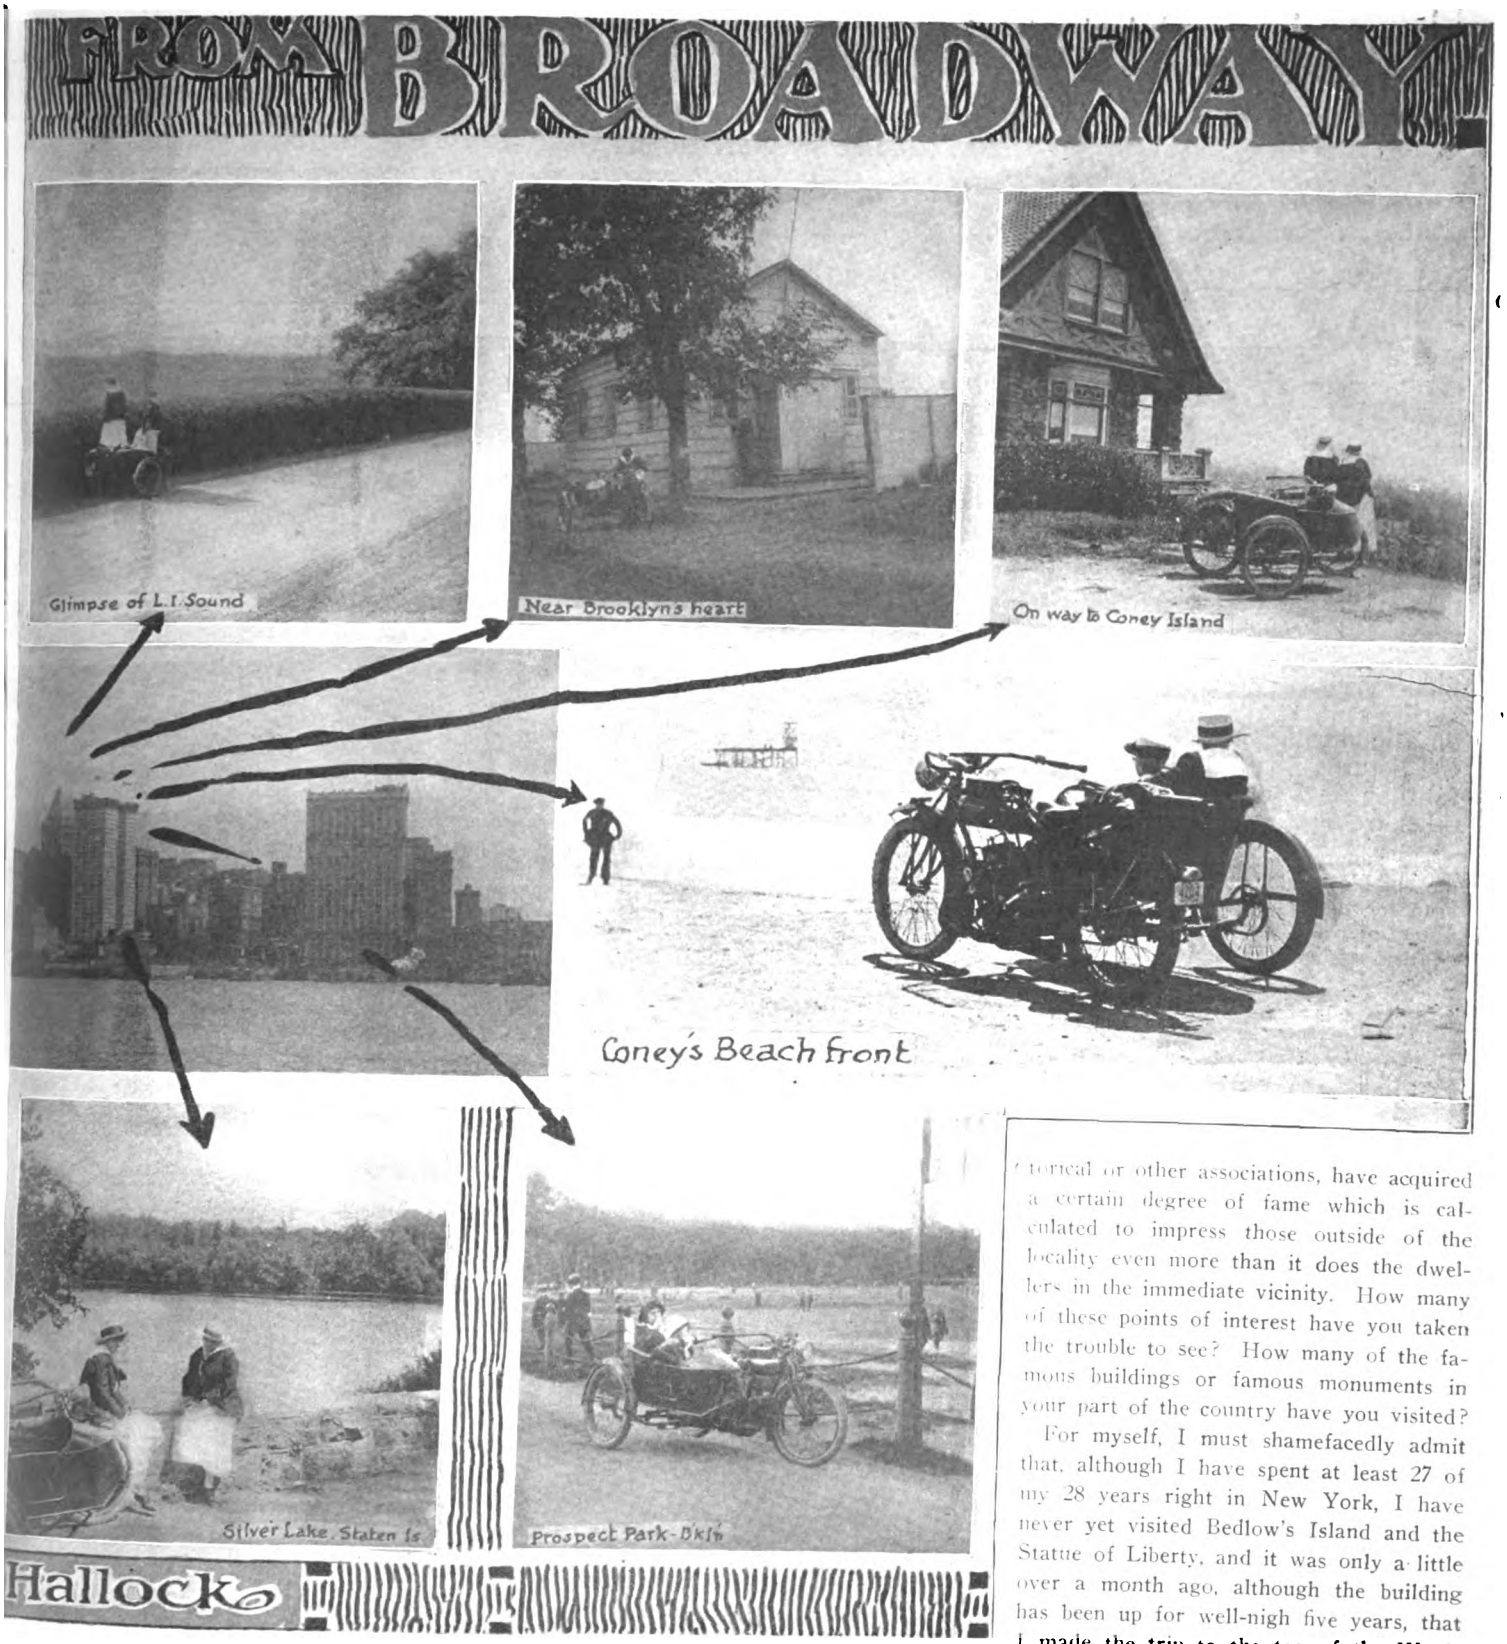
What We Desire in Vacation

We are wont to look on a vacation as a period when we break away from the things we see around us every day and seek new pastures of pleasure; days spent in gazing on new and eye-pleasing settings, or spent in the acquisition of the deep pleasure that comes in following one's pet pursuit. In its very essence the term vacation to the average run of folk denotes a change, a shifting of scenes, as it were; the breaking away from the things we see, the things we hear, and the things we do throughout the better part of the year, and removal to some distant point where these boresome material things cannot intrude.

By E.F.

And because we regard this week or these two weeks, as the case may be, in this light, the most logical of us do the most illogical things in seeking out the ways and the means and the place of spending this comparatively short space of blissful freedom. We get a resort guide, perhaps, or else we read the resort columns in the daily newspapers, and guided wholly by the word picture painted by some enterprising "ad" writer, we pick out one or other of the very many hotels or boarding-houses at some far distant point and make up our minds to enjoy those two weeks, even if the bed be as hard as boards and the only "excellent cuisine" in sight is the one you provide for the host and famished mosquitos which inhabit the said surroundings. And for all the lack of comfort and

Digitized by Google



lack of convenience, we enjoy these two weeks simply because they represent a radical change. We are seeing things and doing things that are different, and in seeing and doing them we are made happy.

Do You Know Your Vicinity

But did you ever stop to consider the number of things there are to be seen which you have never encountered and the number of things there are to be done which you never have accomplished right in the neighborhood of your own home city? Perhaps you will scoff, but just sit down by yourself and count up on your fingers the number of attractions which your city holds and which have escaped you altogether; picture yourself following some tourist through your home town and its environs. He or she, as the case may be, will visit this joint and that, will look with interest on this building and that monument which, because of some historical or other associations, have acquired a certain degree of fame which is calculated to impress those outside of the locality even more than it does the dwellers in the immediate vicinity. How many of these points of interest have you taken the trouble to see? How many of the famous buildings or famous monuments in your part of the country have you visited?

For myself, I must shamefacedly admit that, although I have spent at least 27 of my 28 years right in New York, I have never yet visited Bedlow's Island and the Statue of Liberty, and it was only a little over a month ago, although the building has been up for well-nigh five years, that I made the trip to the top of the Woolworth building, the world's highest inhabitable structure. Yet it is safe to say that there is not a tourist visiting New York who does not include both of these wonders, or near wonders, on his first day's itinerary.

Interesting Places Near Home

If then we pass up these really big things simply because they are near to us, how much more likely we are to let the little

THIS WAY TO BOATING AND BATHING

You Can Laugh at Trains and Trolley Cars If You Use a Motorcycle or Bicycle to Reach Your Favorite Lake or Seashore Resort

ABSOLUTE FREEDOM AND LOW EXPENSE ARE ASSURED

By IRA B. WILLIAMS

NO one who has given a moment's thought to summer vacation tendencies can deny that boating and bathing are among the most fascinating of hot-weather occupations—but the transportation problem is ever present for thousands who wish to avail themselves of those pastimes. The person who lives even a few miles from the seashore or a lake is often deprived of the beneficial effects of water sports through the dread of stuffy, crowded trains or equally crowded trolley cars.

For such persons the motorcycle, or the bicycle, saves the day—perhaps many days. If the trip to the water is a comparatively short one, a bicycle will meet all the requirements, combining pleasant and moderate exercise with the refreshment due to the change of scene and the fun derived from being in, or on, the water. If the trip is longer, say anywhere from ten to fifty miles, the ideal vehicle is the motorcycle—ridden solo or with a side-car attachment, as the conditions may require.

The average worker's holidays are too few. His family suffers with him. When he can't arrange to get away from home, they must submit to the same distressing confinement. Time and the ability to get away on a moment's notice mean everything. For the train or trolley traveler the Saturday half-holiday is merely provoking; it's too short. Even the full day on Sunday is spoiled through delays and the thousand and one other troubles that result from depending upon other people to carry you.

The motorcyclist is free. He can trundle out his mount, hop in the saddle and head for the open country, for the calm waters of a lake or the beckoning billows of the seashore, in a few minutes. A side-car will comfortably accommodate the missus and the kiddies—if the rider is blessed with such responsibilities—and from start to finish there will be the pleasant knowledge that all hands are having a jim-dandy outing at negligible cost.

That's an interesting point—the low cost. Installment systems have now placed the motorcycle within the reach of even the workman of low wages, and the running expense need never be a drawback. The worker who allows the item of expense to keep him from using a motorcycle in order to get in touch with the pastimes that he loves is merely double-crossing himself. He is "penny wise and pound foolish."

To the Beach in the Evening

By using a motorcycle the average worker can even arrange to visit his favorite beach in the evenings. Fifteen or twenty miles of a run in the cool of the evening wouldn't make a motorcycle "breathe hard," whereas a similar trip by train or trolley would be out of the question.

If a day trip is to be made it is the simplest matter imaginable to stow a substantial lunch either on a solo machine or in a side-car, and it is equally easy to add a camera or any extra articles that may be needed.

B. A. Swenson, Indian dealer in Providence, R. I., has had a simple trailer built on which he tows a small motor boat to the lake or river in which he wishes to fish. The motorcycle whisks the trailer along without the slightest trouble, and takes it back home in the same way. It is doubtful if many sportsmen would go to the extent of following Mr. Swenson's example, as it is usually possible to hire a suitable boat at the end of the trip.

"AHOY, BILL! WILL YOU SWAP A ROW FOR A RIDE?"

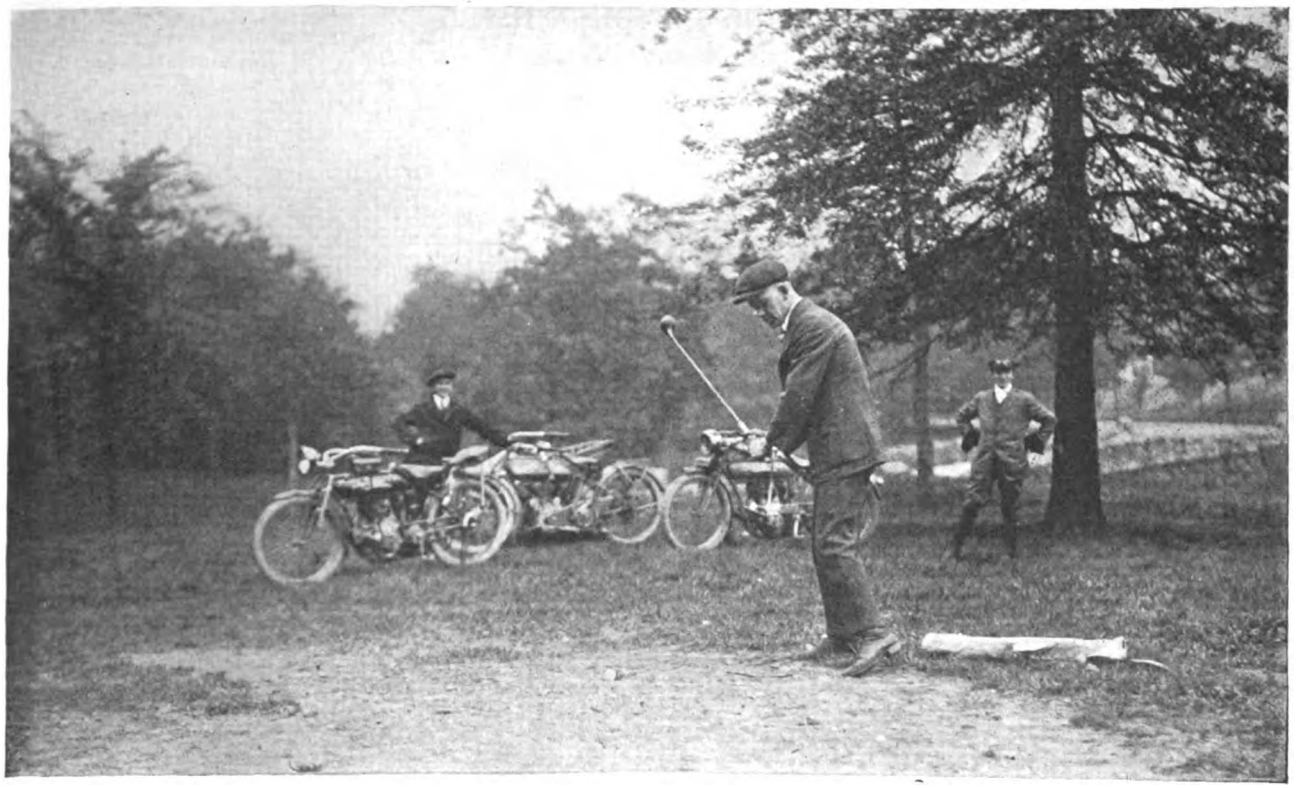
OTHER CLUB ACTIVITIES INTEREST BESIDES THOSE OF THE ROAD



LINKING THE MOTOR WITH THE LINKS

Many Golfers are Discovering That the Motorcycle Fits Into Their Plans Better Than the Costly and Cumbersome Automobile; Gives Quick, Economical Service

NOT every man has the leisure, or the idle cash, to justify his adopting golf as a hobby, but late statistics show that the great middle class is breaking into the ranks of the links lovers at a surprisingly rapid pace. Golf doesn't cost as much as it used to. Clubs are more moderate in their assessments, caddies are almost human in many cases and the paraphernalia of the game is now comparatively inexpensive.

But it is not always a simple matter to reach a good links, and a motor car is something of a nuisance when only one person is to make the trip.

A motorcycle would do the work,—do it just as well and about ten times as cheaply Therefore the middle class golfer, the man who doesn't care to burn up thirty-cent gasoline and wear out precious tires unnecessarily, is overlooking a good bet if he fails to consider the power two-wheeler.

Lightweight Fits Requirements

If he cares to use a sidecar, for his clubs, or for a passenger and the clubs,—well and good, but if he simply wishes to keep in close touch with the links in the most pleasant manner imaginable and to get there and back without loss of time or money, he can have all his requirements met by the lightweight motorcycle.

It is practically as easy to store a lightweight motorcycle as to find room for a bicycle, and the machine will be equal to all the demands of good, bad and indifferent country and suburban roads.

It is well to keep in mind that the golfer who is at all interested in a motorcycle will probably make a quick buyer. He has the money, and it simply remains to show him that the use of a power two-wheeler would simplify matters for him, add to his pleasure, save him time and afford more opportunities to visit the links. In other words, it is only necessary to show him that it would be a common-sense "buy."

Motorcycles are already quite common at golf clubs, but there ought to be more of them. They dovetail with all the requirements of the player and help in more ways than one to "keep him up to his game." The expense of running a motor car is out of all proportion to the benefits derived from it by the average golfer; it makes a costly fuss over doing what the motorcycle would accomplish without the least trouble.

"GETTING WISE" TO TOURING JOYS

Some of the Pleasures That Await the Fellow Who Has Not Yet Undertaken an Overnight Trip—Helpful and Practical Tips for the Intending Tourist

By DUDLY ESSEX

GREEN trees and grass, with a blue sky overhead and a soft south wind blowing against your face—gee! but isn't that the combination to stir the gypsy blood in your veins and cause you to tie a little bundle of fresh linen to the luggage carrier some fine Saturday afternoon and beat it away over the hills and far away?

Can't you see those finger-boards beckoning to you to come out and learn more of the country that lies over the edge of the sky?

Can't you feel that lure of the open road to be out and going?

You know your motorcycle now, and have enough confidence in your skill to meet any road-side emergencies; besides haven't you ridden all of the roads out around your home town in your search for new scenes?

Join the Ramblers' Club

Come on, your first adventure does not have to be a big one. A week end trip over the Saturday half-holiday and Sunday is enough to make you a full fledged member of the Ramblers' Club. And what is better than a motorcycle for such a trip.

You invest a certain amount in your motorcycle, and your first return is health; your second should be a glimpse of as much of these here, now, United States as is possible, a realization of the greatness of the wonderful country you are a citizen of.

If you are not getting full returns from your investment, it is your own fault. The motorcycle is eager enough to take you. Your faithful mount is always ready to be up and away, just as soon as you straddle it. And it will take you at a steady and tireless pace to the land of your heart's desire.

The most necessary thing is nerve. Just beat it away from the home-town with the idea of not turning back before you have reached the place you have picked out as your destination.

Over the Hills and Far Away

Of course, there is a feeling of awe and a thrill of fear and pleasure at your daring, when you go away for the first time, especially when you ride off alone. Well I remember my first long ride. It was to Philadelphia, and I only dreaded getting lost. I did twice; also had some wayside trouble that stumped me for two hours. But I plugged at it with the result I gained the confidence necessary for those who cut loose and ride out over the hills and far away. And you can do it, too.

Indeed there is nothing better than to ride off on a Saturday afternoon and explore regions always a little too remote for the trip in one day. And as you undertake trip after trip of this sort you exhaust the new places possible to view, which makes it almost compulsory to start out on a two-day trip after a while. You have to increase your cruising radius each year if you tire of the near-by scenes.

And what do you need to take with you on the average Saturday and Sunday trip? A change of linen and you are presentable at your turning point, which is travelling light, if you ride solo.

If you are out with the wife in the sidecar, you can carry a little more; but very little more is needed unless the wife is fond of dolling up when she is out of the sidecar.

A few of these week-end trips, then you are ready for a whole week or ten days tour. And now you are talking.

You can comfortably cover about 1,000 miles a week, and that gives you time to stop and look over some of the most important towns you pass through. At the same time you are on the road only about 9 hours a day and travel at a 20-mile-an-hour pace, which if fast enough to keep out of the way of the fellow behind you but not fast enough to keep you from enjoying the scenery.

But when the finger-boards do beckon to you don't let too many of them get your eye. Lay out a trip that can be enjoyed all of the time without racing home after straying too far. Make your tour one of profit to you both in the line of health and enjoyment. And don't fail to profit mentally by the education that such a trip opens up to you.

The cost of such a trip is not too high for the average rider, and is really a matter of individual taste. Some fellows can get through for about $2.00 a day, while others need four fully to enjoy the trip.

Keep Within Pocketbook's Limit

You can lay out your trip in keeping with your pocketbook's limit long before you go way, and if you start with everything, such as tires and chains, in good condition, you will have no extraordinary expenses to drain your capital.

When it comes to a show-down, a week or ten-day trip is nothing more or less than a steady ride out into new country instead out and back from your home town each day over the same distance for a like period. You rarely have to look at your motorcycle from one month's end to the other at home so why should it fail you on a trip?

KEEPING IN TOUCH WITH THE FOLKS

How the Motorcycle Made Those Pleasant Visits to Relatives Up in the Country More Frequent and Conspired With Dan Cupid To Good Effect

By JERSEY BLUE

I SURE am a lucky lad. But I didn't know it until I bought a motorcycle. Now I'm going to tell you how I figure that out.

I have quite a number of relatives who live up in the western section of my State—up where the towns are small and life, especially in the summer months, is certainly worth while.

These folks of mine live in a section of the county that is four miles either way from the railroad station and the roads are over a hilly country, making a trip to them not very pleasant when taken by train and carriage. I rarely visited them after my school days were over, and it was a shame, too, for my uncles and aunts and all of the cousins were glad to see any of us from the city; in fact, they welcomed us with open arms.

Ride Fascinated Him

Well, one of the lads in the office where I worked got a motorcycle three years ago, and invited me to ride on his tandem one day. You can guess the rest. I became so fascinated with the thrill and exhilaration of riding on a machine that it wasn't a week before I had a two-wheeler of my own.

Then the fact that my relatives lived four miles either way from the railroad station no longer interfered with my visits.

Just as soon as I mastered the running of the motorcycle, Bob—he's a pal of mine—and I headed for Little York, to see the aforementioned uncles and aunts. That first trip was certainly exciting! But we got there, and were royally welcomed as long lost sons, so great was their joy at our unheralded visit.

Then—And Now!

That first ride up was an awful experience for both of us, having single-speed machines and not being used to country roads full of ruts and rocks. But now—why we can ride the same stretches after midnight coming home from some dance or harvest-home festival!

To make a long story short, the first visit was only the forerunner of a great many more, for Bob began to take more than a passing interest in one of my cousins, while I renewed old acquaintance with a girl I had played with on several of the vacations I had spent up that way while a school-boy.

That made the lure of the trip all the stronger, and we had many a thrilling ride up and back in all kinds of weather to see those girls. Gee, what a lad will do when he takes a great big interest in one small girl. But I'd better soft-pedal on that stuff, for my attraction in that section of the country has tied up with me for life and is watching this typed off.

I might say, however, that we make the same number of trips as before, only we go by sidecar and have three speeds to negotiate the hills with, and electric lights to pick our way along over the roads after dark. Bob still goes with us every time, and his reason for going up that way will soon be in the city with him.

Wife Wanted a Sidecar

It was wonderful how the sidecar came along just after we were married, we had discussed making the trip tandem, but the wife had a little fear as to our safety, so that when the third wheel attachment came along we had a difficult problem solved.

And hasn't that sidecar helped them out up there in Little York! When we know that some one is coming up from the city we shoot over to the station, wait for the 10.35 to arrive, then load them in two deep in the car and one on the luggage-carrier and whisk 'em over the hills in nothing and two-fifths.

Or, if Uncle Ned wants to go down and chin with some of his friends, we load him in, and before he has caught up with his breathing he is at the gate of the farmer he wants to see.

The first time that sidecar showed up in the village, I'll bet I took out every in-

RACING SCHEDULE FOR F. A. M. CONVENTION

Chairman Swenson Lays Out Program of Speed Events for Thursday and Saturday Afternoons, July 27 and 29—Committees Are Appointed

PROVIDENCE, R. I., July 19.—Further details concerning the F. A. M. National Convention for July 25-29 in this city have been announced by B. A. Swenson, chairman of the convention committee, Providence M. C. The committee is to be composed of E. L. Buffington, vice-chairman; C. H. Westcott, R. I. Trust Co., treasurer; J. G. Edwards, secretary; Cleveland K. Joslyn, Clarence A. Loftes and Clyde S. Joslyn.

As announced in **Motor Cycle Illustrated** last week, racing will be held on Thursday and Saturday afternoons. The Thursday program will consist of the one-mile national amateur championship, the 10 mile national amateur championship, the five mile Rhode Island championship, pro., the 50 mile national amateur championship and the 25 national pro. championship. In the amateur national champ. races, three prizes, valued at $75 will be awarded in each. The Rhode Island pro. event will have three cups as trophies, while for the pro. national event, medals and cash prizes of $50, $25 and $10 will be awarded.

Saturday's Races

The Saturday race program will include the one mile national pro. championship, the two mile national amateur championship, the 25 national amateur championship, a 10 mile pro. sidecar race and a 50 mile or one hour open pro. race. The national pro. championship race will have medals valued at $75 and cash prizes of $25, $10 and $5 for the first three men. The 50 mile race will have cash prizes of $250, $100, $50, $25 and $10 for the first five men. Medals valued at $75 will be awarded in the amateur events.

Mr. Perkins, owner of the Narragansett Speedway, where the races will be held, is negotiating with an aviatrix to come here for Convention Week. If his plan is successful, there will be an added feature in a motorcycle vs. aeroplane race and some exhibition flights.

Excursion Details

The Friday program begins with an excursion to Rocky Point, one of the principal shore resorts of New England. A special boat will be used for the occasion. The principal part of the day's program will include athletic events for men, women and children for which handsome trophies are offered. The entire park will be opened to visitors.

Tuesday of Convention Week will be devoted principally to checking up the riders in the endurance run from Albany and the commencement of the registration. On Wednesday, the registration proceedings will be completed and the officials will get things under way for the meetings to follow.

Ladies' Committee

The ladies' committee, whose formation was announced in the last issue, will have Mrs. Cleveland K. Joslyn as chairman, Mrs. Clyde S. Joslyn as vice-chairman, and the following members: Mrs. John G. Edwards (secretary-treasurer), Mrs. B. A. Swenson and Mrs. L. B. Burlingame. The committee will have charge of all "dove parties" during the week.

The revised itinerary for the endurance run gives Fryeburg, 337 miles out of Albany, as the first night stop, and a distance of 217 miles from that city to Providence, making a total run of 564 miles. Controls will be at Albany, Greenfield, Franklin, Flume and Fryeburg for the first day, and Portland, Portsmouth, Boston and Providence for the second day. Checks will be located at North Adams, Claremont and Bretton Woods the first day, and at Kennebunkport, and Newburyport on the second day.

The tour will include the States of New York, Massachusetts, New Hampshire, Maine and Rhode Island.

PLANS UNFOLDING FOR BROOKLYN'S COMMERCIAL WEEK

They Include a Parade, Publicity Campaign, Window Dressing Competition and Other Business Builders—Tentative Dates July 17 to 22.

BROOKLYN, June 19.—If things go according to the plan outlined at the Milwaukee meeting of the Motorcycle Manufacturers' Association, Brooklyn is due to have her enthusiasm in the commercial motorcycle keyed up to a high pitch during the week of July 17 to 22. That span of five days is to be known as "Commercial Motorcycle Week" in the fastest-growing of Gotham's five boroughs, and during that week every endeavor will be made by the local motorcycle dealers in cooperation with factory travelers and Motorcycle Manufacturers' Association officials not only to consummate commercial motorcycle sales but also to stimulate interest and enthusiasm in the local merchants against the bigger and better commercial business in time to come.

Parade a Feature

The plans as tentatively outlined, include the staging of a vast and varied commercial motorcycle parade including every type and model of motorcycle and motorcycle van in commercial application; a far reaching publicity and advertising campaign through the medium of the local Brooklyn newspapers; a window dressing prize competition in which suitable awards will be offered for the windows which best convey to the mind of the onlooker the fact that the motorcycle has a distinct place in the commercial field; a letter campaign to commercial prospects with a view of bringing home to each and every retail merchant in Brooklyn the story of the motorcycle's applicability to his particular business, and a personal canvass by the factory traveler during which the local dealers will be coached in the art of locating and landing commercial prospects.

The M. M. A. committee which was appointed to arrange the details for Brooklyn's commercial week and which is headed by E. M. Jackson of the Indian factory, is busily engaged in thrashing out the plans for the coming event. The full plans will be presented for ratification by the Brooklyn dealers at a meeting which will be called within the next fortnight. Further information can be had from E. F. Hallock, secretary of the M. M. A., 116 Broad street, New York.

"KEEP RIDER SATISFIED," SAYS SAUER

(Continued from page 19)

extension of free service beyond a certain profitable limit which the manufacturer and dealers know to exist, but I do mean to suggest the formation of clubs and the organization of meets and tours which cannot fail to arouse motorcycle enthusiasm and interest. And it might be well to cultivate in the rider the "help thy neighbor" spirit. If he sees an automobile broken down in the road, for instance, it cannot fail to create a good impression on the motorist if he asks if he can be of service. Or, traveling along with empty sidecar, if he picks up a lone pedestrian and carries him to his destination, he has gone a long way toward creating a desire to ride in this chance passenger, or in alleviating any feeling of hatred or apathy which the pedestrian might have harbored for the power-driven two-wheeler.

WHEELING RACES WILL BE HELD ON JUNE 25

WHEELING, W. Va., June 16.—The races which were to have been held originally on Decoration Day, and which were postponed until June 3 on account of rain, have been again postponed from June 3 by reason of inclement weather, and will be held on June 25. The club will also hold a banquet on the evening of June 27, when the clubs from Moundsville and Washington will be invited to attend.

JERSEY CLUB WILL GREET QUAKER TOURISTS

NEWARK, N. J., June 21.—At a meeting of the New Jersey M. C. last night it was determined to entertain the Keystone and Philadelphia M. C. on the trip of the latter organizations from Harrisburg, Pa. and Philadelphia to the New York State F. A. M. Convention and races at Sheepshead Bay, N. Y. A committee of the New Jersey M. C. members will meet the Keystone tour near Trenton on Saturday, July 1 and escort them to Newark, where a reception will be held at the club rooms that evening.

On July 2, the regular Sunday club run will meet the Philadelphia M. C. run at Trenton and escort them via New Brunswick to this city. At New Brunswick all will watch the New Brunswick M. C. elimination contest. Dinner will be served at the New Jersey club rooms.

The tourists will go from Newark to Sheepshead Bay via Lincoln Highway to Jersey City (Pennsylvania ferry), boat to New York, crossing to Brooklyn over Williamsburg Bridge and taking the regular automobile route to the Speedway.

The meeting of last night was the occasion of the distributing of prizes and medals earned in the club's 20-hour run of May 30. In connection with this, an attractive gold medal was presented to Elliott B. Holton, to whose efforts were due the success of this and other club affairs. The presentation came as a surprise to Holton.

FILMDOM TO SNAP DODGE CITY SPEEDFEST

DODGE CITY, Kan., June 19.—The 1916 300-mile international motorcycle race at Dodge City is to be made a feature of the Mutual Weekly film service, if present plans do not miscarry. Arrangements have been made with the Mutual company to have a camera man present at the race. The films are to be sent all over the Mutual circuit, and their presentation will be of great advertising benefit to Dodge City, the 1917 race, and the motorcycle industry.

Films Will Make Hit

It is the plan of the promoters of the scheme to have the camera man take a few shots at the city itself, and also at some of the surrounding points of interest.

With her "Boot Hill," where were buried the dead cowboys who got "sassy" with the town marshal; with her "Horse Thief Canyon"; with her "Fort Dodge," and with the many other points of interest made historic by the scenes enacted in the former Cowboy Capitol, the films taken on July 4th will undeniably prove a popular hit with moving picture fans from all sections of the country.

FALOR TRADE'S CHOICE FOR F. A. M. PRESIDENCY

Goodyear Man Keen for Post After M. M. A. Committee Assures Him Trade's Support—Deep Insight Into Industry and Sport Make Him Logical Candidate

AKRON, Ohio, June 16—If things go the way the Motorcycle Manufacturers' Association and other motorcycle trade folks feel they should go, Shelby Falor, head of the cycle tire department of the Goodyear Tire & Rubber Co. will be the next president of the Federation of American Motorcyclists.

The Obvious Choice

In casting about for a suitable personage to fill the shoes of the present incumbent, A. B. Coffman who has announced his decision not again to serve as head of the national riders' organization, those in the M. M. A. who have the interest of the federation most deeply at heart could determine on no more suitable man for the big things that should and are to be done in the organization than Mr. Falor. And full of this knowledge and fully convinced that that course was a wise one, considering both their interests and the riders' welfare, the Motorcycle Manufacturers at their meeting on Wednesday last, June 14, appointed a committee comprising of F. J. Weschler and E. M. Jackson, of the Hendee Mfg. Co.; L. D. Harden of the Westfield Mfg. Co.; W. S. Quinlan, of the Cleveland Motorcycle Mfg Co., and W. D. Callender of *Motorcycling and Bicycling*, to wait on Mr. Falor at Akron and appraise him of the fact that the motorcycle manufacturers and other trade folk had unanimously endorsed his candidacy with a view of overcoming whatever scruples Mr. Falor might have at accepting the nomination or any possible objections on the part of Mr. Falor's employers.

Shelby A. Falor

To-day the committee arrived in Akron and interviewed Mr. Falor, and while at first he was reticent he was gradually brought around to the committee's way of thinking, with the result that his hat is now in the ring. And no head piece was ever more worthy of whole hearted support both by the trade and by the riders at large.

A Strong Man

There is not the slightest doubt that the greatest need of the F. A. M. at the present moment is not only a strong man but one who is well versed in F. A. M. affairs and who, moreover, has the time to devote to the interests of the national riders' organization.

Such a man is Mr. Falor. He has every bit of the strength and the dynamic energy of President Coffman and has a keen insight into the conditions throughout both the motorcycle trade and the sport. But unlike Coffman, who to quote himself "must be out and digging every minute," Mr. Falor has ample time to devote to the interests of both trade and sport. He has always taken a great deal of interest in the motorcycle and in motorcycling and is the originator of the "100,000 motorcycles in 1916" movement. If anyone outside of a reincarnated Moses can lead the F. A. M. back to its former high standing, Shelby A. Falor of Akron can.

OF COURSE, THE I
LAUNCESTON-HO

After being batted back and forth like a ping pong ball the Launceston-Hobart (Australia) record has been nailed by the Indian high above all competitors' marks. The new Indian record for the course is two hours, two minutes, 15 seconds, beating the record of another American make by over 32½ minutes. Not merely broke the record *but slaughtered it!*

That's the Indian way.

But That Isn't All

Talking about "cleanups" did you notice what Indian did at Toledo? Made a clean sweep of every event. Taylor took first heat in ten mile open, Matthews winning the second heat. The consolation heat being captured by Creviston. The final heat was won by Matthews. In the 25-mile sweepstakes Taylor was found once more up in front, a winner—*and* the *same Indian* won all four events owing to

Digitized by Google

NDIAN BROKE THE BART RECORD!

the non-arrival of Matthews' and Creviston's machines.

And Here's Still Another One—

At Stockton, Cal. Don Johns wins five mile open and makes track record. Graves captures two five mile open events and Indian finishes first in all amateur fully equipped stock events.

Wait a Minute, Here's Another—

At Madison, Wis., Gene Walker ran away with the ten mile open.

NO MATTER WHERE YOU GO—INDIAN IS ALWAYS WINNING. "CLEANING UP" HAS BEEN AN INDIAN HABIT FOR YEARS—AND NEVER MORE SO THAN THIS YEAR

WHY NOT RIDE THE WINNER? IT'S an

DEALERS OPERATE MOTORCYCLE LIVERIES

South Dakota and Nebraska Harley-Davidson Dealers Find Drummer Trade Profitable—Cut in on Automobile Business

MILWAUKEE, Wis.—Ed. Bushnell, the Harley-Davidson dealer at Newell, South Dakota, has gone to the rescue of the traveling salesmen who work that territory.

Only one train a day runs from Newell to Bellefourche, and there are several good towns along the line, as well as Newell, where the train lays but an hour and then comes back. The traveling men must finish up Newell in an hour or lay over there until the next day, so consequently many of them are accustomed to hiring automobiles in an effort to cover the entire line of about forty miles and make all the towns in a day. Others drive from Bellefourche, stay over night at Newell and then drive cross country twenty-three miles to Sturgis.

The automobiles have been charging $10 to take traveling men over to Sturgis. Mr. Bushnell has found that he can take them over profitably with his Harley-Davidson twin and sidecar for $5. And on top of that he has received a lot of advertising which has brought good results.

In Nebraska there are several places where conditions are equally favorable for furnishing motorcycle livery. One of these places is driving from Kenesaw cross country to Shelton, where the traveling men catch the Union Pacific into Kearney, thus making two towns in one day. Motorcycle livery also has been inaugurated in Kansas. The Mealey & Duke Motor Company at Lyons has established a motorcycle livery upon the flat basis of 5 cents a mile, whereas the automobile rates are about 12 cents a mile, and in some places the automobile men base their charge upon how badly they figure the traveling man wants to go.

Effective Demonstration

"There is not a better way that motorcycles can be demonstrated to the public than with motorcycle livery, and it is profitable if worked right," said Mr. Simon. "Traveling men are the biggest boosters in the land, and if 100 of them were to start using motorcycle livery their gossip on the trains and in the hotels of the time they saved by using a motorcycle and sidecar would do a world of good. And bear in mind the fact that when road conditions are not of the best that a motorcycle and sidecar can go through places where it would be impossible for cheap automobiles.

"Let every motorcycle dealer put up a sign in the hotels showing his rates of fare with a nice large picture of his machine and sidecar. This could easily be developed into a regular business and as some of these traveling men run as regular as clock work he could soon establish regular days on which he could make specified trips for regular customers."

ARE YOU READY TO SERVE YOUR FLAG?

If So, You Are Invited to File Your Name and Address With Motor Cycle Illustrated; Honor List of Motorcyclists Who Are Ready Will Be Published

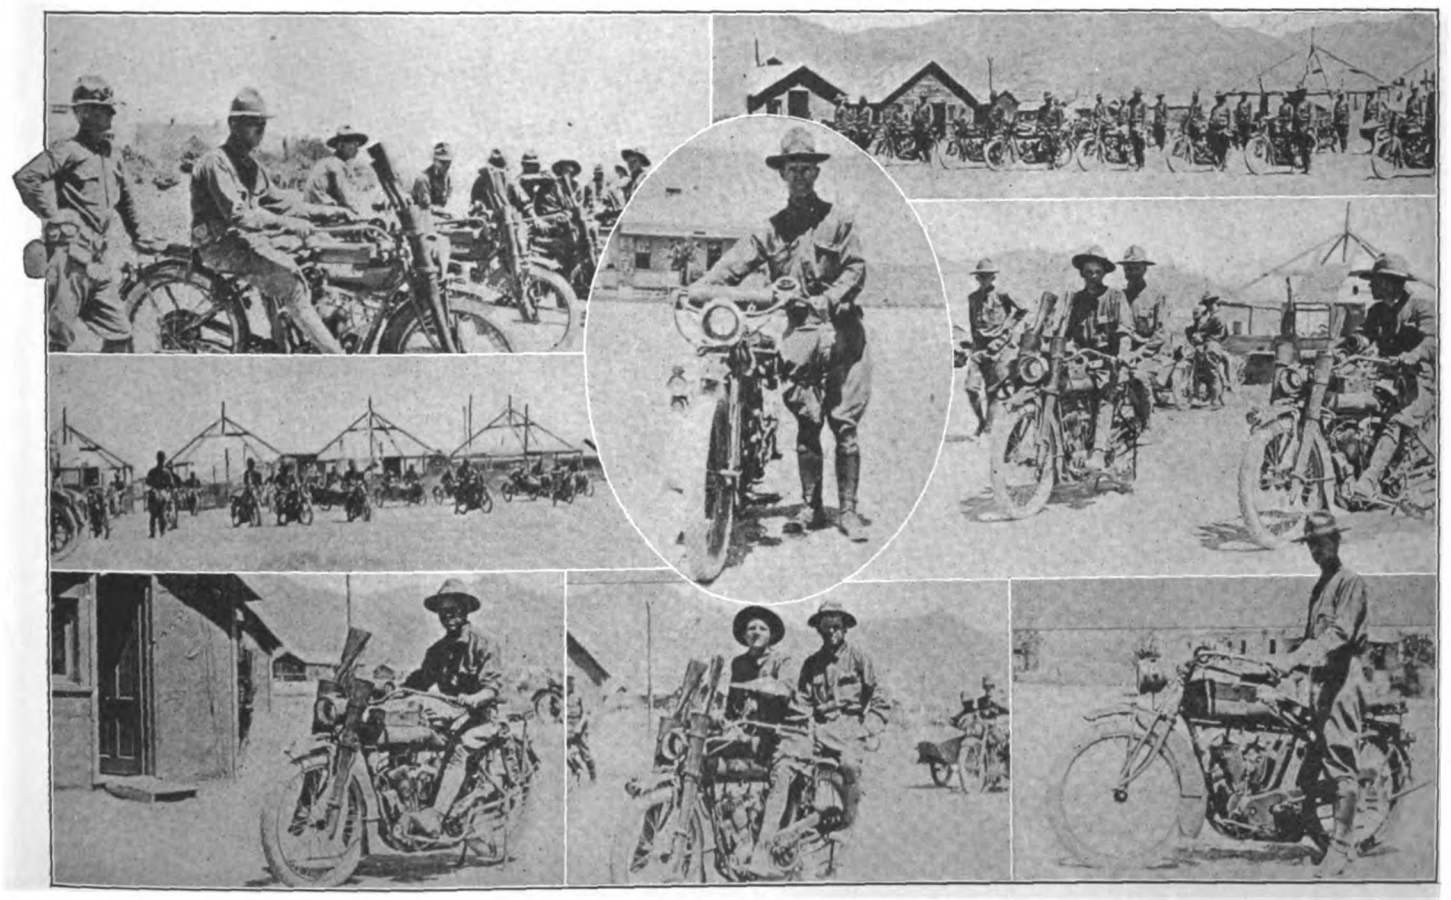
WITH a view of ascertaining for the benefit of army officials just what could be counted upon from motorcyclists in the event of open hostilities with Mexico, and to give riders the country over an opportunity to declare their patriotism, **Motor Cycle Illustrated** will publish in succeeding numbers a list of those who would be willing to serve the flag if called upon in the face of national peril.

The publication of this list will simply mean that those whose names appear own motorcycles and that they would be prepared to place themselves and their machines at the service of the government if the number of motorcyclists already in the army should be insufficient to meet the demands. An opportunity is thus offered for riders to prove that in addition to being good sportsmen, they are true patriots. England's motorcyclists rallied to the colors at the first call and they are beloved of the whole nation today for the spirit they manifested. Motorcyclists of the United States doubtless will be found equally willing to "do their bit."

If a club has been formed to participate in military motorcycle training do not send in merely the name of the organization; send the name of every member. If enough names are filed, they will be arranged according to States,—and new names will be added as they are received. This honor roll will appear in **Motor Cycle Illustrated** as a standing testimonial to the patriotism of the country's riders. and will prove that Uncle Sam has in his motorcyclists a vital force to count upon in an extremity.

All enlistments will be voluntary, of course, and riders who place their names on the list will assume no immediate obligations. It will simply be understood that they are ready and willing to join the colors, **should their country need them.**

SCENES WHICH MAY SOON BE FAMILIAR TO MOBILIZED GUARDSMEN



Military Motorcyclists at Fort Bliss, El Paso, Texas, Ready to March for Invasion of Mexico. National Guard Members Who Have Just Been Called Out by the President May Have to Ride Under Similar Conditions Should the Need Arise. Mr. Martin Stokes, Sales Manager,
Bicycle & Motorcycle Tire Dept.,
United States Tire Co.,
New York City

My dear Sir:

The very least I can say for the "United States Chain Tread" Tires is that they have stood me in good stead over 3000 miles of the worst roads in New Jersey and New York, and enclosed photograph will show they are good for as many more.

In that distance they brought me "Perfect Scores" in the Crotona, the Invincible, the Jamaica and the twenty hour New Jersey Endurance Runs. In short, 1800 miles of the distance lay either in the Endurance Runs themselves or in preparatory trips over the courses of same.

In fact, I am positive they received harder usage than they would be subjected in twice that distance under less severe conditions. In short, I cannot say too much for them, absolutely skid-proof, so far Puncture-proof, and, it seems "Wear Proof" also.

You can be assured that I will use "United States Chain Treads" on my Electric Equipped Power-Plus in the 500 Mile Dixie Endurance Run during August.

Again congratulating you on your splendid product, I remain,

Yours faithfully,

Calvin R. Webber

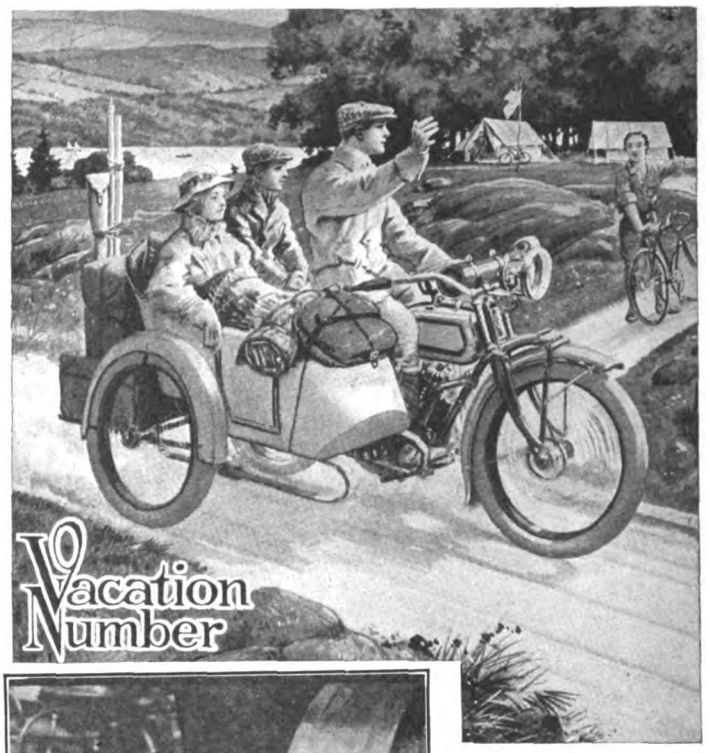
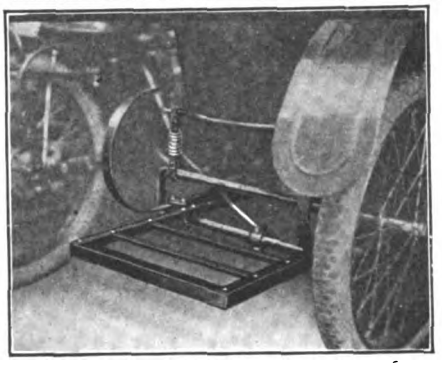
Sidecar Convenience & Comfort

Despite the ingenuity of sidecar manufacturers in bringing their product to a very high standard of perfection, there are certain features in sidecar traveling that have not been provided for. One is the failure to provide sufficient space for extra luggage. The other is the fact that the sidecar passenger is not protected against the "whip" or rebound of sidecar springs on rough roads. We have supplied these important omissions in the BRT Sidecar Luggage Carrier and Safety Shock Absorbers.



B R T Luggage Carrier

Made throughout of angular steel, fastened to the sidecar frame with four strong clips. Carrier is mounted so that the additional weight carried—capacity 150 lbs.—counterbalances the weight of the Sidecar and no additional strain is thrown on the car or motorcycle. Furnished in Black Japan—made in three sizes for Indian, Harley-Davidson and Rogers Sidecars. List price, complete, $2.50.



Safety Shock Absorbers

Counteract the violent rebound which occurs when driving over rough roads or at high speed. Safety Shock Absorbers positively absorb all rebound action and also prevent the sidesway which occurs when car is driven without passenger. Easily attached in a few minutes between body of any car and axle, adjustable to weight of passenger. List Price, $1.00 per set.

FOR THAT TRIP—

Here are four STEVENS necessities that should appeal to the wise tourist. They're all good, sensible, serviceable fitments. Your jobber will be glad to take care of your requirements.

Planning a Bicycle Vacation Tour

By Fred M. Sanborn

In considering the question of a summer vacation tour, the prospective tourist will do well to adopt the slogan "preparedness." In order to get the most out of his trip the rider should first turn his attention to the various details, which, if successfully carried out, will make a pleasant and enjoyable vacation.

First and foremost is the distance to be traveled each day. This should be regulated by the character of the roads to be traversed, whether hilly or otherwise; and the strength of the rider, or, if there is more than one in the party, the ability of the least experienced member.

Ride Without Too Much Exertion

If the country through which the route lays is very hilly or mountainous, fifty or sixty miles a day will be found to be enough. If it is only moderately hilly, about seventy miles can be made without too much exertion, or if it is very flat and level, eighty or ninety miles can be ridden each day. It is not necessary to hurry oneself in order to make this mileage, but if the cyclist gets an early start each morning and just takes his time, riding at a pace of about ten miles per hour, he will find that a surprisingly large amount of ground can be gotten over every day, and that he will have ample time to view the sights along the route and rest up a little during the day too.

Mapping Out the Route

Having settled upon the daily distance desirable to make, the next step is to map out the route from a reliable map, so that the destination of each day's ride will be known in advance and the party will have a schedule to go by. In selecting the route to be followed, it will be found advisable to take the main routes wherever possible, as these are generally well surfaced and afford easy riding, whereas the lesser traveled roads are oftimes very poor. It must be kept in mind that while the less traveled route may possibly be a little more picturesque or shorter, in order to make the trip enjoyable the cyclers must be kept in good physical condition, and nothing will so sap the strength of even a seasoned road rider as several days journey over rough and hilly roads where progress is made only by straining effort.

Taking a "Breathing Spell"

A short halt can be profitably made every fifteen or twenty miles, to give the riders a little "breathing spell," long enough to enable them to get a cooling drink. There is no objection to the cyclist drinking often enough to quench his thirst; but, as in all other things, moderation must be observed.

In making the preliminary arrangements of a bicycle trip it might be noted that another big advantage in following main routes lies in the fact they are easily followed. The riders are not very apt to go astray, and should they do so, there is very little difficulty in being directed back to the main road. In securing directions it is always best to inquire in motorcycle or automobile establishments, as the information thus obtained is generally gained at first hand and is usually accurate, whereas very little dependence can be placed in that given by farmers, for their ideas of distances are often "way off," and their ideas of the differences between a good and a poor road even more so.

Expenses Very Moderate

Another important factor is that of expenses. A good room can usually be gotten almost anywhere from fifty to seventy-five a night, while meals seldom average over thirty-five cents. This is, of course, if the crowd is not looking for any frills or anxious to pick out the very best hotel in the place, but wishes only clean, respectable accommodations and good food.

In view of the easy manner in which good accommodation can be secured at reasonable prices, it has always seemed to me to be far better to travel in this way than to lug along a mass of camping material and camp out each night. When stopping at a hotel or boarding-house there is never any question as to being caught out in bad weather, and should daybreak find the rain pelting down, the hotel is a much pleasanter place to spend the hours of enforced idleness than any camp, however well protected it may be.

Should the party wish to camp out, however, the most important and necessary item of their equipment should be a small folding tent, guaranteed aboslutely waterproof. Make sure of this before you buy it, for it's no joke to awaken and find the wet dripping all over you. A couple of light woolen blankets, one to spread on the ground and one for a cover, would complete the equipment. The camp should, of course, always be made near a stream or spring, as water is absolutely necessary, both for washing and for cooking.

Cooking Meals in Camp

If it is proposed to prepare the meals out-of-doors, a small aluminum pot will be necessary, also a tin plate, knife, fork and spoon for each member of the party. It will be found much more convenient to purchase food at nearby stores than to carry it. Sugar and salt should be carried. The character of the food to be gotten depends upon tastes of the individual riders, but should be plain, substantial

fare. Canned meats, peas, tomatoes, etc., can be easily gotten and prepared. In getting canned goods, don't overlook the good old Boston baked bean, for food value it cannot be surpassed and as a regular diet it is hard to beat. Experience has shown me, however, that a few days of preparing meals out of doors is sufficient to cause the idea to pall.

After several days of long riding there is very little zest in skirmishing around for food, cooking it, washing up dishes, etc. There is no use in trying to dodge the fact—camping out and preparing meals outdoors takes time—and energy. And if

Digitized by Google

the party proposes to camp out, these things must be considered. It is entirely practical to do so, of course, but the fact must be recognized that the trip must be made shorter as the daily mileage is bound to be less.

If the trip is a camping-out one, each rider will need a strong, substantial luggage carrier to put on the rear of his bicycle. The blankets should be tightly rolled and strapped to the handlebars, as the wheel will be found easier to handle with the weight more distributed. If the wheelmen do not camp out, there is no need to carry a luggage carrier, as all they will need to carry will be a coat, a change of linen and a few handkerchiefs, all of which can be made into a compact roll and strapped firmly to the handlebars.

Travel Light

The writer's experience has shown him the desirability of traveling just as light as possible, as it often happens that it is necessary to do some walking, and when it is, every extra pound of weight counts. For the same reason it is suggested that the bundle be placed on the handlebars, where its weight is much more conveniently carried when walking with the wheel, and there is no dead weight hanging on the rear when pedaling.

Should more than one change of linen be found necessary, it can always be purchased at a small cost, so that it does not pay to carry it, the same applying to the shirt. A regular coat is much better than a sweater coat, as the latter is not closely woven, and when worn in the rain does not afford nearly as much protection. The tourists should make sure that their shoes are in good condition, with good soles, for if the latter are too thin the constant pedaling will soon cut through them and give the rider the sensation of riding a bicycle in his bare feet. It is needless to say that the bike trousers should be in perfect condition on the start of the trip, as if the seat of them should give way under the strain of everyday use the result would be embarrassing, to say the least.

Personally, I find that cycling togs, consisting of bike shoes, stockings, khaki trousers and shirt, with a collar attached, combines the maximum of neatness and service. Regarding the equipment of the bicycles themselves, it need be no different from that ordinarily used. The tires should be in good condition, the position should be a comfortable one, without too low a drop on the handlebars; a good coaster brake should be used, and if the country to be traveled is at all hilly, a low gear, preferably a 77, will be found much easier on the rider in a journey of some days duration. For mountainous roads an even lower gear, 62 or 68, would be advisable.

It would also be well to carry an extra tire, if the wheel is equipped with single tube tires, as a light road racing tire adds very little to the weight of the equipment. Those using double tube tires can carry with advantage an extra inner tube, a liberal supply of patching rubber and cement, also some small pieces of heavy rubber or leather to protect the casing should a very bad cut be made in it, the extra piece to be placed over the patch and inside the casing. The user of single tubes should have a goodly supply of cement or jiffy, rubber plugs, rubber bands, plug pliers, rubber band tool, jiffy tool, extra valve (complete) and tire tape.

And Take Talcum Powder, Too

All should carry the regular small monkey wrench, screwdriver, spoke wrench, etc., and extra pedal caps also are needed at times. Last, but not least, do not fail to carry a supply of carbolated vaseline and talcum powder as a preventive against chafing and saddle soreness.

In conclusion, it might be said that in order to avoid arguments possibly arising over routes, detours to places of interest, the pace set, resting up, dinner stops, etc., one member of the party should be chosen as captain for the trip and all should agree in advance that his decision is to be final. He should be the one of the "bunch" having had the most experience and one in whose good judgment and knowledge all can feel the utmost confidence. With the details of the necessary equipment taken care of and the trip carefully mapped out and planned in advance, such a vacation awheel cannot help but be of great benefit to all taking part, in health, strength, knowledge and experience.

QUINE TO TALK AT BUFFALO

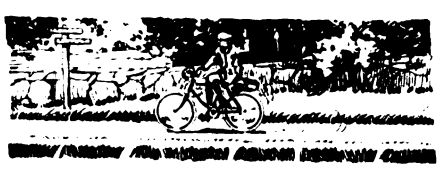
BUFFALO, N. Y. June 21.—Arrangements have been completed by Sales Manager Fred L. Brown, of the Pierce Cycle Co., for H. S. Quine, chairman of the million bicycles committees, to address the members of the Buffalo Rotary Club tomorrow night. The subject will be "The Bicycle."

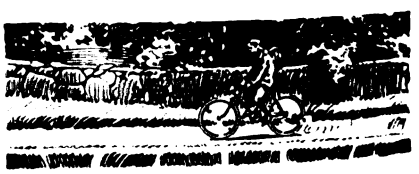
There will be at least 300 members at this meeting, so Mr. Quine will have the opportunity to bring the bicycle before this representative bunch of business men in all its phases. The speaker will tell of the pleasures of the old cycling days and show how the sport has grown to a big conservative industry. He will show that in Buffalo there are about 5,000 persons making a living from the bicycle business and will estimate the total amount of business done in this locality.

The Pierce Cycle Company, which is sponsor for the entertainment feature will give a Pierce bicycle as a special prize in a guessing contest and will have the bicycle on which Frank Kramer won the World's and American Championships on exhibition.

HAZLETON PREPARES PROGRAM

HAZLETON, Pa., June 19.—The Power City Bicycle Club has outlined an interesting card of two-wheeler events which are to be staged in connection with the Independence Day celebration here on July 4. The "piece de resistance" will be a 12-mile endurance run while an Australian pursuit which is also on the program promises some keen sport. The card will will be filled out by several shorter sprint events.





Digitized by Google

Cycling Togs For Comfort

WHY not take those vacation trips in *real* comfort. Ordinary street clothes, as every rider knows, are hardly calculated to afford easy and free riding. The cyclist, like the golfer and other sportsmen, must have the kind of togs that will give him absolute freedom of motion; that will **enable him to enjoy the "best sport ever" to the fullest extent. One rarely sees cyclists nowadays dressed in the regulation togs; but it is safe to say that since the bicycle has intrenched itself—permanently this time—in the hearts of so many, appropriate costumes will soon be more in evidence. For that reason Mr. Farwell's story is certainly timely and well worth reading.**

By W. T. Farwell, Jr.

THAT too many cyclists apparently consider any old thing good enough for a riding costume is evidenced by the number of ill-assorted and nondescript outfits which we see on the roads and streets these days. Baggy and greasy trousers, with the bottoms tied or left to flap in the wind; loud-striped sweaters; shirts innocent of collars and any old hat will not induce the public nor any other road user to look upon the cyclist with any degree of respect.

We are judged by our appearances, and while we are supposed to be the most democratic of all people, we are possessed of an underlying strain of snobbishness. I will illustrate this by mentioning the fact that the owner of a "flivver" feels far superior to the citizen who elects to ride that most democratic of vehicles—the bicycle.

Presenting Pleasing Appearance

Now, its up to us to overcome this prejudice and to create enthusiasm in prospective riders. It is necessary that cyclists present a pleasing, or at least inoffensive, appearance, as a first step in this direction.

Not the least of the benefits of appropriate clothing for the cyclist is the gain in personal comfort. It was long ago demonstrated that knickerbockers gave vastly more freedom and comfort in riding than the regulation long trousers. In the old days, every large clothier maintained a cycle clothing department, but since the collapse of cycling as a fad, suitable bicycle knickers and clothing have been difficult to procure. Department stores handle golf knickerbocker suits, but these are unnecessarily high-priced and not exactly suitable for cycling.

Getting the Clothing

No doubt there are thousands of riders willing and anxious to procure cycle clothing if they knew where it could be purchased at a reasonable price. In all New York City, the writer has found but one clothing house—Raymond & Co., Fulton and Nassau streets—that caters to this class of trade. The manager of the sporting department of this house, stated that in the boom days, the firm made a specialty of cycling garments but like everyone else, dropped it when the demand fell off. But within the past year, he said, so numerous have been the calls for bicycle knickers that they were forced to make up a special line of these goods.

Different Styles of "Knickers"

The cut of cycling knickerbockers is practically the same as it was in the '90s. There are two different styles; those most generally worn are cut after the golf patterns, but with less fullness and are fastened just below the knee. The other style is made with a cuff from four to six inches deep which buttons with four or five small buttons fitting the leg snugly just below the knee. The stockings are ribbed over at the top, allowing part of the calf to show.

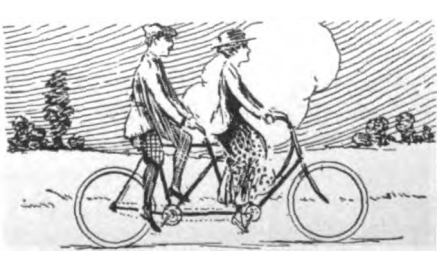
Like everything else, the price of clothing has gone up. Knickerbockers range from $3 to $5 the pair, which is, however, no more than the cost of long trousers.

Coat and Shirt

Almost any coat of a darker material than the knickers can be worn, but a Norfolk or sport coat is more suitable. A flannel negligee shirt generally looks better than a jersey or sweater. If, however, either of the latter are preferred, let them be of some quiet colors. Stockings of dark gray or brown and of heavy ribbed wool look best in the long run. Black ones show the dust quickly, but otherwise are suitable. Good stockings are rather expensive, but it pays to get them good, as they wear a long time.

As to underwear, it must be remembered that cycling is an athletic exercise which naturally causes some perspiration. For that reason, underwear of some absorbent material should be worn. Balbriggan is suitable, although light wool is best, but too warm for most cyclists.

In dress for ladies, nothing better need be looked for than the ordinary full sport shirt, worn with a sweater, Norfolk jacket or blazer.



N. C. W. ON ANNUAL RUN TO SONOMA

SAN FRANCISCO, Cal., June 19.—The New Century Wheelmen ran off their annual club run to Sonoma last Sunday, leaving on the steamboat via Sausalito. They rode through San Rafael, Schellville, and into their destination, where they sat down to lunch at the El Dorado Hotel. After lunch the fellows enjoyed a swim at Bays Hot Springs, two miles out from Sonoma. Here, too, they feasted on big red cherries and then started the homeward journey, reaching Frisco at 8:30 in the evening.

Eighteen cyclists were in the run: Capt. W. Hammitt, Geo Drury, W. Penaluna, E. A. Dyre, E. Castillo, M. Castillo, A. Sangalli, H. Spence, W. Bellzer, A. Mooney, A. Page, H. Lunardini, M. Valentine, R. Welch, W. Rhodes, R. Mascot, Chick Spence, J. Stalker and H. De Brie.

THIRD CYCLE PLATOON FORMING

VANCOUVER, B. C., June 20.—Another platoon of thirty cyclists is being recruited in British Columbia, destined for service on the European battlefront as despatch riders and messengers. Lieut. Machin, of Victoria, has charge of the enrolments. Ten riders will be recruited from Vancouver. Already two cycle platoons from the Pacific province are giving admirable service overseas.

DUNLOP RACE JULY 8

TORONTO, Ontario, June 12.—Announcement has been made that the annual Dunlop Trophy Bicycle Team Handicap Road Race will be held on Saturday, July 8, on a fifteen-mile course on the Danforth road, near Toronto.

IT'S THE BIKE THAT PUTS THE PUNCH IN A VACATION

DEAR Mother:

Just look at this picture and then imagine the good time we are having here. The country for miles and miles around here offers numerous other picturesque and varied settings in every way comparable with this one, and we are taking them in on our little cycling journeys into the woods each day.

My, how glad each of us is to think that we had the forethought this year to bring our wheels with us. How much they have increased our enjoyment—how they have broadened our radius of travel. In the one short week we have been here this year we have, thanks to the bicycle, seen and done more than we did for the full month last year. No more sitting idly on the porch for want of something better to do! No longer are we fatigued by long tramps to the swimming hole and tennis courts. We are up and doing every minute. We get here, there and everywhere with no trouble and in no time and we are having the fun of our lives.

Such a keen edge of enjoyment has the cycle put on our trip that each of us, individually and collectively, has sworn that no matter where we go on vacations to come, and no matter what time of the year we start, the bicycle will be one of the most important if not the most important item of our equipment.

Lovingly yours,

ELEANOR.

VACATION HILLS, VERMONT.

PLANS SHAPING FOR C. R. C. A. CARNIVAL-RUN

Many Prizes Will Be Offered for the Seven Events That Are to Feature the Carnival on August 6

NEW YORK, N. Y., June 21.—Announcements are now being sent out by the Century Road Club Association of the annual pleasure run and carnival of sports which will be staged under the auspices of the New York Division on Sunday, August 6. The run pulls cut from Columbus Circle at nine o'clock in the morning. There will be a decorated bicycle section, and a valuable prize will be awarded to the club making the best showing.

Races Over the Pelham Parkway

The course of the ride will take the cyclists up over the Grand Concourse and Boulevard in the Bronx and across Pelham Parkway, where the Acme Wheelmen race was held last Sunday. Over the Parkway the seven carnival events will be held. These consist of a three-mile bicycle handicap race, a one-mile, one-half-mile novelty, one quarter-mile "record," and slow bicycle race, as well as a hundred yard dash and a one-half mile foot race. For the three-mile bicycle feature there will be ten prizes and for each of the other events five prizes will be hung up. The full list of awards will be announced later.

Entry Fee Is Fifty Cents

Entry blanks can be secured from Thomas F. Lockhart, 948 Second Avenue, New York. The fee for the pleasure run is fifty cents, this including all carnival events but the one quarter, one and three-mile bicycle races, for which an additional fee of fifty cents is asked.

Carnivals Are Popular

The annual run and carnival of the C. R. C. A. has proved to be a great success in the past and the management this year promises that every effort will be made to exceed the fine record established in previous seasons. Mr. Lockhart is ready to give riders any further information they may desire.

WILL TAKE 502-MILE VACATION TRIP

SAN FRANCISCO, Cal., June 19.—George Drury and Harry Spence, of the New Century Wheelmen, plan to spend a two weeks' vacation pedaling to Los Angeles and return. The two boys will leave here on July 9, and follow the valley route through Oakland, Merced, Fresno and Bakersfield and over the Tehatchapi Mountains. The route is very rich in beautiful scenery and is said to cover a distance of 502 miles. If time permits, the pair will cross the border into Mexico.

SALT LAKE CITY COPS RIDE PIERCE BICYCLES

SALT LAKE CITY, Utah.—The "bike" squad of the Salt Lake City police department are now going after speeders and other law-breakers on new Pierce bicycles. The officers presented a fine appearance on their mounts at the first inspection.

Arrangements have been made by druggists in the residence districts so that persons living in these localities can call the nearest druggist if they need a policeman.

IN THE SUBURB OF ANYTOWN.—If you hopped into this interesting sketch you'd certainly be astonished at the great variety of sports which are being keenly enjoyed by this army of cyclists. Just pause a moment before you cross the bridge. Down on the bank is a fellow fishing, and on the other side three lads are diving into the cool river. Now crossing the bridge, you encounter plenty of cyclists out for an exhilarating spin; while on the left lawn some are playing tennis and golf, and at your right are a husky party of campers. Then suddenly you hear the air filled with shouts of excitement, for up the road there's a baseball game in progress, and further on a crowd of youngsters are staging a thrilling bicycle race. Fine variety, eh? You can bet those cyclists are having a dandy time; and it's the bicycle that's bringing the big crowd out to nature's playground and away from stuffy old Anytown!

TRIPLE TIE FOR HONORS IN CRESCENT SERIES

BALTIMORE, Md., June 19.—By winning the second race in the Crescent Bicycle Club championship series, Wm. H. McAvoy went into a triple-tie for first place with Fred. M. Sanborn and Walter V. Iglehart, each of the three having scored eight points in the two races. Sanborn and Iglehart finished second and third respectively in Sunday's race, the winners time for the ten miles being 29 minutes 50 seconds.

The riders got away well bunched at the start, but soon strung out and the finish of the first lap found McAvoy, Sanborn and Iglehart riding together as a team, considerably in the lead of the balance of the field, none of whom were able to cut down their lead during the remaining five miles. Three-quarters of a mile from the finish Sanborn tried to "jump" his companions, but they were on the alert and brought him back, McAvoy crossing the tape first in the final sprint, with Sanborn and Iglehart trailing him. Langdon M. Sanborn finished fourth and Walter Doersch followed.

Plans for the Crescents' open handicap road race, to be held on the 4th of July, are rapidly assuming shape, the assistance in securing prizes of the "Million Bicycles Committee" having already been promised them, and with such an organization behind the Crescent, the prize list is bound to be a liberal one and the entry list should be proportionately large, judging from the amount of interest being taken in the affair by the local riders.

CLUB RUN TO BEACH

SAN FRANCISCO, Cal., June 19.—Frank Carroll, who was chairman of the recent Bicycle Day Celebration, proposes to hold an open club run. The riders will start in front of the Goodyear branch here and push to the beach, where refreshments will be ready for them and a few short races will be staged.

COMMERCIAL CYCLE PRICES AGAIN ADVANCED

CHICAGO, June 19.—The increasing cost of both materials and labor that enter into bicycle construction and which some time ago resulted in a slight advance in the price of Commercial bicycles, which are the product of Jones & Noyes, 227 West Austin avenue, have again resulted in a slight advance in commercial prices. The advance amounts to only $1.50 to the dealer and then $2.50 to the retail purchaser. The Commercial bicycle is selling now at $45 retail as against $42.50 the former list price.

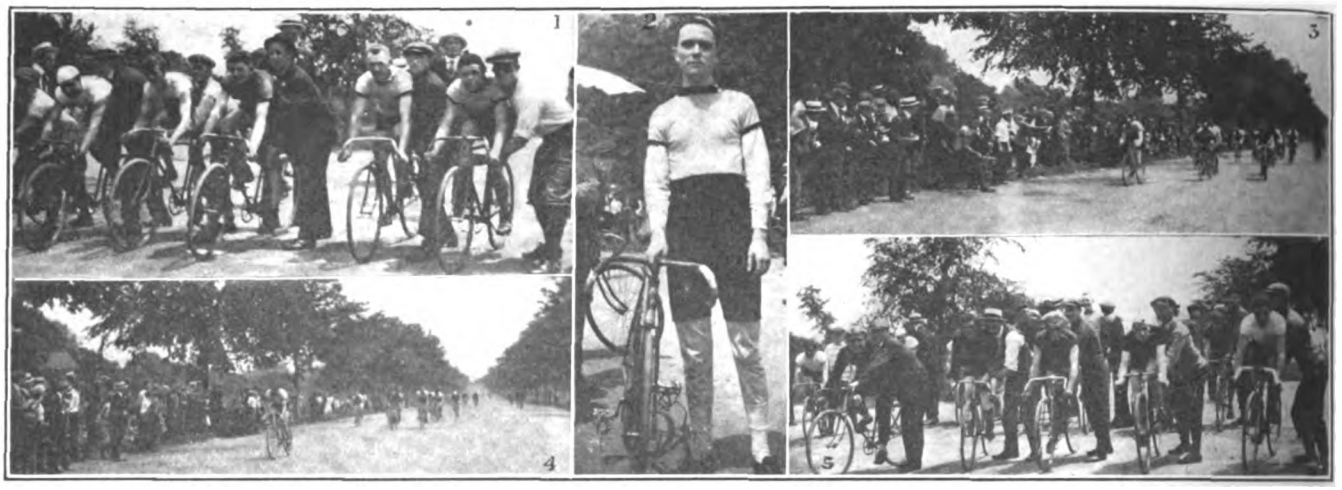
100 CYCLISTS IN BRONX COUNTY CLASSIC

Ten-Mile Race Staged by Acme Wheelmen of New York Last Sunday Captured by Frank Small; First Time Prize Awarded to Nelson Johnson, of the Unione Sportiva Italiana



1—Scratch Lining Up, Left to Right, Desimone, Johnson, Aickelin, Woisin and Reinecke. 2—Frank Small, the Winner. 3—Finish of Race. 4—Scratch Men Fighting for Tape. 5—The 1 Minute Men

NEW YORK, N. Y., June 20.—More than one hundred riders shot from the start in the Bronx County Cycle Classic of the Acme Wheelmen, when Harry Smith, of the Bronx Church House, fired the gun that set in motion the ten-mile battle of sprints over the Pelham Parkway last Sunday morning. The limit men with an allowance of ten minutes jumped from the line at 10:50, and at intervals of thirty seconds the other mark men were on their way, down to the seven scratch men, Jensen, Woisin, Reinecke, Johnson, Nunziatti, Desimone and Aickelin.

In the first lap the 2:30 riders caught the limit men, except Bill Jones, of the New England Wheelmen, who rode alone out in front for nine miles. Unpaced riding, however, proved too much for his strength and he was passed in the last mile, managing to secure, though, the fifteenth position.

Fight for Position

Turning into the last lap, a field of twenty-five riders started a stiff fight for positions, but upon approaching a hill during the last half mile ten men were shaken off. Down the stretch two Acme men appeared in the lead, the first being Frank Small, who with a grin 'most as broad as the road, whisked across the tape the victor. His time was 27:39, having started from the 3:30 mark.

More than two minutes later the scratch men came over the tape, led by Nelson Johnson, of the Unione Sportiva Italiana.

The cup for the largest number of starters went to the Italian organization. The Acme Wheelmen tied with the U. S. I. for the team trophy, each having 37 points. The summaries:

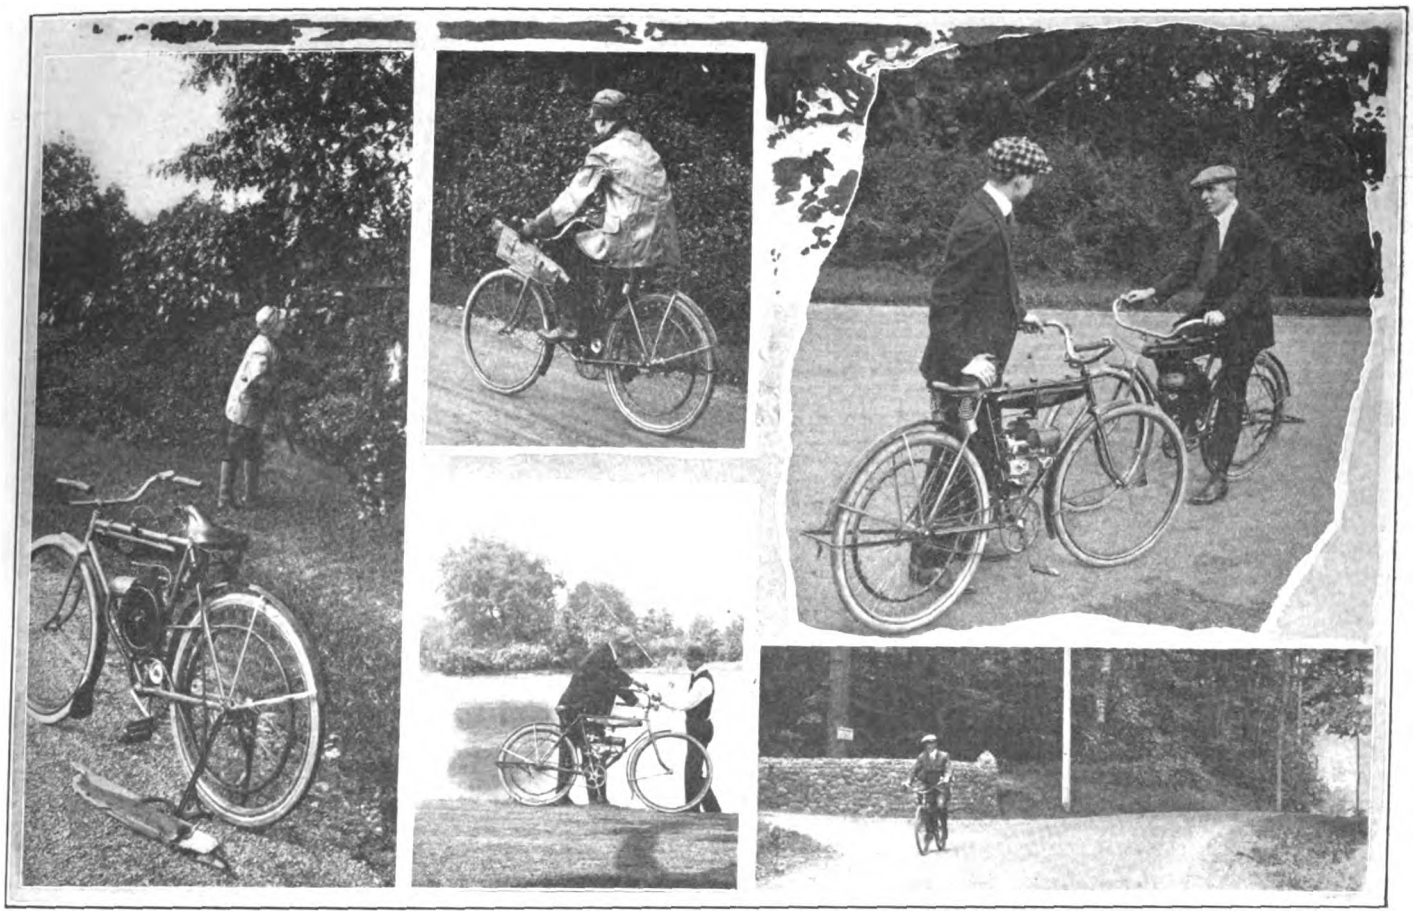
GLIMPSES OF CYCLEMOTORISTS OFF ON A VACATION TRIP



KRAMER HAS TIGHT GRIP ON CHAMPIONSHIP

With Only Three More Title Races to Be Run Off, Frank Rolls Up 15 Points by Winning Sunday's Race; Will Spencer Again Victorious in Amateur Ranks

NEWARK, N. J., June 18.—Frank Kramer practically cinched the national bike championship for the sixteenth consecutive time when he won the half mile championship race at the local Velodrome on Sunday afternoon. Kramer now has a total of fifteen points while Alf Grenda, who ranks second, has gathered but six points. There are only three more races to be run to decide the title and judging by the form Kramer is displaying at the present time, it would not be surprising to see him take all three.

Grenda Loses by Six Inches

Grenda gave Kramer a great little battle for first place in Sunday's race and was only beaten out at the tape by about six inches. Kramer coming from behind uncorked one of his famous jumps in the last yard of the race and just nipped Grenda at the finish mark. In the heat to decide third and fourth places, Marcel Dupuy, the French rider, created quite a surprise by beating out Alfred Goullet.

Kramer got into the final by beating Bob Spears in the semi-final and Alf. Goullet in the grand semi-final. Against Spears, Kramer rode from in front from the crack of the gun. On the back stretch of the last lap, Spears drew up along side of the champion but was not able to pass him. He trailed Kramer to the tape and at the finish was a half length behind the East Orange marvel.

Beats Goullet by a Length

In the grand semi-final Kramer rode Goullet from the rear, trailed him until the last lap and on the last turn drew up on almost even terms with the blond Australian. In the home stretch Kramer outsprinted Goullet and won by a length.

Dupuy in defeating Goullet for third place jumped into the lead as soon as the bell rang announcing the last lap. He caught Goullet napping and remained in front right to the finish. Goullet tried hard to overtake the fleeing Frenchman, but was a half length in the rear at the finish.

Art Spencer Defeated by Cavanagh

Frank Cavanagh defeated Arthur Spencer, of Toronto, in the Brassard race at one mile. Cavanagh was too strong for the Toronto youth and Spencer was beaten by a length. In the miss and out race for the professionals, Jake Magin just slipped over the finish line ahead of Willie Hanley. John Bedell was third, Eddie Root fourth and George Cameron fifth.

The one-mile repechage handicap for the professionals was copped by Ray Eaton, who had a handicap of 120 yards. The handicaps were far too great for the back markers and none of them figured in the money. Ernest Ohrt, who started from the 150-yard mark, was second, and Tommy Grimm, with an allowance of 130 yards, finished third.

Two-Mile Tandem Race

Reggie McNamara and Bob Spears won the two-mile tandem race for the professionals. Alf. Goullett and Alf. Grenda finished second, but were disqualified for taking the pole from the inside and second place was given to Iver Lawson and Willie Hanley. Jake Magin and Percy Lawrence got third place.

William Spencer, of Toronto, captured the feature amateur race on the card by beating out Eddie Carroll, of Oakland, Cal., in an Australian pursuit race. Spencer caught Carroll after riding four miles five and one quarter laps. The time was 11 minutes 14 3/5 seconds. The summaries:

Half-mile novice (amateur) won by Alfred Nannen, Carteret; A. F. Staehle, Newark, second. Time 1:08⅘.

Half-mile handicap (amateur) won by Roy Litvany, Newark (15 yards); Thomas Fitzsimmons, East Orange (30 yards), second; Wm. Purdue, East Orange (75 yards); Marcel Burger, Olympic Club, San Francisco (55 yards), fourth. Time 0:56.

The Brassard at one mile. Frank Cavanagh,

TOURS ARE LAID OUT FOR N. Y. CONVENTION

Contingents Will Start From Buffalo, Boston, Harrisburg and Washington for State F. A. M. Meet, July 2-4—Elimination Trials To Be Held July 3

NEW YORK, June 19.—Further plans for the New York State F. A. M. convention, with its star racing program, have been developed by the Speedway M. C., which has charge of the tours to the meeting and also of the race program. The following tours have been planned, but while the presence of riders is desired, there is no compunction regarding joining. Everyone should, however, be in New York before 10 a. m. on July 3.

Riders coming from Buffalo and upper New York State, as well as from the Middle West, will start from Buffalo at 5 p. m. on July 1, Saturday, and ride to Geneva, 104 miles, making a night stop at this city. The start will be made from Geneva at 8 a. m. on Sunday, July 2, in order to give time for Rochester riders to join (time of leaving Rochester 5 a. m.). The run will continue through Auburn and Syracuse to Utica, noon stop. After lunch the run will continue to Albany via Schenectady, arriving about 4 p. m. Those who desire to take the Albany Night Line boat to New York will have ample time to take passage.

Riding From Albany

Those who desire to ride in to New York will pass on through Hudson to Poughkeepsie, arriving at the latter place at 7 p. m. for dinner. They will then continue on to Yonkers and New York City, arriving around midnight. Commissioner George Ellis will meet this tour at Yonkers. This tour will be under the direction of the Buffalo M. C.. Those who desire to join the tour at intermediate points should apply to their dealer for information.

A second tour will start at Elmira at 9 a. m. on July 2 and pass through Oswego, stopping at Binghamton for lunch (12 to 1) and then continuing through Afton, Franklin, Delhi and Shokan to Kingston, night stop. On July 3, at 5 a. m., the run will continue through Napanock, Middletown, Tuxedo, Hackensack and Edgewater, then through New York to the Speedway, in time for the preliminary try-outs on Monday afternoon.

New England Tour

The tour from New England will be under the leadership of Jes Campbell, of Boston, and will start from that city at 7 a. m. on July 2, passing through Providence, Westerly and New London (noon stop), Saybrook, East River to New Haven. A 30-minute halt will be made in New Haven for the Worcester and Springfield crowd to join them. The run will then continue to Bridgeport, Westport and Noroton, through Rye, Pelham to New York, arriving at 8 p. m.

The Springfield contingent will leave from the Hendee factory at noon on July 2 and join the Boston-Providence run at New Haven. It will be under charge of an Indian factory man or of G. N. Holden. The combined tour will be met at New York by a member of the Speedway M. C.

From Washington

A tour will be started from Washington, D. C., under charge of the National Capital M. C., at 6 a. m. on July 2. It will lead through Elkridge to Baltimore, Perryville and Wilmington to Philadelphia, the noon stop (1 to 2 p. m.). A tour will also be started from Harrisburg at 7 a. m., leading through Lancaster, Coatesville and Wayne to Philadelphia, where it will join with the Washington contingent. This tour will be in charge of Keystone M. C. of Harrisburg. The combined tour will then continue to Newark, N. J., where they will be met by Commissioner Elliott B. Holton, and rest overnight. In the morning, Holton will conduct the riders to New York and over to the Sheepshead Bay track.

All but the riders under Commissioner Holton will assemble at Columbus Circle, New York, about noon, on July 3, and proceed in a body to the Speedway, under local guides, arriving in time for the elimination trials. These will be held on Tuesday afternoon. The Speedway M. C. calls attention to the fact that no rider will be allowed to compete on July 4, unless he has passed his elimination trial on July 3. All riders will be admitted free to these trials. The price on July 4 will be 25 cents admission, with grand stand seats 50 cents and reserved box seats $1. Parking for motorcycles is free.

Coney Island Trip

It is planned to spend the evening of July 3 at Coney Island, and guides will be furnished to such riders as desire to go to that famous resort, only a short distance away from the Speedway. Attention is called to the fact that entries close on June 24. Each rider entered will be supplied with a contestant's badge, which will permit him to practice on the track after June 24, with the exception of July 1 and 3. On the first date an automobile race is to be held.

Secretary Irving Barnard, of 15 Warren street, New York, has received entries from the Indian and Henderson factories, and a considerable number of riders on their own account. It is expected that some fast Excelsiors and Harley-Davidsons will also compete.

Several clubs have notified that they will attend in a body, among them being the Crotona M. C., of the Bronx, which has reserved 60 box seats in one line.

Newark vs. Arthur Spencer, Toronto, Canada. Won by Cavanagh. Time 2:57⅘.

Half-mile National Championship (professional) won by Frank L. Kramer, East Orange; Alfred Grenda, Australia, second; Marcel Dupuy, France, third; Alfred Goullet, Australia, fourth. Time 1:28. Last eighth mile 0:12⅘. Present standing: Kramer, 15 points; Grenda, 6 points; Spears, 4 points; McNamara, 3 points; Dupuy, 3 points; Goullet, 2 points; Egg, 1 point.

Miss and Out Invitation (professional). Won by Jacob Magin, Newark; William Hanley, San Francisco, second; John Bedell, Lynnbrook, L. I., third; E. F. Root, Boston, fourth; George C. Cameron, N. Y., fifth. Time 4:41⅘. Distance 2 miles 1 lap.

Two mile open (amateur) won by John L. Staehle, Newark; Arthur Farnow, Salt Lake City, second; August Lang, Irvington, third; William Weimar, Newark, fourth. Time 5:00⅘.

One mile Repechage Handicap (professional) won by Raymond Eaton, Newark (120 yards); Ernest Ohrt, San Francisco (150 yards), second; Thomas Grimm, Irvington (130 yards), third; Floyd Krebs, Newark (140 yards), fourth; Frank Corry, Australia (90 yards), fifth. Time 1:47⅘.

Australian Pursuit Match Race (amateur). William Spencer, Toronto, Canada vs. E. J. Carroll, Oakland, California. Won by Spencer. Time 11:14⅘. Distance 4 miles 5¼ laps.

Two mile tanden, open (professional) won by Reginald McNamara, Australia, and Robert E. Spears, Australia; Alfred Goullet, Australia, and Alfred Grenda, Australia, second; Iver Lawson, Salt Lake City, and William Hanley, San Francisco, third; Jacob Magin, Newark, and Percy Lawrence, San Francisco, fourth; Joseph A. Fogler, Brooklyn, and Edward F. Root, Boston, fifth; Edward Madden, Newark, and Lloyd Thomas, Salt Lake City, sixth. Time 3:47⅘. Goullet and Grenda disqualified for taking pole from inside.

EIGHT RIDERS FINISH 64-MILE ABERDEEN RACE

ABERDEEN, Wash., June 20.—Two riders tied for first place in the recent Aberdeen to Pacific Beach bicycle race, held under the auspices of the Aberdeen Bicycle Club. These were Sam Lovell and Walter Churchill. Eight of the 14 riders finished the 32-mile course and pedaled back to Aberdeen Sunday night covering the full 64 miles during the day. C. F. Doll won third place and Frank Grinrod fourth place. The two leaders entered the beach resort five or ten minutes ahead of their competitors.

CANADIAN MILITARY CYCLISTS STAGE RACEMEET

TORONTO, Ont.—The military authorities staged a number of bicycle races, along with other events, on the Exhibition half-mile track on Saturday afternoon, June 17, before ten thousand people. An entirely new bicycle feature was a two-mile event for members of the Divisional Cyclist Corps. Twenty-five soldier-cyclists turned out in full uniform and with heavy military wheels for the contest which was won by Private McClenahan with Private Brouse second.

The one-mile open rate was captured by Harry Martin, Salem Bicycle Club, who outsprinted the field in a fine finish. Private George Watson, 123rd Battalion, former Canadian Olympic star, was second, and R. Goldsmith, Salem Club, finished third. Time 2.43 1/5.

Harry Martin repeated in the half-mile sprint with Goldsmith and Watson trailing in the order named. The time of this race was 1.21.

ST. ONGE SIGNS NEW AGENT

CALGARY, Alberta, June 20.—The Alberta Motor Wheel Company has been organized at Calgary for the purpose of representing the Smith Motor Wheel interests throughout the Province of Alberta. The headquarters of the company are located at 238 Eighth avenue, East. Henri St. Onge, traveling representative for the Smith "booster," recently visited Calgary on a tour of the entire Canadian West.

Mott Steel Rims

Mott Steel Bicycle Rims increase the pleasure of bicycle riding because they are the only kind of rims that cannot give trouble.

These Mott Rims are made of the best grade steel and on this account cannot warp, split or crack like the rims of other materials.

Mott Steel Bicycle Rims are light in weight, cost no more than others—easy on tires—and will positively last longer under the hardest kind of service. Both clincher and cement types. Enamelled to match any usual bicycle colors.

For all kinds of pleasure riding—Mott Rims should be on every bicycle.

This Summer Be Biggest Tire Season

Rollfast

TRADE MARK

-made to last

Your tire selling success for this summer is assured when you get the ROLLFAST Exclusive selling agency. The ROLLFAST line of high-grade bicycle tires is positively the *best tire selling proposition.* Why?

Because, first, the ROLLFAST trademark means that nothing but high-quality materials enter into the construction of these tires. The purest of Sea Island cotton fabric, the finest of Para rubber—PURE rubber—all built to motorcycle strength and density.

Because, secondly, the EXCLUSIVE AGENCY practically makes them YOUR tires—no one else can handle them in your town. This means a long start on all the other dealers—because bike riders MUST come to you for the best in tires — AND YOU WILL MAKE FRIENDS.

Write to the men on the list shown here. They are the largest and most representative jobbers in the country—and you can get the agency from them—if it is still to be gotten.

In the Dealer's Realm

KANSAS CITY, MO.

PRACTICALLY all the motorcycle agencies in this city are reporting a mighty nice business this Spring and the proprietors declare that a great deal of interest is centered in the lightweight models. All the various representatives are anxious to get more of the little fellows, but are handicapped by the factories not being able to meet their demands.

Charles Hanson, Wigwam man, says that his lightweight business has been excellent. He hesitates to make a guess at the figure it would reach if he was not having such difficulty in keeping a demonstrator on the floor.

W. Bell, handling the Pope, says: "I have been selling a lot of the Baby Popes, but in a number of cases I have had to substitute the big machines in a lightweight sale."

Fred Ames, representing the Emblem, says: "The lightweight business will most likely double that of the heavyweight in my establishment next season, according to the amount of interest being displayed in them at the present time. However, it is only possible to sell the small number of lightweights that are allotted me this season and not to worry about the demands."

YONKERS, N. Y.

EDWARD MITCHELL, handling the Harley-Davidson in this city, has sold one electrically equipped 16-J, one sidecar combination and one van outfit to the Fisk Tire Service Co. The purchaser of the solo machine was Tom Moore, the motion picture star.

ALTOONA, PA.

JOSEPH WOLF, local representative of the Harley-Davidson, has disposed of his entire stock of supplies and accessories to Earl Fasick and Joseph Sheaffer. He is retiring from the motorcycle business. Woli started in motorcycle line about seven years ago on a small scale, but his geniality and strict attention to his affairs built up his trade to such an extent that he became the leading dealer in Altoona.

The new firm will be known as Fasick & Sheaffer, who will continue the agency for the Harley-Davidson, besides having an up-to-date repair shop.

GLOVERSVILLE, N. Y.

MAYNARD W. LOFT, handling the Indian in this city, is now at the Indian factory in Springfield, Mass. with Rudolph Gunsel, also of this city. They left on June 18, via Albany, Lebanon Mountain and Jacob's Ladder. Loft and Gunsel will make a thorough inspection of the Hendee plants and then go to Worcester and return home, covering 700 to 800 miles in all.

WEST HOBOKEN, N. J.

E. P. GUENTHER has taken the agency for the Reading Standard for this city and vicinity for the 1916 season.

MEMPHIS, TENN.

JOHNSON & MEYER COMPANY, well known as sporting dealers in this section, have taken the agency for the Yale from the Davis Sewing Machine Co., of Dayton, O. The firm will have distributing rights for the western part of Tennessee.

BUTLER, PA.

H. R. WALTER, handling the Indian in this city, has just returned from a trip to the Indian factory in Springfield, Mass. He says that Indian sales are going nicely with him.

WHAT THE CAMPING CYCLIST NEEDS

(Continued from page 27)

starting of course with small pieces. This is peculiarly the motorcyclist's way of starting a fire, as they all have—or should have—a primer gun in the tank so that the matter of getting the gasoline is easy.

Regarding the manner of carrying the food staples, the cereal, flour and sugar are best carried in paraffined food bags, butter and bacon in friction-top tin cans, and salt, tea, etc., in cardboard provision cases. All of these containers can be bought at sporting goods houses.

Iodine Is Valuable

No comments concerning toilet articles are necessary, but everyone does not know that tr. iodine is the best known germicide for cuts or abrasions of the skin. It will smart, of course, but this is surely better than lock-jaw or blood poison. It is best applied with a camel's hair brush, and in the case of an abrasion should be followed by dusting with the stearate of zinc. The wound should then be covered with antiseptic gauze, which is fastened in place with adhesive tape. This treatment, besides affording immediate comfort, insures against infection and causes the wound to heal much more quickly. This is not camping, but in event of a spill and scratched hands it is worth knowing.

In passing, let me add that adhesive plaster is a dandy thing to have around a motorcycle, much better than electrician's tape for the same purposes, and in addition makes a good emergency repair for punctures or small cuts in the inner tube of a tire. The tube should be *thoroughly* cleaned with gasoline and a large piece of the plaster pressed on *firmly;* and it helps to put a second patch over the first.

First under the heading of general equipment is the tent. The one selected was of the "tarp" variety and proved so satisfactory that I would not consider any other kind for the purpose. This tent is simply a rectangle of waterproofed cloth and can be pitched in a variety of forms, the most serviceable of which is the semi-pyramid, requiring one pole, cut anywhere, and six pegs.

My sleeping outfit consists of two army blankets and a poncho of pantasote, which is as waterproof as rubber and wears better. The poncho, by the way, is a most useful article of camp equipment, as it can be used as a raincoat, a ground cloth for use under the blankets, a cover for the motorcycle, or anything else you want to keep dry, or even as an auxiliary lean-to tent in an emergency. With the latter contingency in mind it is well to risk having your poncho too large rather than too small.

Other Conveniences

The water bucket and wash basin, while not necessities, are a great convenience and may be of either waterproofed canvas or rubber, the latter being lighter and more compact but more expensive.

For camp illumination the Stonebridge folding candle lamp is the best and may be had in either tin, sheet-iron or aluminum.

A camp stove is of course not a necessity, but the Stuart "stove" (commonly known as a "cooking jack") is so cheap, light and convenient that it does not pay to be without one. They cost $1.00 at sporting goods stores and are well worth it. And when you are getting the "stove" do not forget a *screw top* hard rubber match box. It is irritating enough to be unable to find dry wood for your fire, but wet matches are the limit. The mechanical fire-lighter holds no appeal for me.

The finding of a satisfactory mess-kit was rather a difficult job, as all of the "made up" ones I have been able to find have faults, chiefly in the matter of "nesting." My own kit was selected piecemeal from various sporting goods and tin-ware stores, with the result that the five articles on the list nest so perfectly that there is not even a "rattle."

Trenching Tool and Canteen

The trenching tool and canteen were bought from a dealer in second-hand army and navy supplies. Although the former is not a necessity, it is a very handy tool around a camp. As the name indicates, this tool was designed for digging operations, but it may be made to serve for chopping also by sharpening one of the sides.

The cheesecloth is to keep out the mosquitoes when the tent fly is open at night, and I found that a piece about 6 x 8 feet did the trick nicely. A piece of cord and a little ingenuity is all that is needed to keep it in place.

The equipment as given saw good service last season and includes nothing that I would care to leave out. On the other hand, I sometimes felt the need of a saw, so a saw I shall have.

NEW MAYSVILLE INDIAN AGENCY

MAYSVILLE, Ky.—The Indian Motorcycle & Bicycle Co. has opened roomy quarters in the old building formerly occupied by the Modern Laundry Co. Motorcycles, supplies and bicycles are carried in stock. The concern is featuring its tire service for all two-wheelers.

Over 11,000 Miles

On Vitalic Tires!

What ordinary bicycle tire could come anywhere near that record? None! It took VITALICS to do it.

Out of over 60 tires used during a period of 25 years by Dr. F. S. Cate of Florence, Cal., the Vitalic was the only one to reach anywhere near this mileage. Among the 60 tires used were the *very best* of other makes, a number of them much higher priced than the Vitalic. But Vitalics ran *more than three times* the average mileage of the seven next best makes of tires used (based on an accurately kept mileage record sworn to before a notary).

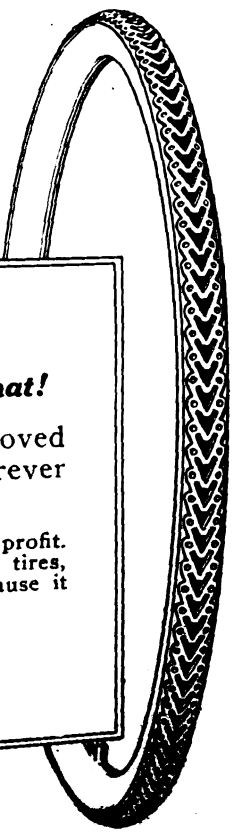
It is this unmatched *mileage* which Vitalics are giving wherever used that proves beyond question their unequalled standard of construction; highest quality of rubber instead of the cheaper grade put in ordinary tires; two plies of heavy *motorcycle* fabric, frictioned with pure rubber, instead of common bicycle fabric; an extra heavy inner tube of pure white rubber.

Write for the testing section and examine these features of construction thoroughly.

VITALIC TIRES

TRADE MARK

For Bicycles



Dealers—

Think what you could do with a tire like that!

There isn't any room for doubt—Vitalics have proved their supremacy over all other bicycle tires wherever comparison has been made.

Thousands of dealers rely on the Vitalic to make their tire profit. Once introduced, it easily brings a better price than ordinary tires, and always sells over and over again to the same trade, because it never disappoints.

Vacation Time Is Motor Bicycle Time

EVERYWHERE—at the lakes, by the sea, in the country—vacationists will soon be thronging.

And there is nothing with such a strong appeal to the vacation pleasure-seeker as the Dayton Motor Bicycle—because it's *fun* to ride one.

NOT A MOUNTAIN CLIMBER, BUT—We have never claimed that the Dayton Motor Bicycle is a Mountain climber or a racing machine, but this is what one man writes about his machine—

"Paced by a large motorcycle with a speedometer, it ascended a long 5% grade at 27 miles per hour and had a maximum speed of 31 miles up a one per cent. grade."
—F. J. Van Winkle, Portland, Ore.

Then, too, there are thousands of those who will stay at home this summer who need a Dayton Motor Bicycle every day. Its front-wheel drive principle; its simplicity, its economy, its cleanliness; all come right home to hundreds—yes, thousands—of young men and women in your town.

Jump upon the saddle, give a little push, and off it goes over any kind of roads, fast enough but not too fast, and gasoline costs less than one-fourth cent a mile.

Selling the Dayton Motor Bicycle is real sport. It increases your profits without increasing your cost of doing business. And now is the time to push it hardest.

Write us for particulars.

45 MINUTES FROM BROADWAY

(Continued on page 35)

things escape us. We will travel miles and miles to get a glimpse of some picturesque landscape. There is not a doubt in the world but that we could see the same thing or something equally as good as it, just forty-five minutes from Broadway. To us the fishing up in Maine is of the unbeatable sort, but you can bet your bottom dollar that a good many of Maine's most famous anglers are planning a trip this summer to do a little fishing at some well-stocked pond or stream just forty-five minutes from Broadway!

In Any Direction

Think it over. Is it not a fact that we can hop in the saddle at Times Square, which is the accepted heart of the greater city ,and turn our front wheel either north, or south, or east, or west, or, for the matter of that, in any other direction on the compass, throw her into "high," slip in the clutch, and give her the gas, and just forty-five minutes away from the city's turmoil and the things we look on with contempt, simply because we are too familiar with them, we are back to nature, either in the mountains, at the seaside, or in some quiet farming district.

The full truth of this was brought home to me not over a week ago. For ten years, at least, I have been riding a motorcycle, and the full ten years have been spent in Brooklyn. There is a famous old road in that borough called Kings Highway, and during all those ten years Kings Highway meant nothing more to me than the roadway from Bay Parkway to the Coney Island boulevard. By chance, a week ago, an automobile cut me off, and I could not turn into the Parkway according to my custom, and I learned to my surprise that Kings Highway extended on the other side of that famous boulevard.

Over Kings Highway

And having learned it, I followed Kings Highway on, and a vast field of newness opened up before me. I might have been in Wisconsin or in Iowa, or in Georgia, such was the varied scenery that this new roadway, not ten minutes ride from my own home, presented to me. And not the least surprising feature of it was the fact that Kings Highway led right into the heart of Brownsville, which is Brooklyn's most thickly populated quarter, and that not two blocks from the center of Brownsville, along its side, stretched acres and acres of the most fertile farmland and rural scenery that would do justice to Coscob Corners.

New Sights Everywhere

I have not a doubt in the world but what there are other Kings Highways for me, a million, or perhaps two million, localities not over a half an hour's ride from my home which are calculated to give me a new thrill when first I gaze upon them, and although I am a typical New Yorker, and feel, with the other Gothamites, that all the rest of these great United States are but a fringe on the outside of Manhattan, in this respect I do not think New York differs materially from any of America's thriving cities. The man on the motorcycle can find newness enough and change enough to keep him busy through several months of vacation not forty-five minutes from the center of his own home town.

There are those who prefer seashore vacation, with its bathing and its boating and its deep sea fishing. Others prefer the mountains with their unexpected lakes and insurmountable slopes, while to still others the big farm with its quietness and restfulness fits better into their scheme of things. Take your choice. With a motorcycle you can have anyone of the three or the whole three. All are open to you and not forty-five minutes from Broadway. And at the end of each day you can go back and get at least one of the three "squares" which home and mother never fail to provide and a good night's rest in your own comfortable bed, which, after all, is worth a great deal.

Where am I going to spend my vacation? Why, forty-five minutes from Broadway!

FROM NEW HAVEN TO MIDDLETOWN
ON A

C. F. Pineau, on a regular stock Miami Power Bicycle, left New Haven, Conn., at 11 A. M. May 24th and arrived at Middletown, Ohio, at 4 P. M. May 30th—1102 miles actual running time, 65 hours—average, 17 miles per hour. Gasoline used, 8 1-5 gallons—average, 134 miles per gallon. No mechanical trouble or adjustments of any kind. First part of trip through the Berkshires, last part of trip over muddy roads in pouring rain. The "Miami" used on this trip had already covered over 1800 miles.

Thousands of Miami Power Bicycles are doing good, hard, steady work all over the country every day.

HOW THE CYCLIST CAN FIND GOOD FISHING

(Continued from page 30)

for a vacation trip it is a good plan to get in touch with someone who knows the region, and find out just how good or how bad the fishing is. If you don't know anybody who can give the desired information, write to the postmaster of the nearest village to the place, enclosing a stamped and self-addressed envelope for his reply. Write to a half-dozen or so different places. Some of the persons will not take the trouble of replying, or else will delay the answer until too late; my own experience in hunting up new fishing grounds has proved this, so it is well to have several irons in the fire.

If the region where you are thinking of going after fish is not too far away, say, within seventy-five or a hundred miles, it is sometimes worth while to take a scouting trip and investigate. You will get an enjoyable Sunday spin out of this and can learn at first hand just what the fishing conditions are. It was in this way that I made connections with the best stream I have yet discovered in Connecticut.

Value of Scouting Trip

There is still another good feature about the scouting trip. One can locate a desirable place to board for a few days or a week, or—if he plans to make a camping trip of it—can select a good camping site in advance. That is better than trusting to luck at the last moment. I have boarded with farmers for varying periods of time, and while I am willing to go on oath that some of the best cooks in the United States live in farmhouses, I am equally sure that the worst cook in our land of the free and home of the moderately brave also inhabits a farmhouse. So it is not always safe to take a chance.

When fishing a new region, and especially when looking for good fishing grounds in a new country, a map is a practical necessity. And for the sportsman's use—I include the motorcycle rider in this, whether he hunts and fishes or not—there is no more satisfactory map than the topographic maps prepared by the United States Geological Survey. These are now published for a large part of the United States, and when the work is completed the entire country will be covered. They show roads, trails, buildings, towns and villages, bridges, ferries, etc. They are printed on sheets about 14 x 17 inches, and in the eastern part of the country show a scale of approximately one inch to one mile. In the West the scale is usually an inch to two miles.

Using Topographic Maps

Perhaps a few words regarding the use of topographic maps would not be out of place. The most noticeable thing about one of these maps is the numerous brown lines that travel here and there over it. They are contour lines, and, when they are understood, give the user of the map a very definite idea of the surface of the country. A contour line passes through points having the same elevation above sea level. Most commonly a twenty-foot contour interval is used, which means that the vertical distance between any two successive brown lines is twenty feet. When the contour lines are close together, it shows a steep hill; when they are some distance apart, the slope is gentle. Since a contour line must always keep on one level, it will bend up a valley to cross it.

These maps are of great value to a fisherman. They show him all the streams and ponds, the roads leading to them, if there are any, and whether the region is thickly settled or not, which offers a basis by which one can estimate the fishing possibilities.

Furthermore, the *character* of the streams is indicated. By the number of contour lines one can tell whether the stream is a swift one with numerous falls and rapids, or whether it is slow. A bog stream is shown by blue tufts, which indicate swampy land; a slow meadow stream will be crossed by few contours; the swift brook by many.

The maps give a perfect idea of the general lay of the land. One can tell in advance how steep all the hills will be by noting the contour lines, and besides, the height of all prominent elevations on the sheet is given in figures.

Cost Is Ten Cents

Topographic maps can be obtained for the very trifling cost of ten cents each, or, if ordered in quantities of one hundred, six cents each. In most large towns they are on sale at book stores, and I have known dealers to charge as high as twenty-five cents each for them. Of course, that means a tremendous profit for the dealer. Never pay more than ten cents. Each map is named after a town, mountain, or any prominent object in its area, as New Haven Sheet, Niagara Falls Sheet, Crater Lake Sheet, etc.

The Edison Alkaline Storage Battery is Fundamentally Different From Every Other Storage Battery.

Poles, plates and container are as rigid and strong—as unbreakable, unbendable and indestructible, as heavily nickel-plated, high grade steel can make them.

No matter how rough the road no part of the Edison Battery can jar loose; no amount of vibration and jolting can shake down the active materials or in any way affect the electrical capacity of the battery.

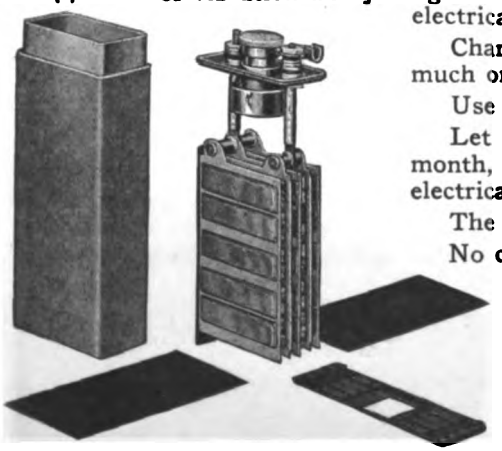
Charge an Edison Battery whenever convenient, no matter how much or how little charge it already contains.

Use an Edison Battery whenever you need it.

Let your Edison Battery lay away idle, indefinitely—a week, a month, a year, or more—it will suffer no injury, and have as high electrical capacity as the day you bought it.

The solution is ALKALINE—that's why.

No corrosion—no sulphation—no fumes—no plate diseases.



One Edison Motorcycle Special M20 Cell showing method of assembly. Note steel construction and rubber insulation. These are characteristics of long life and satisfactory service

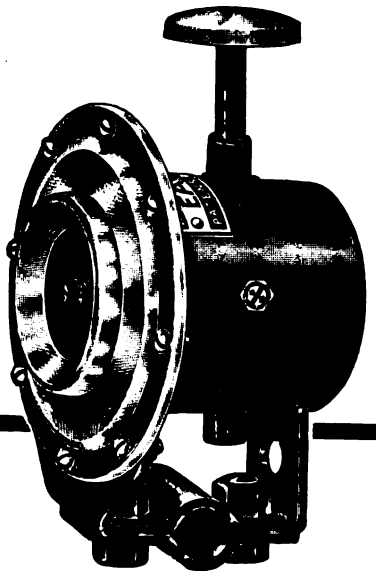
EACO



Sets the Pace in Sales and Service

No horn made has gained such instant popularity, such widespread demand as the EACO. And there's a good reason for its phenomenal sales record.

It's BECAUSE THE EACO MOTORCYCLE AND BICYCLE HORNS ARE THE BIGGEST HORN VALUE BY FAR FOR THE MONEY.

It is the lightest horn made, yet the strongest. Its range is very far-reaching, because of the big "chest" or sound-box and the very sensitive diaphragm.

The EACO is the only horn made that has two brackets attached for instant adjustment on either the top or handlebar of the motorcycle. It is an innovation original with the EACO.

Write for further details—or ask your dealer.

TAKE YOUR CAMERA WITH YOU

(Continued from page 31)

And now, that we have you going, let's talk of the proper camera. Don't get a plate outfit; it's too bulky. Get a folding camera, either roll or film pack.

It does not have to be a special affair with an astigmatic lens and a high-speed shutter. What the average rider wants is pictures for the film he shot off, and he can get some very good results from a moderately priced outfit. Sometimes the finer the tools the finer the workman must be, so that it is not always true that the highest priced cameras will give the best results. A novice will be satisfied with something that takes less experience to handle successfully.

The Lens Question

Of course, a rapid rectilinear lens has not got the latitude a faster lens has. You will not be able to use the former when the day is dull with as good success as if you had an anastigmatic lens, but there are plenty of clear days to use the slower lens.

The size of the picture is the next consideration, and that is like many other things, a matter of individual taste. Take it from one who knows, one who has had a 3¼ x 4¼, then a 2½ x 4¼, and lastly a post card size camera, the bigger the better, even if the cost is a little higher. When you snap one with a large camera, you have a picture that will stand observation without the aid of a magnifying glass to identify those on it.

My idea, as you can gather, is nothing smaller than a 2¼ x 4½, and if the pocketbook can stand it, one of the new cheaper anastigmatic lens-equipped folding cameras, that has a 50th and 25th of a second speed to the shutter, and use it, for more pictures are under-exposed than over-exposed. At the same time get a carrying case for the camera so that you can tote it around with you in a way that it does not intrude on your thoughts to impede your progress—it'll pay in the long run.

Carrying the Outfit

When first I carried a camera, I hung it from my belt, and that was all to the mustard while riding, but it banged against my hip while off the machine, and it also suffered in a few spills that I had. Next I carried it over my shoulder, banging against my back or sliding around to the side, but now I have found the ideal place.

Shorten the strap so that when you put it over one shoulder it hangs high up under the opposite arm-pit. There is will be out of the way most of the time, it will be protected in case of spills, also not be jarred from the road's unevenness and it will be easy to get when it is wanted. If you put the strap over your head before you put on your coat, then it will never shift from the original position when you put that garment on.

Well, there you are, you know why you should carry a camera, you get a line on what kind you need, and you know where to carry it. Will you be one of the bunch lined up among the road this summer with a camera in your hand as we pass by? Good luck to you!

ANGWIN'S HENDERSON MADE A FINE SHOWING

E. J. ANGWIN, of the Motorcycle Sales Co., Henderson representative in San Francisco, started out on a little vacation run with his Henderson sidecar combination a few days ago. He chose Los Angeles as his destination. Charles B. Jenkins, assistant manager of the Hawaiian Pineapple Co., and G. L. Graham, chief clerk of the Pacific Telephone & Telegraph Co., accompanied him.

Angwin found that his 1916 model outfit was never baulked by the high mountain passes, even with a load of 555 pounds of men and a heavy suitcase. The 436 miles of the trip were made without trouble, averaging 43 miles to the gallon of gasoline. Near Tracy, Angwin opened her up and clocked 55 miles per hour with three aboard.

After a short stay in Los Angeles, the trio climbed aboard the combination and started off to repeat the trip in a reverse direction.

KANSAS CITY TRACK WILL ATTRACT RACERS

KANSAS CITY, Mo., June 15.—The construction of a new 1¼-mile dirt track at Kansas City is causing a big bunch of motorcycle enthusiasts to sit up and take notice. It has been announced that motorcycle races, as well as those for motorcars will be run on the track and the local talent is preparing to make the most of the opportunity.

KEEPING IN TOUCH WITH THE FOLKS

(Continued from page 39)

habitant for a test ride—and say but how they did enjoy it! It was laughable to see the look of fear give way to one of delight as they sped along, and now a sort of motorcycle craze has hit the young fellows up there. Two of them bought second-hand machines this spring, and such looking crocks they are. You can hear them coming for half a mile, but you have to hand it to those boys; they sure can ride that rough road like a veteran. And maybe when they are older and have more money to spend, won't they be regular riders, those boys who now are better at repairs than Bob and myself?

So you can see why I said that I'm a lucky lad, and I'll bet you you will agree with me, for how many of you can go out each Sunday to a small town and mingle right in with the crowd, putting in a day of solid recreation and rest, and getting into fine trim for another week at the desk?

TORONTO DEALERS USE BILLBOARD ADVERTISING

TORONTO, Ontario, June 19.—The bicycle dealers of Toronto, with the co-operation of the manufacturers and jobbers, have pulled off an advertising campaign which proved to be highly successful. The whole city was not exactly painted red, but most every billboard was literally plastered with an assortment of thirty-six sheet posters which bore reference to the bicycle. The designs were most striking and the general effect, in each case, was very artistic. The slogan adopted for the advertising stunt was "Twice as Easy as Walking, Three Times as Fast," and this catchy phraseology aroused considerable comment.

FEATHERWEIGHT CLIMBS 6,000-FOOT MOUNTAIN

TURLOCK, Cal.—The climbing powers of the Indian Featherweight were again satisfactorily demonstrated in the Pacific Coast section recently, when J. E. Farris and his partner took a little Indian two-stroke and a Powerplus up to Strawberry, 6,000 feet above sea level. The trip to the mountain and return totaled 200 miles, and this and the climb were made in the same day.

The trip to Strawberry from the base was through snow and water, with loose surface on most of the stretches of road. The Featherweight had no difficulty in the ascent, whereas automobiles have to get into low gear to make the climb. The Featherweight rider who went with Farris is 6 feet tall and weighs 180 pounds.

APPEAL TO RIDERS FOR ROAD FUNDS

GLACE BAY, Nova Scotia, June 12.—The Glace Bay Good Roads Association, in undertaking to improve every highway leading into the town of Glace Bay, has issued an appeal to motorcyclists of the place to contribute $1 each to a road fund. The association has just completed the improvement of the road to Sydney and there is no better highway in this section of the country than this stretch. A. D. MacNeill, Glace Bay, is the treasurer and prime booster of the good roads campaign.

TWELVE TANDEMS ON STODDARD CAMP TRIP

LOS ANGELES, Cal.—Of the 22 machines which were ridden in the Los Angeles M. C. picnic to Stoddard Camp in the mountain recesses of San Antonio canyon, twelve carried tandem. Blick Wolters was chairman of the entertainment committee and certainly made good in every direction.

LONG TRIP TO SEE FOLKS

READING, Pa.—Earl L. Myers, assistant foreman in the transmission covers department of the Ford Motor Company, in Detroit, Mich., has arrived here after a five days' trip from that city on his Harley-Davidson. Myers, who has relatives here, made the run of 1,100 miles via Buffalo and Niagara Falls. He is a member of the Detroit Harley-Davidson club.

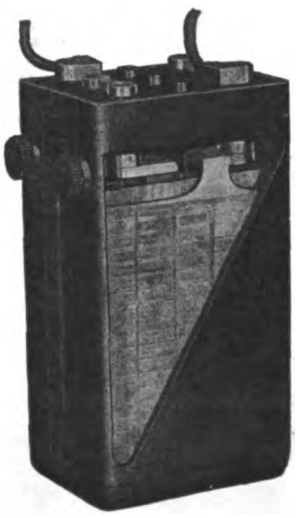
BIG CONTRACT FOR OHIO ROADS

COLUMBUS, Ohio.—Bids were opened June 15 by the Ohio Highway Commission for the improvement of about 150 miles of roadway in about 25 counties in the State, the work to be done the present season. In all the estimated cost of the work is $1,300,000. It is the third large letting of contracts by the Ohio Highway Commission during the present year.

50,000

WICO

Motorcycle Batteries



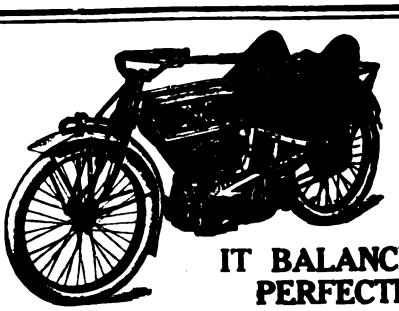
ARE in service throughout the world. No other battery manufacturer has the advantage of such experience.

BECAUSE of it, the Wico Battery is to-day incomparably better than any other sold for the purpose. Don't regard the storage battery as a mystery. We will tell you what happens inside and then you can judge batteries as you do motorcycles. Write us to-day.

WITHERBEE IGNITER CO.

Springfield, Mass., U. S. A.

Note: Write us for List of Service Stations.



IT BALANCES PERFECTLY

You remember the time before you learned how to ride a bike. You would almost swear it couldn't be done. You couldn't imagine how it was possible to ride a two-wheeler without falling off.

TRY A TRIPLEX

You will find that balancing is so easy that you will forget all about it. In the first place these seats are very low, which, of course, makes balancing so much easier.

Then again, the weight is mostly centered in the 2 uprights in the rear. Besides, you know that as long as your front wheel is free you can regain the equilibrium by a slight turn of your wheel.

Dealers—Here's something the rider wants—something to put real ginger into your sales. Write at once for agency proposition.

Fits all makes. ***Guaranteed for 3 years***

PRICE $25.

NAMES—NAMES—NAMES!

By the hundred, or the thousand, as many as you want—Mr. Dealer and Mr. Manufacturer—Names and addresses of the motorcyclists and automobilists who are registered at the New York State Capitol. The motorcycle registration law just went into effect, and here is a splendid opportunity to get business by circularizing the riders of any part of, or the entire State of New York.

We Furnish These Names at Lowest Prices

We copy official automobile and motorcycle records in the Capitol here and can compile a list of the auto or motorcycle owners for your section of the State, at lowest rates, sending you supplements, giving the additional registrations. We can compile a list of owners of any particular motorcycle or automobile you may wish a list of.

We can also furnish a list of owners of any city, county, district or territory you may desire.

Dealers are making good money, and creating a lot of new business by using our lists. Now is the time to write riders in your territory for repair work and new accessories. Get our list now. Beat your competitor to it.

MANY EXS. IN USE BY ARMY AND NAVY IN PHILIPPINES

CHICAGO, Ill.—The Excelsior Motor Mfg. & Supply Co., maker of Excelsior motorcycles, has received a letter from the F. H. Thompson Co., representing the Big X at Manila, P. I., in which is stated the number of such machines used in the Army and Navy. Thompson's letter says:

"We have sold Excelsiors to the Army and Navy as follows: nine twin 3-speeds to the Quartermaster's Department, two twin 3-speeds with sidecars to the Engineers, and six twin model 7-C as well as six twin 3-speeds to enlisted men of the army.

"U. S. Navy enlisted men have purchased four model 7-C, four twin 3-speeds, one twin 16-3 police model and one single 4-C. The station at Guam has two twin 3-speeds with sidecars and two model 7-C.

"From this you will see that your little, old far-off Philipine agent has received more than his share of the U. S. Army and Navy business."

AFTER SHORT-MEASURE MEN IN OHIO CITIES

COLUMBUS, Ohio.—Samuel Lindsay, State sealer of weights and measures, has started another campaign against alleged short measuring of pumps as used by gasoline retailers and has found a number of defective pumps. He found that the largest percentage of short measures were being given in Cincinnati and Cleveland, although other cities had a few that were reported.

In Cincinnati deputies inspected 118 gasoline pumps and found 48 which had to be adjusted or condemned entirely. In Cuyahoga county the inspectors found 32 out of 129 to be bad. In Franklin county only three out of 71 were found to be defective. In about 50 counties in the State the inspectors found 724 defective pumps out of nearly 2,800 inspections.

The Ohio Board of Agriculture will be asked to punish the violators to the limit.

ELECTRIC LIGHT TO BE DIFFUSED IN KANSAS CITY

KANSAS CITY, Mo.—The Kansas City police department has just issued orders that all electric headlights or side lights on motor-driven vehicles must be ground or etched. The following paragraph from the ordinance gives the effect desired:

Electric headlights shall have the entire inside surface of their door glasses etched or ground to such a degree that the lighted filament shall appear blurred and indistinctly defined, and that all light emitted shall be diffused and free from scintillation and brilliant or metallic lustre.

Local riders are using emery flour, turpentine and a piece of steel applied with a circular motion to get the effect desired.

MARTIN LEAVES SVENSGAARD

GRAND RAPIDS, Mich.—Tom Martin, chairman of the Jack Pines Tour, has severed connections with the Harry Svensgaard Sales Corporation of Detroit. Martin has just returned from the pathfinding tour of the course.

WAR CYCLISTS PUBLISH BI-MONTHLY

TORONTO, Ontario, June 12.—Canadian war cyclists now have a newspaper of their own, the first issue of a bi-monthly publication for the Divisional Cyclist Corps having been sent out from the Cyclists' Training Depot at Exhibition Camp, Toronto. The paper is called the *Canadian Cyclists' Post*, and the editor-in-chief is Sergeant E. W. Earle who, prior to enlistment in August, 1915, was a trade journalist of Toronto.

GOOD ROADS DAY RESULTS

LIMA, Ohio.—The first "Good Roads" day held in Ohio resulted in the improvement of a section of approximately 20 miles of road in Allen county last week. In all about 150 teams, 10 tractors, a number of scarifiers, graders and motor trucks were used in the work. About 1,500 men volunteered to work for the day. The work was under the charge of C. F. Rudisill, State Director of the Ohio Good Roads Federation.

"The Key To The Fields"

To the owner of an EXCELSIOR AUTOCYCLE there is an open door to all nature.

Miles of distance are changed to moments of enjoyment and the matter of getting from

Where You Are To Where You Want To Be

becomes a pleasant ride in the open air instead of hours in crowded, dusty and uncomfortable cars.

The Power, Comfort and Safety of the Model 17-3 EXCELSIOR makes road conditions a matter of little, if any, importance.

The Nickel Steel Drop Forged Frame Connections, Extra Heavy Gauge Seamless Steel Tubing and Powerful Construction throughout, insure Absolute Reliability under all circumstances.

The value of a motorcycle for either personal or sidecar transportation is a matter of general knowledge.

To get the MAXIMUM BENEFITS, the motorcycle should be an "X."

Ask your friend who owns one.

STREAKS

Give Out These Bike Caps

THE Goodyear Blue Streak Bicycle Tire Policy does not stop at merely giving the dealer an unusual sales opportunity.

It also places in his hands the most efficient methods of taking advantage of the opportunity offered by the Blue Streak guarantee, the Blue Streak price and the Blue Streak advertising.

One of the most effective helps we offer dealers are the Bike Caps, as pictured on the youngsters in the opposite illustration.

There is no reason why you cannot repeat the success other dealers have had in giving out these caps to the men and boys in their neighborhoods.

80,000 of these gay colored caps, with the dealer's name on the front, are already spreading good will for these dealers in different cities and towns of the country.

These caps we sell you at cost, a trifling expense. You give them out with purchases only. They go everywhere and create favorable comment about you and your store.

A postal from you places a sample cap with prices on your desk. Write for it today.

Every Motor Wheel It's Own Salesman

Smith Motor Wheel
DETACHABLE

OUR most successful dealers continually tell us that the Smith Motor Wheel is the easiest seller among all the lines they ever attempted to merchandise. They call it a full-fledged salesman because it really sells itself. And more than that, it keeps right on selling other wheels.

For the spunky little *Smith* wins more attention and more friends in the course of a short spin up the boulevard or down the country highway than any other motor-driven vehicle known.

It is so unique and so fascinating to the passerby that it immediately prompts a desire for possession. The live dealer knows this and capitalizes on this very element. He uses a little space in his local newspaper and thus links his store with the great national magazine advertising of the A. O. Smith Company.

The result is that his store quickly becomes known as Motor Wheel Headquarters and outdoor lovers flock into his salesroom. Then there is only the simple demonstration—five minutes to attach to any bicycle—and the low price and trifling upkeep clinch the bargain.

Besides selling Motor Wheels the A. O. Smith dealer finds that he adds materially to his sale of tires, new bicycles and accessories—all by virture of being Motor Wheel Headquarters in his community.

The Smith Motor Wheel is a money maker for live dealers.
We may have an opening for you. Write for particulars.

MOTORCYCLE TIRES

Motorcycles which must render hard and heroic service, need tires which will bear the brunt.

Motorcycles which race or travel at high speed, motorcycles which make long runs, want all the tire strength they can get.

Call Blue Streaks a form of over-insurance if you like—call them a superlative form of protection to meet exceptional cases and conditions.

Whatever you call them, depend on it, they will do what they are intended to do.

By present indications, the racing records captured by Blue Streaks last season seem likely to be duplicated.

Reports from all the big race meets show Blue Streaks invariably the winners.

They are simply demonstrating for another year that they are the most practical and popular tire among motorcyclists and therefore the easiest and most profitable tire to sell.

Figure It Out for Yourself.

We make some big claims for 'Chain' Tread Motorcycle Tires—

We say that they are the most efficient anti-skid tires made—

We claim super-mileage for them—

Now then—if they don't make good—you men who use them will hold us responsible.

If every claim of ours is not substantiated—we lose.

Despite our claims, our sales are increasing by leaps and bounds.

In other words, 'Chain' Treads are making good.

Figure it out for yourself.

NEARLY 5000 MOTORCYCLISTS ATTEND THE PICNIC OF CHICAGO DEALERS' ASSOCIATION

Mammoth Affair Draws Riders of All Makes of Machines to Diamond Lake Where Dealers' Co-operative Association Furnishes an Abundance of Good Things to Eat and a Crackerjack Entertainment Program; Fine Spirit of Fellowship From Start to Finish Makes the Day a Memorable One for Both Trade Men and Riders

AN UNQUALIFIED TRIUMPH FOR DEALERS WHO PROMOTED THE BIG PROGRAM

CHICAGO, June 26.—It is estimated that between four and five thousand people attended the first annual picnic of the Co-operative Motorcycle Dealers of Chicago yesterday at Diamond Lake, Ill., which comes pretty close to making a record for affairs of the kind in this country. The huge crowd was well cared for by the dealers, sandwiches, coffee and other forms of refreshments being supplied in abundance. The entertainment arrangements were equally liberal. Boats were furnished for those who wished to enjoy themselves on the water, dancing was a big feature and a band helped to keep things moving.

The unquestioned success of the picnic was due to the fine spirit of co-operation with which the dealers worked on the plans. All the dealers pulled together to the end of giving the riders a full day of pleasure, and they surely did deliver the goods. In return the riders left nothing undone to show their appreciation and their all-around spirit of friendliness.

One of the most enjoyable features of the program was the pie-eating contest. Each contestant was given a blueberry pie and was obliged to carry the pie on his motorcycle over a 100-yard course and then devour the dainty in the shortest possible time. When they reached the finish line the entrants were expected to stop their machines, leave their motors running and gobble the pies. Several of the boys were unable to finish the nine-inch pies and were accordingly disqualified.

Hard to Recognize Contestants

The first prize was awarded to J. Klich, second prize to Al Buck and third prize to William Richard. At the close of the pie-eating contest a committee had to be appointed to probe through the blueberries and locate the features of the contestants so that they could be identified. Some contest, fellers!

Another interesting event, also run over a 100-yard course, involved picking up three handkerchiefs from the moving motorcycle. It was necessary to pick up the first handkerchief with the right hand, the second with the left hand and the third with the right hand, so that the stunt was quite a difficult one. J. Jenkinson captured first prize, his time being 18 seconds. Bill Cobb took second prize and Frank Vertato, third.

LIVE-WIRE DEALERS WHO PROMOTED THE MAMMOTH MOTORCYCLE PICNIC

C. H. Lang, Harley-Davidson.
Jesse Edwards, Indian.
R. C. Crist, Excelsior.
F. D. Freeman, Thor.

Next came an obstacle race, the contestants having to dodge a number of objects placed on the ground. In order to have a perfect score the rider had to avoid touching any of the obstacles and still complete the 100-yard course in 20 seconds. First prize went to Steve Komen, second to Harry Ford and third to Earl Sandmore.

Exciting Baseball Game

A game of baseball provided further excitement and also some keen competition. The teams were made up of North Side riders as opposed to South Siders. A lot of Ty Cobbs were discovered in the course of the game, and grandstand plays were so numerous that the official scorekeepers lost track of them. The North Side team was finally victorious, making nine runs against seven for South Siders.

All in all, it was one of the biggest days Chicago motorcycledom has ever known, and it is taken for granted that the program will become an annual feature. Unlimited credit is due the promoters of the affair, C. H. Lang, Harley-Davidson representative; Jesse Edwards, the Indian man; R. C. Crist, the Excelsior booster, and F. D. Freeman, who handles the Thor line.

MAHONEY LEAVES EXCELSIOR FOR BUDA

CHICAGO, Ill., June 26.—John Mahoney, who for the past nine years has been purchasing agent for the Excelsior Motor Mfg. & Supply Co., has resigned that post to assume a similar capacity with the Buda Co., of Harvey, Ill. In his new berth, Mahoney will care for all the details incidental to the purchase of the materials and parts that enter into the construction of Buda automobile motors which the Buda company manufactures.

SPEEDSTERS READY FOR DODGE CITY RACE

Imposing Line-Up of Crack Track Men Will Appear in the Triple Century on the Fourth; Record Attendance Is Expected

DODGE CITY, Kan., June 27.—There will be a large assemblage of "favorite" riders in the Dodge City triple century on the Fourth, according to factory advices received today. For instance, the fans will see once more the familiar face of Carl Goudy in the Excelsior ranks, and with him will be such veterans as Bob Perry, Joe Wolters, Glen Stokes, L. Boido and A. E. Hilliard. Rumors are abroad that Goudy will have charge of the "X" pit, but everybody's hoping that the clever speed merchant will kick up the dust in the big grind.

The Indian tribe will certainly be well represented. Morty Graves will be on the speedway "with bells on," so he says, and he'll ride in the good company of fearless redskins in the person of Speck Warner, Don Johns, Earl Armstrong, Dave Kinney and Lee Taylor.

The Gray Fellows will be ably piloted by Ray Weishaar, Irving Janke, Sam Correnti, Harry Crandall, Clarence Johnston, Harry Brant and Floyd Clymer. The Harley-Davidson clan are now on their way to the Kansas speed burg, and the full complement of entrants is expected to be here by tomorrow to start practice.

Some keen competition, will be on tap, and those "in the know" believe that records will go sailing, not only as to speed but also in the attendance of fans. From all over the country letters are pouring in, telling of the tours which riders are planning, and a surprising large number of dealers, too, will be at the speedway.

NEBRASKA CITY PLANS JULY 4TH MEET

NEBRASKA CITY, Neb., June 26.—The Nebraska City Speed Association will stage a race meet on the half-mile fair grounds track here on July 4 with a 50-mile open event for the state championship on half-mile tracks as the feature of the card. Arrangements are being made to hold a mammoth parade before the race meet and riders from all parts of Nebraska are expected to participate.

FELIX VAN CLEEF JOINS BENEDICTS

CHICAGO, Ill., June 26.—Felix Van Cleef, of Van Cleef Bros., makers of Dutch Brand products, is on a trip to Hawaii, and it's not a business trip either. Mr. Van Cleef was married on Monday, June 19, to Miss Ruth Einstein, a New York girl, at the Hotel Walton, that city, and is now on a honeymoon trip to the South Pacific Isles.

SPILL PUTS WALKER OUT OF DODGE CITY LIST

CHICAGO, June 27.—Otto Walker, holder of the world's flat track records at 150, 200 and 300 miles, and of the 100-mile board track record, made on Harley-Davidson machines, was seriously injured in practice at the Chicago Speedway when his front tire blew out and threw him while he was hitting 95 miles an hour. Practically his entire body was filled with splinters.

This accident puts Walker out of the big Dodge City race on July 4, as the doctors at the Oak Park Hospital say it will be weeks before he can ride. His machine set fire to the track, but he gamely extinguished the blaze before being taken to the hospital.

NEW WORLD'S RECORD FOR TIRE PRODUCTION SET BY GOODYEAR WITH 28,499 TIRES IN 24 HOURS

AKRON, Ohio, June 27.—The world's record for tire production in 24 hours was smashed at the plant of the Goodyear Tire & Rubber Company on Thursday, June 22, when 28,499 tires were produced. The week before the Goodyear company set a new production record of 17,002 tires in one day and encouraged by this remarkable performance the officials decided to ascertain just how high the mark could be set with every available employee thrown into the task of production. The figure of 29,499 for the 24 hours was the result.

It is only a year ago that the Goodyear company blew its whistles and celebrated somewhat over a day's production of 13,000 tires, less than half of the number turned out last Thursday. When the new buildings now under way are completed it is expected that the plant will be able to turn out 30,000 tires a day as a regular thing.

MORE RECRUITS NEEDED FOR NEW MOTOR BATTERY

NEW YORK, June 28.—One of the biggest developments along military lines in the last few days was the organization in New York of a brand new motorcycle machine gun company, to be affiliated with the Seventy-first Regiment of the New York National Guard. This motor battery will comprise 71 motorcycle outfits, 63 solo machines and eight van combinations. The motorcycles are to be Reading Standards throughout.

The officers, directed by Captain Schroeder and Lieutenant Nickerson, raised $22,000 through private subscriptions in a few hours for the purchase of the motorcycles. The first consignment of 24 R-S mounts arrived at the Seventy-first Regiment Armory today.

There are still some vacancies in the motor battery and those who are interested are invited to call at the Armory, Park avenue and 34th street, between the hours of 2 and 9 during the next few days. Emphasis is placed upon the fact that those who join the new battery now will stand an excellent chance of advancement.

ENTRIES CLOSE FOR SHEEPSHEAD MEET

Many of Best Known "Pros" Attracted to New York State Convention Meet, July 4th; Additional Prizes

NEW YORK, June 28.—If an entry list that includes some of the best motorcycle riders the country over can make a racemeet a full fledged success, the Sheepshead Bay contest which is slated for Memorial Day as the feature of the New York state F. A. M. convention should be a "corker" and nothing short of that. In the professional class to date the following have entered: Teddy Carroll, John U. Constant, Gene Walker, Julius Mercier, Victor Pelizarre, Fred Christman, Bert Walker, A. G. Hamilton, I. W. Barnard, F. E. Whittler, H. J. Klebs, Fred. Luther, Wm. Luther, Wm. Stubner, Mike Costello, Bert Sayre, Thorwald Jepson, Joseph Wasko, Wm. Holt, W. Leahy, John Lindner, Fred Frank, Albert B. Carlson and seven Harley-Davidson entries not yet announced.

In the amateur class are entered the following: George Grant, Serge Sapojnikoff, Sid. Brown, Joe Gest, James Coote, Channing Burbank, J. La Fosse, C. W. Cushing, Carl Currie, Charles Dreyer and five Harley-Davidson entries.

Last minute developments in the way of prizes are a silver cup valued at $100, which has been offered by the United States Tire Co. to the winner of the 100-mile national professional championship contest and two cups put up by the American Liberty Day Committee of New York which are to go respectively to the winners of the 10-mile amateur and the 25-mile amateur events. These cups were to have been offered at the American Liberty Day racemeet.

T. S. Mahoney, formerly referee at the Brighton Beach motordrome will officiate in that capacity during the meet, while the judges will be Art Rochow and Stanley Kellogg.

The more serious side of the convention, including the business session, will be held in the grandstand on the morning of July 4, beginning at 10 o'clock, and immediately after the work has been completed the race officials will receive their final instructions; the racemeet will be started at 2 o'clock.

ST. LAWRENCE BOULEVARD OPENED

QUEBEC, Que.—The motorcyclists of the "Ancient Capital" of Quebec and of the city of Montreal are in high glee because of the completion of the St. Lawrence River Boulevard between Montreal and Quebec.

FEDERAL CALL HALTS WISCONSIN ARMY RELAY

MILWAUKEE, Wis., June 27.—Due to the fact that the entire officer body of the Wisconsin National Guards is under federal orders the Milwaukee Motorcycle Club has decided to postpone its fast motorcycle relay from Milwaukee to Madison until a more propitious time. Just when the relay can be run is indefinite, as it is likely that most of the Wisconsin guard will be rushed to the border with the first detachments.

MOTORCYCLE DISPATCH BEARER VERSUS THE WIRE

Urgent Need for Secrecy and Speed in Delivering Mobilization Orders to New York National Guard Units Impresses Eastern Military Officials with Two-Wheeler's Value—Chapple Beats Train Time

NEW YORK, June 28.—Nothing, not even the things the motorcycle has been doing in a military sense both in the European war and in our own little—by comparison—border conflict, has impressed the military authorities in the Department of the East with the real military importance of the motorcycle to such a degree as the performance of the dispatch bearing squad of the 22nd Engineers, 1st Batallion on Sunday night last. As a matter of fact, the motorcycle was the key to an acute situation, and it proved itself a perfect fit and one that could be hard to duplicate.

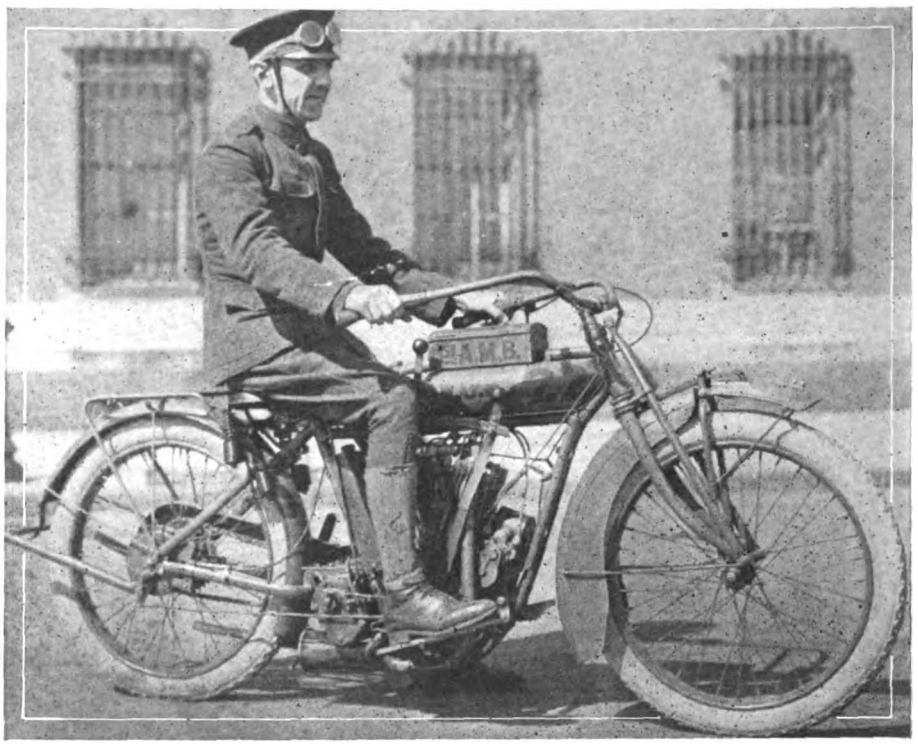
At 10 o'clock on Sunday night headquarters of the National Guard here received orders from Washington to prepare immediately for the entrainment of the 7th, 71st and 14th Infantry, the 22nd Engineers and several cavalry corps for transportation to various points in Texas. The several units involved have been mobilizing at various points in and around New York and because it feared lest leakage of the orders were they entrusted to either telegraph or telephone might be the cause of embarrassment either to the War Department at Washington or to themselves, Headquarters staff chose the motorcycle dispatch bearer squad as the means of distributing the orders.

On this urgent mission, several of the mounted members of the 22nd Engineers who were off on an 18-hour furlough were routed out of their beds through the agency of the New York police and called to headquarters at once. The highly important messages, including the approved rosters from Washington without which none of the National Guardsmen could be sworn into the Federal service, and before the arrival of which not one of the units could be moved, were entrusted to the dispatch bearers for transmission. Both the 7th and the 71st regiments were located in their armories in New York so that the task of the dispatch bearers serving these units was comparatively light, but the cavalry units at Van Cortland Park, the 14th Infantry at Peekskill, the 22nd Engineers and 1st Battalion at Camp Whitman, 76 miles from New York gave the riders ample opportunity to display their staying qualities.

Chapple Wins Recognition

Sergeant Arthur Chapple with dispatches and roster for Camp Beekman at Poughkeepsie, made the trip over none too good roads in 1 hour and 58 minutes, beating the fastest train time by 42 minutes. Other dispatch bearers, serving the other camps, made equally creditable runs, so creditable indeed that the captain of the motorcycle squad received congratulations and thanks from headquarters staff for their performance, while Chapple has been recommended for promotion because of his achievement.

Through this performance by the dispatch bearing squad the militia units were well on the way with preparation for entrainment on Monday morning, and the fact that orders to that effect had been issued did not leak out.



Chapple Will Be Exclusive Correspondent

JUST before entraining with the First Armored Motor Battery of New York for service along the raid-threatened Texas border, Sergeant Chapple secured permission from his superiors to act as exclusive war correspondent for Motor Cycle Illustrated. Every week Chapple will tell in these columns of actual experiences, astride a motorcycle, encountered by members of his battery; and photographs taken at the scene of operations will accompany his stories.

The first Armored Motor Battery of New York is the largest in the United States, having about seventy-five motorcycles, in addition to other motor equipment, and Chapple is in a position to gather at first hand all the thrilling news of its activities.

HERE'S SOME PRAISE FOR DESPATCH BEARERS

OTTAWA, Ont.—Very little information has pased the British censors in relation to the work of despatch riders along the British front in Flanders and North France. A significant statement has just been received, however, from Sergeant George Brooks, 3d Divisional Signaling Corps, C. E. F., regarding the work of the motorcycle and bicycle despatch carriers during recent heavy fighting in which the Canadians participated. This is his note: "The despatch riders never got a minute's rest. As soon as they came in, out they went again without a murmur. I was proud of the boys as I know what they had to go through and they never fell down."

EXCELSIOR RACERS TAKE TO LIGHTWEIGHTS

CHICAGO, Ill., June 26.—Perhaps 35 miles an hour is not enough in the way of speed to interest a motorcycle racing man, but when a little lightweight churns up at the rate of 45, as did the Excelsior machine in the recent Hawthorne Memorial Day race meet, even the Excelsior factory speedsters who have pushed the big X's to many a victory became enthused. And now, to the last man, they are riding lightweights to and from the factory and in and around town on their business trips. The team is also carrying the lightweights as part of their racing equipment and with them cleaned up first and second positions in the lightweight race staged at Madison, Wis.

GOODYEAR BALLOON GIVEN TO ARMY

Ohio National Guard Receives Fully-Equipped Observation Balloon From Tire Company; Has Diameter of Twenty-two Feet

AKRON, Ohio, June 23.—Having given to the army in Sergeant R. H. Upson one of the leading aeronautical experts in America, the Goodyear Tire & Rubber Company went one step further yesterday and presented the Ohio National Guard through Battery B with a fully equipped military kite balloon.

The balloon was designed and constructed under Upson's direction for observation purposes, and is similar to two other Goodyear balloons, one of which was sold recently to the Spanish government and delivered by Upson on his recent trip abroad and the other was sold to the United States navy and is now in use at Pensacola.

It is equipped with the tail cups, also an invention of Upson's, which are used for stabilizing and hold the car steady even during a severe gale, so that delicate observations can be taken.

It also has the Upson parachute by which the observer can descend if the balloon is hit by a shell, or the cable should break letting the balloon float into the enemy's lines.

The balloon is 82 feet long with a diameter of 22 feet, contains 25,000 cubic feet of hydrogen gas and weighs half a ton. It can be moored to an automobile and a winch, and controlled from the field. The gas can be generated also in the field.

MOTORCYCLES HELP OHIO GUARD TO MOBILIZE

COLUMBUS, Ohio.—Motorcycles are playing an important part in the mobilization of the Ohio milita, ready for service in Mexico or on the border. Immediately upon the call for mobilization, messengers on motorcycles were dispatched to carry the news to the various members of the militia organizations.

In addition motorcycles are being used for machine guns and will be included in the Ohio equipment in case the militia sees active service in Mexico.

RAY HORNER, of the Boone County Cycle Co., Columbia, O., has left for the Mexican border with the Fourth Infantry, National Guard, Missouri. Horner is a member of the motorcycle machine gun company, which includes 20 riders.

VERRILL NAILS CENTURY GRIND AT COLUMBUS

Turns the Trick in 1 Hour, 28 Minutes and 40 Seconds; Walker, Creviston, Stokes, Perry and Davis Capture First Honors in Short Distance Events in Interstate Association Meet

COLUMBUS, Ohio, June 27.—Covering the 100 miles without a stop of any kind "Krazy Horse" Verrill, of Los Angeles, astride an Indian, won the "Champion Spark Plug" trophy event of the Interstate Motorcycle Association's meet at the Columbus Driving Park, June 25, in 1 hour 28 minutes and 40 seconds. Glen Stokes of Los Angeles, on an Excelsior, was second, less than a mile behind the winner, while Jim Davis, Indian, was a close third. The track record is 1 hour, 22 minutes, 30 seconds.

One slight accident, several spills and many close escapes marked the day's speedfest. Hilliard was a victim of what was at first thought to be a serious accident. In the second mile of the 100-mile race he crashed into the outside fence at the north turn, just as he was entering the stretch. A couple of cuts in the face, a badly sprained ankle and sundry bruises were the extent of his injuries.

In the first five-mile dash, Verrill's machine turned completely around and the rider landed in a sitting position on the track, uninjured. In the eighteenth mile of the century grind, Joe Wolters had a close call when the left handle bar of his machine broke as he was entering the north turn. He was able to avoid a spill, however. Howich took a spill in his eighty-fourth mile in the big race while he was negotiating the south bend. He also was uninjured.

Several riders not seen here in the race of June 4 were entered when the big event was started. The most prominent were Bob Perry and Joe Wolters. Gene Walker, Ellis and Millen were the others. All these boys but Ellis and Wolters were forced out of the going before the race was over by various accidents to their machines.

From the time made in the short races and the close finishes the crowd looked forward to a race that would be interesting all the way through and they were not disappointed. Creviston, the favorite, at the end of the first mile by less than a wheel's length over Suddith, a Thor rider. When Hilliard went into the north turn Creviston was given the red flag. In the mixup he left the track under the impression that the way was to be cleared. The rest of the boys had attained such a lead that he did not re-enter the race.

Joe Wolters then took the lead, with Davis second and Myers third. The Excelsior rider, who was teaming with Stokes, was never headed until after he had passed the halfway point. After putting 51 miles behind him, Wolters was forced into the pit for oil and gas and Davis took the lead. Stokes was gradually gaining on the leaders all the way.

After completing 62 miles, Fred Myers was forced into the pit and out of the race when his engine caught fire. Howich, who had been going steadily, entered the south turn on his eighty-fourth mile, wobbled, skidded and then turned over, the rider getting on his feet instantly without an injury.

With less than 10 miles to go and three men racing practically even, the crowd was on its feet. Davis was in the lead less than one-eighth of a mile over Stokes, and Verrill was scarcely 400 yards behind the "X" rider. Stokes came into the pit in his ninety-fourth mile for oil and gas, and to fasten his stand, which had been trailing for nearly 20 miles and seriously handicapped the rider, making his machine do tricks on the turns. Glen was nearly two miles behind when he again took up the race.

Davis apparently had the race won when he started his ninety-fifth mile. On his next whirl, however, his gas gave out and Jim was stranded in the north turn. By the time his pit men could reach him Verrill had taken the lead and was never headed. Stokes and Davis then raced it out for second place, the Westerner winning.

Wolters won the sweepstakes prize for the leader at 25 and 50 miles. Davis received the prize for the vanguard at 75 miles, while Verrill won the winner's award and the Champion Spark Plug trophy offered by the Toledo firm. As the three leaders crossed the line there was less than three-fourths of a mile between them. Summaries:

Five-Mile Qualifying Heat—Walker (Indian), won; Davis (Indian), second; Stokes (Excelsior), third. Time, 4 minutes 9⅗ seconds. Perry, Suddith, Verrill and Woodland also started.

Five-Mile Qualifying Heat—Creviston (Indian), won; Wolters (Excelsior), second; Taylor (Indian), third. Time 4 minutes 7 seconds. Hilliard, Ellis, Vern, Walker, Howich, and Ellis also started.

Five-Mile Consolation—Myers (Indian), won; Perry (Excelsior), second; Hilliard (Excelsior), third. Time, 4 minutes 14⅗ seconds. Verrill, Suddith, Woodland, Vern, Walker, Millen, Howich, and Ellis also started.

Ten-Mile Final—Creviston (Indian), won; Stokes (Excelsior), second; Wolters (Excelsior), third. Time, 8 minutes 18⅘ seconds. Perry, Taylor, Hilliard, G. Walker, Myers and Davis also started.

Five-Mile Special—Davis (Indian), won; Vern Walker (Indian), second; Howich (Excelsior), third. Time, 4 minutes 8⅕ seconds. Woodland and Miller also started.

100-Mile Sweepstakes—For Champion Spark Plug Company's trophy—Verrill (Indian), won; Stokes (Excelsior), second; Davis (Indian), third; Wolters (Excelsior), fourth. Time, 1 hour, 28 minutes, 40 seconds. Myers, Suddith, Perry, Taylor, Hilliard, Howich, V. Walker, Woodland, G. Walker, Ellis and Millen also started.

AKRON TAKES CARE OF HER SOLDIER BOYS

Large Tire Concerns Arrange Salary Schedules to Provide for Dependents of Employees Called to Colors—Will Hold Positions Open Until Their Return

AKRON, Ohio, June 26.—Akron, like every other city in the United States large enough to quarter a state militia regiment, is bustling with enthusiasm as the mobilization of the militia is being carried out, and in this connection not the least interesting announcement comes from the tire factories, practically all of which have granted to those employees, who are enlisted in the National Guard service leave of absence either with full or part pay during their call to the colors.

The B. F. Goodrich Co. has been most liberal in providing married employees enlisted with the guard or single ones with dependents, two-thirds of their average pay figured from their earnings during the past three months, less the government compensation. In other words the Goodrich man in this class, who goes to the front, can be assured at least of receiving two-thirds of his pay all told and his own keep. Single men or married men who are not contributing to the support of their families will receive one-half of their salaries less the government compensation. Arrangements will be made for the payment of the Goodrich salary to the dependents of the enlisted men, or else it will be held in trust until the return of the employees. Absence for military duty will not affect pension and insurance funds, and the employees will be continued on the rolls, their absence being classed as a leave of absence rather than a resignation.

Liberal Firestone Policy

The Firestone Tire & Rubber Co. is equally liberal. Those employees who have been with the company for three years, and who have enlisted in the National Guard prior to June 20, will be granted full pay less the government compensation. Employees who have been with the company between one and three years will receive two-thirds pay less the government allowance, and those who have been with the company less than 12 months will be paid one-half of their regular salary less the government allowance. These arrangements will hold for one year, and will apply also to those employees who enlist now or in the near future provided they have been in the Firestone service for at least six months.

The Goodyear Tire & Rubber Co. is also working up a plan to insure the support of the dependents of those employees who are called to the colors, but as yet the details have not been announced. Indications are, however, that the Goodyear plan will follow very closely the plan adopted by the other tire companies.

BOSCH AGAIN OFFERS AMATEUR CHAMPIONSHIP CUP

NEW YORK, N. Y., June 28.—The Bosch Magneto Co. announces that it will again this year offer a handsome silver cup to be awarded to the amateur rider who comes off best in the National amateur championship events which are run throughout the season. Most of the events will be contested for at the Providence meet, though some of them will be run elsewhere, according to the practice followed in previous years.

The awarding of the big silver trophy, which is more than two feet high, is to be determined by a point system. The winner, second and third place men in each of the championship events receive a certain number of points each and at the end of the series the rider who has gained the greatest number is entitled to retain the trophy as his own property and has the title of amateur champion for the year. The point system has been arranged by the donors of the trophy, the Bosch Magneto Co. of New York, and the awarding of points is so arranged that it is practically necessary for the winner of the trophy to compete in all events. This makes the contest for the title a real battle of nerve and skill, and the title is all the more coveted.

ONE HUNDRED MILES FOR DAYTON MEET, JULY 4

DAYTON, O.—The Miami Racing Co., Inc., will stage a meet at the Fair Grounds track on July 4. The feature event of the card will be a 100-mile open, with a first prize of $200, a second of $75 and a third of $50. There will be sweepstake prizes of $25 each for 25, 50 and 75 miles.

The first event will be a bicycle race for boys under 18, with merchandise prizes. The next two will be two-mile heats with first three in each to compete in final. Prizes are $15 and $10 per heat. This will be followed by a five-mile final, with prizes of $20, $15 and $10. A lightweight novelty exhibition will be the fifth event, the winner to get $10.

Entry fee is $1, application being made to W. J. Teubner, 208 North Main street, Dayton.

THEY HAVE PINNED THIS MEDAL ON WAUGHOP

C. W. WAUGHOP, who travels in the East for the Cleveland when he is not cleaning up endurance runs and other contests astride a machine of that make is the proud wearer of the gold medal pictured herewith awarded to him by the New Jersey M. C. The medal was offered in the recent endurance run staged by the club, for the best score made by a professional rider in the lightweight class.

EIGHT EVENTS FOR NORWICH'S JULY 4TH MEET

NORWICH, Conn., June 26.—Entries for the ninth motorcycle race meet to be promoted on the Norwich fair grounds track by the Connecticut Amusement Association on Independence Day, July 4, close on Friday night next, June 30th. The day's card, as now mapped out, comprises five 5-mile events. Four of them for 30.50 cubic inch machines and the fifth for 50 cubic inch stock machines; a 10-mile professional event for 30.50 cubic inch machines, some one-mile time trials for the track record and a three-mile professional for 61 cubic inch machines with sidecars. Entries should be sent to C. V. Pendleton, Jr., 35 Broadway, Norwich, Conn.

BUFFALO CYCLE MEN FIGURE IN PARADE

BUFFALO, N. Y., June 24.—A squad from the Buffalo Rifle Club under the leadership of Otto H. Peters, the Bison City Harley-Davidson agent, rode at the head of the Buffalo Preparedness Parade this afternoon with A. Conger Goodyear, the general grand marshal.

Further, in a heavy rain, nearly one thousand motorcycle, bicycle and tire dealers marched in the parade. The rain did not discourage them a bit. The Pierce Cycle Works had fifty of their employees in line. Percy Pierce acted as captain.

PORTER HEADS SAVANNAH MOTORCYCLE CLUB

SAVANNAH, Ga., June 26.—The annual election of officers of the Savannah M. C. was held last Tuesday night and the following officers elected:

George A. Porter, president; J. L. Hetzel, 1st vice-president; Mark Silvers, 2d vice-president; O. A. Meyer, secretary; H. C. Gould, treasurer; J. S. Cafiero, captain; George J. Cleary, 1st lieutenant; Earl Williams, 2d lieutenant.

LETTERS FROM MOTORCYCLE PATRIOTS RECEIVED

Creditable Start Has Been Made on List of Those Who Are Ready to Serve Flag with Machines in Event of National Peril; First List to Appear in Next Issue

A NUMBER of letters have been received from motorcyclists in answer to the request published in the June 22nd issue that riders list themselves as ready to serve the flag with their motorcycles if necessary, and the formal list will be started in the next number. By way of showing the spirit of those who have already responded three letters are published below and others will be printed in succeeding issues. About a dozen names are in hand and there are indications that the list will be doubled or trebled in another week.

Keep this point in mind: You do not actually obligate yourself to enlist when you place your name on this roll; you simply indicate that you are interested in your country's welfare and that *if needed in the face of national peril* you and your motorcycle could be counted upon for the service of the flag. By taking this stand you will help to prove that American motorcyclists rank second to none in loyalty and in gameness, and that the motorcyclist is capable of considering something besides the hum of his motor on a pleasure outing. Uncle Sam may never need you, but you will at least have the satisfaction of knowing that you stood ready to give your aid if called upon.

Send in your name at once, in order that you may appear on the first list, in the July 6 issue.

"READY FOR DUTY AT ANY TIME"

Editor Motor Cycle Illustrated:

In reply to your article, "Are You Ready to Serve Your Flag?" in the June 22nd number, would say that I believe you have started a fine movement of true patriotism.

You can place my name on the list as one who stands ready for duty at any time that I may be called.

The demonstration at Van Courtlandt Park last fall showed the officials just about how the power two-wheeler can be used.

Wishing you success, and with kindest personal regards from the writer, I beg to remain,

Respectfully yours,
W. H. ENELL.

508 West 180th Street,
New York City.

"GLAD TO OFFER SERVICES"

Editor Motor Cycle Illustrated:

In reply to your inquiry in the latest issue of your magazine, as to the willingness of motorcyclists to volunteer their services with their machines in case an extremity occurs where their services are deemed necessary to maintain national honor, I should be glad to offer my services with my 1915 three-speed Indian and sidecar.

JAMES E. O'CONNELL.

40 Fourteenth Street,
North Troy, N. Y.

"YES, BY ALL MEANS"

Editor Motor Cycle Illustrated:

You ask in your latest number of Motor-Cycle Illustrated if we are "ready to serve the flag?" My answer is: yes, by all means. I have a 1916 three-speed Indian and sidecar fully equipped, including an F-N tandem. Should an occasion arise so that Uncle Sam needs me you can rely upon my answering the call immediately. Kindly publish my name as one of those who are ready.

CHARLES E. KENISTON.

314 Parkville Ave.,
Brooklyn, N. Y.

GOODYEAR COMPLETES ITS FOURTH STACK

AKRON, Ohio.—The last brick in the third stack which for two weeks has been in the process of erection at the Goodyear Tire & Rubber Co., was cemented in place recently. The stack just completed is 21 feet 6 inches in diameter at the bottom, tapering to 15 feet 6 inches at the top, which is about 250 feet above floor level.

Goodyear now has the three highest stacks in the state, all of which have been built to withstand a wind velocity of 100 miles an hour.

The erection of a fourth stack of the same height will be commenced soon for the new mechanical and chemical plant, about a mile up the Little Cuyahoga river.

AGITATING FOR CROSS CANADIAN TRIP

TORONTO, Ont.—In these days of record-breaking transcontinental tours by motorists, President F. A. O. Johnston, of the Canada Motorcyclists' Association, has come out with the suggestion that a road-plugging motorcyclist could make a real name for him self by a dash from ocean to ocean through the wide plains, roadless forests and mountain ranges of Canada. No motorcyclist has ever attempted to cross the Dominion, and the only automobilist who essayed to make the trip was compelled to use a railway.

President Johnston believes that a motorcyclist would stand an excellent chance of completing the journey from the Atlantic to the Pacific, inasmuch as the single-tracker could proceed along trails and paths through the woods of northern Ontario and across the Rocky Mountains much more easily than an automobile. Outside of the three transcontinental railroads in Canada the only means of crossing the country are by walking, flying or motorcycling.

The C. M. A. official is anxious to see some veteran road-burner try the Canadian route. Because of the natural difficulties, which are well known, considerable glory would be earned by the first rider and the first motorcycle to perform the 4,000-mile feat.

GET YOUR TOURING TOGS READY FOR JULY 4TH!

DON'T forget that the Dodge City, Kan., race and the Sheepshead Bay, N. Y., speed program, both slated for July 4th, will be two of the biggest sporting affairs of the year in motorcycledom. Make arrangements to tour to Dodge City, if you are within reasonable riding distance of that point, and if you are in or near the New York district be sure to attend the Sheepshead Bay program.

If you are out of range of these two big cards look around in your own territory for a run, a picnic, a hill-climb, or a race meet and ride to the scene of action. You will have a day of fine sport, encourage the promoters of the sporting events who deserve your heartiest co-operation, and also set a good example for thousands of non-riders who will profit through seeing your neat and skilfully handled motorcycle outfits on the road.

Make your arrangements without delay. Get to the races if you can, but at any rate trundle out the trusty mount and make the most of the holiday.

READY FOR ELIMINATION RUN ON JULY 1

NEW BRUNSWICK, N. J., June 24.—Final plans for the running of the second annual elimination contest of the Indian M. C. on July 1 have been made, and all hands are anxiously awaiting the day of the start. The contestants will be despatched, beginning at 3 p. m. from the clubhouse.

Regarding the finish, no one knows the time. Last year the survivor rode 38 hours and covered 851 miles before being eliminated and officially closing the race. It is predicted that this record will be beaten in 1916, and so sure are the clubmen of this that they are offering a series of medals as follows: Bronze medal to each rider covering over 400 miles; silver medal to those covering over 800 miles and gold medals for those covering 1,000 miles or over. These medals are offered in addition to the cups and accesssory prizes.

Entries have been received from riders in Worcester, Mass.; New Haven, Conn.; and Boston, among others, and there is a big local list. "Peanuts" Spurgeon, survivor of the Worcester, Bay State, and New Jersey M. C. runs, will enter the lightweight division on his Cleveland in this run.

NEW JERSEY CLUBSTERS TO BE BUSY NEXT WEEK

NEWARK, N. J., June 24.—The next regular club run of the New Jersey M. C. is slated for Monday, July 2, with Trenton as the destination. This is on the route of the visiting motorcyclists from Pennsylvania, and the plans of the local organization are to escort the visitors into town in a body.

The New Jersey club will be well represented at the Sheepshead Bay Speedway, and will be recognized by their conspicuous neckties. One member of the club is now with the National Guard in camp. This is E. S. Fraser, holding the agency for the Cleveland lightweight. He is camped with the 22nd New York Engineers at Beekman, N. Y.

Jack Neis and Mike Toepel, of the Splitdorf forces, will be at Dodge City over the Fourth to see to Dixie ignition matters.

The club's decorated parade on June 17 refused to be dampened by rainstorms. Over 50 riders were in line.

GOODYEAR STARTS WINDOW DISPLAY SERVICE

AKRON, Ohio, June 26.—Recognizing fully, as it always has the real worth of dealers' sales helps, the Goodyear Tire & Rubber Co. has inaugurated a new and very valuable helping hand department which will be devoted exclusively to devising and developing window displays built around Goodyear tire products. The new department is in charge of Charles Speed, a display specialist.

The first work of the new department, which is now ready for distribution, includes a set of six window displays embracing automobile, motorcycle and bicycle tires as well as tire fitments and rubber hose. The arrangement is such that the setting for any one of the six displays can be used for any of the others, enabling a dealer to feature the whole series without changing the background, which consists of a three panel unit showing a five color scene in the rubber growing country.

TOURMASTERS READY FOR PROVIDENCE TRIPS

Leaders of Various Divisions Are Enrolling Their Troops of Tourists for Runs to F. A. M. Convention; Dates and Starting Points for the Tours Are Officially Announced

PROVIDENCE, R. I., June 28.—All that good companionship and good roads can do to make the runs to the National F. A. M. Convention in Providence July 25-29 a sparkling success is forecast by the preparation announced this week. Jes Campbell, F. A. M. director for the New England district, at Boston, and Hal H. Noyes, F. A. M. Commissioner-at-Large for New York State, will have general direction of the assembling of the troops of riders.

Not only the Atlantic Coast and inland New York but a big wedge of the Middle West will be represented by riders in this movement, some being expected from Chicago. There will be five tours from the New England States and farther South along the coast. The Western tour will take two days and a half, starting from Buffalo July 23 under Tourmaster George Wagner, of Rochester, N. Y., assisted by Tourmaster Lieutenants Ben E. Neal and E. R. Durkee. The Southern tour starts from Newark July 24. E. B. Holton, of Newark, is tourmaster and his lieutenants are C. W. Waughop and P. W. Stevens.

The White Mountain Tom

The White Mountain tour starts from St. Johnsbury, Vt., July 24. Tourmaster M. M. Counsell of the starting place in command, with Leo Canty, of Rutland, for his lieutenant. The North Coast tour originates in Portland on the 24th. Harry A. Hubbard is tourmaster and his lieutenant is C. C. Jordan. The Greater Boston tour starts from the Hub on the morning of the opening day of the convention, July 25. Calvin W. Stanley, of Boston, is tourmaster and the lieutenants are Fred Smith and Ralph W. Watson.

All these tours are expected to converge in Providence about noon of the 25th in time to see the endurance riders come in from a run which starts at Albany and runs up through the White Mountains and Maine. It is the plan of Committeemen Noyes and Campbell to award gold medals to all survivors on the several tours.

Special diamond medals will be awarded to the neatest appearing sidecar outfit and the neatest appearing solo rider; a diamond medal will go to the captain with the best appearing company; a silk pennant will be awarded to the club with the largest percentage of riders. A nominal entry fee is charged to participants in the tours.

In judging the neatness of riders it is expected that the distance traveled will be taken into consideration by the judges, who will be J. Leo Sauer of **Motor Cycle Illustrated,** T. J. Sullivan of *Motor Cycling & Bicycling* and J. J. O'Connor of *Pacific Motorcyclist.*

Riders can obtain full information from their respective tourmasters or from Committeemen Noyes and Campbell, and additional bulletins will be published before the tours start.

TRADE MEN ARE BUSY AT VANCOUVER

Wigwam Dealer Is Showing Featherweight and Excelsior Man Is Pushing Series 17 and Cygnet Rear Car

VANCOUVER, B. C., June 6.—Chief W. H. Morrison has taken delivery of his second Indian Featherweight, and is busy giving daily demonstrations with it at the Hastings street headquarters of the Indian. The little two-stroker is attracting lots of attention from riders and those who would like to be riders, if they had the cold cash to break into the game.

The Cygnet Rear Car is making its début on Vancouver streets. It is handled by W. E. Woodley, representing the Excelsior here. Woodley is busy showing the capabilities of the rig, and has sold his first one to the purchaser of a '17 model Ex. He has plenty of other prospects, he says.

Woodley has several more Cygnets on order, and is expecting another Series '17 Excelsior in a few days.

INTERESTING STORIES IN THE FIRESTONE

HOW a Firestone tire equipped machine helped get an American out of the hands of Mexican bandits is recorded in the June issue of *The Firestone,* the house organ of the Firestone Tire & Rubber Company, of Akron, O. The machine was a Harley-Davidson, ridden by Lee Koenig, of La Grange, Texas. The issue, as usual, is crammed with interesting pictures of Firestone users and boosters.

SIDECAR OUTING IN ENGLAND FOR WAR'S WOUNDED

Harley-Davidson British Company Stages Second Entertainment Trip for British Soldiers

MILWAUKEE, Wis., June 26.—These troublesome times make us think, when we mention the motorcycle's usefulness in war only as a machine in use at the front for the transportation of machine guns or in dispatch-bearing service. But from the Harley-Davidson Motor Co., Ltd., of London, England, comes the tale of an effective war service rendered by motorcycles, although miles remote from the firing line. The story has to do with the second Harley-Davidson sidecar outing for wounded soldiers which occurred at Burford Bridge, Box Hill, on May 20, which was carried to a successful conclusion by the British Harley-Davidson Co., ably assisted by some 60 private Harley-Davidson owners who contributed the use of their sidecar outfits as well as their services as drivers.

The start was made from St. Thomas' Hospital, the route leading through Chelsea, Putney Bridge, Putney Vale, Kingston, Surbiton, Hook, Ashted Common and Leatherhead to Burford Bridge Hotel where a musical program and refreshments were provided by the hosts. For the most part, the soldiers who were entertained were wounded in the legs, as the hospital authorities gave the preference to the men who, because of their injuries, could not get around as freely as the others in the open air.

The outing has done much to crystallize sentiment in Great Britain on the favorable aspects of the motorcycle and to make more than one person question the wisdom of the British embargo on American-made motorcycles.

FOUR OMAHA RIDERS TO THE FRONT

Lack of Official Recognition of Corps Handicaps Remainder of Mounted National Guard Body

OMAHA, Neb., June 23.—Official recognition of the motorcycle corps of Company C, Nebraska National Guard, was not given by the authorities in Washington, in time to permit the entire division of riders to accompany the Nebraska militia to the Mexican border. Four members of the guard, however, secured permission to ship their machines with the other impedimenta of the battalion from Omaha, and will act as dispatch riders for the headquarters department.

Three Indian riders, Harold Oviatt, Gerald Wilson and James Fisher, and one Excelsior rider, Jess Alexander, comprise the quartet. With the four local companies, they left for the state mobilization camp at Lincoln this morning, and on Sunday will proceed with the brigade of Nebraska troopers to Mexico.

All of the boys carried full military outfits, including blanket roll, knapsack, sidearm belt and canteen, as well as army rifle and bayonet. Mud-guards were discarded on both front and rear wheels to assure easy going through mud, and the machines were "all tuned up" for speedy action. For the past five days since receipt of orders for mobilization of the militia, these men, as well as other mounted troopers of "C," have been performing invaluable service in aiding the work of preparing for the final departure.

SHORT ENLISTMENT FOR MOTORCYCLISTS

WASHINGTON, D. C., June 26.—Realizing that it is practically impossible to take a raw soldier inexperienced in the handling of motor vehicles and train him to operate a motorcycle in a short space of time, one of the congressmen has come through with a suggestion that in order to entice trained motorcycle riders into the service during these troublesome times, a short enlistment period might prove effective. Says the congressman in question:

"If congress would make it possible for the army to receive enlistments for shorter periods than the three years now required, a call for motorcycle volunteers would not only quickly supply the companies now contemplated, but would bring forth regiments of experienced men. As the law now stands, the army is forced to attack the problem the wrong end to. Men who have had experience with motors are needed quickly. The way to get them is to enlist them to serve during the period of the Mexican expedition. Three years is too long a time of enlistment for anyone who does not intend to remain permanently in the army. If the period of enlistment were six months, or even a year, it would bring good results.

"Brigadier General J. J. Pershing, in charge of the American advance in Mexico; Brigadier General George Bell, Jr., in charge of the troops in and around El Paso, and all the other officers on the Mexican job will testify to the same thing."

HOW THE NEW MIAMI PACE IS BEING SET

Committee in Charge of Middletown Factory Has Already Boosted 1916 Business Beyond the Full Total of Last Year; the Hustling Trio Behind the Results

James W. Ash

Harry S. Wise

Charles R. Miller

MIDDLETOWN, O., June 27.—Organization experts have always appreciated fully the importance of team work and a truly co-operative spirit in manufacturing, but it is doubtful if those sterling principles were ever better exemplified in the motorcycle and bicycle fields than at the factory of the Miami Cycle & Mfg. Co., in Middletown, Ohio, where affairs have been in the hands of a committee of three hustlers for some time past. The committee, which is composed of James W. Ash, Harry S. Wise and Charles R. Miller, is able to report today that it has already exceeded the Miami production of last year—and the fiscal year does not close until September.

Congratulated by Directors

This pace was struck soon after the committee was placed in charge of the Miami factory by the Board of Directors, and it has never waned. In fact, there are evidences on all sides throughout the plant that the present gait will continue to be accelerated steadily as plans for the 1917 season are taken up. At the latest meeting of the Directors of the company it was officially stated that the reports of progress in the factory were the most satisfactory ever submitted—and the committee modestly went back to work and threw in a little additional speed just to indicate that the next Directors' meeting is going to be still more successful. All of which is merely a roundabout way of saying that the Ash-Wise-Miller combination is making good—and doing it in a surprisingly short time.

Mr. Ash handles the sales end of the business; Mr. Wise attends to the finances, and Mr. Miller is the factory manager. These three hold daily meetings, ranging from an hour to two hours in length, at which every detail of Miami production is considered. Every meeting starts something worth while, and, having a free hand, the committee loses no time in putting the worth while ideas to work in the factory. Result: More business, and all-round efficiency.

Mr. Ash has brought a lot of bed-rock experience to bear upon his present work, his career in cycledom dating back to 1895 when he started as a bicycle dealer in Lockport, Ill. He took on a bicycle agency while working as a telegraph operator, and later joined the Bean & Chamberlain Mfg. Co., in Hudson, Mich. Mr. Ash worked his way through the factory, which produced the Hudson bicycle line, and became sales manager. He retained that position till 1903 when he bought out the company's bicycle department and operated it as the Hudson Mfg. Co. He progressed steadily till 1907 and in the interim bought over the Park City Mfg. Co., which had specialized on the manufacture of the D & J crankhangers. Mr. Ash continued to market the D & J hangers as part of the Hudson bicycles.

About that time he became deeply interested in racing and was intimately acquainted with George Leander, Nat Butler and scores of others who helped to make early bicycle racing history in this country. For many of these speed stars he built special racing mounts.

Wiped Out Overnight

In 1907 a flood wiped out the Hudson Mfg. Company's holdings overnight, the loss being about $40,000. Mr. Ash considered it unwise to attempt reconstruction, with the possibility of another flood in mind, and when the Miami Cycle & Mfg. Co. made an offer to buy out the Hudson interests he closed the deal and joined the Miami staff. In that year the Miami sales amounted to $360,000, and two years later they footed up to $1,000,000. That they have since increased steadily will be seen from the fact that a total production of about $2,000,000 is figured on for 1917.

Mr. Wise brings to bear upon Miami finances a manufacturing and executive experience gained in 26 years of consistent activity in the cycle industry. He began his career with the Crawford Mfg. Co., which produced the well-known Crawford bicycle, and later went with the Pope Mfg. Co., at the time of the A. B. C. organization. His association with the Pope people continued until he accepted an offer from the Miami folks nine years ago. He entered the Miami organization as a member of the accounting staff and almost immediately began to make his presence felt as a stickler for systematic operations.

A Believer in System

As time went on Mr. Wise suggested improvements in the accounting and allied departments, and finally succeeded in having reports and bulletins from all angles move with clocklike precision. This work he has still further advanced since the committee took up its duties. There are bigger things than reports to occupy his attention, of course, but affairs of vital importance and matters of comparatively trivial significance all go through on the same basis of thoroughness and expediency.

Factory Manager Miller, like Messrs. Ash and Wise, couples modesty with long expeience. He has been so busy "doing things" that he has little time to talk about them. He entered the G. & J. plant in 1894 as foreman of the machine department and naturally had a great deal to do with the successful production of the Ideal

MANICURED COURSE FOR LA GRANDE'S SPEEDFEST

Two-Day Meet, July 22-23, Will Be Run on New 1½-Mile Sub-Irrigated Dirt Track; Interesting Card Augments Success for Club's "Speed 'Em Up" Contest

LA GRANDE, Ore., June 26.—La Grande's "speed 'em up" motorcycle race meet, which is scheduled for July 22 and 23, promises big things in the way of good, clean sport. The La Grande Motor Club, which is staging the affair, has this year chosen the new La Grande speedway for the setting, and on this one and one-half mile circular course on the first day of the meet they will promote five speed events, including a 50-mile feature event closed to northwest riders, and which is designated as the Northwestern Grand Prize championship contest. The purse for this event amounts to $200 divided, $100, $50, $35 and $15.

There are two five-mile events on the first day's card, the first restricted to local riders on seven-horsepower machines, which carries with it a purse of $50 and the second on open free-for-all contest with a purse of $25. A ten-mile event restricted to Northwest riders, with a purse of $50, and a series of one-mile time trials in which riders are to qualify for the final time trials on the second day completes the first day's program.

The "piece de resistance" of the second day, and in fact the feature of the two-day meet, is the one-mile free-for-all for which a purse of $500 is hung up, divided $250, $125, $75, $35, $15. The second day's card also includes two five-mile events and a ten-mile free-for-all in every way similar to the first day's card, and also the finals in the time trials for the track record. In this event a purse of $50 is offered, divided $25, $15 and $10. The entry fee for the 50- and 100-mile events is $5; for the five- and ten-mile events, with $50 purse, one dollar; while for the free-for-all, with $25 purse, no entry fee is charged.

The new La Grande speedway, as was said before, is a mile and a half circuit, built on a firm earth foundation with the curves of equal radius and well banked. The track is 80 feet in width, and was built especially by the La Grande Motor Club for the running of its annual motorcycle race meets, of which the coming event is the fourth. A feature of the track is the fact that while it is dirt, it is sub-irrigated in such a manner that only a single sprinkling is necessary just prior to the running of the race to insure dustlessness.

One point on which the La Grande Motor Club especially prides itself is that the races are absolutely free from commercialism. Not a cent has been asked for or donated to carry the expenses incidental to staging the race meet. All the funds, including the $1,000 purse, have been raised by selling membership and season tickets, and it is pointed out with pride that nearly every man in La Grande is a member of the club, and that everyone is boosting. The club has started an extensive advertising campaign designed to bring the race meet to the attention of motorcycle folk for a good distance around La Grande, and especially to attract possible entries from riders in the northwest district. The club is pushing hard to make their annual race meet second in point of national interest only to the Dodge City event, and in this connection it is pointed out that next year the new speedway will be fully paid for, provided bad weather does not cut down on the gate receipts, and that then the La Grande club will make a bid for the premier motorcycle classic of the year. The race meet is not run for profit, and every cent that is taken in over and above the expenses of staging the coming meet will go towards running next year's affair.

NOVELTIES FEATURE OF OMAHA OUTING

Second Annual Affair of Omaha M. C. to Glenwood a Huge Success; Four Score Riders Attend

OMAHA, Neb., June 22.—Last Sunday the second annual outing of the Omaha M. C. was held at Glenwood, Ia., twenty-five miles southeast of here, with nearly fourscore riders and their friends present. The picnic grounds were in a little park outside of town, on the banks of a small lake which afforded excellent fishing and boating.

After a huge dinner, everybody rode into Glenwood, where a diversified program of sports was staged. All of the races were novelty affairs where dexterity played an important role, and where the big crowd of spectators were treated to innumerable laughs and thrills.

Winners of the events were:

Solo blind-fold race, 300 feet, "Big Bill" Dristy, Indian.

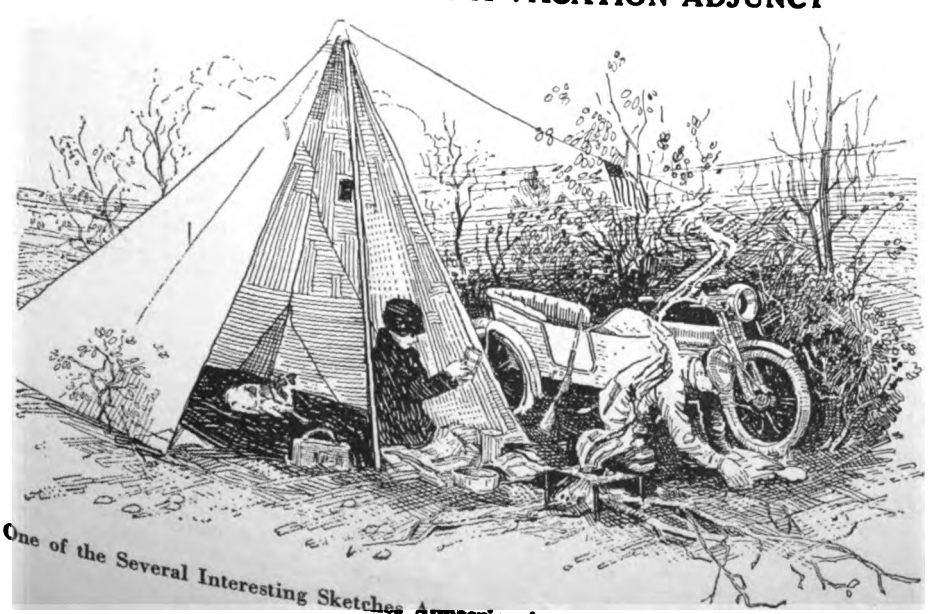
Side-car blind-fold race, 300 feet, Charles Howes and Mrs. Howes, Harley-Davidson.

Pie-eating contest (mounted), Fred Sutton, Harley-Davidson.

Lemon relay race, Carl Adolphson, Indian.

Side-car lemon relay race, Art Hughes and Miss Beulah Wilson, Harley-Davidson.

BOOSTING SIDECAR AS A VACATION ADJUNCT



One of the Several Interesting Sketches Appearing in a Bright Booklet Gotten Out by the Rogers Mfg. Co., Chicago

PARK COMMISSION TAKES "Xs"

Chicago, Ill., June 26.—The South Park commission has again put its seal of approval on the Excelsior motorcycle by ordering eight of the big valve 17-3 models for the use of its speed squad on the South Side boulevard system. The commission bought its first motorcycles, Excelsiors, back in 1910, taking several of the belt-driven models and with the exception of two machines of another make purchased two years ago, the South Park men have stuck to the big X ever since.

ROGERS WANTS GOOD PICTURES

Chicago, June 26.—Here's another chance for the amateur photographer to make $10 and make it easy. The Rogers Mfg. Co., maker of Rogers sidecars, Hearst building, this city, is offering a prize of 10 good United States dollars for the best photograph showing a Rogers sidecar in use. It is pointed out that camping and picnic photographs are especially desired although other photographs will also be considered.

WILLARD PROMOTES GARDNER

H. S. Gardner, manager of the Chicago branch of the Willard Storage Battery Co., has been promoted to manager of branch and service stations, and will make his headquarters at the home offices in Cleveland, Ohio. Chas. S. Whitney, who has been doing special work in the Chicago territory, succeeds him in the branch there.

JIMMY ROURKE'S VACATION TOUR

The Story of the Thrilling Adventures of a Red-Blooded Motorcyclist While on a Cross-Country Trip—How He Got Mixed Up In a Government Affair of International Importance and His Machine Saved the Day

PART I

By PAUL J. BAILEY

"Jimmy Was Being Slowly Overpowered, When Aid Came in the Form of Another Khaki-clad Figure"

JIMMY ROURKE, on a long cross-country vacation tour on his powerful motorcycle, entered the city late in the afternoon and sought a hotel for a night's lodging. After washing his face and brushing the dust of travel from his clothes so that he was neat and presentable in appearance again, he stepped out into the twilight of the street and sauntered to the corner cigar store to buy a "smoke."

As he entered the cigar store three stealthy figures slipped out of the shadows back of him, crept up to the front window, and peered in at him standing at the counter with his back toward them. A whispered consultation between the three, and they slunk into the darkness again as he turned to leave the store.

Suddenly Assaulted by Thugs

Returning to the hotel Rourke was suddenly assaulted by the three unknown thugs as he passed a doorway at a dimly-lighted spot on the street. Taken completely by surprise Jimmy was at a tremendous disadvantage, but he was in the pink of condition and powerfully built, and a desperate struggle ensued. The odds were too great, however, and he was slowly being overpowered, when aid came in the form of another khaki-clad figure that flew into the fray swinging a heavy blue-barreled service revolver.

The newcomer charged into the melee, hurled Rourke's assailants aside so that he could get his weapon into action without risking injury to the man he wanted to help; and as the three thugs fled in panic at this new development of the flight fired two shots after them that brought a scream of pain from one who stumbled and then limped frantically out of sight among the shadows.

Rescuer a Lieutenant

Now that he had time to look at his rescuer, Rourke saw that the other man was dressed in the service uniform of the army, and wore the emblem of rank that stamped him as a lieutenant.

"Warren Conway, lieutenant in the —— regiment," the other introduced himself briefly, and Rourke responded as they shook hands.

Conway took Rourke to the room that the lieutenant was occupying in the hotel and skilfully and deftly dressed the stratches and bruises the tourist had received in the fight, while Rourke told of what had occurred before the army man had arrived at the scene of the recent struggle.

Conway nodded thoughtfully.

"Yes," he said, more to himself than to the other man, "they mistook you for me. We're about the same build, and your riding suit resembles my uniform—they thought they *had me*."

But when Rourke asked him to explain what he meant by this rather puzzling remark, he suddenly became reticent and declined to shed any further light on the matter.

The motorcyclist speculated on this puzzle for quite a time after returning to his own room on the floor below the lieutenant's.

Why had the thugs attacked a man whom they had thought was Lieutenant Conway? Why had they wanted to harm him? And why was the army man so mysterious about it?

These questions defied solution. But Rourke scented the presence of big affairs concealed behind the scenes, and knew instinctively that there was more behind this man than could was apparent on the surface.

Still turning it over in his mind, Jimmy fell asleep.

A Sound from the Window

With something telling him that it was in the dim, dead hours just after midnight, Rourke suddenly woke to full consciousness with a feeling that something had moved nearby. He sat up and looked about the room, which the dim light from a distant street lamp showed to be bare and empty of life other than himself. He was about to decide he had been dreaming, and to settle back to sleep, when the ghost of a

Digitized by Google

sound from the open window brought him to alert attention again.

It sounded like a stealthy step on the fire escape.

Rising cautiously, Rourke slipped to the window and peered out. The iron ladder seemed empty, but he put out his head and looked above him, barely stifling a gasp of surprise. At the window immediately overhead, a form was just drawing himself carefully over the sill and crawling silently into the room occupied by Lieutenant Conway.

Conway Battles with Trio

Twisting catlike out of his window Rourke leaped rapidly up the narrow iron ladder and bounded into the lieutenant's room, just as noise of a struggle began. He caught a glimpse of Conway, a leather pouch fastened by a belt around the waist of his pajamas, grappling with three figures that set upon him in an insane frenzy to bear him down. The three were evidently trying to tear the leather pouch from his waist, snatching at it whenever their struggles put it in their reach, but the army man tigerishly fought them off.

All this Rourke saw in a moment and then Rourke grasped a heavy chair that stood near, and swinging it like a battle axe charged into the group. One of the invaders went down at the first blow, then another turned and grappled with him before he could strike again. Jimmy seized the man in his powerful arms and hurled him back against the sharp corner of the bedpost, where he wilted with a groan of pain. The conflict was short and sharp for a moment after this, then the three assailants suddenly gave up the fight and fled out the broad window and slid precipitately down the fire escape just as the night force of the hotel, roused by the commotion, clamored at the door. Lieutenant Conway lunged at the last thug as he scrambled out and clutched him by the sleeve.

The assailant screamed a curse at the soldier in a foreign tongue, a pistol suddenly glinted in his hand, and with a venomous hiss he fired point blank into Conway's face. As the lieutenant dropped to the floor he vanished down the ladder.

Rourke was at the army man's side in an instant. As the hotel attendants gathered inches, and Conway's life had been saved round in a frenzy of excitement he saw that the assassin's bullet had not gone true, but that the wound was a most dangerous one just the same. The bullet appeared to only by the narrowest margin.

Wounds Not Fatal

A doctor who was hastily summoned looked grave as he examined the wound, but said that if no complications set in Conway would probably recover fully in due time, but that he could not be expected to become conscious again for many hours, have plowed along the skull for several possibly for days.

For 48 hours the injured man lay unconscious, carefully attended by the doctor and nurse. Rourked slipped in quietly every few hours to inquire about his progress and would sit at the bedside anxiously watching the patient for minutes at a time.

About 2 o'clock on the second morning after the fight in his room Conway, who had settled from his troubled stupor into quiet natural sleep, woke to full consciousness. He glanced about the room in a puzzled way for a moment; then as his memory cleared he clutched at the place the leather pouch had rested and his face became strained and tense.

"Where is it—the dispatch bag that was on my belt?" he gasped, appealingly to Rourke, who had advanced to the bedside as the army man awoke.

"It's all right, old man," the tourist reassured him. "We removed it when the doctor was fixing you up and I've taken good care of it. Must be valuable stuff in it for you to watch it so close."

Reaching into a drawer of the dressing table he drew out the pouch and handed it to the lieutenant, who opened it and examined its contents anxiously, then heaved a deep sigh of relief as he saw that nothing had been tampered with.

"What time is it, and what day?" he suddenly asked Rourke, and when he heard the answer his face turned ashen.

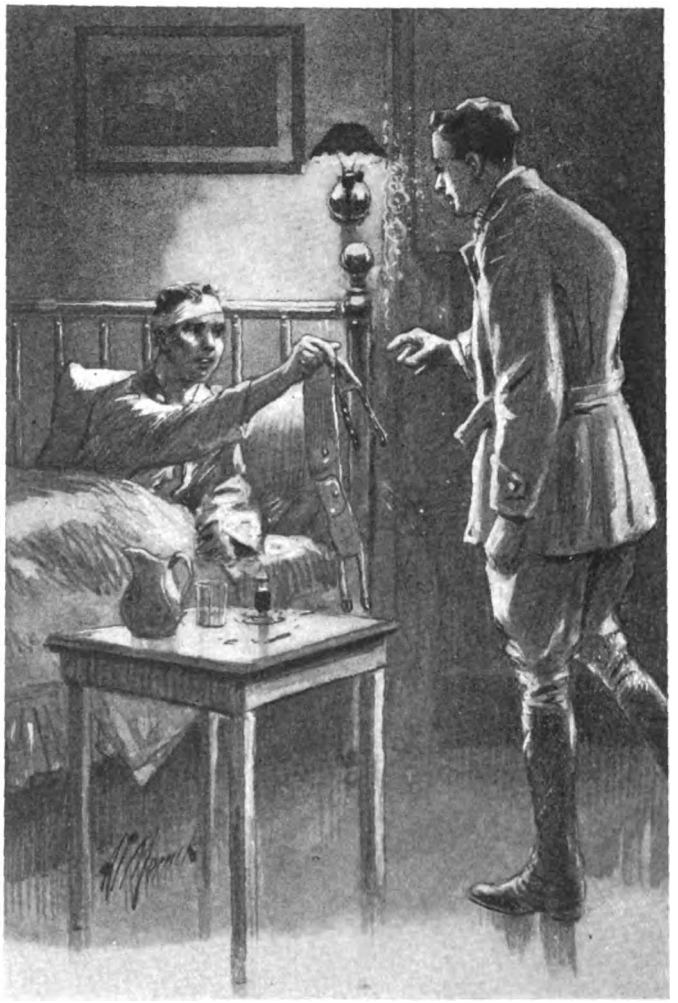
"Too late. The message *can't* be delivered on time now—it means ruin," he breathed despairingly. Then, in answer to Rourke's questioning gaze, he said:

"As you know, America has been involved in complications that might mean war with European powers. Affairs in secret diplomatic channels have come to a crisis now, and a final decision is to be made at a meeting of the Cabinet in Washington *this morning.*"

"The ambassadors of the greatest European powers will be present to receive their answer. *Unless the message I am carrying reaches the Cabinet before 11 o'clock this morning, that answer will mean war with the United States against the most powerful armies of Europe*—millions of lives lost and national disaster."

He paused a moment, then continued bitterly:

"Powerful, unscrupulous men, who for selfish reasons want to see the United States involved in a ruinous war, learned that I was entrusted with the vital message and have conspired to prevent its delivery.



"With Fingers That Shook, He Extended the Belt to Rourke"

A dozen attempts have been made to take it from me—they attacked you by mistake believing you were me, and again you arrived in time to upset their plans when they tackled me in this room.

"The message must reach the Cabinet before 11 o'clock this morning," Conway continued. "It's nearly 3 o'clock now, and Washington is 280 miles away—and no railway connections that can get me there before noon." The lieutenant was in mental

GETTING THRILLS FROM THE TANDEM SEAT

There Were Plenty of Mud and Ruts on the Trip Out of Bennington, a Few Falls and A Ride Over Corduroy Roads Home, But the Scenery was Fine.

IN SPITE OF EXPERIENCES THE PASSENGER WAS READY FOR ANOTHER TRIP

By DEWITT E. LEWIS

SAM came around at 9.30 the other morning and told my brother to hurry, so as not to waste such a glorious day. It did not take long to put final touches to the mount, and we started for the nearest garage for gas.

With tanks filled we emerged from the garage, expecting to meet a friend waiting, but he was nowhere in sight. Figuring that he had started ahead, we rode up the long and bumpy South Street Hill, which carries the rider out of Bennington. For several seconds in each minute it was touch and go as to whether I would continue with the machine or be left on the hill. We rode five miles, expecting to meet Sam at any time, but there were no signs.

Back to Bennington

Finally we stopped a small farmer's boy and asked if he had seen a motorcycle pass. "No, I ain't seen no motorsickle go by, but there's a fellow up there who wants one," said the future agriculturist. We searched the road to pick up his trail, but after following the track of a cycle-car for a mile or two, we shot back to Bennington. Here we found him in a garage, saying severe things about a damaged tire.

I started off on a hike without waiting to see the finish of Sam's job, and presently came to where I could hear shots, barking dogs and all the other things which go to make a Vermont deer hunt. A huge collie burst out of the bushes behind me presently, and startled me by growling. There was nothing to do but to walk on, all alert for any manifestations of anger on his part, which would mean a dash for a tree and a quick shinny up on mine. But in a short while collie and hunters were left behind, and Sam and my brother came along.

The First Picture

They stopped near me and we decided that this was a good place to take a picture. After focusing we heard the sound of a twin approaching, and we hailed the rider and got him in the photograph. After performing the required operations of shutter-snapping and changing the plate, I mounted on the tandem once more and we were off, over nice country roads.

For a while I was saying: Gee, how nice it is to glide over the ground on a good tandem—and then we struck a muddy section. There were also plenty of ruts. We tandemites just adore miniature trenches. Talk about visiting Coney Island with its thrills, why riding on tandem over a stretch of rutty, muddy and picturesque roads is far more inviting and exciting. I came off, landing seated in a squashy mud-wallow, once, but most of the time was bobbing around from one side of the machine to the other, as we traveled out of one deep rut to another.

This highway stretch was, to say the least, exciting for the tandemite. But it soon came to an end, and I had a chance to breathe freely again. But not for long, for we came to another and longer stretch, three times as rutty as before. We entered and was again jounced from side to side and out of the seat. It was a case of hanging on with the teeth and eyelashes.

Again on a smooth road we breathe hard but feel safe and speed to make up for lost time. Reaching the top of the famous Pownall Hill, we took a second photograph. This is a favorite halting place for tourists to admire the best mountain scenery in Southern Vermont. The next stop was at the "White Oaks Road," renowned in Revolutionary times. Up this road marched the Men of Berkshire to fight the British at Bennington, in August, 1777. Down this road in October of that same year came the Continentals with part of Burgoyne's army as prisoners of war.

At Sand Springs

Sand Springs was our next stop. These are the famous warm springs of Berkshire, flowing 400 gallons a minute and keeping a temperature of 76 degrees throughout the year. These springs were a health resort for the Five Nations and for the white men since 1762. After looking around we rode to Williamstown, Mass., the seat of Williams College, over smooth and picturesque highways.

On to North Adams went the wheels, still fitted with chains from the morning's preparations for mud. In this city we felt the pangs of hunger and made for a restaurant, but on taking a corner our mount felt frisky. The next thing I knew down we went, and when I awoke I was flat on my back, with many curious eyes focused on me from the sidewalks. These things always happen when there are plenty of spectators about. I sprang right up, wishing that pavements were made of rubber instead of brick, so as to be softer, and found nothing broken. We mounted again, and again the mount bucked, with the same result. This was my brother's first experience with chains of brick pavements.

In Hoosick Park

After purchasing lunch, we carried it to Hoosick Valley Park and enjoyed it, Vermont fashion—which means out in the fields with the cattle. We presently spied a little summer house and decided to go there. We forgot the pie, but the doughnuts made up for the loss. We surveyed the landscape, with the Mohawk Trail

HERE'S ONE MOTORCYCLE THE MOTORIST FAVORS

Dayton and Sidecar Used by Fisk Rubber Co. of Dayton, O., as Tire Service Car

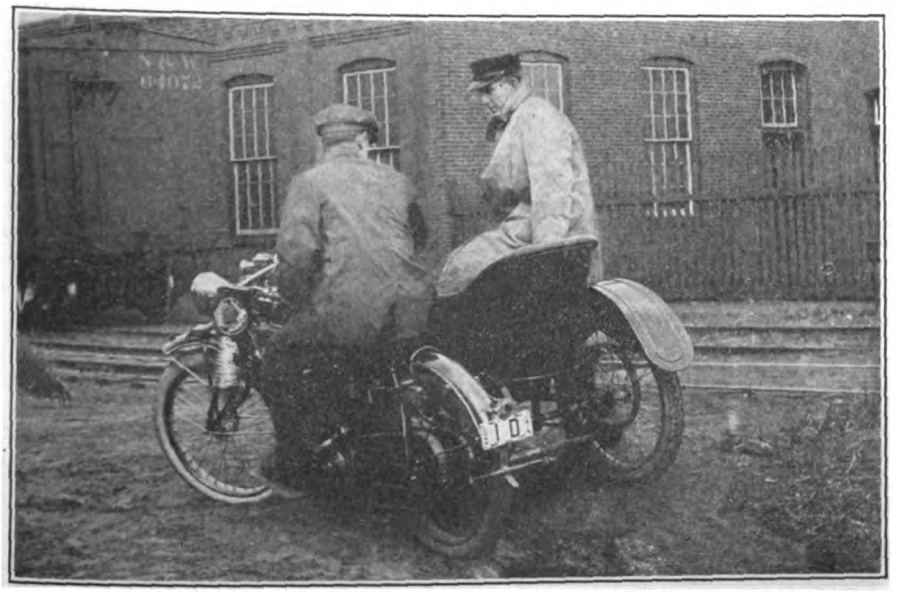
FIRE CHIEF USES INDIAN TO ANSWER ALARMS

NORWICH, Conn.—Deputy Fire Chief Adam Gernhardt, of the local department, has been rendered efficient and novel service by an Indian rider, C. V. Pendleton, Jr., who conveys him in the latter's sidecar to all fires. For the last three years Pendleton has not missed a fire in this city, and on each occasion Chief Gernhardt has gone in the sidecar with him.

When Pendleton first volunteered in 1913 to give the chief of the department, and sometimes the deputy chief a lift to fires, the service proved so valuable that the city government hired him to do this work regularly. He picks up the deputy chief at the shop where he works, about two miles from the center of the city, and then speeds to the fire, often arriving before any of the fire companies do.

FRISCO FISK BUYS HARLEY-DAVIDSON OUTFIT

SAN FRANCISCO, Cal.—The local establishment of the Fisk Rubber Company has just purchased a Harley-Davidson sidecar outfit, to get new tires to automobilists who may be stalled around San Francisco in the shortest possible time. The Fisk company prides itself on this service.



Deputy Chief Bernhardt of the Norwich Fire Department on Pendleton's Indian Outfit

Doings on the Pacific Coast

CALIFORNIA'S TOURING SEASON OPENS

Warm Weather Sends Many Off on Camping Trips and Long Coast Tours in Both Trade and Pleasure Circles—New Roads Opened

SAN FRANCISCO, Cal.—With the arrival of balmy weather, the touring season is well in swing in California and many riders are starting for camping trips in the rough sections. Others are making long tours over the Coast and valley roads. While the ordinary country roads are getting rather dusty, the State highways of asphalt and concrete now extend through most parts of the country.

The State road to Lake Tahoe from Auburn via Donner Lake has just been opened, and plans are developing for the construction by the State of the road from Tahoe City around the north side of the lake to Crystal Bay at the Nevada line.

Volney Davis, the local rider, started June 11 for his annual trip to Yosemite, though he will still have to leave the machine at El Portal. It is earnestly hoped that motorcycles will be admitted to the Valley by next summer.

Z. Barton, manager of the Thor branch, has just returned from a ride down the San Joaquin Valley as far as Fresno, with a good coat of tan, having made about 500 miles, calling on dealers along the way. While at Fresno he met Carter of that place, who was just back from a 1,500-mile run, which took him some distance across the Mexican line, then back to San Diego and up the coast as far as Santa Cruz before returning home; and he was starting for Yosemite to round out his vacation. He reported fine roads for the most part, and a very pleasant tour.

Tennant Lee, of Los Angeles, distributor for the Henderson, has just passed through with his mount, on a tour as far north as the Oregon line, combining business and pleasure, As for business, he says it has never been better.

PIXLEY CHOOSES RUBSCH TO FILL GATES' SHOES

SACRAMENTO, Cal., June 23.—George C. Rubsch, of 3804 South Grand avenue, Los Angeles, has been appointed to fill the post left vacant when Charles Fuller Gates resigned as F. A. M. commissioner for Southern California. In appointing Rubsch to this important post, C. S. Pixley, first vice-president and director of the national riders' organization, states that Mr. Rubsch's interest and activity in furthering federation affairs not only warrant his appointment, but undoubtedly will win for him the support of all federation members in southern California and adjacent territory.

BUTLER MAKES FINE GASOLINE MILEAGE

On Last Trip Along Coast Los Angeles Indian Man Averaged 45 2-3 Miles Per Gallon of Fuel

LOS ANGELES, Cal.—Thomas C. Butler, Jr., manager of C. Will Risden's Indian distributing agency, kept a record of every purchase of gasoline and oil on his last trip up the Coast and back and fourth from this city to San Miguel, beyond Paso Robles. On this trip Butler sold four machines and established agencies with J. W. Smith, Santa Margarita, Luse & McPherson, San Miguel and A. Scott, Paso Robles.

The fuel consumption on the trip, the machine carrying Butler (180 pounds), and a 50-pound suitcase, averaged 45⅔ miles per gallon. This was about the same kind of country covered by the endurance run riders—part boulevard and the rest mountain roads, country gravel and the rough stuff between main highways and ranches, with plenty of running on all three gears. Butler covered 680 miles on 15 gallons of gasoline and 5 quarts of oil. Gasoline was priced at an average of 20 cents the gallon. He made 544 miles to the gallon of oil, and the cost per mile (fuel and oil) was 0.06 of a cent, he states.

NOT "BARNEY OLDFIELD," BUT—

C. L. Smith, Los Angeles Jobber, and "Some Fisherman"

NOTES OF THE TRADE IN CALIFORNIA'S METROPOLIS

SAN FRANCISCO, Cal.—W. H. Jackson, of W. E. & W. H. Jackson, San Francisco representatives of the Dayton line, has just returned from a country trip, and will leave immediately for the Sacramento Valley district.

Bert Neustadt, a well known local motorcycle man, and formerly connected with the Hendee Manufacturing Company's branch, is to be connected with the new store of the recently organized Willys-Overland Company of California.

Mayo & Easterbrook, Harley-Davidson agents at Marysville, Cal., are well satisfied with their venture into the motorcycle game. Mr. Mayo was in San Francisco a few days ago, and placed orders for delivery out of the next carload of three regular machines, a commercial side-van and a side-car outfit, all of which have been sold in advance.

Mr. Sayre, manager of the Appeal Manufacturing & Jobbing Company at Los Angeles, stopped in San Francisco over last Saturday.

S. AND W. WATCHES STAND HARD SERVICE

BUILT to stand the hardest kind of knocks in any service is the Ingersoll Army & Navy wrist watch, the product of the S. & W. Military Specialty Supply Co., of 110 West 40th street, New York. This watch has a luminous dial and hands, making it ideal for night service. The watch is an Ingersoll movement in nickel case with strap of fine leather. It is listed at $4.00.

The dial and hands are specially treated to make them self-luminous, and are guaranteed for five years. This make of wrist watch is authorized by the New York national Guard, and is much used by officers and non-commissioned officers in the regular service. It is sold with a money-back guarantee.

To those who desire a more expensive watch, the firm offers the S. & W. Army & Navy Special, at $8.00. This watch has a 7-jewel lever movement, giving the maximum of efficiency and service and being unaffected by climatic conditions. The case is heavy nickel and the strap is of heavy tan pigskin. An extra strap and crystal is furnished free with each of these watches. The dials and hands are luminous and guaranteed so for ten years. The movement is guaranteed for five years. This watch has been authorized by the regular services as proper equipment for officers and has been tested for several years before being placed on the market.

FILL THE EMPTY SIDECAR WHEN ON THE ROAD

WHEN riding along with an empty sidecar for any purpose, the dealer will do well to pick up the first man he meets on the road, and, if the latter is willing, take him along. The passenger will soon see how easily the combination handles, and may turn out to be a pospect. If not, the dealer has made a friend for the motorcycle and for himself.

POWER BICYCLE MAKES 134½ PER GALLON

Miami Traveler Rides From New Haven, Conn., to Middletown, O., on 8 1/5 Gallons of Gasoline—Covers 1,102 Miles

MIDDLETOWN, O.—C. F. Pineau, Miami Power Bicycle traveler for the Miami Cycle & Manufacturing Company, of this city, recently completed a tour of 1,102-mile trip through Massachusetts, New York and Ohio, on 8⅕ gallons of gasoline. The run was to the factory from New Haven, Conn. Pineau averaged 134½ miles per gallon.

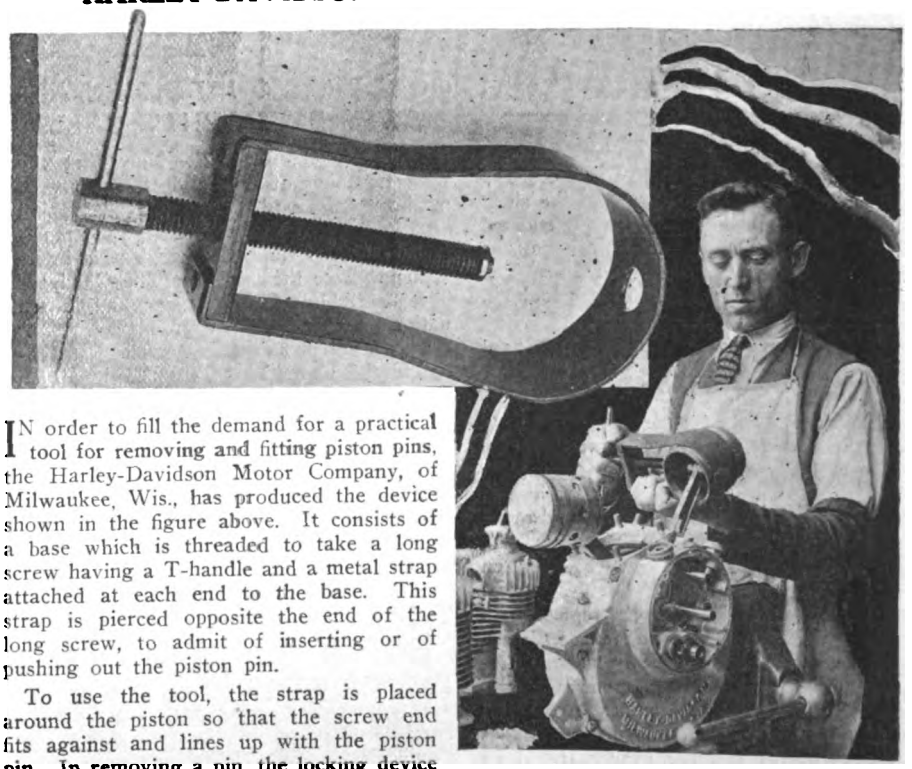
Pineau was in New Haven during the Miami Power Bike week held by Sam Schwartz, the local representative during the second week in May. Toward the end of that week, Pineau decided to ride the little four-stroke mount to the Miami factory in this city and, having notified the home office of his intention, started from New Haven at 11 a. m. on May 24. He reached Lee, Mass., at 7:30 p. m. on the same day; Utica, N. Y., at 7 p. m. on May 25 and Rochester at 6:45 p. m. on the 26th.

Continuing, Pineau and the Power bicycle came in Fredonia on the evening of May 26 and reached Geneva, O., the next night. Bucyrus was arrived at on the evening of May 28, and on the afternoon of the next day he rode into the grounds of the Miami factory here. His total distance from New Haven was 1,102 miles and his riding time was 65 hours, giving an average speed of 17 miles per hour. He used 8.2 gallons of gasoline, averaging 134½ miles per gallon. The trip was made without mechanical trouble or adjustment of any kind, the only accident occurring near Fredonia when the mount skidded and a pedal was broken.

Pineau used Goodyear tires and had no trouble at all with them. His National magneto stood up in fine shape and never missed a spark, even in the heavy rains west of Buffalo. The Spartan belt used as regular

(Continued on next page)

HARLEY-DAVIDSON PRODUCES PISTON PIN TOOL



IN order to fill the demand for a practical tool for removing and fitting piston pins, the Harley-Davidson Motor Company, of Milwaukee, Wis., has produced the device shown in the figure above. It consists of a base which is threaded to take a long screw having a T-handle and a metal strap attached at each end to the base. This strap is pierced opposite the end of the long screw, to admit of inserting or of pushing out the piston pin.

To use the tool, the strap is placed around the piston so that the screw end fits against and lines up with the piston pin. In removing a pin, the locking device is first removed, then the tool set on and the screw turned, pressing the pin out of its lugs. To place a pin in the piston, tap it into the hole until the pin is about 1/32 of an inch into the first lug; then put the piston over the connecting rod. Hold the pin in place by another pin or rod to act as a guide and prevent injury to the bushing. Then place the tool over the piston so that the screw strikes the piston pin squarely. The pin is then fitted and pressed home by turning the screw.

While designed for the present models of Harley-Davidson piston, the tool is adaptable to former models and to many pistons which are of the same diameter. It can also be used to round a piston to form.

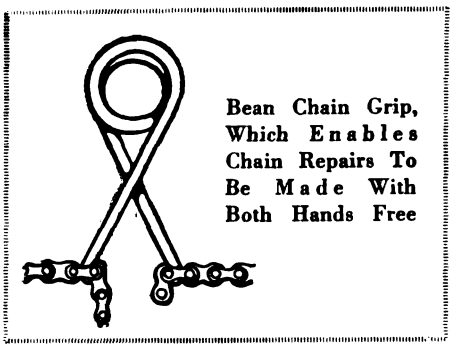
Digitized by Google

equipment on all Miami lightweights was in fine shape at the finish and did not slip in the driving rains on parts of the trip. Monogram oil was used.

No effort toward extreme speed was made by Pineau, the main object of the trip being to demonstrate that the Miami Power Bicycle will stand up under constant use and that it is not simply a city pavement machine. Pineau and his mount received a lot of enthusiasm from Miami dealers along the route and impromptu receptions were staged at Albany, Utica, Syracuse, Rochester, Erie and Cleveland.

BEAN GRIP MAKES CHAIN REPAIR EASY

EASE and speed in adjusting the connecting link to the ends of a chain are had by the use of the Bean Chain Grip, the product of the Bean Company, of Berea, O. This implement, the latest of the many Bean products, consists of a piece of steel formed with a coil at its center, the ends being formed to fit within the chain spaces between the rollers. It is self-holding and very light in weight. The list price is 25 cents.



Bean Chain Grip, Which Enables Chain Repairs To Be Made With Both Hands Free

In using the grip the ends are separated and hooked around the roller of the chain. The coil of the tool will take up the slack so that the chain links between the ends of the grip hang loosely. Both hands are now free to insert the connecting link, etc. The grip is of handy size to fit in any tool kit.

HERE'S A HELPING HAND FROM DIXIE

NEWARK, N. J., June 26.—Something new in the way of an instruction book which will appeal strongly to the rider of the non-technical sort, is a new little instruction book for the care and operation of the Dixie model M 2 magneto for motorcycles which has just been gotten off the press by the Splitdorf Electrical Co. In an even dozen pages replete with half tone illustrations and text so skillfully written as to be easily understandable even to those not versed in things electrical, the booklet makes plain the things that make the Dixie different from other magnetos and the proper treatment to insure its perfect functioning at all times. Instructions for the care of the cables and spark plugs and a complete list of replacement parts and prices also are included. The booklet is the work of the Splitdorf service man, Michael E. Toepel who better, perhaps, than any man in the trade can make the most complex things as simple as A. B. C. to the layman.

PYRENE OUTFIT FOR EMERGENCY FIRE WORK

Combination of Extinguisher Battery and Harley-Davidson Motorcycle Is Offered by New York Firm to Check Fires at Outset

FIRE experts, who agree that the first few moments following the start of a fire are the most vital, now have at their command a most effective combination in the Harley-Davidson motorcycle and the Pyrene extinguisher. The latter article is in the form of a brass cylinder of considerable diameter and is fitted with a T-handled plunger, the liquid contents being sprayed on the fire by successive strokes of the handle. It is made by the Pyrene Mfg. Co., of 52 Vanderbilt avenue, New York.

The combination of Harley-Davidson motorcycle and a battery of Pyrene extinguishers enables any fire discovered to be taken at the critical initial period. The Pyrene extinguishers are mounted on the motorcycle in special carriers, which hold them tight under all road conditions, yet allow of their instant removal by hand. All 1916 models of the Harley-Davidson motorcycle are available for Pyrene equipment. The company is cataloging the combination as the Pyrene Fire Cycle, the normal outfit consisting of a Model 16-J electrically-equipped motorcycle and four extinguishers, and listing at $325.

Two Equipments

The Pyrene equipments consist of either a four-extinguisher or a two-extinguisher unit. The first unit consists of special brackets to fit the luggage carrier, two extinguishers being carried on top of the carrier and the remaining ones on each side. All are thus out of the way of the rider, yet instantly accessible. The weight of the unit complete is about 24 pounds. The two-extinguisher outfit consists of a pair of brackets, one on each of the front forksides, with extinguishers for each.

When a sidecar is fitted, the Pyrene firm supplies brackets for three extinguishers on the forward part of the body as well as forks for two regulation fire axes and a four-foot pike pole. The latter implements are carried at the left side of the sidecar body.

Advantages of Outfit

The Pyrene Fire Cycle is well adapted for the use of fire chiefs in cities of all sizes and is just the thing for volunteer department service. It can be kept in the fire station without taking up much space, and when all members of the crew are trained riders, the first man to turn out will mount and respond to the alarm. The speed of the outfit is 60 miles per hour or better, while that of an automobile apparatus is rarely over 40. The superior ability of the motorcycle to thread traffic at speed is another strong point in its favor.

As stated above, the Pyrene Fire Cycle with Model 16-J machine and four-extinguisher equipment lists at $325. The front fork brackets for two extinguishers list at $15 the set. Application should be made to the Pyrene Mfg. Co. at the New York address for further information.

GOODYEAR GUARD MEN ANSWER PRESIDENT'S CALL

AKRON, O., June 21.—Now that the tramping of feet and the clatter of muskets are heard throughout the nation in response to the president's call for mobilization of the National Guard, it is interesting to note the part that The Goodyear Tire & Rubber Company has had in the nation's preparedness program.

Goodyear encourages its employes to enlist in the National Guard, allowing them the necessary time for summer military camp duty, without prejudicing their salaries or positions with the company. Many Goodyearites are affected by the president's mobilization order, among whom are executives and engineering experts whose services to the company are invaluable.

THIS FIRM HAS PARTS FOR MODELS NOT ON MARKET

RIDERS of machines not now on the market can obtain parts for the same from the Motorcycle Parts Manufacturing Company, of 2127 Michigan avenue, Chicago, Ill. This firm is specializing in such parts and carries an extensive stock for most of the makes listed below. The company can also arrange to supply those parts which are not obtainable elsewhere.

Following are the list of "orphan" makes for which the firm can furnish parts:

Eagle, Arrow, Imperial, M.M., Haverford, Packard 5, Winchester, Victor, American, Vortex, A.M.C., Dixie Flyer, Peerless, National, Armac, Wagner, New Era, Minneapolis, Pierce, Sears, De Luxe, Monarch, Flanders, Thiem, Cyclone, Limited and Feilbach, Curtiss, Crawford, Pirate, Reliance, Yale and Jefferson.

NEWS FROM THE HOME OF THE DAYTON CYCLES

DAYTON, O., June 27.—H. M. Huffman, sales manager of the Dayton motorcycle and bicycle factory, has just returned from a short trip to Milwaukee and Chicago. While at the Windy City Huffman dropped in to see D. W. Gould, manager of the local Dayton branch, and was pleased to hear of the rosy prospects for busy season.

A. Aprahamian, traveling representative of the Auto Supply Export Co., New York, was a visitor at the Dayton factory last week, having returned from an extensive trip through Australia where he placed a number of Dayton agencies with dealers. Aprahamian believes that the Dayton motor bicycle will find a good market abroad; but the Davis company refuses to export these machines until the domestic demand is supplied.

The sanitary police of Youngstown, O., have bought a Dayton motor bicycle through the Motorcycle Exchange. The purchase of the motorbicycle is largely in the nature of an experiment, and should the officials be satisfied with the machine more will be ordered for use in connection with sanitary work.

PROVIDENCE MEET PLANS TAKING DEFINITE SHAPE

Swenson Appoints Committees to Look After the Entertainment Details; Special Attention Will Be Paid to Ladies; Hotel Accommodations Aplenty

PROVIDENCE, R. I., June 26.—That special attention is to be paid to the comfort of the ladies who attend the F. A. M. convention at Providence and special provision made for their entertainment came to light this week when B. A. Swenson, in charge of the convention arrangements, made the following announcement on behalf of the ladies' committee:

"The ladies' committee wishes to serve notice that the women planning to visit Providence during the F. A. M. convention should at once send in their membership applications to G. B. Gibson, as there is going to be something doing here that week, and an F. A. M. membership will be the open sesame to a lot of good things.

Committee Chairman Announced

"This also applies to the men, so don't forget to bring your card and be sure you bring one that is up to date. If you have forgotten to renew, attend to it at once."

Mr. Swenson has also announced the chairmen of the various committees, which are to look after the convention details. These committee heads are: Finance, Charles H. Westcott; endurance run, C. J. Loftes; convention badges and programs, J. G. Edwards; races, E. L. Buffington; entertainment, C. K. Joslyn; transportations, accommodations and hotels, C. S. Joslyn. They have been asked to name as soon as possible three men to assist them.

The Crown Hotel has been decided upon as the official headquarters of the convention. Dr. G. B. Gibson, national secretary-treasurer, and Mrs. Gibson will stop here throughout the meeting as will also Mr. Coffman, national president, who in a letter to Mr. Swenson stated that he would be here several days previous to the opening of the affair.

Moderate Rates at Crown

The Crown is centrally located, but four blocks from the railroad station, and is in the center of the shopping and amusement district. Fred Mansfield is proprietor of the hotel, and is chairman of the conventions committee of the Chamber of Commerce, who first sought the annual meet of the F. A. M. The Crown has 218 rooms and are rented from $1.50 per day upwards.

In the basement of the hotel is a large grill room, and although closed now for the summer, it will be opened during the convention. Nearby are large washrooms, and the riders in the endurance run will find this set aside for them on the finish of the long grind on July 25.

Mr. Swenson has been able to secure one of the large rooms in the lobby of the hotel for the handling of all official business. Here all credentials will be examined. When membership cards are presented for certification each will be punched and then the official list of tickets, souvenirs, programs, etc., incidental to the convention will be given out.

The hotels of Providence are quite adequate to take care of a vast host of people. Among some of the largest are the Narragansett, which has 250 rooms with rates for single persons from $1.50 up, and for two $3 and up, European plan; Dorrance, with 130 rooms, $1 a day and up; Blackstone, 100 rooms, $1.50 a day up, and European plan; Newman, with 115 rooms, $1 a day and up, European plan; Perrin, 48 rooms, $2 a day and up, American and European plan. Other hotels which have rooms ranging from $1.50 up are Adams, Allen, Park, Dreyfus, Dresden, New Quincy, Lincoln, Revere, Market Square, and Central.

Jesse Campbell of Boston and Hall Noyes of Springfield have been appointed chairmen of committees on tours. Mr. Campbell has made a hobby of tours for motorcyclists for a number of years and he is considered one of the best men in New England to get enthusiasts together. B. A. Swenson will offer a special trophy to the captain of the cleanest touring team that enters the city on July 25. These parties will leave their respective places on Sunday. It is expected that application blanks for the tourists will be out in a few days. A small entrance fee will be charged. The blanks for the endurance riders will be ready next week. The entrance fee for this event will be $5.

$600 for Medals

A check for $600 has been forwarded to Chairman Donovan of the competition committee for eight complete sets of medals, the prizes to be given in the races at the Narragansett Park speedway.

It has been decided to add one more day to the convention dates. Sunday, July 30, will be devoted to excursionists. In adding this day Mr. Swenson was of the opinion that there would be many visitors here that would not have an opportunity to visit Newport and at the same time attend the outing at Rocky Point. He is now arranging a free boat ride, clam bake and for competent guides to show visitors over the great summer watering place of the East. This city, 30 miles away, may be reached either by trolley, train, motorcycle, automobile or boat. Sunday's trip will give many a rare opportunity to visit this famous place through the addition of an extra day.

Mr. Swenson left the city yesterday in his specially-built Indian accompanied by D. R. Hobart of the **Motor Cycle Illustrated,** to lay out the endurance run trip, securing checkers, arranging schedules, arranging with hotels, etc. Mr. Swenson said he expected to arrive in Albany, N. Y., late Wednesday afternoon.

Motorcycles Ready for Shipment Here and Abroad

INDEPENDENCE RACE AT MARYSVILLE, CAL.

MARYSVILLE, Cal., June 25.—The Marysville Bicycle Club will hold a race as a part of the elaborate Independence Day program to be carried out in this town, the local team consisting of Louis Newbert, Theo Jacques, Wm. Bluett, Milton Collins, L. Wilcoxon, C. Dempsey, John Trayner, Wm. Reis and R. Dempsey. The Marysville M. C. has also decided to stage a race in connection with the celebration, the meet to be held on the afternoon of July 3.

JACK PINES RUN A MAGNET FOR BEST OF "PROS"

Grand Rapids M. C.'s 800-Mile Endurance Contest, To Be Staged July 2-3-4, Attracts Half Hundred Entries—The F. A. M. Road Championship at Stake for First Time.

GRAND RAPIDS, Mich., June 27.—As plans for the contest progress to completion, it seems almost certain that the "Jack Pines" run, as the 800-mile endurance to be promoted by the Grand Rapids M. C., July 2-4 is termed, will attract at least 50 professional entries, the greater number of whom will be direct factory representatives. The prize at stake is the title of F. A. M. National Road Champion and the competition for first road honors among the nationally prominent riders promises to be keen, to put it mildly.

The riders will leave Grand Rapids about 4 o'clock on the morning of July 2 and are scheduled to travel over 285 miles before reaching the night control. Following are the towns to be made on the first day: Greenville, Edmore, Mt. Pleasant, Clare, Harrison, Houghton Lake, Markey, Roscommon, Lucerne, Mio, Kneeland, Comins, Hillman and Alpena.

Second day, 300 miles: Presque Isle Light, Rogers City, Hammond Bay, Grace Harbor, Sheboygan, Levering, Petoskey, Elk Rapids, Traverse City, and Manistee.

Third day, 225 miles: Baldwin, Reed City, Big Rapids, Woodville, Whitecloud, Fremont, Muskegon, Holland, Grand Rapids.

Facing them as they start on the second day's journey the riders will find one of the worst passages believed to ever have been marked out for an endurance contest. As the riders get fairly away from Alpena on their way to Presque Isle Light, they will run into a swamp that promises to eliminate not a few contestants. The swamp extends for fourteen miles and it took the pathfinders seven and one-half hours to mark the course and it must be traversed in 42 minutes. If the weather conditions are favorable the riders may not be seriously bothered by this stretch.

Crack Riders on List

E. G. Baker, holder of all world's long distance motorcycle records and the transcontinental automobile run mark, drove into Grand Rapids from Indianapolis last Saturday in record time and pushed his Stutz around parts of the course during the next few days, but found many parts impassable for an automobile. He will ride an Indian in the run and stated to the committee in charge that he considered the course the best ever laid out for a championship run.

Some of the entries received up to last Monday from professionals around the country are: Baker, Indianapolis; Von Staden, Indianapolis, Jacobs, Dayton—Indian team.

H. Scherer, Fort Wayne; Howard Peters, Buffalo; William Ruhle, Newark; Elmer Havenstrite, Newark—Harley-Davidson team.

William Davey, Detroit; Kemp, Detroit; Harry Immel, Pittsburgh—Henderson team.

Of the Grand Rapids entries the following are those that bid fair to make the best showings:

Byrne Hull, city champion, Henderson; John Foster, Henderson; R. E. Heth, Excelsior; M. Vandenberg, Excelsior; Tom Martin, Excelsior; Eddie Levandowski, Excelsior; Jim Long, Excelsior; John Hoogerhyde, Excelsior; Faustin Good, Indian.

The committee in charge of the run comprises Tom Martin, chairman; R. E. Heth, Roy Chipman and Hap Scherer. All except Scherer, of Fort Wayne, are local men. Chipman will be referee.

HILL CLIMB IN SAN DIEGO MOTORCYCLE DAY

SAN DIEGO, Cal., June 25.—Motorcycle Day at the San Diego Fair brought out a goodly number of riders, the Los Angeles Motorcycle Club members bringing out a crowd of more than 300 enthusiasts. Several motorcycle events featured the occasion, and the visitors rounded out the day by an inspection of the many exhibits at the fair.

There were two trials in the hill climb, Wells Bennet, Excelsior, winning the first, and Freddy Ludlow, Indian, getting away with the second. A lightweight race was staged for amateur riders, first and second position going to Excelsior riders. The Indian Feather-weight, the only other lightweight represented, was retired when its rider fell. The hill climb was a novelty; it was held in the rough of a canyon, the riders starting at the summit of one hill and coasting down, throwing in at the bottom to make the grade at the other side.

GENERAL TIRE ERECTING PLANT ADDITION

AKRON, Ohio.—Less than six months old and already erecting an addition to its present plant is the record of the General Tire & Rubber Co., Akron's newest rubber factory.

This company was formerly located at Kansas City, Mo. Tire accessories and a few rubber specialties were the principal products, the company being in this line of manufacture for about seven years. Increased business in this department, together with a growing tire business makes the additional space necessary. Tires are now being made in gradually increased quantities, and within ten days the plant will be manufacturing about 150 tires per day.

Mr. M. O'Neil, president of the company, states that with the contemplated increased equipment and floor space, the capacity of the factory will be 500 tires per day.

MUELLER AND CROLIUS IN CAMP

E. J. Mueller, assistant sales manager, Harley-Davidson Motor Company, and Lacy Crolius, advertising manager, together with Mrs. Mueller and Mrs. Crolius, are spending a ten-day vacation in the northern wilds of Wisconsin. There was enough excess baggage in the shape of guns and fishing tackle to make it interesting for anything in the section of Phelps, Wis., with fins, feathers or fur.

ARTLEY USED SPLITDORF PLUGS

In discussing the service given him by his Henderson motorcycle and its equipment on his recent record-breaking run between Los Angeles and San Diego, Roy Artley has placed special emphasis upon the performance of his Splitdorf spark plugs. "I almost forgot they were in the motor," says Artley, "and I reckon that's about as strong a compliment as you can pay a piece of equipment on such a tough trip as that record-making run."

NEW STEWART-WARNER HEAD

C. B. Smith was elected president of the Stewart Warner Speedometer Corp. late last week by a meeting of the directors. The other directors elected were W. J. Zucker, vice-president and secretary, and T. T. Sullivan, vice-president and treasurer. Smith succeeds J. K. Stewart, who died on June 1.

MANY RIDERS SAW RACES AT STOCKTON

SAN FRANCISCO, June 25.—The race at Stockton, last Sunday, was one of the biggest motorcycle events to take place in northern California this season, and attracted a big crowd of riders from all over the state. The San Francisco M. C. made Stockton the destination of a social run for the day, and fully 25 machines made the trip, having a nice ride and getting home about 9 p. m. Some of the boys counted nearly 100 motorcycles between Oakland and Stockton bound for the same point. The Marysville M. C. turned out in force, as did the crowds from San Jose and several other towns. The crowd seemed well pleased with the races, though the professional events were somewhat lacking in diversity, and the track was very poor and soft.

MEET AGAIN HALTED

PROVIDENCE, R. I., June 26.—The motorcycle races which were to be held here Decoration Day, and which have been twice postponed since, have now been postponed until Labor Day, because of the fact the Hillsgrove track soon will be used for horse racing.

LONDON M. C. RUN

LONDON, Ont.—Several members of the London M. C. took a run to Ingersoll on a recent Sunday and as the roads were found to be in good condition, the young ladies in the sidecars drove the machines home on the return journey. There was plenty of excitement but no mishaps and the drivers were delighted.

"Indian Makes Clean Sweep"—is the Racing Slogan of 1916!

From Coast to Coast Indians are constantly "cleaning up." Indian victories leave no question.

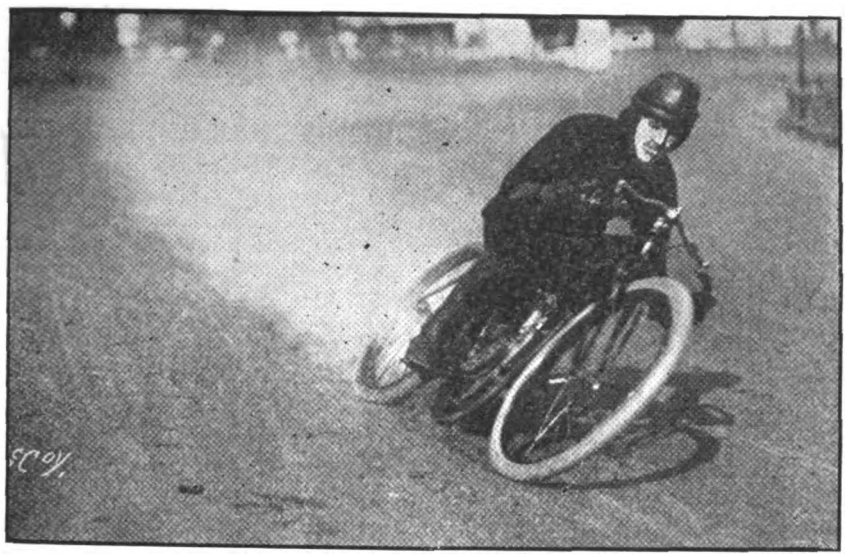

Photo by McCoy.

No matter what distance, you'll find an Indian up in front—the winner.

Pitted against all makes, the sturdy Indian goes on winning—verifying its claim to motorcycle leadership by "delivering the goods."

Quality counts—that's why Indian wins!

At Columbus, Ohio

Indian wins *all six events,* including 100 mile race, Verrill's time for the hundred being *88 minutes.* Creviston, Davis and Walker clean up other events.

At Greenville, Ohio

Three events—Indian wins all three! Lee Taylor pockets 10 mile open and 25 mile free for all. Verrill tucks away the five mile open for Indian.

Every Indian rider is sure of the *same sturdiness of power* and *strength.* Enjoy the highest possible motorcycle satisfaction—be an Indian rider.

SPARE LINKS

By GOSLIN

Now for the summer tour.

Made those plans for a three-day trip over the "4th"?

Good idea to get a few of your congenial friends together and mote off for the whole three days. Bet you'll want to go again.

Big doings slated all over the country on the Fourth, but most interest centers about Dodge City, with its 300-mile classic and Sheepshead Speedway, near New York City, with a strong card of racing.

The Keystone M. C. of Harrisburg, Pa., will make a three-day trip to Newark and New York over the Fourth, taking in the races and sights while in the vicinity.

Motorcycle Club of Philadelphia will sit in at the same party and help make it a regular time along with their fellow-staters.

The New Jersey M. C. will act as host, and try to live up to their city slogan: "Newark knows how."

Lot of motorcyclists called out with the militia, fellows, why not keep them in dues if they belong to your local club. Another idea is to keep them posted with the current issues of the motorcycle papers, if possible.

Indian Motorcycle Club, of New Brunswick, will stage the next big road contest, starting July 1 and running till—well, till the last man says "enuff."

After that the big two-day F. A. M. run to Providence and the convention.

Bet we will have some time at the convention this year; that fellow Swenson puts over big "doins" every year on his annual picnic day.

He has a reputation of being wide awake, but he left a tire iron in the rear shoe in the Worcester run, and went out of the contest 50 minutes late. That's not clever, B. A., anyone could do that.

Safety First—good idea! Hackensack M. C. plays it well. Their colors are Indian Red and Harley Gray.

Baker has a good story he brought back from Australia, as to how he got the name of "Cannonball." Ask him to tell it to you next time you see him.

The M. M. A. favors tours; so do we; that is, most of us who ride do. Why not drop track racing, gentlemen, and put your money and time into get-together-events, where the young and the old could all join in and play the motorcycle big as a means for recreation and sport.

Great how the sidecar has come ahead with a rush in the past two years! That's the result of multi-speed gear-sets.

Sidecars bring the older men into the game. Try and get them into a club, fellows, they make good, steady members.

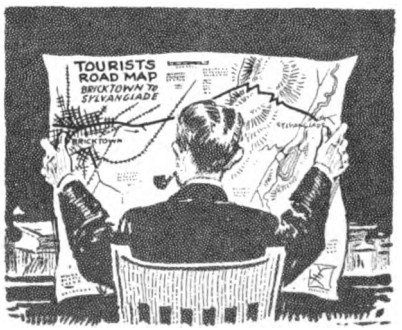
Also brings the wives out, and Lord! men, how they can cook if you get up a picnic run!

And then again a wife has a way of pulling up on the purse strings against extravagance which distributes the coin evenly over the whole town. It's a gift!

When you need a map, fellows, don't forget that the B. F. Goodrich Co. is distributing a mighty comprehensive assortment of 'em. **Motor Cycle Illustrated** will pass along your application for a map if you would like to do it that way.

If your club is going to stage a run, why not let some of the sidecar members carry a neat canvas banner on his car advertising the fact for a week or so before the event? I've found it a good way to get publicity.

If you're a red-blooded chap—and you probably are or you wouldn't be riding a motorcycle—you'd better get your name on



Motor Cycle Illustrated's list of motorcyclists who are willing to do military duty if needed. It'll show Uncle Sam that you can fight as well as play—if you have to.

Hey, bo, don't forget that I'm going to meet you at the F. A. M. convention in Providence. You'll easily recognize me because I'll be grinnin'.

Picked out your riding colors yet? Better do it. Have the club make a selection and then show 'em in sweaters, pennants, etc., whenever you have the slightest opportunity. It all helps.

Tough luck, that spill at Chicago that puts Otto Walker out of the running for the Dodge City speedfest. Otto's a good sport and a hard rider, and even being full of splinters out of that Speedway track probably won't make him "stuck up.' He isn't that kind.

HOW THE NEW MIAMI PACE IS BEING SET

(Continued from page 22)

bicycle line. It was in 1900 that he joined the Miami organization, taking charge of the Machine Department. Later he was made superintendent of the plant.

When the Board of Directors decided to place the committee in charge of the factory, Mr. Miller was simply retained on the job at which he was already making good.

That's the story of the Miami factory's prosperity as shown today. Three men, each eminently fitted for his branch of work, have fulfilled the expectations of their friends by "delivering the goods,"—and what's still more to the point, they have affairs so arranged that they will be able to go right on delivering them.

GETTING THRILLS FROM THE TANDEM SEAT

(Continued from page 26)

prominently in the foreground, and then lit out for the Natural Bridge. We took the wrong road, however, and hit a sand bank, so had to turn back and try again. We got on the right road then and reached the bridge, then headed for home. The sun was going down among the hills, and we had delightful thoughts of riding corduroy roads to Bennington.

My, how we did hum! Returning down that long steep hill, coasting at a fair speed, we slacked suddenly, nearly losing the tandem passenger—which was me—and round a hairpin turn. On and on toward Bennington, dodging a duck here, with plenty of wobbling, and dancing up and down in quick time. I'd rather ride sods than these ruts.

Another Fall

Again I come to with the machine pinning me to the ground. But I beat the machine to it, this time. It jumped on me from behind. All I can remember is saying: "Get it off, quick." We would show you a little of this road, but we valued the camera too much. Finally we reached home, the whole three of us. There were plenty of thrills all along, bestowed on a tandem victim. Then came supper and bed. Dreams of bucking over corduroy roads follow, also those of spills.

But the next morning, why is it so hard to get up? My shoes seem to hurt, my arms are weak and my back is rather lame. I put it down to the dreams last night. I'm ready for another ride any time. Tandem riding is certainly some sport.

WESTFIELD FEELS MILITARY SPIRIT

Westfield, N. J., June 26.—The Westfield branch of the National Security League is agitating for the formation of a motorcycle brigade with machine gun units. Trenton has been appealed to for a list of names of motorcycle riders between Plainfield, Elizabeth, Summit and Rahway, and these men will be called upon to enlist in the new brigade provided it is formed.

NEWMARKET PATRIOTIC RACEMEET

NEWMARKET, Ont.—Motorcycle races are to be held on the half-mile track at Newmarket on Wednesday, July 5, in connection with a patriotic demonstration.

THE BICYCLING WORLD
FOUNDED 1877
DEPARTMENT OF MOTORCYCLE ILLUSTRATED
"ALL THE BICYCLE NEWS EVERY WEEK"

BUFFALO ROTARY CLUB HEARS CHAIRMAN QUINE

Nearly Three Hundred Representative Business Men of the Bison City Enthused by Striking Talk on Scope of Local Bicycle and Allied Industry; "Million" Movement Described

BUFFALO, N. Y., June 27.—If the business men of this city, in common with so many other business men the country over, regarded the bicycle industry among the "has beens" of commercial history, they certainly changed their opinions when Chairman Harry Quine of the Million Bicycles Committee completed his address to the Rotary Club last Thursday afternoon.

Figures and Facts

Some two hundred and eighty-six representative manufacturers and merchants, all of them members of the Rotary Club, gathered to hear Mr. Quine's illuminating talk, and were shown in a conclusive and effective manner the prominent position which the bicycle and allied trades occupy in the Bison City. To say that Mr. Quine opened the eyes of his hearers is putting it mildly, for he brought an impressive array of figures and facts to the attention of the business men which revealed, to some of them perhaps for the first time, the great dignity and solid standing to the bicycle and allied industries.

"Judging from the enthusiasm shown at the Rotary Club today," said Sales Manager Fred L. Brown, of the Pierce Cycle Company, to a reporter after the meeting, "I honestly believe that Mr. Quine has made every one of the business men who heard him an out and out booster for the bicycle. I would earnestly advise other bicycle, parts and accessory manufacturers, who are members of the Rotary Club, to hold meetings similar to this one."

Before Mr. Quine spoke, a guessing contest was held, in which the men present were asked to guess the number of parts in a Pierce bicycle, a two-wheeler from the Buffalo factory being hung up as a prize. Two men tied twice, but the winner was placed in the third trial. Much interest, not to say excitement, was aroused by the contest.

The full text of Chairman Harry Quine's interesting address follows:

I deem it a great honor to be permitted today to address the men of the Buffalo Rotary Club, the representatives of all the thriving industries of this great American city.

I know well that you stand as important links in a great industrial and commercial chain that has made Buffalo famous—Buffalo, situated at the head of the lakes, doubly blessed with transportation facilities and many times blessed with men who do things; Buffalo, city of great political achievements, home of Grover Cleveland, of Norman Mack, of John W. Henry, and last but by far not the least important, home of the bicycle.

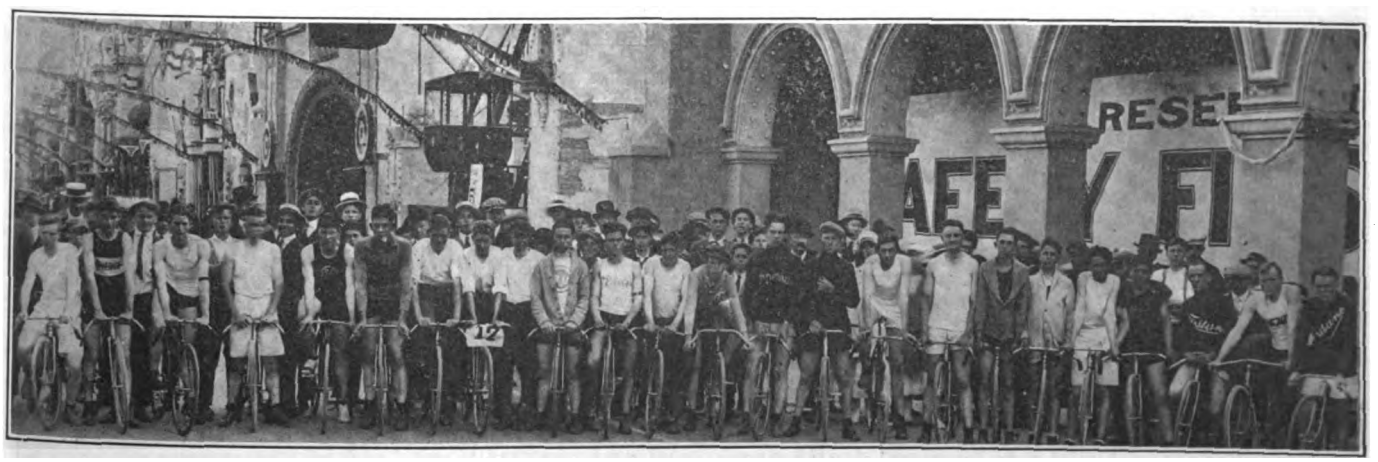
A Common Belief

I know there is a prevalent belief among the unobserving and those not allied with the bicycle industry, that this important vehicle is a thing of the past; that so far as the bicycle industry is concerned its dirge has been sung, its grave has been dug, and that the clods have fallen upon its earthly remains. One of the gentlemen in this meeting has told me that frequently when he has been introduced to business men and he has told them that he is engaged in the manufacture of bicycles, they have lifted their brows in mild surprise or in apparent pity, giving the impression of their belief that the bicycle is a thing of the past.

You may all be surprised to know that this is a year in which an actual demand for a full million of bicycles has been created; and that million of bicycles would certainly be sold within the limits of 1916, if bicycle manufacturers had the facilities for turning them out. You may also be surprised to know that right here in the city of Buffalo no fewer than ten thriving industrial concerns are engaged in the manufacture of the bicycle or its parts, that more than 1,000 Buffalo citizens are directly employed in one way or another by this allied industry and that, counting their families, not fewer than 5,000 people are dependent upon it for their existence. Not only that, but the industry continues to grow by leaps and bounds. Events of the past year have made plain that the bicycle is here to stay, that the bicycle business is now as big or bigger than it was in the so-called boom years back in the late nineties.

Importance of Pierce Company

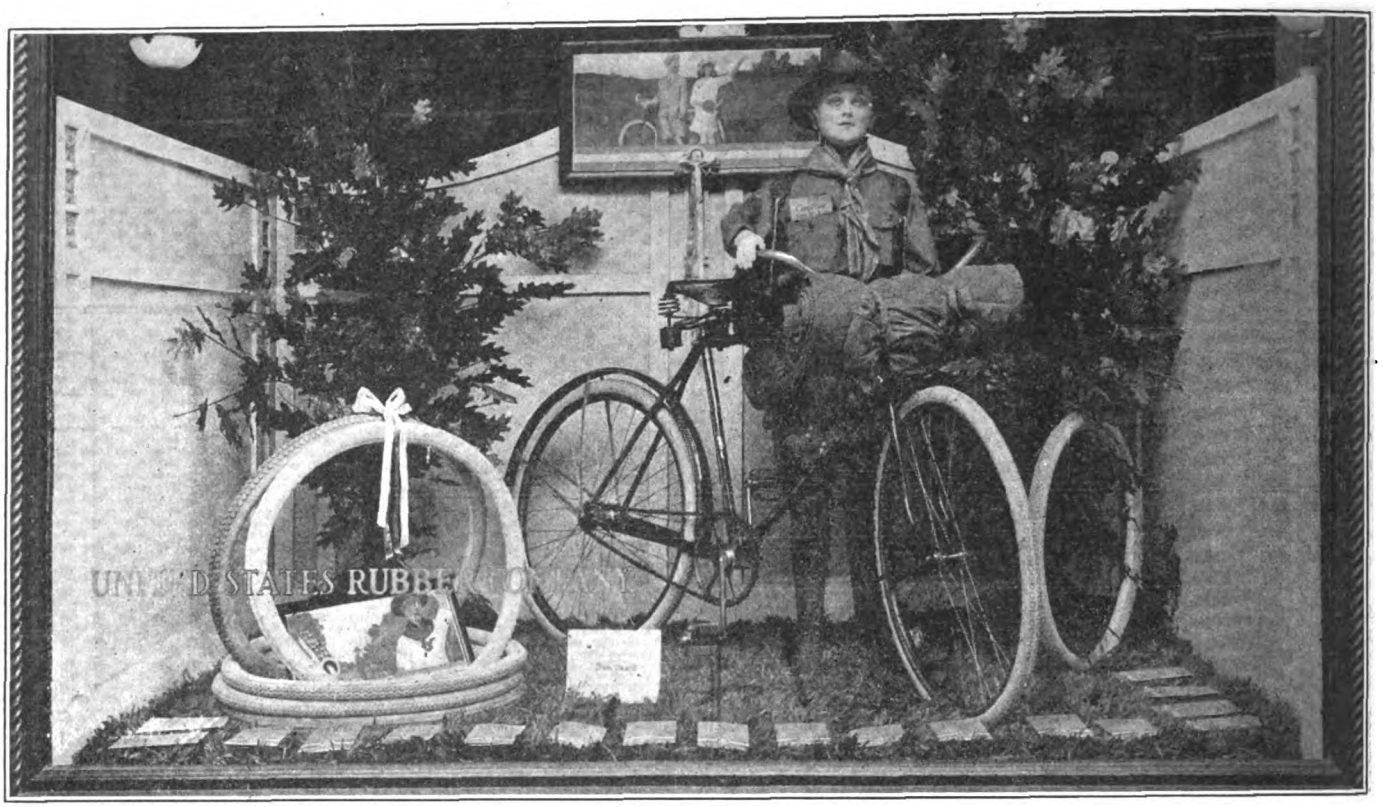
Referring to Buffalo, take for instance the Pierce Cycle Co. This institution employs an average of about 100 people the year round. Note this especially: In the last three years the Pierce company has more



Start of Recent Twenty Mile Bicycle Road Race at San Diego, Cal.

Digitized by Google

PUTTING AN OUTDOOR PUNCH IN A BICYCLE WINDOW DISPLAY



Recent Display of the United States Tire Co., in New York. It Was Designed by G. A. Smith, Whose Instructive Article on Window Decorations Appears Elsewhere in This Week's Issue

than quadrupled its output of bicycles and this year has received specifications for over 13,500 high-grade bicycles in the first eight months.

Consider the Crosby Company, also of Buffalo. This busy institution manufactures stampings and fittings. The Crosby company has been in the business for years; it has at least 100 men employed in the manufacture of bicycle material and these men are employed the year round. Take for instance the Excelsior Steel Ball Co., also of Buffalo. It specializes in the balls that go into the bicycle bearings. Nothing is more important to make a bicycle easy running than its bearings, so you will readily appreciate how useful the Excelsior company is in this industry. The Excelsior employs upwards of 100 people in its factory and with the aid of automatic machinery manufactures at the rate of over one million hard tool steel balls a day, using many hundreds of tons of steel per year. So this concern is an important buyer of the product of the steel mills, even though balls are among the very smallest articles used in the make-up of a bicycle. Abrasives for grinding balls, also help to keep the abrasive mills in action, so you will readily see that the Excelsior company has every right to recognition as one of Buffalo's leading industries.

75,000 Atherton Brakes Made Yearly

The Buffalo Metal Goods Co., manufacturers of Atherton Coaster Brakes, put out over the country fully 75,000 coaster brakes a year. It does a business of over $200,000 annually in the manufacture of coaster brakes alone, to say nothing of other parts produced by which enter the bicycle's make-up. The Buffalo Metal Goods Co. employs 75 to 90 persons the year round.

The Emblem Mfg. Co. may be considered a Buffalo institution, although located at Angola, a suburb in which Emblem may safely be said to be "the whole thing." The Emblem company employs at least 150 men. Its total pay roll for the past 12 years has been approximately $1,200,000, or $100,000 a year. It manufactures from 25,000 to 30,000 bicycles per annum.

The Forsyth Metal Goods Co. is also entitled to a place in Buffalo's roll of honor in the bicycle industry. It manufactures stampings of all kinds for bicycles and has a large plant with about 50 people employed in producing the articles that pertain to the bicycle.

The Peter A. Frassee Co. has an office and warehouse in this city carrying bicycle tubing in large quantities.

The institutions I have just named cover the manufacturing end of the business for Buffalo, but in addition to the manufacturing there is another large department of the business which contributes in an important way to your city's welfare: Buffalo contains three large bicycle jobbing houses.

45,000 Machines Shipped from Buffalo

It is estimated conservatively that they distribute at least 7,000 machines from here into adjacent towns and cities. Add this number to the shipments of the Emblem Mfg. Co. and the Pierce Cycle Co. and you have about 45,000 bicycles shipped yearly from this point.

There are also about 50 bicycle stores and shops distributed about the city. These employ an average of five persons per place. It is impossible to estimate the number of bicycles sold at retail in Buffalo, but from 1,500 to 2,000 a year is considered very conservative.

To summarize then what the bicycle means to Buffalo: Within the city limits and adjacent towns from 900 to 1,000 people are employed in making or selling bicycles or their equipment and estimating 5 persons to the ordinary working man's family, we have a total of about 5,000 people living on the bicycle industry.

Industry of Dignity and Standing

This was an ideal year for the Million Bicycles Committee to start its work and I am glad to say that results have already been surprisingly fruitful, and from our investigations and co-operation in all parts of the United States, I can safely say that the bicycle has a great future. Next year the production, I believe, will pass the million mark; and near two millions than one million bicycles a year will be this country's logical production for many years to come.

In conclusion, if there is one thing more than another that I can urge upon you, it is that you men of Buffalo open your eyes and keep them open to this great and growing industry in which Buffalo has such an important part. If you do, you will more and more appreciate the dignity and standing of the bicycle industry, as you will see it exemplified not only in bicycles themselves, but in the brick and mortar and cement of steadily growing factories.

SMITH RESUMES DUTIES

MILWAUKEE, Wis., June 27.—Announcement is made by the A. O. Smith Company that R. Stanley Smith, the designer of the Smith motor wheel, after a year's absence devoted to special engineering work, has returned and will resume his duties as chief engineer of the Smith company, giving his time largely to the interest of the motor wheel division.

NEW POSTER IN COLORS

Just Issued in Large Size for Cycle Dealers

NO CHANGE CONTEMPLATED IN MOTOR WHEEL

MILWAUKEE, Wis., June 27.—"We are frequently asked," writes Mr. W. V. C. Jackson, general manager of the motor wheel division of the A. O. Smith Co., "what radical changes will be made in the motor wheel for 1917, and will state that it is not our policy to have annual models. The motor wheel has been improved steadily since its introduction eighteen months ago, and when we see any chance for improvement we make it, regardless of season. Our present model is giving uniform satisfaction and just now we have no changes in contemplation."

VIM GETS OUT A PAIR OF CYCLE CATALOGS

BUFFALO, N. Y., June 26.—Cycle literature, already voluminous, has been increased during the past week by the addition of two catalogues which have just been gotten off the press by the Vim Cycle Hardware Co. Of the two the bicycle catalogue is the more nearly complete, on its 122 pages being listed as well as pictures everything that enters into the construction of the bicycle from a simple ball-bearing to a completed wheel. The other booklet is simply a parts catalogue bearing on motorcycles and parts. Either of the booklets are well worth the dealer's while and can be had by those interested for the asking.

GERMANY BANS USE OF PLEASURE BICYCLE

THAT the rubber situation in Germany if it is not acute is at least verging on that state, comes to light through an order issued by the commander of the military district embracing Berlin and the province of Brandenburg prohibiting the use of bicycles other than those used for business purposes or for board track racing. The latter in order to be used must be shod with solid rubber tires and they can only be used until such time as the tires are worn out. Violations of the new order will be punished with fines up to $357 or a term of imprisonment up to one year.

C. A. C. C. RELAY RACE TO BE HELD JULY 9

SAN FRANCISCO, Cal., June 27.—The California Associated Cycling Clubs will hold their annual thirty-mile relay race at San Jose on July 9. The winner of this event will receive the privilege of holding for one year the silver trophy donated by the United States Tire Co. This cup must be won three consecutive seasons to become the permanent property of any one of the clubs.

The Garden City Wheelmen captured the trophy last year and will put up a stiff battle to keep it for another season. The following clubs will compete in the relay race: New Century Wheelmen, Olympi Club, Garden City Wheelmen, Samson Wheelmen and Sacramento Wheelmen.

TAUNTON DEALERS TO HOLD 10-MILE RACE

TAUNTON, Mass., June 20.—The Taunton cycle dealers will hold a ten mile bicycle race on the morning of July 4. The agents held a race on May 30, which proved a big success, thousands turning out for the affair. Ned Chandler, of Boston, a pro., won the cup offered by the mayor of this city. Entry blanks for the July 4 event can be had from A. E. Barber, Taunton, Mass.

There will be a five mile handicap race in the afternoon at the track of the Taunton Driving Club, in connection with a horse racing meet. Five nice prizes are offered for this event.

MOTOR PACED ROAD RACE FOR MICHIGAN C. C.

GRAND RAPIDS, Mich., June 27.—A bicycle race that is sure to be of more than usual interest because of several unique features connected with it has been planned by the Western Michigan Cycle club and will be run off July 9.

The course will be from Muskegon, about forty miles west of here, to this city. Motorcycles will set the pace for the pedal pushers and some of the best riders in the western part of the state have been entered and a new record for cross country riding is expected.

A special car will take the riders to Muskegon and they will mount their bikes there and pump their way to Grand Rapids winding up at the office of the Grand Rapids *Herald*.

Several other events are being considered for later dates in the summer by the cycle club.

ROUTE LAID OUT FOR C. R. C. A. TOUR

Three-day Trip Will Be Taken by the New York Riders, July 2-3-4, to Philadelphia and Return; Will Make Stop at Atlantic City

NEW YORK, N. Y., June 27.—The annual Fourth of July tour of the New York Division of the Century Road Club Association will be a three-day affair this year, with Philadelphia as the turning point. The start will be made from the City Hall, New York, on Sunday morning, July 2 at 5 a. m., and the outward journey will take the cyclist over to Totenville, Staten Island, then to New Brunswick, Dayton, Princeton and Trenton, after which the Burlington Pike will be followed into Camden and Philadelphia, the Quaker City being reached at 5 p. m.

300 Miles in 3 Days

The trip back will take up two days the riders covering the route through Berlin, Hammondstown, Egg Harbor City and Atlantic City, where three hours will be spent in sight-seeing, and then the participants in the tour will continue on to Absecon. New Gretna and Tuckertown, the latter being the stopping point for the second day. The complete distance for the first two days' pedaling will be approximately two hundred miles; and on the last day another hundred miles will be covered.

On the third day, or July 4, the tour will continue through Forked River, Tom's River, Lakewood Freehold and South Amboy, returning to New York by way of Staten Island.

Second Bunch Rides July 4

A second bunch of riders will take to the road on the morning of July 4, setting out from City Hall, New York, and riding down the coast to meet the three-day tourists at a *point* near Lakewood, where the two groups of cyclists will unite and proceed to Gotham.

This three-day tour will be an open event and, as such, all riders in the Metropolitan District are invited to participate. The only restrictions will be that every wheelman be equipped with a repair kit, lamp and extra clothes; knickerbockers, whether regular or improvised, will have to be worn.

Further information can be secured from George Steppello, at 139 Eighth street, Long Island City, N. Y., or William Winquist, 171 Dean street, Brooklyn, New York.

RAIN SCARES VELODROME PROMOTERS

Nat. Butler, of Revere Track, Confers with Newark Officials on Financial Difficulties Resulting From Meets Postponed by Jup. Pluv.

NEWARK, N. J., June 27.—Nat. Butler, who operates the Revere Beach cycle racing track at Boston, came on to Newark yesterday for a confab with the Cycle Racing Association promoters. Butler, at the New England track, has been meeting with the same fate as the Newark promoters in the way of postponed meets, and the combination got together to grapple with the financial problem. Just what solution was reached, if any, was not made known.

So far nine out of seventeen meets scheduled at the Velodrome have been prevented by rain. Here it is the end of June and only one night meet has been conducted at the local track. Others have been prevented by rain or cold weather.

Another effort will be made to stage a night meet tomorrow. The card originally arranged for last Wednesday and postponed again last Sunday will be staged, if possible. This will include a one-mile national championship race for the professional class and a five-mile tandem-paced race between Alfred Goullet and Oscar Egg. The only change made in the program carried over from last Sunday is the elimination of the Brassard match between Frank Cavanagh and Marcel Dupuy. That will go over until next Sunday.

VETERANS WILL RIDE IN C. R. C. A. RUN

NEW YORK, N. Y., June 27.—A veterans' division will be one of the big features of the Century Road Club Association's annual pleasure run and carnival, to be held August 6. President Daniel M. Adee, of the promoting body, himself one of the most prominent veterans in the game, will head this division, and to insure a good showing he is making a special request of his many bicycle friends to appear in the ranks. If plans now contemplated by President Adee materialize, the veterans' division will vie with the old time cyclists' rally recently held in England.

As was announced exclusively in last week's issue, the run, which will be in the nature of a parade, will start from Columbus Circle and proceed up Broadway and Seventh avenue to the Grand Boulevard and Concourse, where the judges will award prizes to the owners of the best decorated bicycles. The run will then continue to Fordham Road and Pelham Parkway, where races will be held over a one-mile course which will be closed to all traffic while the various events are in progress. Entry forms are being distributed by Thomas Lockhart, 948 Second avenue, New York.

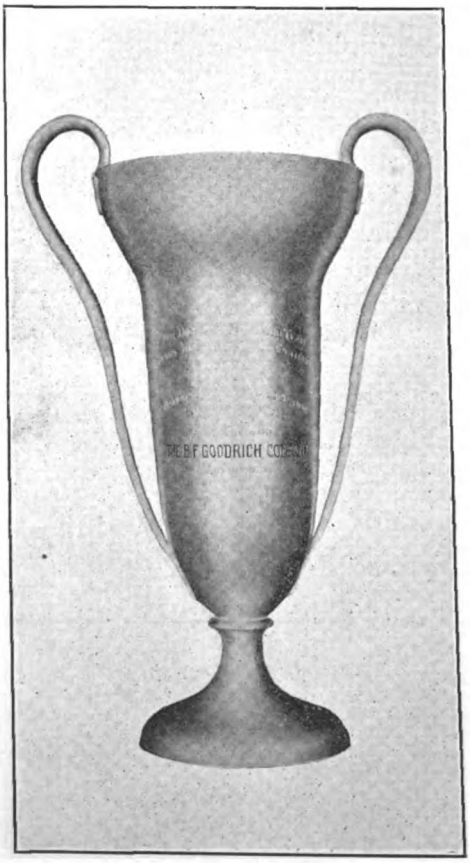
MOTOR WHEEL RACE, JULY 4

JAMESTOWN, N. Y., June 27.—Louis W. Collins, the local Smith motor wheel dealer, will stage a race for users of the "red speed demon" on Independence Day. He already has assurances of from 15 to 20 entries.

31 CARRIERS ON PIERCES

SALT LAKE CITY, Utah.—Thirty-one rural mail carriers in the Salt Lake City district have adopted Pierce bicycles for their work. They have the post office O. K. for the make.

GOODRICH BICYCLE TROPHY



AKRON, O., June 27.—Above is shown a picture of the $400 trophy which the B. F. Goodrich Company offers to the team scoring the highest in open road competition during 1916. The purpose in hanging up this cup is to stimulate interest in road racing, which must be held under N. C. A. sanction and rules. Notwithstanding the fact that the Goodrich company makes the famous Palmer Cord racing tires, the Giant safety and others, the contest is open to riders using any make of tires.

VAN CLEEF ISSUES CATALOG IN TWO COLORS

DUTCH BRAND bicycle and automobile accessories are pictured in two colors—red and blue—in the latest issue of the Van Cleef Brothers Catalog. These colors are *facsimiles* of those on the actual packages. This live-wire Chicago house is regularly introducing novelties, among the more recent of which may be mentioned the "Sure Shot" tire fluid tube, on which a patent has been applied for. This tube is a cylinder with two threaded ends, one of which screws in the tire valve and the other into the pump connection. Two or three strokes of the pump will shoot the fluid directly into the tire. This tube is designed for stopping leaks in bicycle tires.

The entire line of rubber cements, chemical specialties, lubricants and tire specialties are shown in the 12 page catalog. Those interested should address the firm at 7709 Woodlawn avenue, Chicago, for special terms to dealers, etc.

RIVERVIEW AGAIN HUMMING WITH ACTION

CHICAGO, Ill., June 26.—One of the best bicycle races ever seen in the Riverview Velodrome was the five-mile open which featured yesterday's racing card. The race was won by Peter Guidotte, of the Italian-American Club. Incidentally, he dethroned Ernest Kockler, one of the stars of the track.

Kockler was the big favorite when the riders lined up for the start. He had met and defeated the same field before, and his backers were confident he would bring home the bacon this time. But Guidotte got off to a good start and was in trouble at no stage of the race. He won easily, with R. Vanderpaelt, of the Belgian-American Club, second and Ernest Kockler, who rides under the colors of the Mystic A. C., third. After the race the riders each issued a challenge for a match race and Manager Harmon may consent to stage it later in the season.

Jules Arens, of the Logan Square Cycle Club, shared the honors of the day with Guidotte. He won the half-mile open, class B, and made the distance in 1:04 1-5. He also won the miss and out race for the class B and C riders. They went fourteen laps before Arens won. The management announced yesterday that motor-paced races will shortly be a part of the Saturday and Sunday bills. It also was announced that an attractive card is being prepared for next Saturday night. Summaries:

One Mile Novice—Won by Mike Danlos, Italian-American; George Strick, Riverview Cycle Club, second; A. Vansteenkiste, Belgian-American, third. Time, 2:15.

One-third Mile, Handicap, Class A—Won by Roy McWhirter, Northwestern Skating Club; Olaf Lodal, Mystic A. C., second; Andrew Andresen, Conqueror C. C., third. Time, :37⅘.

One Mile, Professional, for Roller Skaters—Won by C. Watts, Riverview Roller Skating Club; A. Krueger, Opal A. C., second; Roland Cioni, Opal A. C., third. Time, 2:23.

Half-mile, Open, Class B—Won by Jules Arens, Logan Square Cycle Club; Charles Saelems, Belgian-American, second; Fred Vench, Belgian-American, third. Time, 1:04⅘.

One Mile Handicap, Class A—Won by Olaf Lodal, Mystic A. C.; Peter Guidotte, Italian-American, second; Roy McWhirter, Northwestern Skating Club, third. Time, 2:15.

Miss and Out Race, Class B and C (fourteen laps)—Won by Jules Arens, Logan Square Cycle Club; Charles Saelems, second; Phil Klaes, Belgian-American, third; C. Stockholm, Riverview C. C., fourth. Time, 5:42⅖.

Two Mile, Professional, for Roller Skaters—Won by Roland Cioni, Opal A. C.; A. Eglington, Riverview Roller Skating Club, second; C. Watts, Riverview Roller Skating Club, third. Time, 5:02⅕.

Five Mile Open—Won by Peter Guidotte, Italian-American; R. Vanderpaelt, Belgian-American, second; E. Kockler, Mystic A. C., third. Time, 12:19⅘.

PARTS SCARCITY IMPRESSES JOHN HENRY

BUFFALO, N. Y., June 25.—John W. Henry, president of the Vic Cycle Hardware Co., who has just returned from a week's trip through western New York and northwestern Pennsylvania with the Buffalo Wholesaler Dealers Boosters Club, reports that everywhere there was much evidence of the scarcity of parts, etc.

"While in the various towns," he remarked, "I renewed old acquaintances which I made ten or fifteen years ago when I was on the road. I also met all of our new customers. All were of the opinion that bicycles were being sold in larger quantities than ever before."

WALTHOUR WINS OVER FAST FIELD

Lights Go Out Suddenly During Thirty-Mile Motor-Paced Race at Revere, Curtailing Event; Linart in Second Position

BOSTON, Mass., June 27.—Bobby Walthour proved to be the winner of the feature event of last Saturday night's racing at the Velodrome, which was to have been a thirty-mile motor-paced race. But for the first time in history of the track the lights went out while the motor-paced riders were completing the next to the last mile in the feature race. Fortunately no one was injured.

Morin, a pace maker, received a few scratches when he tried to check the speed of his machine, the sudden stop throwing him to the track. The lights were out about three minutes.

Bobby Walthour won the race, which went 28 miles and five laps. Victor Linart was second and George Wiley, who had more hard luck, finished in third place. Wiley carried the two other riders around for a big part of the distance in the lead. A flat tire cost him some distance.

One of the features was the sprinting of Ned Chandler, the Boston boy, who gives every indication of supplanting Major Taylor in the estimation of the fans. Chandler, with L. C. Rollins, defeated Tim Sullivan and Pat Logan in a special match race. Chandler had to defeat a fast field in the five-mile open race. His partner in the team race, Tim Sullivan, gave him a great rub, but the speedy colored boy was too fast.

Mike Barber won a quarter-mile amateur race and Percy Cutter, of Wakefield, won a mile profesional race.

HAPPY JAUNT THROUGH THE NORTHWEST

What a Lone British Columbian Cyclist Saw on a Trip Down the Pacific Coast from Vancouver to San Francisco—He Averaged 54 Miles a Day and Had Only One Puncture

By A. FRASER REID

VANCOUVER, B. C.—The trip was made by a young University student of Vancouver, British Columbia. Wilson T. Dougan is well accustomed to cycle touring, having spent three summers touring the United States and Canada. As interesting as it is brief, we give the narrative in the form of extracts from the rider's diary, he having given evidence of wonderful vision and memory on the long, lonely ride across the Pacific Coast:

Goodbye to Vancouver

Twelve miles of elegant riding lead into New Westminster, the first capital of the province of British Columbia, with its magnificent fresh water harbor and its million-dollar bridge over the Fraser guarded by stalwart soldiers with fixed bayonets. The afternoon is hot, good gravel roads lead to the international boundary at Blaine, Wash., and unaccustomed to riding, I get "seasick" after riding 34 miles. Camped for the night at 6 o'clock—campsite a forest near White Rock, and slept till daylight 'neath a majestic pine, and with the starry sky my only covering. Breakfast of blackberries introduced me to the simple life. Passed customs officer at Blaine without having to put up bond, on account of good reputation of Canadian riders.

At Mt. Vernon I had a long, idyllic sleep until 5 a. m., and at Everett a long trestle crossing brings me into a plethora of Aunt Sallies, hurdy-gurdies and peanut stalls—the "Klayhowyah" is in full swing, but the celebration does not detract from the lone pleasures of the journey before the rider; instead, apricots and a cantaloupe are laid in store for a feast later on. Along Lake Washington, and so into Seattle, with a brick paving for the past twenty miles into the Sound City. Seattle offered a room, a bath and a snooze; the city knew little and cared less, whether I was there or not. Hills are here like a sloping house roof, all leading up from the waterfront, yet the ride up the Yesler Way is as easy as on the cable cars which ply the city.

Tacoma, the City Beautiful

The route to Tacoma lay through scenery of a domestic nature—wheat fields, orchards, dairies and scattered hamlets. Enjoy a cheery lunch at Auburn, in view of majestic Mount Rainier, and enter Tacoma over an expanse of tideflats. Tacoma looks like a city satisfied with its accomplishments—or one waiting sadly for something to happen! There is much animation, and the city has shown energy enough to capture for its smelters much of the copper mined in British Columbia. Point Defiance Park is the beauty spot, a humble imitation of Stanley Park, Vancouver's thousand-acre playground. The long run to town is lined by swell residences, and the High School guards the unique concrete stadium with a seating capacity of 35,000. St. Peter's Church boasts the oldest church tower in America—a tree. Visited relatives near Spanaway Lake, and was mistaken for a tramp!—explanations, then strawberries and cream, and a brief sojourn, laboring in the hayfield.

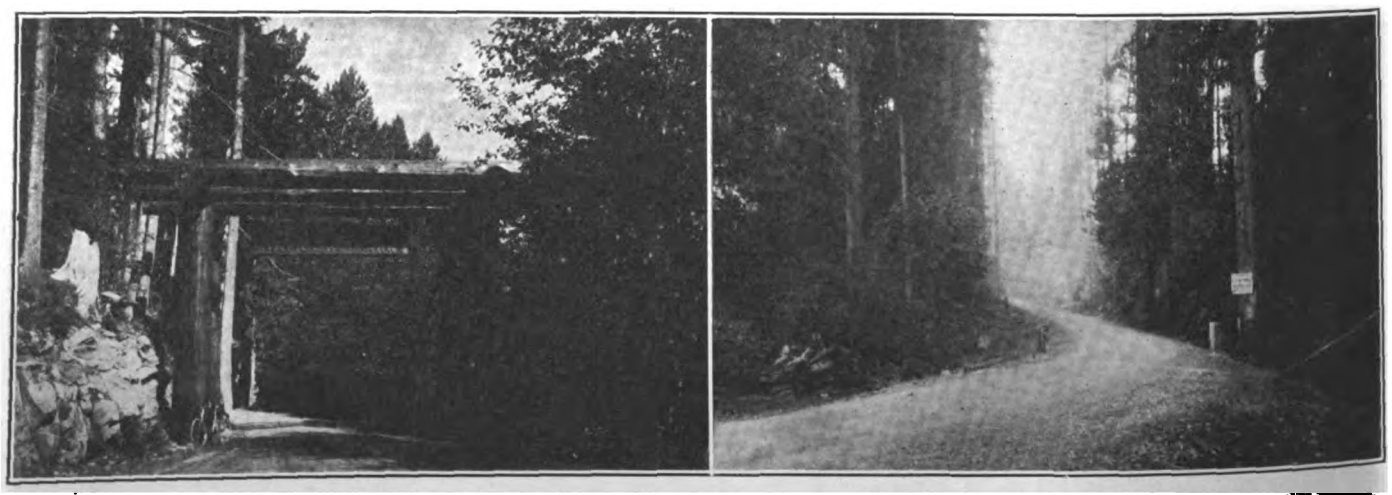
My mind is soon made up to essay the side-trip to Mount Rainier—it is a mere matter of 75 miles each way. The first night is spent in a deserted shack among the ferns on the mountainside, with the owls for company. The climb is a slight grade for the first seven miles, with an occasional glimpse of the 14,000-foot peak. The succeeding fourteen miles are over good surface road, but as crooked as sin. For instance, the climb from Nisqually Glacier, which the road skirts, to Narada Falls, eight miles straight up a narrow mountain trail—with many spots where a slip means a wreck. Reese's camp at Roadhead is reached at an elevation of 5,557 feet, after a climb of six per cent. the whole of the fourteen miles. A hot meal awaits beside a glowing fire—without, a cold wind from the summit, bathed in impenetrable mist. The return to the park entrance is one long, entrancing glide of 21 miles, only necessary to touch the pedals at the bottom, when it became imperative to dismount to pass autos on the climb. This was a fine test for the brakes and gear of the cycle.

Crossing country, in place of returning to Tacoma, I got stranded on a stretch of ten miles of gravel, over which it was necessary to use Shank's mare. A signpost also pointed west instead of south, leading me into a farmyard five miles from any highway. Too stubborn to return, so crossed three barbed wire fences, a ditch, and slid down an embankment to the railroad track, which I followed for 1 1-2 miles against the expressed wish of the section foreman. Olympia is the Capital of Washington, but a side-tracked town—no sooner entered than the other side is reached.

Seeing the Rose City

The city of Portland seemed just out of a bandbox, a narrow and lofty town, with narrow-gauge cars and high, encircling hills. Trolley cars and jitneys in profusion. Many of the streets are lined with roses and shaded by cherry trees, with Mts. Hood, St. Helens, Adams and Rainier in the background. Every car seems to bear notice of an excursion or picnic—truly the Rose City lives. The river meanders and curvettes gently through a shady lane broken in a dozen places, where fine highways cross the Willamette. Leave Portland at night on the way to Hood River, with admirable road for twenty miles to auto club headquarters on the Sand River. The summit of the long hill through the forest touches the brink of the Columbia Gorge; so anxious were the good people of Portland to build this million-dollor roadbed that they personally subscribed bonds, with in many cases their homes as security.

Rooster Rock seems like a toy as the



Left, Entrance to the National Park Near Tacoma, Wash.; Right, Glimpse of the Fine Highway Leading Through the National Park

Digitized by Google

Left, Dougan Starting from His Home Town, Vancouver, B. C.; Right, a View of Mount Ranier

road creeps around the edge of the Heights of Thor to Crown Point; here the road winds, with the heights backing it and the great wall of cliff dropping sheer below. The view extends for 35 miles, and during the next ten miles eleven waterfalls tinkle musically over the cliffs to the south. The culmination is Multnomah, with a fall of 700 feet sheer over a ledge of conglomerate formation. Each creek is spanned by a concrete viaduct of Italian ornamentation, with the stone wall approaches in harmony. The roadway descends to the level of the railroad, and together they leave behind the grandest and most sublime scenery at Oneonto Gorge; here a cleft in the rock with overhanging walls burst across the highway, and into the bluff beyond the road is tunnelled, with the railroad tracks parallel on the outside. A wild thrill of admiration, not untinged with awe, quickens the pulses as one views by moonlight the charms of Shepherd's Dell with forest giants of olden days that still attempt to bridge the waters of the Columbia. A fish wheel, with its wealth of glittering salmon, slowly revolves in the river. The road is now soft for miles, and much time is lost walking. Night found me on the heights, stranded and unable to make the descent. No houses are near, so a convenient wheatfield affords shelter.

End of Great Barrier

Sand, deep and loose, marks the end of the Dalles, or "great barrier." The road turns up a canyon and loses the river, navigable for hundreds of miles yet. A "header" is seen drawn by 32 mules—cutting, threshing and sacking grain at the rate of 17 acres per diem. It is a picture of industry; the road reaches the horizon over a series of vast rolling hills covered by golden grain, reminding one much of the prairies of Manitoba and Saskatchewan. Up a narrow creek, the bare hillsides are reached, and night brings with it again camp in a handy barn.

Bought a cone at Ione; anticipated cost, 5 cents, but actual expenditure 10 cents—result, one cyclist clean broke. Crossed the driest section of country yet seen. Find a deserted farmhouse at nightfall, but phew! Prefer the outdoors, and sleep under the stars, among the relics of an old harvest binder.

Now enter desert, cactus, rabbits and snakes, with a blazing sun and no water. Reach an empty farmhouse—with empty water tanks. Dry as a bone, and unable to articulate. Found a cheque for $50; reached Echo and found the owner of the fifty bones, who handed out the handsome reward of four bits. Spied a fountain and literally absorbed the fluid. Darkness falls as I near Pendleton—a town of 8,000, but during the annual round-up, cow-boys and other visitors to the number of 100,000 invade the ranching centre. Kept on in the darkness to Walla Walla, arriving there on a Friday after three hundred miles of laborious grinding.

Hard luck now steps in. Had a great time trying to catch a boat, after riding 28 miles to Wallula, but nothing doing. Only 23 miles to the nearest town, with no road—so bump, bump over the ties! On the way met a real specimen of the tramp species—and this meant the last of my carefully stored harvest of peaches. It is hard to deny when the suppliant asserts "Nothing to eat but two sandwiches in three days." Almost step on a 3 1-2 foot rattler crossing the track; ripped out a small fence post, and goodbye rattler. Plodded along to Umatilla, with its tumbledown hotel—one window missing and the other propped up with a chair. Seventeen beds in one room—some dormitory! Held up for a day on account of excessive moisture, and cut back to road over the hills, with nothing more exciting than a distant acquaintanceship with an odoriferous skunk and another night at a farmhouse. Tried the trout fishing at Umpqua, but proved no Isaak Walton; tried bathing, and found this far more satisfactory. A pie, a loaf of bread and sundry confections constitute supper fit for a king—if he is not too critical.

Joins Fire Warden's Camp

"Is there a trail across the Cascades?" A garage owner supplies the answer, with the cheerful addition that I will probably have to walk twenty miles of it. The distance is thus cut to 90 miles: a hint to lay in supplies was timely, so stocked up with delicatessen and supplies. The country is mountainous, with long shadows and brief twilight. Striking a fire warden's camp, my services were enlisted in fire fighting on the Cascades, and my trip was thus delayed two days, chock full of varied experiences. The pass over the Cascades reached an altitude of 4,000 feet, with a trail for a highway and a grade of 15 per cent.—rather rough riding, indeed. Crossing the Divide, the view was a wonderful one, stretching way down the length of Rogue Valley. During the lone night watches in a deserted barn, grey squirrels kept up incessant chatter and an eerie wind whistled through the cracks.

At Crater Lake

Beside the Rogue River, the road again climbs—up, up through a narrow canyon of brown lava, ascending 400 feet to Mill Creek Falls and entering the lava region from Crater Lake. Finally, the road merges into two ruts in the soft sand, entailing considerable pedestrian exercise for many miles, as per forecast. The road is very crooked, and swarms of autos are encountered on the ascent. From the summit we peer down into a basin with an area of 25 square miles; the water is purest emerald near the shore, with every shade and tint of blue beyond. Tiny launches ply the waters of the lake so far below us—waters 2,000 feet deep, breaking straight from shore. Two islands nestle in the middle of the lake, one of them containing the crater of a volcano and the other a literal representation of a ship petrified into stone. Edges of pure lava rock show, weathered into strange and fantastic forms. The trees are few and stunted, and a massive stone hotel stands on the very brow of the cliff. The altitude of the summit is 8,000 feet, and here 50 feet of snow falls annually, making no appreciable difference in the volume of water below.

Roads are heavy and crooked crossing the California line. An orchard follows the sign-post, and here little money buys many apples. The sun is blazing hot, and I am coasting nicely down a hill when the sack of apples behind sustains a puncture managed to salvage a few of the rosy fruit. Pulled up after a quarter of a mile, and Soon reach the Pacific Highway, which is a synonymous term for good road. Speed now averages 16 miles per; the afternoon sun is hot and oppressive, and each successive town adds its quota of ice cream cones and sodas to soak. Lovely Mt. Shasta Siskiyou Mountains is reached at an elevation of 3,500 feet, with Mt. Shasta within comes into view, and the summit of the fifteen miles.

At Siaska are immense fish holes for the hatchery, and at Shasta Springs Hotel I

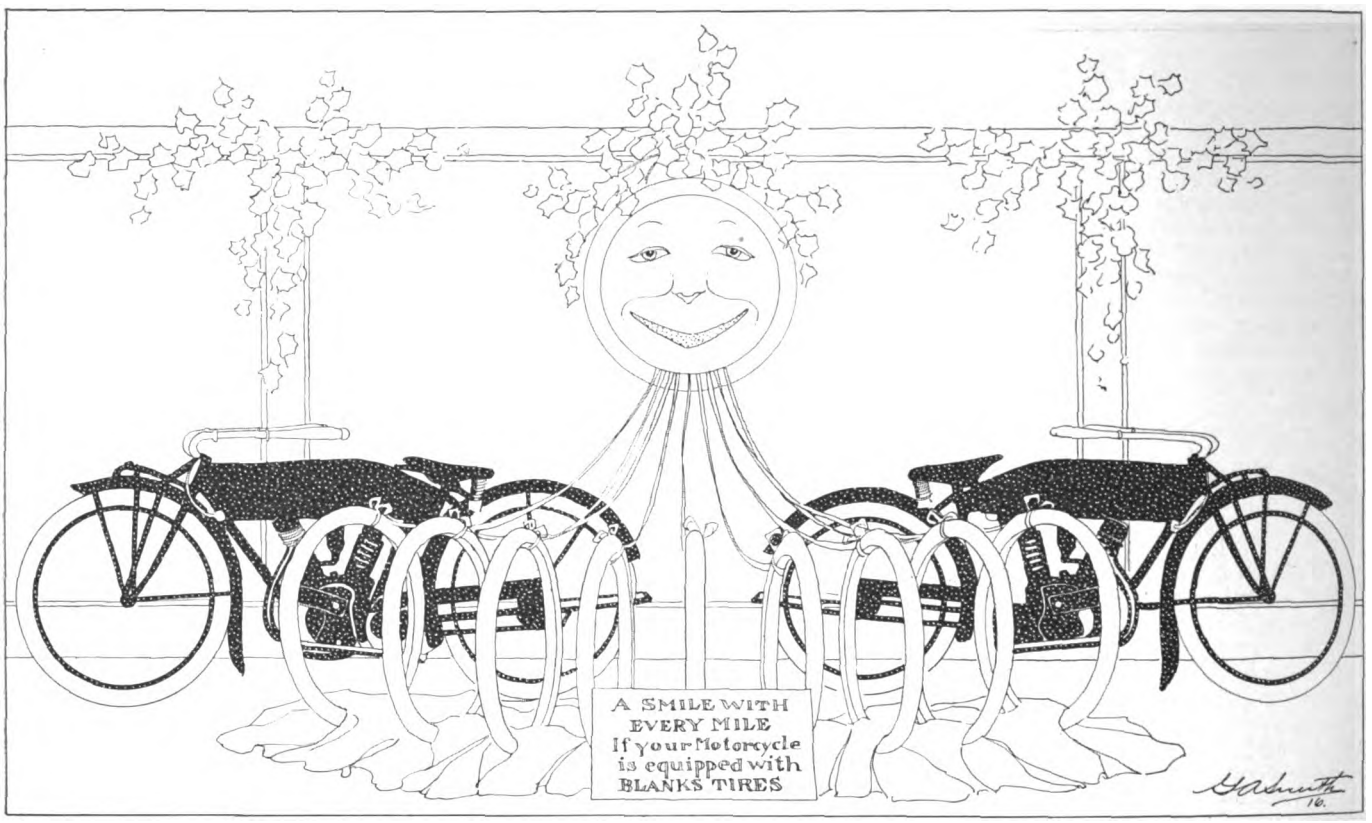
Catching the Public Eye

INEXPENSIVE DEVICES FOR USE IN WINDOW DISPLAYS

How the Cycle Dealer Can Build Stands and Other Equipment

By G. A. SMITH
In Charge of U. S. Rubber Company's Window Displays



No. 1, Attractive Layout for Combination Motorcycle and Tire Display

THERE is no excuse for the dealer who complains that he cannot afford the proper equipment for the display of his merchandise when he can easily construct from ordinary lumber fixtures to meet every display requirement. The only good excuse he could really give would be that he had neglected this end of his business, or that he did not know how to go about it.

First of all, you should thoroughly realize that in order to get the greatest possible results from displays it is necessary to present the goods in a creditable and up-to-date manner, and to bring this about it is essential that you have the proper equipment to display them with. When I say proper equipment I don't want you to misunderstand me in regard to the sort of equipment that is essential. In fact, the fixtures need not be of the highest order. But one thing quite necessary is that they should be suitable to the merchandise which you wish to display, and of such a design that they will permit you to bring out the prominent and vital points of the goods.

ASK QUESTIONS

Motorcycle and bicycle dealers who have in mind a special display, or who wish to obtain authoritative advice concerning any window display matter, are invited to address their inquiries to Mr. Smith, who will answer them in these columns. Practical and thorough co-operation is the purpose of this department, and dealers are invited to call for advice early and often—if they need it.

With the wide experience that I have had in all lines of merchandise display problems, I find that motor cycles, bicycles, tires and their accessories are a line of merchandise that can be handled very easily without the aid of a great many fixtures. The necessary fixtures, however, should in all cases be of a practical nature and conform to the goods which are being shown.

The appearance of the display in general is made more impressive through the use of unusual artistic and practical arrangements of the merchandise in conjunction with the right sort of settings, ideas and equipment.

There must at all times be harmony throughout; aim to bring out all the good features the goods may possess, and in order to accomplish this you need not possess any great number of fixtures. A few well-made and practical ones will serve the purpose quite nicely, providing you know how to utilize them.

Assuming that you are an ingenious sort of fellow, you will soon be able to solve your display problems with ease. One of your greatest aids will be the use of home-made equipment devices, etc., which may be made up from wall-board or seven-eighths inch soft pine lumber over which a covering of some sort of imitation wood grain, onyx marble or bark paper may be placed. The possibilities in this field are unlimited. It is surprising to learn of the many different schemes in the shape of fixtures and devices for display work that can be worked out from these materials.

Digitized by Google

The accompanying illustrations show two good examples of home-made equipment and just how they may be ulitized. These consist of tire supports and show two styles, the smaller one being made for use on the floor of window or platforms. The other is raised from the floor to any height you may care to make it and is attached to an upright. We might christen them the "Trough Tire Supports." They are made from ordinary lumber nailed together to form the "trough," as illustrated, and should be made about one inch or more wider than the tire itself and of a length that will permit the tire to set down into it, so that the tire touches the bottom of the trough. The troughs can then be painted or covered with imitation wood grain marble or onyx paper.

The standard of the raised support can also be constructed from ordinary soft pine lumber.

When these are used in your window display they will in all cases have to be draped with some sort of material such as lining, plush, velour, cotton flannel, cheesecloth or anything you may see fit to use.

Using the Fixtures

Another of the accompanying illustrations shows how this should be done. Illustration No. 1 shows the use of nine floor supports, and one raised, in connection with a corking good idea for featuring motorcycle tires in conjunction with two motorcycles. This is a very simple method and one that demonstrates forcibly the good qualities of these devices.

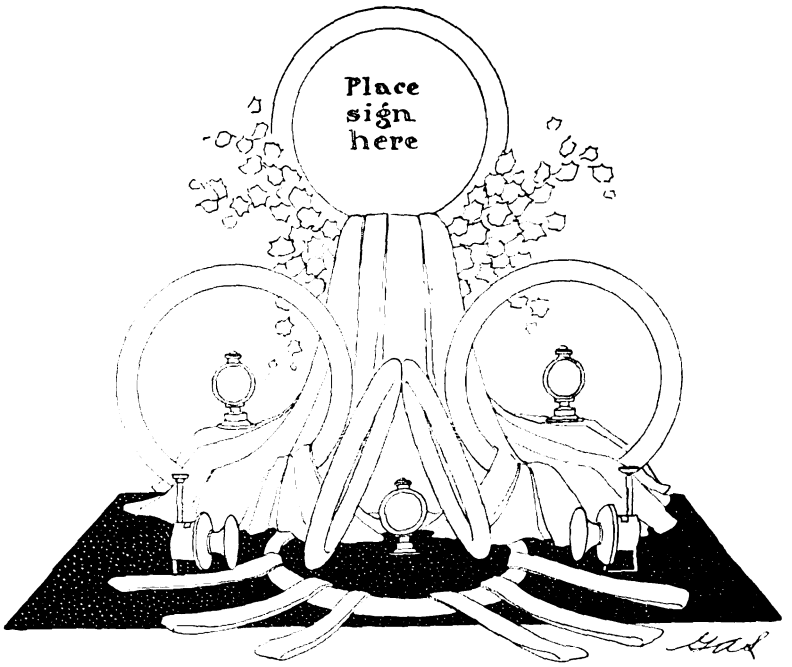
The central feature in this display consists of a tire placed in the raised support at back. A smiling face painted in outline on a circular-shaped piece of cardboard is placed inside of the tire. Narrow strands of ribbon are then attached to the lower part and brought out and tied to the tires arranged in the supports on floor of window.

Material is draped around the supports and through the tires, as shown. A motorcycle is arranged at each side, and when completed the layout takes the shape of a semi-circle in formation. Several sprays of seasonable foliage can be placed at each side and back of window, also around center tire. A placard should be used containing the wording, "A smile with every mile if your motorcycle is equipped with "Blank Tires," the name of the tires which you are featuring to be inserted.

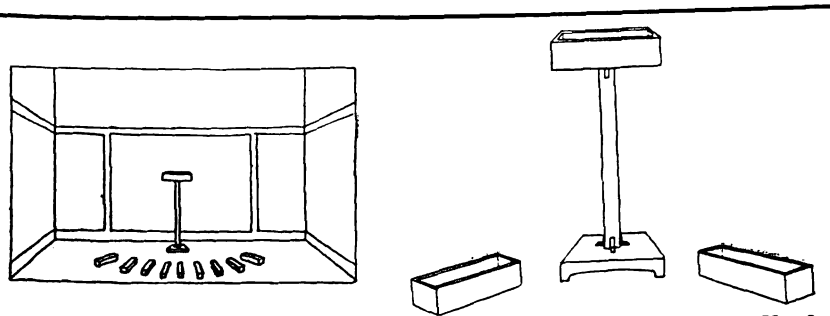
The illustration No. 2 shows the skeleton setting as to how you should arrange the fixtures. No. 3 illustrates a small unit grouping of tires and accessories arranged with the use of one extended support and two floor supports. Material is shown draped from the central tire at back, the ends being brought out over the floor and through the tires covering the supports. Several sprays of foliage are attached to the lower portion of the central tire by means of fine wire. A sign with any wording you may see fit to use can be placed as suggested. Several lamps, horns and tubes placed in advantageous positions complete the unit.

Simplicity is the keynote in all display work. It is very forcibly illustrated you will notice in these displays.

Proper arrangement of the goods shown is one of the greatest factors in good display work. Therefore, strive to keep this uppermost in your mind when you install your displays.



No. 3, Special Grouping of Tires and Accessories; This Is Based on the Two Troughs and the Upright Shown at the Right Below



At Left, No. 2, the Troughs and Raised Standard for Tire Display; at Right, No. 3, Troughs and Upright as Used in Display Shown Above

GAS PRICE EVIDENCE RESULTS IN CONSTERNATION

WASHINGTON, June 26.—So involved and contradictory in character was the maze of testimony offered by gasoline experts and near experts in the Federal gasoline inquiry before the Federal Trade Commission, that the commissioners are more or less at sea in so far as determining the real reason or reasons for the jump in price of the liquid fuel. Over production of crude oil, non-competitive tactics of the Standard Oil Company's competitors, the demoralization of the industry in the west, crowding of the garage men out of the retail industry and a host of other minor causes were given in evidence before the commission which will issue in a short time a report based on the hearings.

In the meantime all the evidence tends to show that the price of gasoline has reached and passed its high water mark and that it will either remain at its present elevation or decrease throughout the next few months.

NEW FUEL FROM BLOOMFIELD

BLOOMFIELD, N. J.—This city has produced a new fuel, called "gasene" by its inventor, Frank R. Blamey, a local automobile man and grain and feed dealer. It consists of the usual mysterious chemical which is to be added to a mixture of gasoline and kerosene, one cent's worth being enough for five gallons of "combined fuel" (gasoline and kerosene).

OMAHA MOTORCYCLE SQUAD READY

OMAHA, Neb., June 26.—Twenty members of the motorcycle squad of C Company, Nebraska National Guard, are now under arms in this city. They will be mobilized with the remainder of the Guard following President Wilson's order of June 18.

TWO INDIANS FOR POLICE

PATERSON, N. J.—June 27.—John Steele, the local Indian agent, has delivered a Powerplus Indian to the Englewood police department and one to the police of the Little Falls Township. More than $205 in fines were imposed by the motorcycle officer of Little Falls the very first Sunday the new machine was used.

British Sport and Trade

By OLD RAMBLER

ONE of the veteran writer-riders on this side wrote me a letter a short time ago with these words in it:

"We'll get some more roadside joys before long. Like you, I revel in the game and we'll slide along the sylvan glades and bosky dells—the ambrosial places of Fair England—for the sunny days are coming up our way, my boy, and the European nightmare will soon be over and gone."

Words worth reading, aren't they? The cult of the roadside and the countryside, the reading of the great Book of Nature, has been growing grandly for many years. Men who love speed also love the Old Lady of the Woods, the Mother of the Mountains; for travelers by bicycle and motor alike find rare delight in Nature's ways. It is a pleasure that beautifies life. The spirit of "Freckles" (one of the American books which is going great guns over here) is the dominating force that sends thousands of men and women health-hunting.

The Nature Spirit

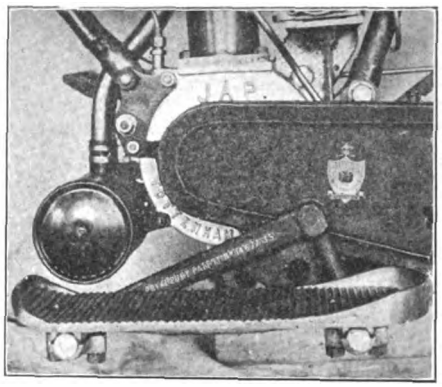
They go away from the money-grubbing centers for a day or so every week. And already we see signs of summer, and also, say many, the end of the war. The right side of life is the bright side. These words are the expression of the inner soul that every true rider has in him. Now for some really practical matters!

The war has not brought stagnation into the camps of British motorcycle designers. I had a walk over the Royal Ruby motorcycle factory in Manchester a short while back and the great chief thereof, G. E. Rigby, presented a plethora of evidence that "Forward" is the watchword. Before long, I hope to be able to tell you of the new method of rear springing, along similar lines to that of your own Indian; of the method of rendering the back wheel quickly accessible. This latter will be a Godsend over here—we have too long been cursed with inaccessibility of back wheels not only for tire troubles, but for bigger repairs.

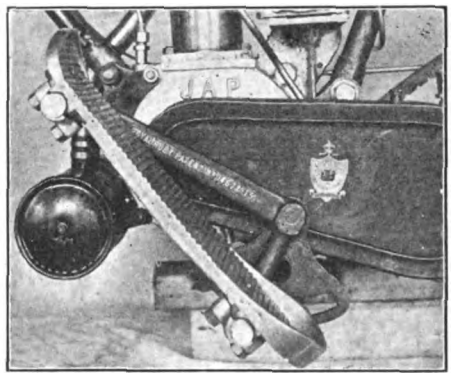
Adjustable Foot Rests

Among the Royal Ruby's innovations for the 1916 season are adjustable foot rests. At first blush, the value of these will not be appreciated, except by riders who are accustomed to long journeys and have yearned for an easily effected change of position. The illustrations show the range of adjustability—from the horizontal to a steep angle. The patent for this desideratum is for sale in America and communications may be sent to Mr. Rigby or through the editor of this magazine.

Inside the mudguards a channel is made, down which water and mud must run, so that the grime and wet will not drip on the belt. The channel drains the fluid filth to a point where it will drop on the road. The rear carrier is of first-rate design. Not only is it strong enough to support a heavy pillion seat for a joy-riding companion, but it is so made as to be quickly removable in order that the back wheel can be quickly got at. Hand and foot control are both provided.



Royal Ruby Footboard in Its Lowest Position



Footboard in Uppermost Position; Compare with Other Picture

Ladies' and Export Models

Two features of trade are prominent at the Royal Ruby works: export and ladies' models. In the case of the latter, the trouble during the war has been to get supplies of variable gears with free engine, but the problem has been overcome. As regards motorcycles for export, these are specially designed and the 8 horsepower model with overhead valves is being sent to the four corners of the earth. To go to the other extreme, the Royal Ruby folks are now actually producing a two-stroke lightweight with a 2½ horsepower engine.

The Royal Enfield cycles and motors are among those which are not suffering from anything in the nature of a war slump. It is a pleasant paradox that, in spite of advanced prices during the European disruption, the demands for bicycles are more numerous than before prices started heavenward.

It is quite impossible to state the exact reason for this. It may be due to public appreciation of high quality in wheels; it may be due to the fact that a lot of people are so aggravated by motor restrictions as to be falling back on their old pedal-pushed friends.

American makers and riders will note with interest that the Royal Enfield manufacturers are reducing the number of their models. Hundreds of times, writers on this side contrast American factory practice with British regime. Here, a factory generally aims at meeting every fad and fancy and fashion, from lightweights to monsters, and it is debatable whether this plan is better than the common one in the States, making one or two models only.

Anyway, the Enfield people are not cataloging as many sorts as beforetime. There will be a big supply of 6 horsepower motorcycles to cope with the call for a mount that will take a sidecar anywhere. The 3 horsepower model will be built in big numbers because it has won a big popularity; but the modern demand is also to be met by a flexible two-stroke lightweight gem. This is the beau ideal of a motorcycle for a novice or for the man who wants an economical friend.

About Harry Long

I met Harry Long the other day, and think that some chat about him and his cycle and motorcycle feats will be of interest, as a sequel to your notes on Lenz, Stevens and others. Long is a man of magnificent physique. He lives at Southport, one of the pleasure resorts on the West Coast. He is the only man who has ever cycled round the coast of Great Britain; motorcycled over the same course and driven a light car around the coast in the bargain.

The feat is not so simple as you may imagine. Don't delude yourselves with the patriarchal joke of the American who said he dared not motor or travel by train in England for fear of falling over the edge and getting drowned. Britain isn't *quite* so small. The coast line is over 5,000 miles and some of it is so hilly and so lonely that one wonders how it contrasts with the 'Frisco-New York trip.

Four Times Round Coast

This is a list of Harry Long's performances round the British coast—5,159 miles:

By bicycle, 50 days, averaging 103 miles a day; motorcycle, 32 days, averaging 161 miles a day; by sidecar combination, 33 days, averaging 156 miles a day; by light car, 28 days, averaging 184 miles a day.

The journeys were made in four successive summers and Harry Long stands alone in his achievement. To average 103 miles per diem on a bicycle may not seem extraordinary, but record-making was not the objective. His aim was to do what nobody else had done, and to transact business on the way. If some of the century riders who piled up big figures when the L. A. W. was in its pomp had tried their strength on the fearfully hilly journey round our coast, they would have been content with shorter day's traveling.

Questions and Answers

INFORMATION ON MOTORS

PLEASE answer the following: 1. Can a motor of 3⅜ bore by 3¼ stroke be used in track racing. 2. What gasoline consumption should I get with a 2¼ h.p. lightweight. 3. How does the bore and stroke of the Powerplus Indian compare with that of the J. A. P. twin.

Chicago, Ill. FRANCIS AHERN.

1. Not in sanctioned F. A. M. races. The piston displacement is over 61 cubic inches. 2. Better than 75 miles to the gallon on good roads; probably 80. 3. We presume you mean the J. A. P. 8 h.p. twin. The Powerplus is 79 x 99½ and the J. A. P. is 85 x 88 millimetres. Both are less than 1,000 c.c., or 61 cubic inches displacement. In inch measurement, the J. A. P. is 3.34 x 3.46 inches.

REDUCE PLUG GAP

MY new twin motorcycle runs perfectly on one cylinder, but while the ignition seems O.K. on the other it skips badly. Adjusting the carbureter will not correct the fault. I have taken the plug from the rear cylinder and put it in the front cylinder, where it works all right. The gap in the plug is 1/16-inch. The trouble is more noticeable when running slow.

Divine Corners, N. Y. SUBSCRIBER.

The distance between the plug points will have a good deal to do with the misfiring. It is rather too great. Try 1/32-inch gap. Also search for leaks in the inlet piping, as these may be a cause of the trouble.

CLUTCH IS SLIPPING

I AM having trouble with my motor overheating. After I get rolling at medium speed everything goes right, but in starting or on low gear the motor roars and seems to speed up. It then gets hot.

Galveston, Tex. WILLIAM RAND.

In all probability the clutch is slipping. Try taking it up, but if this will not prevent the slippage, take the clutch apart and put in a new set of worm and screw parts. With the slip corrected, you will find that overheating no longer occurs.

IMPERIAL MOTORCYCLE

CAN you tell me where I can get parts for the Imperial motorcycle? I can find no trace of such a company in any motorcycle list.

Cleveland, O. MARK SMYTHE.

The Imperial is an "orphan" model, made by the defunct American Motor Co., of Brockton, Mass. Parts may be had from the Motorcycle Parts Mfg. Co., 2127 Michigan avenue, Chicago, Ill.

We wish to thank Walter Burmester, of La Valle, Wis., for his letter telling us about the Imperial motorcycle, which information we did not have at the time of answering another inquirer in this Department.

USE LIGHT OIL

HAVING been using cylinder oil in my front and rear hubs, I find its work unsatisfactory, and would be glad to have you tell me what to use.

Brooklyn, N. Y. HAROLD VERBECK.

Use a light oil or a grease recommended by the makers of your machine. You can get the name and grade from your dealer, or by writing to one of the oil companies. You do not state the name of your machine.

EAGLE MOTORCYCLE CO.

PLEASE tell me whether the Eagle motorcycle is still made and what is the present address of the company. If not in business, tell me where repair parts can be had.

St. Johns, Mich. HERMAN J. SMITH.

The Eagle Motorcycle Co., of Brockton, Mass., has taken over the business of the Sterling Motor Co., of same city. The latter firm made the Eagle up to 1914. It is reported that the Eagle company will continue the manufacture of the Eagle motorcycle. Parts can be had from the Motorcycle Parts Mfg. Co., 2127 Michigan avenue, Chicago, Ill., and we also understand that the Eagle Motorcycle Co. has undertaken to supply parts for both new and old models.

SHELLAC HAS WIDE RANGE OF USEFULNESS

Its Application Cures Leakages at Joints and Prevents Many Troubles

By GEORGE M. JOHNSON

TO the rider who does his own overhauling and repairing, a small bottle of orange shellac is a practical necessity. As a seal of leaky joints it is invaluable and this property alone makes it something to have on hand at all times.

In the first place it is invaluable for sealing connections that must be air tight; for example, the unions between the carburetor manifolds and the cylinder heads. When the carburetor is put on and the union nuts set up, it may happen that the fit is not tight. This means that air will be sucked into one or both manifolds, upsetting the mixture delivered from the carburetor. Irregular running, perhaps the firing of only one cylinder on low throttle, will surely follow. The cure is to back off the nuts and to smear the threads with a liberal supply of shellac. If a bit of grocer's twine is used for packing about the union, in addition to the shellac, the manifold cannot fail to be absolutely tight when the nuts are set up firmly.

Eliminating Oil Leaks

If you remove the cylinders from the crankcase and wish to have no oil leak around the base when the motor runs after they are put back, use shellac, letting it dry enough to become quite tacky before bolting the cylinders down. Of course the seats should be cleaned of oil or dried shellac first. In addition to the customary copper asbestos gasket, shellac will help make an oil and gas tight cylinder head, when the inlet valve cage has been removed for grinding the valve. If the motor is of the separate head type, a little can be used to advantage in that place also, though it is not really necessary provided a new gasket is used and provided also that the head nuts are set down properly, a turn at a time. In any case, be careful not to get any shellac on the inside of the cylinder.

For Emergency Repair

Shellac may well serve for an emergency repair in certain cases. Some time ago, while reassembling my Indian motor, I was so careless as to twist the oil pipe that leads to the front cylinder. It happened as I was screwing up the union nut where the pipe joins the cylinder, the result being a split in the pipe about a sixteenth of an inch long.

I was in a hurry to use the machine, so went on with the assembling, but of course much of the oil that fed to the front cylinder escaped through the crack, quickly covering the motor and crankcase with oil. In addition there was the danger of overheating the front cylinder, as it was not getting the customary amount of lubricant. The cost of a new oil by-pass is one good round seed, and although I didn't like to buy one, that seemed the only cure; furthermore it is quite some chore to fit one of those cam case by-pass pipes. Then it occurred to me to try the shellac treatment. I cleaned the pipe carefully, then wrapped it with tire tape of quarter inch width, smearing the tape with a lot of shellac, which effectually sealed it. Not a drop of oil has oozed out since, and the fitting of a new pipe has been indefinitely postponed.

AN ENDURANCE RUN PRACTICE WHICH AFFECTS SALES

FOR several seasons, including the present, it seems to be the custom for sidecarists in an endurance run to be packmules for the solo and tandem entrants. The competing soloist passes his spare parts to the sidecar passenger for transportation, and then collects them afterward, say the day after the event.

This is all right, but it would be better if the spare parts were only those carried in case of emergency. Generally they are not. At the finish of each run the onlooker is treated to the edifying spectacle of mudguards, chainguards, footrests and stands crowded in the sidecar with the passenger, or held by him. These are the parts which have been broken off or shaken off during the run, and they don't impress people with the reliability of the machines. It is impossible in all cases to tell the spectators that a fall or two off a precipice will crack the mudguards off, and remarks are heard on all sides: "There's another mudguard from a Blank machine. The 1916 models must be punk." Or "The Dash machines finish tied together with wire."

Creates Bad Impression

That's the impression to the non-rider. He puts down the motorcycle as being all right for speed work or for good roads, but one that is likely to come apart in a day's severe riding. This is one reason why there seems to be room for improvement in the construction of mudguards for endurance run work at least; to create an impression of staunchness of the whole motorcycle, and thus eliminate an excuse for not riding on the part of some numbers of pedestrians. Isn't it worth it?

BEST WAY FOR DECIDING STARTING POSITION IN CONTESTS

IN every contest where the riders are numbered, the best way to decide starting position is by having each man draw a number from a hat. The old method of letting riders start in the order in which entries are received gives an opportunity to bunch machines of one make. For particulars see the Bay State M. C.

ALL HANDS ENJOYED THEMSELVES AT MASLEN'S OUTING

Girls in Handkerchief Race at Maslen Picnic

PHILADELPHIA, Pa.—Over 40 riders and passengers joined with Wigwam Man George S. Maslen, in his recent outing at Neshaminy Falls. Maslen gives one of these affairs annually, under the title of "Indian Field Day" and holds a number of athletic events following the luncheon. This season the feature event for the fair sex was the potato race, which was hotly contested by the ladies. The photograph shows the start of this race.

The program included spearing the ring for sidecars or tandems with lady passengers, slow motorcycle race, sack race for men, egg and spoon race for ladies, backward race for ladies, 50 yard dash, broad jump and running jump, in addition to the potato sprint. The party left Maslen's store at 9 a. m. and served luncheon at the Falls from 12 to 2.

LOEFFLER IS MANAGER

COLUMBUS, Ohio.—E. F. Loeffler, one of the pioneers in the tire business in Columbus, has been made manager of the tire department of the Justus & Parker Co., dealers in supplies and agent for the Swinehart line of tires.

SHEPHERD JOINS BENEDICTS

L. H. Shepherd, manager of the B. F. Goodrich Co. in Providence, R. I., returned from a two weeks' trip last week, bringing with him a Mrs. Shepherd. He is receiving the warm congratulations of his friends. Mrs. Shepherd was formerly Miss Ione Diggs, daughter of Mr. and Mrs. William S. Diggs, of Cincinnati, Ohio.

BATES QUITS FIRESTONE

DETROIT, Mich., June 23.—George J. Bates who has been in charge of manufacturers' accounts for the Firestone Tire & Rubber Co. has quit that post to become commercial manager for the King Motor Car Co. Previous to his Firestone connection, Bates was for a period of years with the Diamond Rubber Co. of Akron.

CANADIANS EMIGRATE FOR GAS

SARNIA, Ont.—An interesting feature of the gasoline situation is that Lieutenant-Colonel Ellis, collector of customs at Sarnia, has discovered that local motorcyclists and others have been in the habit of filling their tanks with gas on the Michigan side of the border whenever the opportunity has arisen, because of the higher price for gasolene in Canada. The local customs official has announced that he intends to impose a duty charge on gasolene imported by local riders and motorists in this way.

FROM NEW HAVEN TO MIDDLETOWN
ON A

Miami PowerBicycle

C. F. Pineau, on a regular stock Miami Power Bicycle, left New Haven, Conn., at 11 A. M. May 24th and arrived at Middletown, Ohio, at 4 P. M. May 30th—1102 miles actual running time, 65 hours—average, 17 miles per hour. Gasoline used, 8 1-5 gallons—average, 134 miles per gallon. No mechanical trouble or adjustments of any kind. First part of trip through the Berkshires, last part of trip over muddy roads in pouring rain. The "Miami" used on this trip had already covered over 1800 miles.

Thousands of Miami Power Bicycles are doing good, hard, steady work all over the country every day.

What Every Dealer Knows

—every dealer, that is, who has had any experience in the selling of bicycle coaster brakes. This dealer knows that the demand for the

CORBIN

DUPLEX COASTER BRAKE

is far in excess of the demand existing for any other coaster brake on the market. He knows that in suggesting it to a customer he is doing that customer a real favor. He knows that the presence of the Corbin Duplex on the hub of a bicycle he is trying to dispose of is oftentimes the final argument that clinches the sale. And knowing these things he specifies the Corbin Duplex when ordering bicycles from the manufacturers and makes the Corbin Duplex a permanent part of his stock.

NEW CLASSES FOR CONTESTANTS

By GOSLIN

DIDJA ever play "Button, button, who's got the button?" when you were a kid? Well, that's about the game every referee and competition committee is playing when the entries come pouring in for the annual endurance run, only they call it "Pro, pro, who's a pro?"

And it's all on account of that section 3, under classification of Competitors, in the F. A. M. Competition Rules Book.

That section mentioned is one of those masterpieces in English that are delightfully vague as to meaning, the kind that cause a lawyer much joy in unsnarling, but cause the average motorcyclist to miss, drop into low, and stall after the first dozen words have been perused.

The aforementioned section says that anyone who is connected with internal combustion engines, be he "in the sky overhead, on the land or in the sea beneath," then that one is a professional rider, IF—and this is the stumbling block to the poor rider—if that one competes on a track where the public is charged admission.

Rush through that section 3 and you will argue till you are blue in the face, that a dealer is a professional, but give the "if" a chance to to get working properly and you will be "wit us and not agin us."

Why Was Trade Class Abandoned?

It may have been the idea of the powers that were in the F. A. M., to make a dealer, or anyone connected with internal combustion engines, a professional road rider, but the sentence when put on the operation table does not reveal that fact.

And why should things be so? Or why, in that same inquisitive mood, did the F. A. M. 1912 convention do away with the trade rider class in competition?

Mayhap the term was abused, that was not the classification's fault. But it sure did away with the opportunity of the dealer or his employee to ride as amateur.

All of which is a forerunner to the argument that the dealer and the motorcyclist who is connected in some manner with the internal combustion engine should get a new classification at Providence.

Why should a dealer or anyone who is connected with the trade be rated as a professional rider in the average road contest?

The word professional means one who makes his living by doing that certain thing which constitutes his profession.

Runs Yield Very Small Returns

Now then, tell us, how many road riders make a living by the fruits of their victories in endurance runs, etc.

Why the average contest that is staged on the road is a money-losing proposition to the promoters and its a lucky club that can pull through with a small deficit. Consequently there is no incentive such as a bigger gate if some noted track-star is "imported" for the occasion.

And another thing, because a man sells motorcycles is no indication that he can outride the average private owner; or his connection with a factory will not hold him up in loose sand or deep, clay roads.

And last, but not least, the average dealer who competes in a road run does so because he finds sport in the competition, he can sell motorcycles without the

13 Per cent. Increased Efficiency 10 Dollars Increased Price

The new Motor of Pope Model L-16 Special is surprising even those who knew the power and the economy of the "Pope Big Twin."

Special cylinder heads with larger intake passages, larger rocker arm yoke stems and heavier construction, together with the new one-inch carburetor, give a two horsepower increase in speed.

Selling at ten dollars more than the regular Model L-16, this special model pays back its increased cost every hour it is on the road by thirteen per cent increased efficiency—going further and faster per gallon of gasoline—and getting the greatest possible return from the poor quality fuel that is so frequently supplied these days.

Do you wonder that L-16 Special is finding such an enthusiastic reception at the hands of dealers and riders alike?

To the dealer who is alive to the opportunities that this special model affords, we have one of the best propositions that has ever been made him. But quick action is necessary—write now.

WAYS OF REDUCING GASOLINE CONSUMPTION

Veteran Rider Tells How He Doubles His Mileage Per Gallon of Gas; Reduces Opening in Carbureter Jet, Keeps Tires Fully Inflated and Avoids Low and Second Gear as Much as Possible

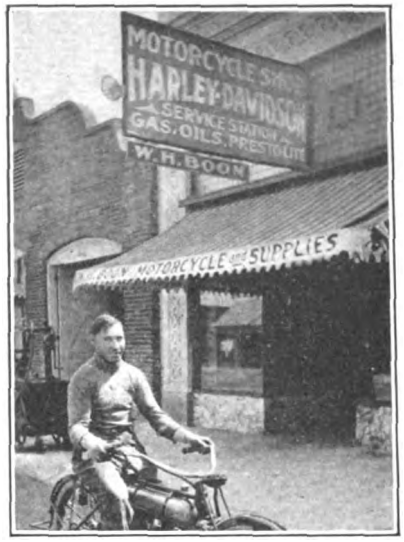
By D. B. PANGBURN

WITH gasoline retailing at the present time for twice what it cost a short time ago, and with no prospects of going lower, any methods for reducing the gasoline consumption are valuable to the rider. Below are described certain ways which I have found to materially increase my mileage per gallon, as well as being beneficial otherwise.

My machine is a three-speed Indian, equipped with the regular type of carbureter used up to 1916, which has a separate, or pilot, jet in addition to the main carbureter. I believed that the opening in this jet was larger than it needed to be, and was letting through too much gas, so much in fact, that the air openings were not large enough to supply the proper amount of air for a perfect mixture. I might have added auxiliary air ports, but then the machine would have been too speedy when running on the pilot jet alone, as it was already making twenty-five miles an hour.

Using Wire in Jet Hole

So instead of auxiliary air addition, I determined to cut down the supply of gas by reducing the opening in the jet. To this end I unscrewed the drain plug at the bottom of the pilot jet and inserted a small wire through the jet hole, leaving a loop of the wire at the lower end to keep it from being sucked through by the engine. I made the wire long enough so that the upper end reached through the jet and up almost to the top of the carbureter. The plan was more than a success. The wire not only reduces the opening in the jet and so cuts down the amount of gas passing through it, but also seems to break up what gas is admitted into fine particles, so the mixture is much improved.



W. H. Boon and His Harley-Davidson Store at Anaheim, Cal.

The result of the change was to increase the mileage per gallon of gasoline by approximately forty per cent., while at the same time increasing the speed of the machine by nearly two miles an hour when running on the pilot jet alone. The engine also keeps noticeably cooler, probably due to the fact that it is supplied with a somewhat lean mixture from the doctored carbureter. The only disadvantage of the method observed so far is that the lean mixture makes the engine rather hard to start without priming when cold.

Keep Tires Fully Inflated

The other principal improvement is in respect to tires. Unless a tire is fully inflated there is a flat spot at the point of contact with the ground, like a flat wheel on a trolley. That is, as the wheel revolves any section of the tire is first round, then flattened as it comes to the bottom, then round again. This constant bending of the walls, if excessive, is very bad for both tube and casing, as the friction and folding wears and weakens the fabric, to say nothing of cracking the rubber on the sides and chafing the tube. But it is bad for your pocketbook in a worse way still.

Prest-O-Lite

For MOTOR CYCLES

All the Vital Features in Satisfactory Motorcycle Lighting, at Small Cost

Prest-O-Lite meets perfectly the demand by experienced riders for brilliant, dependable light.

Riders must have a lighting system they can trust, that will not fail in any emergency, and that vibration and road shocks cannot injure. That's why Prest-O-Lite is used on more machines than all other systems combined.

Prest-O-Lite efficiency is lasting. It is independent of road conditions. Its operation is simple. Prest-O-Lite never needs expert attention. What little care it requires, you yourself can give easily and at but trifling cost. For practical convenience, Prest-O-Lite is unequalled.

You get full value from Prest-O-Lite

You can use Prest-O-Lite with the utmost satisfaction on **any** make of motorcycle.

Many dealers are offering equipment combinations including Prest-O-Lite. A typical combination of this sort is Prest-O-Lite, a lamp and a good mechanical horn—offered at a very gratifying price. Saves you money in purchase price and more as you use it.

Get all the facts about the Prest-O-Lite motorcycle lighting system when you buy your machine.

The Better the Oil—
The Better the Motor—

The engine of a Motorcycle is the most sensitive of gasoline motors. It quickly responds to good lubrication, and as quickly shows the injurious effects of poor oils. Nothing but the BEST should go into your motor—oils that have for years been tested and proven beyond a doubt to be the most efficient for gasoline motors—

HARRIS
TRADE MARK REG. U.S. PAT. OFF.
OILS
AND
GREASES

HARRIS OILS make all the difference in the world—to ANY engine. They give life, energy, speed and power because they are all lubrication—no waste.

QUALITY in the ingredients, QUALITY in manufacturing processes, and 30 years of experience in the making of lubricants result in an oil that is unquestionably best for your engine. Try a can. You'll never be satisfied with anything else.

HARRIS Motorcycle Oils are put out in the following grades: Extra Heavy Motorcycle Cylinder Oil (especially designed for high speed, air-cooled motors), Heavy, Medium and Light.

Good Dealers Recommend HARRIS OILS.

"A Little Goes A Long Way and Every Drop Counts."

A. W. HARRIS OIL CO.

Branch:
143 No. Wabash Ave., Chicago, Ill.

aid of endurance runs; but he deliberately takes time off to participate in a road contest—time that he could probably use to better advantage in his business.

They say that the finest spirit of amateurism is to follow up some sport when you really should be utilizing the time to better advantage. And that clinches the argument that a dealer is not a professional rider, in road runs at least.

Keep in mind that nothing is said of track stuff, that is out of the writer's line, and is of little or no importance in the advancement of the motorcycle as a means of recreation and sport.

What we need in the F. A. M. rule book is a clear, concise statement classifying riders; something that could be put into the "First Reader" and not go over the reader's head.

Here's the point that should be brought out in endurance runs, etc.: class the riders as to their skill and knowledge, not according to whether they sell motorcycles or not.

Why not a class for the rider who has been through several runs and another for the novice and the inexperienced?

You have to learn how to ride endurance runs, just the same as you learn to bat and catch a ball, or play the finer points of baseball. Endurance riding demands as much, if not more, skill than any other game or sport.

Getting the Knack from Experience

In endurance riding you stack up against such well-known goat-getters as Col. H. L. Jinx, Old Father Time and J. Pluvius & Co., a rare old trio to beat the uninitiated, and the consequence is that a novice endurance rider rarely shows to advantage in his first contest.

It stands to reason that after you have been through several runs, you realize how that old watch keeps ticking on as you jog along. And after you have been late at several checks you know that it's best to keep moting while the moting is good; you also get to be a good sign reader and are more observant for tracks in the road when the posting is poor, so that, all in all, whether you be so-called pro or amateur rider, you become skilled in the ways of the endurance run.

Now we come to the mutton, as it were. Why not classify the field as to skill and ability rather than according to whether we buy or sell the motorcycle used in the contest.

As a suggestion—

Do away with amateur and professional classifications in endurance runs entirely and substitute the following:

General class—All motorcyclists who have not competed in more than three road competitions.

Expert class—All motorcyclists who have competed in more than three road competitions.

What do I care if the fellow competing against me works for the factory, himself or some other man. What bothers me is whether he can ride better than I can, and it does not interest me in the least if he sells his prizes or uses them on his machine afterwards.

I am in the contest because it is a sporting event, and if I win a prize all well and good. I will use it if it is an accessory, or exhibit the prize if it is a medal or cup. So what care I what the other lad does with his awards. He has won it and it is his.

There is already too much hypocracy in the sporting world regarding amateurs and professionals; so let the motorcyclists come out first with a new order of things. We are fortunately in a different position than are the followers of other sports, hence my plea for independent and original action in these matters.

The Price Of Certain Safety

In buying motorcycle accessories think

—of the value of your life

—of the value of the lives of others

—of the value of your motorcycle—

and you will buy Stewart Products and gladly pay the price of certain safety.

The $3.50 that a Stewart (hand) Motorcycle Warning Signal costs is mighty cheap insurance for your safety. No cheap little horn or buzzer can demand attention in the din of present-day traffic. It takes the snappy, commanding Stewart blast.

The accurate, easily read Stewart Motorcycle Speedometer costs only $10 complete and will pay for itself in a season by saving you from exceeding the speed limit and by giving you an indisputable mileage record from which to secure fair tire adjustments.

Due to the unprecedented demand for Stewart Products our volume has been doubled and we can now offer Stewart quality, accuracy, dependability and service at prices far lower than such quality and class ever sold for before.

Pay the price of certain safety—get a Stewart Motorcycle Warning Signal and Speedometer today.

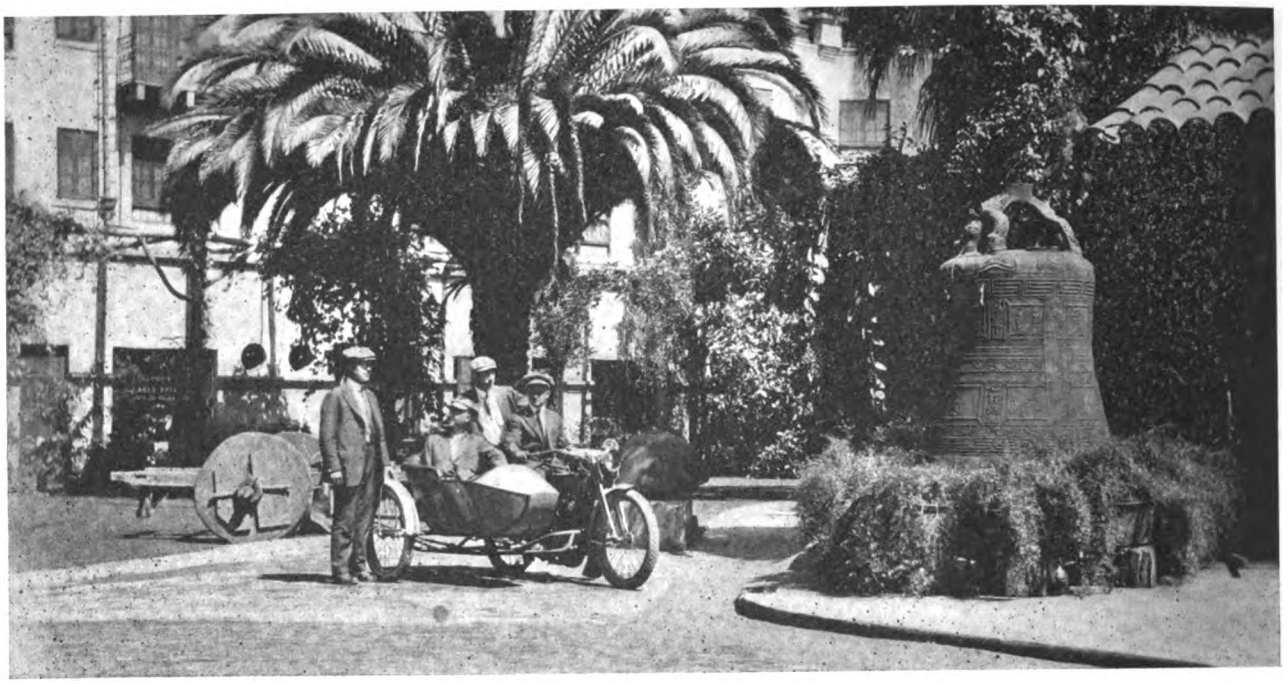
IN THE VACATIONISTS' PARADISE—A SCENE IN LOS ANGELES



WAYS OF REDUCING THE GASOLINE CONSUMPTION

(Continued from page 50)

If you feel of an underflated tire after even a short run, you will usually find that the tread is cool, while the walls are hot, the less inflated the hotter. Heat means work done. Where is the work being done? You can't get something for nothing. You have to pay for that heat, and it comes right out of your gasoline tank, via the engine, which has to work just that much harder. Have you ever pushed your machine with empty tires? Then you know it's a mean job. And don't you remember how much harder it was to push your pedal bike with a flat tire? In the same way, whenever your tires are under-inflated the engine has to do extra work, and you have to pay for it on the gasoline bill. To avoid this, keep the pressure up to that recommended by the makers, and save both fuel and tires.

How They Work

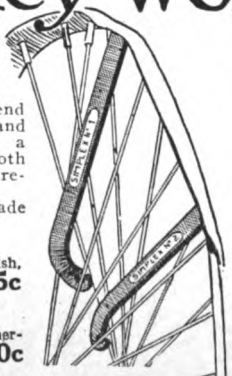
With the **Simplex Tire Tools** the heaviest motorcycle tires can be removed easily and quickly.

Just insert the straight end under the bead, pry up and hook the curved end on a spoke. That's the trick. Both hands free to complete the removal of the casing.

Simplex Tire Tools are made in two sizes:

No. 1 Set
Made of pressed steel, nickeled finish, suitable for tires 2x2½ inch. Price **25c**

No. 2 Set
Solid drop forgings, rust proof sherardized finish, will handle the heaviest tires. Price..... **50c**



A New Tool for the Shop

"Jimmy" is a big husky fellow, just right for the job where a little persuasion is needed. **Nothing better for putting on new, stiff tires or getting old ones off in a hurry.** You'll find a hundred other uses for him around frames and motors. Made of spring steel, 1¼-in. x 5/16-in. x 16½-in. long. Better order a couple at once. Price, each ... **25c**

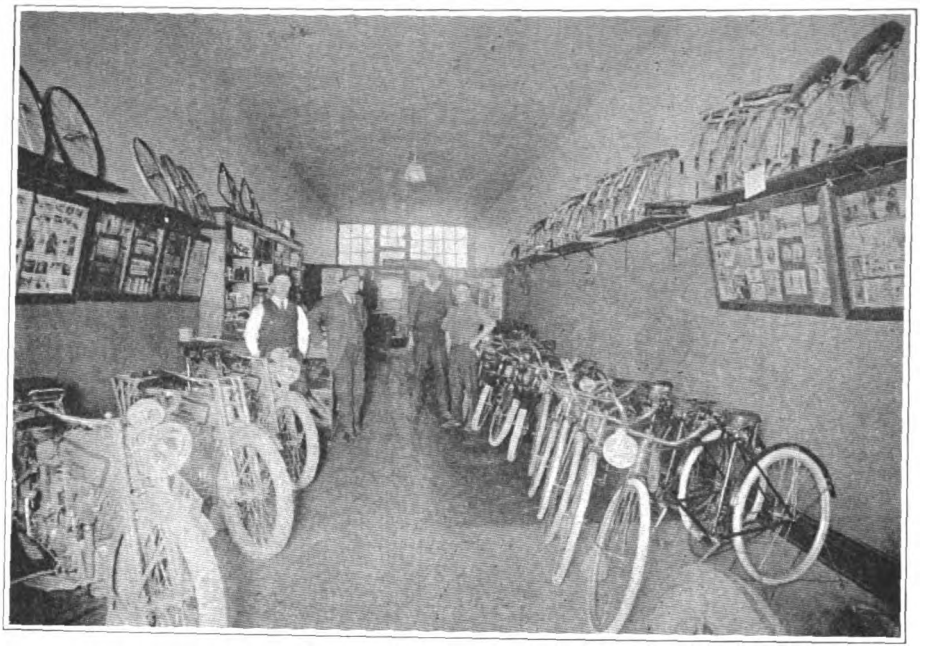
NEAT ESTABLISHMENT IN UTAH'S BUSY CAPITAL



Interior of House of Hopper, Distributing the Harley-Davidson in Salt Lake City. In Addition to Silent Grays, Hopper Does a Big Bicycle Business

ORANGE COUNTY ASSOCIATION BENEFITS DEALERS

LOS ANGELES, Cal.—Motorcycle trade in Orange county is greatly improving conditions through the medium of the Orange County Dealers' Association. This was organized six months ago and now has in its membership all dealers in the county but two. As a result of having this organization dealers have been able to standardize the credit situation and have adopted a new and uniform policy of extending credit, whereby all bills are due on the first and become past due on the 10th of the month, and credit is restricted to any person having a past due account to any member.

Another matter in which the association has been active is in the promotion of a policy among Los Angeles tire jobbers of co-operating with the regular trade in distribution of their goods. In the way of advertising the motorcycle the association has already pulled off what they believe was the most spectacular hill climbing contest in the country, and have other events in mind for later in the season.

COURT TAKES AN INDIAN

LOUISVILLE, Ky.—Frank Marshall, manager of the Century Cycle Company, Indian agent, reports the sale of a 1916, 3-speed, electrically equipped Indian, to the Jefferson County Fiscal Court, to be used in apprehending speeders on the country roads in and around Louisville.

HICKEY JUMPS TO PAINT TRADE

LOUISVILLE, Ky.—R. E. Hickey, formerly manager of the motorcycle and bicycle department of the Dow Wire & Iron Works, has left that company to open up a retail paint store.

KLINES INAUGURATE SUNDAY RUNS

LOUISVILLE, Ky.—Kline Brothers, Louisville Harley-Davidson agents, have arranged to hold Sunday runs to various points on every other Sunday during the rest of the summer. One of the first trips was made on Sunday, June 10, to Elizabethtown, Ky., fifty miles from Louisville.

"The Invisible Motor"

"When I climb on my wheel and begin pedalling, I seem to start some invisible motor that boosts me along with an uncanny smoothness and ease. I hardly seem to be pedalling, so smooth is the action of my MORROW Coaster Brake." That's what one enthusiastic rider said of the

"Morrow"

A demonstration of a bicycle with the MORROW Coaster Brake means a *sure* sale. Not only because of the sterling MORROW reputation, the result of more than 18 years of conscientious brake building, but because of the almost incredible sense of gliding luxury made possible by the ball-bearing action of the MORROW. No bicyclist knows to the full the ease of bicycle riding until he has mounted a wheel fitted with the MORROW.

JIMMY ROURKE'S VACATION TOUR

(Continued from page 25)

agony at the thought of the terrible calamity hanging over the nation, still unconscious of its peril.

In a flash an inspiration came to Rourke.

Two hundred and eighty miles in eight hours! An average of 35 miles an hour, including all stops, turns and delays—it would mean riding at 55 to 65 miles per hour most of the time to maintain the average, but—there was a chance—it *might* be done, and it was worth trying.

"Give me the message—I'll get it to Washington on time," he said eagerly, with a look of indomitable determination on his face.

Lieutenant Conway stared at him an instant in surprise, then his face lit up with the fire of hope as it flashed over him that there was still a last chance, a forlorn hope.

With fingers that shook with eagerness he extended the leather pouch and belt to Rourke.

"Take my service revolver, too, and use it if anyone tries to stop you," he said huskily. "You're risking your life in more ways than one, old man—if the conspirators learn you are carrying the message they'll hesitate at nothing to stop you. But the fate of the country rests with you now—spare neither yourself nor your machine, but *get this message to Washington before* 11 *o'clock*. America is depending on you now, Rourke."

Quickly strapping the belt with the precious leather pouch and the holster with the big army revolver about his waist, Rourke gripped hands with the army man for a sober minute, then hastened downstairs to the garage where his speedy motorcycle was waiting.

A few minutes close scrutiny of the machine to see that all was in perfect trim for a gruelling trial of speed and endurance—tightening a bolt here and there, testing the tires to see that they were hard, then filling the gasoline and oil tanks to the brim.

Turning on the gas, he lit the big headlight, throwing a brilliant path of radiance down the deserted street ahead. Then at a push of the foot lever the engine purred smoothly. Rourke slipped into the saddle, drew back the clutch lever and shot away along the pavement, leaving a trail of blue vapor from the exhaust hanging in the air behind him.

(To be concluded)

TWO MORE CLUBS IN F. A. M.

Secretary G. B. Gibson of the F. A. M. announces two more clubs as affiliated during the second week in June. These are the Bridgeport M. C., of Bridgeport, Conn., with 30 members, all F. A. M., and the Apache Trail M. C. of Miami, Ariz., 15 members, all F. A. M. Harvey Snyder, of 105 Gilbert street, is secretary of the Bridgeport body, while Robert Drummond acts in a similar capacity to the Arizona aggregation.

The Lowell M. C. of Lowell, Mass., 43 members, has re-affiliated.

A HAPPY JAUNT THROUGH THE NORTHWEST

(Continued from page 41)

sample the mineral waters, but am not enamored of them. The road for the next 60 miles is being reconstructed, with a soft surface meantime and a plentitude of hairpin and screw curves. The road is such that it is often necessary to walk two miles out of three. I attempt the ride over some newly-constructed road, the road metal is sharp, and zipp, zipp. Caught a puncture—my first one, after riding 1,752 miles. Started to get busy, and developed a keen hunger. Found the puncture, also a gold mine on the side of a hill. Gold it was, and not less than $15 per ton value, but the seam likely to peter out a few feet in. Dug out a sample and got the gold fever real bad. Ran into a flock of sheep, and had to follow behind for a couple of miles. More cussedness!

Walked four miles to the top of the winding road, and so out of the Siskiyous at Redding. Redding is supposed to rest on the brink of Eternity, yet Mt. Lassen is actually 60 miles distant. Saw it in the early morn, smoking but not in any way spectacular. Crossed a 150,000 acre farm of the original Spanish survey, and at Vina the great vinery of the Stanford Ranch had caught fire and was still smouldering on my arrival. At Marysville City the palm trees were very luxuriant, and here I met an old friend from Vancouver, who directed me to a party of friends quite near. Had a good look at the ostrich farm, climbing a fence for the purpose, and rode into Sacramento, a city of homes and with the usual domed Capitol.

Rides After Midnight

A citizen of the Golden State Capitol tries to persuade me to take the boat to 'Frisco. After coming 2,000 miles—well, hardly! I rode all night till 2 o'clock, after which rested my weary bones under a wagon. Through Stockton and up the valley, the energy required to pedal down a 15 per cent. grade against a roaring hurricane was too much, and I footed it with head bent to the gale, determined to reach my goal in the morning. Did walk for hours, and finally took shelter in the lee of a barn—dead beat. Rested an hour and rode till 5 a. m. Another hour's rest, and rode till breakfast time. Dined at one of the Imperial Oil pumping stations, and kept going till I could see the mountains about Oakland, and rode along the boulevard some 20 miles, descending to lovely lake Merritt and passing the civic buildings en route to the ferry.

The thirty-five minutes spent in crossing were utilized in cleaning both the machine and myself as far as that was possible. Arrived at the ferry depot, San Francisco, at 8 p. m., completing the trip at the hotel to which I was directed by the Y. M. C. A. Thus finished my cycle tour of 2,161 miles, as registered by speedometer. I later visited the Exposition, registering as a good Canadian at the Canadian Building.

Actual days travelled, 40; a day counted if only a dozen miles travelled. Average, 54 miles per day; greatest mileage, 97—might have been over century often, but bad roads prevented. Least mileage, 16. One puncture, and a melted rear tire caused by excessive heat. One broken spoke only other trouble. Cost of trip, including cycle, about $130.

EXCELSIOR OFFERS FEATURE FILM TO DEALERS

CHICAGO, Ill., June 26.—Something out of the ordinary in the way of dealers' helps has been inaugurated by the Excelsior Motor Mfg. & Supply Co., which has just purchased from the Pathe Weekly the film picturing the recent Los Angeles hillclimb, one of the recent Excelsior successes. This film is being loaned to motorcycle dealers throughout the country for exhibition at their local moving picture houses. All that is required of the dealer is that he see that the film is properly treated and placed in its metal container and shipped promptly after having been used to the next dealer. Dealers who have not yet made application for the film should apply to Sales Manager Fred Mathis at the earliest possible moment.

OHIO REGISTERS 17,100 CYCLES

COLUMBUS, Ohio.—W. H. Walker, Ohio registrar of automobiles who also registers motorcycles in a report issued covering the year up to June 21 shows a total of 17,100 motorcycles registered. Applications for registration are coming in briskly and the total will likely reach 25,000 for the year.

NAMES—NAMES—NAMES!

By the hundred, or the thousand, as many as you want—Mr. Dealer and Mr. Manufacturer—Names and addresses of the motorcyclists and automobilists who are registered at the New York State Capitol. The motorcycle registration law just went into effect, and here is a splendid opportunity to get business by circularizing the riders of any part of, or the entire State of New York.

We Furnish These Names at Lowest Prices

We copy official automobile and motorcycle records in the Capitol here and can compile a list of the auto or motorcycle owners for your section of the State, at lowest rates, sending you supplements, giving the additional registrations. We can compile a list of owners of any particular motorcycle or automobile you may wish a list of.

We can also furnish a list of owners of any city, county, district or territory you may desire.

Dealers are making good money, and creating a lot of new business by using our lists. Now is the time to write riders in your territory for repair work and new accessories. Get our list now. Beat your competitor to it.

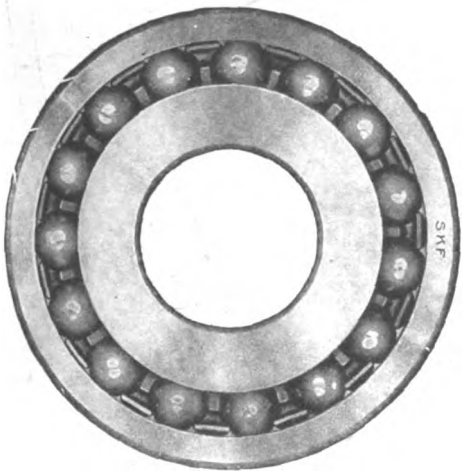
SKF BALL BEARINGS

See--The Ball Driven Into the Anvil



S K F Ball Bearing in Normal Position

A HOMELY test, of course. But imagine one of the ½-inch S. K. F. Swedish Crucible steel balls, hammered with all the force that a brawny blacksmith can exert.

Imagine a ball so hard that the impact of a heavy sledge hammer has no effect other than to sink it into the tough steel of the anvil.

If you could analyze S. K. F. Swedish Crucible steel and know the laborious perfect control and care required to refine it—you would not wonder why S. K. F. steel is so hard. S. K. F. Ball Bearings have many other features which you should know about. Are they on your motorcycle?

What Our Big Production Means to You

Year after year for many years, we have made more spark plugs than all the others *combined*.

Year after year we have greatly enlarged our output.

This year we will double last year's production.

Year after year we have made Champions more and more dependable.

As our production has grown we have been able to adopt extreme and still more extreme measures to insure dependability—

Because—as our production increases we can distribute the expense of these extremes of engineering, of testing and of processing over a vastly larger number of spark plugs.

That's why Champions are so much more dependable.

PREST-O-LITE

For Motorcycles

Light that is Unaffected by Bumps and Vibration

You must have brilliant, reliable light to make night riding pleasant and *safe*. You owe it to yourself to adopt a *lighting system that will not fail you in emergencies.*

Get Prest-O-Lite. It's as sturdy as your motorcycle itself. It stands the strain of hard use. Rough roads, jolts and vibration do not affect it. It is thoroughly dependable, practical and convenient. Needs no attention you yourself cannot give it, easily, quickly and at little cost.

More riders use Prest-O-Lite than all other systems combined, not only because it costs less, but because it's best.

When You Buy Complete Equipment—

Choose the kind of equipment that will stand up under hard, every day service. On the machine you buy, get a tried and proven combination, so popular with experienced riders—"Prest-O-Lite, a lamp and a good mechanical horn," any dealer can furnish it, at a very satisfactory price. This outfit costs little to buy and little to use.

The Measurer of Roads

Few motorcyclists today are content to drive without a speedometer.

This is proved by the rapidly increasing number of speedometers sold each year.

Still fewer motorcyclists are content to equip their motorcycles with the first speedometer that comes handy, as is clearly shown by the remarkable sales record of the

CORBIN-BROWN SPEEDOMETER

"The Speedometer of Absolute Accuracy"

It is a record which establishes one fact—the superiority of the Corbin instrument over all others. This is a matter of principle and construction, but it means dollars and cents to you.

It means dollars and cents to every dealer who stocks with the Corbin-Brown.

There has always been a profitable demand for this speedometer, but this year it will be more so than ever, and for two reasons: (1) There has been a general impetus in the motorcycle business in all parts of the country; (2) The Corbin-Brown has proved to the satisfaction of the majority of motorcyclists its claim to supremacy in the motorcycle field.

Take action today to meet the 1916 business. Your jobber will gladly supply you. Catalog, price lists and discounts on request.

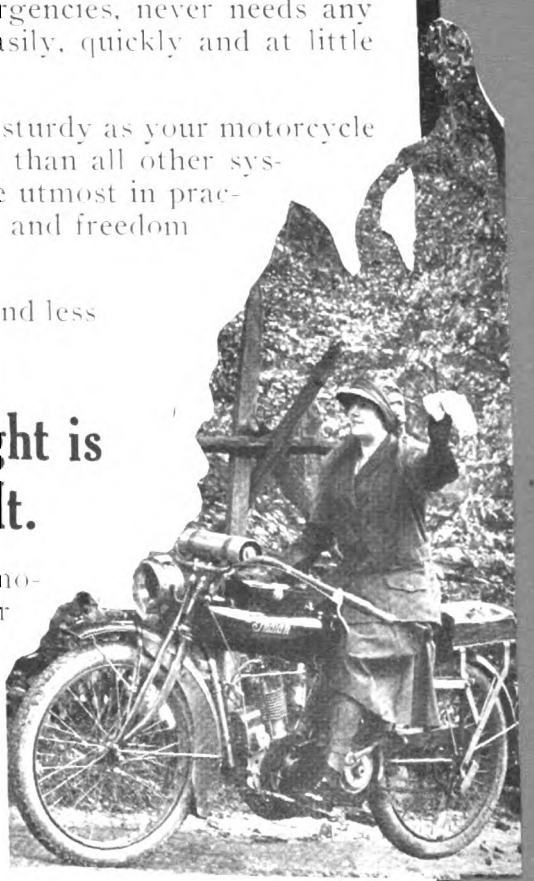
Prest-O-Lite for Motorcycles

A Simple Lighting System Giving Perfect Service at Small Cost

Because Prest-O-Lite gives perfect riding light, is simple and trouble-proof, never fails you in emergencies, never needs any attention you yourself cannot give easily, quickly and at little expense.

Because it stands the jolts and is as sturdy as your motorcycle itself, *you'll* find more riders using it than all other systems combined. Prest-O-Lite has the utmost in practical convenience due to its simplicity and freedom from trouble.

Yet Prest-O-Lite costs less to buy and less to use than any other brilliant light.



Brilliant, Dependable Light is as Vital as Fuel. Get It.

You can get Prest-O-Lite on any motorcycle you choose to buy. Your dealer can make you an equipment combination offer, including "Prest-O-Lite, a lamp and a good mechanical horn" at a very attractive price. This satisfying combination saves you money in the purchase price and also its cost of operation is less.

1,000,000 BICYCLES=

18,000,000 FEET OF STANWELD TUBING

ONE MILLION bicycles is the goal for 1916. That's a lot of bicycles, but a nation as great as ours should easily purchase that number. In fact, people would probably purchase more than that number, if individuals really knew the health-building qualities of bicycle exercise.

Yet, as large as one million bicycles may seem, the number seems small when compared with the number of tires, spokes, ball-bearings, or feet of steel tubing required to make one million bicycles.

The task before bicycle manufacturers is a huge one. But, the task before the parts-manufacturers is equally as big, for most of them are engaged in other lines of business as well.

The one million bicycles made during 1916 will be made better than bicycles ever have been made before. The manufacturers know that the future of their business depends upon the quality, strength, and longevity of their product. Therefore, they will buy only the best tires, the best spokes, the best ball-bearings, and the best steel tubing to build these one million bicycles of. And, because we believe Stanweld Cold Drawn Seamless Steel Tubing to be the best steel tubing for bicycle construction made anywhere, we say 1,000,000 bicycles equal 18,000,000 feet of Stanweld Tubing.

The higher-grade bicycles and motorcycles have been built of Stanweld Tubing for many years. In fact, it has been used almost to the exclusion of other makes. Its strength, lightness, and superb finish have helped to make American Cycles the best in the world.

We are proud of our product. We have no fear that we can maintain and even improve its high quality. Yet, we realize that to make tubing for one million bicycles is ***some*** job.

We will say, however, that we shall do our best. A new factory, almost equal in size to the old one, is practically completed. We shall soon have it filled with new machinery, and a largely increased force of workmen. And, even 'though these new facilities have been scheduled—for months in advance, we believe we can help to make "A MILLION BICYCLES IN 1916" a reality.

MOTOR EFFICIENCY
Worth How Much?

MOTOR efficiency depends largely upon lubricating efficiency and that means:

Reduced carbon deposit.
More mileage from your gasoline.
More mileage from your lubricating oil.
Increased power.

There is only one way to experience for yourself the benefits from a really scientific lubricant. That is—use it.

A simple test should convince you.

The Lubricating Chart below which represents our professional advice, has, for a number of years been the standard guide to scientific motorcycle lubrication. Opposite your motorcycle you will find specified the correct oil for your motor.

That oil was specified after a careful scientific analysis of its lubricating requirements by the Vacuum Oil Company.

Is it not worth the nominal expenditure involved to discover for yourself by actual test the continuous benefits resulting from the use of the oil specified for your motorcycle by a company whose unquestioned standing in engineering circles is world-wide?

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. For information, kindly address any inquiry to our nearest office.

VACUUM OIL COMPANY **Rochester, N. Y., U. S. A.**

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

Domestic Branches: Detroit New York Philadelphia Minneapolis Boston Chicago Indianapolis Pittsburgh Kansas City

Explanation: In the chart below, the letter opposite the motorcycle indicates the grade of Gargoyle Mobiloils that should be used. For example, "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." etc. For all motorcycle transmissions use Gargoyle Mobiloil "C." The recommendations cover all models of the same make, unless otherwise noted.

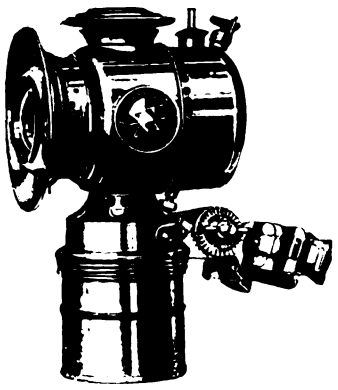
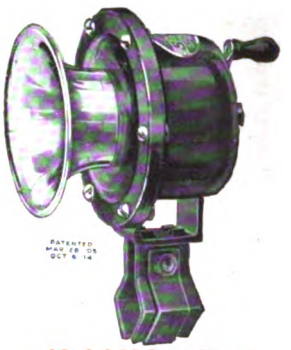
SEISS LAMPS AND HORNS



Model 12 Gas Lamp

$3.75 SEISS Model "M" Double Acting Horn. Operated by touch of hand—either to right or left—for short sharp blast—or for long continuous sound same as a motor driven Horn. This is the only Horn on the market having these features and *Guaranteed for 10 years*. Positive in Action—No Ratchets—No Spring pressure to go against. Simplicity and nothing to get out of order.



Model M Seiss Horn

$3.00 Model 12 Gas Lamp is without equal for reliability, strength of construction and real value, 125 candle power. Produces a clear white light. Regulator under easy control at all times. Finished in full bright Nickel.

Light Weight Oil Lamp

$1.50 Light Weight Oil Lamp. A high class Lamp at a very low price, will not jolt or jar out. Gives a clear bright, reliable light. Highly nickeled and furnished with adjustable or solid Bracket.

75 cents. The Clear-Out Horn is larger, heavier and more substantial in every way than the Root-Out. It is not too large for Bicycles, and it is plenty large enough for Light Weight Motorcycles. Requires no adjustment and no batteries. Finished in Black Rubberoid Enamel and furnished with a rigid adjustable Nickel-Plated Bracket.

25 Cents. The Root-Out Bicycle Horn is a hand operated diaphragm Horn which makes noise enough to make the pedestrian take notice. It is furnished with an adjustable clamp for attaching to the handle bar frame or any convenient place.

Write today for Printed Matter.

"TOLEDO MADE FOR THE WHOLE WORLD'S TRADE"

Dependable Spark Plugs

Write Your Own Guarantee

The Champion Guarantee is "Absolute satisfaction to the user. Free repair, replacement or your money back."

If in your opinion that way of putting it does not afford you every possible protection in buying Champion Spark Plugs, write your own guarantee and forward it for our signature.

"Absolute satisfaction to the user" makes you the judge of our product, and if you are not absolutely satisfied, YOU have YOUR choice of three remedies, "Free Repair," "Replacement" or "Money Back."

And always you are the counsel, judge and jury, all in one, and there is no appeal from YOUR verdict.

But such is the DEPENDABILITY of Champion Spark Plugs and such is the thoroughness of our inspections, that our guarantee is scarcely ever brought to mind, except as we see it printed on the cartons in which we pack our product.

Sweden

Now—

The demand for SKF Ball Bearings has now progressed to a point where it has become vitally necessary to establish an American plant, to act in conjunction with our enormous foreign works in Gothenburg, Sweden.

SKF Swedish Crucible Steel, the ultimate in ball-bearing metal, is being combined with American industry, American skill and accuracy in producing ball-bearings of the same high degree of workmanship that has always characterized SKF Ball Bearings.

Hand in hand with the mammoth parent organization in Sweden, the SKF Ball Bearing Company of Hartford will do its share toward supplying the trade. AND REMEMBER—whether "Made in America" or imported from Sweden, the same high standard quality of material and workmanship that has built for SKF Self Aligning Ball Bearings their unexampled reputation will be consistently maintained.

DOMINANCE

In quality, in service, in popularity, the BETHLEHEM FIVE POINT SPARK PLUG dominates the field —it towers above all competition.

Why?

Because of its inimitable perfection, from its multiple sparking points that give four times the ordinary sparking surety, its heavy nickel electrodes, to its heat-proof mica insulation.

Because of the broad-gauge life guarantee. A new plug or your money back in case of dissatisfaction *at any time during the life of the motor.*

Because of the rock-ribbed BETHLEHEM selling policy that refuses to deal with mail-order houses or firms who cut prices. *This means an even selling chance for every* BETHLEHEM dealer.

BETHLEHEM FIVE POINT SPARK PLUGS COST $1.25 EVERYWHERE — BECAUSE THEY'RE WORTH IT.

A full-page advertisement of

LONG-LIFE
Kokomo
BICYCLE TIRES

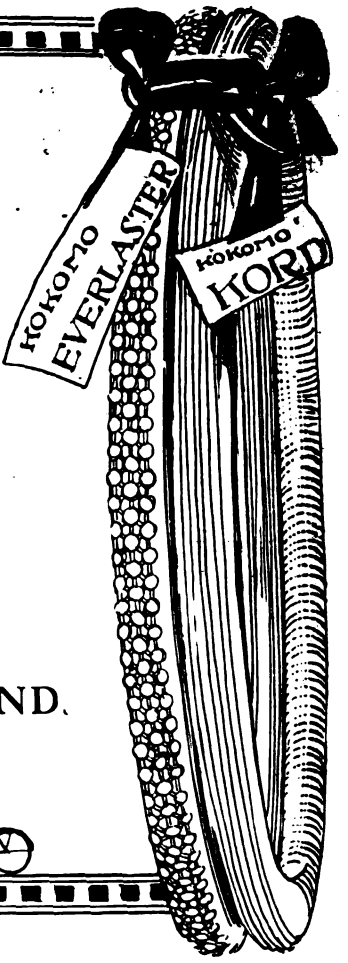
will be published in this week's

Saturday - Evening Post

on sale Thursday, June 15—dated Saturday, June 17

YOU will find this advertisement an unusual one. It talks high prices instead of low prices. It is a forceful declaration in behalf of quality tires. It will interest riders, as well as dealers. Read it.

KOKOMO RUBBER COMPANY, KOKOMO, IND.



Vacation—And the Motorcycle

That's the theme of our big Vacation Number which will be published next issue

June 22nd

This issue will stimulate sales. It will furnish the dealer with a line of pepppery sales-arguments that he has never used before. It will storm the prospect out of his trench of indifference with a volley of solid sense.

Fifty thousand pamphlets, consisting of eight pages each, will be distributed among one thousand big dealers. These booklets will tell the vacation story in condensed form, and also REFER IN AN INTERESTING WAY TO EVERY CONCERN THAT ADVERTISES IN THIS NUMBER. This means an additional circulation of 50,000!

Every advertiser will appreciate the value of such a number as this. Your best and biggest advertising copy should be in the VACATION NUMBER, because from cover to cover it is one big motorcycle, bicycle and accessory *salesman!*

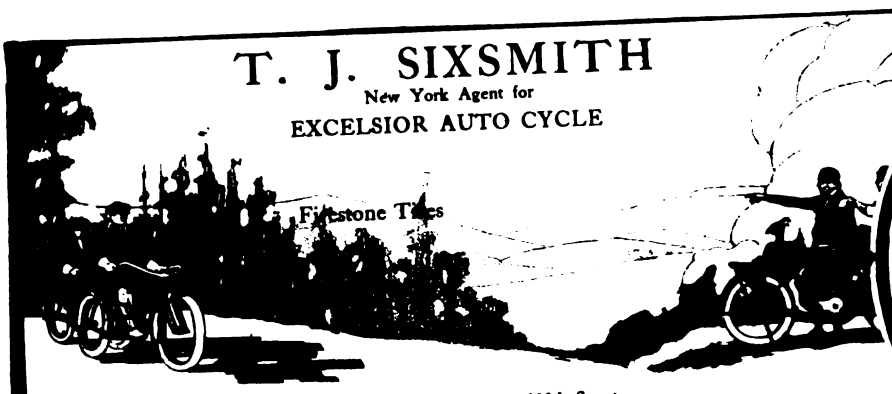
Bethlehem Five Point Spark Plug



T. J. SIXSMITH

203 & 205 West 100th Street
New York, June 23rd, 1916

The Silvex Co.,
171 Madison Ave.,
N. Y. C.

Gentlemen:

The Bethlehem Five Point Spark Plug is there. I have used it in demonstrating my 1916-17 Excelsiors and "never a miss" - is the verdict.

I have not the slightest hesitancy in saying that the BETHLEHEM has proven itself to be the proper plug for use in the "Good Old X" and I strongly recommend it to every Excelsior rider who wants to do justice to the super-power of the X Motor. I have no trouble in selling Bethlehem's at $1.25 and will never sell them for less.

Very truly yours,

T. J. Sixsmith

HALCO-BRAND

"Artillery" Puttee

The Dealer's Best Seller

Best, Because:

It has a merited reputation for quality.
It has the "quick detachable" feature.
It wears like iron and feels like velvet.
It is comfortable as well as stylish.

An extra heavy leather, tanned to a remarkable smoothness, makes for an excess of durability. The Halco "Artillery" Puttee really "wears like iron." Its graceful shape molds itself to the leg and gives a wonderfully smart and neat appearance. Add to this the fact that this "Artillery" Puttee comes in five distinct styles, and you have some of the principal reasons why the Halco "Artillery" is meeting with such a unanimous approval among the riders.

Dealers should write at once for trade prices.

Hagerstown Shoe & Legging Co.
Hagerstown, Md.

THE consistent growth of the business of Henderson dealers, with each year's sales increased substantially over those of preceding years, is conclusive evidence of the preference of riders for the advantages given by four-cylinder design.

Rollfast
TRADE MARK

There's a Pot of Gold at the End of the Rollfast Rainbow

Like the Prince in the fairy-tale who was told to look for the pot of gold at the end of the rainbow, and sought vainly for many years before he found it—so are the dealers who have struggled along trying to find the right sort of bicycle tire with the inevitable pot of profits attached to it.

Those who have obtained the exclusive Rollfast agency have found the end of the rainbow—and the **pot of gold!**

These fortunate dealers have found a line of tires in ROLLFAST that has immediately placed them in the front rank of tire dealers in their town.

They have found that in appearance, in price, and in service, ROLLFAST tires have been so absolutely what the riders wanted that they wondered why someone had not brought out such flawless tires before.

Built of automobile fabric stock—of the purest of pure rubber—of the finest proven designs of treads on the market—no wonder ROLLFAST means tire success.

Any of the solid distributors listed here will take care of you. Write to the nearest to-day.

PERKINS & LAWRENCE
Bicycles and Bicycle Supplies

Santa Rosa, Cal., June 3, 1916

Davis Sewing Machine Co.
Dayton, Ohio.

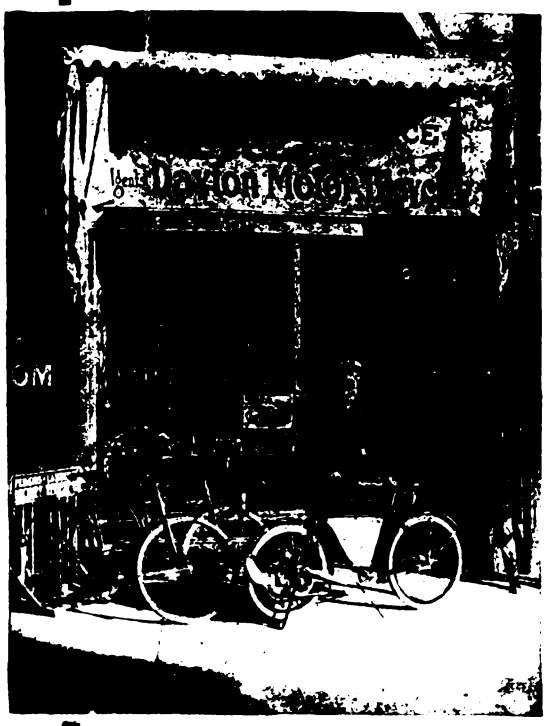
Gentlemen:-

Just a few lines to tell you how the Dayton Motor Bicycle acts in California.

A few weeks ago I took a week-end trip of 120 miles. We went up-hill and down through sand 6 inches deep and several 10 or 15 percent grades. The little machine was always on the job. Did I walk those hills and sand roads? No sir. I just got in and pedaled when necessary and came home a-smiling.

Results of trip:-Cost, six quarts of gasoline. Received a jolly good appetite, sun burn, and 120 miles of scenery such as only California can boast of.

Yours very truly
G. E. LAWRENCE
Perkins & Lawrence Cyclery



DEALERS—
Every bicycle rider is a Motor Bicycle prospect. There are no seasons for its sale.

East or West—It's All The Same

The Dayton Motor Bicycle has *made good* everywhere. Its front-wheel drive principle is acknowledged the biggest event of the season.

Simple, clean, dependable, economical. Light in weight. Comfortable to ride. Low priced. What more can you ask?

The Dayton Motor Bicycle kills every objection of thousands of people who, for one reason or another, have no use for a motorcycle of either heavy or light weight. It's in a class by itself and the sales you can make are limited only by the efforts you will exert.

Send for Catalog. Note the handsome cover design.
